BUSINESS
Circulation up;
Ad revenues rebound
The use of color is paying big dividends for newspaper publishers across the nation.
Recent industry surveys indicate a marked rise in readership and advertising revenues in major daily newspapers that have switched from black and white to color.
The use of new color technology has served a two-fold purpose: heightening reader interest through a more visually appealing format and reducing the time gap between news deadline and press time. Now, even the video camera can replace the traditional still photo camera in the field.
The move to color also results in significant cost savings. Although situations vary, the return on investment is quite favorable, with the new equipment paying for itself in three years, on average.
The use of color is paying big dividends for news-
publishers across the nation.

World Media Moguls

Some foreign 'press lords' are buying U.S. newspapers, but their main interests tend to be elsewhere in the media marketplace

BY MARY A. ANDERSON
presstime staff writer

At least 150 U.S. newspapers, more than ever before, are owned by foreign companies. However, foreign acquisitions have not accelerated at the alarming pace predicted by some newspaper analysts in the early 1980s.

Late last year, Hollinger Inc., a public holding company headed by Toronto businessman Conrad Black, bought 23 small dailies in the United States, with a combined paid circulation of less than 100,000 among them. In terms of circulation, that splash in the year-end acquisition pool caused barely a ripple compared to the rush of U.S. newspaper groups to increase their newspaper holdings—and to pay steep prices to do it.

Some observers say they are far more concerned about the ever-increasing holdings of U.S. media conglomerates than about the occasional dabbling in the U.S. media marketplace by foreign interests.

Still, when someone crosses the border to shop for newspapers or other media properties, people take notice.

Tycoons from Canada, Great Britain, Australia and Mexico are eyeing and buying U.S. media properties as one important part of their global communications empires. Currently, though, U.S. newspapers are not figuring heavily in their expansion plans.

Exceptions are Black's newspaper purchases last year and those of fellow Canadian Kenneth R. Thomson, whose publicly traded company since 1960 has steadily accumulated 106 small to mid-size U.S. newspapers, all but four of them dailies.

Included in that total are the Charleston (W.Va.) Daily Mail and three other newspapers currently owned by Clay Communications Investors, which Thomson agreed in mid-April to purchase for an undisclosed sum.

"The only consistent buyer (of U.S. newspapers) is Thomson, which is so large now it's fully competitive" with U.S. newspaper groups on the acquisition front, says Christopher J.H.M. Shaw, co-managing director of Henry Ansbacher Inc., an investment banking firm formed three years ago by the British corporation of Henry Ansbacher Holdings PLC. "Hollinger is a special case, because its papers are too small to be of interest to anyone (else)."

Shaw says his firm has been involved in nearly all foreign acquisitions of U.S. media.

For the moment, at least, the other foreign press conglomerates are showing a decided preference for magazines, scientific and business publications, databases, television, and motion pictures.

One is shedding some of its newspaper holdings in order to hang on to television stations. News Corp. Ltd. of Sydney, Australia, a publicly held company that is controlled by Australia-born (and as of 1985, U.S. citizen) K. Rupert Murdoch, sold the Chicago Sun-Times last year to comply with federal rules barring ownership of a newspaper and a TV station in the same market.

Conrad Black

His Toronto company bought 23 small dailies in the United States late last year.

For compliance reasons, Murdoch also plans to sell the New York Post and The Boston Herald [presstime, Sept. 1986, p. 66].

Other items high on the media moguls' shopping lists include services to newspapers. Two notable such purchases last year were United Press International by Mexican Mario Vázquez-Raña (see story, p. 14) and the AD/SAT advertising-via-satellite service by Briton Robert Maxwell [presstime, April 1987, p. 52].

OUTPRICED. "What you're finding is the foreign money is going into magazines (and other media properties) because (U.S.) newspapers are just so damned expensive," says Geoffrey Edwards, publisher of The Journal Newspapers in Springfield, Va.

In the 1970s, Edwards worked in England for the Liverpool Daily Post and Echo Ltd. and had been scouting for U.S. newspapers. The Liverpool group bought nine Pittsburgh area weeklies in 1978 that Edwards had spotted; in 1980, it bought The Daily Calumet in Chicago and three Illinois weeklies. But the search stopped there.

Unlike American newspapers, which in most cases offer safe profits with their local monopolies, the majority of British dailies are national products, scrapping among themselves for circulation in densely populated, relatively compact Great Britain.

Consequently, prices paid to acquire non-competitive American newspapers may range from 10 to 50 times annual earnings. By contrast, a British paper up for acquisition can be had for one to eight times earnings, says Martin Singerman, president and chief executive officer of News America Publishing Inc., a subsidiary of Murdoch's News Corp.

The prices American corporations are prepared to pay for U.S. newspapers keep most foreign buyers from breaking in.

"We're not counting ourselves out of the newspaper business in this country," Singerman said. "The opportunities are quite limited, but you never know. The largest and mid-sized cities are pretty well controlled by the major newspaper groups in this country."

From 1974 through 1986, foreign buyers acquired or invested in 81 English-language general interest newspapers, according to the U.S. Commerce Department's annual

reports on "Foreign Investment in the United States," supplemented by data compiled by **presstime**.

Of those, 24 were bought by Thomson, and 23 by Hollinger Inc. The Liverpool group's acquisitions accounted for 13 other small papers.

Six of the 81 were in major cities: the New York City, Boston and Chicago papers bought by Murdoch; the start-up of the now-defunct Philadelphia Journal by Quebecor Inc. President Pierre Peladeau of Canada; The Houston Post, by the Toronto Sun Publishing Co.; and The Washington Times and The New York City Tribune, conceived by the Rev. Sun Myung Moon of Korea, head of the Unification Church, and owned by News World Communications Inc.

While newspaper purchases by foreigners have dropped off, magazines and book publishing houses remain popular, says J. Kendrick Noble, a newspaper analyst at PaineWebber Inc.

Not only are magazines and other specialized publications more plentiful and more affordable than newspapers, but "English-language products (such as books and magazines) can be marketed worldwide, unlike those in Dutch, German or other languages," Noble says. He points out that English is the most common second language and the language of international business.

Also, American magazines and books, particularly business and scientific journals, long have been sold internationally, notes James T. Sullivan, executive vice-chairman of British Printing and Communications Corp. That publicly held company, which owns the Daily Mirror group of newspapers in London and other properties, is a subsidiary of Maxwell's privately owned Pergamon Press Group.

AIMING FOR THE TOP. Since last year, Maxwell has been aggressively bidding for American properties, targeting databases, book and magazine publishers, and printing plants. Besides AD/SAT, he spent almost $275 million last year to acquire two commercial printing firms, Providence Gravure from The Providence Journal Co. and the Webb Co. of St. Paul.

In mid-April, Maxwell agreed to acquire the assets of Diversified Printing Corp., a subsidiary of Parade Publications Inc., for an undisclosed price. The assets include Diversified's long-term $1 billion contract to print Parade magazine, which now distributes 31.7 million copies through about 300 newspapers [**presstime**, April 1987, p. 73]. Diversified Printing also prints the other nationally distributed Sunday newspaper magazine, USA Weekend, and several newspapers' individual Sunday magazines.

The purchase of Diversified gives Maxwell 12 production locations in the United States, providing more than $500 million in annual revenues to BPCC.

Providence Gravure, Webb and Diversified Printing are among the nation's largest printers of consumer and commercial publications. In addition to Sunday magazines, they print advertising inserts for newspapers.

Sullivan says Maxwell would love to buy American newspapers, if it weren't so hard to outbid U.S. companies that want the same properties.

"In terms of whether you can make a good business out of it, that play is already going on. Between Knight-Ridder, Gannett and others, you're up against some awfully stiff odds," he says.

But Maxwell boasts of his plans to develop the world's largest information and communications company, and he is fond of drawing an analogy to the oil business when speaking to American audiences. He believes that just as the world energy market came to be dominated by about 10 large players, so will the market for the modern world's most important commodity: information.

Kenneth R. Thomson

The Canadian's U.S. branch owns 102 dailies, more than any other company.

"I put myself forward as a candidate for one of the 10 places," he told attendees at PaineWebber Inc.'s conference on The Outlook for the Media last December in New York.

While Maxwell has television and cable interests in Europe, he has not pursued broadcast property in the United States, unlike Murdoch, who has invested—and borrowed—heavily to support his vision of a fourth network, Fox Broadcasting Co., launched a year ago.

Rather, Maxwell is staking his American claim both in traditional print areas and in what he calls "electronic database publication"—disseminating data via computer.

"I am predicting a continued fall in the dollars spent on television advertising with a substantial rise in print-oriented advertising," Maxwell told the PaineWebber group.

Who and What Is a 'Press Lord'?

Several foreign newspaper tycoons still adhere to the tradition of the "press lord," a term literally derived from a long line of press moguls within the Commonwealth of Nations on whom the British monarchy has bestowed lordships and knighthoods.

"It's a supreme public accolade, if you have done substantial things, and the media industry is a very high-profile industry," says Brian P. Knox-Peebles, group marketing director of London-based United Newspapers, which is headed by Lord David Stevens.

Kenneth R. Thomson inherited the title Lord Thomson of Fleet from his father, Roy H. Thomson, founder of Thomson Newspapers Ltd.

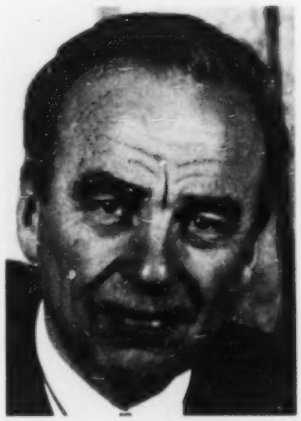
But two who have invested in the U.S. media market have declined the title.

Robert Maxwell won a defamation lawsuit last year against the British magazine Private Eye, which had accused Maxwell of trying to buy favor with a Labor Party leader to obtain a lordship. Maxwell, who had served in Parliament seven years in the Labor Party, won his case after testifying that he has twice refused overtures to offer him the peerage.

K. Rupert Murdoch has been offered a knighthood several times but refused it—unlike his father, Sir Keith Murdoch.

The image of the "press lord" carries a negative connotation to Murdoch, according to Martin Singerman of Murdoch's News America Publishing Inc. "A lord is somebody who runs the manor from above and isn't interested in tilling the land. That's not the way he works," Singerman says of Murdoch's hands-on style.

In that address, he referred to Murdoch as "a well-known competitor of mine" in the world's media marketplace. Murdoch "clearly is a successful and serious player," he said. "The difference between his approach and mine—and they may both succeed or may both fail—is that his candidature is backed by a massive amount of debt."



K. Rupert Murdoch

Now a U.S. citizen, he is selling some big-city U.S. dailies to retain TV stations.

THE PLAYERS. Maxwell, 63, built his debt-free empire from scratch, with a life story that could put any of Horatio Alger's characters to shame. Born Jan Ludwig Hoch, the son of a Czech peasant, he had three years of schooling before fleeing the Nazis, being captured, then escaping.

As a penniless teenager, he joined the British Army in Europe and changed his name. At 22, he was awarded the Military Cross for bravery during World War II. Self-educated, he speaks eight languages, according to several of his company representatives. He began Pergamon Press in 1951 to print technical and scientific journals. An avowed socialist who nonetheless has mastered capitalism and union-busting, he served as a member of Parliament in the Labor Party for seven years during the 1960s.

In 1984, he bought the Mirror Group, publisher of the Daily Mirror, Daily Record, Sunday Mail, Sunday Mirror and several magazines in England and Scotland. It is Britain's largest newspaper group [**presstime**, Dec. 1986, p. 18].

Here are thumbnail sketches of other key players in the U.S. and global media sweepstakes:

• Murdoch, 56, is the son of Sir Keith Murdoch, who as editor of the Melbourne Herald expanded into specialized magazines, radio and the newsprint industry in Australia.

Learning the newspaper business under his father's tutelage, Murdoch assumed what was left of the family enterprise after payment of inheritance taxes. Today, Murdoch controls about half of Australia's newspaper circulation, after spending $1.5 billion to win the recent bidding war for the Melbourne-based Herald & Weekly Times Ltd.

In London, Murdoch's News Corp. publishes four national newspapers: the News of the World, the Sun, The Times and The Sunday Times. In the United States, Murdoch's company publishes the dailies in New York and Boston plus the San Antonio Express-News, the supermarket tabloid Star, assorted business publications and five magazines—New York, New Woman, the U.S. version of Elle, European Travel & Life, and Automobile.

On March 30, he agreed to pay about $300 million for Harper & Row Publishers Inc., adding to his holdings in book publishing that include: Salem House Ltd., Boston; Times Books, London; William Collins & Sons, Glasgow, Scotland; and Bay Books, Sydney.

He switched from Australian to U.S. citizenship in 1985, which made it possible for him to buy seven television stations in large markets from Metromedia Inc. (The Federal Communications Commission limits a non-U.S. citizen's direct control of a television station to 25 percent of capital stock and indirect control through a corporation to 20 percent).

Murdoch also acquired Twentieth Century-Fox Film Corp.

• Thomson, 63, is the son of Roy H. Thomson, founder of Thomson Newspapers Ltd. of Toronto.

With 102 U.S. daily newspapers in or about to be in its fold, Thomson Newspapers Inc. of Des Plaines, Ill., owns more daily newspapers in the United States and Canada than any other company, but most are of modest size [**presstime**, Nov. 1985, p. 6].

Thomson shrinks from publicity as much as Maxwell welcomes it.

The thrust of the company's acquisition program moved from Canada to the United States in 1959, and executives of the U.S. subsidiary, Thomson Newspapers Inc., consider it to be "a very American company with Canadian ownership," says Brian W. Slaight, executive vice president.

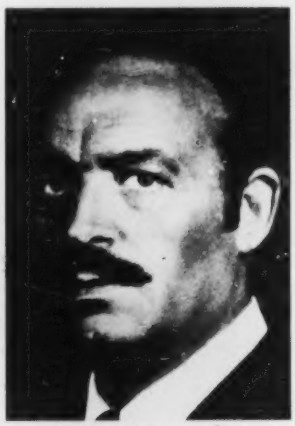
Thomson Newspapers' sister company, International Thomson Organisation, focuses its U.S. interests on broader communications properties, such as information services and business publications, including the daily financial newspaper American Banker.

• Black, 42, a former mogul in farm machinery, grocery stores, mining and petroleum, formed Hollinger Inc. in 1985.

An article last January in Thomson's own The Globe and Mail of Toronto called Black "a sort of modest man's Kenneth Thomson." His current holdings include the small newspapers he has purchased in the United States and Canada and a 58-percent interest in The Daily Telegraph of London, with an option to buy more shares.

Hollinger's acquisition of newspapers represents a return to Black's roots. As a university student more than 20 years ago, he and two other students started the Sterling Newspapers Ltd. in Canada, which now has 13 papers under the Hollinger umbrella.

• Lord David Stevens, 50, chairman and president of United Newspapers, publishes several newspapers in London, including the Daily Express, the Sunday Express and the Star. He has expanding interests in the United States through Gralla Publications in New York and Miller Freeman Publications Inc. in San Francisco, which publish business periodicals. Gralla has just launched



Mario Vázquez-Raña

After building Mexico's largest newspaper group, he spent $40 million last year to buy the financially ailing United Press International wire service.

Robert Maxwell

A Briton, he plans to develop the world's largest communications company with purchases like AD/SAT and the commercial printers Providence Gravure and Diversified Printing.

Real Estate Times, its first biweekly newspaper in the United States.

• Vere Harold Esmond Harmsworth, 61, better known as Lord Rothermere, inherited the title from his father, British media mogul Harold Harmsworth. His uncle, Lord Northcliffe (Alfred Harmsworth), was a Fleet Street legend, who created some of Britain's popular national newspapers.

Rothermere is chairman of the Associated Newspapers Group Ltd., which publishes several national newspapers in London: the Daily Mail, Mail on Sunday and The London Evening Standard. He recently revived The Evening News as a second afternoon competitor to The London Daily News, launched in February by Maxwell.

American media properties owned by Rothermere are The American Lawyer, a monthly, and Whittle Communications in Knoxville, Tenn., which publishes travel and entertainment magazines.

• Vázquez-Raña, 54, purchased ailing UPI last year for $40 million after building the 62-paper El Sol group, Mexico's largest. He has just agreed to buy eight more Mexican newspapers.

Vázquez-Raña is the son of a Spanish artisan who emigrated to the United States, then Mexico, where he founded a furniture business. Vázquez-Raña took the reins when he was only 17 years old, making the Hermanos Vázquez furniture store chain one of the most profitable businesses in Mexico before selling out to his brothers in 1984.

He bought the El Sol group from the Mexican government in 1976 for $12.8 million, assuming $84 million in debts and eliminating that debt within one year.

In addition, he is board chairman of Mexico Radio S.A. and of two Mexican television stations.

Vázquez-Raña's acquisition of UPI and the occasional acquisitions by Canadians and others have sporadically renewed concerns among U.S. newspaper executives about foreign ownership.

Opinions vary, according to the differing views of the marketplace.

"I think you have that natural apprehension," says James D. Squires, executive vice president and editor of the Chicago Tribune. "But the fact is that the real strength of our system is that anyone can own a newspaper who can get one going."

"Americans will go right to the quality," Squires says. "If (foreign owners) put out better newspapers than Americans, then we deserve it."

He adds, "I don't spend a minute worrying about Rupert Murdoch or Lord Thomson. I don't think they're going to be able to outbid the Al Neuharths and Billy (William Dean) Singletons."

The growth of media companies such as Neuharth's Gannett and Singleton's MediaNews Group is precisely what worries K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass.

"All the arguments over quality are short-term red herrings," he says. "The issue has to do with the diversity of opinion."

"My paranoia is not whether the foreigners are coming. It's just simple concentration of ownership," says Low, whose paper is one of a dwindling number of independent American newspapers.

"I'm more comfortable about having Vázquez-Raña owning (UPI) than about Gannett or Knight-Ridder owning it." □

The story behind nyloprint® is getting around. And more and more newspapers are changing over. Not just because it goes to press so quickly. And not just because it runs so long. The word has gotten out that there's even more to it.

For one thing, every plate is produced to exacting tolerances in one of the world's most advanced manufacturing facilities. And it's backed by a widely distributed sales force and a technical staff that many consider the best in the business. They, in turn, are supported by one of the largest and most innovative research programs anywhere in the printing industry—a program that has been leading the way toward the development of much long-awaited technology, including flexo plates suitable for newspaper printing using a direct anilox inking system.

It has been our experience that once a newspaper has all the facts, chances are they'll go with nyloprint.® And judging by the orders that are coming in, the facts are getting out. If you'd like to know more, call Harvey Millman, Product Manager, at 1-800-343-4700. Or, if you're coming to ANPA-TEC '87, come see us at Booth #748. BASF. Ahead in Photopolymer Performance.

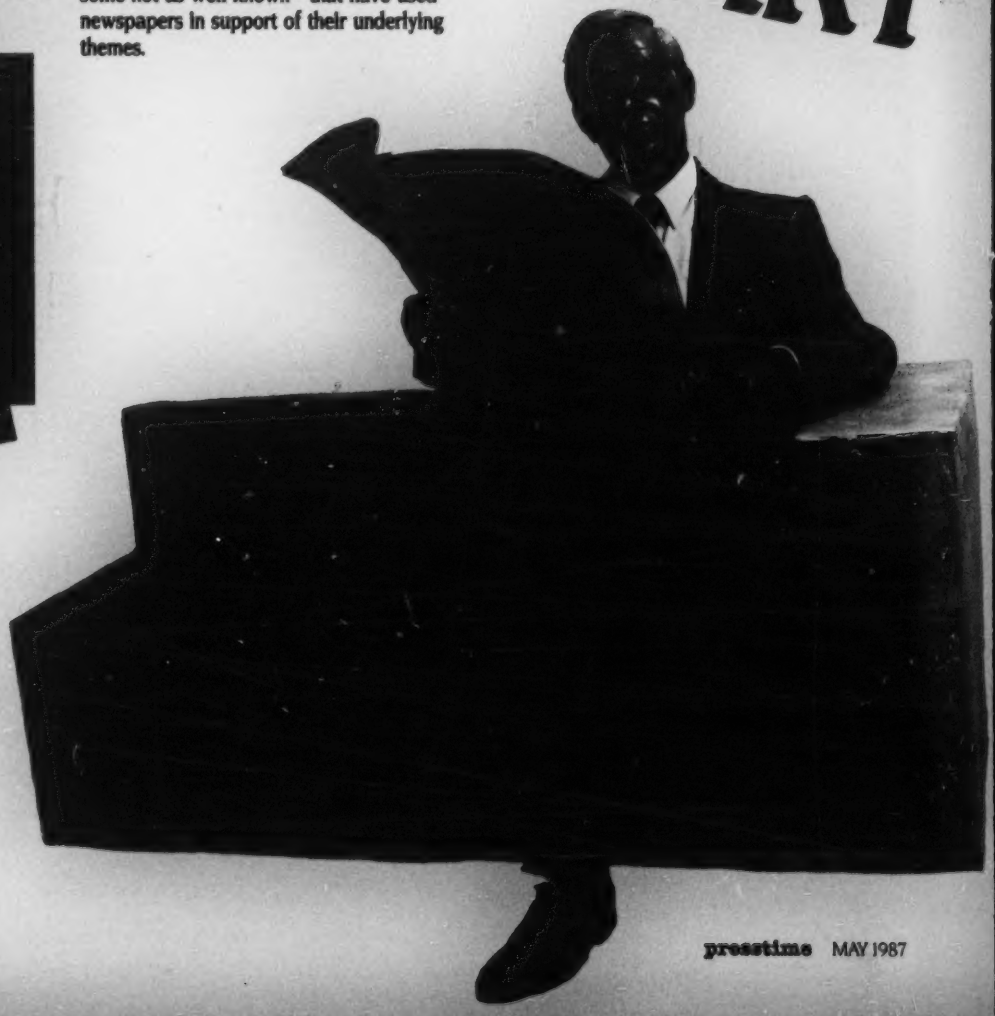
ART ART & more ART

"Just Out" (below) and "Morning Papers," (right) both by the late J.G. Brown, are part of the collection of the James S. Copley Library, San Diego. They are displayed at Copley Newspapers corporate headquarters in La Jolla, Calif.

Newspapers and newspaper-related scenes through the years have served as inspirational subject matter for many painters and sculptors. These are just a few of the many works—some popular and some not as well-known—that have used newspapers in support of their underlying themes.

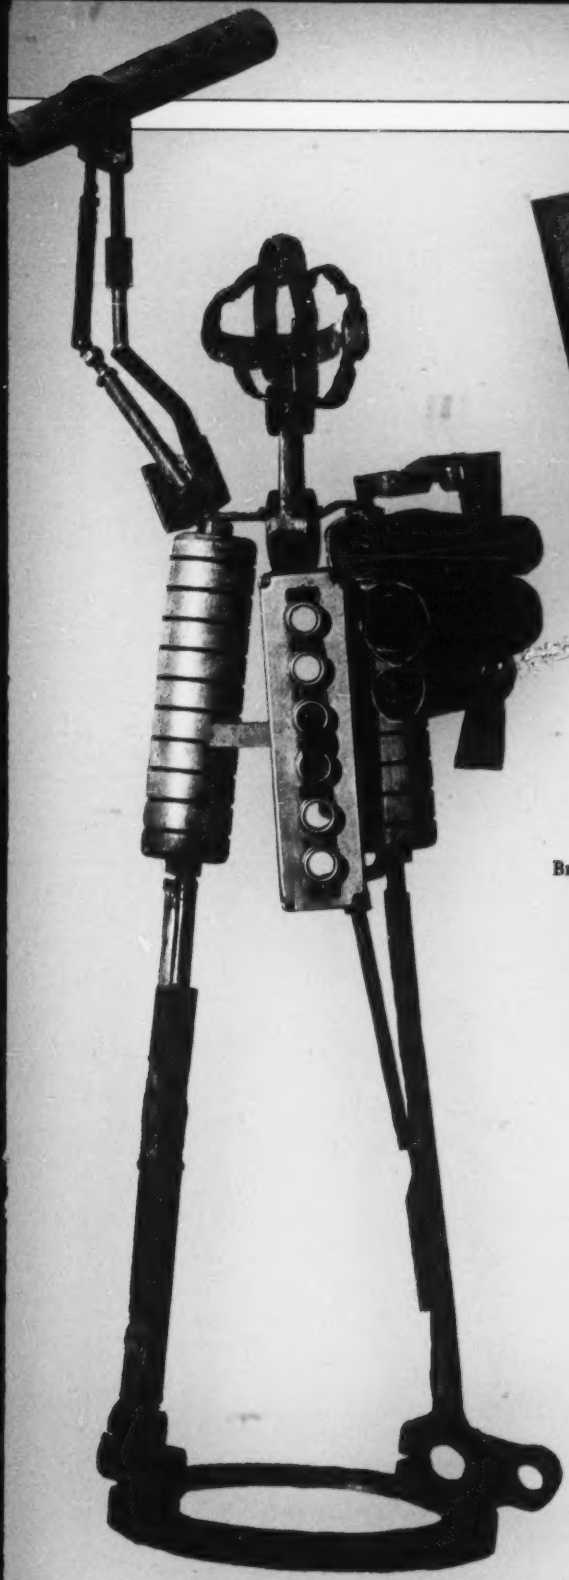
A 1,500-pound terra cotta plaque (above) hangs in the lobby of The Sacramento Bee. It was cast in 1901 by a San Francisco firm commissioned by the Bee's owners at the time, C.K. McClatchy and his brother, Valentine McClatchy.

The bronze sculpture "Waiting" (right) by J. Seward Johnson Jr. of Princeton, N.J., is owned by the Colorado state Public Employees Retirement Association and is located in the lobby of Penn Center Building in Denver. The work features The Denver Post nameplate and a story about the sculpture and PERA by Post writer Max Price.



The oil painting "Newspaper Boy" (left) was done in 1869 by Edward Mitchell Bannister, a 19th-century black American artist. The work is displayed in the National Museum of American Art, Washington, D.C.

British painter Beryl Cook found the New York subway a good setting for "Reading the Newspaper" (right), a 1985 work that is one of a series of paintings contained in the book *Beryl Cook's New York*. The piece is owned by a private collector in London.



One of the most unusual statues of a newsboy (above), made from parts of hot-metal presses and Linotype machines, is owned by the Anniston (Ala.) Star and is on display in its lobby. The work was created in 1970 by Mark Lane, former director of the Anniston Museum of Natural History.

One of the most famous of all newsboy statues is in Newsboy Park, Great Barrington, Mass. (left). Col. William Lee Brown, part owner and editor of the New York Daily News, donated the bronze sculpture to Great Barrington in 1895. Brown is buried near the monument, which is 14 feet high including pedestal.

An Insider's Prescription For Curing UPI's Ills

BY MILTON R. BENJAMIN

(Editor's note: After about a year as a consultant to United Press International owner Mario Vásquez-Raña and five months as president and chief operating officer of the troubled wire service, Benjamin quit April 1 after disagreements with Vásquez Raña over the path UPI should follow to regain viability. Benjamin has returned to his Washington, D.C., consulting firm, Anderson, Benjamin, Read & Haney, which no longer is advising the UPI owner. Benjamin was asked by **presstime** *to describe what he thinks UPI must do in order to survive.)*

In early January, the CBS News program "Sunday Morning" took a nostalgic look at UPI and its struggle to survive. Walter Cronkite, a war correspondent for the old United Press in his pre-CBS days, opined that "it's the breaking news story that is important—the ability to check one service against another. . . . I think this is a very important service in keeping newspapers accurate. . . ." Added CBS correspondent Charles Kuralt: "For journalists, UPI plus AP stands for a system with built-in checks and balances. . . ."

Well, sorry friends. The American newspaper industry has done its own new math on that equation and come up with a different answer. If the desirability of across-the-board competition with the Associated Press is to be the raison d'être for UPI's survival, the battle is over.

That is not to suggest no role remains for a new UPI. A UPI for the 21st century—with more experienced foreign correspondents, extending a U.S. journalistic presence to more world capitals than any newspaper or group can aspire to staff on its own—could well be of greater value than ever. Aren't the second and third tier of international capitals, after all, precisely where editors would welcome an earlier on-the-ground American reportorial presence when news breaks? Even in capitals where the AP is also present, aren't sensitive international political and economic stories exactly where editors most want a second (and preferably a third) version of the news.

An equally important role could be staked out by a new UPI at home. Again, it lies in coverage of government—in Washington, of course, but even more usefully in the 50 state capitals. Beyond the indisputable need for more consistent and comprehensive coverage of executive branch agencies, the real opportunity lies in providing readers with a better view of how local political and economic challenges are being dealt with around the country. Which editor felt, as his state grappled with the liability insurance crisis last year, that he had an adequate perspective on how other jurisdictions were coping with the problem—or how his state's approach related to actions at the federal level?

But couldn't the AP do all these things if its members wanted this type of coverage? Of course. But if having a competitive reporting presence aggressively covering the news makes sense anywhere, most editors would vote to have a second set of journalistic antennae probing the nooks and crannies of local, state, federal and foreign governments.

The new UPI could be the extremely competitive source of this "high-value" information—and at a considerably lower cost to newspapers than what most subscribers pay for America's second wire service today! My guess, based on discussions with editors and publishers of small as well as large newspapers over the past six months, is that many would be buyers of this type of "premium" top-end news service—including many who do not currently subscribe.

Milton R. Benjamin

The new UPI *could be the extremely competitive source of 'high-value' information.*

UPI's problem with its present positioning in the market, however, is that newspapers are being asked to write checks for an amount that comes all-too-close to their AP assessment for something editors want but for which publishers aren't willing to pay: competition in covering nuts-and-bolts stories.

INFRASTRUCTURE BURDEN. The reality of the 1980s is that U.S. newspaper publishers, large and small alike, no longer are willing to pay the freight for more than one news service of record to chronicle every two-alarm fire and fatal auto accident that occurs each day across America. And maybe that's not so bad. In an era where few newspapers directly compete and many are targeting their own resources on increasing the quality of stories rather than the quantity, one news agency giving a daily carpet sweeping to America, picking up every piece of lint on the landscape, may well be sufficient.

Most large newspapers—the papers that pay a disproportionate share of the cost of running a news service—largely don't run those limited-interest local stories anyway. And notwithstanding the loyal but mistaken belief of too many UPI salesmen that it is still possible to sell displacement, the small one-service newspapers that rely on the wire for those nuts-and-bolts local stories have largely gone AP to stay.

But if you are UPI, continuing to cover those locally-important-but-generally-of-little-national-value stories in all 50 states imposes infrastructure requirements that in aggregate leave you with an unsupportable cost structure. For starters, you wind up maintaining news bureaus in far more cities

than makes any sense economically. In New York state, for example, the daily flow of major news obviously mandates strong bureaus in New York City and Albany. But how do you rationalize the cost of maintaining bureaus in three other New York cities, while trying not to explode at the pressure to open one in Poughkeepsie?

Multiply that times 50 and you quickly come up with an imposing number. Then factor in the need to staff a significant number of these bureaus from dawn to midnight to make regular "check" calls and to take phoned-in stories from stringers. (Don't think electronic carbons are the solution to this problem; someone still has to read and process the stories received this way.) Now you are up to a pretty substantial force of reporters and editors just to support UPI's infrastructure.

Even worse, most UPI newspeople today rarely leave the bureau to actually perform the kind of "premium" reporting that editors would buy as an add-on to what they get from the AP. Don't get the idea UPI staffers are anything but the hardest working reporters and editors in America. UPI staffers are always hustling. But what keeps them occupied? Grinding out rewrites of local stories, packages of briefs, and updated headlines for rip-and-read radio stations.

That, ultimately, is the killer. No radio station is too small, its location too remote, its management too disinterested in news, for UPI's sales staff. In the competitive frenzy to keep potential clients—any clients—from falling into the clutches of the AP, they are encouraged to sign up every available pennies-a-week radio customer, ignoring the fact that each nickel of revenue adds dollars in costs to UPI's infrastructure burden.

Unfortunately, and I say this with sorrow because radio stations for years formed the loyalist core of the UPI client base, my new UPI would get out of the low-end radio market. Leave the rip-and-readers to the tender mercies of the Associated Press. Major market radio and television stations are another matter entirely. Their news interests and requirements are similar to those of newspapers. UPI serves this high-end broadcast market today better than the AP, and it clearly makes sense to continue to do so.

NEW DIRECTIONS. But doesn't this strategy imply a very different UPI—a new UPI more focused on government and economics coverage? Of course. The new UPI's reporters still will be eager to cover major breaking stories. (Ever seen a reporter who wasn't?) But the difference is the new UPI may not—probably will not—move the first bulletin on a major train-wreck in Oklahoma, though its coverage ultimately may well be better than ever. And the new UPI will not beat the AP by six minutes on a double-fatal auto accident in North Dakota. It may not ever cover that story at all.

I am convinced the new UPI could produce and successfully market such a report.

Doesn't this strategy also suggest a much smaller UPI? In terms of total editorial staff, absolutely. But the new UPI would evolve into a more-experienced, better-paid news service, with staffers in every state capital, selected economic centers, and about 50 major cities around the world. And notwithstanding the reduced body count, the new UPI would actually be doing far more original reporting than either today's larger UPI or the AP.

What about traditional UPI strengths such as sports and photos? Here, the future must be determined by the marketplace. As superior as these services may be, both are priced today in a manner not directly tied to the cost of production. If enough newspapers were willing to subscribe to these services at a price that would yield a profit, there would be no reason they shouldn't be part of the new UPI. If not, the marketplace would have spoken—and it ought to be heard. No future exists for UPI divorced from the realities of the marketplace.

Unless it can find a new role that forces newspapers to buy the service as an indispensable information resource—and not as an act of charity—on what basis can UPI succeed? Will publishers and editors long want to buy and print a privately owned, stand-alone news service kept alive for some motive other than return on investment? I doubt it.

But from months of conversations with editors and publishers across America, I am persuaded "high-value" coverage of government and economic news in all 50 states, Washington and around the world is an editorial product for which there is a demand. I am convinced the new UPI could produce and successfully market such a report at a price that would yield a profit.

But getting from here to there requires thinking about the new UPI in a new way—by publishers and editors, by UPI's editorial and sales staffs, and by its owners. Even then, success would hardly be guaranteed.

Nothing is more difficult than successfully repositioning a product in the marketplace. But absent such an effort, there simply is no hope of stanching the bleeding. And while American publishers and broadcasters owe Mario Vasquez-Rana a vote of thanks for the monthly transfusions that are keeping the patient alive, I see no chance for ever unhooking UPI from its present life-support system unless it steps up to the radical surgery that might yield a healthy future. □

FLORIDA HOT SPOTS

Rapid growth in the Sunshine State has spawned intense competition among strong, high-quality dailies

BY TOM KELLY

Newspaper competition may be a nostalgic relic in much of America, but it is very much alive throughout the booming state of Florida.

Retirees and tourists who flee to Florida from the urban Northeast and Midwest expecting to find a tranquil landscape free of competitive pressures are in for some surprises when they begin shopping for a daily newspaper.

While Florida generally delivers on its promises of sunshine, fishing, golf, shuffleboard and slower rhythms of life, it also amazes and delights new residents with perhaps the most heated journalistic competition to be found in the United States today.

And it's a competition with distinct differences from the street-corner hawkers and promotional giveaways of a bygone age. Florida's newspaper wars are being fought by some of the most powerful communications organizations in the land, possessing the most sophisticated and innovative news coverage and marketing strategies money can buy. The competition is exclusively for morning-newspaper readers and, happily for all concerned, it appears to be that rare kind of competition in which everybody wins, especially readers.

There already are millions of avid newspaper readers in Florida, and there are going to be a lot more by the turn of the century. Florida's population is approaching 12 million, and it is expected to be 15 million by the year 2000. The state's newspaper readers are already well-served because Florida's dailies—from Pensacola in the northwest to Key West in the southeast—are widely recognized for their excellence.

Kelly, current president of the Florida Society of Newspaper Editors, is former editor of the Palm Beach Post.

Florida customarily places two dailies—The Miami Herald and the St. Petersburg Times—on virtually everybody's list of the nation's top 10 newspapers. And there is a growing consensus that another Florida daily, The Orlando Sentinel, now deserves to be ranked among the top 10.

Ralph Lowenstein, dean of the School of Communciations at the University of Florida in Gainesville, finds the situation "very invigorating."

"I don't think there's a more competitive newspaper state in the union," Lowenstein says. "It's full-scale warfare 24 hours a day. People think of Florida as a vacation state, but it's much more than that. The state just passed Pennsylvania in population, and by the year 2000 Florida will be the third-largest state.

"And Florida is not only big, it's diverse and a growing economic giant. The state's image just doesn't comport with the reality."

Florida pretty much fit the sleepy Southern stereotype until the late 1960s when the major newspaper groups began awakening to the state's growth potential and moved to acquire Florida newspaper properties. Within two decades, Gannett Co., The New York Times Co., Scripps Howard, the Tribune Co. of Chicago, The Hearst Corp. and Morris Communications Corp. all moved into Florida to join established Knight Newspapers (now Knight-Ridder Inc.), Cox Enterprises Inc. and Media General Inc. Now virtually all the state's main dailies, with the notable exception of the independent St. Petersburg Times, are affiliated with national media groups. One of the last holdouts, the Naples Daily News (evening, circulation 24,858), went to Scripps Howard for $160 million recently.

The three major theaters of operations in Florida's newspaper wars are the "Gold Coast," the "Suncoast" and the "Space Coast," which just happen to be three of the most explosive growth areas in the nation. The Gold Coast consists of Dade (Miami), Broward (Fort Lauderdale-Hollywood) and Palm Beach (West Palm Beach-Boca Raton) counties. The Suncoast is the thriving Tampa Bay metropolitan area dominated by Hillsborough (Tampa) and Pinellas (St. Petersburg) counties. The Space Coast's main competitors are based in Orange (Orlando) and Brevard (Cocoa-Melbourne) counties.

Florida's newspaper wars are at different stages of belligerency on the three main fronts. The Gold Coast war has been raging in earnest for nearly five years and promises to continue indefinitely. The Suncoast offensive began only a few months ago, and the Space Coast conflict appears to have reached the cease-fire stage.

GOLD COAST. Major-group affiliation is a major element in the battle for readers on the Gold Coast, where Knight-Ridder (The Miami Herald and Boca Raton News), Tribune Co. (Fort Lauderdale News and Sun-Sentinel) and Cox (The Palm Beach Post and Evening Times) have been competing intensely in Florida's most populous region. Nearly 4 million people live in Dade, Broward and Palm Beach counties.

"We are all major players here, and nobody is going to go away," says Thomas P. O'Donnell, president and chief executive officer of Fort Lauderdale's News and Sun-Sentinel Co.

The Sun-Sentinel (morning, 137,176) is one of the fastest-growing dailies in the nation. Combined, the Fort Lauderdale papers attained an all-time seasonal circulation peak in March with totals of 270,000 daily and 335,000 Sunday.

While Fort Lauderdale's morning daily wages a two-front war—with The Miami Herald (407,296) and Scripps Howard's Hollywood Sun-Tattler (32,696) on its southern flank and with The Palm Beach Post (102,247) in the north—the Miami and West Palm Beach newspapers face different competitive pressures.

The Herald's problem is perhaps unique in American journalism. Published in a joint operating arrangement with Cox's The Miami News (evening, 55,684), the Herald is dominant in Dade County. However, because that traditional circulation base is acquiring a distinctly Hispanic accent with the

immigration of more than a million Cubans over the last quarter-century, the Herald must appeal to a variety of very different audiences who have strong ideas about what a newspaper should be.

Richard G. Capen, the Herald's chairman and publisher, bridles over recent national news stories that have examined the Herald's marketing challenge: "The real news in Miami is what The Miami Herald is doing more than any other newspaper in the United States to attract readers who are coming to our area from other countries.

"No other newspaper has tried to publish a Spanish edition, but our El Herald is 11 years old. We have Hispanics in our senior management, and two Hispanics sit on our editorial board. I've even learned to speak Spanish! We have a high level of consciousness toward the needs of our Hispanic readers, and this consciousness is infused into our daily thinking. We always ask, 'How can we make this story more relevant to our readers?'

"We haven't written off any readers, and we are not content to sit back and wait for the process of assimilation to work. We intend to accelerate the assimilation process through our newspaper."

Capen acknowledges that his competitive posture is different in Broward and Palm Beach counties, where the conflict is "more traditional."

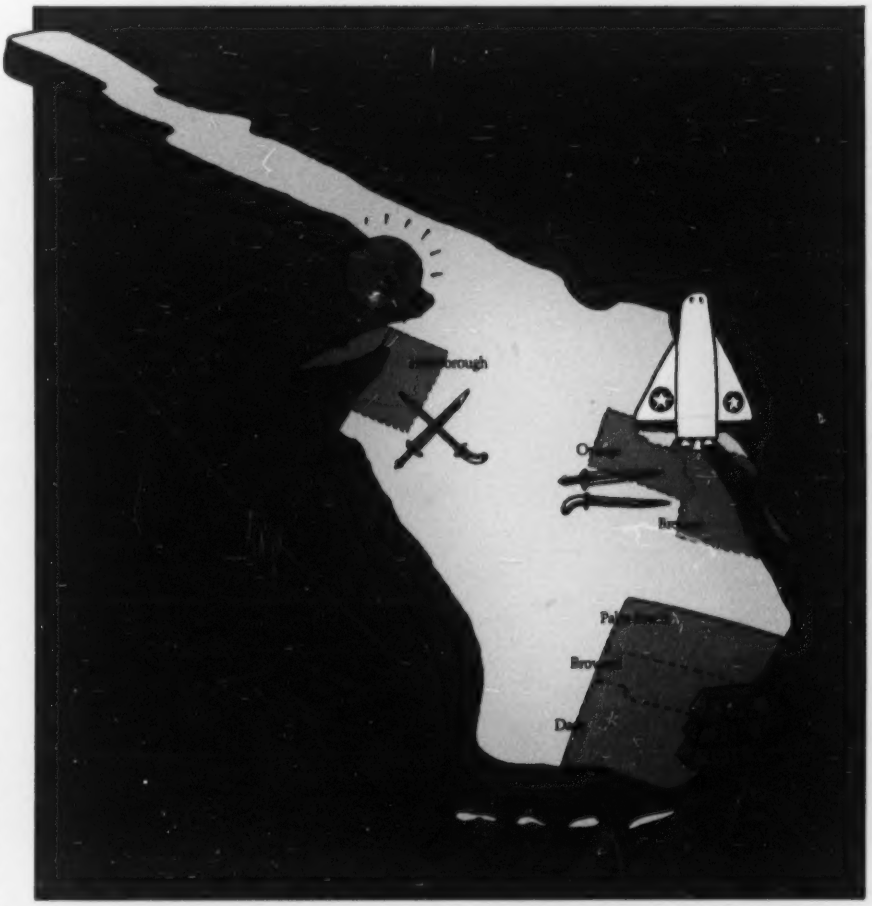
The Herald launched greatly expanded Palm Beach and "Treasure Coast" (Stuart-Fort Pierce area) editions four years ago in an attempt to extend its influence into the high-growth areas 50 to 120 miles north of Miami. But the costly new news bureaus and heavy promotion resulted in only marginal circulation and advertising gains, and, since last year, the Herald has retrenched steadily in the outlying areas.

After the dust had settled on the Herald's northern offensive, its Palm Beach County circulation was little more than the 30,000 it claimed before the big push. And the Herald was struggling to maintain its 100,000-plus foothold in southern Broward County.

Capen is not willing to concede an inch in Broward, where he sees a vigorous competition with the Sun-Sentinel "for some time to come," but his view of the Herald's role in Palm Beach County is more limited: "To be a strong, respected, regional newspaper bringing to readers all that that implies."

O'Donnell thinks the Herald "is in kind of a slump. It's still trying to sort out its mission in Palm Beach. In Broward, it's a different newspaper in the southern half of the county, which it treats as an extension of Dade, and the north, which it covers much the way it covers Palm Beach County."

O'Donnell particularly covets Palm Beach County for its growth potential. His



Sun-Sentinel is the dominant morning paper in the county's burgeoning southern cities of Boca Raton and Delray Beach, which are closer geographically and psychically to the Fort Lauderdale sphere of influence than they are to that of West Palm Beach.

"Palm Beach is an emerging county that is still 10 years away," O'Donnell says. "Nobody really has owned that turf, and we think that it's still up for grabs."

Tom Giuffrida, publisher of the Palm Beach Post and Evening Times, is determined that most of that unclaimed turf will belong to his newspapers, members of the Cox group since 1969.

The Post, which is the dominant Palm Beach County paper from Boynton Beach north to the Martin County line, also is experiencing strong growth, recently hitting 145,000 daily and 210,000 Sunday circulation—both all-time highs—during the traditionally prosperous winter tourist season.

Giuffrida, who came to Palm Beach from Cox' flagship Atlanta Newspapers in mid-1985, considers southeast Florida the most competitive newspaper environment in the nation outside of "three or four major cities such as New York, Chicago or Los Angeles."

"Only here," he says, "can you set three

The Gold Coast war has been raging in earnest for nearly five years. The Suncoast offensive began only a few months ago, and the Space Coast conflict appears to have reached the cease-fire stage.

newspapers on your desk each morning and see who did the better job. Three papers are trying to create 'the paper' for Palm Beach County. One of our competitors is nationally recognized in the top 10; the other is a rapidly emerging metro daily.

"The Miami Herald remains an excellent paper despite its current soul-searching. I always regard it as a serious competitor but less of a factor in Palm Beach County than the Sun-Sentinel. The Sentinel doesn't hide the fact that it wants to be Palm Beach County's newspaper, and it has been very successful in the south county."

Giuffrida has spearheaded Cox' major new commitment to Palm Beach by upgrading staff and salaries, increasing the Post's community profile with promotions and increased advertising, redesigning the newspaper and adding new content (including a daily Opinion section with six pages of editorial and op-ed material) aimed at the county's elderly-weighted readership. In January 1986, the news staffs of the morning Post and afternoon Times were combined, leading to speculation that the Times' days as a separate publication might be numbered.

"The major increases in our budget clearly needed to be done," Giuffrida says. "Cox is not just interested in this year, but in the long-term market here. Atlanta (Cox headquarters) has said to us, 'Let us know what you need and we'll give you the help.' "

SUNCOAST. While a tentative equilibrium exists between the three Gold Coast competitors, the St. Petersburg Times is intent on changing the long-time division of Suncoast readers between the leading newspapers on the opposite shores of Tampa Bay.

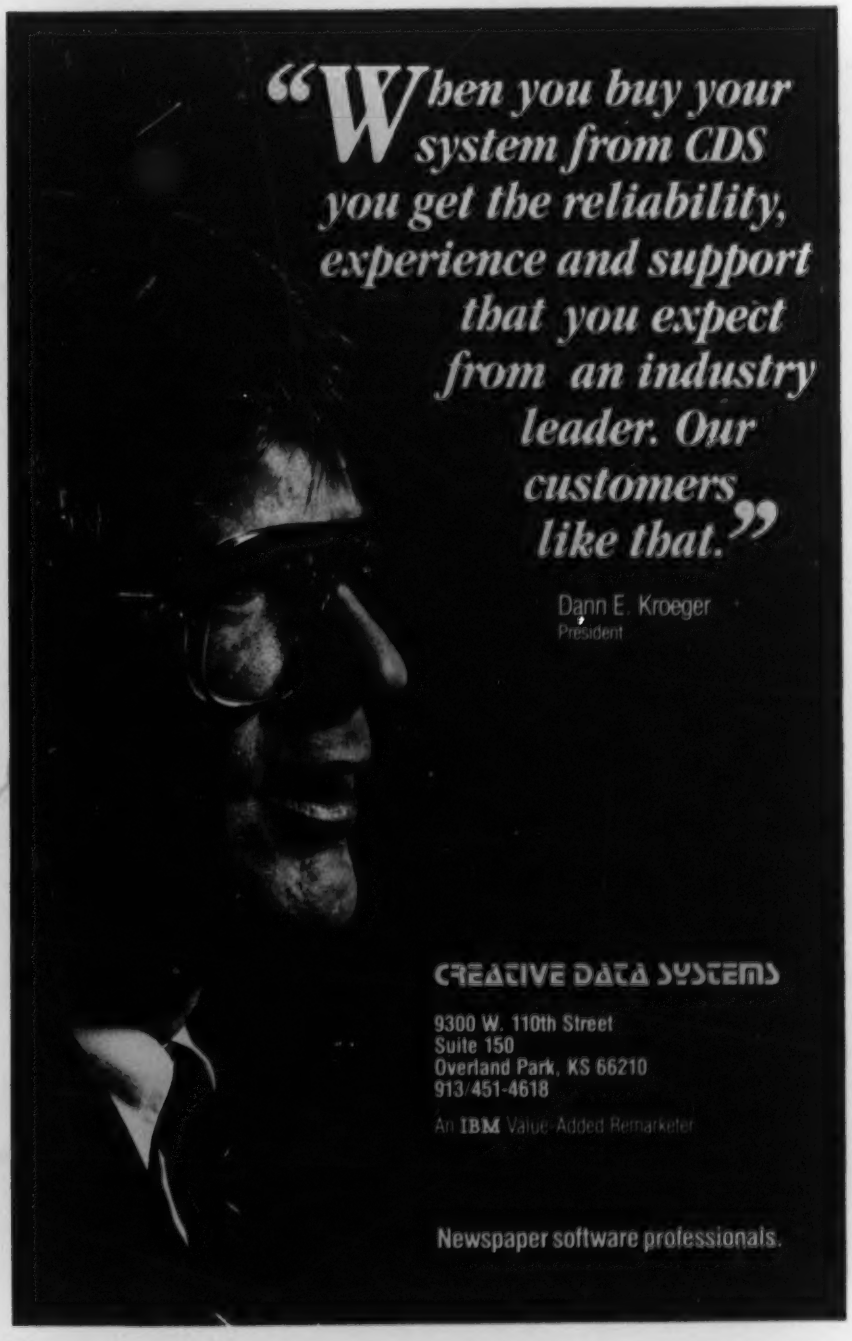
On Feb. 1, the Times, Florida's second-largest newspaper (morning, 302,403) opened fire on the neighboring Tampa Tribune (also an a.m. and fourth-largest at 207,671) by beginning an offensive aimed at cutting a swath through what is nominally Tribune circulation turf. The territory extends from northern Pinellas County across Hillsborough to the University of South Florida campus—an area of active growth being populated by the upscale families so coveted by advertisers.

University of Florida researchers predict that the population of Hillsborough and Pinellas counties will reach 1.1 million each by the year 2000. Currently, Hillsborough has 750,000 and Pinellas—also home of Hearst's Clearwater Sun (morning, 27,507)—has 850,000. Proportionate growth in neighboring counties such as Pasco, Citrus and Hernando is expected to be even more dramatic.

Eugene C. Patterson, chairman of the Times Publishing Co. and a World War II officer under Gen. George Patton, characterizes his newspaper's push to the north and east as logical and inevitable.

"We're backed up in the Pinellas peninsula," Patterson says. "If we look west, we see fish. If we look east, we see one million people in the next dozen years. You can't repeal the laws of geography and demography, and we plan to be there with a good newspaper when the growth comes."

Patterson thinks the Times' chances of becoming a habit with the new residents are good. "The whole region between St. Petersburg, Clearwater and Tampa is attracting enormous high-tech manufacturing growth," he says. "These are young families who are filling the schools with kids and generating a lot of jobs. We have never put out a geriatric journal here despite the older median age of our readership."



"When you buy your system from CDS you get the reliability, experience and support that you expect from an industry leader. Our customers like that."

Patterson perceives the region as "the great new city of Tampa Bay." He sees the three bridges that span the bay as "connectors, not dividers."

"There is a growing new metropolis here," he says, "and the two newspapers were keeping it divided rather than united."

The Times' strategy is to treat this metropolis as one giant city with numerous important component communities. "Our approach will be to provide a major metropolitan newspaper that covers a city of 2 million people but incorporates 10 separate newspapers covering each component community."

Media General's The Tampa Tribune has not been sitting back idly. "We've improved their paper tremendously," Patterson comments. "It's now a very live paper, I'm sorry to say."

The Tribune's response to the incursion has been to strike at the Times in its own back yard. Since late February, it has opened five new bureaus in Pinellas County staffed by 30 reporters and even more circulation people.

Media General recently lured back a veteran Florida editor, H. Doyle Harvill, to command the Tribune's counter-strategy. Harvill left the now-defunct Tampa Times nearly 20 years ago, but last fall he gave up his position as publisher of the Montgomery (Ala.) Journal and Advertiser to become executive editor and vice president of the Tribune.

In Harvill's view, the challenge from the St. Petersburg Times is but one of the many continual attacks on the frontiers of what he likes to call "Tribuneland"—a wide north-south corridor that extends from Gainesville in the north to Lake Okeechobee in the south.

"These beautiful rolling sand hills and dairy pastures have traditionally been Tribune country," Harvill says. "We've had regional editions in these areas for close to 40 years. The sand hills are becoming golf courses and lakes, and the fireman from Detroit is learning that it's just as nice to retire there as on the coast, plus it's a lot less expensive."

Everywhere he looks in Tribuneland, Harvill sees tough competition. "Starting in the far north with Lake City and working south, you have Gainesville, Ocala, Leesburg, Lakeland, all of which used to be small remote papers that have been turned into fine newspapers by The New York Times," he says. "Due west there's another fine New York Times paper in Sarasota"—the Herald-Tribune.

"When we look east, we're right in the middle of the most strategic newspaper area in the country—central Florida—which happens to be the home of The Orlando Sentinel, the most improved paper in Florida in the last 20 years.

"You'll just have to forgive me if I can't get overly excited about the Tampa Bay wars," Harvill says.

Harvill hasn't been awed by St. Petersburg's efforts so far. "They put people in white tie and tails and gave the paper away," he chuckles. "They had a lot of ads in the first papers, but most of them were Clearwater and Pinellas County ads sold at a low pickup rate. A lot of their stories so far have been 'educate-the-reporters' stories—the power-structure bit."

Harvill pointed to a Media General decision of a few years ago to purchase new,

FROM NEW YORK CITY . . .

"If the alienation is growing in the black community, it grows, too, among street cops. They feel more and more alone out there. They feel used. In investigations involving police conduct, they have begun refusing to testify before grand juries unless they are granted immunity. They don't trust the system to protect them.

"This sounds, does it not, very much like the grievance of the ghetto. We have been abandoned.

"Yet it is surely a flight into fantasy to imagine that the cops and the ghetto blacks might find a mutuality in their predicament. It's never happened before—for the very obvious reason that the police are sent in as virtually the only representative of the decision-makers. So ghetto frustration must inevitably fall on the available target. Sometimes it falls justifiably, on those occasions when certain cops demonstrate racist behavior, but it also falls on them even when no such disease exists.

"It's too bad the police and the poor are never going to realize, or be encouraged to realize, how much in common they have—functioning out there on society's dirty, far edge, where chaos breeds. Wouldn't it be a great dream if they could, at least figuratively, march together on city hall?"

NAPP.

larger presses as evidence that "this company has been gearing up to maintain its franchise in this area for some time."

As for him, he's happy to be home and confident of the future of Tribuneland. "I'm a native of this area," Harvill says. "I know every back road, the names, the people and the places. I know every which way the wind blows. The Tribune has been in a lot of counties for a lot of years, and we're here to stay."

Patterson echoes the commitment from the west side of Tampa Bay: "This competition has taken money off both our bottom lines, but in the long pull, it's an investment that has to be made. For our part, we're not content just to divide up the profits in this region. We're going for the brass ring."

SPACE COAST. Drive due east on Interstate 4 from the City of Tampa Bay, through "Tribuneland," and in about three hours you'll reach the Space Coast, where the big guns in the major Florida newspaper skirmish of 1986 have been momentarily silenced. The combatants are wiser but not necessarily sadder.

In late fall of 1985, Gannett, publisher of Cocoa's Today, began an experiment designed to change the reading habits of its customers. Today became Florida Today, an intensely state and local paper stripped of most international and national news, including stock-market and sports reports.

Florida Today was offered as one-half of an "information package" with USA Today, Gannett's national daily. The papers were sold at a combination rate of $3.25 a week. The experiment was designed to determine whether readers were as ready to embrace two daily newspapers as they have been to add television sets to their homes.

After little more than a year, the answer appears to have been a resounding "no." Reader resistance to the change was intense and immediate.

Enraged by what they perceived as an attempt to coerce them to buy two newspapers, 10 percent of the paper's 70,000 subscribers cancelled. Many of them fled to The Orlando Sentinel (all-day, 242,755), which enjoyed a windfall of more than 10,000 new subscribers in Today's Brevard County back yard.

"They were putting out a terrific package—four sections of state and local news and four sections of international-national—but an awful lot of people got mad at them," says Steve Vaughn, executive editor of the Tribune Co.-owned Sentinel. "They had major delivery problems, and people just didn't have time to read that much newspaper. Many told us that they resented the fact Gannett had yanked their newspaper out from under them."

Without even trying, the Sentinel increased its circulation in Brevard from a base of 8,000-10,000 to 20,000 in a matter of months. Orlando responded by beefing up its Brevard news bureau from three to 12 staffers to deal with the growth.

In December, Gannett ended the trial, returned traditional content to Florida Today (**presstime**, Feb. 1987, p. 63) and tried to put the best face on the hard lessons it had learned.

Ed Manassah, editor of Florida Today (morning, 62,277), thinks the experiment proved that there is a significant segment of the readership that does not require two daily newspapers. "But we also learned that most readers are far more accepting of the traditional style of newspaper."

Manassah, who joined Florida Today six months ago from Gannett's Lansing (Mich.) State Journal, says, "Florida Today is a much better paper now because we have retained many of the new things that had been developed while we were building our local coverage. Our listings are much more complete. Our sports section is much better than it was. Staff reaction to Florida Today as it is now has been very positive, and we have more full-time news staffers now than we did before all this started."

To hear both sides tell it, everybody is better off than before the great experiment. Despite a recent dropoff, the Sentinel has retained most of the 10,000 new subscribers that "plopped into our lap," in Vaughn's words.

Florida Today has won back many of its old readers, with Sunday circulation topping 100,000 for the first time ever in February and daily circulation peaking near 75,000. According to Gannett sources, USA Today circulation increased "800 percent" (to 18,000) during the experiment, and the gains have been maintained.

The Space Coast experience seems to typify what the University of Florida's Lowenstein calls "the invigorating character" of Florida's newspaper wars. All over the state, already-good newspapers are improving themselves creatively, seeking to win more market share in a climate of explosive growth.

Capen of The Miami Herald could have been speaking for all of Florida's publishers when he said, "Any time you have good papers working hard to improve their quality, both the readers and the advertisers will benefit." □

Technological Advances for All Newspapers

Technology to the rescue! Today any newspaper, regardless of printing process, can look and feel cleaner and fresher than ever before possible. U.S. Printing Ink technology makes it happen.

Letterpress tradition no longer needs to be associated with readers' sooty fingers. Our *Aqua-Kleen** letterpress news inks have the waterbased emulsion technology which reduces rub by as much as 50% to run clean, *stay clean,* from news stand through a "clean hands" read. Our Civilox* version stays equally clean. And all *Aqua-Kleen* inks cut mist by up to 50%.

If offset quality is your strength, cleanliness comes to you, too, with our *KleenSet** line of technologically advanced low-rub inks. Refreshingly clean formulations deliver superior rub resistance, control dot gain, and avoid roller and blanket build-up.

Switched to flexography? Our *Aqua-News** line offers you just the right waterbased flexo inks that not only look and feel as fresh as a babbling brook, but print crisper halftones and more uniform solids than you'd expect.

With an Eye On the Past And a Look To the Future

ANPA marks century of service to changing world of newspapers

The year was 1887.

Grover Cleveland was President of the United States; all communities with a population of at least 10,000 got free mail delivery for the first time; 18 sugar refineries formed the "Sugar Trust"; the Interstate Commerce Act was passed to regulate railroads; and the nation's first golf club opened in Foxburg, Pa.

There were fewer than 1,000 U.S. daily newspapers. None had a circulation of more than a quarter of a million copies. There were a few newspaper groups, but daily newspapering was primarily a "home-grown" enterprise. Evening papers were predominant. Newspapers' only real competitors were magazines; and about as much revenue was raised from circulation as from advertising.

Although the typewriter was being introduced in newsrooms, and the first Linotype had been introduced at a daily newspaper a year before, most news copy still was being written and set in type by hand.

The telephone was only 11 years old. The roll-fed press was just coming into newspaper use. And newsprint still was being made, in part, from rags.

At noon, Feb. 16, 46 publishers, business managers and advertising managers from daily newspapers in the United States and Canada convened at the Powers' Hotel in Rochester, N.Y. The two-day meeting had been organized under the leadership of William H. Brearley, advertising manager of the Detroit Evening News. "We have, of course, a little plan to suggest," said Brearley, as he called the meeting to order.

The plan was formation of the American Newspaper Publishers Association.

This special report was prepared by presstime *writers and other members of the ANPA staff, drawing heavily from the work of Edwin Emery, professor emeritus of the University of Minnesota, who has written historical works on the Association.*

This month, ANPA celebrates its 100th Anniversary Convention, and it will be a time of reflection on how much things have changed during the Association's first century. The Powers' Hotel is gone (although the building, now offices, still stands). ANPA has grown from a small office in New York City, from where it collected annual dues of $25 from each newspaper; through operating in New York, Chicago, Indianapolis and Easton, Pa.; until it now has all of its functions consolidated in its own multimillion dollar building in Reston, Va., called The Newspaper Center.

The newspaper business has changed, too. The United States has 1,674 daily newspapers, five of which have circulations of more than a million. Newspaper groups control more than 70 percent of U.S. dailies. Although evening papers still dominate numerically, the number of morning papers is growing and a.m. papers account for a majority of daily circulation. And while newspapers continue to be the leading advertising medium, competition for advertising and for peoples' time is coming from a diversity of sources—broadcast and cable television, direct mail, magazines, radio, free newspapers, shoppers, electronic information services, catalogs, directories, etc.

The Canadian newspaper scene has changed in similar fashion. The 91 daily newspapers in existence in 1891 have grown to today's 111 dailies.

Typewriters have all but disappeared from the newsrooms of most newspapers; news copy is now composed by computers and may be sent by microwave or satellite to remote printing plants. News and advertising is beamed to satellites and back to receivers at newspapers. Production experts are beginning to talk about the prospect of electronic printing, eliminating newspaper presses as we know them. Although newspapers still are printed on paper, wood pulp long ago replaced rags in newsprint composition and the possibility of producing newsprint from kenaf, a plant that produces about 12 times more paper pulp per acre, per year, than trees, is being studied.

But many of the concerns that dominated early ANPA debate remain the focus of the Association, which today serves nearly 1,400 daily and non-daily newspapers accounting for more than 90 percent of the daily newspaper circulation in the United States and 80 percent in Canada.

First ANPA President William Singerly

1887-1899

At the beginning of the period:

- Number of U.S. dailies—971
- Number of charter members of ANPA—50

"The objects of this Association are the protection of the members from irresponsible customers; the gathering and disseminating among its members of news of value to them; and the rendering to each other of such other assistance as may be within their power."

—Article adopted at first ANPA meeting

To understand what compelled formation of a trade association of daily newspapers in 1887 is to know what was happening in the United States and in the newspaper business at the time. The country was evolving from one that was agricultural and rural into one that was industrial and urban. Newspapers were reflecting those changes.

In the last three decades of the 1800s, U.S. population doubled and city dwellers tripled.

During that time, the number of daily newspapers quadrupled and daily circulation grew six-fold as newspapers aggressively pursued readers in the expanding cities. The largest daily at the time, the New York World, had seen its circulation grow from 20,000 in 1883, when Joseph Pulitzer bought it, to 250,000 in 1887, driven by its lively news coverage, mechanical and format improvements, and cut-rate price.

Rapidly rising circulations caused publishers to be increasingly concerned about newsprint costs. There was good reason. During the Civil War, the price of newsprint had reached $442 a ton, and although by 1880 it had declined to $138 a ton with the introduction of wood pulp as a substitute for rags, that price would equal about $1,590 in today's dollars. By 1899, however, the price had dropped to $42 a ton, thanks to developments in the use of sulphite in the wood pulping process.

The last decades of the 19th century also saw rapid industrial growth. Newspapers were becoming increasingly mechanized.

It also was a time of great labor unrest. Strikes aimed at reducing the 10-hour workday took place nationwide in 1886. Many newspaper workers already had joined the labor movement. The International Typographic Union had been formed in 1852 and had affiliated with the American Federation of Labor when it was launched in 1881.

Mass production was beginning, and producers needed to advertise their wares widely. Advertising was providing a growing percentage of newspaper revenues. In 1879, circulation revenue of daily newspapers was $22 million, advertising $21 million. By 1909, circulation revenue for all newspapers was $84 million and advertising $148 million. The number of advertising agents and agencies, some of questionable reputation, was increasing, and they were demanding discounts and commissions for placing ads with newspapers.

Newspaper organizations existed at the time, but none was devoted to the business problems of newspapers. It was such an organization that Brearley proposed to form. He had the initial support of three other influential newspapermen: Jerome C. Briggs of the Ohio State Journal in Columbus, Milton A. McRae of the Cincinnati Post, and J. Ambrose Butler of the Buffalo News. They decided to call a meeting if they could get the signatures of 30 of the 211 publishers of dailies with more than 5,000 circulation. They got 80.

The executives at the first meeting represented newspapers from 13 states, the District of Columbia and Canada: 19 from New York State, five each from Michigan and Ohio, three from Indiana, two each from Massachusetts, Pennsylvania and Rhode Island, and one each from Connecticut, Delaware, Florida, Iowa, New Jersey, Wisconsin, Washington, D.C., and the province of Ontario. (ANPA attracted its first West Coast member, the San Francisco Call, in 1889.)

The newspaper executives turned first to advertising topics, including rate cutting and agent commissions. They decided to establish an office in New York City to keep members informed of advertising developments. That first office was at 104 Temple Court. Subsequently, ANPA headquarters moved

The Baltimore Sun

Turn-of-the-century newsrooms like that of The Baltimore Sun were largely white, male and pencil-and-paper operations.

several times in the city before relocating, in 1972, to Reston. The Association was governed initially by an Executive Committee, which evolved into a Board of Directors when the Association was incorporated in 1897.

Early bulletins of the Association are full of warnings about which advertising agencies to avoid and which advertisers should be required to make cash payment. Evolving legislation, a subsequent lawsuit and changes in priorities for ANPA sharply reduced the Association's role in these and related matters. The credit and collections function eventually evolved into ANPA Credit Bureau Inc., which became a separate, wholly owned subsidiary of the Association in 1975.

The early bulletins also provide evidence of ANPA as a lobbying organization from the very beginning, as members from New York state were urged to write state legislators to oppose restrictions on the sales of patent medicines.

The second topic under discussion at ANPA's inaugural meeting was newspaper labor relations. In fact, the resolution listing "objectives" of the new association included one clause that, albeit obliquely, authorized publishers to take collective action in meeting labor demands. Known as the "general welfare" clause, it set as one of the objectives of the organization: "the rendering to each other of such other assistance as may be within our power."

As early as 1889, ANPA was publishing statistics on wages. In 1890, the Association authorized the establishment of a Labor Committee.

In its early years, the Association also formed other committees, which provide a good indication of the major concerns of newspapers of that day.

The ANPA Postal Committee was established in 1892 to monitor legislation being proposed to correct perceived abuses of second-class rates. The committee endorsed rural free delivery, subsequently established in 1897.

Committees were appointed to investigate new production methods. Then, as now, the recommendations of ANPA technical committees carried considerable weight. For example, in 1893, after a committee reported that the Remington typewriter was the best on the market, 500 of the machines were ordered through ANPA's New York office.

A committee on libel law was authorized in 1893 to prepare a model libel law and get it adopted by states. A committee on copyright law was established in 1894. And, in 1897, a committee was formed to seek an end to the tariff on imported newsprint.

1900-1929

At the beginning of the period:

- Number of U.S. dailies—2,154
- Number of ANPA members—224

"What are the prospects for cheaper newspaper! To what extent is the so called paper trust responsible for the advance in the price of newspaper!"

—Topic for discussion at the ANPA's 14th Annual Meeting in 1900

No wonder the publishers were concerned. In 1900, the cost of newsprint increased 33 percent, from $42 a ton to $56. Newspapers suspected the "paper trust."

Although the Sherman Antitrust Act had been passed in 1890, it was not vigorously enforced in its early years, and businesses continued to combine. The newsprint business was no exception. International Paper Co. was formed in 1898 and controlled 18 mills, the majority of the mills east of the

Mississippi River. In 1900, General Paper Co. was formed by 26 mills in Wisconsin, Michigan and Minnesota to compete with International.

Until this time, newsprint prices had been going down, reflecting the economies of new manufacturing processes.

At the same time, U.S. daily newspapers' newsprint consumption was growing from 100,000 tons in 1880 to 569,000 in 1900, making the price of paper an increasingly important consideration.

At that 1900 ANPA Convention, a resolution was passed asking Congress to investigate newsprint prices and the paper trust. At the Convention four years later, ANPA continued to press for an investigation, this time urging President Theodore Roosevelt and his attorney general to begin an antitrust suit.

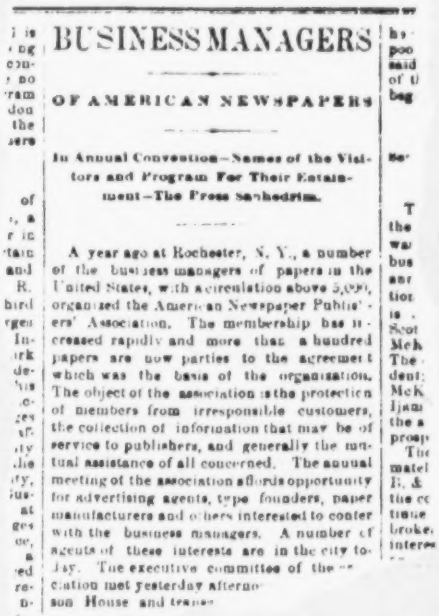
Finally, the call was heeded. The Justice Department's suit against the General Paper Co. was one of 44 instituted during Roosevelt's administration. In 1906, General Paper was found to be a combination in restraint of trade and was dissolved.

But paper problems continued to trouble the publishers. In 1907, the Association reissued its call for repeal of the tariff on newsprint. Like other imports, newsprint had become subject to the tariff imposed during the Civil War as a revenue-raising measure, but the tariff endured as a protectionist measure at the insistence of big business. The American Paper and Pulp Association, founded in 1878 as the American Paper Makers Association, argued that free entry of Canadian newsprint would hurt manufacturers.

In 1911, President William Howard Taft addressed the ANPA Convention, advocating legislation to establish a reciprocity agreement whereby newsprint would be imported free if Canada did not apply an export duty. A former reporter for The Cincinnati Times, Taft apparently was the first sitting president to address ANPA.

That bill was passed by Congress and signed by Taft later in the year. Then, in 1913, President Woodrow Wilson's first year in office, a law was enacted that removed all duties on wood pulp and newsprint. This ended the long ANPA battle and sparked an avalanche of newsprint imports from Canada. By 1926, the amount of newsprint imported from Canada exceeded that produced domestically.

Newsprint supply challenged ANPA during World War I. But an even greater concern during the war was censorship. At the 1917 Convention, ANPA voted in favor of strict but voluntary press censorship.



BUSINESS MANAGERS

OF AMERICAN NEWSPAPERS

In Annual Convention—Names of the Visitors and Program For Their Entertainment—The Press Sanhedrim.

A year ago at Rochester, N. Y., a number of the business managers of papers in the United States, with a circulation above 5,000, organized the American Newspaper Publishers' Association. The membership has increased rapidly and more than a hundred papers are now parties to the agreement which was the basis of the organization. The object of the association is the protection of members from irresponsible customers, the collection of information that may be of service to publishers, and generally the mutual assistance of all concerned. The annual meeting of the association affords opportunity for advertising agents, type founders, paper manufacturers and others interested to confer with the business managers. A number of agents of these interests are in the city today. The executive committee of the association met yesterday afternoon House and transa

The Indianapolis News carried a Page-1 report on ANPA's second annual meeting, held in that city in 1888.

At the end of World War I, the demand for advertising space exploded. At the same time, newsprint manufacturers raised the price of paper. Several drastic solutions were discussed, including one congressional proposal to exclude from the second-class mails any newspaper with more than a designated number of pages. At the 1920 ANPA Convention, a Publishers' Buying Corp. was established to buy paper for smaller publishers.

Besides newsprint issues, the Association during the first three decades of the 20th century focused on labor, postal, advertising, production and government affairs.

In 1900, a Special Standing Committee on labor relations was approved, headed by a special commissioner. The committee, with a paid staff, was to carry out the Association's policy on labor relations. That policy was one of conciliation, rather than confrontation, a tack that was in contrast to that of some other industries of the day. The first labor office was established in Chicago and moved, in 1911, to Indianapolis where the ITU, the biggest labor union in the newspaper business, was then located. Later, the office moved back to Chicago, and in 1976 it moved to The Newspaper Center. (See time-line chart, pp. 30-33.)

Postal matters continued to get attention. In 1912, a rider was attached to the Post Office appropriations bill that required publications using second-class mail to file sworn statements listing the editor, managing editor, publisher, business manager, owner, stockholders, bondholders, mortgagees or other security holders and giving the average daily circulation for the past six months. (It was this law that prompted ANPA and other trade associations to form the Audit Bureau of Circulations in 1913-14.) Publications also had to mark all matter published for a price "advertisement."

The new law, known as the "newspaper publicity law," was challenged in court, and the case went all the way to the U.S. Supreme Court. Although not the actual complainant, ANPA was the force behind the case. In 1913, the court ruled against ANPA's position, saying that the lower second-class mail rate was a privilege, not a right, and that Congress could prescribe the conditions of its use.

Advertising remained a major topic. From the first, ANPA Conventions attracted various other newspaper interests, including advertising agents. After establishing a Committee on

Advertising Agents in 1899, ANPA and American Association of Advertising Agencies began meeting simultaneously in 1901.

In 1913, the Bureau of Advertising was formed as an auxiliary unit of ANPA. It consolidated the Daily Newspaper Club, which had been formed by ANPA members to obtain more display advertising that they saw increasingly going to magazines, and two similar groups. Although it was under the direction of an ANPA committee, the bureau had no financial ties with ANPA and admitted non-ANPA newspapers into its membership. In 1950, the bureau became a completely separate entity, and in 1973, it was renamed the Newspaper Advertising Bureau.

ANPA established a Committee on Federal Laws in 1922, directing it "to exercise its utmost effort to maintain the freedom of the press whenever and wherever it may be threatened." The next year, it retained Elisha Hanson as its attorney and Washington representative. In 1935, Hanson became general counsel and served in that post until 1962, when he was succeeded by his son, Arthur B. (Tim) Hanson. ANPA, which had been represented by various outside legal counsel since 1897, began developing its own in-house staff of lawyers in 1978 when it began its Legal Department.

In 1925, the Convention voted to establish a Mechanical Department "with a view to improving the general production of newspapers." Mechanical conferences began in 1927. The first one was held in Harrisburg, Pa., and was attended by 80 representatives of 54 papers in 21 states. This year's ANPA/Technical Exposition and Conference is expected to draw more than 10,000 registrants.

A second Convention per year began in 1925. These events, held in the fall usually at a resort location, were halted in 1932 during the Depression.

Also begun in this period was a Traffic Department, charged with obtaining the lowest-possible transportation rates for newspapers' raw and finished products.

This was a watershed era for newspapers. The number of daily newspapers hit an all-time high of about 2,600 in 1909. ANPA budgets also grew, with receipts from dues and initiations rising to $40,000 in 1908 and $75,000 in 1918; total receipts reached $100,000 in 1918.

1930-1945

- Number of ANPA members—501

". . .with radio now established as a definite competitor of newspapers, it should be required to stand on its own feet and make only that development to which it is entitled on its merits."

—From the report of the Radio Committee, presented at the ANPA Convention in 1930 by Chairman Elzey Roberts of the St. Louis Star

In the 1930s, with the postwar boom over, newspapers felt the effects of the Depression and a new competitor, radio. Radio advertising revenues jumped from $4 million to $40 million between 1927 and 1929.

ANPA had established a Committee on Radio in 1923, three years after the first scheduled broadcast took place—announcing the results of the presidential election. By the early 1930s, it was clear that radio would compete with newspapers for news and advertising, and newspapers didn't want to give the competition any more help than it had to. In 1931, the ANPA Convention resolved that radio program logs published in newspapers should be handled as paid advertising.

A year later, the Association took steps to restrict news information available to radio. At that time, the ANPA Board of Directors recommended that press associations—today's wire services—should not provide news to radio before it could be published by newspapers. Furthermore, the board said radio news broadcasts should be confined to brief bulletins, which would whet audience's appetites for the full story in the newspaper. The press associations obliged.

A year later, after radio began gathering its own news, ANPA agreed to establishment of a Press-Radio Bureau whereby press associations would provide brief news summaries that radio would air without commercial sponsorship. That lasted about a year, until new press associations that were not party to the agreement began, and the older press associations sought to get out of the pact.

Of course, if newspapers considered radio the enemy, then the enemy was themselves. Newspapers were some of the earliest

owners of radio stations. In 1920, The Detroit Evening News became the first newspaper to own a radio station. In 1941, the Federal Communications Commission decided to study the "problem" of newspaper/radio cross-ownership. It determined that 249 of the 882 radio stations had some newspaper affiliation. The FCC took no action to restrict ownership at that time.

In 1975, however, the FCC issued rules prohibiting the future cross-ownership of newspapers and broadcast stations and ordered 16 "egregious," "small-market" combinations broken up. By that time, of course, television had arrived on the scene; sale of TV sets to the public began in 1939.

The advent of electronic competition caused increased emphasis to be placed on the Bureau of Advertising. In 1938, the bureau began a research project and series of publications, the Continuing Study of Newspaper Readership.

It was also a period of landmark court cases.

One involved a Minnesota law that allowed judges to suppress any publication that they determined to be a "malicious, scandalous, and defamatory newspaper, magazine, or other periodical." ANPA denounced the law and, after great internal discussion and strong dissent, came to the aid of a Minneapolis newspaper that was enjoined from publication—but ANPA criticized the publisher's odious views along the way. The case went to the Supreme Court which, in 1931, handed down a 5-4 decision in *Near v. Minnesota* that established the still-existing prohibition against prior restraint of publication.

Some ANPA gatherings of yesteryear required formal attire. Attending this mid-1940s dinner for Howard Davis, ANPA president 1932-35, were (clockwise, from left foreground) George N. Dale, David W. Howe, W.E. MacFarlane, Amon G. Carter, Walter M. Dear, S.R. Winch, F.I. Ker, J.L. Stackhouse, C.F. McCahill, ANPA General Manager Cranston Williams, E.S. Friendly, Commander James G. Stahlman, W.G. Chandler, Davis, Linwood I. Noyes, John Stewart Bryan, E.H. Butler, J.D. Barnum, William F. Schmick and ANPA General Counsel Elisha Hanson.

ANPA won another Supreme Court victory in 1936, when the high court declared unconstitutional a Louisiana tax on the advertising income of papers with more than 20,000 circulation.

The New Deal of Franklin D. Roosevelt brought newspapers increased labor problems, which in turn led to even more major court decisions.

The 1933 National Industrial Recovery Act, which gave employees the right to collective bargaining, also called for establishment of codes of fair competition for all industries. ANPA drafted the code for daily newspapers. After some modification, it was accepted by the federal government. But newspaper workers complained about the salary provisions. The dissatisfaction of editorial employees led to the formation of the American Newspaper Guild in 1933. The NIRA was declared unconstitutional in 1935.

In 1937, the activities of ANPA's Open Shop Department ended after the Newspaper Guild and the Allied Printing Trades Council of Greater New York requested a Senate investigation of the department, which had been formed in 1922 as newspapers adopted a more confrontational approach to labor problems.

Also in 1937, ANPA lost a key labor case before the Supreme Court involving the constitutionality of the 1935

"It was my good fortune to be at the starting gate of the newspaper production revolution. One of our first triumphs was developing the high-speed etching system. . . . We never dreamed computers would take over."
–William Dwight, ANPA Chairman 1956-58

"The greatest service ANPA performs for its members is keeping track of government plans and actions that affect the free press. In addition, it provides a clearinghouse for ideas and innovations that improve the service of the press to the public."
–D. Tennant Bryan, ANPA Chairman 1958-60

"ANPA has meant fine leadership supplied by a great staff in the cause of freedom of the press . . . the providing of up-to-date information on all matters of interest to publishers . . . and great service in mechanical and production matters."
–J. Howard Wood, ANPA Chairman 1966-68

Keeping track of finances in the New York office in 1962 were (from left) Thomas C. Fichter, now senior vice president and deputy general manager, Richard Kelleher, Charles J. Herrell and two outside auditors.

Wagner Act and its applicability to newspapers and press associations.

Among other things, the Wagner Act, also known as the National Labor Relations Act, prohibited employers from refusing to engage in collective bargaining and from interfering with employees' membership in a labor union. In 1936, the National Labor Relations Board ordered the Associated Press to reinstate a discharged employee who said he had been fired for activities relating to the American Newspaper Guild. AP took the case to court; ANPA was an amicus curiae. In 1937, the court upheld the constitutionality of the Wagner Act and said: "The publisher of a newspaper has no special immunity from the application of general laws. . . ."

The heated atmosphere further inflamed the labor situation, and soon newspapers were taking steps to protect themselves. In 1939, ANPA instituted strike insurance. In 1963, Mutual Insurance Co. Ltd. was founded at the request of ANPA members to operate the strike insurance program and to offer libel insurance.

Besides dealing with labor law, ANPA engaged in intense lobbying on other New Deal matters, including an unsuccessful effort to scuttle legislation giving the Federal Trade Commission authority to regulate unfair or misleading advertising of products in interstate commerce.

ANPA, in 1939, was a founding member of the National Council on Professional Education for Journalism (now called the Accrediting Council on Education in Journalism and Mass Communications), the journalism school accrediting body that came into being after ANPA President James G. Stahlman of the Nashville Banner criticized journalism education.

With the start of World War II, attention turned away from domestic affairs.

In 1939, as the war in Europe began, ANPA created a committee on supplies. In December 1940, the committee advised ANPA members to stock up on supplies that would be restricted by the Office of Production Management. One of those products was newsprint, and the effort to keep supplies flowing to member newspapers involved ANPA leaders in one of their strangest roles—in effect, that of government rationers.

In 1942, the War Production Board named a Newspaper Industry Advisory Committee with many ANPA leaders as members. The committee concluded that a reduction in the use of newsprint was necessary. In January 1943, the WPB told newspapers that they should use no more newprint in the first quarter of that year than they did during the first quarter of 1941, which meant an average cutback of 10 percent. Cutbacks grew each quarter until 1944.

In 1942, also after consulting with ANPA representatives, the Office of Price Administration froze the price of newsprint at $50 a ton. The price eventually rose to $84 a ton in 1946 before the OPA went out of business.

Even before the United States entered the war, ANPA was concerned about newspapers' role in covering the conflict. At the 1941 Convention, the Association resolved that while "newspapers recognize their primary obligation to further national defense in every possible manner," they "also recognize their essential duty to furnish complete and accurate information compatible with military necessities."

It asked for the "cordial consideration and cooperation" of government authorities.

Two years before the war ended, ANPA gave heightened recognition to the important role played by community newspapers. It elected its first president from a small daily, Linwood I. Noyes of the Daily Globe of Ironwood, Mich.

1946-1959

At the beginning of the period:

- Number of U.S. dailies—1,872
- Number of AN?A members—756

"Now we turn, flushed with victory, from the responsibilities of war time to the equally great responsibilities of peace time. There are many problems to be faced and difficulties to be overcome that present to us a challenge, which must be met unflinchingly with all the courage, the strength and the ability that we possess."

—From the 1946 Convention address of Arthur P. Irving of the Glens Falls (N.Y.) Post-Star and Times, program chairman

One of the challenges ANPA took on after the war was to improve newspaper production. No significant new technology had been developed since the introduction of the Linotype in 1886. The Board of Directors decided that the newspaper business would have to find and fund its own new technological breakthroughs. In 1947, the Association named a research director; two years later a research laboratory opened in Easton, Pa., with the aid of J.L. Stackhouse, publisher of the Easton Express. ANPA is the only known industrial trade association in the world that operates its own technical research and training facility.

Working hand-in-hand with suppliers to the newspaper business, the ANPA technical research staff fostered many innovations, beginning with the invention of high-speed metal engraving, which enabled newspapers to use photocomposition and cut advertising composition and makeup costs dramatically. The benefits continue to this day.

In 1957, the ANPA Research Institute merged with the Institute of Newspaper Operations, an organization established separately by a group of publishers. Until 1972, the Institute operated with a separate board of directors. In 1983, the research operations were moved to The Newspaper Center.

The postwar era, also saw ANPA and other newspaper organizations around the world founding the International Federation of Newspaper Publishers in 1948. ANPA continues to participate in that and other groups whose mission is to promote world press freedom.

In the labor area, the Taft-Hartley Act, passed in 1947 with ANPA's support, supplanted the Wagner Act and ended the closed shop. Subsequently, ANPA filed charges against the ITU with the National Labor Relations Board, which in turn charged the ITU with several violations of Taft-Hartley.

In 1955, the Antitrust Division of the U.S. Department of Justice filed suit against ANPA, the American Association of Advertising Agencies and other trade associations charging that

"As one of the 'early mavericks' on the ANPA Board, my greatest personal satisfaction was as part of the group that got Board support to move ANPA out of New York City to its own building in Reston, Va."

–Richard H. Blacklidge, ANPA Chairman 1970-72

"Without ANPA the newspaper business would not have a rudder. My fondest memory of the ANPA is all the wonderful people who worked there and the fellows who worked on all the papers who were real supporters of the 'rudder.'"

–W. Davis Taylor, ANPA Chairman 1972-74

"At a Board meeting in the mid-1970s we cut through some language suggested by lawyers and adopted revised articles of incorporation that started with the declaration that the ANPA's reason for being is 'to advance the cause of a free press.'"

–Harold W. Andersen, ANPA Chairman 1974-76

Showing stereotype plates to visitors in the mid-1950s is ANPA's Frank J. Stanczak (right), who remains a member of the technical staff today.

"My fondest ANPA memory is the result of the Search Committee that sought a new general manager in 1975 following Stanford Smith's retirement. The past 12 years have convinced me that Jerry Friedheim was a superb choice."
–Joe D. Smith Jr., ANPA Chairman 1976-78

"ANPA is the industry 'glue' that holds newspaper publishing executives together for their common benefit. The umbrella that it provides for all other specialized newspaper industry associations is a mutually beneficial one for them all."
–Allen H. Neuharth, ANPA Chairman 1978-80

"ANPA is central to the continued progress of all newspapers, large and small. On the highest level, it represents the industry and advances its interests on major issues. . . . I was honored to be the first woman to serve as head of ANPA."
–Katharine Graham, ANPA Chairman 1980-82

their practice of officially "recognizing" advertising agencies was a violation of the Sherman Antitrust Act. Newspapers relied on the ANPA's decision as to whether a company was a bona fide advertising agency in determining whether to grant it the customary commission and discount. The suit never got to trial. In 1956, ANPA and the other defendants entered into consent agreements with the government, agreeing, among other things, to cease their recognition activities.

During this period ANPA began cosponsoring, with International Circulation Managers Association, the Newspapers in the Classroom program, which continues today under the auspices of ANPA Foundation as Newspaper in Education.

All in all, especially during the eight years of Dwight D. Eisenhower's presidency, it was a calmer time for newspaper publishing. But ANPA and the newspaper business in general had used this period to place in motion many of the innovations that would lead to the explosion of activity and progress that marks the current era.

1960 *to present*

At the beginning of the period:

- Number of U.S. dailies—1,850
- Number of ANPA members—848

"How deep-rooted Government's attitude is against the people's right to know is best illustrated in a short paragraph which appeared in an Air Force manual first issued in 1955, and only recently withdrawn because of numerous protests. This is what the manual said:

'Another rather silly remark often heard concerning security is that Americans have a right to know what's going on. Most people realize the foolhardiness of such a suggestion. Keep in mind that public news media present only as much information as the government wants to release.'

"However, the fight for a freer flow of information from Government continues in both House and Senate."

—From the report of the Federal Laws Committee presented at the 1960 Convention by Chairman M.W. Armistead III of the Roanoke (Va.) Times and World-News

With the rise of "big government" (particularly federal government), the growing litigiousness of society (particularly in the libel area), and the need to streamline operations (particularly in the expensive and labor-intensive pre-press area), ANPA's challenges were clear and not a little daunting as the modern era dawned.

Although the Association had a Freedom of the Press Committee as early as 1928, recent years have seen ANPA increase its activities aimed at ensuring an open government. The Association established a Government Affairs Department in 1976, as the government and the courts increasingly threatened First Amendment rights.

It has joined with other newspaper-business organizations to strengthen access to federal government information through the Freedom of Information Act, enacted in 1966, and the Government in the Sunshine Act, enacted in 1977.

In the wake of a news blackout during the United States' invasion of Grenada in October 1983, ANPA was a leader in efforts to improve military-press relations and was instrumental in formation and periodic testing of a contingency press pool to accompany future military missions.

In 1964, the U.S. Supreme Court issued its landmark ruling in *New York Times v. Sullivan*, requiring public officials to show that the press acted with "actual malice" in order to sustain a libel judgment. In 1967, this protection was extended to cases involving public figures. In 1971, the court held that private individuals involved in matters of general and public interest also come under the actual malice test. In subsequent decisions, however, the court narrowed the media's protection in private-figure cases.

In 1978, ANPA established its Legal Department. Since 1980, the Association has filed *amicus* briefs in seven libel cases before the U.S. Supreme Court. An apparent increase in the number of libel cases and in the number of adverse decisions coming from the Supreme Court prompted ANPA and other media organizations to form the Libel Defense Resource Center in New York City in 1980. It provides a place to which media defense lawyers can turn for information and exchange of views on libel matters.

A 1969 Supreme Court decision holding that a joint operating arrangement between daily newspapers in Tucson was a violation of antitrust law thrust ANPA into a legislative fight that resulted in enactment of the Newspaper Preservation Act. That 1970 law grants limited antitrust immunity to competing newspapers for merging their production and business operations while retaining separate news and editorial voices if one is a "failing newspaper." The legislation was not supported by all newspaper interests.

The 1960s ushered in many changes to newspapers' relationship with the U.S. Postal Service. Although remaining allies in the delivery of second-class mail, they have taken opposite sides on a number of issues, particularly third-class rates.

Until 1979, third-class rates were relatively high, and

advertisers had little incentive to use the mail category's bulk-mail service. But in 1979, as the result of a major rate case, relatively low fees were established for third-class mail presorted to the carrier route. To the delight of USPS, volume soared in large part in the form of advertising preprints.

Fueling the trend in 1981 was the evolution of "shared mail," in which two or more ad preprints are united as one third-class piece. ANPA maintains that third-class rates are too low because they do not cover USPS costs to provide the service. The Association contends that first-class mail subsidizes third-class.

ANPA also played a major role in the revolution of technology that swept the newspaper business beginning in the 1960s:

- In 1961, the ANPA research staff worked to perfect the offset printing process for newspapers. The effort was aimed at improving reproduction and enabling newspapers to use new, low-cost electronic composition techniques. The Association also initiated the development of a plastic plate to replace lead stereotype plates, enabling letterpress newspapers to convert to electronic composition. The efforts resulted in getting the lead out of the newspaper business, both in the composing rooms and in the pressrooms, as Linotype machines and stereotype plates were phased out.
- In the late 1960s, ANPA led the development of computer technology for newsrooms.
- The cost of new presses prompted ANPA's work in the 1970s on new press designs, resulting in the development of a flexographic printing press for newspapers.
- Oil shortages in the 1970s spurred ANPA's development of ANPA-INK,® a non-petroleum based ink.

Technical activities were not limited to laboratory work. In 1962, the Association began offering Technical Advisory Services for member newspapers. In 1965, it established a wide range of technical training programs, and in the early 1970s, with newspapers facing new government regulations from the Federal Occupational Safety and Health Administration, the Environmental Protection Agency and others, ANPA began assembling a staff of industrial hygienists to assist newspapers with environmental matters.

At the same time it has been working to apply new technologies to the newspaper business, the Association has been looking at who else might be using new technology to newspapers' detriment—particularly in the telecommunications field.

In the past two decades, ANPA telecommunications activities have changed focus. Earlier, newspapers were concerned as users about the access to and cost of telecommunications facilities such as telegraphs and telephones. With the introduction of videotex technology, personal computers and the growth of cable television, newspapers also became concerned that these technologies could become competitors.

The Press Communications Committee, established in 1945, became the Telecommunications Committee in 1978. In 1980, ANPA established a Telecommunications Department to keep newspapers abreast of developments of interest to newspapapers.

During this period, newspapers themselves began to experiment with new telecommunications technologies. For example, an ANPA/NAB survey found that some 110 newspapers launched ventures with cable television operators between 1982 and 1984. Most of these involved providing news and advertising texts on the television screen, although some were in video format. Two major newspaper companies, The Times Mirror Co. and Knight-Ridder Inc., also conducted experiments with videotex, an electronic home-information service.

"My fondest memory of serving ANPA is the effort to devise press pool guidelines for covering military actions after the 1983 Grenada invasion. The media-wide committee that I chaired worked with the White House to get a solution."
–William C. Marcil, ANPA Chairman 1982-84

"If the adage is true that all of us are smarter than any one of us, then the unity provided by the industry's great Association brings together fine minds in a way no single individual or newspaper can to provide collective leadership."
–Richard J.V. Johnson, ANPA Chairman 1984-86

"ANPA's work for its members and for their societies in helping to 'preserve the blessings of liberty' has been and will always be our greatest challenge and our greatest contribution. Each of us can be proud to be a part of such a magnificent mission."
–Alvah H. Chapman Jr., ANPA Chairman, 1986-87

Among the first recommendations of the new Telecommunications Committee was a study to determine whether individual newspapers could use small satellite earth stations for wire service and advertising material. They could, and today they do.

ANPA has been especially vigorous during this period in attempting to make sure that telephone companies do not have an unfair competitive advantage in the emerging telecommunications field. In 1981, the ANPA Board adopted the "Diversity Principle," which provides that monopoly telephone companies should not be allowed to own or control the information that flows over their transmission facilities. In 1982, the Justice Department and AT&T settled a longstanding antitrust suit. The settlement, which required AT&T to divest its local Bell telephone companies, contained the Diversity Principle, and the effort to maintain that principle continues today.

During this period of technological change, the development of new collective bargaining strategies became increasingly important. Strike activity, arbitrations, court cases and NLRB complaints increased significantly as jurisdictional and management rights issues were tested beyond the negotiation of collective bargaining agreements. ANPA resources were directed toward providing information to help solve these challenges.

In the modern era, ANPA labor relations activities have changed, expanding to cover the total human-resource management area. What was once the Labor Department and later the Labor and Personnel Relations Department now has the

name "Human Resources," as does the corresponding ANPA committee. Today, while the Human Resources Department continues to keep close tabs on labor developments, it also maintains information on a wide range of other employee-relations issues.

Another constant concern of ANPA is newsprint. After a two-year effort by ANPA, the Treasury Department in 1965 issued a new definition of duty-free standard newsprint that allows papermakers sufficient flexibility to do such things as experiment with new and cheaper species of wood and wood substitutes.

As the price of newsprint has risen, the Association has stepped up its efforts to find an alternative to wood in the manufacture of newsprint. In 1979, the International Paper Co., in cooperation with ANPA, produced kenaf newsprint, which was tested at several daily newspapers. In 1982, a study commissioned by ANPA found that the economics could, under certain conditions, justify development of a kenaf newsprint industry in the United States. That same year, ANPA sponsored an International Kenaf Conference. Currently, efforts are being made to get the financial backing for a feasibility study and business plan for kenaf newsprint production in the United States.

As it has in the past, ANPA came to the aid of publishers at a time of tight newsprint supply in the mid 1970s. In 1974, it issued a special report on "Newsprint Conservation Methods." In 1975-1976, when newsprint mill and railroad strikes caught smaller newspapers with dwindling supplies, ANPA put these papers in touch with others willing to lend some paper.

In 1969, ANPA's Newsprint and Traffic departments merged. In addition to its traditional service of monitoring freight rates, ANPA has urged railroads to build super-cushion under-frame cars to reduce damage to newsprint in transit and encouraged "piggy-back" services (trailers on railroad flatcars) for shipment of presses.

Although ANPA relinquished much of its involvement in advertising marketing in 1950 when the Newspaper Advertising Bureau became a separate entity, the Association has continued to support efforts to make newspapers a more attractive buy for advertisers. In 1980, the ANPA Board endorsed a voluntary system of Standard Advertising Units and urged its adoption by newspapers. In 1983, the SAU® system was expanded, with ANPA's support, to include a recommended, standard six-column format for broadsheet newspapers.

ANPA also has been active in attempting to stimulate readership. In 1977, it sponsored with the NAB and 14 other organizations the Newspaper Readership Project. The six-year, $5 million-effort investigated why people do or do not read newspapers and what newspapers can do about it.

Readership concerns also are at the heart of ANPA Foundation, started in 1961 as the educational arm of the Association. Today, its major activities are:

- Expanding the Newspaper in Education program. In 1983, ANPA Foundation began, with the cosponsorship of the International Reading Association, the annual National Newspaper in Education Week.
- Improving literacy.
- Supporting and influencing journalism education.
- Encouraging minority employment in the newspaper business.
- Educating the public as to its stake in the First Amendment.

ANPA's own mission was redefined in 1975, when the Convention amended the bylaws to state as the organization's leading purpose: "To advance the cause of a free press." Members also voted to admit non-daily newspapers as members.

The Association has changed in many other ways since the mid-'70s. In 1977, a Training Services Department was established to run the three non-technical training seminars then offered by the Association: Marketing Seminar, Management Development Workshop, and Conference for Young Newspapermen. These offerings were refined and to them were added: Newspaper Training Conference in 1978; Strategic Planning Seminar in 1979; Managing People in the Circulation Department in 1979; Leadership in the Newsroom in 1981; and Promotion Managers' Workshop in 1981. In addition, the Training Department has conducted a number of special training sessions.

In 1979, **presstime** was launched as the monthly journal of ANPA, replacing a variety of specialized bulletins, some of which dated to ANPA's earliest years. The magazine fulfills one of the Association's chief objectives—"to widely disseminate information to and about the newspaper business."

"Today's ANPA is an organization that our founding fathers in Rochester could hardly have imagined—with a membership of 1,389 newspapers, a staff of 164, a budget of $14 million, an efficient headquarters building 25 miles from the U.S. Capitol, and influence that is felt throughout North America and the world," says ANPA Chairman and President Alvah H. Chapman Jr.

"For our part, we can only dream of the shape of the ANPA of the future," he says. "One thing is certain, however. As has been the case since the beginning, ANPA's every activity will be guided by one simple goal: 'To advance the cause of a free press.' " □

ANPA directors attending the fall 1970 groundbreaking for The Newspaper Center were (from left, foreground) James L. Knight, Harold W. Andersen, Chairman Richard H. Blacklidge, W. Davis Taylor, General Manager Stanford Smith, Allen H. Neuharth, David K. Gottlieb and Richard C. Steele; (back row from left) Otis Chandler, M.W. Armistead III (obscured), Joe D. Smith Jr., Charles H. Peters, Peter B. Clark and Len H. Small.

Newspapering . . . Why Bother?

BY JERRY W. FRIEDHEIM

A centennial observance is a good time for us to ask ourselves why newspaper people bother to do what they do; and whether what they do matters anyway.

Jerry W. Friedheim

We do bother, of course, because newspapering in all its facets is a vibrant, exciting business filled with talented, thoughtful people dedicated to helping make progress possible.

Newspapering plants its feet on past wisdom and current reality, keeps its wits about it, and focuses on the future.

It's an alerting, involving and informing medium with a scope ranging from courthouse reporting and ad sales to telecommunications researching and satellite transmission.

It's bawdy and bustling. It's intense and innovative. It affects masses. It cherishes individuals.

We sit right in the middle of the information explosion, working hard to serve information consumers so well that at every step of the future's way the information society will remain a free society.

And will our society need us in the future?

Sure. It will need us:

- As a watchdog on government
- As a beacon in a murky world
- As a marketing voice for goods and services
- As a source of entertainment
- As a flagger of the important and the unpredictable
- As a vehicle for sharing the common knowledge that fashions community interest and understanding.

But is all that excitement and challenge enough reason for us to bother?

No, the primary reason is simply because good newspapers matter.

They matter to democracy and to open, enlightened government.

They matter to safety, justice and equality.

They matter to the pursuit of happiness; to the blessings of liberty.

The point is: A strong, free press and a strong, free country are inseparable. You can't have one without the other. No society ever has; none will.

A free press cannot exist in anarchy; it requires social order.

And tyranny cannot exist with a free press operating.

Only we North Americans and a small number of our close allies and friends in this world enjoy a free press; only our societies are what we would call free; only our citizens have real individual liberties.

And that's why newspaper people bother. Because newspapering matters. Newspapers matter.

Friedheim is ANPA executive vice president and general manager, and publisher of **presstime**.

Two former ANPA general managers reminisce. See Essay, p. 56.

FRONT-END SYSTEMS

Despite competition from personal computers, larger machines still are needed to handle many jobs in the newspaper business—at least for now

BY ROSALIND C. TRUITT
presstime technical writer

(Editor's note: This article is the third in a four-part series on new electronic prepress technologies and how they are transforming the newspaper business.)

Is the big newspaper front-end system a dinosaur of the high-tech era?

Hailed as a marvel a scant 15 years ago, the familiar system of "dumb" video display terminals tied to a central computer may not survive the personal computer revolution, some experts say.

"Intelligent," compact personal computers are less expensive, generally easier to operate and in some cases more versatile than front-end systems, and some PCs offer speed and data-storage capabilities approaching those of smaller front ends [presstime, April 1987, p. 18].

"I don't see much need for front-end systems in the future," says Jules S. Tewlow, director/special projects for Lee Enterprises Inc., who as a member of ANPA's technical staff in the 1960s helped adapt computer technology for word processing and other uses at newspapers.

But despite the competition from personal computers, the majority of newspaper executives interviewed for this article say it is too early to classify the front-end behemoth as a species whose extinction is near.

Those same newspaper executives as well as vendors interviewed by presstime believe these so-called "dedicated" systems have a number of years of life left in them before their skeletal parts are consigned to museums. They point out that:

- Large to medium-size newspapers process so much data and must keep track of it on so many different levels that a mass storage device known as a central file server, acting as a kind traffic cop routing data between multiple work stations, will probably be necessary for the foreseeable future.
- Although some newspaper executives like the idea of assembling a system with off-the-shelf PC hardware and software, others say they don't want to be in that position. They see the major front-end suppliers as being better equipped to deliver the technology newspapers will need in the future.
- Although there are exceptions, in most cases it is difficult to "network" more than 30 personal computers.
- Suppliers of front-end systems are working out configurations that allow for the use of personal computers within the systems they market. Such arrangements give newspapers the ability to route large amounts of information to a number of VDTs through a front-end system while using less expensive personal computers as writers' individual work stations.

"Newspapers' needs have changed, and front ends have changed," observes Tewlow. "In the beginning, newspapers had zero sophistication in terms of understanding how computers worked so they needed systems vendors to provide bundled, packaged systems."

Now, he says, many newspapers can approach the purchase of a computer system much the way one would travel down a cafeteria line: selecting the best components from a variety of sources.

Many newspaper executives find themselves in just such a line these days. Some newspapers have 10-year-old front-end systems, although on average such systems last only five to seven years, according to John W. Iobst, ANPA research manager/computer applications.

That being the case, a number of newspaper computer experts or business managers are preparing to replace systems with the latest generation of computers—either with a new front-end system, with a PC system or with a combination of the two.

Nowadays, about a dozen vendors manufacture newspaper front-end systems. Their ranks have dwindled because of competition and consolidation, and those remaining in the field are trying to adapt to the changing marketplace.

"We're not eternal optimists. We see the tide turning," says Stephen E. Nilan, director of marketing for System Integrators Inc., a Sacramento firm that has installed more than 180 front-end systems, primarily at larger newspapers.

SII and several other vendors have expanded in recent months into the area of PC publishing systems.

Craig Bogan, Copley Los Angeles Newspapers

West (left) and Box discuss capabilities of front-end system serving three Copley newspapers.

Talk to us about your publishing system needs now, and you can be sure you'll have someone to talk to later.

When you choose a front-end system from Mycro-Tek, you get more than a short-term fix. Yes, we have the system you need today... from a single-terminal operation to an entire network with hundreds of terminals and peripherals.

But what about tomorrow? As your operation grows and changes and improves, so does your system. You don't *replace* it, you *enhance* it, with upgrades and add-ons and new products that easily and efficiently integrate into your system. So your original investment keeps paying dividends.

What's more, the *real* beauty of owning a Mycro-Tek system is that you get more than just the system. You get the whole company... training, service, product support, R&D, more than ten years' experience in your industry, and an international and domestic client list that fills a book.

If you've been looking for solutions, talk to us now.

Moreover, staff reductions and other expense controls are making the front-end vendors leaner and better able to take on future challenges, their executives say.

That should be welcome news to publishers, says G. Michael Jones, director of information systems for Knight-Ridder Inc. "It is a major concern whether the traditional front-end suppliers will remain viable in this new environment," Jones says. They are needed, he adds, to continue working on the technology that ultimately will lead to newspapers that are produced totally by electronic means.

The ranks of front-end manufacturers have dwindled because of competition and consolidation, and those remaining in the field are trying to adapt to the changing marketplace.

SHIFTS IN STRATEGY. Vendors of large systems are following a variety of marketing game plans to adapt to the new environment. Nearly all are helping clients work personal computers into front-end systems, substituting an "intelligent" PC for a "dumb" VDT where appropriate. Other vendors are plunging directly into the PC field.

That's not to say the large-system vendors have embraced the personal computer to the exclusion of their own products. The companies maintain that their front ends remain superior to PCs—able to store more information, more secure, more durable, engineered more specifically for newspaper uses. They regard the PC as a component to be integrated into their own product lines, not as a replacement for mainframe systems, particularly for newspapers with circulations of 30,000 or more.

System Integrators is a good example of a company adapting to the changing market. It sells front-end systems with from 32 to 700 VDTs. Last year it acquired desktop-publishing vendor Cadex, so now SII markets PCs as well as front ends.

Front-end vendors also are beginning to target markets beyond newspapers.

Although newspapers account for about 95 percent of System Integrators' business, Nilan says the firm knows not all newspapers are interested these days in the kind of customized systems his company can provide. Thus his firm is seeking customers in other areas, such as the technical-publishing field.

"Newspapers have always been our business, and they're still important to us, but newspapers have awakened to PCs and they realize there are some generic solutions out there they can use. For that reason, they don't have the kind of loyalty to dedicated newspaper vendors that they once had," he says. "There's an opening up of attitudes of newspapers, and they're willing to accept less sophisticated solutions and adapt them to make them work."

Timothy Flaherty, vice president/marketing for Crosfield Data Systems, a division of Crosfield Electronics Ltd., says the parent firm recognized about two years ago that personal computers were beginning to make serious inroads at newspapers.

"Editors pick up a computer magazine and see where they can buy personal computers for about $2,000 each while they see the (front-end) vendor selling work stations for $6,000 to $7,000 or more. They also see they can run standard hardware off the shelf a lot cheaper than specially designed hardware, so they buy it. What often happens, though, is they find the cheaper models don't have the kind of resolution they're used to," Flaherty says.

To assist customers who want the power of a larger system and the flexibility of stand-alone machines, Crosfield works with customers to see how PCs can be used, usually within the framework of the larger, existing system.

Another front-end vendor, Digital Equipment Corp., is re-emphasizing the newspaper business after broadening its market base in recent years.

DEC believes it can preserve its share of the market by concentrating on newspapers and making its equipment the central link that ties together its computers and electronic prepress elements from other companies.

In order to do that, the company is expanding its product line. The company has manufactured its VAX minicomputers for about nine years. Earlier this year, DEC announced a new system that links four VAX minicomputers into one, a move the company says gives the four VAXs the computing power and speed of the mainframes offered by other companies, such as International Business Machines Corp.

In addition to linking those four, DEC also introduced the Micro VAX 2000 computer that can stand alone or support up to four directly connected users or 16 users in a network. With 32 bits of memory it is compatible with larger VAX computers, long an industry standard for minicomputers.

Robert J. Farquhar, DEC's director of media industry marketing and a former

Front-end terminals are getting easier to use, the vendors say. Emphasis is on one-stroke commands, interactive directories or "menus," and keyboard keys for which users can program an individual use.

newspaper managing editor, says the new products enable the company to provide computer systems to newspapers of all sizes.

Compugraphic Corp. is another front-end vendor that has discovered the merits of PCs. Last year, it introduced the Intrepid II, a PC-based text-editing and classified system for newspapers. Stephen Dupree, senior marketing manager, says that in doing so, the company is responding to customer sentiments that large systems are costly to maintain and do not always perform as advertised.

"Basically, newspaper customers are saying they want more functionality at a lower cost," Dupree says. "Newspapers already have systems, and they know what they will and will not do. (Newspaper) buyers are more sophisticated now than they were in 1973. They don't just accept everything they are told."

He believes that is why newspapers were quick to see personal computers made sense for some applications.

On the other hand, Dupree says not all newspapers are ready to discard a system that is performing adequately. Thus, the Intrepid II system was designed to run in a network with existing computer systems.

Atex Inc., which together with Eikonix Corp. form Eastman Kodak's electronic pre-press business, also endorses using personal computers in conjunction with front ends "where it makes sense, primarily as remote units," says Allen P. Carney, director of systems marketing.

However, he says, the company still thinks its VDT system is more cost-effective in the long run and allows for easier connection of remote terminals to the mainframe computer.

"What we (Atex) have today is a mature, proprietary system capable of performing a variety of functions and with an excellent response," Carney says. "I have seen some PC networks with good performance in a variety of functions, but they have some built-in liabilities that are not at all trivial."

The "liabilities," he says, include queues that have been known to purge themselves accidentally of text. "I question whether a newspaper such as The New York Times would accept an editorial solution that didn't include a centralized database for all files."

ENHANCEMENTS MADE. Although the front-end vendors find themselves spending a lot of time these days defending their products against the PC onslaught, that's not the sole focus of their energies.

Operating under the philosophy that the best defense is a strong offense, the companies continue research and development efforts, adding even more "bells and whistles" to their systems.

Front-end terminals are getting easier to use, the vendors say. The emphasis is on one-stroke commands, interactive directories or "menus," and keyboard keys for which users can program an individual use. Split screens that allow the simultaneous viewing of two or more files are now standard, and the screens themselves are easier to read and are available in larger sizes.

Front-end companies and newspapers say response times are faster, even when there is a huge demand on a computer system such as on a Friday afternoon when large numbers of classifieds are processed for the Sunday edition.

Pagination continues to be a central focus of the research-and-development efforts of front-end vendors, who claim their large systems are better suited to offer the integration necessary to combine text and graphics.

Walter R. Schudel, marketing director for Crosfield Electronics, observes that editorial systems, typesetters and platemakers once performed in their own orbits. That is no longer the case, and he believes the necessity for integration of various electronic components points to the need for a front-end or host system.

"A coherent, centralized approach obviously will make it easier for all the various factions . . . (to) come together," Schudel says.

Crosfield last year acquired Hastech Inc., a front-end and pagination vendor that caters to small and medium-size newspapers, and Composition Systems Inc., a supplier of systems with 50 or more terminals. This move enables Crosfield to offer front-end systems as well as color and graphics equipment for a total pre-press product.

Digital Equipment also believes in the necessity for integration. But rather than integrate within a company, DEC says it wants to serve as the "integrator" for the systems of various companies.

DEC's Farquhar says the company has made an effort in recent years to talk with newspaper editors to find out what they want in a system. And the one thing many

Congratulations!
ANPA
FOR 100 YEARS OF SERVICE TO THE NEWSPAPER INDUSTRY.

For 100 years, the ANPA has helped the newspaper industry take giant steps in technology advancement. Since 1910, Inland Newspaper Machinery Corporation has been a proud part of this heritage. Join us at Booth #3118 as we attend our 28th consecutive ANPA Conference.

MORE THAN A PRODUCTION SYSTEM

CYBERGRAPHIC SYSTEMS GIVE YOU A FULLY AUTOMATED NEWSPAPER PRE-PRESS SYSTEM.

Over the past seven years, **CYBERGRAPHIC SYSTEMS** has been providing newspaper production systems that are totally integrated, incorporating editorial, classified, layout and display advertising. And as you know, integration is the key to growth and automation. A **CYBERGRAPHIC SYSTEM** may be the last production system your newspaper will ever need. **CYBERGRAPHIC SYSTEMS** also offers you a choice of either a completely new system or the option of gradual expansion by interfacing to your present system. Our system works with any **DEC CPU** product using **VAX/VMS** or **RSX11M** operating systems.

The intelligent **CYBERGRAPHIC** terminals give you **WYSIWYG** display interaction and full graphics capability. From simple keyboard entry to modular make-up and manipulation, everything is performed in the terminal. This provides consistent response, greater user control, and high-speed performance regardless of system load. You need more than a production system. You need **CYBERGRAPHIC SYSTEMS.**

the cost effective solution

of them want is integration of products.

"The industry is looking for leadership to integrate pagination capabilities for editorial use, to integrate display advertising with classified, (and) the circulation department with the mailroom. At present, those various departments can't talk with each other, and they should. Networking is more than just connecting computers. It would be valuable for various departments to share information," he says.

To accomplish that end, DEC is advocating an "open architecture" for equipment that would allow standardized equipment to be developed. "Architecture" refers to the way hardware and software are constructed. "We want to be the glue that holds everything together," Farquhar says.

In other research-and-development efforts, SII is trying to come up with a distributive operating system that Nilan says would be the "backbone" for a large-scale operating system. As envisioned, the system would store data in several different locations rather than in one central unit—enhancing speed and reducing the danger of losing information in a computer snafu.

The vendors also are working to prevent system-wide crashes, which in the best of situations slow down production and in worst-case scenarios result in lost copy. The equipment being manufactured is increasingly "fault tolerant," they say, and redundant connections to central processing units are protecting important information.

PURCHASES CONTINUE. The vendors continue research and development because they believe a market remains for their products. And, indeed, newspapers continue to purchase front-end systems.

In recent months, for example, SII has sold a 90-terminal editorial/classified advertising system to the Vindicator in Youngstown, Ohio, and a similar system with 110 terminals to The Bakersfield Californian.

The Evansville (Ind.) Press and The Evansville Courier will share a 40-terminal Atex Series 6 editorial system. Another recent Atex buyer is The Jersey Journal of Jersey City, N.J., which chose a 42-terminal system for editorial and advertising use.

Large systems are also being purchased to support the editorial and advertising needs of a group of smaller publications that independently wouldn't need such an elaborate system.

Three Copley Newspapers in California —the Daily Breeze of Torrance, the Outlook of Santa Monica and the News-Pilot of San Pedro, all of which are printed in Torrance—are sharing a 192-terminal SII editorial and classified advertising system.

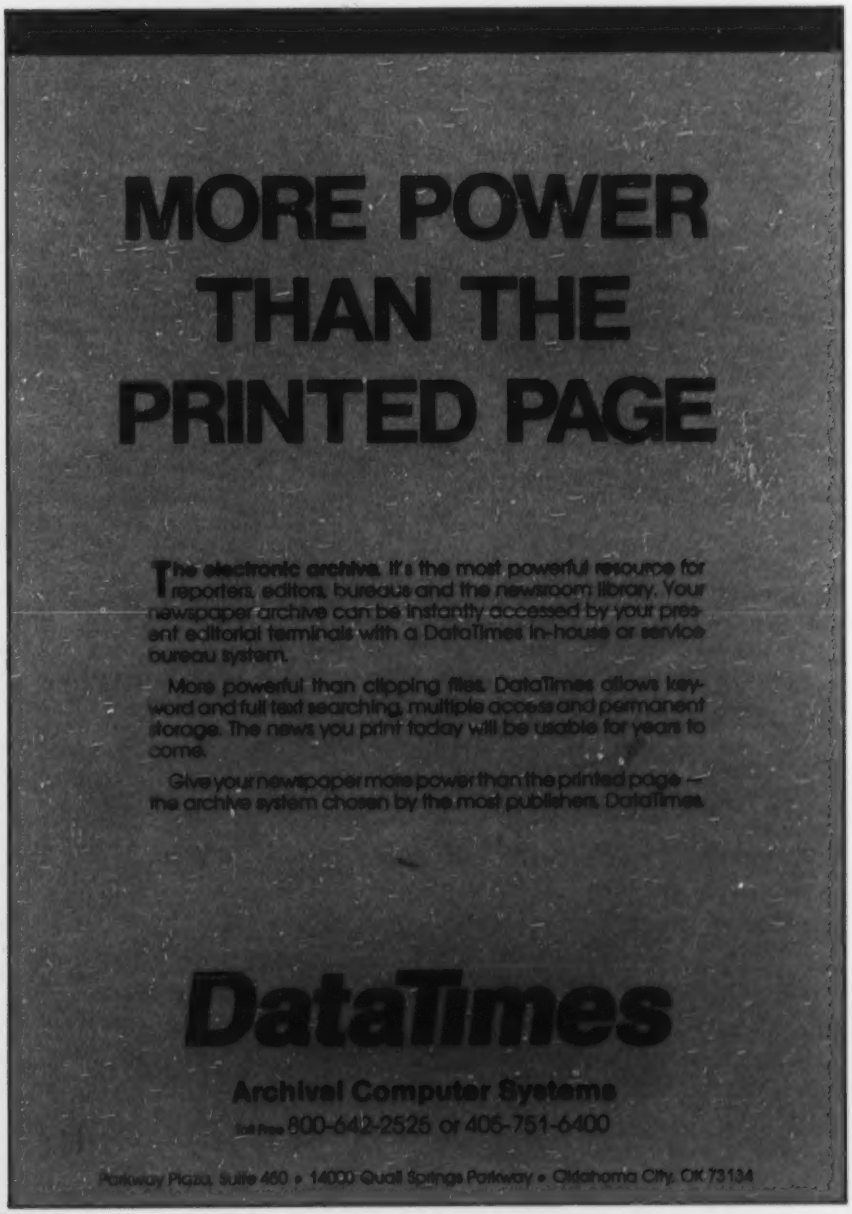
Roland B. West, manager of information systems for the three newspapers, says that logistically, one system for the three newspapers made sense. The system coordinates data between the Santa Monica and San Pedro locations and Torrance and also keeps track of which stories go into which newspapers.

"We've been very pleased with the new system so far. It's functioned beautifully," says James M. Box, editor of the three newspapers. Since its installation late last year, "response time has been very high even on our high-volume days."

Personal computers are used in one of the newspapers' remote bureaus as well as in business, circulation and other departments.

Whether a newspaper chooses to go the route chosen by the Copley papers is an individual decision made according to individual needs, of course.

But James D. Hitchman, vice president/production of Ottaway Newspapers Inc., observes that the heightened competition between front-end vendors and personal computer manufacturers is healthy for the newspaper business. It encourages both ies to keep improving their products and ultimately will lead to the all-electronic newspaper many editors want, he says. □



MORE POWER THAN THE PRINTED PAGE
The electronic archive. It's the most powerful resource for reporters, editors, bureaus and the newsroom library. Your newspaper archive can be instantly accessed by your present editorial terminals with a DataTimes in-house or service bureau system.
More powerful than clipping files. DataTimes allows keyword and full text searching, multiple access and permanent storage. The news you print today will be usable for years to come.
Give your newspaper more power than the printed page — the archive system chosen by the most publishers. DataTimes.

Publishers on Parade

Why did Reg Murphy bring Parade to The Baltimore Sunday Sun?

REG MURPHY
PRESIDENT AND PUBLISHER, THE BALTIMORE SUN

"Here at The Baltimore Sun, we're always eager to implement features that will make our newspapers more informative, more enjoyable. That's really the best way to attract new readers.

"So when Parade became available in our market after The News-American ceased publication, we had an opportunity to make our Sunday product more attractive to News-American readers, our readers, and everyone else who likes incisive, lively writing on topics of interest nationwide.

"We're particularly impressed with Personality Parade, Intelligence Report and Parade's in-depth human interest stories.

"In short, Parade has proven to be the perfect complement to our locally acclaimed Sun Magazine. And we don't think it's coincidental that our Sunday circulation has grown by 45,000 since adding Parade."

Featured in 301 newspapers every Sunday.

For more information on why Parade is important in major markets, contact Carlo Vittorini at (212) 573-7111, and talk publisher to publisher.

We Are The Software Firm That Incorporates Accounting Principles & Human Resources Into Newspaper Management Systems

We're Collier-Jackson, and we've spent 12 years developing advertising, circulation, financial, accounting and personnel systems to help newspapers organize, process, analyze and present information more efficiently, more effectively.

We believe it is the creative ideas of our people that make our products so successful. People who know as much about ROP color linage as they do about reducing CPU, I/O and elapse times.

You see, it's the combination of newspaper expertise, accounting principles, human resources and software know-how that sets us apart as a company and differentiates our software from all others.

AWARD-WINNING SOFTWARE

Our unique way of working means our installation base is growing at a rapid pace.

Work which earns us numerous ICP Awards for products that have clearly evidenced their acceptability in the marketplace and their leadership as proprietary software systems.

Growth that keeps us ranked as an Inc. 500 and ICP 200 company.

It's the payoff for dedication. And it makes for satisfied customers in newspapers throughout the United States.

FULL RANGE OF PRODUCTS

Each of our newspaper management systems is designed to do business the way you do business. And they work alone or together to better work for you.

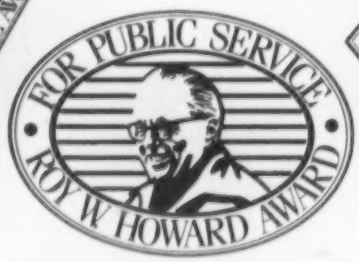
THE BEST MAKE THE MARK



The Scripps Howard Foundation honors the commitment to excellence with its 1986 national journalism awards. An independent panel of judges, among the most distinguished journalists in America, selected the winners. The awards and winners are:

The Ernie Pyle Award for human interest writing: Greta Tilley, Greensboro (N.C.) News & Record.

The Walker Stone Award for editorial writing: Mary Cantwell, The New York Times, for eloquent editorials on various topics.

The Edward Willis Scripps Award for service to the First Amendment: The Indianapolis News for determined reporting and legal action that opened the decision-making process of the Indianapolis City-County Council to public scrutiny.

The Charles E. Scripps Awards for efforts to combat illiteracy: El Paso Herald-Post (newspaper division) for its "Year of the Printed Word" literacy project, and WXYZ-TV, Detroit (broadcast division) for extraordinary effort in instructional programming for illiterates.

The Roy W. Howard Awards for public service: The Pittsburgh Press (over 100,000 circulation) for detailing medical and addiction problems among commercial airline pilots, and The Ledger, Lakeland, Fla. (under 100,000 circulation) for an investigation leading to the ouster of a county sheriff.

The Charles M. Schulz Award for most promising cartoonist: V. Gene Myers, Glen Ridge, N.J.

The Edward J. Meeman Awards for conservation journalism. The Seattle Times (over 100,000 circulation) for exposing safety and security problems in nuclear weapons production, and The Morning Advocate, Baton Rouge, La. (under 100,000 circulation) for its series "Vanishing Wetlands."

The Jack R. Howard Awards for broadcast public service: WXFL-TV, Tampa (television, large markets) for a documentary on the breakdown of a healthcare delivery service; WBRZ-TV, Baton Rouge, La. (television, small markets) for its report on irregularities in awarding minority road development contracts; KMOX, St. Louis (radio division, large markets) for its documentary on how medical incompetence is covered up; and WJYY, Concord, N.H. (radio division, small markets) for reaction coverage of the Challenger disaster.

COMMITTED TO EXCELLENCE

A Twist To The Usual Organization Chart

Four daily newspapers have put their editors in charge of circulation in an effort to make them more aware of who their readers are

BY GENE GOLTZ
presstime staff writer

At least four daily newspapers in the United States have editors who are in charge of the circulation department as well as the newsroom. The intent is to make the editors more cognizant of who their readers are.

The newspapers are two owned by Lee Enterprises Inc.—the Decatur (Ill.) Herald and Review (morning, circulation 45,300) and The Billings (Mont.) Gazette (morning, 57,620); and two owned by Knight-Ridder Inc.—The Philadelphia Inquirer (morning, 504,946) and the Philadelphia Daily News (evening, 252,150).

Editors and publishers at all four say the system means a lot of extra work for the editor, and that it probably would not be suitable for every newspaper. But they also say it can be an effective twist to the traditional organization chart at a newspaper.

For example, Editor Richard J. Wesnick says The Billings Gazette increases single-copy readership through constant communication with the circulation department.

He says he confers with the circulation department almost every day.

"In some instances where we have an opportunity to promote a story of particular interest in a circulation area, we've bought radio time in outlying towns," Wesnick says. "We have seen increases of 300 to 500 single copies (some days) as a result."

Circulation at all four newspapers has shown a slight but steady decline in recent years. The editors say, however, that the declines are due to the economy and other factors that cannot be arrested by the combined circulation-editorial system.

The first of the four papers to adopt the system was the Decatur Herald and Review in 1984 when Publisher Wayne E. Schile told his editor, Thomas L. Blount, he thought Blount's salary ought to be based partly on circulation figures. Blount, who always had been interested in circulation, replied that if he were to be responsible for it, "I wanted a lot more control over circulation than I had."

Two years after Schile started the editor-circulator system in Decatur, he moved to Billings and installed it at the Gazette.

Blount says that under the editor-in-charge system, Decatur's news and circulation departments, while not combined, work much closer together than is the industry norm. On the day he was interviewed by presstime, for example, he had scheduled a two-hour meeting between newsroom and circulation supervisors to talk about subscriber retention.

Editor Stalberg says he devotes at least half his time to circulation.

In both Decatur and Billings, a circulation representative sits in on the daily story conference. The circulation department representative is asked which story is likely to be most important for readers in a particular zone, and promotion "teasers" are planned accordingly.

At the two Lee papers, the circulation manager reports to the editor, enabling the editor to keep track of circulation matters. But the nuts-and-bolts aspects of distribution are left to the circulation manager.

In Philadelphia, on the other hand, the editors have been taking more of a hands-on approach since circulation was put under their purview last September.

For example, Inquirer Executive Editor Eugene L. Roberts, who is also president of Philadelphia Newspapers Inc., goes out into the circulation field offices and meets with district managers, supervisors and individual carriers. "He has worked his way through every aspect of the circulation department to date," says Arthur W. Howe, circulation marketing manager for the Inquirer.

Zachary Stalberg, senior vice president and editor of the Daily News, says he probably spends at least 50 percent of his working day on circulation matters. He says he would not be able to handle both circulation and editorial without capable subordinates in both departments who take on much of the burden.

The combined-job system works well, he says, because the Daily News is a tabloid with 75-percent street sales, and editors there always have had to consider what stories would sell on the street.

100

And still making headlines.

Congratulations ANPA on your 100th birthday...
It's been a century of progress for newspapering, and the ANPA has always managed to stay ahead of the times. We appreciate that kind of forward thinking at Paddock Publications. We're 115-years-old ourselves. But you'd never know it by looking at the new "reader friendly" Daily Herald. Bright, colorful, inviting, it's setting the pace for a whole new generation of newspaper publishing. Best wishes ANPA and take heart–you can be well past 100 and still turn a lot of heads.

"We've always made editorial decisions on getting the reader's attention," Stalberg says. The paper regularly posts circulation figures on the newsroom bulletin board. "It's almost a measure of how well you've done that day," he says.

Sam S. McKeel, publisher of the Philadelphia dailies and chairman of PNI, says it was a "short and natural step" to have the editors turn their attention to circulation. At the same time, he says the system at the Philadelphia dailies is still evolving.

For example, major circulation problems have taken what McKeel calls an inordinate amount of the editors' time. The problems resulted largely from installation of new equipment in the mailroom and loading docks [**presstime**, April 1987, p. 64].

In addition, the newspapers' circulation zoning structures were rearranged, with several neighborhood zones added. "It made the whole delivery and packaging problem complex," McKeel says. Roberts and Stalberg have had to do "an awful lot of direct circulation management."

Breaking down departmental barriers and making newsrooms more sensitive to reader interests were hallmarks of the 1976-83 Newspaper Readership Project sponsored by 16 newspaper associations [**presstime**, April 1983, p. 4]. However, executives at Lee and in Philadelphia say they arrived at their systems independently and that the NRP had little or no effect on their decision to correlate circulation with editorial.

The newspapers arrived at their systems independently, and the 1976-83 Newspaper Readership Project had little or no effect on their decision to correlate circulation with editorial.

Whether other newspapers may decide to adopt such a setup is unclear.

Although no plans are afoot to adopt the editor-circulator system at other Lee newspapers, the company's director of circulation, Steve Miller, says "it does merit consideration" by any newspaper.

Some editors, such as Bill Kovach of the Atlanta Journal and Constitution, question the advisability of the two-hat arrangement. "It would be a superhuman job trying to do both. Even if you delegated a lot of the authority," he says, "just trying to stay on top of the issues would be an enormous job."

But Michael G. Gartner, editor of The Courier-Journal in Louisville and immediate past president of the American Society of Newspaper Editors, takes a more positive view. "I think if an editor is good and smart, of course he could run circulation, too," he says. "It's not necessarily two full-time jobs. You assign responsibility; you delegate authority." □

FROM WASHINGTON . . .

"As a patient, I'd sometimes like to be able to read my prescriptions. So would a lot of pharmacists.

"Pharmacists, nurses and other doctors have been complaining about some doctors' bad handwriting for decades. Last year Georgetown University Drs. Karen White and John Beary got tired of trying to read patients' charts for a quality-assurance study they were doing, so they made a survey to assess the overall legibility of their hospital's records.

"They randomly selected 50 sets of notes written by attending physicians and residents caring for internal-medicine outpatients. Each set of notes was then independently judged by two physicians.

"Sixteen percent of all that was written was illegible, on the average. A full 52 percent of the text in one report was impossible to decipher. On the average, little more than half the reports were generally 'comprehensible.' Eight out of 10 doctors' signatures were illegible.

"In a letter to The New England Journal of Medicine, White and Beary concluded that 'a considerable portion of most handwritten medical records are illegible. . . . The price we pay for illegibility includes lower quality of care, a waste of professional time, potential legal problems and a waste of resources in duplicating data' that can't be read."

THE $10,000 1987 EUGENE C. PULLIAM FELLOWSHIP EDITORIAL WRITING AWARD

The Sigma Delta Chi Foundation is pleased to announce the 1987 Pulliam Fellowship, which honors an editorial writer by helping to broaden journalistic horizons and knowledge of the world.

The $10,000 award will be used by the recipient to study in a field of interest, to travel either in the United States or abroad, or both. The Fellowship is designed to increase the writer's understanding so that he or she might better serve the reading public.

The 1986 recipient was Jonathan Freedman of The Tribune, San Diego, California.

To qualify for the Fellowship, applicants must have at least three years of full-time editorial writing experience.

Each applicant must submit: 1) A personal biography; 2) A summary of professional experience; 3) Five samples of editorials or editorial series; 4) Your plans for using the award; 5) A letter of endorsement from your employer.

Send your application to: Pulliam Fellowship, Sigma Delta Chi Foundation, 53 W. Jackson Blvd., Suite 731, Chicago, IL 60604. Deadline for entries is September 4, 1987.

The Fellowship honors the memory of Eugene C. Pulliam (1889-1975), who was publisher of The Arizona Republic, The Phoenix Gazette, The Indianapolis Star, The Indianapolis News, The Muncie Star, The Muncie Press and The Vincennes Sun-Commercial. He was also one of the founders of Sigma Delta Chi in 1909.

The award is made possible through a grant from Mrs. Eugene C. Pulliam.

SIGMA DELTA CHI FOUNDATION

George W. Wilson

Small-city newspaper executive has national clout

BY MARGARET GENOVESE
presstime staff writer

The Concord (N.H.) Monitor is a small newspaper (circulation 21,479) in a small city (population 30,902) that has made a big splash in national newspaper circles recently.

Its editor was named Editor of the Year in December by the National Press Foundation. One of its reporters made headlines in January when he refused to testify in a murder trial. The newspaper itself is involved in a pending federal court case that will decide whether reporters are "professionals" under the Fair Labor Standards Act.

And this month, its president will be nominated to become chairman and president of ANPA.

George W. Wilson says he decided long ago that "it really isn't necessary to seek out a larger arena to sample some of the pleasures and delights—and the disappointments—that journalism offers. I thought that if I stayed in one small newspaper in a small city and worked hard at it, as time passed I might see most of those things pass through this community."

Although Wilson has made his name in the newspaper business in New England, he was born in Norfolk, Va., and raised in Aiken, S.C.

Wilson first experienced New England living as an undergraduate at Harvard University. To earn enough money to continue his education, he took a three-year break after his sophomore year and went to Washington, D.C., where he worked during the day in the U.S. Senate mailroom and at night as an auditor at a hotel.

Toward the end of the three years, Wilson secured a job—as a "copy girl," he says—in what was then the women's department at The Washington Post. He later moved to the city desk as "copy boy."

While in Washington, Wilson met his wife-to-be, Marily Dwight, whose family owned the Transcript-Telegram in Holyoke, Mass., and a half-interest in the Greenfield (Mass.) Recorder. After their marriage and his 1962 graduation from Harvard with a degree in American government, Wilson went to Concord, where the Dwights had purchased the Monitor the year before.

His initial job was advertising sales, but

Wilson says, "whenever I got a spare moment, I wrote news stories and took photographs." Even as he assumed more and more management responsibilities, he gravitated toward news. He even figured a way to cover the 1964 and 1968 political conventions, as a stringer for NBC News.

By 1968, he was general manager of the Monitor. In 1974, he attended the Harvard Graduate School of Business Administration's Program for Management Development, and later that year was named publisher and president of the Monitor. He relinquished the title of publisher earlier this year but remains president.

Wilson also serves as president and chief executive officer of Newspapers of New England Inc., the umbrella company formed by the family in 1978. Since then, the company has expanded its holdings, assuming complete control of the Greenfield daily and purchasing a fourth daily, the Valley News in Lebanon, N.H. Last year, it established a weekly newspaper division, purchasing weeklies in Peterborough, N.H., and in Mansfield and Sharon, Mass.

Of all the publishers he knows in the Northeast, says K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass., "George Wilson is the best there is, period."

Wilson is a "scrapper," says Low, pointing to the two court cases in which the newspaper has recently been involved.

As he looks forward to assuming his new ANPA role, Wilson says the newspaper business' biggest challenge is to maintain the "national treasure" that is newspapers' reporting capability. "Anything that can be done to transfer resources from the more mechanical aspects of our operations to improving our news-gathering and reporting functions are matters of highest priority."

When he takes the gavel at the end of ANPA's 100th Anniversary Convention in New York City, among those in attendance will be Wilson's father-in-law, William Dwight Sr., 83, who was ANPA president in 1956-58.

The Wilsons have three children: a daughter who is a reporter for the Associated Press in Nashville, a son who recently graduated from college, and a daughter who is a college sophomore.

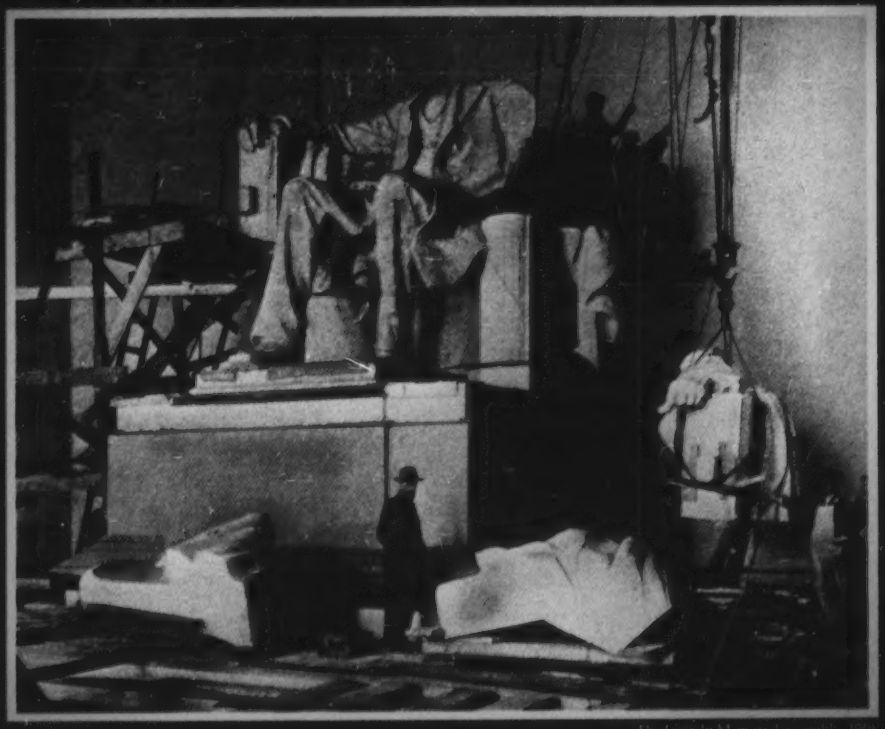
A three-sport athlete in high school, Wilson, 50, has a wide variety of interests outside the family business, among them, hiking, sailing, tennis and scuba diving.

He also serves as a director of The Washington Post Co. Wilson says he feels "right at home" in his visits to the Post.

"There's all the world of difference between a metropolitan daily like The Washington Post and a community newspaper like the Concord Monitor, and for all those differences, the similarities are astounding. . . . We really deal with the same kinds of challenges and the same kinds of problems and the same kinds of frustrations," he says.

The Post's publisher, Donald Graham, says of Wilson: "I think people of all size newspapers are going to find (that) in George, ANPA is going to have a chairman and president who understands the problems facing newspapers as well as anybody who has ever done the job." □

Before Lincoln became a monumental success.



The Lincoln Memorial assembly, 1919

Stockbridge, Massachusetts' Daniel Chester French. He sculpted the seated Lincoln—a figure so majestic it immortalized not only the man it was built to commemorate, but also the sculptor himself.

But years before French put Lincoln in his place, The Boston Globe was in place covering all the important news issues of the day.

From the unveiling of political figures to the covering up of political scandals. From racial suffering to women's suffrage. If it was being talked about, you could also read about it in The Globe.

Which is why long before people from all over the world came to see French's Lincoln; people from all over New England were reading The Boston Globe.

The Boston Globe

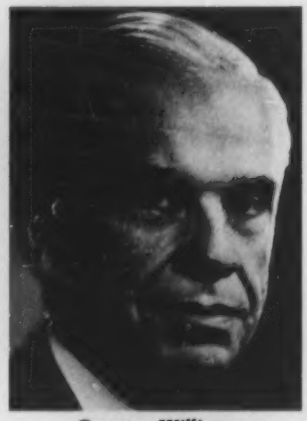
Two Former Chiefs of Staff Reflect on 36 Years at ANPA

(Editor's note: Cranston Williams was general manager from 1939-1960. He lives in retirement with his wife, Caroline, in Lynchburg, Va. Stanford Smith was general manager from 1960-1974. He and his wife, Martha, are retired and live in Satellite Beach, Fla. At presstime's *request, these veteran ANPA executives presented the following views and reminiscences of ANPA.)*

Helping newspapers during World War II was one of many challenges

BY CRANSTON WILLIAMS

Early in life, I found there was no limit to the good a man could do if he didn't care who got the credit. I will use "I" often in this piece, but it is not ego.



Cranston Williams

High spots I remember from my 21 years as ANPA general manager were:

- Put strike insurance into operation in 1939
- Served ANPA members and all newspapers—daily and weekly—throughout World War II to assure a newsprint supply without government control through rationing. From the beginning of the war in 1939 to its end in 1945, no newspaper suspended publication solely for lack of newsprint.
- Brought the Research Institute into being at Easton, Pa.
- Operated an office in Chicago to serve members in labor matters; provided a service to supply personnel to publish newspapers when a union struck in a city where there was police protection
- Defended ANPA and member publishers against federal antitrust charges in operating "recognition" system of advertising agencies

(New advertising agencies would apply to ANPA and other trade associations for "recognition" so they could qualify for the commission granted by newspapers to agencies. A 1956 consent agreement entered into by ANPA and the Justice Department ended the case.)

- Operated with the Pressmen's Union an international arbitration-agreement program to which local arbitration awards could be appealed
- Changed the ANPA dues system to one based on a newspaper's circulation and national advertising rate. Previously, it had been based on the number of typesetting machines at a newspaper and on a paper's national rate, even though members publishing mornings and evenings used the same machines for both editions.
- Established the first retirement program for ANPA staff.

Some of the other things done by ANPA during my years included operating a scrap-metal drive and a scrap-paper drive to help the war effort, and representing newspapers without lobbying status before congressional committees by getting a publisher to ask a senator or House member to see me. It eliminated my having to approach the legislator.

ANPA had no television and radio department, but we helped those newspapers that owned TV and radio stations to set up their own group.

Our entire staff was retained when I reported to ANPA on July 1, 1939. I had no person to bring with me from my previous employer, the Southern Newspaper Publishers Association.

I told the ANPA staffers I would keep them, and that helped me get 200-percent support as a newcomer. But I had some trouble getting employees born in Brooklyn or the Bronx to understand my pronunciation when I installed dictating machines to replace stenographers taking personal dictation.

ANPA, through me, helped the then-War Department set up a public relations unit preparing for our entry into World War II and devising censorship rules, as the department had no records of what was done in World War I. We assisted in bringing to the War Department people with newspaper experience.

There are many other remembrances, of course, like what I found in the way of newspaper publishing in New York City when I began working at ANPA headquarters there.

Nearly a dozen dailies were being published in the city then, and I became secretary of the New York City Publishers Association—without knowing that it would become another job for me.

Now for some personal statistics. When I retired in 1960, I had spent 54 years in newspaper work except for four years at Emory College, two years in the Army (one year of which was in France commanding a machine gun company), and five years in Washington, D.C., as secretary to a U.S. senator from Georgia. I was in daily newspaper association work for 36 years—from 1924 to 1960.

I have lived 91 years of ANPA's 100 years of existence. □

ANPA, through me, helped the then-War Department set up a public relations unit preparing for our entry into World War II and devising censorship rules.

Fighting for the well-being of newspapers is good for the soul

BY STANFORD SMITH

If anything was clear to the ANPA leadership in the early 1960s, it was the need to adapt new technology to newspaper publishing.

In it's 100-year history, ANPA demonstrated remarkable stability while maturing as a major force in the entire field of journalism. ANPA remained true to its founders' goals by adapting its programs to meet changes in the society served by its members.

In retrospect, my 15 years as general manager collapse into a collage of pleasant memories such as:

- Cordial, loyal, appreciative members who almost unfailingly responded to ANPA requests for information or legislative alerts
- A stream of giants of journalism who served on the ANPA Board of Directors and set policies that enabled the staff and committees to act with certainty of purpose
- A loyal professional staff, highly competent and dedicated to the goals of ANPA
- A whole series of mostly adversarial hearings before an ever-increasing number of federal regulatory bodies trying—for the most part unsuccessfully—to impose some kind of controls on newspaper operations.

For some people, the last item would not be regarded, even in retrospect, as pleasant. Not so for me. A fight for what one regards as fundamental to the welfare of journalism and the nation itself is good for the soul.

Whatever ANPA accomplished in my tenure stemmed from the combined efforts of all those identified above. Cranston Williams had modernized the Association's operations and imbued the staff with a dedication to serve every member to the best of our ability. I had seven years' experience on that staff before his retirement. But new challenges then faced us.

Membership. In a moment of sheer determination, I announced through Editor & Publisher magazine a goal of a membership of 1,000 daily newspapers (the membership then was just over 800). We needed more members to strengthen our voice in Washington where we were facing new and different problems.

With support of the Board, we added a full-time membership representative to call on both present members and prospective members to make profitable use of ANPA services. It paid off, and we soon reached the 1,000 goal and went on to about 1,200 before my retirement.

Stanford Smith

New Technology. If anything was clear to the ANPA leadership in the early 1960s, it was the need to adapt new technology to newspaper publishing. It was not only the acute labor union problems typified by the then-powerful ITU but also the rising cost of everything associated with producing and distributing newspapers. We attacked these problems with the aid of a Scientific Advisory Committee of outstanding men of science, a contract with the Electronic Systems Laboratory at Massachusetts Institute of Technology and an internal reorganization of the ANPA Research Institute.

The interplay of these actions along with the undertakings of many newspapers and supplier companies resulted in major changes in the way newspapers are produced. It would be impossible to produce today's high quality newspapers with the technology used in the early 1960s.

Labor Relations. ANPA had always placed a high priority on assisting its members in their relations with newspaper labor unions. With the death of George N. Dale, we appointed Mike Patrone to head the ANPA labor-relations activity, and the result was a rapid upgrading of the service along with an increased level of communications with the heads of the international unions. Meanwhile, the emerging technology was greatly strengthening the hands of publishers in their determination to continue to serve their readers and advertisers regardless of the actions of any labor union.

Without such determination on the part of publishers, newspapers and their readers and advertisers would have suffered severe losses. ANPA played a major role on the national level and frequently in individual newspaper crisis situations.

International Affairs. ANPA had been involved early in the organization of the International Federation of Newspaper Publishers, or FIEJ, but in its early days FIEJ seemed to be mostly a social organization. The rapid advance of new technology and the fact that its impact was worldwide led a few far-sighted publishers, both in Europe and North America, to see the need for newspapers to play a bigger role at the international regulatory level to assure uninhibited use of new technology for the transmission of news and pictures by the news services, newspapers and other media.

When the Europeans asked ANPA to designate me to organize a new entity for that purpose (over my objections that I was no expert on telecommunications technology), the ANPA Board instructed me to take on the mission. The result was organization of the International Press Telecommunications Council, which I headed for its first two years and which now is well-recognized and highly regarded in telecommunications technology circles throughout the world. Today ANPA is playing a bigger role than ever in this vital work.

The Newspaper Center. Moving ANPA headquarters from New York City to the Washington, D.C., area was a major step taken during my tenure. Many alternatives were considered, and Board members made many trips in the course of the investigation which led to the move to Reston,Va. The impetus was not just cost-effective operations in a different environment but also a recognition that the Nation's Capital had become a much more important element of ANPA activity. The effects of the move were just as had been anticipated—increased efficiency, improved cost control and effective service to the membership.

This move led to the accomplishment of one of my personal goals not achieved during my tenure—namely, improved coordination among the many associations in the newspaper business. This has now been achieved through The Newspaper Center.

For this and the many other current accomplishments of ANPA, this former general manager warmly congratulates the officers, directors, members and staff. □

REGULATIONS

OSHA focus on Pa. newspapers finds 'serious' violations

Pennsylvania newspapers apparently have been targeted for safety inspections by the federal Occupational Safety and Health Administration. And, according to an ANPA environmental expert, the inspections have drawn fines for violations classified by the agency as "serious."

Richard W. Neergaard, ANPA manager/environmental services, said he knows of at least four Pennsylvania papers that have been inspected by OSHA within the past year. The inspections have been routine or "programmed" inspections, rather than inspections prompted by an incident or complaint.

Neergaard also said an OSHA official indicated to him that the newspaper industry "is at or near the top" of the list of industries targeted for routine inspections in his section of Pennsylvania.

According to Neergaard, newspapers have been cited for: failure to maintain a "hazard communication" program; operating a Goss Urbanite press without ink train roller guards; operating a press folder without guards covering "nipping" rollers and with a partially unguarded drive shaft; operating compressors with unacceptable protective covering of the drive belts and pulleys (even though the guards in place at the time of the inspection were original equipment); partially blocked aisles and exit doors; and miscellaneous electrical hazards.

He said OSHA proposed fines of $200-$300 per violation.

All four OSHA area directors in Pennsylvania refused to comment on whether newspapers rank high on their list of firms scheduled for inspections. The rankings are confidential, they said.

However, William K. Mason, acting director in OSHA's Pittsburgh office, said newspapers and other printing concerns are on the state's "high-hazard" list.

One violation was lack of roller guards.

OSHA targets industries for safety inspections based on their lost-workday injury rates, compiled by the Labor Department's Bureau of Labor Statistics. OSHA looks at newspapers nationally and by state.

Industries with lost-workday injury rates above 3.4 per 100 full-time workers, either nationally or in a state, go on the high-hazard list, according to Joseph J. DuBois, director of OSHA's Office of Data Analysis in Washington, D.C. The number 3.4 is chosen because it is the lowest lost-workday injury rate for the entire private sector in the past five years, he said.

Nationally, the newspaper business had a lost-workday injury rate of 2.8 per 100 full-time employees in 1985. Therefore, said DuBois, the newspaper business will only appear on lists in states where the newspaper average is above 3.4.

Each OSHA area office receives an annual list of the high-hazard industries in the state. The area office then sets up an inspection schedule. Establishments inspected one year generally will not be inspected again for another two or three years. □

Detroit JOA hearings to start Aug. 3

A federal administrative law judge set Aug. 3 for the start of the public hearing into the application of Detroit's two daily newspapers for a joint operating arrangement [**presstime**, April 1987, p. 42].

The Detroit Free Press and The Detroit News had proposed a starting date of June 1. "We would have preferred it sooner; the newspapers are losing a lot of money. But it's nice to have a date we are moving toward," said Lawrence J. Aldrich, attorney for Gannett Co., owner of the News.

Meanwhile, unions at the Detroit papers are looking into the possibility of an employee purchase of the Free Press, the newspaper said to be "failing" and requiring a JOA to survive. However, David Lawrence Jr., publisher and chairman of the Free Press, said "we see nothing that seems to make it a financially feasible possibility." □

ANPA critical of EPA proposal on chemical reporting

ANPA has criticized a proposal by the Environmental Protection Agency to require companies that make, store or use hazardous chemicals to file reports with state and local emergency planning personnel.

The Association said compliance with the plan would become "prohibitively expensive" for newspapers. It suggested an alternative to full compliance for "low-hazard" companies like newspapers.

The Emergency Planning and Community Right-to-Know Act was enacted by Congress last year as part of the Superfund reauthorization legislation.

In March 30 comments to the EPA, ANPA suggested that instead of requiring new forms to be used for reporting to fire and health officials, the government require newspapers to submit the material safety data sheets and chemical product lists they already must maintain under the Occupational Safety and Health Administration's "hazard communication" program.

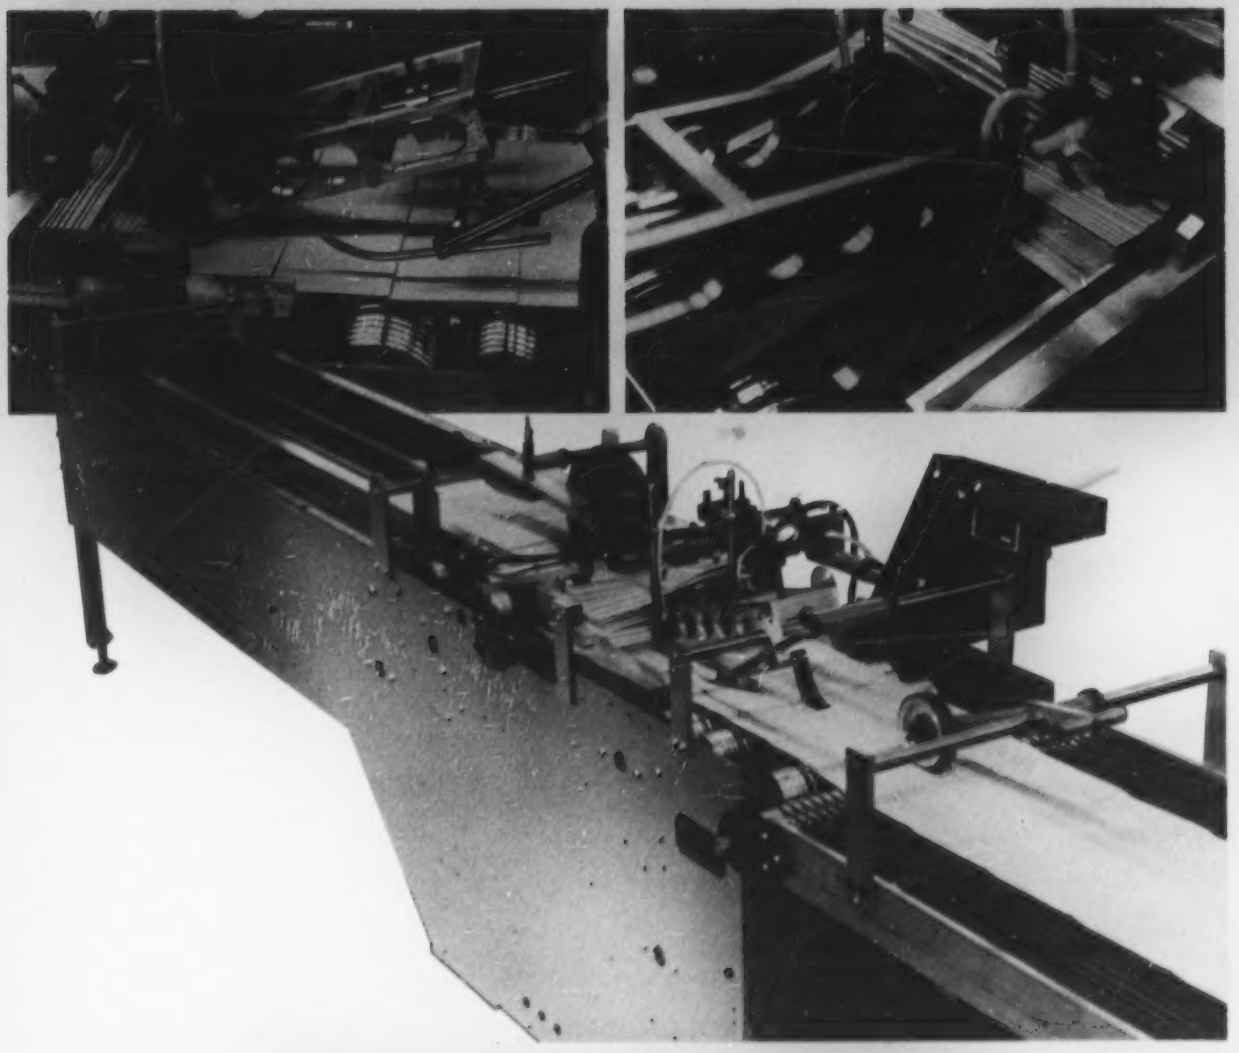
ANPA said the new EPA forms would require reporting of "interpolated information" that goes beyond what is required on a material safety data sheet and would force newspapers to make "exhaustive hazard determinations."

Newspapers, ANPA said, would have "no alternative other than to hire additional specially trained scientists" to comply with this requirement.

Chemical manufacturers, importers and distributors have more knowledge about the potential hazards of their products and should be the ones solely responsible for making a hazard assessment, the Association added.

ANPA said newspapers use "comparatively low-hazard consumer-oriented and packaged chemical products and a small amount of flammable products."

Because flammability is the most significant potential hazard of products used in such industries, ANPA suggested that EPA devise a new inventory form for them. It would require information about any flammable chemical products stored in excess of 500 pounds (or 55 gallons) and would include the name of the product and information on storage, use and provisions for fire protection. Submission of this form along with MSDS would provide emergency personnel with "adequate information," ANPA said. □



This new SIMFEED 45 feeds your rotary trimmer at speeds exceeding 60,000 per hour.

The SIMFEED 45 Feeder creates a shingled stream at speeds up to 60,000 per hour. Two minute easy make-ready. Product can be loaded onto feed table in full size lifts from both sides of the machine. Designed to interconnect with the SIMFOLD 60 for efficient offline quarterfolding.

LEGISLATION

Tobacco ad issues heat up

Canada's minister of health and welfare announced April 22 he will introduce legislation to ban all tobacco advertising and promotion in Canada.

Although the Canadian Daily Newspaper Publishers Association issued a statement opposing the plan, CDNPA General Manager John E. Foy said the legislation "mostly likely" will pass.

Under the proposal, tobacco ads in newspapers would be prohibited starting Jan. 1, 1988, and in magazines and billboards a year later.

Canadian broadcast media already are without tobacco advertising, by virtue of a voluntary agreement of tobacco companies that dates from 1972.

The CDNPA Board of Directors released its statement when, one week before the official announcement, it learned of Minister Jake Epp's legislative plans. "Once government intervenes to ban any lawful product from being advertised, a dangerous precedent will have been set that offsets the Canadian tradition, now enshrined in the constitution, of freedom of speech," the board said.

The developments in Canada came in the same month when, in Washington, D.C., the 100th Congress conducted its first hearing on legislation to ban all tobacco advertising in U.S. media. A legislative ban against cigarette advertising in U.S. broadcast media was enacted in 1970; in 1973, it was extended to small cigars, and last year, to smokeless tobacco.

In the congressional hearing April 3, an ANPA representative sounded a "dangerous precedent" warning similar to that voiced later in the month by CDNPA.

Proponents of legislation to ban tobacco advertising (or deny tax deductions for it) are "willing to cross the line and impose government censorship," said John Seigenthaler, chairman, publisher and editor of The Tennessean in Nashville. "They seem to forget: Government censorship is addictive. It will suffocate creative thinking. It will strangle the breath of free speech. It will kill free expression. It is a deadly disease. A dangerous precedent is established for other enthusiasts to champion censorship of products, services and ideas they don't like."

The hearing was conducted by the House Commerce Committee's Subcommittee on Transportation, Tourism and Hazardous Materials, which has jurisdiction over the Federal Trade Commission.

John Seigenthaler

Rep. Mike Synar

The focus of the hearing was HR 1532, introduced by Rep. Bob Whittaker (R-Kan.), ranking Republican member of the subcommittee. His bill would ban all media advertising of tobacco products.

The legislation is similar to HR 1272, introduced by Rep. Mike Synar (D-Okla.), except that Whittaker would give the FTC authority to enforce the ban, while Synar would give that authority to federal courts.

The Synar bill is pending before the Commerce Committee's Subcommittee on Health and the Environment [**prsestime**, March 1987, p. 48].

Two federal government representatives spoke against the legislation at the April 3 hearing. "Information is not, in itself, harmful," said FTC Chairman Daniel T. Oliver. "People will perceive their own best interests if they are well-enough informed. The best means to that end is to open the channels of communication rather than to close them."

Douglas W. Kmiec, deputy assistant attorney general, said the Justice Department has "substantial doubt" whether either HR 1272 or HR 1532 is constitutional.

The chief legislative assistant to Synar, John H. Hollar, denied speculation that the ad-ban bill had been, in effect, defeated because of the opposition from the two federal agencies. He said the subcommittee's hearing was "stacked against" proponents of the ban. And he denied a marketing newsletter report that Synar plans to revise his bill to prohibit all but so-called "tombstone" ads for tobacco—those that restrict content to the name and picture of the product.

In a related development, Rep. Fortney H. Stark (D-Calif.) introduced a bill, HR 1563, to dissallow tax deductions for advertising or other promotion expenses associated with the sale of tobacco products. A similar bill has been introduced in the Senate. □

Lottery ad restrictions called 'antiquated'

Calling federal law restricting the advertising of legal lotteries "antiquated," a newspaper publisher told a congressional subcommittee the time has come for repeal.

"All but four states now have legalized some form of gambling," said Frank A. Daniels Jr., president and publisher of The News and Observer and The Raleigh (N.C.) Times. "But the federal government has forgotten that it should not act to suppress truthful commercial speech about lawful activities."

Daniels, current Newspaper Advertising Bureau president and a former ANPA director, testified April 2 on behalf of ANPA before the House Judiciary Committee's Subcommittee on Administrative Law and Governmental Relations.

The panel is considering legislation to lift existing restrictions on mailing or broadcasting lottery advertising. HR 1568, introduced by subcommittee Chairman Barney Frank (D-Mass.), would lift the restrictions if the lottery is "authorized and regulated" by a state and if the ad complies with state law [**prsestime**, Feb. 1987, p. 14].

However, a representative of the U.S. Postal Service raised concerns about having an exemption from federal law depend on a mailer's compliance with various state laws.

Also testifying before the subcommittee was a Justice Department official who said his agency believes the current law is unenforceable on constitutional grounds. □

Supreme Court rules Arkansas tax must exempt magazine

The U.S. Supreme Court ruled 7-2 that Arkansas violated the First Amendment by refusing to exempt a general-interest magazine, Arkansas Times, from the state sales tax.

Already exempted from the tax were newspapers and "religious, professional, trade, and sports journals and/or publications printed and published within this state."

Sales taxes affecting newspapers and other media have prompted debate in many other states, particularly Florida. (See story, p. 62.)

In its April 22 ruling in *Arkansas Writers' Project Inc. v. Ragland, Commissioner of Revenue of Arkansas*, the court said the case involved a "disturbing use of selective taxation."

"We stated in *Minneapolis Star (& Tribune Co. v. Minnesota Commissioner of Revenue)* that '(a) tax that singles out the press, or that targets individual publications within the press, places a heavy burden on the State to justify its action.' In this case, Arkansas . . . has advanced no compelling justification for selective, content-based taxation of certain magazines, and the tax is therefore invalid under the First Amendment," said Justice Thurgood Marshall in writing the opinion of the court.

The ruling reversed the Arkansas Supreme Court, which held that the magazine exemption applied only to the already-designated types of periodicals and that it was a permissible, "ordinary form of taxation" to which publishers are not immune.

The U.S. Supreme Court remanded the case to the state with instructions to consider the award of attorney's fees to Arkansas Writers' Project, which publishes the monthly magazine.

Justice Antonin Scalia dissented, joined by Chief Justice William H. Rehnquist. Scalia based his opinion on the precedent that tax preferences, as "subsidies," do not necessarily infringe on the rights of those excluded from them.

The Arkansas sales tax neither inhibited, nor meant to inhibit, the magazine's publication, he wrote.

ANPA and The Miami Herald jointly filed a friend-of-the-court brief in the case.

Tonda Rush, the ANPA assistant general counsel involved in the case, said "It was mostly a good decision. I wish the court had focused more attention on the way taxing information affects the flow of information."

In another development, the court agreed to hear Hustler magazine Publisher Larry Flynt's appeal of a $200,000 jury award to evangelist Jerry Falwell for "intentional infliction of emotional distress."

The award stemmed from a liquor-ad parody featuring Falwell's picture and a fictitious interview describing an incestuous relationship [**presstime**, April 1987, p. 40]. □

COURT BRIEFS

• FBI **"rap sheets" are not exempt from disclosure** under the Freedom of Information Act, according to a ruling by a three-judge panel of the Court of Appeals, District of Columbia Circuit. The ruling came in related cases brought by a CBS reporter and by the Reporters Committee for Freedom of the Press.

The government had argued that a 1957 law governing records of arrests, indictments, convictions and imprisonments prevented release of "rap sheets" because of privacy considerations.

• A federal jury found that a Washington state daily did not violate **antitrust law** by offering lower advertising rates than a rival weekly.

The weekly, The Skagit Argus of Mount Vernon, charged that the Skagit Valley Herald sought a monopoly in restraint of trade by establishing the low rates and by threatening reprisal against advertisers who refused to boycott the Argus.

• ANPA and 30 other press organizations filed a friend-of-the-court brief in the appeal of the **espionage conviction** of former naval analyst Samuel L. Morison.

The brief to the 4th U.S. Circuit Court of Appeals argues that the espionage and theft statutes under which Morison was convicted were not intended to be applied to the dissemination of information to or by the press [**presstime**, Jan. 1987, p. 43].

Morison was convicted for providing classified photos to Jane's Defence Weekly.

Alaska paper loses libel coverage for running arrest reports

The Wrangell (Alaska) Sentinel has never been sued for libel since it began publication in 1902.

Yet Fireman's Fund suddenly canceled the 1,600-circulation weekly's libel policy after 15 months of coverage.

Repeated inquiries from the newspaper's lawyer, John McKay of Anchorage, brought a response from the insurer that the Sentinel printed "too many names" of arrested residents from the local police blotter, because people in such a small community would be sensitive about seeing their names in the paper.

The paper's co-publisher, Ann D. Kirkwood, said, "We are extremely careful with how we write" information from the police blotter. "We say, 'Joe Blow is charged in connection with an incident in which a person is accused of. . . .'"

The community supports the practice of publishing arrest information, she said, even the naming of arrested juveniles who are treated as adults under Alaska law when charged with drunken driving.

Lawyer McKay said Fireman's Fund also objected to a published letter to the editor dealing with a tax break for a forest-products firm in the economically strapped mill town. The letter ended, "Just because the town is bonded to the hilt doesn't mean they have to kiss anyone's butt."

Fireman's Fund said in a letter to McKay, "Most newspapers would strike (the word butt) or edit it out. This indicates an editorial approach that will get them in trouble."

Since losing its libel coverage, the paper has turned to a group policy offered by the National Newspaper Association at twice the premium.

So far, neither McKay nor Kirkwood has heard of cancellation of libel coverage by Fireman's Fund elsewhere. But Kirkwood said other publishers have indicated they are nervous when their Firemen's Fund policies come up for renewal.

Fireman's Fund officials had no comment.

McKay said he received a telegram from a Fireman's Fund representative that said the company seeks to avoid defense costs, and its libel coverage "is aimed at the non-controversial, small-town, straight-news publication."

Kirkwood asks, "Why us? We don't do anything other weekly newspapers in Alaska don't do." □

State and Local

Ad-tax bill enacted in Florida

Florida Gov. Robert Martinez has signed into law a measure eliminating sales-tax exemptions on most professional services, including newspaper advertising, effective July 1. Circulation and use of wire services also will become subject to taxation.

Already, one investment banking firm has pushed the alarm button, reducing its stock ratings of several large media companies because of a possible drop in their earnings.

Ad industry leaders are considering a court challenge to block the new tax.

Officials of Florida's Department of Revenue, which has broad rule-making power in the collection of taxes, have stated the 5-percent levy will apply to:

- Advertising in Florida media, even that placed from out of state
- A pro-rata share of all advertising in national media circulated in Florida [**presstime**, April 1987, p. 46]
- The cost of doing business, including outside services purchased by newspapers, such as job printing or graphic arts.

The bill is expected to raise more than $750 million in the fiscal year beginning July 1, $100 million of that from advertisers. Martinez has argued that the revenues are desperately needed to handle burgeoning expenses in the rapidly growing state.

Ad industry leaders fear that other governments may follow Florida's lead. At the moment, the Tucson City Council is considering an extension of its 2-percent sales tax on local media to national advertisers, which would be unprecedented for a municipal government.

The possibility of a tax wildfire breaking out led Salomon Brothers of New York City to reduce the ratings for the newspaper-related companies it tracks: Gannett Co., Knight-Ridder Inc., The New York Times Co., The Times Mirror Co., Tribune Co. of Chicago, Capital Cities/ABC Inc. and The Washington Post Co.

Spokesman Charles Brophy said Salomon Brothers reduced its rating from an "O," meaning the stocks are expected to outperform Standard & Poor's index of 500 stocks, to an "M," meaning performance should match the Standard & Poor 500. A "U" rating would mean underperformance.

Other likely battlegrounds on taxation issues are Texas, Oklahoma, Minnesota and Louisiana, said Kevin Grant, ANPA state relations coordinator. □

Telecom

Greene allows 3 BOCs to enter advertising with restrictions

Federal District Judge Harold H. Greene ruled that three regional Bell Operating Companies may enter the advertising business. But he imposed several restrictions on their operations, including two specifically sought by ANPA.

Southwestern Bell Corp., NYNEX Corp. and Bell Atlantic Corp. had filed similar requests for waivers of the consent decree governing the breakup of AT&T. They asked to be allowed to enter the advertising field through subsidiaries separate from their operating telephone companies.

Greene's April 13 orders prohibit the BOCs from offering any of the advertising services to their "telecommunications companies, subsidiaries or operations."

ANPA had sought such a prohibition, arguing that the subsidiaries would have the "incentive and opportunity" to charge excessively high rates to the BOCs for advertising services. As a result, rate payers would have to pay "inappropriately high charges," and this would result in cross-subsidization of the BOCs' advertising ventures, the Association said [**presstime**, Dec. 1986, p. 54].

Greene agreed. In the order granting the advertising waiver for Southwestern Bell, the first BOC to seek one, he said "ample opportunities for cross-subsidization, and therefore circumvention of the decree, would exist if Southwestern, through its separate subsidiary, were permitted to offer advertising services both to the public in general and to its affiliated telephone operating companies."

Greene also said the subsidiaries may not obtain telephone subscriber listings or information maintained by the telephone companies unless the information is made available to competitors. ANPA had requested that condition. □

Computer III is over

The Federal Communications Commission March 25 concluded the final phase of its Computer III Inquiry designed to establish rules whereby AT&T and the divested Bell Operating Companies can provide "enhanced" services.

The FCC failed to adopt an ANPA recommendation that the companies be allowed to use telephone-customer information only if the customer gives permission and if the information is made available to competitors [**presstime**, Nov. 1986, p. 54]. □

Postal Affairs

Commission approves size change

To accommodate newspapers' total-market-coverage programs, the Postal Rate Commission has recommended that the maximum size allowed for certain third-class mail be enlarged slightly.

The commission said the change would have no adverse impact on postal operations, yet it would allow TMC publications to be eligible for the less-expensive third-class rate for material presorted by carrier route.

ANPA had requested that the maximum size be increased from 11 1/2 by 13 1/2 by 3/4 inches to 11 3/4 by 14 by 3/4 inches [**presstime**, April 1987, p. 44]. Many newspaper presses will not run off a publication small enough to meet the existing third-class size limitations. Those wanting to use third-class delivery have had to quarterfold their free-circulation publications to get them down to size.

However, according to some members of the ANPA Postal Committee, U.S. Postal Service enforcement of the size rule has been erratic.

In fact, some local postmasters have routinely allowed a slightly larger size, the members said. □

Governors postpone new rate case

Despite the U.S. Postal Service's insistence that it needs more revenue, the postal Board of Governors postponed filing a rate-increase request.

Chairman John N. Griesemer said after the board's April meeting that the governors' panel needs more information on rising USPS costs in labor, retirement and other employee benefits before proceeding with a rate case.

Postmaster General Preston R. Tisch told an April meeting of postal customers that there will be an estimated $2-billion increase in costs over the next two years, partly as a result of a new employee retirement system and higher labor costs. "We cannot manage all of these costs without some adjustment in rates during the latter part of 1988," Tisch said.

It can take a year or longer for new rates to become effective after the governors file a rate case with the independent Postal Rate Commission [**presstime**, April 1987, p. 44]. □

For the newspapers of tomorrow, Austin provides the facilities of tomorrow.

Bundling system, Florida

Insertion system, Illinois

Insertion system, Minnesota

Computer workstation, Ohio

Freeroom, Wyoming

Consider the complexities of producing a newspaper. More and more, publishing is a composite of complex systems. Automated material handling. Electronic pre-process controls. Computerized inserting and packaging.

Effective operation requires that all of these systems be coordinated and integrated, communicating with one another, and with management.

Austin strives both to understand and to rationalize the intricacies of systems integration. Indeed, systems integration is the key element of all of the facilities of tomorrow that Austin designs, engineers and constructs.

Austin also understands newspaper production, having solved facility problems for more than 100 newspapers in the last decade. Currently, Austin has under contract 40 newspaper projects in various stages of development.

This depth of pertinent experience makes Austin uniquely useful to publishers of all types of newspapers, from suburban weeklies to metropolitan dailies. The Austin Company, Cleveland, Ohio 44121.

Western Hemisphere gets mixed free-press review

A mixed report on the status of press freedom in the Western Hemisphere was presented to the Inter American Press Association at its meeting in San Antonio.

The report of the organization's Committee on Freedom of the Press, subsquently adopted by the IAPA Board of Directors, noted that at least 13 journalists had been killed in the Americas in the past year.

"Just as the killing of men cannot accomplish its objective, neither can the killing of newspapers and radio stations—the latest flagrant examples being ABC Color and Radio Nañduti in Paraguay, and La Prensa and Radio Catolica in Nicaragua," the report said.

It also identified several cases in democracies in the Americas where there has been "nibbling at the edges of press freedom." This, the report said, "too often precedes the taking of much larger bites."

Among the incidents cited was the United States' detention and exclusion of Colombian journalist Patricia Lara last October [**prestime**, April 1987, p. 45].

In the same category, the report also listed: the compulsory licensing of journalists in 14 countries; the withholding of official advertising from newspapers critical of the government in Ecuador, Venezuela, El Salvador and elsewhere; the sentencing of Venezuelan editor Victor Gonzalez to three years' imprisonment "on what appear to be spurious charges"; the "abuse" of journalists during the kidnapping of the president of Ecuador; and a restrictive press law in "supposedly newly democratic Haiti."

But, the report said, "the situation is not all grim by any means. Over the past seven years, despotic governments have become the exception rather than the rule, with only Cuba, Nicaragua, Suriname, Paraguay and Chile remaining as dictatorships. Panama also is under de facto military control."

It also reported on "promising events" in two countries where press freedoms have long been denied. In Guyana, a new independent weekly, the Stabroek News, was allowed to be established, and the Catholic Standard was permitted to accept the gift of a printing press. In Chile, publications banned after an assassination attempt on President Augusto Pinochet were allowed to reappear, and a new independent daily newspaper, La Epoca, began publication.

Near the conclusion of the organization's March 23-26 meeting, the IAPA Board of Directors passed numerous resolutions. Among them were those:

Hoy/Santiago, reprinted from World Press Review

- Calling on the U.S. government to make public evidence on which it based its action against Lara and protesting the "haphazard and secret procedures" of the Immigration and Naturalization Service with regard to the admission of other foreign journalists.
- Requesting South Carolina Gov. Carroll A. Campbell to reply to IAPA's earlier protest of harassment by public officials of editor Ken Fortenberry, formerly of The McCormick (S.C.) Messenger [**prestime**, March 1987, p. 84].
- Urging Latin American governments to "repeal any law or laws which may contain restrictions on the ownership and use of satellite transmission and receiving equipment, as well as private access to satellite communication."
- Urging IAPA members to "join, support and encourage" journalists in Colombia and elsewhere "to expose the drug cartel and its threat to press freedom." □

Journalists call for fund to fight censorship

A "Fund Against Censorship" has been established to support challenges to censorship and "related abuses" around the world.

Creation of the fund was called for in January at a London conference of journalists from 35 countries [**prestime**, Feb. 1987, p. 42].

Representatives of the six media associations that organized the London assembly met April 2 in Madrid to discuss implementing this and other recommendations contained in the "Declaration of London."

The World Press Freedom Committee, one of the six associations, offered start-up money for the fund. "There will need to be fund-raising" for its operation, said WPFC Chairman Harold W. Andersen, chairman and chief executive officer of the Omaha World-Herald Co.

WPFC Executive Director Dana R. Bullen said the amount to be sought has not yet been determined. He declined to state the exact amount of the WPFC's initial contribution, saying only that it was "about what it would cost you to buy a car." The money will be spent on the fund's initial projects, he said; two are currently being discussed, in Africa and Asia.

WPFC, with headquarters at The Newspaper Center in Reston, Va., will act as coordinator for the fund.

The other five organizations involved are the International Federation of Newspaper Publishers, International Press Institute, North American National Broadcasters Association, Inter American Press Association and International Federation of the Periodical Press.

News media experiencing censorship or related problems can contact any of the six organizations to be considered for assistance from the fund. □

WORLD PRESS NOTES

- De Ware Tijd of Paramaribo, Suriname, one of that country's two daily newspapers, **ceased publication** April 15 when it was unable to get U.S. currency from the country's Central Bank to purchase imported newsprint. The paper was one of about 20 companies closed by the currency crisis.

The other daily, De West, was reportedly running low on paper.

- The Supreme Court of Chile will consider the **libel case** of Chilean magazine editor Juan Pablo Cardenas, selected to receive the 1987 Golden Pen of Freedom award by the International Federation of Newspaper Publishers.

Cardenas, editor of Analisis, had been sentenced to spend every night for the next three years in prison for libeling Chilean President Augusto Pinochet [**prestime**, March 1987, p. 50].

An appeals court overturned the verdict. The Ministry of the Interior, which brought the original complaint, then appealed to the high court.

The rest is history.

In 1837 Arunah Shepherdson Abell printed the very first edition of The Baltimore Sun, ushering in a new era in newspaper publishing.

Since then, we've earned 12 Pulitzer Prizes, hundreds of local, national and international awards and been home to journalists like H.L. Mencken and A. Aubrey Bodine.

Obviously, we've come a long way in the past one hundred and fifty years. And it is our commitment to the people of Maryland to continue to grow and get even better in the future. In essence, to be the very best newspaper we know how to be.

Here's to another 150 years of history in the making.

Now you can have both with the new Goss "Colorliner" press. Paging and color flexibility – unmatched by any other double-width offset press – combined with optimum R.O.P. print quality. Without having to make a choice. Even in the future, when the Colorliner's modular design accommodates your changing production requirements.

It's unique four-high vertical arrangement with its short couple-to-couple web lead, the Colorliner can print process color on every page of a section, including the front page. Without the setoff associated with unit-to-unit compensators and common impression cylinders. Without reversing couples. And with reduced need for angle bar and bay window leads. This makes the four-high arrangement particularly with optional third form rollers in the printing couples – well-suited to produce Sunday previews and four color advertising inserts.

The Colorliner can be installed with 4-4, 4-2-4-1, 3-1-2-1 or whatever cylinder arrangement you need today. And its flexibility extends into tomorrow to meet new pagination and color requirements.

Goss **COLORLINER**

NOT EITHER/OR. ANYMORE.

The 75,000 cph Colorliner has a number of other outstanding features to maximize print quality and productivity. Slow-speed Goss Injector™ or open fountain inkers. Water down-first, direct-to-plate dampening systems. Narrow gap lockup. Presetting and sequential startup. A new running-belt RTP for 45" rolls. Options include a 50" running-belt RTP, automatic webbing in vertical arrangements and heavy-duty 3:2:160-page Sovereign™ and 80-page 2:3:3 jaw folders.

The Colorliner is available with new, user-friendly press control and information systems. The menu-driven Advanced Press Control System provides all the advantages of automation: touch-screen input, feedback on ink zone, registration, compensator and web tension controls, preset individual ink and water curves, and automatic sequential startup.

The Production Information Control System counts papers and shuts presses down at preselected counts, generates customer-formatted reports and can collect historical data for up to a year.

Paging and color flexibility. It's not either/or anymore with the unique Goss Colorliner press.

Exchange benefits news staffs

Several years ago, when Time magazine listed the 10 best U.S. newspapers, it carried a sidebar mentioning that The Anniston (Ala.) Star (evening, circulation 31,798) and The Free Lance-Star of Fredericksburg, Va., (evening, 34,717) were examples of outstanding smaller papers.

Charles S. Rowe, editor and co-publisher of the Virginia newspaper, said that after the article appeared, H. Brandt Ayers, editor and publisher of the Alabama daily, called to propose exchange visits involving some editorial personnel. The feeling was that each newspaper's staff could learn from the other.

The visits were slow to materialize, but on three days in mid-March, four members of The Anniston Star sat in the newsroom of The Free Lance-Star, observed the operation, attended story conferences and other staff meetings, and had plenty of chances "to shoot the breeze" with their Virginia newspaper counterparts, Rowe said.

In June, The Free Lance-Star plans to send four or five staffers to Anniston for the second part of the exchange.

The two newspapers bear strong similarities: in name ("Star" in both nameplates), publication schedule (evening), circulation size (30,000-35,000 range), ownership (independent) and editorial excellence (witness the Time magazine mention).

Yet the Alabama delegation headed by Executive Editor Paul M. Rilling discovered differences that he said his newspaper can learn from.

For example, the Virginia daily has a large news desk that handles reporter assignments, copy editing, headline writing and page layout. In contrast, Rillings' paper has a copy desk for editing, headline writing and layout, and a separate metro desk to oversee assignments.

A major difference that became clear when the two staffs got together was tenure. Rowe said his paper's staff has "very, very little turnover." Consequently, he said he especially welcomes the opportunity to send some of his staff to Anniston to see how another newspaper functions.

Rilling said staff stability is something many other small newspapers, including his, would envy. But the Anniston paper is proud of the training it gives young reporters who then jump to larger newspapers, he said. "We're that kind of paper," the executive editor said. □

ASNE leader reaffirms minority hiring goal

A reaffirmation of the American Society of Newspaper Editors' commitment to the hiring of minorities will be one of the top priorities for the incumbency of new ASNE President Katherine Fanning.

"In the nation's newsrooms today, only 6.5 percent of the employees are minorities, and we are looking at a projected 25-percent minority population (in the nation) by the year 2000," she said following her election at the ASNE Convention April 7-10 in San Francisco.

What is news to the white community may not even interest black, Asian, Hispanic, American Indian or other minority groups, she told **presstime**. And a minority reporter may be the only person who knows what *is* news in his or her community, said Fanning, who is the first woman to preside over ASNE.

During the San Francisco convention, results of ASNE's latest survey of minority hiring at U.S. daily newspaper newsrooms were released. They showed that minority employees accounted for 6.56 percent of the total in 1986, compared with 6.30 percent last year.

The organization's goal, adopted in 1978 when ASNE began monitoring minority newsroom employment (then 3.95 percent), is to have the percentage of minorities in the newsroom equal the percentage in the U.S. population by the year 2000.

There are about 3,600 minority employees in U.S. newspaper newsrooms today among a total work force of 54,700, the survey showed. It also found that minorities are "sorely underrepresented" in newsroom management, with only 3.9 percent of 12,000 supervisors coming from minority groups.

Besides minority hiring, Fanning said that during her one-year-presidency she will be stressing the importance of bringing Third World journalists to U.S. newspapers for a month of orientation. The editors' society has had such a program for the past three years, funded by newspaper foundations and individual newspapers and involving 12 Third-World journalists. The program was funded for only the three years, however, and it is now scheduled for a year's evaluation.

Fanning, editor of The Christian Science Monitor, said she personally does not need a year to judge the program's worth. "Reassessment already tells us this is a terribly important program," she said.

A third item high on her agenda is recruiting editors of smaller newspapers to join ASNE. She said the organization has waived initiation fees for papers with less than 25,000 circulation and has a policy of reduced fees for papers a little larger than that.

Fanning said she will have task forces from each of five regions study ways the society can be of more service to editors, particularly those from smaller newspapers.

She already has appointed a Future of Newspapers Committee, with Burl Osborne, president of The Dallas Morning News, as chairman. The panel will investigate "the reality and future of our business," Fanning said. "We want to know where technology is taking us. We want to know about the changing work force and the changing demographics of our business."

At the convention, ASNE editors heard results of a nationwide survey of copy editors, many of whom lamented their lack of "clout." Of the 650 copy editors who responded to the ASNE survey, 45 percent said they did not have sufficient clout, and some embellished their reports with comments, such as "We're given the respect that might be given to an assembly-line worker" and "The copy desk is where the elephants go to die—the rejects."

Linda Grist Cunningham, chairman of the ASNE Human Resources Committee, said "there is a growing concern among editors that we are rapidly approaching a crisis in finding good copy editors."

"We must begin to listen to our copy editors," she said, "or we will wake up one morning with a newsroom filled with reporters and no one to write the headlines."

Another element of the convention was the release of a 12-month study of newspaper subscribers, many of whom "loved" their newspaper but stopped taking it nonetheless. (See story, p. 88.)

During the convention, the ASNE board called for "full and vigorous enforcement" of the current liberal-arts standard for accreditation of journalism schools. The resolution passed at the convention makes enforcement a condition of ASNE's continued membership in the Accrediting Council for Education in Journalism and Mass Communications.

Elected to serve with Fanning for the next year were: vice president, Edward R. Cony, associate editor of The Wall Street Journal; secretary, Loren Ghiglione, editor and publisher of The News of Southbridge, Mass.; and treasurer, John Seigenthaler, editor and publisher of The Tennessean in Nashville. □

First Amendment project delayed

The official launch of Project Watchdog, a First Amendment program, has been delayed, according to Russell C. Tornabene, executive officer of the Society of Professional Journalists, Sigma Delta Chi.

Tornabene said in early April the delay would be about two months. This means the Project Watchdog WATS line—(800) 542-1600—is not yet in effect [**presstime**, April 1987, p. 51]. □

Inquirer wins three more Pulitzer Prizes

Three 1987 Pulitzer Prizes went to reporters at The Philadelphia Inquirer, making a total of 13 for that newspaper in the past 15 years. Two Pulitzers each went to editorial employees at the Los Angeles Times, The New York Times and The Washington Post Writers Group.

At the Inquirer:

• Daniel R. Biddle, H. G. Bissinger and Fredric N. Tulsky won in the category of investigative reporting for a series on incompetence and conflict of interest in Philadelphia courts.

• John Woestendiek also won for investigative reporting. The Pulitzer board rarely gives more than one prize in each category, but it happens occasionally, a spokesman said. This, however, was the first time in the 71-year history of the awards that one newspaper won twice in the same category. Woestendiek's reporting led to the release of a man wrongfully imprisoned for life for murder.

• Steve Twomey won the feature-writing category for a magazine article on the daily lives of those aboard the aircraft carrier USS America.

At the Los Angeles Times:

• Michael Parks won in international reporting for coverage of civil unrest in South Africa.

• Richard Eder won the criticism category for biweekly book reviews on a variety of books, primarily fiction.

At The New York Times:

• Alex S. Jones won in specialized reporting for profiling the feud of the Bingham newspaper family that led to the sale of The Courier-Journal and The Louisville Times.

• The Times' staff won in national reporting for stories detailing construction and design flaws in the space shuttle and in the administration of the space program after the Challenger explosion.

The staff of The Miami Herald also won in national reporting—another unusual instance where two separate awards were given in the same category—for 170 articles, including many exclusives, on American arms deals with Iran and diversion of money to the Nicaraguan rebels.

The two winners at The Washington Post Writers Group were Charles Krauthammer in the commentary category for columns on national issues, and Berke Breathed, cartoonist of "Bloom County," for editorial cartooning.

The Pittsburgh Press won for public service for a 14-part series by two reporters on the medical problems and drug addiction among airline pilots and flight crews. The reporters who investigated and wrote the series were Andrew Schneider and Matthew Brelis.

Schneider shared a Pulitzer a year ago for a series on organ transplants.

The staff of the Akron Beacon Journal won the general-news reporting category for coverage of an attempted hostile takeover of the Goodyear Tire and Rubber Co. by British financier Sir James Goldsmith.

Jeffrey R. Lyon and Peter Gorner of the Chicago Tribune won in the explanatory journalism category for a seven-part series on the lives of victims of genetic disorders and the promise that gene therapy holds for them.

Jonathan Freedman of The Tribune of San Diego won the editorial-writing category for editorials urging reform of the immigration laws.

Kim Komenich of the San Francisco Examiner won the spot-news photography award for coverage of the downfall of Philippine President Ferdinand E. Marcos.

David Peterson of The Des Moines Register won the feature-photography award for photographs showing the effects of the farm crisis on people in Iowa. □

JOIN
THE GREATS

It's not only that more U.S. newspapers use VU/TEXT as their electronic library service than all others combined—it's that more of the best newspapers use us. Join them and we'll do the same fast, cost-efficient job for you. With our stand-alone and service bureau options, we provide a complete solution for all newspapers regardless of size. And if you're not in the market for an electronic library, you'll still want VU/TEXT—the information retrieval VU/TEXT—so your reporters can access the other greats.

Deadline May 6 for annual SND competition

Newspapers have until May 6 to enter the Society of Newspaper Design's eighth annual newspaper design and graphics competition.

Newspapers of all types—daily, non-daily, broadsheet or tabloid—published anywhere in the world are eligible to enter. The contest covers 19 categories, including regularly appearing news sections, breaking news presentations, special topics, page design and overall design.

Entries must have been published between May 2, 1986, and May 1, 1987, and must be postmarked no later than May 6, 1987.

For more information, contact Ray Chattman of SND at The Newspaper Center, Box 17290, Dulles Airport, Washington, D.C.; (703) 620-1083. □

Winning Times Two.

It's nice to win the most coveted prize in journalism. It's even nicer to win two of them in the same day.

So when the winners of this year's Pulitzer Prizes were announced recently, we were proud to find two members of the Los Angeles Times on the list.

Michael Parks, Times bureau chief in Johannesburg, was named winner of the Pulitzer Prize in International Reporting for his vivid coverage of the turmoil in South Africa.

Richard Eder, Times book critic, took the Pulitzer Prize in Criticism for his sensitive reviews of contemporary literature.

The Times has now received a total of 16 Pulitzer Prizes; and this is the third time we've received more than one Pulitzer in a single year.

We are honored to be the recipients of these awards, because they symbolize the highest form of journalistic recognition from our peers. But they also symbolize something far more important: the scope, as well as the depth, of the reporting we're committed to giving our readers.

The Pulitzers are awarded only once a year. But the ideals they represent are what we strive for every day.

Los Angeles Times

Michael Parks
Winner of the 1987 Pulitzer Prize for International Reporting

Richard Eder
Winner of the 1987 Pulitzer Prize for Criticism

News-ed majors fared best in job market last year, survey shows

Journalism school graduates who specialized in news-editorial had better luck finding jobs last year than did other 1986 J-school graduates, according to the Dow Jones Newspaper Fund.

The fund's annual survey of recent graduates also found that "newspapers and wire services hired more college journalism graduates in 1986 (3,270) than any other media-related employer."

The 1986 survey results represented 1,022 responses from 2,050 May/June 1986 graduates of 52 colleges. The Gallup Organization selected the schools at random according to location and size of their journalism programs.

From those responses, representing 4.5 percent of all who received bachelor's degrees in journalism and mass communications last year, the fund projected the employment patterns of all 21,100 graduates.

The ratio of newspaper jobs to news-editorial specialists was 1 to 1.5, whereas two or more graduates vied for each job opening in broadcasting, public relations and advertising programs, the fund reported.

Minority news-editorial majors had even better chances of landing a newspaper job, with one job available for each. Daily newspapers hired 13.4 percent of all minority journalism graduates, 2.3 percent more than in 1985. In 1975, dailies hired only 3.3 percent of them, the fund said.

Fifty-one percent of minority graduates found media jobs within three months of graduation, an increase of nearly 10 percent from 1985.

Also, 14 percent of all journalism graduates hired by daily newspapers were minorities, up from 11.5 percent in 1985.

The survey report said that "continued increases in the proportion of minorities who major in news-editorial programs account for the increase in hiring. Nearly one-quarter of minority J/MC (journalism and mass communications) graduates were news-editorial majors last year, up from 14 percent 11 years ago."

Overall, 42.7 percent of the news-editorial majors landed jobs with newspapers and news services; 8.3 percent entered public relations; 4.4 percent, commercial magazines; and 2 percent, advertising agencies. Non-media fields drew 17.2 percent; graduate school, 8.8 percent; and another 7.7 percent were unemployed three months after graduation.

The 1986 graduate working for a newspaper earned a median starting salary of $13,900, an increase of $380 from 1985. By comparison, the median salary for beginning broadcasters was $12,600, up $1,420 from 1985; at advertising agencies it was $14,700, up $920; and in public relations it was $15,300, up $740.

Among the newspaper hires of 1986 graduates, 73.6 percent had previous experience through internships, and 81.6 percent had experience working on their college newspapers.

The survey also polled how graduates viewed their schools and departments. More than one-fourth (28.5 percent) who found newspaper jobs had consulted their J-school placement offices for help. □

Jon Abell, San Angelo Standard Times

D'Ann Adams of the San Angelo (Texas) Standard Times and students at Bonham Elementary School, San Angelo, examine advertisements the children created in the Design An Ad project, part of Newspaper in Education Week in March. The Standard Times published a tabloid of selected ads by 1,791 students in 63 classrooms. Thirty-six local advertisers helped instruct the students on the basics of good ad design.

New York classifies newspapers as textbooks for state funding

Newspapers now are defined as "textbooks" under New York law and therefore qualify for purchase with state aid.

"In a lot of the states, newspapers are included as part of the curriculum," said Judith D. Hines, vice president and director of ANPA Foundation. The New York situation may be unique, however, because newspaper interests managed to change a regulation that had previously excluded newspapers from the definition of "textbooks," she said.

Representatives of the New York Newspaper Publishers Association and other organizations had been negotiating with the state's education department for more than 10 years to change the regulation under the state's textbook law.

Local boards of education have the power to designate which textbooks to buy with the $25-per-pupil allocation provided by the state.

The amended rule, which became effective Feb. 26, establishes two conditions under which school districts may buy "general circulation daily and weekly newspapers": newspaper companies must provide them at a discount of at least one-third, and the companies must provide "study guides" for the curriculum.

Newspaper in Education groups, under grants of the New York State Newspaper Foundation, are preparing such guides. □

Quality and commitment: The best in editing.

"AP is an extension of the home newsroom. AP is there, just as surely as the city desk or the sports department. The AP wire is just a part of the staff."

John Marlow, news editor at the Seattle bureau, thinks his primary responsibility as an AP journalist is to serve member newspapers and their readers.

"The bottom line is really that the readers will be getting a balanced news report."

In his 26 years with AP as a newsman, bureau chief and editor, Marlow has had his share of bylines and frontline excitement. But he has grown to find satisfaction in the often anonymous work behind the newsfiles, digests and advisories. These, he says, ultimately shape the news reports appearing in newspapers, whether AP is credited or not. "We have a tremendous impact on how well informed the public is."

Marlow and other editors are the administrative backbone of AP's bureau system, serving the thousands of newspapers and broadcasters who own AP. He's responsible for long-range planning, staff scheduling, and editing. He'll take care of a member's request for special coverage, or he'll provide help if a member's computer goes down.

Like him, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry—a goal that is a continuing commitment by everyone in AP.

Marlow says that AP staff members' awareness of their wide audience is what strengthens their personal dedication and keeps their standards high.

"If AP makes a mistake, it appears in hundreds of papers around the country. So we take painstaking care that it's right before it goes to the wire."

AP Associated Press
Quality. Commitment.

New Foundation publications address free press/fair trial, literacy, citizenship

A variety of new publications are available from ANPA Foundation. They are:

• "Speaking of a Free Press: 200 Years of Notable Quotations About Press Freedoms," a revision of an earlier publication and already mailed to ANPA members. Additional copies are $1 apiece, or 75 cents each for 100 or more.

• "Free Press & Fair Trial," also a revision (it reflects U.S. Supreme Court decisions through 1986) and mailed to members of ANPA and the American Society of Newspaper Editors. Additional copies are $2 each, $1.50 each for 10-49 copies or $1 each for more than 50.

• "Newspapers Meet The Challenge," subtitled Literacy Handbook 1987, a compilation of guidelines and resources for newspapers to use in developing community literacy programs. It is scheduled for mailing this month to ANPA members.

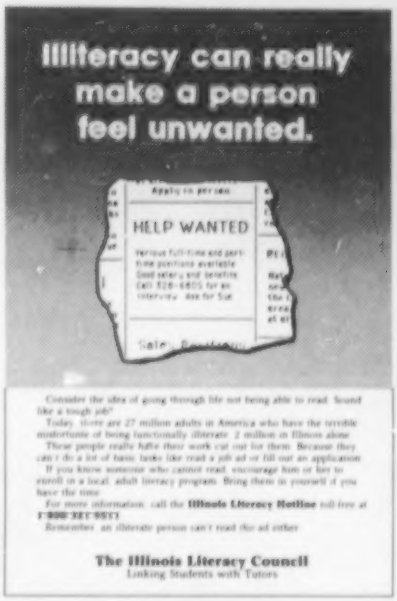
• An educational packet for "A Celebration of Citizenship," the first in a series of mailings to all schools nationwide and to Newspaper in Education coordinators. Materials are ready for reproduction. Additional packets are available for $3 each, or $2 each for 50 or more.

To obtain any of these publications, contact Ruth Finn of ANPA Foundation at The Newspaper Center, Reston, Va. □

J-school search service

After its first full year of operation, the Dow Jones Newspaper Fund College Search Service has helped more than 300 high school students choose a college journalism program through a computerized search service.

For a $5 fee, a prospective journalism major can fill out a questionnaire, specifying what he or she considers to be most important in a journalism program. Then, the computer matches the student with what various schools have to offer, such as location, financial aid and admission criteria. □



Illiteracy can really make a person feel unwanted.
HELP WANTED
The Illinois Literacy Council
Linking Students with Tutors

INMA campaign offers ideas for marketing NIE

Newspaper In Education coordinators want publishers to know that a strong NIE program is not only a community service but also good for business.

To that end, the International Newspaper Marketing Association has developed a campaign titled "Marketing Plans for Newspaper in Education." The project, cosponsored by ANPA Foundation, consists of a series of mailings to ANPA and INMA members.

The mailings, which began in March and will conclude this month, feature folders that describe ways NIE can be integrated into a newspaper's total marketing plan.

The campaign presents some of the most successful NIE projects around the nation, reporting results in terms of generating newspaper sales, involvement of the business community and public relations benefits.

Paula Markiewicz, executive director of INMA, said she hopes the campaign "will result in some new plans for integrating NIE into overall marketing strategy." □

WANTED: A Meaningful Relationship

As the political countdown begins, The Atlanta Journal and Constitution—flagship publications of Cox Newspapers—are looking at the meaningful relationships between people and politics.

The South, with Super Tuesday primaries and the Democratic National Convention in Atlanta, could be the most important region in the nation in determining the next President.

The Atlanta Journal and Constitution Southern Primary Poll is taking the pulse of the South on key political issues, not once but four times. The first poll, released March 15, set the region's political baseline. It will be followed by polls in November, February, and March, reporting the issues, attitudes and candidate preferences of the South.

As The Atlanta Journal and Constitution help chart the meaningful relationships between people and politics, they are also helping to support a meaningful relationship between politics and the future.

Non-monetary ethical concerns, youth readership are studied

BY GUIDO H. STEMPEL III

Most codes of journalistic ethics and most discussions of them focus on money. What is in print on the subject makes it appear that the main ethical concerns are free tickets, free trips and gifts.

A study by Katherine C. McAdams, a doctoral student in journalism at the University of North Carolina, finds that there are four non-monetary conflicts of interest that are at least equally important ethically. The four, with an example of each, are:

- Political ties, such as a friend of the mayor covering city hall.
- Family ties, such as the son of an oil merchant covering energy.
- Reporter-source antagonism, such as a former union activist covering business.
- Affinity, such as a lawyer covering courts.

Her findings are based on a mail questionnaire sent to the editor, publisher and one other staff member of 333 randomly selected newspapers. The response rate was 74.9 percent.

McAdams found that feelings about these non-monetary conflicts are personal and situational, and for this reason there is considerable difference of opinion on how to handle them.

Thus, for example, while most newspapers see the expertise gained by having a lawyer cover the courts outweighing the potential conflict of interest, many do not. She also found that avoiding antagonizing and alienating anyone is a major consideration in handling such situations.

The study is reported in the Winter 1986 Journalism Quarterly.

• • •

The recent Ohio Newspaper Association survey [**prestime**, March 1987, p. 52] has some enlightening figures on newspaper reading by younger people. The study found that 71 percent of the Ohio respondents had read a daily newspaper the day before the interview. By age groups, the "read yesterday" figures were 18-24, 58 percent; 25-44, 65 percent; 45-64, 81 percent; and 65 and over, 78 percent.

So, while readership was markedly lower for younger people, even the figure for the youngest group was a substantial one. Still, it might appear that more than a third of younger people are not being reached by newspapers. That's not quite the story.

Respondents also were asked if they had read a daily paper in any of the last five weekdays (Saturdays and Sundays excluded). Those figures by age groups were 18-24, 78 percent; 25-44, 80 percent; 45-64, 87 percent; and 65 and over, 82 percent. That's a much smaller range.

What is really indicated is that nearly as many younger people read newspapers, but not with the same consistency as older readers. The survey asked respondents how many of those five weekdays they had read a daily newspaper. Analysis of those responses showed that 85 percent of the people 45 and over who read a daily paper any of those five days read it all five of those days. Of the respondents less than 45 years old, only 56 percent of those who had read a paper any of those five days read it all five.

Newspaper researchers might well focus on whether that difference has to do with lifestyle, content or some other factor.

• • •

The suspicion with which news people view public relations people is well-known and well-documented. Clearly, news people assume that public relations people have a different view of the world. A study by Michael Ryan, professor of journalism at the University of Houston, indicates this may not be the case.

Ryan sent a mail questionnaire to 120 randomly selected members of the International Association of Business Communicators and 120 randomly selected members of the Public Relations Society of America. The survey sought reactions to 14 statements about corporate social responsibility and the public relations person's obligations. Response rate was 56 percent.

He found overwhelming support for corporate social responsibility. Ninety-eight percent of the respondents agreed that "developing programs that are good for society is both good business and good citizenship." Ninety-six percent agreed that socially responsible corporations are more credible.

The vast majority also agreed that PR people should act as the consciences of their companies, should be deeply involved in helping management define the company's social role and should avoid putting corporate obedience ahead of personal conscience. This study is reported in the Winter 1986 Journalism Quarterly. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to **prestime**.

Minnesota newspapers enlighten public on First Amendment

Freespeech, a statewide coalition formed by the Minnesota Newspaper Foundation, launched an advertising campaign in April to heighten public awareness of the value of the First Amendment.

The campaign is geared toward the 40 percent of Minnesotans who, according to a 1986 survey by the Minneapolis Star and Tribune, thought it better for the government to suppress free speech than to risk undesirable behavior [**prestime**, Aug. 1986, p. 43].

"We hope to be able to find the money to do a follow-up survey" after several months of the campaign that includes free advertisements, public-service announcements and speakers, said Patricia A. Hirl, associate legal counsel of the Minneapolis Star and Tribune. She also is a member of the steering committee for the Freespeech effort.

For a fraction of what it cost the Minnesota committee to develop the survey and public-service campaign, any other state can do likewise, Hirl said.

That's because for $500, the Minnesota Newspaper Foundation will provide all materials, including the survey questionnaire, research methodology, copies of ads and audio tapes. The only additional costs would be for people to conduct and analyze the survey, and for distribution of ad slicks and public-service-announcement tapes. □

Plan to sell research to Advo draws flak from newspapers

Responding to some irked newspaper executives, Scarborough Research Associates terminated an offer to sell its upcoming 1987 syndicated newspaper research to Advo-System Inc.

Scarborough in December offered to sell the data for $10,000 to the large direct-mail firm—one of newspapers' biggest competitors for advertising dollars.

But in late March, following complaints by newspapers and the International Newspaper Marketing Association, Scarborough changed its mind.

"To put (research data) in the hands of our biggest competitors is inappropriate," said William F. Share, senior vice president of marketing of Journal-Sentinel Inc. in Milwaukee.

Newspapers also complained about the proposed sale price, which would be less than what most newspapers would pay for the data. Share said subscribers, "in effect, would subsidize their competitor."

Scarborough President Harold Israel said that after complaints were received, his firm decided it need not offer the results to Advo. "We sought additional legal advice on whether we had to offer" the material, "and it turns out we did not," he said.

It is not unusual for competitors to buy syndicated market research. In many instances, however, the purchase price is the same as the highest subscriber price, according to experts. In the case of Scarborough and its newspaper research, that would be about $50,000, according to Israel.

He said the proposed sale price to Advo was lower because direct-mail firms are considered "unmeasured media" for purposes of the study. Lacking specific information about direct-mail activities, the study theoretically would be of lesser value to Advo.

Scarborough is one of two research firms that conduct syndicated newspaper research covering virtually all major metropolitan markets. The other is Simmons Major Market Research Inc.

Advo also asked Simmons to quote a price for the 1987 results, and Simmons offered it for $50,600—its highest subscriber price. "They had no interest in buying at that price," said Simmons Director L. Kay Schultz.

Both Scarborough and Simmons started their syndicated newspaper research with an initial project released in 1983. The companies joined forces for a 1985 study. They later parted ways to resume work independently [**presstime**, Aug. 1986, p. 46].

The flap over Advo comes at a time when some executives worry about large newspapers' declining support of syndicated market research. The International Newspaper Advertising and Marketing Executives recently warned that the future of newspaper research could be "in serious jeopardy" if newspapers do not support the Scarborough and Simmons work.

Nearly 200 newspapers subscribed to the 1983 studies. The number dropped to 125 for the joint project. As of April 24, 139 had subscribed to this year's programs: 97 with Scarborough and 42 with Simmons. The subscribers this year include a larger number of smaller newspapers.

Deadline to sign up is mid-June, just before the data will be released. Simmons said it will issue its report in late June. Scarborough said its results will come out in mid-to-late July. —*C. David Rambo*

Media respond heartily to anti-drug campaign

The public service anti-drug advertising campaign is getting off to a rousing start, according to Thomas A. Hedrick Jr., market director for the Media-Advertising Partnership for a Drug-Free America.

Hedrick said responses from the media have been so numerous he had not been able to tally up all the donations of space and air time.

By April 18, The New York Times had run five full-page, anti-drug ads and The Wall Street Journal had carried three, Hedrick said. Knight-Ridder Inc. is distributing ads to all its newspaper members, he said.

The responses are all the more remarkable because the campaign has hardly gotten into gear, Hedrick said. The ads promised from the American Association of Advertising Agencies had not even reached most papers by late April, he reported.

The Media-Advertising Partnership for a Drug-Free America is a coalition of newspapers and other media, businesses and advertising agencies formed under the auspices of AAAA to carry out a three-year, anti-drug campaign [**presstime**, April 1987, p. 54].

Hundreds of AAAA volunteers will solicit space and time from local TV and radio stations, magazines and newspapers throughout the country, Hedrick said. □

FOA yields positive results

BY CRAIG C. STANDEN

Two years ago at the ANPA Convention in Miami Beach, the Newspaper Advertising Bureau's Board of Directors, in cooperation with ANPA, established the Future of Advertising project.

Since then, more than 140 senior executives from all facets of the newspaper business have contributed their time and effort to the 10 FOA task forces. These are the top people in our business and they have spent more than 2,500 hours in task-force work sessions.

It's an exciting adventure: getting the newspaper business ready for the 21st century. For perhaps the first time in history, an entire industry is *planning* its long-range future.

I'd like to use my column this month to recap what FOA has produced in its first full year of work. It's in the form of a checklist that you can use to see how well your newspaper is doing to get ready for the challenges of tomorrow:

□ **AD/SAT.** In just a year, AD/SAT has gone from an untested idea, endorsed by the FOA's Standardization Task Force, to a going business. With more than 100 newspapers expected to be fully operational in the satellite system by October, AD/SAT has had excellent acceptance from ad agencies and retailers, and it is aggressively pursuing business from them [**presstime**, April 1987, p. 52]. If your newspaper hasn't joined the network, it's worth considering. For information, call me at (212) 704-4500, or Buddy Hayden or Dave Farren of AD/SAT at (212) 330-0678.

□ **"The Guide to Quality Newspaper Reproduction."** Every art director and print production person at your local ad agencies and major retail advertisers—and everyone on your ad sales, art, production and photo staffs—should have a copy of this 55-page publication. More than 30,000 copies have been distributed by newspapers. It will pay for itself many times over by improving the quality, and thus the effectiveness, of ads in your paper. ANPA's Technical Services Department at (703) 648-1210 will take your order.

□ **"Readers: How to Gain and Retain**

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

cen · sor · ship \'sen(t)-sər-ship\ *n* **1 a:** the institution, system, or practice of censoring **b:** the actions or practices of censors: *esp* : censorial control exercised repressively

Webster's New Collegiate Dictionary

Here? In The USA?

Perhaps. A tobacco advertising ban, proposed in this year's Congress, is a clear infringement of free expression in a free market economy, and represents a dangerous form of censorship.

The Constitution has protected us from censorship for 200 years. Freedom of speech stands first in the Bill of Rights. And by a process of logical extension — and repeated legal interpretation — that guarantee has protected commercial speech as well.

The issue is not smoking. The issue is simply the abuse of a constitutional right by a few who would obstruct the flow of information in an attempt to bend human behavior to match their notion of the ideal, their concept of the acceptable.

The First Amendment has been a preoccupation of writers and scholars, journalists and politicians for the last 200 years.

Not for them "censorial control exercised repressively."

And not for us, the men and women of Philip Morris U.S.A.

And surely not for the ANPA.

Them." If you want to increase circulation, and keep it going up, start by putting copies of this 64-page publication into the hands of every one of your managers—not just in circulation, but editorial and advertising, too. Circulation is everybody's business. Newspapers have obtained some 6,000 copies, and if you're not one of them, you may well be losing readers. Order from NAB's promotion department at (212) 921-5080, ext. 397.

☐ **Standard Advertising Invoice.** Some newspaper people think this is just something for the accounting department, but SAI is a lot more. It not only reduces billing problems with advertisers and is compatible with newspaper and advertiser computer systems, but it also helps newspapers get paid more quickly. One major retailer rates SAI as more important than Standard Advertising Units. Target date for implementation is December 1987. For a 20-page brochure on SAI, call the NAB promotion department.

☐ **Standard advertiser codes.** These are designed to tie in with Item 14 of the standard invoice by providing a 10-digit number to identify product category and advertiser name. Their use will simplify your accounting and billing procedures and reduce errors, make it easier for you to analyze sales data and sales-staff performance, quickly alert you to important new trends and ad categories, and greatly improve newspapers' ability to form and operate ad networks. To get more information, call NAB's Uldis Grava at (212) 704-4550.

☐ **Guidelines for standardized retail research.** Every year, newspapers spend millions of dollars on local-market research for the benefit of retail advertisers. Now the FOA Task Force on Marketing Data has come up with a format on which everyone agrees—with standard methodology, standard demographics and standard readership data—to make all newspaper research equally useful to retailers. Many papers have converted to the new format. For information and a brochure, call NAB's Grava.

☐ **"Promoting Circulation Sales."** Once new subscribers have signed up, how do you keep them? Newspaper researcher John Mauro analyzed 15 circulation retention strategies used by 58 U.S. and Canadian dailies. This is a publication that should be read by everyone in circulation management, research management and general management. To order, call the bureau's promotion department.

☐ **"Opportunities in National Advertising."** One of our long-range problems, especially with national advertisers, is to make our pricing more competitive. This brochure contains the first concrete proposals ever made on an industry basis for dealing with our pricing problems. All four of its proposals should be considered by your newspaper. For a copy, call NAB's Grava.

☐ **"Measuring Retention and Circulation Sales Effectiveness."** With this 8-page guide, you can measure and evaluate circulation promotions in terms of which ones effectively generate and retain new readers. The publication contains a formula for comparing costs and benefits of promotions. It was developed by two Knight-Ridder circulation executives. Copies are available from NAB's promotion department.

Please give serious consideration to every item on this checklist and the same consideration to every new idea, program and publication developed in the future by the FOA task forces. ☐

Have You Looked at Your Yellow Pages; Lately?

It's Grown, Hasn't It?

And now you probably have 2 or even 3 directories in your market where there was just one a few years ago. Perhaps you haven't looked at the Yellow Pages as competition, but they may be your biggest competitor for local ad revenue.

American Consulting Services in Vancouver, Washington, has developed a marketing program for the newspaper industry which can teach your ad reps how to convert Yellow Page dollars into newsprint contracts. Millions of dollars have already been recaptured by the newspaper industry through this training program. You have an opportunity this year to increase your bottom line by simply checking into this cost-effective seminar.

Newspapers fume at Reagan aide's testimony

Do only 18 percent of U.S. daily newspapers refuse to run questionable advertising as a matter of policy?

That was the message conveyed earlier this year to a federal advisory committee by Virginia H. Knauer, special adviser to President Reagan for consumer affairs.

Newspaper advertising leaders question the accuracy of the information.

Knauer appeared at one of a series of meetings sponsored by the Advisory Committee on Commodity Futures Trading Commission/State Cooperation. The meetings were convened to discuss ways to fight commodity fraud.

Committee Chairman Fowler C. West said there had been discussions about the "feasibility of having voluntary guidelines for publishers to use in screening their advertisements, but I don't know to what extent this has been done in the media."

In her testimony, Knauer said that "while a few reputable media have made concerted efforts to screen advertising for obviously false claims, most have not."

She cited a 1985 survey by a Washington, D.C., consumer newsletter showing that "only 18 percent of 1,700 daily newspapers surveyed specify that they do not accept questionable advertising."

Consumer Newsweekly obtained the 18-percent figure by analyzing the listings in the *1985 Editor & Publisher International YearBook*. In its July 1, 1985, issue, the newsletter reported: "Only 301 (or 17.9 percent) of the 1,688 dailies in the United States choose to show any listing under 'Advertising not accepted' in the 1985 E&P directory."

It is believed the newsletter is no longer being published.

Of the newsletter's methodology, newspaper advertising executive Leo L. Kubiet commented: "That's not very scientific." Unequivocally, he added, the conclusion is "absolutely false."

Kubiet, advertising director of the St. Petersburg Times, said the E&P listing is meant merely to indicate "flat-out rejections of any categories of advertising. . . . But it doesn't mean that (newspapers) don't have rigid standards on the acceptability of financial advertising or other kinds of advertising."

For example, under "Advertising not accepted" in the 1985 E&P *YearBook*, the Times listed only astrology and liquor (in color comics). Yet that same year, the newspaper revised and published a 21-page booklet titled "Advertising Standards of Acceptability." It includes an entire section dealing with financial advertising.

James T. Conner, classified advertising manager of the State Times and Morning Advocate of Baton Rouge, La., joined Kubiet in questioning Knauer's reliance on the newsletter analysis.

"Most newspapers that I've been in touch with, and I've been in touch with most of them around the country, are very conscious of screening their advertising to do what's right," he said. □

THE 1987 PULITZER PRIZE FOR PUBLIC SERVICE

THE PITTSBURGH PRESS

TO ANDREW SCHNEIDER AND MATTHEW BRELIS FOR DOCUMENTING MEDICAL AND SUBSTANCE ABUSE PROBLEMS AMONG COMMERCIAL AIRLINE PILOTS.

Their reporting uncovered an outdated medical review of pilots by the federal government, including superficial examinations and lack of drug testing.

As a direct outgrowth of The Press' work, Congress held hearings, the American Medical Association advised physicians to report impaired pilots, the Federal Aviation Administration reassigned its top physician, and the Department of Transportation ordered random drug testing for pilots.

Now the reporting that achieved this dramatic turnaround has been honored with the 1987 Pulitzer Prize for Public Service.

Last year, The Pittsburgh Press received the 1986 Pulitzer Prize for Specialized Reporting for a series by Andrew Schneider and Mary Pat Flaherty on abuses in the worldwide organ transplant system.

Members of the Scripps Howard family have now won 33 Pulitzer Prizes.

SCRIPPS HOWARD NEWSPAPERS

Promotion hampered by too few coupon inserts

Executives of several newspapers around the country said the main reason they do not promote the value of coupons in their newspapers is that suppliers do not furnish enough free-standing coupon inserts for the full press run.

"The main issue is, we're not getting enough coupons," said Richard J. Lakus, circulation director of the Worcester (Mass.) Telegram and The Evening Gazette.

Last year the Audit Bureau of Circulations authorized a 12-month trial, beginning last Oct. 1, during which newspapers could promote the value of the coupons contained in that day's paper.

M. David Keil, president and managing director of the bureau, said he does not know the exact number of newspapers that are trying same-day promotions, but it appears to be relatively small [**preestime**, April 1987, p. 55].

"The suppliers furnish you with coupons based on your net paid circulation," said Lakus, current president of the International Circulation Managers Association. "This is substantially different from the total number of papers you distribute." Ideally, he explained, a newspaper would like to sell all the papers it places on the newsracks, but realistically, that seldom happens. This is one of the reasons the actual press run exceeds paid circulation.

"My paper can run as short as 20,000 (insert) coupons a week," Lakus reported. This leads to situations where subscribers call and complain that their Sunday paper did not have a particular coupon mentioned in a radio commercial.

Frank J. Savino, vice president/marketing for The Record in Hackensack, N.J., said the same situation exists at his paper. Although Savino said he was initially enthusiastic about the idea of same-day promotion of coupons, there are never enough inserts for all of the newspapers printed.

"For us to say we are carrying 'X' number of dollars worth of coupons today and then not to have them in the newspaper would be a disaster," he said. "I was very hot on the idea till it became a reality, and then I realized the pitfalls."

The Denver Post (morning, 227,105; Sunday, 425,454) began promoting same-day coupons last October on both Wednesday and Sunday, said Robert J. Masino, director of circulation. But Masino said that for the same reason—not enough inserts—the newspaper does not promote coupons regularly any more.

"Their (advertisers') primary objective is to reach the home-delivery subscriber," Masino said. "They just hesitate to give you more (for single-copy subscribers)."

To make up for shortages, the Post removes coupons from unsold single copies of early editions, then inserts them into later editions.

The Chicago Tribune is continuing to promote its coupons on newsrack cards and front-page stickers, although Vice President and Circulation Director Howard L. Hay acknowledged that the number provided by the insert printers does not equal the press run. "You try to squeeze as many coupons in as you can," he said, adding that the Tribune also recycles inserts from unsold returns of early editions.

Another strategy, he said, is to ensure that coupons are included in copies going to zones where their value is being promoted.

Executives of the three marketing companies that dominate the coupon-insert business–Quad Marketing, Valassis Inserts and Product Movers–agreed that newspapers do not receive a fully supply.

They explained that the package-goods manufacturers whose products are promoted in the coupons will not allow them to furnish enough for all single-copy sales. The potential for fraud is too great, because no one tracks the coupons in unsold single copies, they said.

Celeste Lazerrari, media manager for Product Movers, said her company polled the manufacturers a year ago because of newspapers' complaints about shortages. The manufacturers refused to increase supply beyond about 80 percent of the audited circulation, she said. —*Gene Goltz*

San Francisco workers fired for alleged circulation fraud

More than 30 employees of the San Francisco Newspaper Agency have been fired on charges of falsely inflating the number of unsold copies of the San Francisco Chronicle and the San Francisco Examiner.

The alleged fraud may have cost the agency, which prints and distributes the two San Francisco newspapers, many thousands of dollars, said Jesse Knight, vice president of marketing for the agency. That's because drivers were given credit at the going wholesale price for thousands of copies of newspapers they falsely claimed they did not sell, he said.

The agency is working with the Audit Bureau of Circulations on revising upward the true circulation of both newspapers, Knight said. The San Francisco Examiner (evening, circulation 145,014) sells 50 percent of its papers from newsracks, and the Chronicle (morning, 551,545) 30 percent.

Knight said in late April that although he could not give the precise number of employees who have been dismissed following an investigation by the newspaper agency, it was well over the 28 who had been let go by the end of March. It remains to be seen how many thousands of dollars have been fraudulently paid out and how many thousands of copies each newspaper will gain when true circulation figures are arrived at, Knight said. In both cases, he added, the figures will be "substantial."

Knight said the fraudulent scheme was uncovered by hidden cameras, which showed that drivers were not returning the vast number of newspapers they had claimed were unsold. As the investigation continues, Knight said he is certain that more people will be fired. □

L.A. Herald Examiner, USA Today experiment with joint home delivery

The Los Angeles Herald Examiner and USA Today teamed up for two weeks in March for an experiment in home delivery of both newspapers.

The Hearst Corp., owner of the Herald Examiner, agreed to deliver 3,600 copies of Gannett Co.'s USA Today in a cost-cutting test. Hearst is sending out follow-up questionnaires, asking people involved in the test whether they would consider taking both newspapers and what price they would be willing to pay.

Officials at the two companies said it is too soon to determine whether any joint distribution activities will result from the test.

USA Today (morning, circulation 1,179,052) said it has a home-delivered circulation of 19,500 in Southern California, of which about 10 percent are carrier-delivered. The remainder are delivered by same-day mail.

The Herald Examiner's circulation (morning, 241,454) is mostly single-copy sales, with about 55,000 weekday home deliveries by carrier. □

Building Our Reputation

POWER STRAP

Design innovation. Operator safety. Maximum dependability. Superior service.

The qualities we build into every Power Strap tying machine are building our reputation as an industry leader. Whether you choose state-of-the-art high production — as in our 45 bundle-per-minute PSN-5, pictured above — or simple, economical strapping, the Power Strap commitment to advanced design, safe operation, reliable performance, and customer satisfaction is part of the package.

POWER STRAP

Year-long, nine-city research project cites lack of reading time for loss of subscribers

New subscribers who quit a newspaper within a year cited "had no time to read" more than any other factor as a reason, according to new research.

The great majority of those surveyed–both those who dropped out and those who still subscribed after a year–also said they were generally pleased with the contents of their newspaper. That finding gave rise to the title of the report summarizing the research: "Love Us and Leave Us: New Subscribers One Year Later."

The results came from a 12-month study sponsored by the American Society of Newspaper Editors and the Newspaper Research Council, with cooperation of the International Circulation Managers Association.

The report was largely written by Virginia Dodge Fielder, vice president/news and circulation research at Knight-Ridder Inc., assisted by Beverly Barnum, corporate director/market research of Harte-Hanks Communications Inc.

It suggested that editors take people seriously when they complain they have no time to read; four out of 10 former subscribers indicated this was the case, and a nearly equal number said, "Papers kept piling up before they got read."

Further, the report said editors might want to consider using more anchored features, indexes, summaries and other devices to help people plow through the newspaper. "Brainstorm ways to help people use their reading time more efficiently," it advised.

The one-year research project involved 1,745 new subscribers of newspapers of various sizes in nine cities. By the end of the 12-month period, 53.1 percent were still subscribing, 43 percent had canceled and the status of the other 3.9 percent was unknown.

The researchers found that 22.1 percent of the 750 households that stopped taking the paper did so because the residents had moved. Those surveyed were found to be "an extraordinarily mobile group"; half had lived at their current address less than a year, and another quarter had lived in the local area less than a year.

The second-highest reason for quitting the paper–about 3 cases in 10–was problems with delivery.

The compilers of the report noted that the survey did not represent statistically accurate samples of readers, and that it did not represent all new starts in daily newspapers nationally. "Nevertheless," the report stated, "the results are persuasive."

Among other findings:

- 67 percent of "voluntary" starts kept taking the paper after 12 months, against only 45 percent of those labeled "pressure" starts—those resulting from a sales pitch.
- Nine out of 10 former subscribers rated the content of the newspaper they had quit as "good to excellent."
- Only 53 percent of former subscribers agreed that reading a newspaper daily is an important way to keep informed, compared with 76 percent of continuing subscribers.
- The second-highest reason for quitting the paper—about 3 cases in 10—was problems with delivery, including late and missing papers.
- Only 13 percent said they quit because they didn't like the news and feature content of the newspaper.
- Those who stopped taking the paper were more likely to be young, single, less than college-educated, apartment dwellers and living in households making less than $35,000 a year.

As a result of the survey the authors of the report made several suggestions, including:

- Circulation departments should recognize that while discounts and other selling techniques increase trial subscriptions, they also increase "churn"—turnover among subscribers.
- Newspapers should measure retention and circulation sales effectiveness by measuring costs-per-order of different types of starts, according to the system developed by the Future of Advertising Project [**presstime**, April 1987, p. 55].

The report was presented in April to the Newspaper Research Council meeting in Nashville and several days later to the ASNE Convention in San Francisco.

Fielder said ASNE paid $3,500 to cover part of the costs of interviewing and about $5,000 for printing the report, the NRC paid $3,000 for interviewing, and additional support came from Knight-Ridder, Harte-Hanks, The New York Times Regional Newspaper Group and the nine papers in the study. They were the Abilene (Texas) Reporter-News; The Record, Hackensack, N.J.; Chicago Tribune; The Dallas Morning News; The Ledger, Lakeland, Fla.; Lexington (Ky.) Herald-Leader; Press-Telegram, Long Beach, Calif.; The Washington Post, and the Yakima (Wash.) Herald-Republic.

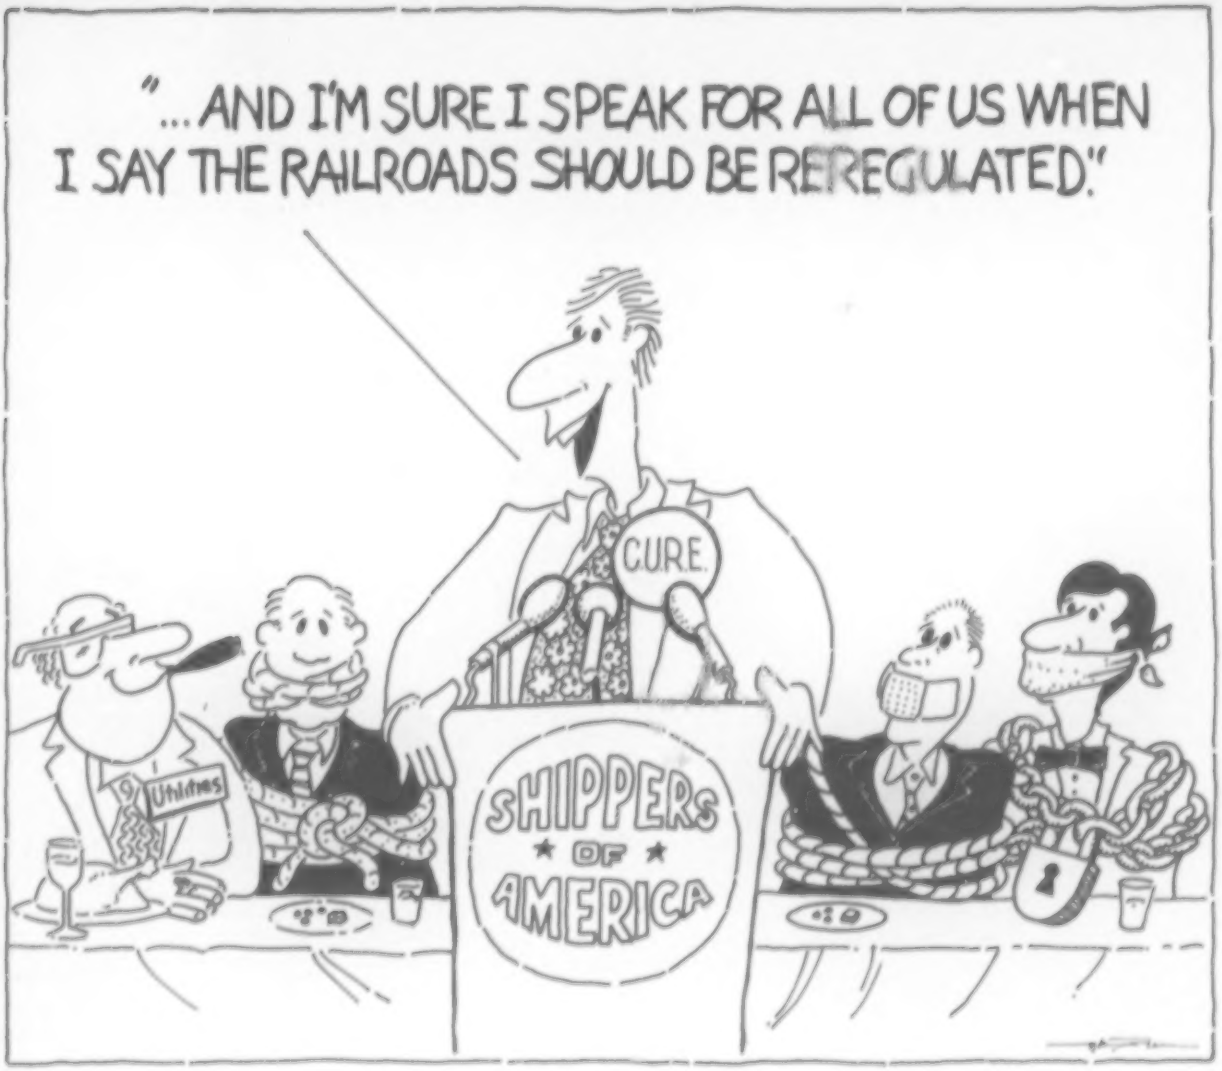
Copies have been distributed to members of ASNE. Additional copies are available for $5.50 each from ASNE Foundation, P.O. Box 17004, Washington, D.C. 20041. □

Hard times lead to newsstand thefts

As the economy got worse, the thefts increased. And before long it seemed that Milton B. Ryan, circulation manager for The Montana Standard in Butte-Anaconda, couldn't go anywhere without witnessing single-copy thefts.

- As Ryan was eating lunch at a popular Butte restaurant, he watched the cook insert 35 cents into a newspaper vending machine and remove about 50 copies of the 17,170-circulation morning paper. The cook proceeded to hand them out to customers. When Ryan complained, the restaurant manager reprimanded the cook but took no other action.
- Just outside the newspaper's business office, Ryan watched as a woman inserted 35 cents and took out numerous copies, one by one. When she looked up and saw Ryan watching her, the woman reacted with grace under pressure. She reached into her purse for coins and began steadily inserting them into the slot.
- Ryan has seen apartment residents pay for one paper and load up with extra copies for neighbors.

Ryan said a staggering 25 percent of the Standard's newsstand copies are lost to theft. He thinks it is largely a result of the falling prices of copper, which led to the closing of Butte's economically vital Anaconda Copper Co. mines. □



Some people who claim to speak for everybody are really speaking for almost nobody.

For example, there's a group in Washington calling itself Consumers United for Rail Equity (C.U.R.E.) that claims to speak for rail shippers. It's a group that is supported principally by the coal and electric utility industries. And it's seeking revisions to the Staggers Rail Act of 1980 which–if they benefit anyone–would primarily benefit the coal and utility industries at the expense of most other rail customers.

Most shippers–87 percent of those surveyed recently–are happy with the improved service and rates brought about by deregulation. They don't want to see this progress reversed. And they certainly don't want to change a law that has revitalized failing railroads and made it possible for all railroads to become so competitive with each other and with other modes of transportation that rates overall are dropping.

Even the rates paid by C.U.R.E.'s supporters for shipping coal have dropped for the past two years. Down 2 percent in 1985 and down 2.5 percent in 1986. They're now at their lowest level since 1981. In addition, the contracts made possible by the Staggers Act have assured many utilities of low rates in the future.

Nevertheless, C.U.R.E.'s members think they can use federal and state governments to lower their rates still further.

Maybe. But if they win, most other rail shippers will lose–through higher rates, deteriorating service, and–as railroads decline–perhaps through loss of service altogether.

If you're a journalist interested in these issues, the Association of American Railroads will be happy to provide you with more information. Because we think that to tell the story properly, you need facts, not just assertions. To get the facts, write Media Information, Association of American Railroads, 50 F St., N.W., Washington, D.C. 20001, Dept. 712. If you're on a deadline, call (202) 639-2555.

Unions seek monitoring curbs

Electronic monitoring of employees' work is emerging as one of the hot labor issues of the '80s among unions both inside and outside the newspaper business.

"It's a growing issue on the office scene, especially keystroke monitoring," said David J. Eisen, director of research and information for The Newspaper Guild.

Morton Bahr, president of the Communications Workers of America, has called monitoring "a worker-rights' issue for all workers."

"We haven't encountered it as much as other unions," said Walter Lypka, education director of the Graphic Communications International Union, "but it's a further erosion of workers' privacy. A matter of principle is involved."

The systems at issue can, for example, show the number of telephone calls answered, the handling time and the customer waiting time. Such monitoring is much more prevalent at telephone companies, airlines and insurance companies than at newspapers.

The congressional Office of Technology Assessment is preparing a report on the growth of electronic monitoring in the workplace for the House Government Operations Committee and the House Judiciary Committee's Subcommittee on Civil and Constitutional Rights. An OTA spokeswoman said the report is expected to be released in late May or early June.

Supervisor and employee check record of calls.

An earlier report commissioned by the congressional office cited the failure of today's computer-based monitoring techniques to measure quality of work along with quantity. Research for the report by professors at the University of Wisconsin included a survey of Guild-represented classified advertising employees at The New York Times and the St. Paul Pioneer Press and Dispatch.

Several other newspapers are known to maintain computer-generated records of the productivity of workers in their classified departments and in their circulation departments' customer-service areas.

The report prepared for the OTA said that controlled access to the records resulting from monitoring systems was a source of conflict between classified employees and management.

All employees who participated in the survey conceded that computerization had made their jobs easier and helped them work more efficiently, but most respondents said the monitoring systems did not enhance their performance.

The Guild and other unions, including the CWA and the GCIU, have participated in OTA discussions on the subject. In response to a draft of the forthcoming OTA report, the unions and the AFL-CIO contended that computer monitoring increases job stress, thereby threatening workers' health and hindering job performance and satisfaction. The group submitted to the OTA 34 case studies of electronic monitoring systems installed by employers.

The group pointed out that many of those case studies identified health effects "believed to be caused or promoted by computer monitoring," including anxiety, depression, headaches, gastrointestinal disorders, hypertension, eyestrain, musculoskeletal symptoms and chest pain.

Separately, the Guild called upon the OTA to endorse legal prohibition of monitoring of individual employee performance, as recommended by an international conference of unions in Switzerland in 1984. Eisen said that OTA's draft report contained findings that would support such an endorsement.

Eisen said the argument against such a ban in another part of the draft—that it might best be left to union-management resolution—was undermined by the draft's recognition elsewhere that U.S. office workers largely are not represented by unions.

The issue has been raised by the Guild in at least one city during recent negotiations for a new labor agreement. R.L. (Ralph) Wray, employee relations director at the St. Paul daily, said the Twin Cities Guild had proposed, among other things, that the new contract contain a prohibition against "secret surveillance," that monitoring not be used in disciplinary proceedings, that there be restrictions on monitoring and that a joint management-Guild committee be formed on the issue. None of the Guild's proposals were incorporated into the contract ratified in March by the unions' members.

"I don't think there should be anything secret about it," Wray said. "Monitoring can be misused, but if used appropriately it can be a very useful tool for both employees and management." He added that any recording of information at the newspaper is shared with employees.

Newspaper labor specialists also point out that before computers came along, monitoring was done visually by supervisors, and that time studies and stop watches have been part of the workplace for years.

The AFL-CIO's Executive Council, at its winter meeting in Bal Harbour, Fla., said the federation will press for legislative measures aimed at curbing "abuses" of monitoring.

Toward that goal, Rep. Don Edwards [D-Calif.] has introduced a bill (HR 1950) that would amend federal wiretapping laws to make it unlawful for an employer, or an agent of an employer, to listen in on an employee's work phone call unless a repeating audible tone is utilized to warn parties involved in the call. The bill is supported by the CWA., which has adopted the slogan "Don't Bug Me." *–Clark Newsom*

Minimum wage bills

Bills have been introduced in the U.S. Senate and House to increase the $3.35 hourly federal minimum wage in three steps to $4.65 by Jan. 1, 1990. The current minimum became effective Jan. 1, 1981.

Effective Jan. 1, 1991, and Jan. 1 of each succeeding year, the minimum wage would be adjusted to equal 50 percent of the average private, non-supervisory, non-agricultural hourly wage as determined by the U.S. Labor Department's Bureau of Labor Statistics.

The bills are supported by the AFL-CIO. □

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. NLRB orders newspaper to drop code of ethics

The National Labor Relations Board has ordered The Mercury of Pottstown, Pa., to rescind a code of ethics it promulgated in 1974.

The board found that the newspaper had violated the Taft-Hartley Act by refusing to bargain with Local 10 of The Newspaper Guild about terms, conditions of employment and penalties embodied in the code. The case had been remanded from the U.S. Court of Appeals, District of Columbia Circuit.

The Mercury, an Ingersoll newspaper, had not decided by press time whether to appeal the board's decision.

The code established standards of accuracy, objectivity and fair play. It prohibits acceptance of gifts and favors, and requires employees to avoid any activity or conduct that could compromise the newspaper's integrity.

The board had ruled in 1977 that the newspaper had no duty to bargain with the union over code provisions but did have such an obligation regarding penalties.

The Guild appealed to the Court of Appeals, which in 1980 directed the board to re-examine the code to determine whether it fell within the category of mandatory bargaining subjects under the act [presstime, Oct. 1980, p. 41].

In its latest decision, the board agreed with the court that, as a general principle, rules like code provisions and their penalties "should not be artificially severed from each other" for purposes of bargaining.

The board said that a news publication is free to establish reasonable rules to protect its editorial integrity without necessarily being required to bargain. However, the board said, a publisher's degree of control "is not open-ended." In determining whether an employer—without prior bargaining—may impose rules or codes of conduct governing employee behavior, the board said the rule "must on its face be narrowly tailored in terms of substance" without being overly broad, vague or ambiguous.

Re-examining The Mercury's code under those criteria, the board said the code as a whole did "not withstand such scrutiny and must be rescinded."

The board noted that the code applies to "all employees," not just reporters and editorial personnel. The code contains a "pledge" stating that any employee "who does not wholly and fully subscribe to these tenets should make himself known now and state his reasons." The board said this pledge, in effect, unlawfully requires the employee to bypass the bargaining representative and bargain directly with the company.

In addition, the board said the code provisions were "substantially overly broad" rather than "narrowly tailored." For example, the board said, if an employer wishes to address the subject of an employee's secondary employment, "we deem it incumbent on the employer to distinguish between employment which would constitute a clear and improper conflict of interest, and that which does not. We find no such distinction made here."

With respect to The Mercury's attempts to curtail other outside activities—such as "political involvement," service in community organizations or conducting their "personal lives" in a manner that reflects adversely on the newspaper—the board said it agreed with the court that such regulation "interferes substantially with the civil and economic rights of the employees" and on their private lives.

Preservation of editorial integrity does not necessarily require employee abstention from political participation, according to the board decision.

In other sections of the code, the board found "vagueness and certain ambiguities." Such "infirmities," the board said, may be "tolerable" where a company wishes merely to announce its goals as part of an effort to improve the newspaper's quality and credibility. "But they are not acceptable where, as here, an employer seeks unilaterally to impose such imprecision on employees in the form of rules which affect their terms and conditions of employment, and for breach of which the employees may be subject to discharge."

The board added that its decision did not preclude the newspaper from establishing a completely new ethics code, "subject to the standards set forth above."

(Peerless Publications Inc. and Newspaper Guild of Greater Philadelphia, 283 NLRB No. 54) □

Ruling in Concord 'professional' case is not expected soon

It may be 1989 before a federal judge rules on whether newspaper reporters, photographers and non-supervisory editors should be classified as "professional" employees—exempt from the overtime requirements of the Fair Labor Standards Act.

Post-trial briefs in the closely watched case involving the Concord (N.H.) Monitor were filed in July 1986 [presstime, Aug. 1986, p. 49]. The case was heard in Concord by Chief U.S. District Judge Shane Devine.

The reason a ruling is not expected soon, according to several people close to the case, is that the court has only two judges to handle an unusually heavy caseload.

"The other judge is swamped, and Devine is helping him," said an attorney involved in the case, *Secretary of Labor v. Newspapers of New England Inc.*

Monitor President George W. Wilson said it is his understanding that "there are other decisions due from (Devine) from cases that were argued up to two years ago."

There is "no way to tell" when a ruling might come, said John S. Casler, attorney for the U.S. Labor Department.

In a related matter, Herbert J. Cohen, deputy administrator of the department's Wage and Hour Division, which is considering whether reporters should be exempt under the FLSA, said a notice of proposed rulemaking is scheduled to be published in the Federal Register in October [presstime, April 1986, p. 64]. □

Increase in elections

There were 29 union representation elections conducted by the National Labor Relations Board at newspapers in 1986, compared with 23 in 1985. The number lost by unions rose with the increase in number of elections. Last year, unions won nine and lost 20. In 1985, unions also won nine but lost 14 [presstime, March 1986, p. 25].

Recent contract settlements

Houston Post, Mailers: Three-year agreement covering mailroom employees; effective July 15, 1986.

Winnipeg (Manitoba) Free Press, CWA, GCIU: Three-year agreements covering separate units of composing room employees, editorial and commercial employees, and pressroom employees; retroactive to Oct. 1, 1986.

(Details in April and May 1987 ANPA Labor & Personnel Relations Letters.)

We're biased.

We don't think crime should pay.

In Houston, a man, one of tens of thousands, was arrested for entering this country illegally. He was placed in a privately run jail. And killed when he was suspected of trying to escape.

Who is responsible? The private corrections company or the state?

In Pennsylvania, a judge ordered a privately operated prison to return 55 out-of-state inmates the prison managers had brought in to increase their profits.

Private prisons are the most dangerous aspect of the policy of privatization—the transferring of certain public service to private enterprises. Maybe that's why many states have considered "contracting out" prisons, but very few have even experimented with it.

Out of 4,000 state and local corrections facilities, only thirty privately run prisons or jails are now operating in the U.S., according to the National Institute of Corrections.

Law enforcement and legal experts agree that privatizing prisons would leave governments liable for the actions of a private company.

Imprisoning a citizen is one of the most drastic acts governments can take. Government, and government alone, should have the legal responsibility and liability of incarceration.

There could easily be fundamental conflicts between a private firm's profit motive and a government's duty to ensure the fair administration of justice.

Private jails run the risk of bringing cost considerations into the forefront of public safety. Salary and benefits make up around two-thirds of corrections costs. Several major corporations involved in privatization say that hiring fewer people and cutting salary and benefits is one way they plan to make a profit. This in a nation where staff-to-inmate ratios are already dangerously high.

There are deep legal and ethical questions concerning "contracting out" prisons.

Do you think a private parole board should decide who they can let out of prison?

Should private guards judge the conduct of an inmate which affects the length of time a person should stay in jail?

Should we let some of our citizens profit from the punishment of others? (With private contractors, the more prisoners they have, the more money they make. There is no incentive to rehabilitate.)

Can a city or state legally relinquish its responsibility or liability for the incarceration of inmates?

From every angle, "contracting out" of prisons is bad policy and bad government.

We'd like you to know about the pitfalls of prison privatization. AFSCME has published a new book entitled *Does Crime Pay?*. We'd like to send you a free copy. Mail this coupon today.

Drug, other tests on upswing at newspapers

BY MARK INGHAM

Nine percent of the newspapers responding to a new ANPA survey on personnel practices report that they ask job applicants to submit to a test for drug use.

Pre-employment drug testing is nearly twice as prevalent at newspapers with one or more labor unions, compared with non-union newspapers.

This information is among the preliminary findings from the survey, which was mailed to ANPA-member newspapers early this year by the Association's Human Resources Department [**presstime**, Jan. 1987, p. 58].

Except for newly added questions such as the one about drug screening of job seekers, responses are being compared to those drawn from a similar survey conducted in 1981. The goals are to identify developing trends in personnel management in the newspaper industry and to provide members with information on a variety of personnel issues.

Ingham is ANPA personnel relations asssociate.

As of late-April, 415 completed survey forms had been returned to ANPA—a 30-percent response rate. While statisticians believe that figure approaches an acceptable rate of return, response to the first survey was close to 39 percent [**presstime**, Dec. 1981, p. 44].

Additional responses are being sought to enhance the statistical accuracy and reliability of the final results.

On the matter of pre-employment testing besides drug screening, the survey shows a clear upswing. Those giving job applicants an overall physical examination have increased from 9.5 percent of the respondents to 31 percent. In addition, 38 percent give an aptitude test, up 3 percentage points from 1981 [**presstime**, Oct. 1986, p. 38].

According to other preliminary findings:

- The number of newspapers with a personnel manager has increased from 45 to 52 percent.
- The number of personnel departments with more than six employees has increased from 17.5 percent of the total to 25 percent.
- The number of newspapers budgeting 1 percent or more of their operating budget (other than wages and benefits) for the personnel function has increased from 25 to 31 percent.

Responses to the current survey indicate that of those newspapers where unions lost one or more representation elections in 1986, 75 percent had a personnel department. Since the previous survey, there has been a slight decline in respondent newspapers with one or more unions—from 51 to 49 percent.

In the employee-benefits area, some forms of coverage have increased. In 1981, 5 percent of respondents indicated that they offered employees some form of "cafeteria" benefits, whereby workers select from several options [**presstime**, June 1983, p. 28]. Current responses show that figure has risen to 8 percent. Also, only 30 percent of the responding newspapers pay the full cost of hospitalization/surgical benefits compared with 51.7 percent in 1981.

There has been a slight increase in the percentage of newspapers offering pension coverage for their employees, from 86 percent in 1981 to 88 percent in 1986. In addition, the portion with non-contributory plans has increased from 73 to 76 percent.

In another area, the practice of permitting flexible scheduling of work hours has grown. In the new survey, 18 percent of the newspapers said they allowed "flextime" scheduling, compared with 16 percent in 1981. The departments most likely to operate with employees on a flexible schedule are production and editorial.

Another question new to the survey and for which there is no comparative data concerns job-sharing—where two people share one full-time job. Fifteen percent of the respondents report they have job-sharing positions. Once again, the departments most likely to have job-sharing arrangements are production and editorial.

Another development is the reduction in the numbers of employees in certain departments, especially when analyzed by circulation size. Newspapers with circulations of more than 500,000 have decreased the average number of composing room employees from 292 in 1981 to 198 in 1986.

As more surveys are returned, the data will be refined to provide greater depth to the analysis, according to Patricia P. Renfroe, ANPA manager/personnel relations. A complete report eventually will be mailed to all ANPA-member newspapers. □

Drug booklet distributed

The problem of drug abuse is a growing one for newspaper managers, according to the chairman of ANPA's Environmental Task Force. But most managers lack information about drug-screening programs, said Michael Stern, production manager of Syracuse Newspapers Inc.

To remedy this situation, ANPA has sent copies of a booklet, "Urine Testing in the Workplace," to every member newspaper.

In a cover letter, Stern said the booklet, developed by the American Council for Drug Education, "is intended to provide newspaper executives with an overview of the subject that can be used in conjunction with other information generally available to them locally." The intent is to enable them to "make an informed, independent decision about what is best for their employees, their newspaper and ultimately their community," Stern said.

The booklet includes information about the legal issues of urine testing, analytical methods for testing and the process of selecting a laboratory.

Union files lawsuit over personnel files

Local 51 of The Newspaper Guild has filed a civil suit against The Milwaukee Journal and Milwaukee Sentinel charging the newspapers with unlawfully withholding from employees "secret" information contained in their personnel files.

The suit, filed in Milwaukee County Court, seeks an injunction that would forbid the company from collecting personal information that is unrelated to employees' work performance. The plaintiffs are the union and 14 members of its executive board.

A Wisconsin "open records" law provides that employees have the right, with certain exceptions, to look at their personnel files. The right to inspect does not apply to such matters as test results and material used by the employer for staff-planning purposes.

The company said it is legally entitled to withhold certain confidential information from the union.

The suit stems from disclosures made during a hearing before an NLRB administrative law judge that two sets of personnel files are kept—one in the newsroom and one in the personnel department. The hearing concerned the company's proposal made during negotiations for a new contract that all pay for editorial employees be based on merit [**presstime**, Nov. 1986, p. 34]. A decision by the NLRB judge is pending.

The union represents about 300 editorial employees at the newspapers. □

Pay-for-performance system embodied in Guild contract

A new labor agreement negotiated between Local 82 of The Newspaper Guild and The Seattle Times contains a pay-for-performance system for the first time in a Guild contract.

A separate contract covering editorial employees of the Seattle Post-Intelligencer also was concluded. The newspapers operate under a joint operating arrangement whereby the Times handles all but editorial functions for the Post-Intelligencer.

A key change in the new Times contract is that advertising sales personnel will not get a general wage increase; instead, they will share a minimum pool of incentives from which monthly commissions will be paid depending on individual sales performance. Under the contract, grievances over performance pay are not subject to arbitration, but there is an internal appeals procedure.

Another provision creates the new job classifications of zone reporter or zone photographer. Employees so classified will receive between 65 and 70 percent of the pay of main-office reporters and photographers, depending on experience. Wages of current suburban reporters and photographers are protected by a "grandfather" clause in the contract.

The Guild represents about 770 employees at the Times and about 125 at the Post-Intelligencer. Employees received a lump-sum contract-ratification bonus of up to $1,000 for those making at least $600 a week, with smaller bonuses for those making less. The bonus was in lieu of retroactive pay in the contract back to the effective date of July 22, 1986.

The Guild had threatened to strike over new contract terms but did not receive the support of other unions [**presstime**, March 1987, p. 62]. □

Fired driver wins unemployment benefits

A delivery truck driver for The Spokesman-Review and Spokane Chronicle who was discharged for tardiness was entitled to unemployment benefits, the Court of Appeals of Washington state has ruled.

The driver was fired after being late to work 14 times during the 15 months prior to his discharge. His schedule required him to be at the company's loading dock by 12:45 a.m.

The state's Employment Security Department had denied benefits to the former employee on grounds that he had been discharged for misconduct. He appealed to a county court, which subsequently ruled in his favor. The Employment Security Department appealed that decision to the appellate court, and once again the former employee prevailed.

The appellate court noted that "misconduct" is not defined in the state's Employment Security Act. Moreover, the court said, there were no general guidelines or "rules of thumb" that define when tardiness becomes chronic or excessive so as to fit within the definition of misconduct. Each case must be judged on its own facts and circumstances, the court said.

The court ruled that the driver's conduct did not "amount to the misconduct necessary" to deny him benefits. It noted that the last two instances of tardiness were beyond his control because they were caused by power failures that stopped his alarm clock.

In addition to the unemployment benefits, the man was awarded $2,130 in attorney's fees. □

GCIU affiliation fails

Members of an independent union at Dow Jones & Co., publisher of The Wall Street Journal and other publications, have rejected a proposal to affiliate with the Graphic Communications International Union.

The members of the Independent Association of Publishers' Employees voted 568 in favor of affiliation and 530 against. Approval by two-thirds of the membership was required [**presstime**, July 1986, p. 73]. □

Arbitrator says Denver paper is free to subcontract

The Rocky Mountain News of Denver did not violate a labor agreement with Local 74 of The Newspaper Guild when it unilaterally subcontracted janitorial work, an arbitrator has ruled.

In October 1985, the newspaper moved most of its operations into a new, five-story structure adjacent to its original three-story building. The company subcontracted for janitorial services to be performed in the new building; later, it added janitorial work on the first floor of the old building to the subcontract.

William W. Fletcher, president of the newspaper, said the subcontracting decision was made to effect a substantial reduction in maintenance costs and to obtain specialized maintenance of the glass, marble, granite and wood interior of the new building and refurbished first floor of the old building.

None of the company's 18 custodians was laid off because of the subcontracting.

The union contended that the subcontracting violated its labor agreement because the janitorial work had been performed by its members for some 30 years. The agreement states that no work being performed by covered employees will be assigned "to other employees of the publisher" who are outside the Guild's jurisdiction.

Arbitrator John Phillip Linn, professor of labor law and arbitration at the University of Denver College of Law, found that during contract negotiations the company had rejected Guild proposals to limit subcontracting work.

"Given this history of contract negotiations," he ruled, the newspaper retained the right to subcontract.

Linn also found that the company did not violate the labor agreement by subcontracting the work without prior notice to or discussion with the union. □

NLRB elections

Agana (Guam) Pacific Daily News, Teachers: Newsroom employees voted 11-8 against representation by Local 1581 of the American Federation of Teachers.
(NLRB Case No. 37-RC-2863)

Columbus (Ohio) Dispatch, Guild, Teamsters: Employees in the inside circulation department and single-copy rack division voted against further representation by The Newspaper Guild and in favor of representation by the Teamsters. The vote was 47 for the Teamsters, 1 for the Guild and 40 for no union.
(NLRB Case Nos. 9-RC-15014, 9-RD-1364)

South Bend (Ind.) Tribune, Teamsters: Bundle delivery drivers voted 24-5 against representation by Local 364 of the Teamsters.
(NLRB Case No. 25-RC-8413)

Jury finds Daily News discriminated against blacks

A Manhattan federal District Court jury is scheduled to begin deliberations May 11 on financial damages due four black editorial employees of the New York Daily News.

The jury decided April 16 that the newspaper had discriminated against the four between 1979 and 1982 by giving them fewer promotions and lower salaries than were given to white journalists with comparable experience and qualifications.

All four—reporter David W. Hardy, copy editor Causewell Vaughan, Assistant News Editor Steven W. Duncan and Manhattan Cultural Affairs Editor Joan Shepard—still work at the News.

John M. Dunleavy, assistant to the publisher, said the verdict would be appealed. He said the newspaper "remains convinced" that it did not discriminate against the staff members. "The News believes its presentation to the federal jury was severely hampered by the trial judge's highly prejudicial rulings, which excluded key witnesses and evidence."

U.S. District Judge Miriam Goldman Cedarbaum presided over the trial. It was the first courtroom case involving a race-discrimination case brought by editorial employees against a major news organization [presstime, March 1987, p. 63]. Out-of-court settlements have been made in other cases.

Albert E. Fitzpatrick, president of the National Association of Black Journalists, said the verdict "will make editors take a look at the minorities on their staffs and see if they are really being treated fairly and given opportunities to succeed in the newsroom." Fitzpatrick, who is assistant vice president/minority affairs for Knight-Ridder Inc., said he sees "a positive thing coming out of this. The awareness factor will be heightened throughout our newsrooms."

Dunleavy of the News said "we feel strongly that we've made progress in minority hiring in recent years." Of the 445 people in the newsroom, 13 percent are minorities, he said.

According to a 1987 survey by the American Society of Newspaper Editors, 6.56 percent of U.S. newsroom employees are minorities (black, Hispanic, Asian American and American Indian). □

'Focus on Daily News' in labor negotiations

Negotiations with 10 unions for renewal of labor agreements that expired March 30 at the New York Daily News, the New York Post and The New York Times are continuing, although talks at the latter two papers are "on the back burner," according to a union official.

"The whole focus is on the Daily News," said George E. McDonald, president of New York Mailers' Union No. 6 and head of the Allied Printing Trades Council, an umbrella group that represents the 10 unions. Tribune Co. of Chicago, owner of the Daily News, has asked for concessions from the unions [presstime, Jan. 1987, p. 56]. "The unions want to know what investment the Tribune Co. will make," McDonald said.

Other union officials predicted new contracts are unlikely to be agreed upon before this summer. □

Court reinstates sex discrimination case in Cleveland

A 15-year-old case charging The Plain Dealer of Cleveland with sex discrimination has been revived by the 6th U.S. Circuit Court of Appeals.

In a 2-1 ruling, a panel of the court overturned a federal District Court judge who last year granted the newspaper's motion for summary judgment [presstime, March 1986, p. 56].

A company spokesman said The Plain Dealer is filing a petition for a rehearing before the full court.

The case began in 1972 when Local 1 of The Newspaper Guild filed a charge with the Equal Employment Opportunity Commission.

The union alleged that the newspaper was discriminating against women in the editorial department in terms of merit pay, promotions, assignments, and other terms and conditions of employment.

In 1982, the EEOC informed the Guild that conciliation efforts had failed. The Guild then filed a class-action suit in U.S. District Court.

U.S. District Judge Thomas D. Lambros held that the Guild had not presented a sufficient explanation for its delay in bringing suit. But the majority of the appellate court panel disagreed, saying the delay was caused by the newspaper's "own stonewalling" and refusal to cooperate with the EEOC. □

Two Canadian dailies struck by GCIU

Two dailies in Ontario have been struck by local unions of the Graphic Communications International Union in unrelated disputes over renewal labor agreements. Both newspapers are continuing publication.

The Cornwall Standard-Freeholder was struck April 2 by members of the Montreal local, which represents employees in the pressroom and another unit of employees in the advertising, business and circulation departments. Two pressmen and nine clerical employees are on strike at the 17,056-circulation paper. Agreements covering the two units expired June 30, 1986.

The Brampton Times was struck March 30 by members of the Toronto local, which represents pressroom employees. Two pressmen are on strike. The agreement at the 7,921-circulation daily expired Oct. 31, 1986. □

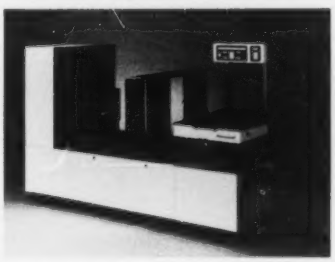
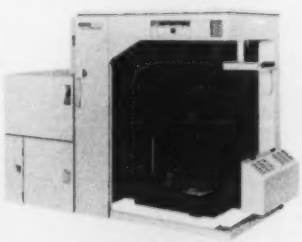
An oasis of new equipment will have desert setting

Canon electronic camera



Agfa-Gevaert RPS 6100S camera



DS America C-220-E camera

Scitex Assembler terminal

For the first time since 1983, the Association takes its annual trade show to flamboyant, fast-paced Las Vegas.

The 59th annual event, previously known as the Operations Management Conference & Exposition, was renamed this year to ANPA/TEC '87—the ANPA/ Technical Exposition and Conference. Although the name has been streamlined, the show has not.

The June 6-10 equipment Exposition will take up about two-thirds of the Las Vegas Convention Center, the second largest exhibit hall in the United States. More than 280 exhibitors have contracted for 310,000 square feet of booth space, setting records yet another time. (Adding aisles, room between booths and other needs, the overall space requirement will be on the order of 600,000 square feet.)

There will also be the customary three days of Conference sessions.

Larry D. Strutton, chairman of the ANPA/ TEC '87 Arrangements Committee and vice president/operations for the Los Angeles Times, said stock-market analogies are being used as the themes for each day's general session. On Monday, June 8, the focus will be on "The Market" and how newspapers can meet the competition. "The Issues" of press decisions, ink and quality will be featured the next day. And on the closing day, June 10, "The Futures"—live demonstrations that will offer a look at developing technology—will be featured.

Ten symposiums also will be conducted over the three session days [presstime, Feb. 1987, p. 58].

More than 10,000 people are expected for the event. Deadline for preregistration was May 1, but on-site registration will be available during each of the five days of ANPA/TEC '87.

The final program and a complete list of exhibitors and their booth numbers will be published in the June issue of presstime.

On June 7, presstime will sponsor its third annual Exposition and Conference "Fun Run" for attendees and their families. The two-mile course for runners, joggers and walkers will start and end at the convention center. Trophies will be awarded to the top finishers in the men's and women's divisions, and all people who complete the course will receive a presstime T-shirt commemorating the event and ANPA's centennial year.

Strutton predicted a warm reception for exhibitors. He believes the Las Vegas show will build on the brisk business generated by the 1986 Exposition in Atlanta. "Newspapers are really in a buying mood these days. There's a real boom out there in construction and in new equipment purchases," he said.

"In 1986 we had serious lookers, and this year we will have a lot of people who are looking to buy. The show represents the best chance to see all of the equipment you may be considering in one place so comparisons can be made."

Strutton said electronic photography and advancements in press technology will attract attention in Las Vegas. Electronic photography appears ready to live up to its promise of the past few years, the Times executive said. Many newspapers that postponed press purchasing decisions in recent years need to make those kinds of decisions soon, he added.

ANPA/TEC '87 Director Peter P. Romano, ANPA director/technical services, agreed and said ad-makeup terminals and personal computers for desktop publishing and other uses also should draw crowds.

As is always the case, some vendors decline to tip their hands until the opening of the show. However, many companies surveyed or interviewed plan to show a great variety of equipment never before shown at an ANPA Exposition. This year's equipment parade will include:

ELECTRONIC PHOTOGRAPHY

Electronic photography seems poised to turn dreams into reality this year, according to Strutton and other observers. Because of the relatively inexpensive equipment involved, they believe this new technology can enable even small newspapers to offer good color reproduction.

- *Associated Press*'s Visual Newsroom will feature the wire service's electronic darkroom, electronic cameras and its Access retrieval system that delivers AP graphics directly into a newspaper's graphics computer.
- *Canon USA Inc.* will demonstrate its still video system that includes a still electronic camera, a recorder, a printer and a transceiver for sending photographs over telephone wires.
- *Sony Corp.* will demonstrate its SG6x-10 Pro Mavica still electronic camera as well as the portable Pro Mavica video player/recorder and the CSS-100 color still system.
- *Tecnavia S.A.*, will demonstrate its Picture Store and Forward newsphoto management system. It retrieves—instantly and on-screen—any photo in computer storage. Up to 700 images can be stored at a time, the company said, and the system can be linked to full-page pagination equipment.
- *United Press International* will demonstrate its Pyxys digital picture transmission system. It

Six years ago there was only one UNIMAN 4/2 press

Today we are the world leader...

with sales of more than 100 presses to mid size newspapers — worldwide. UNIMAN 4/2 is the fastest selling press in newspaper history, with an average of 20 complete presses sold every year.

We created a demand for UNIMAN 4/2 by offering a heavy-duty press at an attractive capital investment. A press with the ability to produce excellent process color while reducing operating costs. A press you can grow with.

If you enjoy being a leader in *your* market, ask the people who have already made the UNIMAN decision. Then call us — MAN Roland USA, Inc., 333 Cedar Avenue, Middlesex, NJ 08846 (201) 469-6600, Telex 833-330

MeadDataCentral
P.O. Box 1830, Dayton, Ohio 45401

also will feature CustomData, a service that the wire service said "incorporates the broad spectrum of UPI's coverage, tailored to specific needs" of newspapers of various sizes.

SCANNERS, COLOR EQUIPMENT

For newspapers, good color has traveled the road from special, occasional use to necessity in a relatively short period of time. As the use of color increases, so do the equipment choices. Visitors to this year's show will witness the continuing evolvement of electronic scanners and other equipment.

- *Agfa-Gevaert Inc.* will demonstrate its Reco-Print photographic color proofing system for newspapers and its 6100-S Daylight Horizontal Camera that can be used with CopyColor proofing materials to reseparate wirephotos.
- *Chesley F. Carlson Co.* will set up a darkroom and produce high-speed color proofs. A color consultant will be available for discussions.
- *Crosfield Electronics Inc.* will demonstrate its Magnascan, a digital color scanner, and Scantex, an analyzer scanner that provides what the company describes as "high-quality color-image data" for manipulation on a Scitex America Corp. pagination terminal. The company also will demonstrate the AdWizard and NewsWizard VAX-based terminals for display-ad makeup and pagination, respectively.
- *Daylight Color Systems Inc.* will demonstrate its electronic tint-generating system for line art. The company said the electronic imaging system offers an alternative to manual mask making and contact tinting.
- *DS America* will demonstrate its C-220 E vertical daylight camera featuring microprocessor controls that handle all functions, from exposure to developing, internally. Also demonstrated will be its TG-200 tint-generating system that lays one to four flat tint colors into film negatives of line art. An operator designates on a computer screen the desired dot percentages for each tint on each color separation.
- *Newscolour Corp.* will demonstrate the Digi-Colour system that eliminates multiple color stripping, according to the company. Color correction masks and separations are made on scanner film and developed with rapid-access chemistry.
- *Scitex America Corp.* will demonstrate the concept of "distributed production" in a variety of electronic color pre-press terminals. The equipment includes the Astra color layout and production system, the Assembler page-assembly terminal and the Iris 2044 ink-jet proofing device.
- *X-Rite Inc.* will demonstrate a variety of densitometers, including the 408 and 418 portable color-reflection densitometers and the 361T black-and-white transmission densitometer.

OTHER PREPRESS

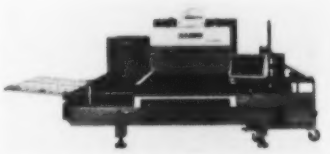
Printing plates, chemistries and other components dictate how well color reproduces on the printed page. Some vendors this year are introducing equipment to help cope with such problems as tinting and toning, still a major headache for offset-printed publications.

- *American Litho Inc.* will demonstrate web offset printing supplies and accessories, including an additive offset plate designed especially for color inks.
- *American Hoechst Corp.* will demonstrate a water-based chemistry for long-running, pre-sensitized offset printing plates, as well as color proofing films and processing equipment for films and plates.
- *Krause Printing Techniques International Inc.* will demonstrate a double-page platemaking system that can expose two printing plates simultaneously from two different films through dual exposure units.
- *Napp Systems (USA) Inc.* will demonstrate the NAPPflex flexographic printing plate and a table-top plate-exposure unit.
- *National Machine Co.* will demonstrate its Tone-Buster, a processor for additive offset plates. It desensitizes the plates—a process that helps eliminate toning, according to the firm.
- *New England Newspaper Supply Co.* will introduce its Neu-tro Mix Super Concentrate, a platemaking chemistry. It also will display 3M's Deadliner/Pyrofax platemaking supplies and a line of newsroom furniture.
- *NuArc Co. Inc.* will demonstrate an exposure unit for platemaking and proofing as well as light tables, darkroom and other prepress equipment.
- *Nu-Graphics Manufacturing Inc.* will display its XPress, an exposure unit that burns, processes and crimps plates, and the Accu-Lite Plate Register, a device that "accurately checks the registration of color plates before going to press," according to the company.

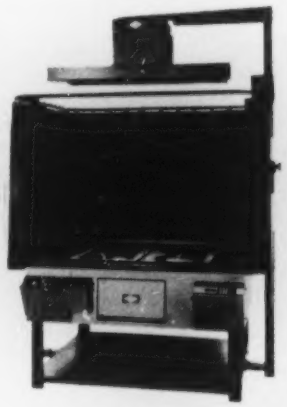
PRESSROOM EQUIPMENT

Newspapers of all sizes face press decisions these days. Go flexo? Or is the next generation of offset presses the answer? What about ink that resists "ruboff"—smudging on readers' hands? The booths in Las Vegas may contain answers to such pressing questions.

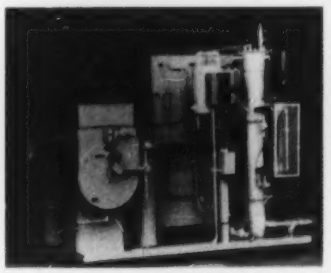
- *Alternative Resource Technologies* will demonstrate Printing Miser, a printing-waste management system. With stainless steel filters, the Miser cleans solvents and blanket wash, and it reclaims 95 percent of all disposable waste.
- *Capital Elevator Sales Inc.* will have a model of its beneath-the-floor roll-handling track system for transporting newsprint to reel rooms.
- *Crabtree Vickers Inc.*, will display the Civilox +4 Multi-Color Printing Unit. The keyless inking unit can be slipped into an existing press line and can produce up to eight pages of full color per press run.
- *Eclectic Co. Inc.*, manufacturer of a variety of pressroom accessories, will display equipment



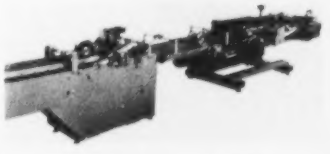
Krause NP-30 platemaker



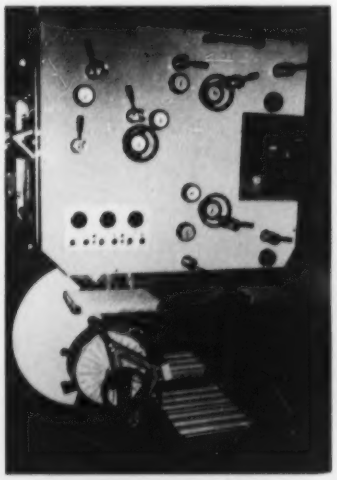
nuArc exposure unit



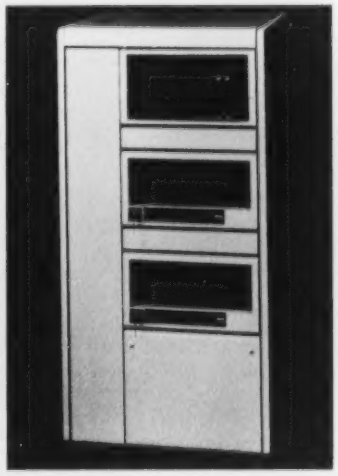
Alternative Resource Technologies Printing Miser



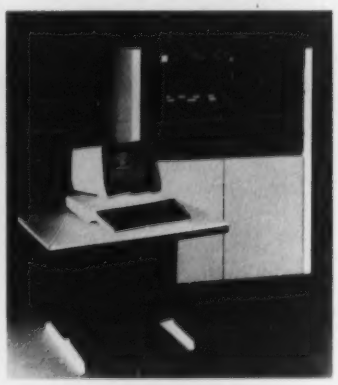
MacGraphics quarterfolder



Solna non-heatset web press



Atex Series 60 computer



CPS minicomputer system

that controls paper waste, collects paper dust, controls ink misting and muffles noise.

• *Flint Ink Corp.* will show its newspaper flexo ink and its Super low-rub black ink.

• *The Ink Co.* will display an ink-management system and present information on its Flexotech flexo ink, Ultra N low-rub ink and Civitech water-emulsion ink.

• *IVT Cotordry Inc.* will demonstrate a remote-control inking system and the IVT Spraydamp, a computerized spray dampener with enclosed spray bars to prevent misting. It has two nozzles per page section for maximum coverage, according to the company.

• *King Press Corp.* will display a press designed for the high-speed and color requirements of four-color inserts.

• *MacGraphics Inc.* will demonstrate the SIMFold-60 Quarterfold. The company said it can fold 60,000 newspapers per hour on-line and 45,000 per hour off-line.

• *M.A.N.- Roland USA* again will exhibit its Flexoman, a double-width flexographic press unit with a color deck, and a computerized press-management system. Also shown will be the Uniman 4/2, a double-width offset press unit for mid-sized newspapers, and the Colorman 75, a double-width offset press for metropolitan papers.

• *Mitsubishi Lithographic Presses North America* will exhibit schematics of a keyless offset press and robotic press systems.

• *Motter Printing Press Co.* again will print process color and black on its Motterflex flexographic press, which has a self-contained ink-management system.

• *Nikka/Oxy-Dry* will display a variety of pressroom equipment, including a web-break detection system, ultrasonic ink levelers, web guides and cutoff controls.

• *North American Cerutti Corp.* will display two different single-width flexo presses and a double-width slip-in flexo unit.

• *Printers' Service* will feature a fountain concentrate, Newsfount N, which the company said "delivers the performance you expect from a neutral fountain concentrate at an alkaline economy."

• *Publishers Equipment Corp.* will display a Hoe Colormatic flexo conversion with a Windmöller and Hölscher inking system, W&H flexo equipment, a King Press Color King 4 offset press with folder, and Koenig and Bauer flexo and letterpress equipment.

• *Rockwell International Graphic Systems Division (Goss)* will have static displays of two presses the company has announced since the 1986 show: the Goss Colorliner, an offset press that prints color on both sides of the web, and the Flexoliner flexo press. Commercial presses and the company's advanced press controls system will be displayed, too.

• *Ryco Graphic Manufacturing Co.* will introduce a plate dampener that converts an ink-train dampening system to a pulse system whereby water goes directly to the printing plate.

• *Solna Inc.* will demonstrate its Distributor 30 non-heat-set offset web press. The company said the press allows the user to add spot color without a color deck. Solna also will demonstrate the F36 folder.

• *Southern Cross of Delaware Corp.* will display specially fabricated parts and hardened gears for high-speed web-offset presses.

• *Tokyo Kikai Seisakusho (TKS)* will demonstrate an advanced press-control system with a touch screen. Other equipment in the booth will include a programmable stacker with its own personal computer.

• *3M* will demonstrate repulpable tape designed specifically for newsprint splicing.

• *Web Printing Controls Co.* will display its MicroTrak 9400 Linear web guidance system and its MTK 9100 sonic web-break detection system.

FRONT-END, PAGINATION

Research and development on pagination continues, and front-end vendors not only are working to improve their own products but seem increasingly willing to find uses for personal computers within larger systems.

• *Atex Inc.* will demonstrate its advertising and editorial systems on the company's Series 30 and Series 60 computer packages that feature fixed Winchester disk storage and a "high performance memory management system."

• *Computer Peripheral Sciences Inc.* will display a higher speed computer with large Winchester disk-storage capacity for a minicomputer system, as well as personal computers with the capability of previewing graphics and providing output to laser printers.

• *Cybergraphic Systems Inc.* will demonstrate its CGS 150 terminal plus integrated newspaper publishing software for text processing, classified pagination, display-ad layout and page makeup.

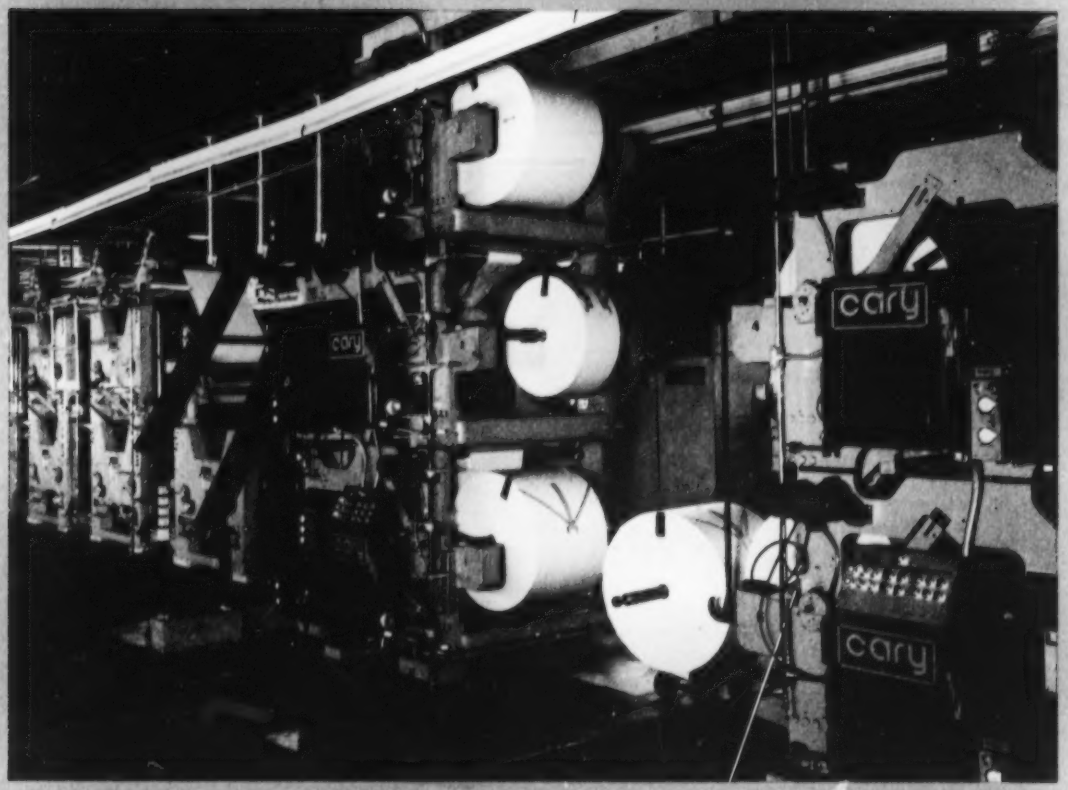
• *Dewar Information Systems Corp.* will demonstrate its DISC/net pagination system that includes classified ad software running on its DISCcribe terminal. In addition, editorial news layout will be demonstrated on the DISCovery terminal.

• *Mycro-Tek* will demonstrate its Nortext System. According to the company, it is "designed as a totally integrated publishing/management system to meet the requirements of the million-plus circulation daily."

• *System Integrators Inc.* will feature products in the Sierra Pagination System, including display-ad makeup, editorial-page design and full-page processing. Also to be demonstrated is the CX, SII's minicomputer for stand-alone bureau applications. It uses a software package that includes "soft" typesetting—output to a laser printer—and text-editing functions.

• *Software Consulting Services* will demonstrate its Track-8000 ad-tracking system and the WebPresser program to configure press runs.

For FAST Relief...



Put Cary Flying Pasters on Your Press

Relief From:

Spending millions of dollars for new press equipment.

By adding Cary Flying Pasters to your existing single-width press, you don't need double-width equipment!

Relief From:

Production deadlines.

You'll get your paper "on the street" faster, extending your editorial and advertising deadlines. And that means increased circulation and revenues.

FAST? You bet Cary is Fast!

With a Cary Flying Paster, the press NEVER stops or even slows down during the entire press run. A built-in automatic infeed and tension control speeds make-ready, provides perfect web control during press stops, and is the proven performance leader for running color.

Forget about "stop the presses" to change paper, getting back into register, roll stubs, and wasted newspapers.

Call Cary today. See why there are over 500 units in operation worldwide. Talk to us about our analysis of your needs, training, follow-up, and highly responsive service. Let us show you what "unsurpassed reliability" and "simplicity of operation" really mean.

Cary Flying Pasters. Take one — or up to 12 — for FAST relief.

---

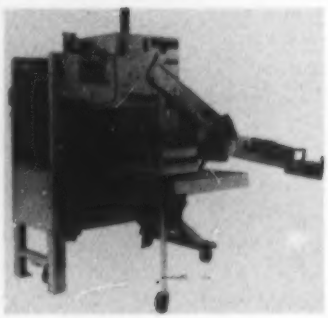
DISC pagination system

Allied Linotype Graphic System

Denex Laser Copy Counter



Harris Graphics RS-30 counter/stacker

• *Xeta Inc.* will demonstrate its Graphics/Text/Art Pagination System that the company said "melds" scanned images, line art and halftones. Also to be demonstrated is the Chameleon PC software and file server. According to the firm, the software enables the user to send data to the host system without having to learn the host's computer formats.

BUSINESS SYSTEMS

The business offices of newspapers must keep track of an abundance of information, from the billing of a classified-advertising customer to the company's balance sheet. The equipment to be shown or demonstrated covers these business needs and many others.

• *Collier-Jackson Inc.* will demonstrate its CJ/Newspaper Management Systems that include CJ/Classified with classified-ad support for multi-zoned newspapers; CJ/Circulation for carrier billing; and CJ/Advertising, with enhancements that allow users to keep accounting histories for longer periods of time without affecting processing efficiency.

• *Creative Data Systems Inc.* will demonstrate systems for laying out pages, managing inserts and designing possible press configurations on a computer terminal. Demonstrations of its Accounts Receivable/Display Advertising System also will be offered.

• *International Telesystems Corp.* will demonstrate telemarketing equipment that dials telephone numbers and passes calls that are answered to sales personnel.

• *Neasi-Weber International* has updated ADMARC, its advertising-management and accounts-receivable software, to facilitate ad tracking through assignment of "bin numbers" for various classified-ad categories. The software also has the capability to send a statement and invoice to more than one address.

PERSONAL COMPUTERS

Personal computer use in the workplace spirals ever upward, and the strong showing of vendors at this year's Exposition will be further proof of the high level of interest at newspapers.

• *Archetype Inc.* will demonstrate Archetype Designer, page makeup software with WYSIWYG (What You See is What You Get) display of true fonts. Intended for designers and graphics artists, it runs on IBM PC ATs.

• *Camex* will demonstrate a "total newspaper prepress system." A highlight is a PC-based editorial and classified system designed by Intertext, a personal computer company recently acquired by Camex.

• *Computerease* will demonstrate software for display-ad entry, selection and dummying, as well as text-editing software for PCs. Also featured will be an automated PC network that permits two-way communication between different systems.

• *Concept Publishing Systems* will demonstrate the latest version of its NewsSet editorial system, with composition and high-speed editing features, plus an enhanced classified-ad system for networked Apple Computer Inc. Macintosh PCs.

• *CText Inc.* will demonstrate Adept, its WYSIWYG display-ad makeup software running on networked PCs, and editorial software having what the company described as "sophisticated" file-management capabilities.

• *Digital Technology International* will demonstrate its display-ad makeup system on a Macintosh with a 19-inch monitor. The company's classified-ad, editorial and display-ad software all drive the Apple Laserwriter Plus.

• *Information International Inc.* will demonstrate the PC-based Morris editorial/classified system, to which Triple-I recently acquired the marketing rights. Also demonstrated will be an electronic prepress pagination system for larger newspapers.

• *LAN Systems Inc.* will demonstrate a desktop-publishing system for ad layout and a laser disk-storage system for automating a newspaper library. Also featured will be a classified-ad production and accounting system on networked PCs.

• *Newspaper Electronics Corp.* will demonstrate a "true multiuser, multitesting network" that includes both personal computers and editorial, display-ad and business front-end systems.

• *Pongrass Australia Pty. Ltd.* will demonstrate an editorial, classified and display-ad system running on networked PCs. A DEC VAX-Mate computer system that uses PCs for editing also will be demonstrated.

• *Press Computer Systems Inc.* will use a Macintosh as part of a display-ad system that includes ad dummying and a continuous-tone and line-art graphics PC for page makeup.

• *Stauffer Media Systems* will demonstrate electronic library software for newspapers that the company said runs on IBM PCs and IBM-compatible personal computers and will link with most front-end systems.

• *Weather Central Inc.* is introducing a line of weather maps that are produced on Macintoshes and transmitted to newspapers through a modem or by dialing into Weather Central's database.

OUTPUT DEVICES

Phototypesetters will certainly be in evidence, but laser printers—whether for proofing or pasteup—also will be featured.

• *Allied Linotype Co.* will demonstrate a number of products, including the 8/4 laser printer that offers 400-dots-per-inch resolution for plain paper proofs. Also demonstrated will be the enhanced Linotype Graphic System, a computerized system that performs prepress makeup functions and combines text and graphics for output to a laser imagesetter.

• *Anitec Image Corp.* will demonstrate a vari-

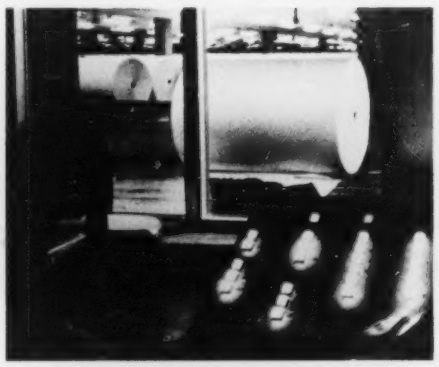
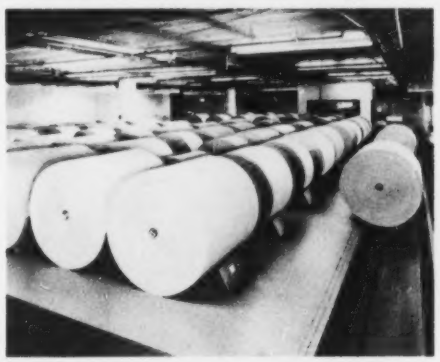
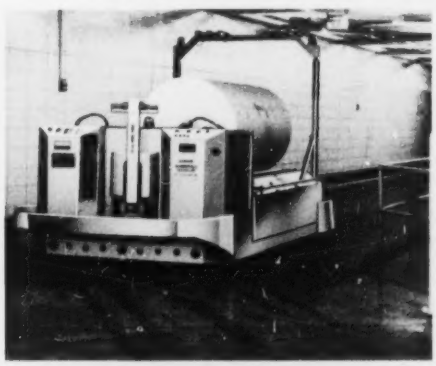
An Automatic Approach To Newsprint Roll Handling.



With today's trend towards automation, Webb automatic newsprint roll handling systems are fast becoming a key area for trimming production costs in the newspaper industry. From wrapped roll storage to the reel stands, time and efficiency are critical when handling the necessary tonnage of paper rolls to meet daily production schedules. Webb newsprint roll handling systems feature state-of-the-art equipment and controls ranging from simple gull wing conveyors to sophisticated AGVS (automatic guided vehicle systems). With basic information from the customer, Webb can custom-design a cost efficient, automatic system including preliminary concepts, rough pricing, and project scheduling. Innovative experience has earned Jervis B. Webb an unparalleled, worldwide reputation of quality and reliability in newsprint roll handling.





For more information on paper and newsprint roll handling systems call our Material Handling Hotline: 313/553-1220.

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

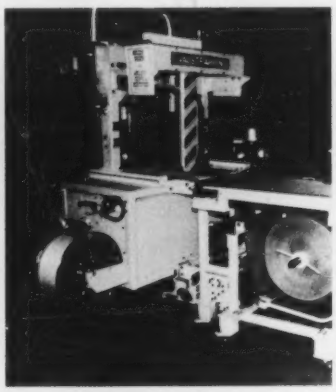
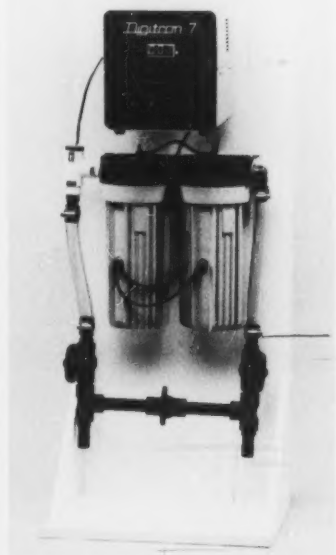
IDAB MP100 stacker



Ovalstrapping JP40 strapping machine



Siltec silver-recovery system

ety of phototypesetting products, diffusion-transfer products and scanner films.

• *Chemco Technologies Inc.* will demonstrate its line of rapid-access processors, Chemco Spectrum X-II input/output system and NewsScan laser facsimile system.

• *Compugraphic Corp.* will demonstrate its 9400/PS heavy-duty, plain-paper output device. Other demonstrations will involve the Dawn full-page text and graphics terminal and its 9600 laser typesetter.

• *Oscar Fisher Co.* will demonstrate high-speed phototypesetting paper processors.

• *Graphic Enterprises of Ohio Inc.* will demonstrate its high-resolution Graphco 500 laser printer that the company said has an output 18 inches wide and 36 inches long—large enough for a broadsheet newspaper page.

• *Harris/3M* will demonstrate the 6030 copier with advanced electronic editing, plus the model 6022 that reduces or enlarges artwork.

• *High Technology Solutions Inc.* has designed a typesetting network that features display and text typefaces, text and graphics integration, and interactive composition. A high-resolution laser printer also will be demonstrated.

• *Photech Imaging Systems Inc.* will display rapid-access films, Lasertype phototypesetting paper, Daystar Daylite films and papers for process cameras, and darkroom equipment and chemistries.

• *Xitron Inc.*, a manufacturer of protocol converters for computer systems, will display its XM-16/16 electronic "softswitch" that links front-end systems with typesetters. There will also be demonstrations of the firm's image processor for laser proofing of typeset copy.

DISTRIBUTION

The mailroom continues to be a headache for many newspapers, and the vendors are offering increasingly mechanical solutions to the problem of counting and bundling newspapers and inserting preprinted material.

• *Denex Systems Technology* will demonstrate the high-speed Denex Laser Copy Counter and a gripper sensor for conveyor belts.

• *Ferag Inc.* will show its Multi-cell stacking system for preprints in conjunction with its single-copy conveyor.

• *Graphic Management Associates Inc.* will demonstrate its SLS-1000 inserter, a 20-into-one inserting machine with zone-control capabilities.

• *Hall Processing Systems* will demonstrate its Tray-Matic bundle-distribution system.

• *Harris Graphics Corp.* will demonstrate its NP-212 hopper loader that the company said allows one person to feed up to 75,000 preprints per hour, and its RS-30 counter/stacker that uses vibrating tampers and squeeze rollers to compress preprints into tighter stacks.

• *IDAB Inc.* will demonstrate a variety of stackers, including the redesigned MS100 for smaller newspapers. A lapped-stream conveyor system also will be demonstrated.

• *Ideal of America Inc.* will demonstrate its model SFT-100 sealing unit that produces plastic-encased bundles at speeds of up to 40 per minute.

• *Muller Martini Corp.* will demonstrate its 308 Biliner inserting machine operating with a distribution system of main and tandem feeders.

• *Ovalstrapping Inc.* will demonstrate its 30-bundles-per-minute JP40 strapping machine in a simulated production line. The system has a bottom wrapper and a programmable ink-jet printer that prints ZIP codes for the routing of bundles.

• *Power Strap Inc.* will demonstrate a variety of tying machines, including its triple cross-strapping system, as well as bundle feeders.

• *Quipp Inc.* will display its SJ200 newspaper stacker, a newspaper collator and plastic wrap station for single copies.

• *Signode Corp.* will demonstrate the Tandem Spirit high-speed strapping system with turntable conveyor.

• *Spegram Inc.* will demonstrate its on-line quarterfolder/stitcher for web presses and its on-line labler for TMC products, plus an air-cushion handler for newsprint rolls.

MISCELLANEOUS

Plant designs, furniture for desktop-publishing use, the means to jazz up the TV log and energy management systems will also be found at the Exposition.

• A number of architectural and construction firms will describe their plant designs for newspapers. They include The Austin Co., Denver Design Associates, Lockwood Greene Engineers Inc., George R. Hall Contracting, Chas. T. Main Inc. and The Pellegren Corp.

• *Midwest Publishers Supply Co.* will introduce a line of "ergonomic furniture designed for desktop-publishing use."

• *Seaboard Energy Systems* will introduce products for both fluorescent and incandescent lighting that will save energy without sacrificing brightness, the company said.

• *Witte Energy Management Inc.* will exhibit infrared sensing equipment that pinpoints possible mechanical failure of equipment because of heat buildup.

• *Eastman Kodak Co.* will demonstrate its Ektacolor Plus color proofing system.

• *Siltec Marketing International Ltd.* will display silver-recovery systems.

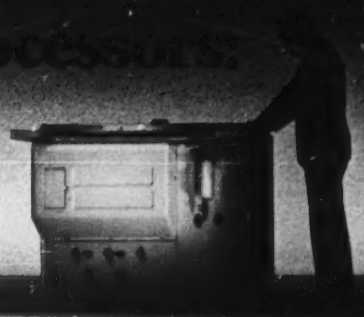
• *TV Data Inc.* has redesigned its software and offers customized television listings and such features as "Prime Time Pics" and "Best Bets" program highlights.

• *TV Listing Group Inc.* will exhibit newly developed, camera-ready grids with full descriptions of TV programs within the grid box containing the program title.

• *Vu/Text Information Services Inc.* will demonstrate its new SAVE library system.

—Rosalind C. Truitt

Introducing the DS film processors: automatic, solid state and built to last.



DS now makes a complete line of fully-automated, solid state rapid access and lith film processors. Built-in microprocessors control development time and temperature at speeds of up to 174 sheets of film an hour. The control panel gives instant status of every function with a push of a button.

These 26″ and 36″ machines are fully electronic. Unlike many other processors, there are no mechanical relays to corrode. They offer major exclusives like a hard and soft roller system for unmatched dot quality. But the big advantage is that they're all made by DS. They're not only designed right, they're built to last for years.

This new film processor line is just one segment of the full DS spectrum of fast, accurate pre-press equipment. If you'd like more information about the lasting quality of anything from a densitometer to a complete pagination system, call DS first.

SMALL TOWN DAILY WITH BIG PLANS FINDS THE PERFECT PARTNER FOR GROWTH: THE NEW HARRIS GRAPHICS NC-450 4-PAGE WEB PRESS.

John Schumann, editor and publisher, *Vero Beach Press Journal*, Florida.

With daily circulation at 20,000 and rising, the *Vero Beach Press Journal* decided it was time to upgrade productivity and quality to meet future needs.

The paper prides itself on serving its community with a sophisticated product, seven days a week. But its old press, with maximum speed of 16,000 pph, only produced a paper of up to 24 pages. It was no way to grow.

John Schumann: ". . . We needed a very fast press [capable of printing for double present circulation] . . . expandable . . . producing a high-quality paper . . . flexible in paging and color placement, and representing a real value . . ."

After extensive evaluation, Schumann chose the Harris Graphics NC-450, our new 4-page web press. With 10 units and the RB-2 folder, the NC-450 can provide a 40-page broadsheet at 45,000 pph.

At the *Press Journal*, every minute counts. Deadlines are pegged to a 3:30 a.m. carrier pickup, yet the paper holds news and sports sections until 2 a.m. for the latest news and West Coast scores. (Vero Beach is winter home to the Los Angeles Dodgers!)

Time saved in make-ready and running is time gained for the news desk. And there are other vital savings. With the NC-450, ". . . we get the speed with just half the number of plates that would be required on a semi-cylindrical press," says Schumann. "Over the life of the press, we figure this alone will save us $½ million."

The 4-page format with 2-page breaks gives great flexibilty in paging and color placement. And the paper can print its own color comics and a lot of spot color.

Add the capability of producing high quality inserts and other commercial jobs and you'll find, as the *Press Journal* has, the Harris Graphics NC-450 the ideal press for the growing small to medium size newspaper.

For more information, please contact the Sales Promotion Manager, Harris Graphics, 121 Broadway Street, Dover, NH 03820, (603) 749-1922.

Ink made from soybeans runs well

BY JOE HLADKY

Recent successful printing runs of soybean-oil-based black and color inks represent milestones in ANPA's continuing effort to develop smudge-resistant, environmentally safe printing inks for the newspaper business.

The ANPA-INK® press runs were conducted March 24-25 by the Cedar Rapids Gazette on its offset Goss Metro presses.

In the runs, ANPA-INK color and black inks were used to print the front page of the Gazette, the front pages of two sections of its weekly affiliate Iowa Farmer Today, and the front page of The Voice of the Hawkeye, an Iowa University publication.

This marked the first full color and black run with commercially available ANPA-INK. The ink was manufactured by ANPA licensee General Printing Ink, a division of Sun Chemical Co., using a soybean-oil base. Approximately 105,000 copies of the publications were printed on the Gazette's presses.

Tests are also being made on the letterpress version of ANPA-INK. About 70,000 copies of the Providence Bulletin were run using the ink March 31, and a second test took place on the Bulletin's Wood Custom 75 letterpress press. According to George Cashau, ANPA director/technical research, other tests are being scheduled on letterpress units of newspapers in Newark and New Brunswick, N.J., and in Syracuse.

The tests with the soybean-oil base resulted in reduced ruboff, better mileage and good "lay down" characteristics. More tests are scheduled with larger volumes of the ink to test how it performs over time.

Research that led to ANPA-INK dates from 1980, when the ANPA Board of Directors asked the Technical Research Department to try and develop new inks that would:

- Resist rubbing off on hands and soiling clothes—a major complaint of newspaper subscribers
- Consist of non-petroleum ingredients. Several years of oil shortages had greatly escalated the price of ink oils, and the quality of the oil being used had brought complaints

Hladky, publisher of the Cedar Rapids (Iowa) Gazette, is an ANPA director, vice chairman of the Association's Technical Committee and chairman of its Newspaper Ink Study and Research Task Force.

Display Ad Makeup

The Concept Publishing Systems® AdNet Plus™ System introduces an entirely new concept in "WYSIWYG" (What You See Is What You Get) ad composition.

AdNet Plus display ad software teamed with the Apple Macintosh™ computer means there is no foreign computer language to learn, no memorizing unintelligible coding.

AdNet Plus is so fast and easy to operate that a compositor or even a salesperson can typeset a complete ad with borders, screens, tints and linework in no more time than it takes to draw a rough layout.

- **True Formatting**
- **Type sizes from 5 to 120 point**
- **User defined leading**
- **Reverses**
- **Screen tints**
- **Automatic color separations**
- **20 megabyte hard disk**
- **Full screen reduction**
- **Condensed or expanded type**
- **Measurement in picas, inches & centimeters**
- **PostScript® output**
- **Conventional typesetter output**

of "stinky ink" from newspaper customers.

• Be environmentally safe. Oil-based products were under scrutiny regarding waste disposal and worker exposure.

An ink chemist, John Moynihan, was hired by ANPA and a laboratory and a pilot plant were stocked with the necessary equipment to begin research.

After a great many formulation trials, an ink based on tall oil (derived from trees), gilsonite (a naturally occurring mineral) and carbon black was developed for both letterpress and offset printing. Trial runs were made at a number of ANPA-member newspapers.

Several versions of this ink were patented, and many ink companies were licensed by ANPA to manufacture the product. The ink satisfied all of the board's criteria, but the fluctuating cost of tall oil and its availability made it difficult to predict success in the marketplace. The tests at member newspapers were encouraging, showing that the ink prints well and with superior mileage characteristics.

But the soybean-oil ink is even more promising. At present, only GPI is manufacturing soybean-oil ANPA-INK; however, many other ink companies are licensed and will have the capability to produce it once orders are received.

Remaining tests on this ink will focus on its performance over time in day-to-day operations as it is fed from larger storage tanks, and on use of color flushes instead of dry pigments.

If these tests prove successful, as expected, the ink will be competitive with petroleum-based products. As petroleum becomes scarcer and more expensive, the soybean-based ink will help ensure U.S. and Canadian newspapers of a home-grown supply of excellent news ink.

(Now that it's possible to use ink made from U.S. soybeans, we can look to the future when we may be able to print our newspapers on paper made from the plant kenaf. This would give our farmers a well-deserved boost for their products.)

FARMING '87

WAR ON WEEDS

Iowa Farmer Today was printed with new offset ANPA-INK.

The Ink Study and Research Task Force of the ANPA Technical Committee will continue to seek new non-petroleum ink formulations that provide a safe working environment and low ruboff.

Our goal is to provide the best possible inks to print the kind of quality that the newspaper business desires, and to keep the environment as clean as possible. We hope that our research will provide the stimulus for manufacturers and suppliers to continue to improve their products for newspapers. □

TECHNOLOGY CALENDAR

• **Paper and Ink Problems in the Pressroom**, a Graphic Arts Technical Foundation seminar, will be May 2 at the International Hotel, Baltimore/Washington International Airport, and May 5 at the Holiday Inn, Milford, Conn.

• The annual **Forum of the Flexographic Technical Association** will be May 3-6 at Marriott World Center in Orlando.

• The **Gutenberg Festival**, an annual equipment show for the graphic-arts industry, will be May 14-17 at the Long Beach (Calif.) Convention Center.

• The Society for Imaging Science and Technology will hold its **annual Conference and Symposium on Hybrid Imaging Systems** May 17-22 at the Genessee Plaza Holiday Inn in Rochester.

• The annual **Web Offset Meeting** sponsored by Printing Industries of America will be May 18-20 at the Royal York Hotel in Toronto.

• The Rochester Institute of Technology will host a **conference on printing quality** May 27-29.

• **ANPA/TEC '87** will be June 6-10 at the Las Vegas Convention Center.

Check it out: a way to evaluate printing quality

A checklist for newspaper reproduction quality, "ANPA-CHECK," has been developed by ANPA and the Newspaper Advertising Bureau.

It came about because many newspaper executives expressed a desire to evaluate the quality of their newspapers but didn't know the right questions to ask, said Charles R. Blevins, vice president/production for Gannett Co. and chairman of the ANPA Technical Committee's Quality Evaluation Task Force.

In addition, the notion of what constitutes good printing reproduction can be abstract and vary according to who is doing the evaluating.

"The checklist starts with the basics and gives newspaper executives a point of orientation as far as quality goes," Blevins said, adding that it will enable them to look at print quality the way someone looking at the paper for the first time might.

Readers "may not be able to tell exactly what's wrong, but if the type is crooked or blurry, they know immediately the newspaper doesn't look the way it normally does," he noted.

The checklist was compiled into a 13-page booklet that was mailed to newspaper members of ANPA and NAB in April. It is intended as a companion to the *Guide to Quality Newspaper Production*, published last year.

In a foreword to the new publication, ANPA Chairman and President Alvah H. Chapman Jr. stated: "ANPA-CHECK is not intended to be a quality control 'how to' manual but rather is a guide to help newspaper executives and production people be more aware of areas of the newspaper that might need improvement and of ways to more easily identify trouble spots."

Newspaper executives should use both subjective and objective means to evaluate their publications, according to the publication. For example, it asks whether someone at the newspaper has the ongoing responsibility to assess print quality against established production standards and whether each department has measurable quality and process standards.

ANPA-CHECK has two major components—the Executive Checklist and the Production Checklist.

The Executive Checklist consists of 47 questions, ranging from "Is your newspaper aesthetically pleasing with regard to reproduction quality?" to whether columns of type line up, page margins are equal and spot colors are within borders.

The Production Checklist asks questions pertinent to specific aspects of production. Examples of its 51 questions include: Are photographs printed sharply with no spots or other defects? Are typesetting fonts checked periodically for damaged characters? Are plates handled in such a way to prevent scratches and finger prints? Are press blankets properly packed? Are ink rollers set according to manufacturers' specifications?

Questions have been written so that "yes" is the preferred answer to all. A "no" answer indicates a problem that requires attention.

The booklet suggests that those making evaluations do so while looking at several recent newspaper copies. It is further suggested that each newspaper establish its own standards and then strive to meet them consistently.

The Blevins task force guided ANPA technical research staff members in creating the ANPA-CHECK procedure. The checklist is part of a broader Association and NAB effort to emphasize to newspapers that among other rewards, good, consistent reproduction can benefit the bottom line.

The back of each page of the ANPA-CHECK booklet is blank so that the sheets may be torn out and photocopied. Or additional copies of the publication may be obtained from the Association's Technical Services Department at The Newspaper Center, Reston, Va. Copies are $5 each for one to 10 copies or $3 each for 11 or more.

In addition to ANPA-CHECK, ANPA plans to offer this year two quality-evaluation services for member newspapers [**presstime**, Feb. 1987, p. 59]. □

Equipment exchange

For sale: Harris 1420 terminals, five keyboards and tubes in excellent working order, with cables, $8,975 for all or $1,995 each. Also, Harris double-sided, 1.2 megabyte MicroStor, upgraded model 1251 in perfect condition, $3,495. All may be seen working on our floor. Contact Herman Baumann, Chicago Suburban Times Newspapers, 1000 Executive Way, Des Plaines, Ill. 60018; (312) 824-1111.

Editor's note: Exchange notices are published without charge as a service to ANPA-member newspapers.

Editorial Networks

NewsSet™ has been turning Apple® personal computers into integrated editorial systems since 1979.

Now, the evolution continues as NewsSet takes advantage of the speed and power of Apple's newest computer, the //GS™.

That means NewsSet users can choose the Apple //GS, the ever popular Apple //e™, or both computer types.

There's a new and still more powerful edition of NewsSet software, too. Existing NewsSet users aren't left behind, because the new hardware and software also work with existing Systems.

New software features include the ability to send groups of stories to output at one time, dropped-capital formatting (like the first letter in this text), variable character set-width, optional overwriting of obsolete story versions, flagging of edited files, simplified output device commands and an expanded special character menu (things like ¼ [ ] + & •).

Output devices include the Apple LaserWriter Plus™, other PostScript® language devices and most conventional phototypesetters.

— Standard network storage up to 126mb (more optional)

— Up to 63 Apples per network

— All keys user programmable

— Wire service capture

— Fast and accurate hyphenation and justification

— Automatic character kerning

Equipment, supplies donated to ANPA for technical research and training

The ANPA technical departments received donations last year from many vendors who sell to the newspaper business.

They included two large pieces of equipment:

• TKS (Toyko Kikai Seisakusho) donated an offset press unit and helped convert it to flexographic printing. The unit will be used for flexo research (**presstime**, Oct. 1986, p. 61).

• W.R. Grace & Co. donated a 135A platemaking machine that has been converted to produce plastic plates for flexo printing.

Supplies and raw materials were donated by the following companies:

Newsprint—CIP Inc., Consolidated Bathurst Newsprint Ltd., Great Lakes Forest Products Ltd., Kimberly-Clark Corp., Ontario Paper Co., Spruce Falls Power & Paper Co. Ltd., Stora Forest Industries.

Ink—Graphic Fine Color Inc., Flint Ink Corp., Cal Ink., Huber Ink Corp., United States Printing Ink, General Printing Ink, Reiger Ink Co.

Printing plates and chemicals—Western Lithotech, American Hoechst Corp., 3M Printing Products Division, Anocoil (Plate Division), W.R. Grace, NAPP Systems (USA) Inc., Graphic Arts Technical & Consulting Services.

Film & processing chemicals—Eastman Kodak Co., DuPont Co., Chemco Photoproducts Co.

Fountain solutions—Rycoline/Sun Graphic, Varn Products Co., Saranda Corp.

Blankets—New England Newspaper Supply Co., Imperial Metal & Chemical Co., Reeves Brothers Inc., W.R. Grace Polyfibron Division.

Press chemicals—Anchor LithKemKo, Imperial Metal & Chemical Co., Rycoline/Sun Graphic, Varn Products Co., Robertson-Porter Inc.

Press packing materials—Cromwell Paper Co., Rogers Corp., W.R. Grace.

Roller coverings—New England Newspaper Supply, JoMac Superior Roller Co.

Miscellaneous—Union Carbide Corp. (anilox rollers), Smith RPM Corp. (spray bar dampener).

George Cashau, ANPA director/technical research, said donated equipment and supplies are used in research conducted at The Newspaper Center as well as in ANPA's hands-on technical seminars. He said that offers of donations are appreciated but that acceptance is not automatic.

Companies considering equipment donations should contact William D. Rinehart, ANPA vice president/technical.

Cashau said the "latest and best" equipment is needed for meaningful research. □

TECHNOLOGY NOTES

• Members of the Hastech User Group, known as HUG, are working with Composition Systems Inc. customers to create an **expanded users' group**. Crosfield Electronics Ltd. acquired CSI and Hastech in 1986. CSI has not had a formal users' group, and HUG members believe it will be mutually beneficial to share information. Hastech and CSI users will meet June 11 in Las Vegas following ANPA/TEC '87. For more information, contact Frank Allman of The News-Journal, Daytona Beach, Fla.

• Monotype Inc., a supplier of newspaper typesetting equipment, has **moved its headquarters** from Arlington Heights, Ill., to new facilities in nearby Elk Grove Village that are twice as large.

• AM International Inc. has opened **a new sales and service facility** in Norcross, Ga. north of Atlanta. It houses AM's Harris Graphics, a manufacturer of pressroom and mailroom equipment for newspapers, as well as Multigraphics and Varityper divisions.

• Collier-Jackson Inc., a supplier of circulation, business and advertising software for newspapers, has signed an agreement with Digital Equipment Corp. to become DEC's first **cooperative marketing partner** for newspapers and other media.

Collier-Jackson will offer systems using its software and DEC's VAX minicomputers.

DEC signed a similar agreement with Data Research Associates Inc., which will now offer "turnkey" library systems for VAX computers.

BOOTH #2719

Ink companies may apply for certification

Ink companies are invited to submit inks to ANPA for testing and certification that they meet the specifications of the new *ANPA-Color™ AD-LITHO™/AdPro® Ink Book*.

The book is in the process of being printed, and the new run-of-paper colors contained in it will become the newspaper industry's standards in August, said George Cashau, ANPA director/technical research.

Written requests are required for certification. Upon request, ANPA will send samples of ink for the purpose of matching, a list of approved pigments and the specifications for the new inks.

Ink companies should direct written requests to ANPA's Wilson Cunningham at The Newspaper Center in Reston, Va. for additional information, call Cunningham at (703) 648-1188. □

ANPA/TEC 87

Who: You are invited to attend, with your colleagues in the newspaper and graphics arts industries.

What: ANPA/TEC '87 — ANPA's 59th annual Technical Exposition and Conference.

The Exposition. More than 270 companies will occupy more than 300,000 net square feet of exhibit space to display their latest innovations.

The Conference. General sessions and symposiums will give you a prospectus on the "market," perspectives on the "issues" and perception into the "futures" of the newspaper business. Topics of this year's symposiums include voice recognition and artificial intelligence, ad composition and ad tracking, and electronic cameras.

When: June 6-10, 1987

Where: Las Vegas Convention Center

Why: The ANPA Technical Exposition and Conference —ANPA/TEC — is a unique opportunity for you to see and discuss state-of-the-art newspaper-publishing and graphic-arts technologies and ideas.

More mills to hike prices

Twelve more newsprint firms have followed MacMillan Bloedel Ltd. and Abitibi-Price Inc. in announcing higher newsprint prices.

The increases will take effect July 1.

The Eastern list price is scheduled to go from $570 to $610 per metric ton with some discounting being offered.

The Western list price will increase from $570 to $600, with discounts of 3 percent and 5 percent available in most situations, according to industry sources.

The dozen mills that recently announced price hikes are: Domtar Inc., Great Lakes Forest Products Ltd., Great Northern Paper Co., Kruger Inc., Spruce Falls Power and Paper Co. Ltd., Consolidated-Bathurst Inc., CIP Inc., Bowater Inc., British Columbia Forest Products Ltd., Crown Forest Industries Ltd., Boise Cascade Corp. and Smurfit Newsprint Corp. [**presstime**, April 1987, p. 71]. □

Snowflake contract ratified; other labor talks in progress

Members of the United Paperworkers International Union ratified a three-year contract at Southwest Forest Industries' mill in Snowflake, Ariz.

The agreement provides for no increase in the first year, an $850 lump sum in the second and 3 percent in the third.

The UPIU contract had expired Feb. 28, and workers had struck the mill March 17 [**presstime**, April 1987, p. 71].

On the labor front elsewhere:

- Members of the Association of Western Pulp & Paper Workers have started separate negotiations with Boise Cascade Corp., in bargaining involving four mills, one of which is a newsprint mill located in Steilacoom, Wash. The contract there expires May 31.
- Negotiations started in April between the Canadian Paperworkers Union and Eastern Canadian newsprint producers. □

Reports published on waste, test results

Two annual newsprint reports have been issued by ANPA.

Copies of the "Newsprint Waste Report" for 1986 have been mailed to member newspapers. It examines newsprint waste for letterpress, offset and DI-LITHO™newspapers. A newspaper can use the report to compare its percentage of waste to categories of newspapers consuming comparable amounts of newsprint.

For example, the report shows that the waste factor for offset-printed newspapers consuming 20,000 or more tons annually averaged 4.89 percent in 1986. The same waste factor in 1985 was 5.17 percent.

The second publication, "Newsprint Properties Analyzed/Test Results for 1986," reports on the results of tests of newsprint sent by newspapers to ANPA for analysis.

The report will be mailed early in May to member newspapers, and additional copies are available on request from ANPA. Contact Doris E. Kleintop, technical supervisor/newsprint quality, at The Newspaper Center in Reston, Va. □

Can You Measure The Quality Of Your Newsprint?

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

The Technibrite™ MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate Technibrite MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration.

SYMMETRY

PRINTING ELEGANCE

SYMMETRY SC PAPER PROVIDES A HIGH-QUALITY REPRODUCTIVE PRINTING SURFACE FOR MAGAZINES AND CATALOGS.

A rose, nature's symbol of beauty and elegance. Its soft texture, gentle folds and subtle shades of color all blend to project an image of living brilliance. To capture this essence in printed form, one must use only those ingredients that are critically sensitive and faithful to high-quality reproduction.

Symmetry® Supercalendered paper is one such faithful ingredient. Its glare-free readability, opacity, brightness and satin-like finish reproduces color with beautiful brilliance. It's the ideal printing surface for catalogs, inserts, newspaper distributed Sunday magazines and weekly and monthly publications.

Symmetry SC paper is widely used for both gravure and offset printing by leading publishers and catalog producers. The New York Times Magazine, a prestigious Symmetry paper user for five years believes that Symmetry paper has greatly contributed to its success. Last year, The New York Times Magazine carried more color ad pages than any other U.S. magazine.

Symmetry SC paper, a unique, non-glare, high-quality reproductive paper that offers 15-20% savings; truly a sophisticated choice.

For more information, contact Madison Sales Company, 695 East Main Street, P.O. Box 10328, Stamford, Connecticut 06904-2328 (203) 359-8927.

PAPER INDUSTRIES

U.S. dailies lead consumption climb

Newsprint consumption by all U.S. users was 3-percent higher in March than in the same month a year earlier, and consumption by U.S. daily newspapers was up 3.7 percent.

For the first quarter of 1987, consumption increased 1.6 percent for all U.S. users and 2.6 percent for U.S. dailies.

At the end of March, stocks of newspapers in ANPA's statistical sample totaled 41 days—five days fewer than a year earlier. North American mill stocks also were down—from 471,652 tons in March 1985 to 386,969 tons.

The Canadian operating rate was 100 percent for March, the highest since April 1980. The U.S. operating rate was 93.4 percent. The first quarter operating rates for Canada and the United States were 99 percent and 95.3 percent, respectively.

March shipments from Canadian mills increased 12.3 percent compared with March 1986, while U.S. shipments increased 1.7 percent. First quarter shipments for North American mills wee up 7.2 percent.

ANNOUNCING:

The DAWN™ of a new era in display ad creation.

Are you still living in the Dark Ages of display ad production—cutting and pasting type, logos and graphics into place by hand? Shed a new light on display ad creation with DAWN, an affordable, electronic production system that enables you to design and produce display ads with remarkable speed and ease. The combination of industry-standard hardware and innovative software makes DAWN a powerful, yet intuitive production tool. But most significantly, save time and money, as many of the steps normally required in the design and production of display ads are eliminated.

With DAWN, design your display ads right on the screen, and output them to either a plain-paper laser printer or high-resolution typesetter. The system offers many advanced composition features, such as true type display and a WYSIWYG editor; extensive draw capabilities, including circles, boxes, elliptical shapes, drop shadows, and fill patterns; the ability to pour text into shapes; and much more. And with our 19″ high-resolution monitor, view full pages on the screen, and display 6-72 point type at actual size.

What's more, the extensive Compugraphic library of type, logos, and symbols is available, so that your DAWN output has exactly the look you want.

The DAWN system—tomorrow's technology today from Compugraphic. Call **(617)-658-5600** today to see the dawn of a new age.

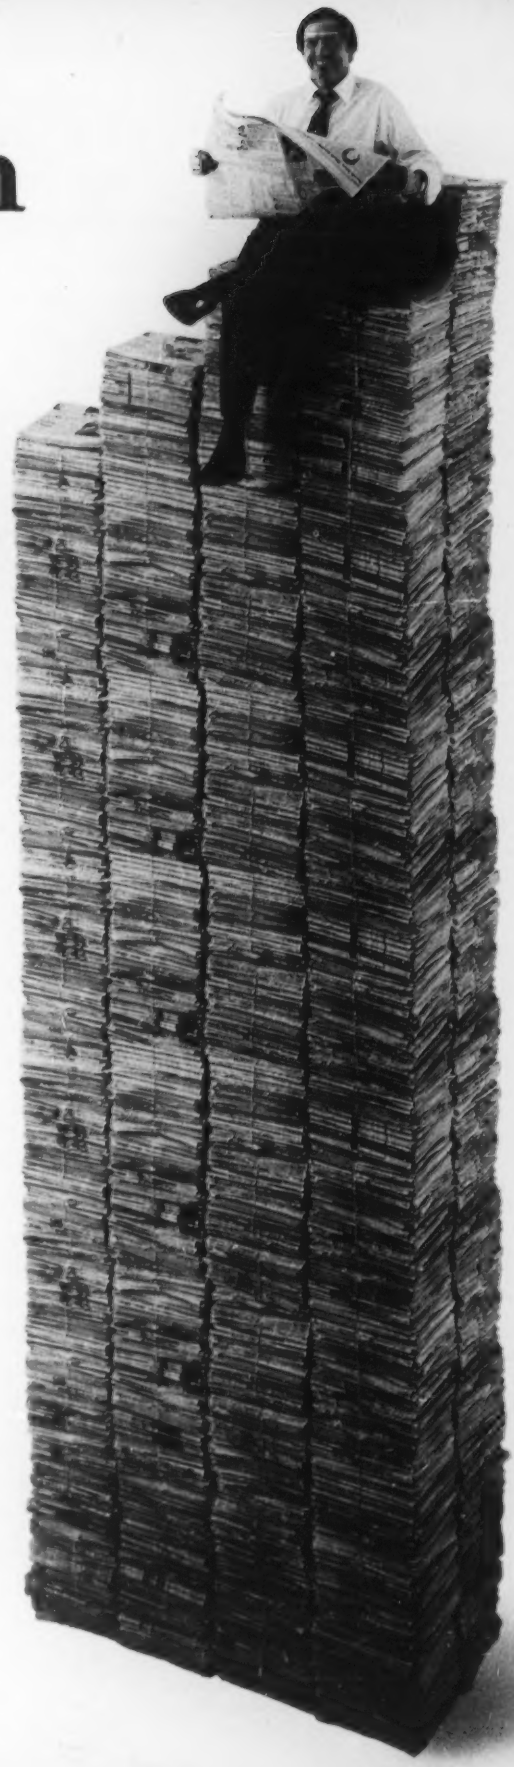
Implementing a Minority Purchasing Plan
E. Ramsey Altman Jr., purchasing director, Atlanta Journal and Constitution

Managing Travel and Entertainment Expenses
Richard Miller, purchasing director, Union-Tribune Publishing Co., San Diego

Some of our customers run our 200,000-impression additive plate 400,000 times.



Our salespeople begged us to rate our new Conquest 200 plate for 400,000 impressions instead of the mere 200,000 we decided upon.

"Who will notice the difference?" they asked.

"We will," we replied. "It's true that after 200,000 impressions the image is still pretty darn sharp—but not the *razor* sharp image it started out with."

We're fanatics about accuracy and quality control.

That's why our plate ratings are minimums—not somebody's best guess as to what an average run *might* be.

That's why our standards for dimensional tolerance are, among the highest in the industry.

That's why when it comes to cracking, scratching, toning, or oxidation, our plates are virtually problem free.

That's why—to get the most out of our plates—we developed our own line of specially formulated chemicals.

And that's why printers who don't like surprises, order their plates from us.

So when we rate our top of the line Conquest 200 plate at 200,000 impressions, that's exactly what you'll get.

After that, you're on your own.

Like to know more about our complete line of additive plates and chemistry? Call us toll free or stop by and see us at ANPA Booth No. 1448.

A year of ups and downs

North American newspapers had a mixed economic performance in 1986.

Advertising expenditures in U.S. daily newspapers increased to nearly $27 billion, a gain of 7.2 percent from 1985's $25.2 billion. But that rate of growth was less than the 8.3-percent rise recorded a year earlier.

Dailies continued to lead all media in U.S. ad expenditures. However, their share of the overall advertising pie declined slightly—from 26.6 percent of the total in 1985 to 26.4 percent in 1986, according to preliminary figures. Television remained in the second spot, more than $4.6 billion behind newspapers, and its share of the total—21.9 percent—was unchanged from '85. Topping the $17-billion mark, direct mail increased its share from 16.4 to 16.8 percent and was the third largest ad medium.

In circulation, U.S. dailies had a slight decrease for the second straight year. From a revised 1985 total of 62,766,232, circulation dropped by just over 275,000 copies (less than one-half of 1 percent) to 62,489,360—which was about the same total as in 1982.

Meanwhile, Sunday circulation soared to a record 61,515,214, up from a revised 58,825,978. That increase of nearly 2.7 million copies per Sunday represented a 4.6-percent rise.

These statistics and many others are included in ANPA's "Facts About Newspapers '87." The annual statistical report [presstime, May 1986, p. 89] is being mailed to ANPA members and other presstime subscribers.

Among other data in the report:

- There were 1,657 U.S. daily newspapers in 1986, 19 fewer than a year earlier. Evening papers still outnumbered their a.m. counterparts by more than 2 to 1, but their ranks declined to 1,187, while the number of a.m. papers increased to 500. (There were 30 "all-day" papers that were counted in both the a.m. and p.m. categories but only once in the overall total.)
- The number of U.S. Sunday papers increased by 11 to a record 809.
- Newsprint consumption by U.S. dailies climbed to a record 8.9 million metric tons—74.3 percent of all the newsprint used in the United States.
- Employment at U.S. newspapers increased for the fourth consecutive year to a new high of 461,000. U.S. Department of Labor statistics show increases of 9,500 employees in 1986, 11,500 in 1985 and 13,100 in 1984.
- The number of U.S. weekly newspapers, paid and free circulation, decreased by 111 to 7,600.

Canadian daily newspapers numbered 110 in 1986, one less than in 1985. But total circulation increased to 5,681,850, up by 61,039 copies from 5,620,811 the previous year.

Their advertising revenue increased from $1.4 billion in '85 to $1.5 billion. Canadian newspapers' share of advertising expenditures was unchanged at 22.7 percent, but television dropped from 16.8 to 16.6 percent. □

10 more p.m. papers have been lost through conversions, mergers this year

Three more U.S. daily newspapers have converted from p.m. to a.m. publication. They are:

- The Daily Freeman of Kingston, N.Y.
- Santa Barbara (Calif.) News-Press
- The Tacoma (Wash.) News Tribune.

That brings to five the number that have made the switch thus far this year [presstime, Jan. 1987, p. 69], and to at least 113 that have done so since October 1976.

Additionally, The Journal Times of Racine, Wis., has announced plans to convert from an afternoon to a morning paper on June 22.

Also so far this year, five dailies have discontinued their evening editions or merged with their morning sister papers:

- Dropping their evening editions were the Austin (Texas) American-Statesman, the Colorado Springs Gazette Telegraph and the Abilene (Texas) Reporter-News.
- Merging were the Anderson (Ind.) Daily Bulletin, an evening paper, with The Anderson Herald, an a.m., into the a.m. Anderson Herald-Bulletin; and the afternoon Observer-Dispatch of Utica, N.Y., with the morning Daily Press into the a.m. Observer-Dispatch.

It has also been announced that on June 1, the p.m. Corpus Christi (Texas) Times will be consolidated with the a.m. Corpus Christi Caller. The combined paper, the Corpus Christi Caller-Times, will be published in the morning. □

THE GROWING POWER
OF THE RZ LASER
SCANNING SYSTEM:

The only scanning system with on-line interactive previewing now packs the power of electronic dot generation.

INTRODUCING THE ROYAL ZENITH 210 L LASER SCANNING SYSTEM.

The RZ-210 L puts you way ahead in high-quality color, today and tomorrow. Controls are few and easy to master. On-line electronic previewing allows instant correction, with "fine tuning" and approval before you run film. With the 210 L System, you have the widest range (to correct transparencies), the highest color quality, and you're on your way to fully-electronic page make-up! (What's more, we've made it easy for present 200 S users to migrate upward to the powerful 210 L System.)

No wonder more newspapers use Royal Zenith color scanners than all other scanners combined!

Call Martin Sussman at **(201) 641-7200,** for information and a demonstration of the RZ-210 L System.

15 percent of classified-ad employees are minorities, new study shows

An initial survey of minority employment by the Association of Newspaper Classified Advertising Managers found that about 15 percent of all employees in classified are racial minorities.

The report noted that this is "roughly equivalent" to the non-white population in the United States.

It is also more than twice the minority percentage of the newsroom workforce—6.56 percent, according to just-released findings of the American Society of Newspaper Editors. (See story, p. 71).

However, ANCAM found that "racial minorities are very poorly represented in upper management" of classified advertising departments despite an "encouraging" record in 1986 when 19 percent of those promoted were non-white.

The survey was based on responses from 304 papers in the United States and Canada—about half of ANCAM's membership.

In other minority-related news:

• An eight-member advisory committee of journalists and journalism educators has recommended that the Navajo Times Today, Window Rock, Ariz., resume publication once or twice weekly with an initial grant or loan of $400,000 to $500,000 from the Navajo Nation.

The committee's review stems from the sudden closure of the paper [presstime, April 1987, p.74]. Tribal officials said it had been operating at losses averaging $700,000 a year.

• There will be a workshop June 7-Aug. 15 at the University of South Carolina to train minorities for immediate editorial positions.

Faculty for the Southeastern Minority Newspaper Workshop will include professionals from newspapers in North Carolina, South Carolina, Georgia and Florida.

The newspapers will pay a participation fee, according to circulation size, to meet the program's estimated $80,000 cost. This will cover tuition, room and board, and a modest stipend for 10 to 20 workshop attendees, who must be college graduates or have "equivalent life experience" and must be residents, students or employees in one of the four states.

• Employers seeking Asian American or Hispanic journalists have two new resources. One is a 24-hour hotline for job seekers; editors interested in listing positions on it may contact the Asian American Journalists Association at 3921 Wilshire Blvd., Suite 315, Los Angeles, Calif. 90010; (213) 389-8383. The second is a newly published national directory of more than 3,000 Hispanic media professionals, available for $50 from the National Association of Hispanic Journalists, National Press Building, Suite 634, Washington, D.C. 20045; (202) 783-6228. □

Purchasing managers add responsibilities, push for buying from minority vendors

Ten or 15 years ago, newspaper purchasing managers were regarded primarily as paper-pushers.

"There was a time when purchasing managers did little more than buy forms, pens and paper supplies," said James O. Dunning, purchasing director for the San Francisco Newspaper Agency and secretary of the Newspaper Purchasing Management Association.

Now their concerns have expanded to subjects as diverse as software, telephone systems and hazardous-waste disposal. Often, the purchasing manager is responsible for newsprint buys—the most expensive commodity in many newspapers' budgets and traditionally the province of the publisher.

At NPMA's 30th annual conference April 13-15 in Baltimore, members made clear they want recognition that is commensurate with their increasing responsibilities in newspaper operations.

About half of the association's 150 members attended the meeting, whose "Sharing the Wealth" theme signified NPMA's purpose of improving the purchasing practices and profitability of the newspaper industry through sharing of ideas.

Guest speaker Reg Murphy, publisher of The Baltimore Sun, told the group, "What we (as publishers) want to do is to bring you into the planning process." At the same time, he advised purchasing managers to assume the initiative and take their cost-cutting ideas to publishers and general managers.

"I think you are going to have to knock on the door," Murphy said. "And I think if you knock on the door with enough ideas that turn out to be good ones, you will dramatically change the way people think."

The Baltimore publisher also said purchasing managers can show particular leadership through programs to increase business with minority vendors.

On that score, Ramsey Altman, purchasing director of the Atlanta Journal and Constitution, described the steady gains those newspapers have made. They bought no goods and services from minority vendors in 1980; by 1985, their business with minority vendors exceeded $1 million, he said.

Despite that degree of success, Altman told the conference that an effective minority purchasing plan is difficult to implement. Minority vendors are particularly scarce for big-ticket items, he said, such as ink or offset printing plates.

He also noted, "You are trying to put out a daily newspaper, and sometimes it's difficult to keep the minority purchasing objective at the forefront of your mind."

—Mary A. Anderson

F.Y.I.

Newspaper people are beaming about satellite transmission of advertisements

BY CRAIG C. STANDEN

One of the first priorities announced by the Future of Advertising project was the support of AD/SAT, a company formed to deliver advertising materials from advertisers and agencies to newspapers via satellite.

Last April at the ANPA Convention, Joe D. Smith Jr., chairman of the FOA Standardization Task Force, asked the newspaper business to make a commitment to the future of our business by signing up with AD/SAT.

In the 10 months since then, a good deal has happened:

- **In November, AD/SAT completed a successful two-month test** of its facilities and equipment [**presstime**, Jan. 1987, p. 52]. Four major New York ad agencies—N W Ayer, Ogilvy & Mather, J. Walter Thompson, and Young and Rubicam—took part, along with newspapers from Boston, Chicago, Houston, Los Angeles, New York, Newark, Philadelphia, San Francisco and Washington, D.C.

Reproduction quality of the transmitted material was excellent. It's impossible to tell the difference between impressions printed from original material and those printed from material transmitted via AD/SAT. The few "bugs" in the system were quickly corrected.

- **On Jan. 5, AD/SAT began commercial operation** from its transmission center in New York City. In the first two months, 11 additional agencies—including such giants as DDB/Needham, Grey, BBDO, and Bozell, Jacobs, Kenyon & Eckhard—have used the system to transmit national advertising to one or more of the 12 original AD/SAT newspapers.

- **Several retailers have expressed a great deal of interest** in the potential of AD/SAT for distribution of their advertising materials. One retailer, Lord & Taylor, which has stores in six of the 10 cities already served by AD/SAT, has been sending as many as 50 ads per week via the system.

- **On March 9, AD/SAT announced the signing of the 100th newspaper** to join its network. Because the facsimile equipment for the newspapers must be manufactured, there is a six-month lead time between the signing of the contract and the installation of the receiving equipment. Thus the number of newspapers actually able to receive ads via AD/SAT won't increase until July. But sometime in September or October, AD/SAT should have in its network 100 newspapers with combined circulation of 25.2 million daily and 31.4 million Sunday. And we have every reason to believe that these numbers will continue to grow.

Craig C. Standen

Looking toward that time and beyond, AD/SAT in March began a major promotional and advertising campaign directed at ad agencies. The campaign includes large-space ads in the advertising trade press and a six-and-a-half-minute videotape cassette briefly explaining how the system works and containing testimonials from print production people at the test agencies as to the quality and speed of transmissions.

What about the future of AD/SAT?

I believe it is an important step forward in our long-range effort to increase newspapers' share of the advertising market.

It will save our advertisers a lot of time and money. Instead of having to produce multiple copies of newspaper ad slicks or Veloxes, an agency or retailer can produce one copy of the ad. Instead of wrapping, labeling and shipping each copy of the ad, the agency merely delivers that one copy to AD/SAT. Instead of a day or two in transit (and the possibility of some of the packages getting lost or being delivered late), the ad can be transmitted by AD/SAT simultaneously to every newspaper in the network in three and a half minutes. Receipt of an ad is confirmed instantly by AD/SAT's electronic message system.

Cost to the advertiser for this fast, high-quality transmission is only $15 per newspaper for each ad transmitted, versus more than $70 each the older, slower way—a saving of nearly 80 percent.

What do newspapers get out of AD/SAT?

Eventually, they should get a lot more advertising—not just national advertising, but retail and classified advertising as well. As we have noted before in this space, there is a steady, long-range trend toward the centralization of advertising among retailers and among classified advertisers in the categories of recruitment and real estate. These advertisers are becoming more like national advertisers in many ways: They increasingly use ad agencies to prepare their ads, they tend to have all their advertising prepared in the same place, and they are quick to take advantage of new ideas and new technology that save them time and money.

But there is a much more immediate benefit for newspapers. In the course of a year, many newspapers lose thousands of dollars in advertising because of the aforementioned transmission problems, or because the lead time in getting an ad into print is too long. Some of this advertising is run at a later date, but much of it is revenue lost forever.

AD/SAT will get most of this lost advertising into the newspaper. I suspect for quite a few newspapers, the revenues saved by AD/SAT will more than pay for its cost.

The Newspaper Advertising Bureau has no financial or other interest in the ownership or management of AD/SAT. But the NAB Board of Directors and the Future of Advertising Steering Committee regard AD/SAT as an important step forward for our business. □

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

Thomson adds Charleston Daily Mail to its fold

Thomson Newspapers Inc. has agreed to purchase the Charleston (W.Va.) Daily Mail and three other newspapers for an undisclosed sum from the closely held Clay Communications Investors.

The newspapers have a combined circulation of 118,000 and would bring to 102 the number of U.S. daily newspapers owned by Thomson, headed by Canadian Kenneth R. Thomson.

Thomson owns more U.S. dailies than any other newspaper group, although their combined circulations of 1,582,485 as of Sept. 30, 1986, ranked the group only 10th among U.S. newspaper companies.

The Daily Mail, a plum that was sought in final bidding by six newspaper groups, will mark Thomson's first acquisition in a state capital, and with 53,250 daily circulation, it will be the third largest of Thomson's U.S. newspapers (behind the San Gabriel [Calif.] Tribune, with 60,816, and the Canton [Ohio] Repository, 58,451).

Lyell B. Clay, publisher of the Daily Mail and executive partner of Clay Communications Investors, will retire once the sale is completed. John F. McGee, managing partner and chief operating officer of Clay Communications, will become publisher and continue as president of Charleston Newspapers, the partnership that oversees the joint operating arrangement between the Daily Mail and the Charleston Gazette.

The deal between Thomson and Clay also includes The Register-Herald in Beckley, W.Va., The Shelby (N.C.) Star and The Enquirer-Journal in Monroe, N.C.

On the same day the sale was announced, Clay executives also announced formation of a private foundation by the Clay family that will have assets of about $25 million.

The endowment, which will receive some of the proceeds from the sale, will make The Clay Foundation Inc. one of the largest private foundations in West Virginia and one of the largest in the nation to arise from a newspaper fortune [**presstime**, April 1987, p. 6].

BUSINESS ROUND-UP

In other business developments:

- The estate of John Cowles Sr. is disputing a $3.7-million tax bill from the Internal Revenue Service, saying the government should instead pay the estate a refund of more than $600,000. At issue is an $8-million difference in the values placed by the estate and the IRS on Cowles Media Co. stock at the time of Cowles' death in 1983. The federal Tax Court is being asked to overturn the IRS claims.
- McClatchy Newspapers has put its four radio stations up for sale. The stations, in Sacramento and Fresno, Calif., are the only remaining broadcast properties owned by McClatchy, which sold several television stations between 1981 and 1986. It also sold its cable holdings last year [**presstime**, Jan. 1987, p. 22].
- The Times Mirror Co. sold about 26,000 acres of timberland in Washington and Oregon to Longview Fibre Co. of Longview, Wash., for an undisclosed price. □

WJR is donated to U. of Maryland

Owners of WJR, the Washington Journalism Review, have agreed to donate it to the College of Journalism at the University of Maryland.

The donation will allow the 10-year-old magazine to be operated from a $3.3-million permanent endowment.

The magazine has been operated at a deficit for seven years by Jessica Catto and Henry Catto, who will continue as contributing editors. They bought it in 1979 through H&C Communications Inc. of Houston, owner of several media properties for the Hobby and Catto families. □

Correction

The cutline for a photograph that ran in the April issue of **presstime** (p. 6) should have read "... funded by the Chicago Tribune Charities," not "Chicago Tribune Foundation and Charities." Chicago Tribune Charities, a separate entity from the Foundation, is entitled to raise and disburse funds for philanthropic and charitable purposes. The Foundation, on the other hand, supports such causes directly from corporate profits or an endowment of stock. **Presstime** regrets the error. □

We Deliver . . .

"You do this every day, Lee, but when one sells a newspaper for the first and only time, you have to rely on the integrity of your man. You didn't disappoint us. When you call on a pro, you expect a professional job — and we got it." — Timothy B. Werner, Sheboygan (WI) Press, 30,000 daily, December 1986

"Disposing of a 50% interest in a newspaper company is not an easy assignment. In selecting you to handle this, we were confident that with your brokering experience and contacts in the newspaper community, you would find a buyer at a fair price. You accomplished the sale in a sensitive and professional way." — A. J. Kohler, Co-Executor, C. K. Wesley Estate, Monroe (MI) Evening News, 26,700 daily, August 1986

"We hesitated for weeks on whether to retain a broker. Now, with the sale completed, I can say that we definitely made the right decision. We sincerely appreciate the professional way in which you handled the offering and sale, from the thorough preparation of a presentation right up to the closing." — Daniel A. Dwelle, Athens (TX) Daily Review, 7,300 daily, July 1986.

"We set the price, and Lee Dirks found the buyer. Your background as a media analyst gives you a full understanding of markets and newspaper properties, as well as a personal acquaintanceship with virtually all key media people. If we were starting over, we would again use Lee Dirks & Associates." — Allen D. Strunk, Harry Allen Strunk, and Grant J. Strunk, McCook (NE) Gazette, 10,300 daily, December 1986

SILENCE IS NOT ALWAYS GOLDEN

Freedom of the Press—
A Precious Right

They printed 23,000 issues of the Polka City Rustic Republican and 250,000 copies of the Mink Madness Sale Catalogue, all on the same day, all on the same press.

You can get that kind of speed and versatility with a Solna Distributor 30 web offset press.

The exclusive 2 + 1 printing unit lets you print two colors on top of the web, one color on the bottom. Three pairs of cylinders give you three different web threading options. Combine 2 + 1 units with standard 1 + 1 perfecting units and the possibilities are endless.

Add the F36 folder and you can run up to eight webs on one former. For newspapers only, add the high performance F40 folder and run up

All this, and no bearers. The Distributor doesn't need them, doesn't have them. The unique cylinder arrangement lets you quickly adjust blanket-to-blanket pressure with a simple handwheel—even while the press is running. You change stock thicknesses in a flash. You finish a long run without time-consuming readjustments.

From the bearer-free design to the one-man paper loader to the one-panel start-up system, every aspect of the Distributor 30 is geared to rapid changeover, quick make-ready, and high-speed printing—up to 30,000 iph. It's not surprising that there are over 4,000 units in use worldwide.

If you're in the market for a proven press that combines speed and versatility, write to us at the address below. For fast action, call toll free.

IT WOULD HAVE BEEN AN HONOR TO WIN JUST ONE.

KR
KNIGHT-RIDDER

We are extremely proud to be able to make this announcement again this year. We are deeply honored to have won five Pulitzer Prizes in 1987. We salute this year's winners as well as the four other Knight-Ridder finalists. And the exceptional work being done in all of our newspapers every day. This continuing commitment to excellence has brought the total of Pulitzers awarded to Knight-Ridder's newspapers and journalists to 44, sixteen in the past three years.

President Reagan to speak at this month's Convention

President Reagan will address the opening ceremonies of ANPA's 100th Anniversary Convention May 3-6 in New York City.

It will mark the third straight ANPA Convention in New York City to be addressed by the President of the United States. Reagan also spoke at the 1983 Convention, and President Jimmy Carter—who also will be part of this year's program—addressed the 1979 Convention.

President Ronald Reagan

The President's acceptance has prompted a change in the location and time of the ceremonies on Sunday, May 3.

For security reasons, the location has been moved from Castle Clinton, at the tip of Battery Park, to Ellis Island—the historic site where millions of immigrants once were processed upon arrival in the United States.

Starting at 1 p.m., buses will take Convention-goers from The Waldorf-Astoria, the Convention hotel, to Gangway No. 1 at Battery Park where they will board ferry boats for the 15-minute trip to the island. Tickets mailed to Convention-goers in late April must be presented to board the ferries.

The last ferry for Ellis Island will leave the dock at Battery Park at 3:40 p.m.

The reception sponsored by Knight-Ridder Inc., previously scheduled for Castle Clinton, will begin at 2:30 p.m. on Ellis Island.

The opening ceremonies will begin at 4 o'clock, rather than 5:30 p.m. as previously scheduled.

Also speaking at the event will be the Rev. Billy Graham, a late addition to the program.

Because of the change in the opening ceremonies, the ANPA Expert Centers will operate on an earlier-than-previously-announced schedule. They will be open between 9 a.m. and 12:30 p.m. on Sunday at the Waldorf's Hilton Room. In other late developments regarding the Convention program [**presstime**, April 1987, p. 78]:

• The Associated Press announced that its annual meeting May 4 will include a panel discussion on the Iran-Contra arms controversy. Called "Aftermath: Conversation on the Tower Commission," the discussion will be moderated by Louis D. Boccardi, AP president and general manager. Panelists will be former U.S. Secretary of State Edmund S. Muskie, a member of the Tower Commission, named by President Reagan to investigate the Iranian arms deals; Larry Speakes, former White House spokesman, now senior vice president of Merrill, Lynch, Pierce, Fenner & Smith Inc.; W. Clark McFadden, counsel to the Tower Commission; and James David Barber, Duke University political scientist.

• Participants in the Tuesday afternoon General Session on the "Future of Retailing" have been announced. Moderator will be James Hoge, president and publisher of the Daily News of New York. Panelists will be Gordon R. Cooke, executive vice president, sales promotion of Bloomingdale's, New York City; Lee M. Dubow, senior vice president, corporate sales, of Belk Stores Services, Charlotte, N.C.; Melvin Jacobs, chairman and chief executive officer of Saks Fifth Avenue, New York City; Walter F. Loeb, senior retail analyst/principal, Morgan, Stanley & Co., New York City; and Stephen L. Pistner, chairman and CEO of McCrory Corp., New York City.

• Theodore J. Gordon, chairman of The Futures Group of Glastonbury, Conn., will give the main address during the Tuesday panel discussion on "The Next 100 Years."

• Additional participants in the Wednesday seminar on "The Constitution: Separation of Powers 1987" were named: Lloyd N. Cutler, former presidential counsel and currently with the law firm of Wilmer, Cutler & Pickering, Washington, D.C.; U.S. Rep. Barney Frank (D-Mass.); Jeane J. Kirkpatrick, former U.S. representative to the United Nations, now senior fellow at the American Enterprise Institute; Gary G. Sick, former member of the National Security Council staff, now program officer at the Ford Foundation; Leon Silverman, former special prosecutor, now with the law firm of Fried, Frank, Harris, Schriver & Jacobson, New York City; William French Smith, former U.S. attorney general, now with the law firm of Gibson, Dunn & Crutcher, Los Angeles; Helen Thomas, United Press International White House correspondent; and Barbara Walters, ABC News correspondent. The seminar is funded by The Hearst Corp. □

The importance of circulation

Circulation sales account for approximately one-fourth of newspapers' revenues, producing more than $12 million a day in the United States alone.

Circulation is "an essential part of the newspaper's business structure," say William J. Thorn and Mary Pat Pfeil, associate professor and instructor, respectively, at the College of Journalism of Marquette University.

In *Newspaper Circulation: Marketing the News*, they describe ways circulation complements other elements of newspapering—readership and promotion, for example—and they explain fundamentals of circulation.

The 336-page, hard-cover book is available for $34.95 from Longman Inc., 95 Church St., White Plains, N.Y. 10601.

Practical advice on newspaper color

Color in American Newspapers was prepared especially for newspaper executives who are contemplating introducing color into their publications or who want to enhance color already being used.

Practical advice and observations by color practitioners, design tips, profiles of three newspapers that use color, research findings and an annotated bibliography were edited by Mario R. Garcia and Don Fry, associate directors of The Poynter Institute for Media Studies in St. Petersburg.

The 72-page, soft-cover book is available for $7.95 from The Poynter Institute, 801 Third St. South, St. Petersburg, Fla. 33701.

A career guide on newspapers

Professionals offer advice to those who are considering a newspaper career in *Newspapers*, one of a series of career directories edited by Ronald W. Fry, president of The Career Press.

From production to promotion, each area of the newspaper business is discussed from the perspective of people who have specialized in it and who explain how prospective newspaper careerists might attain such positions.

The 244-page book is available in hard cover for $34.95 or in soft cover for $26.95, plus $2.50 for shipping, from The Career Press, P.O. Box 34, Hawthorne, N.J. 07507. □

UCARLOX™

Laser Engraved Ceramic Anilox Rolls

The rolls that are turning the industry around.

When your anilox roll starts to go, so does your quality. Well, now there's a roll that outlasts all the others. UCARLOX™ laser engraved ceramic anilox rolls from Union Carbide.

UCARLOX rolls last for years. Not months. They're coated with chromium oxide. It's extremely hard—over 1150 Vickers—and outwears hard chrome plate many times over.

Once coated, a computer-controlled laser engraves the coating with precise screens and uniform cells. The result?

Increased ink metering control to help meet the most demanding printing requirements.

Put out quality printing. Put in UCARLOX rolls. The anilox rolls that are virtually indestructible. With engraving so precise, it's unmatchable.

For more information about the rolls that are turning the industry around, just fill out the coupon. Or call George Pappaioanou (317) 299-1941.

Subtract the wear. Add up the benefits.

UCARLOX rolls help maintain printing quality longer. And that saves you money.

- Increased damage resistance.
- Improved wear resistance.
- Better corrosion resistance.
- Increased operating life.
- Reduced downtime.
- Better ink release.

UNION CARBIDE COATINGS SERVICE

Our reputation's on a roll.

A Giant recruits and leads his flock of young deliverers of New Jersey newspaper

As many newspapers have found, it's getting tougher to recruit youth carriers [**press-time**, Feb. 1987, p. 20]. But a New Jersey daily has come up with a winning idea.

Soon after the New York Giants (who play their home games in New Jersey) captured the 1987 Super Bowl, The Record of Hackensack hired tight end Zeke Mowatt (in photo above) to enlist and train youngsters. In the first two months, the Giants player recruited 1,267 prospective carriers, says Frank J. Savino, The Record's vice president/marketing.

"Youngsters react positively to him," Savino says. "With stats like these, we are delighted to have him on The Record team."

In his dealings with the young carrier force, Mowatt also delivers messages on sportsmanship, citizenship, and the dangers of using drugs and alcohol.

Nearly all The Record's carriers are youths.

'Good morning' leads to bad days

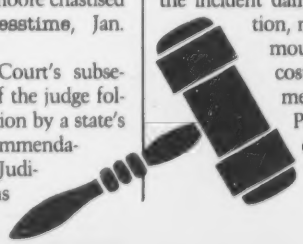
The Florida Supreme Court has reprimanded Circuit Judge E.L. Eastmoore for his reprimand of a newspaper reporter who failed to return the judge's hallway greeting.

On Sept. 4, Eastmoore had a bailiff take Butch Prevatt, a reporter for the Palatka Daily News, to his chambers. Eastmoore chastised Prevatt there [**presstime**, Jan. 1987, p. 72].

The Supreme Court's subsequent reprimand of the judge followed an investigation by a state's attorney and a recommendation by the Florida Judicial Qualifications Commission in support of a reprimand.

The Florida high court said Eastmoore's conduct was "reminiscent of the playground bully."

Prevatt, meanwhile, has filed suit against the judge. Having been transferred from his courthouse beat, the reporter is alleging that the incident damaged his reputation, motivated anonymous threats and cost him government sources in Putnam County, of which Palatka is the county seat.



Newspaper numbers

2.7 billion—approximate number of dollars U.S. newspapers received for carrying preprints in 1986, according to a Knight-Ridder Inc. survey.

80—average percentage of newspapers' total costs from libel lawsuits that go to pay defense lawyers.

66—number of U.S. daily newspapers that carry regular science sections; 19 did so two years ago.

20—number of the 349 composing room labor agreements on file at ANPA that refer to pagination jurisdiction.

Lapel button use seems to be contagious

"Censorship is Contagious."

Those words from Floyd Abrams, a noted First Amendment attorney, helped persuade the American Bar Association to refrain from endorsing a legislative ban on tobacco advertising.

Now Abrams' admonition has made it onto a lapel button.

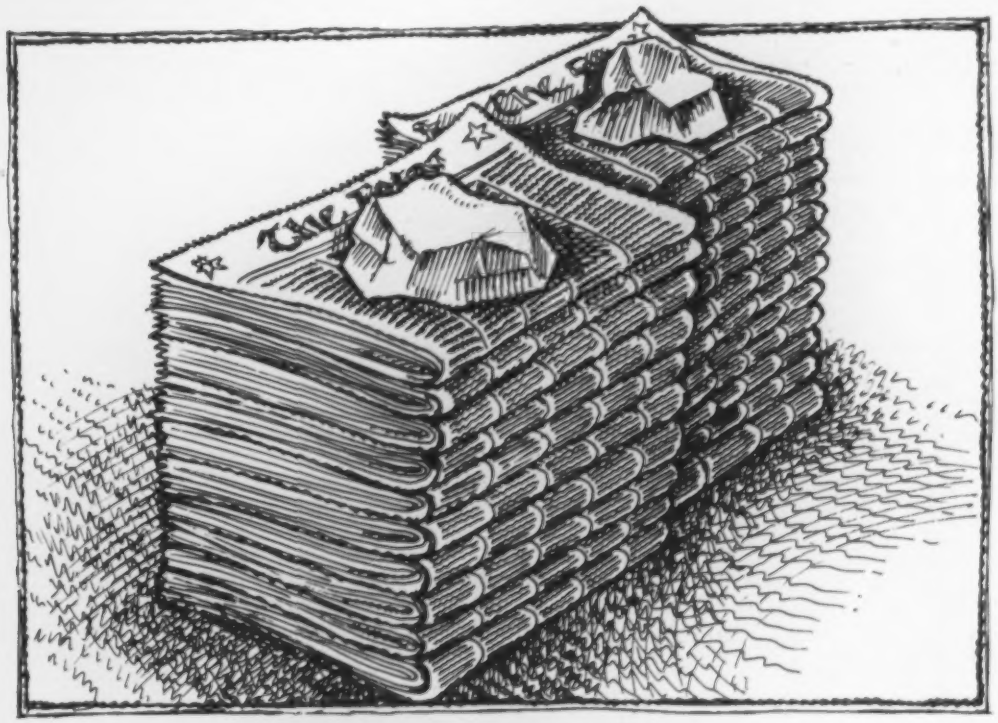
The brainchild of ANPA Assistant General Counsel Tonda F. Rush, the buttons have been showing up in some pretty high places.

When he heard about them, U.S. Rep. Thomas A. Luken (D-Ohio) requested 100. Luken is chairman of a subcommittee that held hearings in April on tobacco advertising.

Michael G. Gartner, immediate past president of the American Society of Newspaper Editors, was sporting one when he addressed the recent ASNE Convention in San Francisco.

A bonus is that the button doesn't just apply to tobacco advertising. "Those words convey a message that goes well beyond the question of tobacco advertising and, indeed, embraces a large amount of the work we do," said W. Terry Maguire, ANPA vice president/general counsel.

To obtain a button, contact the ANPA Legal Department at The Newspaper Center.



Mutual protects you against paper waits.

A lot of papers can pile up during a newspaper strike, and that means a lot of lost revenue. Even when a paper is able to continue printing and distributing, extra expenses such as additional security and advertiser boycotts can be burdensome.

That's why strike insurance from the Mutual Insurance Company of Hamilton, Bermuda, is so important. Strike insurance from Mutual minimizes the financial damage caused by strikes, and provides newspapers with the economic backing needed to endure a strike while a settlement is being negotiated.

A Mutual strike insurance policy covers net profits, fixed charges, and ordinary business expenses in the event of a full or partial strike. Mutual also provides for extra security to protect both personnel and physical plant. As unionization and resistance to automation increase, the protection that Mutual's strike insurance provides is now more valuable than ever.

Mutual offers strike insurance only once a year, with coverage effective from July 1st through June 30th, so contact Mutual immediately to qualify.

Another Flint Ink FIRST

This spring, Flint Ink delivered a tanker of Arrowflex black water-based flexographic newsink to the Providence Journal.

That makes us first again!

We made history with the first bulk delivery of letterpress black newsink. As newspapers began turning to offset, we had another first with bulk delivery of offset newsinks — both black and color. We introduced alkaline fountain solutions, the standard of today's offset newspaper industry. Now, once again we're first — this time with bulk delivery of flexo newsink.

As the nation's leader in quality newsink — letterpress, offset and now flexo — Flint Ink delivers.

Bulk delivery of Arrowflex Newsink is now here.

Flint Ink CORPORATION

They printed 23,000 issues of the Polka City Rustic Republican and 250,000 copies of the Mink Madness Sale Catalogue, all on the same day, all on the same press.

You can get that kind of speed and versatility with a Solna Distributor 30 web offset press.

The exclusive 2 + 1 printing unit lets you print two colors on top of the web, one color on the bottom. Three pairs of cylinders give you three different web threading options. Combine 2 + 1 units with standard 1 + 1 perfecting units and the possibilities are endless.

Add the F36 folder and you can run up to eight webs on one former. For newspapers only, add the high performance F40 folder and run up to 12 webs.

All this, and no bearers. The Distributor doesn't need them, doesn't have them. The unique cylinder arrangement lets you quickly adjust blanket-to-blanket pressure with a simple handwheel—even while the press is running. You change stock thicknesses in a flash. You finish a long run without time-consuming readjustments.

From the bearer-free design to the one-man paper loader to the one-panel start-up system, every aspect of the Distributor 30 is geared to rapid changeover, quick make-ready, and high-speed printing—up to 30,000 iph. It's not surprising that there are over 4,000 units in use worldwide.

If you're in the market for a proven press that combines speed and versatility, write to us at the address below. For fast action, call toll free.

THE GROWING POWER OF THE RZ LASER SCANNING SYSTEM:

The only scanning system with on-line interactive previewing now packs the power of electronic dot generation.

INTRODUCING THE ROYAL ZENITH 210 L LASER SCANNING SYSTEM.

The RZ-210 L puts you way ahead in high-quality color, today and tomorrow. Controls are few and easy to master. On-line electronic previewing allows instant correction, with "fine tuning" and approval before you run film. With the 210 L System, you have the widest range (to correct transparencies), the highest color quality, and you're on your way to fully-electronic page make-up! (What's more, we've made it easy for present 200 S users to migrate upward to the powerful 210 L System.)

No wonder more newspapers use Royal Zenith color scanners than all other scanners combined!

Call Martin Sussman at **(201) 641-7200,** for information and a demonstration of the RZ-210 L System.

INDEX VOLUME 9, NUMBER 6 JUNE 1987

Convention Report *From President Reagan's Ellis Island address on Sunday to former President Jimmy Carter's speech on Wednesday, ANPA's 100th Anniversary Convention in New York City was an event to remember. Former Sen. Gary Hart's appearance turned it into a newsmaker. Other headline speakers included first lady Nancy Reagan, Senate Minority Leader Robert J. Dole and former Secretary of State Edmund S. Muskie. Discussion topics ranged from minorities in the newspaper business to the Tower Commission report to the next 100 years.* **32**

The suburban trenches *There is a war going on for readers on the fringes of major cities. Newspapers follow different strategies to capture this lucrative market.* **8**

Pagination's progress *Some are blazing trails, but generally newspapers have been slow to embrace electronic layout technology.* **16**

Goodbye to presses? *Electronic printing is just over the horizon. It will be made possible by the use of erasable laser optical-disc technology.* **20**

Voice information services *This new telecommunications tool can be used to inform the public or to improve the efficiency of internal operations.* **24**

Admitting error *To err is inevitable in daily journalism. To correct those errors prominently is becoming common practice at newspapers.* **66**

Profile: Constance Casey *The San Jose Mercury News' book editor speaks volumes about how to create a good book section.* **72**

Essay: What happened to 'Who'? *Acceptance of anonymous sources aids those who seek to manipulate the news, says journalist Richard Scott Mowrer.* **74**

Higher postal rates sought *The new postal rate case would raise third-class rates steeply. ANPA is analyzing the potential impact on newspapers.* **79**

New emphasis on minorities *The ANPA Board directs the Association to step up its efforts to improve minority opportunity in the newspaper business.* **84**

Smoldering union issue *Where there's no smoking, there may be complaints. At least two union locals have protested newspapers' no-smoking rules.* **98**

ANPA/TEC '87 *Plan your itinerary for the big Las Vegas conference and trade show by reviewing the schedule of sessions and the exhibitors' list.* **112**

CHAIRMAN'S CORNER

ANPA's organizational strengths will be tested in coming year

ANPA enters its second century with a change to one-year terms for its presidents. After only 12 months, the familiar face of Alvah Chapman, Knight-Ridder chairman, is replaced on this column by that of George Wilson of Concord, N.H. Who?

I know what you mean. Alvah—widely known and respected chairman of one of America's largest and finest newspaper organizations, and bagger of Pulitzer Prizes—yields the gavel to someone who has spent his career of 25 years in a far corner of America trying to satisfy the newspaper needs of 22,000 families. That sometimes means delivering the second newspaper I always bring home to someone who missed his and who calls me. And those are the nice calls.

George W. Wilson

The rotating diversity of leadership in ANPA may be one of its great strengths. The change of leadership annually reminds us of the variety of newspaper interests in all of North America. Paradoxically, with the variety we rediscover the fundamental values that bind us together in common cause and cut across differences of market, ownership, size and background.

In the coming year we are faced with proposed changes in postal rates and the way we report our circulation, possible modifications in Judge Greene's telephone rulings, and new initiatives in the states to tax newspaper sales and advertising. Newsprint and energy prices will rise. We face renewed challenges to find ways to become more efficient, to produce better newspapers and, above all, to help newspaper people use their immense talents and their creativity for the benefit of the nation's readers.

The scores of ongoing ANPA activities dedicated to ensuring a free and vigorous press will not cease with a change in leadership.

Changes from leader to leader seldom are dramatic. That is because ANPA itself has changed to become continually responsive to a constantly evolving environment.

The membership is more involved in a meaningful way. More than 200 executives of member newspapers serve on 11 standing committees and several special task forces. The 22 directors, of diverse backgrounds, are activists, serving on board committees and standing committees. The ANPA staff, expert in numerous fields, from postal affairs to printing technology, is talented, dedicated and responsive to the membership.

A formal planning process forces recommended actions to be discussed thoroughly and to be assigned priorities as they bubble up through committees for final board consideration and action.

But all of this works only so long as ANPA is in tune with your needs. We will make sure we hear you clearly. Call me if you think we stray.

George W. Wilson
ANPA Chairman

SYMMETRY

A TOUCH OF GLOSS

SYMMETRY SC PAPER PROVIDES A HIGHLY POLISHED, SEMI-GLOSS FINISH WITHOUT THE HARSH GLARE OF COATED STOCK.

Fashion advisors say that the low lustre of fine pearls make them always the correct accessory choice. Pearls are elegant, understated and the perfect partner for everything from haute couture to casual wear.

Symmetry - Supercalendered Paper has a similar understated and elegant appearance. Its polished, satin-like, gloss finish provides the ideal four-color printing surface without the harsh glare of fully-coated paper. It's the perfect partner for catalogs, inserts, newspaper distributed Sunday magazines and weekly and monthly publications.

Symmetry SC paper is widely used for both gravure and offset printing by leading publishers and catalog producers. The New York Times Magazine, a prestigious Symmetry paper user for five years believes that Symmetry paper has greatly contributed to its success. Last year, The New York Times Magazine carried more color ad pages than any other U.S. magazine.

Symmetry SC paper, a unique, non-glare, high-quality reproductive paper that offers 15-20% savings; truly a sophisticated choice.

Doing Battle In the Suburbs

Locals vs. Metros, Locals vs. Locals

BY MARY A. ANDERSON
presstime staff writer

In the shadows of all metropolitan dailies, the landscape is teeming with suburban papers. Particularly in the Northeast and along the West Coast, one urban area merges into the next with wall-to-wall newspapers.

Many suburbs that began as bedroom communities now have become cities in their own right, attracting business and wealthy residents to areas increasingly distant from traditional urban cores.

There, newspapers large and small, daily and weekly, are waging what academician David B. Sachsman calls "the battle on the fringes."

"The urban audience per se is not a money audience," says Sachsman, chairman of Rutgers University's journalism department and author, with free-lance writer Warren Sloat, of *The Press and the Suburbs*.

"The future of the American newspaper is in large regional newspapers or suburban newspapers," he predicts.

"Metros have not made strong moves into suburban areas," says James E. Elsener, executive director of Suburban Newspapers of America, a trade group encompassing more than 1,000 newspapers, nearly all of them non-dailies.

"For awhile, our people were very fearful. But our people have been able to hold onto their basic markets. I don't think there has been a major swing in either direction in the past five years, nor will there be in the next five years."

As newspaper ownership becomes more concentrated throughout the industry, suburban papers are seeking to solidify their markets. To defend against encroachment of metros, papers published in adjacent suburbs and shoppers, some are entering into joint ventures or combining production facilities with sister papers under the same ownership.

Meanwhile, the metros are finding that the best defense against erosion of business is a good offense in the suburbs.

SEEKING READERS. In markets as diverse as Chicago, Washington, D.C., and Philadelphia, metropolitan papers are recognizing that long-term profitability, or even survival, depends on well-laid plans to woo readers living in outlying regions.

Publishers in various markets reluctantly have reached the conclusion that two-newspaper households appear to be a thing of the past—that a reader gained by one newspaper is likely to be one lost to another.

With the stakes so high, it is understandable why the battle for readers is being waged so aggressively.

One suburban paper that has grown phenomenally is the Southtown Economist of Chicago's southwest section, a former weekly transformed into a daily by the time Pulitzer Publishing Co. bought the Economist group of 27 papers in April 1986.

Through a stepped-up sales and promotion plan, the Southtown Economist increased its paid circulation 60 percent in one year, from 18,967 daily at the time of its acquisition to 30,366. Circulation for the Sunday edition grew to 46,320, a 29-percent increase.

Bruce Sagan, president of Pulitzer Community Newspapers Inc., says he sees no limit to the paper's possible growth over the next five or 10 years. Meanwhile, the two metro dailies in that market, the Chicago Tribune and Chicago Sun-Times, have seen slight declines in both daily and Sunday circulation.

Elsewhere, Donald E. Graham, publisher of The Washington Post, recently told a gathering of newspaper analysts that the Post's financial health depends on the answer to one key question: "To what extent will the Post be able to extend beyond the first ring of counties into the second, big, rapidly growing ring of counties, many of which already have their own newspapers?"

Graham said it is a question that the Post should be able to answer successfully, given the already high penetration rates in counties as far as 50 miles from its core market. The lowest penetration in the eight counties surrounding Washington is 31 percent daily and 66 percent Sunday, a "very, very

The Delaware County Daily Times provides tough competition west of Philadelphia.

strong" starting point, Graham said.

Competition with the suburban press causes the Post to be conservative about price increases, Graham said. "We will raise prices from time to time. But we think our shareholders are much better served if the Post keeps pace with this very fast-growing market. And a lot of other newspapers are coming to see the world in the same way."

Like the Post, most urban dailies have been seeking to expand their realms for several years.

Yet a number of dailies that began in outlying areas, such as The Orange County (Calif.) Register and Long Island, N.Y.-based Newsday, have gained such strength that some experts argue that "metro" and "suburban" journalism must be redefined.

"I don't use the term 'metro' anymore," says Sachsman of Rutgers.

His 1985 book on the subject focuses on one such lively market—New Jersey, whose many dailies can all be considered suburban as they bump up against metro dailies published in New York City and Philadelphia. "We developed what is today's suburban press a little earlier than the rest of the country," Sachsman says. "It's a good place to see the whole pattern" of typical competitive pressures.

The competition is particularly intense for what Sachsman calls "counter-coverage"—the local, regional and statehouse reporting that the metropolitan papers often cannot match. Consequently, he says, "The competition here (in New Jersey) is not so much between metros and suburbans but between suburbans and suburbans."

But whether suburban papers are vying with metros, shoppers or each other, one thing is clear: Both the urban giants and their suburban neighbors are devising new strategies to compete in markets that are more congested than ever.

HEATED COMPETITION. "The competition for your franchise has and will heat up," Ruth Clark, president of the marketing research firm of Clark, Martire & Bartolomeo, told SNA last year. "If the metro papers have suddenly discovered the importance of local news, they owe it to you."

Effective local coverage is not just a battle for turf, the researcher added. The biggest prize is long-term reader loyalty—an increasing concern in a time of a decreasing rate of growth of newspaper readership among young adults.

"Populations may change, people may change, advertising sources may change, the landscape may change, competition may change—but, every indication and past experience has shown that as society becomes more complex, one's smaller world becomes more important," Clark said.

Effective local coverage is not just a battle for turf. The biggest prize is long-term reader loyalty—an increasing concern in a time of a decreasing rate of growth of newspaper readership among young adults.

Her research has shown, for instance, "an incredibly strong sense of emotional town identification," even among newcomers. "Throughout the country," she said, "we have been struck by the growing sense of townmanship, local patriotism and pride," despite the fact that adjacent communities are often virtually indistinguishable.

Except for a group she labeled as "high-tech yuppies," who plan on moving on, "Today's suburbanites, even the young ones, are strangely immobile," she said. "There is a craving for smallness and a budding revolt against bigness."

Few, if any, metro newspapers have failed to recognize that possibility.

Every one of 168 dailies with more than 100,000 circulation responding to a 1986 survey said they made some content-oriented change, such as supplements or zoned editions, to win suburban readers.

Hal Lister, who conducted the survey, reports, "There wasn't one of them that hadn't introduced some suburban effort within the paper.

"Unfortunately for many of them, it was too little, too late," says Lister, associate professor of journalism at the University of Tennessee in Martin.

Many of the city-based papers have met with only marginal gains, if any, Lister said, because they frequently geared sections to sweeping areas such as "North" or "South," instead of treating suburbs as "viable, autonomous areas of government."

Thomas Marquardt, managing editor of The Capital in Annapolis, Md., said "for us, the issue is the same as 10 years ago—offering good community journalism that metro papers cannot." Annapolis (1985 estimated population about 68,000) is a small city and a state capital. A mere 25 miles from Baltimore and 32 from Washington, D.C., it is coveted by the metro dailies published in those cities.

Since The Baltimore Sun was acquired last year by The Times Mirror Co., it has been peeking into The Capital's backyard and plans to begin zoned editions there later this year.

"It's no different than a city that has to expand its tax base," Marquardt says. "So (a metro) has to annex territory. (Metros) have to annex new territory to retain readers."

ANNEXATION DRIVES. Indeed, a kind of annexation is the plan of Philadelphia Newspapers Inc. for its two dailies, The Philadephia Inquirer and Philadelphia Daily News.

A recent company description of its new suburban strategy evokes a quest to rescue innocent suburbanites from a type of three-headed Godzilla: Ingersoll, Calkins and Gannett.

With 10 dailies published in the eight-county Philadelphia market, those three

companies control 85 percent of the suburban papers' circulation on weekdays and 90 percent on Sundays.

The long-range plan developed by a task force of executives of PNI and its parent, Knight-Ridder Inc., is one response to a suburban market that is coalescing under group ownership.

Among other goals, the plan should allow PNI to "defend against the attacks of the most dangerous print, electronic and direct-mail competitors," according to the synopsis presented to the company's employees. It continued: "Competition is fierce. . . . Philadelphia's suburban sprawl is moving straight into the arms of long-established and increasingly sophisticated suburban newspapers. . . . The possibilities of combined advertising sales and shared editorial products could give these chains more weapons in their battle against PNI for readers and advertisers."

Then came the bottom line: "Our strength is concentrated in the static and declining areas. New business will not naturally flow to PNI; we must constantly work for it."

The plan's major components focus on the Daily News' increasing financial losses and the Inquirer's need for a stronger suburban presence.

A merged ad staff now offers special rates and incentives for advertisers through combination sales.

Editorially, the plan calls for a spiffed-up Daily News aimed at attracting more city workers who may live in the suburbs and a continuing shift in editorial focus to give the Inquirer more of the feel of a local paper—a process that began in 1982 after its metropolitan rival, The Bulletin, closed. The Inquirer already publishes eight zoned Neighbors sections, with plans for more.

"[The Inquirer] cannot gain readers by being only the metropolitan newspaper of choice; it also must be the local newspaper of choice," executives said in the plan.

For many readers west of Philadelphia, that choice is the Delaware County Daily Times in Primos, Pa.—with 61,885 circulation, Ingersoll's largest newspaper in the area.

Daily Times Publisher Frank Gothie, like many other suburban publishers, says his paper has been able to hold its own. "The new 'Neighbors' edition is definitely trying to eat our lunch, so to speak," he says.

But he has noted no drop in circulation since the Inquirer launched Neighbors in Daily Times territory last fall.

Although the Daily Times' circulation has remained at 60,000 to 62,000 for some years, intensified competition from the Inquirer and a number of local weeklies has the paper constantly looking over its shoulder. "We have these weeklies nipping at our heels and metros trying to squash us," Gothie says. "Overall, our strategy is to keep the quality of our newspaper product" by excelling in local news.

Other newspapers in suburbia also are seeking to solidify their markets.

This year, Copley Newspapers created a new entity by consolidating the production and editing facilities of three suburban newspapers in Southern California, while also homogenizing their look through a common redesign.

The Copley Los Angeles Newspapers, with a combined afternoon circulation of 135,000, consists of The Daily Breeze in Torrance, the Evening Outlook in Santa Monica and the News-Pilot in San Pedro.

As in the case of Philadelphia, the change was born of a Strategic Planning Committee. "We needed to move quickly to solidify our position in some of the most desirable portions of Los Angeles County," says Publisher Bertram E. Winrow.

AMALGAMATION. The Copley case is representative of a key trend of recent years: "in a word, amalgamation," says Lister of

MORE POWER THAN THE PRINTED PAGE

The electronic archive. It's the most powerful resource for reporters, editors, bureaus and the newsroom library. Your newspaper archive can be instantly accessed by your present editorial terminals with a DataTimes in-house or service bureau system.

More powerful than clipping files. DataTimes allows keyword and full text searching, multiple access and permanent storage. The news you print today will be usable for years to come.

Give your newspaper more power than the printed page — the archive system chosen by the most publishers, DataTimes.

the University of Tennessee.

Lister, who edited suburban papers for more than 20 years in the Milwaukee area, says merging operations or dropping afternoon editions are the primary means by which large and small newspapers seek to gain a competitive edge in an era of flat circulation and often sluggish growth in ad revenues.

For the metros, combining news staffs of jointly owned a.m./p.m. papers or dropping afternoon editions has enabled them to eliminate duplicative coverage and thus spread staff reporting over a larger geographic area.

Such efforts are viewed as evidence that the competition between the big-city papers and their suburban counterparts is fiercer than ever [**presstime**, Aug. 1982, p. 38].

"I think the lines are pretty well drawn. It's kind of like the First World War in a way. They (suburbans and metros) are both trying to advance—taking a step forward and a step back," says Elsener of Suburban Newspapers of America.

Meanwhile, the suburban press also finds itself fighting off new competitors in their own markets, including other paid- or free-circulation suburban papers and shoppers. Some suburban publishers have followed the lead of the big newspaper companies and created specialty publications for farmers, professionals or consumer groups, he says.

By and large, though, suburban papers have maintained their traditional strength: the local-news franchise.

This was verified in a recent survey of newspapers about their competitive strategies. It was made at the behest of the Associated Press Managing Editors Association's Committee on Small Newspapers, headed by Marquardt of Annapolis. Results will be presented to the association in September.

Johnny R. Vardeman, managing editor of The Times in Gainesville, Ga., and one of two APME members who conducted the survey, says respondents made the same point "over and over. It's just doing a better job of doing what they have been doing all along: local news."

"Most of them seem to feel they were holding their own and not really concerned about metros beating them," says Vardeman, whose own paper is published 50 miles north of Atlanta.

COMPETITION REDEFINED. On the other hand, concentrating on "local news" could be the kiss of death for daily metro papers, some observers say.

Metros "must become regionalized to offer the coverage that is not the bailiwick of the suburban paper," says Lister. He also sees hybrids emerging, taking after Long Island's Newsday. "Newsday is a perfect example of a good metro daily and a perfect example of a good suburban paper."

Newsday is unique among suburban papers by virtue of its incursion into the heart of a city.

But author Sachsman says Newsday should not serve as a model for other suburban papers to follow, only as an interesting experiment. "Generally, head-to-head competition in a core urban market is suicidal. Nobody else should risk the kind of money that Newsday is risking."

But, he adds, Newsday has a unique opportunity to advance from its suburban base while positioning itself for a middle-class market should one of the Manhattan tabloids fail.

"What Newsday is doing now could turn out to be some kind of fabulous investment," Sachsman says. □

COLOR QUALITY

X-Rite Densitometers make it easier than ever.

X-Rite 408 & 418
Color Reflection
Densitometers

Introducing two new densitometers designed to improve the color in your newspaper: the X-Rite 408 and 418. They're the most versatile color reflection densitometers available for newspaper quality control procedures.

Accurate & Easy to Use

With only a few simple steps, the 408 and 418 give you the important information needed to control print variables like density, dot gain, hue error/grayness, and print contrast.

Special Ink-Trap Formula

Responding to the unique characteristics of printing on newsprint, we've included a special newspaper ink-trap formula in the circuitry of the 418 to deliver realistic trap percentages.

To discover why the X-Rite 408 and 418 are rapidly becoming the choice of professionals throughout the industry, contact us today for more details.

Sure, your publishing system works today.
But what about tomorrow's edition?

Tomorrow is already here.

See the Sierra Integrated Newspaper Publishing System June 6 through 10 at ANPA Booth #2172.

Product demonstrations will feature an obsolescence-proof generation of smoothly upgradable hardware and software solutions for graphics and text handling applications.

At SII, system obsolescence is an obsolete idea.

When you invest in an electronic publishing system you're looking for productivity, not just for now, but for years to come.

That's why System Integrators created the Sierra Integrated Newspaper Publishing System.

We began with the proven foundation of SII's System/25 and System/55, then we built in powerful new graphics applications and an intuitive user interface. We made the interface system-wide, so once you learn one application, you can work with all of them.

The most impressive feature of the Sierra Integrated Newspaper Publishing System?

Simply this. It is so smoothly upgradable, this is the last publishing system you will ever need to buy.

We've taken product development out of the back room and into the newsroom.

SII systems are developed, tested, and proven where it counts — in partnership with leading newspapers throughout the world.

The more questions you ask about reliability, speed, and ease of use, the better we look.

Ask us about reliability and we'll show you fault-tolerant Tandem NonStop™ computers — the heart of every SII publishing system.

Ask about speed. We'll introduce you to a system that increases productivity in every part of your newspaper: from page layout and display ad makeup to graphics processing and classified pagination.

Ask about support. SII gives you exactly the customer services you need: installation, training, on-line technical assistance, and regular system updates.

So go ahead, ask.

Call System Integrators today. We'll show you that tomorrow's publishing technology is even closer than you think.

PAGINATION

Slowly Finding a Newspaper Niche

BY ROSALIND C. TRUITT
pressstime technical writer

(Editor's note: This article is the last in a four-part series on new electronic pre-press technologies and how they are transforming the newspaper business.)

Pagination technology can be found in a larger number of newspapers these days, but the flow of the technology into newspaper plants still is more a trickle than a torrent.

Most newspaper executives and pagination manufacturers agree the technology continues to mature. And as it does so, research and development centers on creating systems that are faster, easier to use, and able to integrate process color into a page for full-page output to a typesetter or directly to a printing plate.

As the technology evolves and improves, the question remains: Why haven't more newspapers adopted pagination?

"The technology is there, but a lot of newspapers feel it is just too expensive for them," says George Cashau, ANPA director/technical research.

He and other observers say that although pagination offers many benefits, many newspapers believe those advantages do not outweigh the up-front cost of purchasing a system.

Of the approximately 1,770 daily newspapers and many more thousands of weeklies in the United States and Canada, about 250 have welcomed the technology into their plants, according to Eric Wolferman, executive editor of The Reporter in Lansdale, Pa., and an expert on pagination. But of those, only a handful have complete systems integrating text, halftones and other graphics. These advanced systems, integrating many functions, cost $1 million to $4 million. Less expensive systems are widely used for production tasks.

In addition, hundreds of smaller papers have flocked to "desktop publishing" technology, a form of pagination using a personal computer and a laser printer [**pressstime**, March 1987, p. 22].

Overall, the pagination users interviewed by **pressstime** say the equipment lives up to their expectations that it would save time and reduce manning requirements.

But a recent incident at The Arizona Republic and The Phoenix Gazette underscores the need for continuing R and D. In late April, the pagination system used by the two newspapers since September 1985 suffered a major crash—one so serious it raised doubts that publication would be possible on the day it happened, says William R. Hogan, vice president and general manager of Phoenix Newspapers Inc.

The crash precipitated a mad scramble to retrieve earlier-generation ad-makeup terminals from a warehouse. In addition, workers had to be retrained to perform their old jobs—manual pasteup of pages.

Although no complete editions were missed, two zoned sections could not be printed at first, and normal operations were not restored until more than a week and a half after the crash.

"I still have a lot of confidence in the system" manufactured by Information International Inc., Hogan says. "It's worked very well for us overall."

The problem arose when Triple-I installed a new microchip to boost the system's power and speed. Hogan says the equipment also may have been taxed by an increase in the number of pages being processed from an initial 400 a week to nearly 700.

Prior to the crash, the morning Republic was electronically laying out about three-fourths of all pages—everything except the front and sports sections; the afternoon Gazette had received its pagination training later and was paginating a lesser percentage.

To enable the newspapers to resume paginating, technicians restored the old microchip temporarily. Once satisfied the problem is solved, they plan to reinstall the new microchip, and Hogan says it could happen by the middle of this month.

> *"The technology is there, but a lot of newspapers feel it is just too expensive for them."*

Perhaps the most unfortunate aspect of the crash was its timing. It occurred in the middle of a seminar Phoenix newspapers and Triple-I were conducting to brief executives from other newspapers on how the equipment was performing.

"Even though we've been using the equipment for awhile, we're still in an R and D mode here," Hogan says.

Leroy Bell, vice president of customer support for Triple-I, says the adaptation of pagination to newspaper publishing has been an evolutionary process, both for personnel working with it and for the equipment itself.

"You have to remember that pagination has been used to produce pages, complete with line art and halftones, for technical documents and for magazines a good long time," he observes. Pagination has been used for magazine production for nearly 10 years, while the first newspaper experimentation with the equipment occurred six years ago.

The biggest challenge in bringing pagination technology to a great many more newspapers? According to Bell, it is the relentless deadline, often several a day. "A news magazine has a deadline once a week. A journal, once a month. Pagination at newspapers puts different demands on people as well as the system."

Those unique demands may explain why pagination, a major piece of the puzzle depicting the electronically reproduced newspaper, hasn't dropped into place as neatly as did VDTs more than a decade ago.

"Pagination equipment is more sophisticated and more difficult to operate than VDTs were when they first entered newsrooms," notes Wolferman of the Lansdale daily. "VDTs aren't really that much different than typewriters." Wolferman has overseen the installation of a pagination system at his paper and at another Gannett paper, and he acts as a consultant to newspapers that are considering pagination systems.

"Pagination requires a whole new way of thinking," he says.

That new way of thinking involves a totally integrated pagination system that includes all elements of a page, including photographs.

Experts say that electronic photography will help make totally electronic newspapers a reality. Electronic photos will be previewed on a screen, cropped and integrated into a page without ever being reproduced on photographic paper.

Companies that develop and market pagination equipment thus are concentrating research on the storage and manipulation and integration of continuous-tone graphics, including color.

CAPABILITIES VARY. Two years ago, medium-size newspapers were believed to be the best market for pagination equipment because smaller ones could not afford it and large ones had page volume exceeding its pages-per-hour capacity [**presstime**, March 1985, p. 30].

That remains somewhat true, although the equipment is becoming more affordable and faster.

Still, the vast majority of newspapers with pagination systems today are not producing pages complete with halftones and text, says Wolferman. They reserve spaces for graphics on the page, then manually insert photographs and other graphics. For the most part, pages are sent to a typesetter in two halves and after being reproduced on photographic film are pasted up manually.

A few newspapers, including The Wall Street Journal and the Daily Record in Morristown, N.J., use systems that send the completed page directly to platemaking. The Journal's system stores graphics digitally, then merges line art, text and advertisements for output to the plate.

Despite its high initial cost, the direct-to-plate method is the best way to go in the long run, says Kim Breese, vice president/operations at Dow Jones & Co, which publishes the Journal.

"The key is being able to go directly to plate. If you're still outputting to a typesetter, as far as I can see, that's not far removed from a system where you use pasteup people and cameras."

In Morristown, where a direct-to-plate system manufactured by Autologic Inc. has been used for about a year and a half, work is under way to incorporate color halftones. "If we were going to spend $2.5 million on a system, then we wanted a full-blown system," says Howard J. Eichler, vice president/operations at the Daily Record.

The number of companies manufacturing pagination equipment continues to increase, but a handful seem to attract the most interest from newspapers in terms of sophisticated technology or numbers of systems sold.

Nyle Leatham, Phoenix Newspapers Inc.

Linda J. Vachata (above), a features editor of The Arizona Republic and The Phoenix Gazette, uses a mouse to design a page that is typeset automatically (photo on facing page).

They include Atex Inc., Autologic, Crosfield Hastech, Cybergraphic Systems Inc, Dewar Information Systems Corp., Harris Corp., Information International and Xenotron Inc.

In addition, companies such as Crosfield Electronics Ltd., D.S. America, Hell Graphics and Scitex America Corp., offer color systems that can store, crop and otherwise manipulate color photographs and then insert those elements into the assembled page.

Even though the number of newspapers that have adopted pagination is still relatively small, interest in the technology remains high, and the subject has become almost a fixture at conference sessions at ANPA's annual trade show. (See story, p. 112.) That interest is translating into serious consideration for many newspapers, vendors say.

"I noticed the change last year at the ANPA show," says Albert Fenaughty, president of Triple-I. "People came in seriously looking at the equipment and discussing ways in which they could actually use it in production at their publications. In past years, our situation was a little like exhibiting at an auto show. When you have something new and exciting, people come and look at what you've got because they want to see what everyone's talking about, not because they're thinking about buying it."

In the past year, Fenaughty says, Triple-I has sold an advertising makeup system to The Indianapolis Star and The Indianapolis News, and a page makeup system to a Japanese financial daily. The firm is conducting "serious talks with a number of other newspapers," he adds.

Fenaughty says newspapers have been drawn to pagination because of the control the systems offer. "They see the chaos level going way down and the quality levels way up."

The companies that design pagination equipment say they work constantly to make the equipment easier to use. For example, terminals such as Cybergraphic's CG 250 G allow the user to copyfit all the various elements of the page, combining different fonts and story depths. A split screen also enables the user to preview the typeset page while viewing text to be inserted on the other side of the screen.

Pagination's proponents continue to cite a number of distinct benefits it brings to newspapers.

IMPACT ON STAFF. Pagination's proponents continue to cite a number of distinct benefits the technology brings to newspapers, including more control over the finished product, reduced manning requirements in the composing room, less time required to make up pages and thus im-

proved deadlines, and better looking pages.

Larry Allison, senior vice president and editor of the Press-Telegram in Long Beach, Calif., a pagination pioneer among newspapers, also says it allows his editors to try a variety of options in a short period of time and offers flexibility for last-minute changes. "Pagination certainly is here. We produce our newspaper that way every day," says Allison. But he says he understands the skepticism of others. "Until we began paginating, I was skeptical, too."

The Press-Telegram has been using a Triple-I system for about two years. It produces full-page output of text, halftones and line art to a typesetter. "If we didn't feel the technology was there, we wouldn't have purchased the system. We wanted a system that did it all, including digitizing halftones," says Allison.

Wolferman says, though, that pagination's progress will hinge not on how fast the technology advances but on how the technology is managed. He and other newspaper executives say introducing the new equipment to employees should be done gradually; staff members should be consulted as various systems are considered; classes should be set up, and users must be given time to practice extensively.

"It does have its bugs, but when it works the way it should, people really like it."

Careful consideration of the conversion to pagination also gives the newspaper time to deal with potential labor problems when positions are eliminated because of the new equipment.

In most cases, newspaper executives say they began paginating on sections printed in advance and moved later into the "live" pages that often change right up until deadline.

Most difficult, many say, is coordinating page jumps.

Most newspapers also are making paginating a part of the daily routine of copy editors, news editors or other editors. "We don't have paginators here. We have editors," says Mike Dunnell, an assistant managing editor at The Windsor (Ontario) Star, who oversees the system in the newsroom there. "Everyone has to know how to paginate in case someone is out unexpectedly. It's just become part of the job description."

In Long Beach, a different route was taken. "We looked at pagination and decided we'd be imposing a very complex new system on the traditional newsroom structure, and we decided that wasn't the way we wanted to go," Allison says.

Instead, the newspaper created a design department with a staff of 13 full-time employees. Some were former desk editors who expressed an interest in design; others were hired from outside. Allison says each section editor still controls the content and play of stories, but the designers create the pages. The section editors review pages before final output.

Also happy with pagination are employees at The Hamilton (Ontario) Spectator, says William J. Muir, production editor. The Spectator began using a Harris 8300 Page Layout system last December. Editors receive five eight-hour days of training. Muir says they are about halfway through the learning curve. "It's very important to get people using equipment early and often. The more you use it, the better you become at it," he says.

The afternoon paper has found that with pagination, it can make changes to the front page as late as 10 minutes before press time, compared with an hour under manual paste-up. Between 65 percent and 75 percent of the newspaper is currently being paginated.

Hogan of Phoenix says some editors had to be coaxed into using the new system, but for the most part, it was readily accepted. That made it harder to go back to the old way of doing things when the system crashed.

"Basically, you have journalists up to their ears in electronics," he says. "It's a totally different field. It does have its bugs, but when it works the way it should, people really like it."

Dunnell in Windsor, Ontario, agrees. "It would take a major disaster to make us go back to the old way of cut and paste. Pagination isn't 'either/or,' it's the way we put out our newspaper. If I can reflect back to the way it was when we first had VDTs, if you took out VDTs now, the staff would walk out. If for some strange reason we got rid of pagination at this point, our editors would be very upset. It's just the way we do things." □

Armotek's ULTR-A-LOX® precision engraving system delivers perfectly identical anilox cylinders for newsprinting.

ULTR-A-LOX cylinders don't need a pretty picture to tell their story. It's a story being told from coast to coast and border to border in EVERY SUCCESSFUL NEWSPAPER FLEXOGRAPHIC PRESS.

ULTR-A-LOX cylinders don't promise anything in the future—They deliver successful printing today, every day, and everywhere.

At Armotek the committment to supplying the newspaper industry is over six years old and growing. In fact, we've increased capacity 30 percent in 1986 alone. When newspaper flexography needs output capacity, Armotek is ready.

Call Armotek for more information. Or better yet, call any newspaper printing flexographically. They already know the ULTR-A-LOX success story.

Presses May Be Museum Pieces By the Turn of the Century

BY WILLIAM D. RINEHART

Electronics in the past decade moved Ottmar Mergenthaler's hot-metal Linotype from newspaper composing rooms to museums. By the turn of the century, if not before, electronics will move the heavy iron presses from newspaper pressrooms into the same museums.

Currently, newspapers use an iron monster weighing 400 tons to put one-fifth of an ounce of ink on 64 pages of paper. Such complex press systems severely limit the flexibility of a newspaper to zone its run-of-paper advertising and news content.

Today, newspapers can zone preprinted advertising inserts with precision, yet they cannot offer the same flexibility with their mainstay ROP product. What's more, newspaper ROP reproduction can't compete with that of many preprints.

Current press technology also prevents distribution of news of special interest to subscribers. One news package must fit all, regardless of any individual special interest. The subscriber who doesn't care about stock prices nonetheless gets pages of financial data.

The electronic press technology of the 21st century will allow a newspaper to customize each subscriber's news copy and allow advertisers to reach target zones or even particular subscribers.

Electronic press technology will enable newspapers to print high-quality ROP and to run preprints on coated stock as part of the subscriber's newspaper. Instead of receiving preprints by truck from a commercial printer, the newspaper will receive an advertiser's prepared copy on a delivered electronic compact disc or from a satellite transmission directly into electronic ad storage. The electronic newspaper of tomorrow won't have to share preprint expenditures with a commercial printer and a trucker.

On the immediate horizon—and representing the first necessary step toward electronic printing— is erasable laser optical-disc technology, which will have a profound effect on all areas of newspaper operations. This type disc provides a new way to store computer information very compactly and at extremely high speeds [presstime, Jan. 1987, p. 61]. A number of companies are in final development stages of erasable discs, including Sony, Matsushita, Du Pont and Philips.

The technology will have a material effect on full-page pagination, electronic photography and other computer operations. It is a key development—one that will make all-electronic newspaper printing a reality.

The computer storage provided by erasable discs will make it possible to image a newspaper page electronically. Adjacent to each electronic page imager will be an erasable disc dedicated to the imaging of that page.

This will enable newspapers to make copy changes "on the fly." Each newspaper will have the potential of being addressed to an individual subscriber.

Other than reels and folders, the iron will be gone once this new technology is available to newspapers.

As was the case with early offset press developments, all-electronic imaging is already being used in small commercial printing applications. The machines involved are no longer called presses; their producers refer to them as "engines."

Delphax Systems of Randolph, Mass., is producing an ion deposition engine—a press. It is an all-electronic imaging system that prints high-quality text and graphics (although no photographs as yet). Sales are in the thousands of units for computer printouts, 8½-by-11-inch commercial printing, etc.

Advanced Graphic Systems Inc. of Mt. Laurel, N.J., is producing an all-electronic magnetographic engine. The computer signals write the image by charging a magnetic drum.

And many companies, such as Xerox Corp., are producing laser-imaged engines (printers).

Meanwhile, ink-jet printers are being manufactured by a number of firms. Canon U.S.A. Inc., for example, reproduces high-quality color photos with an ink jet.

None of the ion deposition, magnetographic, laser or ink-jet units currently available are adequate for newspaper printing. An all-electronic newspaper imaging engine will require new technology—technology that ANPA believes can and will be developed in the next decade providing proper research-and-development work is undertaken.

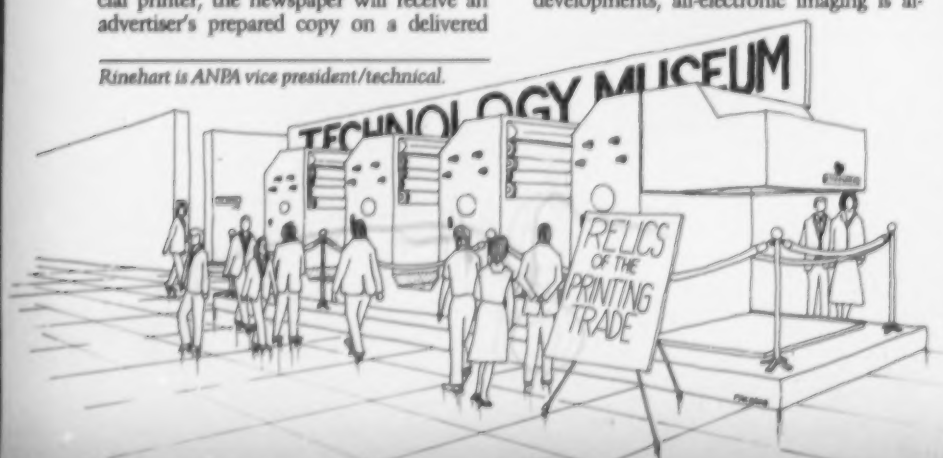
All-electronic newspaper imaging will be made practical because of the development of the erasable laser optical-storage disc.

The new electronic imaging systems will enable newspapers to serve advertisers and readers better by giving newspapers complete flexibility to customize copies.

Undoubtedly, the first electronic imaging will be in the form of add-on units to existing iron presses. As the technology improves, the iron presses will be replaced by the new electronic imaging systems.

The ANPA Technical Committee hopes the current suppliers of the iron presses will start research into all-electronic imaging. It is also hoped they won't fall into the pit that trapped many of the major producers of hot-metal composition equipment: Many of them failed to recognize photo and electronic typesetting, and thus failed to survive. □

Rinehart is ANPA vice president/technical.



Technological Advances for All Newspapers

Technology to the rescue! Today any newspaper, regardless of printing process, can look and feel cleaner and fresher than ever before possible. U.S. Printing Ink technology makes it happen.

Letterpress tradition no longer needs to be associated with readers' sooty fingers. Our *Aqua-Kleen** letterpress news inks have the waterbased emulsion technology which reduces rub by as much as 50% to run clean, *stay clean*, from news stand through a "clean hands" read. Our Civilox* version stays equally clean. And all *Aqua-Kleen* inks cut mist by up to 50%.

If offset quality is your strength, cleanliness comes to you, too, with our *KleenSet** line of technologically advanced low-rub inks. Refreshingly clean formulations deliver superior rub resistance, control dot gain, and avoid roller and blanket build-up.

Switched to flexography? Our *Aqua-News** line offers you just the right waterbased flexo inks that not only look and feel as fresh as a babbling brook, but print crisper halftones and more uniform solids than you'd expect.

US U.S. Printing Ink

East Rutherford, NJ; Washington, DC; Jacksonville, FL; Chicago, IL; Cincinnati, OH; Dallas, TX; Denver, CO; San Francisco, CA; Los Angeles, CA; Portland, OR; Seattle, WA

**AquaKleen, KleenSet,* and *Aqua-News* are tradenames of U.S. Printing Corp. *Civilox* is a tradename of Crabtree Vickers Ltd.

WHEN IT COMES TO POLLUTION CONTROL, MANY NEWSPAPERS ARE IN OVER THEIR HEADS.

THE CHOICE IS CLEAR

Dan Sells, Vice President of Newspaper Sales at Western Lithotech, explains a new concept in cost-effective pollution control.

Dan, what is this concept?
Well, it involves two systems: Envirotech clean chemistry and a special processor called Eliminator.* And together, they are the best available technology for additive plate processing.

How do they work?
First, they're designed to work exclusively with Western Lithoplater® processors. Envirotech is a new developer and finisher chemistry — so clean it meets tough government regulations. Odorless and not flammable, it also delivers improved processing speed and superb dot resolution.

Then our new Eliminator system is connected to the Lithoplater, removing solids from effluent waste. So what goes down the drain is safe and virtually clear.

So what happens to the solid waste?
It's easily disposed of by your waste haulers.

Tell me more about the Eliminator.
It's specially engineered to work with our newest Lithoplater processors, models 30D, 38D, 48D and 58D. It can also be retrofitted to many of these models already installed.

Give me three good reasons why a newspaper needs Envirotech and Eliminator Systems.
Here are four: EPA, OSHA and state regulations *and community responsibility.* Because newspapers represent the communities they serve, they feel a sense of responsibility when it comes to promoting cleaner and safer living conditions.

The big question: Just how much can these new systems save me?
Plenty. Consider the alternatives: government fines of up to $10,000 a day; possible shutdowns; personal injury suits; or designing an approved system of your own.

What about switching to a subtractive plate system?
It's less expensive to use Western. No start-up costs, personnel retraining or lost production time, and not all subtractive plate chemicals comply with EPA and OSHA guidelines.

What about other environmental additive chemistry on the market?
They just don't do the job, because additive plate processing produces polluting sludge. Our Eliminator makes all the difference. Remember, it's not just the chemistry that must pass government regulations...*it's what goes down the drain.*

The Choice is Clear.
For complete technical information, call 1-800-325-3310 (in Missouri, 314-225-5031). Or write Western Lithotech, 3433 Tree Court Industrial Boulevard, St. Louis, MO 63122.

'VIS'ion of the Future

'Voice information' offers a relatively low-cost way to dabble in new telecommunications services

BY MARGARET GENOVESE
pressime staff writer

Want to know what's on television today in Tulsa? You could get a copy of the Tulsa World and look it up.

Or you could dial (918) 582-CITY and get the day's TV highlights—plus stock market quotations, sports scores, community events calendars and other recorded information—from CityLine, "a telephone information service of the Tulsa World."

CityLine is one of a broad category of services—generally lumped under the heading of "voice information services"—that offer electronically stored voice information or messages over the telephone. They can be geared to the public, like CityLine, or to interior business operations, like messaging, call handling, telemarketing and transactions.

Although some experts believe there is a coming VIS market for newspapers, right now interest among publishers is "modest," according to Kathleen Criner, ANPA director/telecommunications affairs.

She estimates that only about 12 to 20 newspaper companies currently operate publicly accessible voice information services. Most are looking at them as a "complement" to their papers, Criner says, rather than viewing them as an entirely separate business the way a few years ago they viewed ventures into other electronic information services such as videotex and teletext.

Unlike videotex, these services use the familiar and ubiquitous telephone as the sole device for retrieving information, not costly computer terminals. But like videotex, they are slow to return a profit. Among those newspaper companies willing to talk about the profitability of their ventures, none reported making any money from the services.

Newspapers are "dabbling" in VIS, just as they dabbled in videotex, says Robert M. Johnson, chairman of the ANPA Telecommunications Committee. However, with voice information services, the cost of entry is "considerably less."

Johnson, publisher of Newsday on Long Island, N.Y., speculates that newspapers may be reluctant to jump into VIS, which used to be known as "audiotex" [pressime, Oct. 1984, p. 28], for several reasons. First, it involves information provided in audio and not textual form, so they may not consider it an integral part of their businesses. Second, they may have been lulled into a "false sense of 'Nothing is going to happen in this area'" because of the failures in videotex.

Johnson predicts there will be a market for voice information services and, because costs are relatively low, "there will be people learning to make a living" from it.

Newsday, which studied the field for eight months, took over the service providing weather information in New York City on May 1 and is examining public interactive services for possible investment.

It also is considering the opportunities for using VIS internally. "More and more large newspapers that are developing more sophisticated internal telephone systems are beginning to use it," says Johnson.

Only 4 percent of the approximately 475 newspapers responding to an early 1986 survey by the ANPA Telecommunications Committee said they had a voice messaging, or "voice mail," system. However, ANPA's Criner believes more may have purchased such equipment within the past year.

When integrated with a company's own telephone system, she says, such systems are expensive, which may have limited their acceptance. However, she says, costs are coming down, and service bureaus are springing up that will provide a company with internal VIS capability at lower cost. Some independent telephone companies currently provide such services, and the regional Bell operating companies may be unleashed to offer them, too.

The role of the telephone company in VIS services is one on which ANPA is of two minds.

The consent decree governing the breakup of AT&T prohibits AT&T and the BOCs from offering electronic information services.

However, Newsday's Johnson says he has "no doubt" that if the court-imposed restrictions are removed, the BOCs will "get

A fully staffed newsroom—17 employees strong—supports DowPhone.

in (to VIS) as quick as they can." BOC participation will make it hard for others to compete, he says. ANPA has urged retention of the information-services restriction.

On the other hand, ANPA has said that the telephone companies should be allowed to offer some technical services in the voice information services field if they can be offered in a "content neutral" way and with anticompetitive safeguards in place.

"There are some technological things that the telephone companies can do in their networks to facilitate some kinds of voice storage applications," says Uzal H. Martz Jr., chairman of the Telecommunication Committee's Diversity Task Force and president and publisher of the Pottsville, Pa., Republican. "We've already gone on record as supporting applications utilizing network facilities when the telephone companies are not, themselves, involved in the content."

Currently, the VIS industry as a whole is "growing rapidly, but is still quite small," according to Mary Jo Culp, an executive at Pacific Bell and chairman of the Voice Information Services Section of the Information Industry Association.

Culp says LINK Resources, a New York City telecommunications consulting firm, estimated 1986 nationwide revenues from the voice information-services industry at $1.2 billion. However, she says, industry revenues are expected to grow at a compounded annual rate of 27.5 percent per year through 1991, when annual revenues will be $4.1 billion. Almost half of this is projected to come from equipment sales to the industry.

INTERACTIVE MODE. Much newspaper VIS activity has been in establishing so-called interactive services, such as Tulsa's, where callers can choose among a variety of types of information using a touch-tone phone. Dow Jones & Co. was a pioneer in this area with DowPhone.

Operating since January 1984, DowPhone now has a news staff of 17 people who take information produced for other Dow Jones products and edit it for use on the voice information service.

"We are enhancing the service as we go along," says Charles E. Barnes, director of audiotex services.

Other newspapers' services also highlight financial information.

The Tulsa World began offering its CityLine service last August. Initially, it had only StockQuote HotLine, by which a caller at no charge can obtain the current market price of any stock by entering a code for the stock using the telephone keypad.

According to Executive Editor Bob Haring, the newspaper initially figured that it would get about 2,000 calls a day to the stock service, and that it would take a month or two to reach that level. But it hit the target "almost immediately."

There were so many callers getting busy signals that the newspaper quickly increased the number of lines from 14 to 24. It also expanded the types of offerings sooner than anticipated and hired a manager to run the service and sell advertising.

The expansion started in September with sports information. "That took a terrific burden off our sports staff," which typically handled "hundreds" of calls on Friday and Saturday from people looking for sports scores, says Haring. "We put that on CityLine and, boy, the calls to the sports desk just stopped overnight."

The vast majority of the calls are to the stock service, according to Gil R. Swalls, director of CityLine. In January, when the stock market was unusually active, the service logged 120,990 calls. Since then, usage

PERFECT REPRODUCTION

Lockwood Greene understands the reproduction needs of the printing industry. Working with you to establish all project requirements and priorities, our professionals can devise specific solutions tailored to every situation — from new construction to expansions and modernizations.

Our single source of design responsibility ensures a logical transition throughout each phase of an assignment, resulting in a totally suitable, successful project — completed on time and within budget.

We are Lockwood Greene. We've been designing America's workplace for over a century and a half.

CityLine has enabled the Tulsa World to save newsprint by relying on the phone service to provide descriptions of TV shows. It also has resulted in 30-percent fewer stock listings in the paper.

has dropped. The service took 112,867 calls in April.

Ads on the service cost between $100 and $500 a month, depending on the popularity of the particular type of information. Callers can stop the flow of information at any time to move to another information category except when a sponsor's commercial message is being played.

The service has been operating on a "break-even" basis from the beginning, according to Haring. But he says there "clearly" is profit potential in the service. "As the calls build and as the customers learn to use it, I think the potential is there."

The single biggest operating expense is telephone lines, he says. Next is personnel. In addition to Swalls, some World staffers are paid to prepare information for the service. The only other expense is the cost of the Associated Press stock feed.

Swalls says CityLine has enabled the newspaper to save newsprint. It relies on CityLine to provide descriptions of TV shows and now just prints times and titles in its daily TV grid. It also reduced by about 30 percent the stock listings it provides in the newspaper.

CityLine also gives the newspaper a means to provide community service. For example, during a weekend flood, the newspaper made CityLine available to city officials to give the public water level updates and evacuation announcements. It received 8,000 calls in 36 hours, Swalls reports.

The Tulsa paper purchased the equipment for the venture from Brite Voice Systems Inc. of Wichita, a company founded in 1983 by Stanley G. Brannan, who also founded Mycro-Tek, the newspaper front-end system manufacturer.

The equipment includes an interactive voice computer, an operator control terminal, software, a report printer and optional interfaces to the AP stock wire and DowPhone. Brite Voice has sold the equipment in 25 markets, and purchasers include nine newspapers.

Cost depends on the size of the market, with a major variable being how many telephone lines a system operator wants, Brannan says. For a small newspaper, the equipment package starts "in the neighborhood of $31,000." For a market as large as Tulsa, the cost is about $150,000.

The target for each market, Brannan says, is to generate revenues up to two-and-a-half times expenses, "depending on how aggressive they are in their local market." He says he does not know whether any of his company's clients are making a profit.

Not all such services are advertiser-supported. DowPhone charges a subscription fee, as does The Oakland Press in Pontiac, Mich. The Providence Journal Co. will begin offering an interactive service June 1 that will solicit neither advertisers nor subscribers. However, people will have to obtain a copy of the newspaper every day to use the service. A different four-digit access code will be used every day, and that number will only be found in the newspaper.

GROWING PASSIVE PRESENCE. In addition to experimenting with interactive, electronically stored information services, newspapers are expanding their practice of providing the public with passive, recorded messages.

Richard H. Friedman, president of Weatherline Inc., a St. Louis firm that offers a weather-announcement service to newspapers and others, reports his company has about 23 daily newspaper clients, up from 16 in 1984.

These types of announcements are generally free to the caller, and thus return no revenue to the newspaper. But they have other benefits. One is their promotional value. For instance, each caller to the weather, business or sports hotlines operated by the Houston Chronicle hears a pitch to subscribe to the newspaper.

These hotlines also provide a reader service and take the burden of responding to routine calls off the newspaper staff. The Atlanta Journal and The Atlanta Constitu-

tion offer a sports hotline, in cooperation with a local radio station, because the newspapers have an "implicit contract with our readers to provide them with information that doesn't go into the paper," says Managing Editor Glenn McCutchen. The recording provided by the newspapers is heavy on scores of sports events that occur too late to make their final home editions.

The newspapers have an "ulterior motive," too, in providing the scores; it "courteously" deflects calls that would have gone to the sports department, McCutchen adds.

In some markets, newspapers merely provide the information to other companies, that offer the service at a cost. The Chicago Sun-Times, for example, which once operated its own sports hotline, now cooperates with Phone Programs Inc., a national company that provides passive voice information services to the public as a money making business through special "976" phone lines. The Sun-Times promotes, on a daily basis, the sports and racing services on its agate sports page. In exchange, Phone Programs plugs the paper at the beginning of its recorded announcement.

Unlike the services offered free by some other newspapers, callers to the Sun-Times-affiliated service are charged 25 cents for the calls. The money is split between Phone Programs and the telephone company; the Sun-Times receives no money.

USA Today offers a similar service on a national basis, using AT&T's "900" service. "We like the idea of keeping our readers informed," particularly on weekends when USA Today doesn't publish, says Philip A. Fuhrer, vice president of Gannett New Media, the company's research-and-development division.

The service is offered through a New Jersey company, A.G.Young & Associates, which updates the information every 10 minutes. USA Today sports writers produce some recorded material for the service, which averages 25,000 to 30,000 calls a weekend, according to Fuhrer.

To listen to the two-minute sports recording costs the caller 85 cents. The service begins to make a profit once an AT&T-set minimum of 14,000 calls in a seven-day period is met. "This is not some big money maker, obviously," says Fuhrer. "But if you do enough volume, then, yes, you will generate some money." The profit is split between USA Today and Young.

MESSAGING, CALL HANDLING. Increased efficiency inside the newspaper plant, rather than interaction with the public for profit or promotional gain, is the incentive for several other newspapers involved in VIS technology.

In the advertising department, the services are being used to take messages for the sales staff and to record responses to classified ads [**presstime**, April 1987, p. 22].

In the circulation department, they are being used to route complaints to delivery personnel. For example, the Chicago Tribune has used a voice-mail system in its circulation department since last April. When the department receives a delivery complaint, a circulation employee records the message and places it in the "voice mail" box of the appropriate delivery agent or distributor, who is required to call in at least once an hour to retrieve the recorded messages.

The system has enabled the paper to reduce its call-relay staff from 11 to four. "If you don't need to talk to the person, it's the best way to communicate," says Debra A. Kollins, the Tribune's telecommunications manager.

Another Tribune Co. property, the New York Daily News, uses its four-month-old voice information service in the editorial and advertising departments. The system also is used for call handling. After 8 p.m. and before 8 a.m., it answers the phone, and a recorded message gives callers a selection of departments that they can reach by pressing a number on their touch-tone phones.

Only one newspaper company has gone outside of its own operation to offer such voice information services to other firms. Voice Response Inc., a subsidiary of Lee Enterprises Inc. of Davenport, Iowa, has developed a system capable of handling large numbers of incoming calls simultaneously. For instance, it was used by NBC News during the last presidential election for exit pollsters to report their results.

Initially, Lee had looked into providing passive, recorded announcements in the top 100 U.S. markets using telephone company 976 lines. According to Voice Response President Robert D. Ross, vice president, new ventures, at Lee, it abandoned the idea when some telephone companies declined to provide such lines. According to Ross, fear that the lines would be used for pornographic message services may have scared some of the companies away.

Some telephone companies did decide to provide 976 service, and Lee and Phone Programs Inc. protested the terms under which several are doing so. They have asked the U.S. Department of Justice to investigate whether the rates being charged by those telephone companies violate the terms of the AT&T consent decree because they give the telephone companies a financial stake in the information being provided over their transmission lines.

That problem notwithstanding, Ross remains a big believer in VIS. "The applications are endless," he says. □

WHOSE MARKET STUDIES PAY FOR THEMSELVES IN JUST ONE YEAR?

The answer is obvious: Market Opinion Research. MOR's comprehensive surveys of retail shopping behavior arm you with powerful data. Data that documents the challenges and opportunities in your retail community. Data that demonstrates how newspaper advertising is an indispensable part of a successful marketing plan for every advertiser. Data that pays for itself ... presentation after presentation.

MOR: the research company that's growing faster than the information industry itself. Serving the newspaper industry with expertise in strategic research and planning, market analysis, consulting services and database management. ow good ® t really is rial.

The more you know about nyloprint® the more impressed you're likely to be. Not only with how quickly it goes to press. And how long it runs. But with everything we've put behind it.

To begin with, nyloprint® is manufactured to the most precise tolerances in one of the world's most modern facilities. It's backed by an extensive sales force and a technical staff that many consider the best in the business. And they're supported by one of the most energetic and innovative research and development programs in existence — a program that has been leading the industry toward the development of much long-awaited technology, including flexo plates suitable for newspaper printing using a direct anilox inking system.

But despite all that, we think the strongest case that can be made for nyloprint® is a trial right on your own equipment. Then you be the judge. For an on-site demonstration, or for more information, call Harvey Millman, Product Manager, at 1-800-631-8371. And if you're in Las Vegas be sure to stop in at Booth #748 at ANPA-TEC '87. BASF. CELEBRATING

The operative word is "memorable."

Those who were there will not soon forget the scene on Ellis Island May 3: The overcast sky darkening with approaching storm clouds. The podium lit with unnaturally bright TV lights. The red, white and blue bunting draping the speakers' platform tossed by the wind. And, in the distance, the Statue of Liberty, her raised lamp glowing brighter and brighter as dusk deepened.

The Coast Guard Academy Band struck up the familiar chords of "Hail to the Chief," President Reagan strode to the dais, and ANPA's 100th Anniversary Convention began.

There are other pictures from the May 3-6 event in New York City that stick in the mind:

First Lady Nancy Reagan captivating listeners with witty remarks about life in the White House.

Humorist Calvin Trillin's deadpan delivery of his unique view of Americana, while everyone else in the house was convulsed in laughter.

The discussion of the arms to Iran scandal in the unlikely setting of a church sanctuary.

A stage bristling with government and media luminaries who spent three hours playing out a hypothetical set of events having to do with a fictional foreign country—and who mesmerized their audience in the process.

The warm welcome accorded former President Jimmy Carter.

And, perhaps the most enduring image, an angry Gary Hart, whose Convention address marked the presidential aspirant's first public appearance following The Miami Herald story about his weekend socializing with a Florida model. The speech turned the Convention into a bona fide newsmaker and put the event into the national spotlight.

It already was an unusual event, as ANPA Conventions go. In honor of the Association's 100th anniversary and the 200th birthday of the U.S. Constitution, the meeting had a theme: "The Blessings of Liberty: The Next 100 Years."

In his keynote address, ANPA Chairman and President Alvah H. Chapman Jr., who came up with the theme, reminded the pub-

lishers of their "awesome responsibility of providing Americans with the information needed to understand and preserve the constitutional republic and the individual freedoms which underlie it."

Because of the Convention's celebration of both events, the usual nuts-and-bolts topics gave way in large measure to philosophical discussion about past and future.

A multimedia slide presentation that preceded Chapman's remarks traced, in tandem, much of the history of the United States and of the nation's newspapers. A panel on the future split over whether the next century would see the end to humanity's problems, but one panelist said a free press and informed citizenry would continue to be key to the country's survival.

However, the Convention also aired some of the industry's leading concerns: the need for a greater minority presence in the workforce, the problem of drugs in the workplace, and the future of newspaper advertising and of retailing.

Appropriately, the 100th anniversary of ANPA's founding was observed in the city where the Association had its headquarters for its first 85 years.

The scene of numerous ANPA gatherings, The Waldorf-Astoria proved equal to the task of hosting the Convention's record-setting 3,038 registrants. The total exceeded by 150 the previous record set in 1983, also in New York City.

Outside the friendly environs of the Waldorf was another story. Although the calendar said early May, the weather was more like early March. But most attendees appeared to take the inconveniences caused by rain and chilly temperatures with good humor.

As they left New York, some may have been looking forward to next year's Convention in Honolulu. And while that meeting surely will offer warmer weather, it will have to go a long way to provide as many memories. □

OUR LIBERTY

C. David Rambo

President Reagan praises the media, but also criticizes a lack of "perspective" in reporting on the contras.

DAY ONE—SUNDAY
The President on Ellis Island

A Plea for Democracy

With the Statue of Liberty in the background, the decrepit shells of former immigrant-processing buildings in front and the soaring towers of lower Manhattan to the side, President Reagan opened ANPA's four-day 100th Anniversary Convention on historic Ellis Island with a strong plea for support of democracy in Central America, particularly in Nicaragua.

The President reached out to find common cause with the press as he addressed the 1,800 newspaper executives and their families, but he also chided them for what he described as a lack of "perspective" on reports concerning the Nicaraguan rebels, or contras.

"I can't help but note that in the new democracy of El Salvador, Communist-supported guerrillas continue to try to bring down democratic rule, and there is little or no media attention," he said. "Yet, just across a border in Nicaragua, the freedom fighters battle against a totalitarian Communist regime and are assailed far and wide as lawless terrorists or worse. Forgive me, but the story needs perspective."

Delivered two days before congressional hearings began in Washington, D.C., into the Iran-contra affair, Reagan's address spelled out his three-part Central America policy composed of additional economic assistance to the democracies of Costa Rica, El Salvador, Guatemala and Honduras; diplomatic efforts "to achieve a lasting peace" in the region; and continued support for the contras.

Hatless, but in a raincoat buttoned to the top, the President delivered his speech in chilly temperatures and under threatening skies. He received standing ovations at the beginning and end, but the 23-minute address was not interrupted by applause.

There were some laughs, however. One came when Reagan, after reciting the popular Jefferson quote about preferring newspapers without a government over a government without newspapers, added: "Of course, Jefferson said that before he became President."

Before launching into the Central America issue, the President praised the press as "guardians of our liberty" and gave his view of the often prickly relationship between the press and government. "The fact is," he said, "if those of us in government and the press sometimes think of ourselves as antagonists, it's only in the context of transitory events, the rush of daily business that can obscure for us a deeper truth—that we are two complementary institutions, each drawing life and strength from the other and that together we hold the sacred trust of democratic government and freedom."

Despite the threatening weather, the famed Reagan luck held in the open-air ceremony. The protective awning that had covered the speakers' platform had been removed earlier in the afternoon when the skies briefly brightened. But the rain that had begun falling as ANPA Chairman and President Alvah H. Chapman Jr. introduced the President shortly before 5 p.m. ended one minute into the Reagan speech. And it held off until only a minute or two after he finished.

Then the downpour began, turning parts of the island into a quagmire. The President, however, already was in his car headed off the island over a construction bridge that links the island with the New Jersey mainland.

For everyone else, the wait for ferryboats to return to Manhattan had just begun. □

Margaret Cenovese

Convention Arrangements Committee Chairman David Laventhol (right) and New York Mayor Edward I. Koch chat before the President's arrival.

At left: Kathy Irwin (left) and Mary Cay Dietz, fiancees of newspaper brokers Owen Van Essen and Lee E. Dirks, respectively, enjoy the scenic ride.

Boarding an ANPA bus at the Waldorf-Astoria bound for departing ferries are the "dean" of former ANPA chairmen, William Dwight, and his wife, Dorothy.

Mr. and Mrs. Robert M. White II of the Mexico (Mo.) Ledger receive umbrellas that Knight-Ridder Inc. distributed to people boarding the ferries.

By the Boatloads, They Came To Ellis Island

For many, Ellis Island in New York's harbor simply had been a place read about in history books or novels. For others, it was the gateway for their ancestors starting a new life in America generations ago.

For everyone on Convention Day One, the 27-acre parcel that has been virtually deserted for the past 33 years again was the site of a historic event: President Ronald Reagan's addressing the ANPA membership on the Association's 100th anniversary.

Although about 200 people were unable to obtain passage when the Secret Service sealed off the island and halted further boat service, some 1,800 newspaper executives, their families and guests were ferried from Battery Park to the island and back.

Photos by Margaret Genovese, Maurice Fliess, Wendy J. Workman and C. David Rambo

The first of three ferries donated by the Circle Line prepares to depart Battery Park, as a queue forms for the next voyage.

The 15-minute boat ride abounds with picturesque views of the Manhattan skyline.

Immediately after coming ashore, visitors are led through metal detectors, and uniformed White House security agents inspect handbags.

The crowd waits under a darkening sky for the President's arrival, while behind them were tents set up for a reception before and after the ceremonies. Ultimately, the tents provided needed shelter from the downpour that came immediately after the President's talk.

Taking refuge under a large umbrella are (from left) Jane Marcil of The Forum, Fargo, N.D., and Mary Ann and Charles S. Rowe of The Free Lance-Star, Fredericksburg, Va.

A U.S. Coast Guard Academy Band member sets a patriotic tone for the event.

Crew members of a fireboat that ended the festivities by shooting jets of red, white and blue water into the air are in an exuberant mood that turned to embarrassment when their vessel became grounded in the Ellis Island boat slip. This delayed the ferries 55 minutes in transporting visitors back to Manhattan.

Nothing comes between us.

Go from pagination terminal to plate with the latest news, fully paginated with graphics. Without time-consuming steps like RC and film processing, pasteup and stripping.

Autologic's APPS-1 system makes up your paper fast, right on the terminal screen. Just click the mouse to electronically dummy, call up the graphics and ads, and flow text. Make last minute changes, and send your page directly to Autologic's laser platesetter.

Your plate is press-ready in minutes, with text and graphics in place. Not only do you save time, you also save on consummables by eliminating material costs such as expensive silver base film.

Quality is also improved by reducing the number of intermediate imaging steps before plate production.

Let us show you how the APPS-1 can help you make the news faster. Contact Autologic, Product Marketing (805) 498-9611.

Revolutionary Digital Transmission Technology for News Photos

PYXYS—UPI's revolutionary new digital photo transmission technology—makes all other photo transmission systems obsolete.

Transmit, edit, archive news photos in minutes—not hours.

PYXYS can transmit six color or black-and-white photos from UPI's Washington headquarters to your newsroom in less than five minutes.

But that's only part of the picture.

The unmatched quality you see in this action sports photo is the same quality as you will see in every photo transmitted to your newsroom by UPI's PYXYS. That's because PYXYS digital technology replaces antiquated analog picture transmission systems—systems which allow wire news photos to lose detail in transmission.

Vibrant action shots in the sharpest possible detail transmitted to your newsroom in minutes on PYXYS—UPI's revolutionary new digital photo transmission system.

Now, the photo that arrives in your newsroom is precisely the same quality as the original. You receive UPI's prize-winning photography and you receive it exactly as it was taken—sharp, clear and without loss of detail from transmission.

Unprecedented reliability, speed and quality—advantages that will put PYXYS first in your newsroom.

If news is your business, inquire about UPI's PYXYS today.

See how you can save money on the news photo service of the future.

Contact your local UPI representative or UPI headquarters in Washington (800) 824-7221.

See Pyxys Demonstrations at APPA-TEC Booth #2318.

DAY TWO—MONDAY
Recalling blessings of liberty
A visit by the First Lady
Controversial drug issues
The need to hire minorities

Newspapers and Liberty Go Hand in Hand

Like the Convention itself, the keynote address of ANPA Chairman and President Alvah H. Chapman Jr. was dramatically different from those of the past.

For this was a Convention with a theme, "The Blessings of Liberty: The Next 100 Years," and at no time was it hammered home more strongly or consistently than in his 14-minute keynote speech—only about a quarter of which was devoted to the usual recounting of Association activities.

Chapman, chairman and chief executive officer of Knight-Ridder Inc., dwelled mostly on the historic relationships between press and governments and stressed "the unique nature of our freedom and the special duty newspaper people have to help exercise and safeguard our constitutional liberties."

The Convention theme, he said, is "worthy of where we are—200 years into our constitutional republic—and who we are—newspaper publishers with the awesome responsibility of providing Americans with the information needed to understand and preserve the constitutional republic and the individual freedoms which underlie it."

Liberty in America is not in jeopardy today, he said, but it is threatened by concerns he labeled "poverty, proximity and posterity."

Although there is more affluence in the United States today, there also is more poverty, he said, and for those in poverty "the blessings of liberty are a dicey proposition at best."

The fact that only 35 percent of the world's population enjoy democratic freedoms, and the proximity to the United States of "one of the world's most brutal dictatorships" (Cuba), constitute another threat, Chapman said. "If self-government, democracy and personal freedoms are lost, most of the people on this planet wouldn't miss them because they haven't had them."

Posterity is a concern, he said, because 1 million immigrants a year are entering the United States, and most are from Third World countries with no history of democratic freedoms. Because of that, and because of the illiteracy problem in this country, he said, "we cannot assume that generations in a changing America will both understand and appreciate the responsibilities of informed citizenship on which the blessings of liberty are founded."

Addressing nuts-and-bolts newspaper issues, Chapman said several ANPA projects accomplished or begun in the past year "have left some sound foundations" for the future. These include:

- A new commitment to increasing minority employment at newspapers
- Raising the literacy project to "equal billing" with the Newspaper in Education program at ANPA Foundation
- A new emphasis on circulation and readership concerns
- Increased ANPA participation in the media-advertising campaign for a "drug-free America"
- Efforts before Congress and the courts "to prevent mistaken notions from becoming laws," particularly in the areas of taxes, telecommunications and advertising bans
- Helping the Audit Bureau of Circulations improve its operations.

Chapman is the first ANPA elected head to serve under the Association's new procedures that limit the term of chairman and president to one year. So this was both his first and his last Convention keynote speech.

The stage was set for his talk by a 15-minute ANPA multimedia presentation highlighting 200 years of life under the U.S. Constitution and 100 years of ANPA and newspapering, ending with a crescendo of music and flashing lights. □

William J. Keating, new AP board chairman

AP Technology, Staffing Advance As Membership Grows

The Associated Press has a new chairman and a membership that includes 1,373 U.S. daily newspapers—161 more than two years ago.

William J. Keating, president of the Detroit Newspaper Agency and a former congressman from Ohio, was elected by the AP Board of Directors to succeed the retiring Frank Batten, chairman of Landmark Communications Inc. of Norfolk, Va. Batten had been AP chairman for five years and a board member for 12. He said AP had replaced a former image of smugness and secrecy with one of service.

Of the recent spurt in membership, President and General Manager Louis D. Boccardi told the AP annual meeting that growth was especially pronounced among smaller papers. "Of the 36 newspapers that came aboard last year," Boccardi said, "34 had circulations of 21,000 or less."

Boccardi announced that this fall the AP will set up a new high-speed graphics network allowing newspapers to receive AP graphics directly into Macintosh computers. The graphics will be delivered in one to three minutes, compared with today's 10-minute LaserPhoto transmissions, he said.

Newspapers that do not have Macintosh computers will continue to receive graphics through the LaserPhoto system.

AP also will introduce an electronic picture system that will deliver a photograph in a minute or less, compared with current 10-minute speed, Boccardi announced. The system will be ready for delivery into newsrooms within a year, he said.

The electronic photo transmission, already installed in AP's offices in New York City and Chicago, allows pictures to be stored in a computer or "electronic darkroom."

Before this storing capability became available, a newspaper wanting a certain picture was required to have its circuits open at the time the picture was transmitted.

In addition, AP this year will be adding at least 15 reporters to state bureaus, Boccardi said.

Members elected two new directors and five incumbents to the AP board. Terms are normally for three years. One new director, David R. Bradley Jr., editor and president of the News-Press & Gazette, St. Joseph, Mo., will serve the remaining two years of the term of Robert C. Achorn, who is retiring as publisher of the Worcester (Mass.) Telegram and Evening Gazette.

Ruth S. Holmberg, publisher of The Chattanooga Times, replaced Batten, who chose not to run for another term.

Re-elected were James K. Batten, president, Knight-Ridder Inc.; Tom Johnson, publisher, Los Angeles Times; J. Stewart Bryan III, publisher, Richmond (Va.) Times-Dispatch and The Richmond News Leader; Joe D. Smith Jr., president, Alexandria (La.) Daily Town Talk; and John O. Emmerich Jr., publisher, The Greenwood (Miss.) Commonwealth. □

Scrutinizing the Press and President Against Iran-Contra Backdrop

On the eve of congressional hearings into the Iran-contra affair, the Associated Press sponsored a discussion on the issue.

Although the session focused on the findings of the presidentially appointed Tower Commission regarding the performance of the President and his National Security Council staff, it branched off at one point into a critical appraisal of the performance of the press.

When AP President and General Manager Louis D. Boccardi asked whether there were any lessons for the press in the matter, political science professor James David Barber responded in the affirmative.

"We're revealing six years or more into this presidency that a President who has continually come on as independent, in charge and factual . . . is none of the above," the Duke University professor said. "Where have we been all that time, and where were we when we chose that President or chose some of these other Presidents in the past who haven't done so well?"

The press should pay less attention to presidential candidates "diddling around in New Hampshire" and more attention to their qualifications for the office, he said. "That's what's important. It's not judging Ronald Reagan as whether he is a good person or a bad person, that's up to St. Peter."

The religious reference was appropriate, moderator Boccardi observed from his seat in St. Bartholomew's Church, site of the discussion on "Aftermath: Conversation on the Tower Commission."

Other participants were former U.S. Sen. Edmund S. Muskie, a member of the Tower Commission; Larry Speakes, former spokesman for the Reagan White House; and W. Clark McFadden, Tower Commission counsel.

Although he disagreed with Barber's character-

C. David Rambo

Analyzing Tower Commission findings are (from left, front row) Barber, Muskie, Boccardi, Speakes and McFadden. To the rear are AP's James F. Tomlinson and outgoing AP Board Chairman Frank Batten.

ization of Reagan, Speakes agreed there is a "basic problem" with the way Presidents are chosen. The problem, he added, has been "exacerbated" by the addition of the "Super Tuesday" primary elections. The public will get only "the briefest glimpse" of the candidates in Iowa and New Hampshire before "Super Tuesday," when two-thirds of nominating convention delegates will be chosen.

"The ball game is all but over at that point," Speakes continued. "The press is not adequate, no matter how many reporters you've got and how many more you will add to your statehouses . . . to give the public a fair assessment of these presidential candidates." Although the media are "struggling mightily" to find a better way of political and campaign coverage, reform of the primary system is necessary, he said.

Muskie concurred that the system for electing Presidents is "lousy." However, he said the press can do a "great deal" by "setting the standard for evaluating candidates."

"I suspect, I hope at least, that after this particular incident (Iran-contra) is behind us that the public will understand the importance of knowing whether or not we are electing a President who can handle the system and manage and govern and build policy that the people can support," he said.

With regard to press coverage of the Tower Commission report, Muskie said: "It is the first time in my whole political life that something with which I was involved was not criticized by somebody." □

First Lady Shows Humor, Grace

Nancy Reagan offered an at-times lighthearted view of her role as first lady in an address at the Associated Press annual luncheon.

With a quip typical of those punctuating her remarks, she brushed off reports of her being "power hungry": "This morning, I had planned to clear up U.S.-Soviet differences on intermediate range nuclear missiles. But I decided to clean out Ronnie's sock drawer instead."

On a more serious note, the first lady said she sees her role as "another means to keep a President from being isolated. I talk to people. They tell me things. They pass along ideas. And sure I tell my husband. And if something is about to become a problem or fall between the cracks, I'm not above calling a staff person and asking about it."

She said her most important role is that of wife. The President is "an individual with human needs" and "a flesh-and-blood person who must deal with the pressures of holding the most powerful position on Earth. . . . I make no apologies for looking out for his personal and political welfare."

She also said she decided to focus attention on "something that really mattered"—drug abuse among young people. She has visited 60 cities in 31 states and seven foreign countries to heighten awareness of the problem.

Regarding the intense press coverage of the first

Nancy Reagan makes no apologies for looking out for her husband's personal and political welfare.

Wendy J. Workman

family, she said some of the stories are "amusing. Some are maddening. Some hurt. What I've learned is that you may never stop being hurt by stories, but you do stop being surprised when they appear."

In a question-and-answer session, Reagan was asked how she rates newspaper and television coverage of her husband's presidency. Almost sheepishly she said it is "sometimes good, sometimes bad." Then she put up her hands and shrugged.

Asked what kind of a person she would like to see succeed her husband, the first lady allowed as how Ronald Reagan will be "a hard act to follow. I'd like him to be someone like my husband, I guess." □

The American Way of Life According to Calvin Trillin

Margaret Crosbie

Trillin says he was responsible for a Buffalo mayoral candidate's slogan: "Never Been Indicted."

Dryly and without once cracking a smile, syndicated columnist Calvin M. Trillin entertained the opening session with "A Humorist's View of America and Americans."

Having traveled around the country for 15 years and reported on his findings for The New Yorker magazine, Trillin said he believes the United States may be broken down into two basic regions: the area that had major league baseball before the Second World War, which he called the "*ancien* United States," and "the expansion team United States."

Under Trillin's method of regionalization, St. Louis is "the last Eastern city . . . the last with European ethnic neighborhoods. It's the last place where the waiter in an Italian restaurant is likely to have a name like 'Vinny' or 'Sal' instead of a name like 'Duane.' If you're in an Italian restaurant with a waiter named 'Duane,' you're in the 'expansion team United States.'"

He also used a St. Louis example in poking fun at slogans of cities, states and politicians. "St. Louis is not the 'Gateway to the West' but the 'Exit from the East,'" he asserted.

A native of Kansas City, Mo., Trillin lamented the fact that his hometown surrendered its motto of "Heart of America" when the admission of Alaska and Hawaii to statehood shifted the geographical center of the United States. Kansas City remains the geographical center, he noted, "when you don't count Alaska and Hawaii, which I never counted and don't intend to." Nonetheless, he said with regret, Kansas City now calls itself the "City of Fountains."

Likewise, he suggested that Oklahoma rethink its all-too-modest motto, "Oklahoma is O.K." And he said he was responsible for a slogan for a mayoral candidate in Buffalo, "'Never Been Indicted.' Until the Ed Meese confirmation hearings, I didn't know anybody could use it to become attorney general."

As the grandson of four immigrants, the columnist observed that people once boasted if their ancestors reached America "on the Mayflower or something. But that was when American history was mainly celebrating many things rather than lamenting the atrocities that we've all committed. . . . Now there's tremendous advantage to being from immigrant stock, because my family had nothing to do with snookering the Indians out of anything. We did not slaughter any buffalos. My family has its faults, but when it comes to rapacious 19th century American capitalism, my family's hands are clean." □

Some Notable Convention Quotes

"'America, The Beautiful' will not have reality until we publishers do our part to insure that 'our alabaster cities gleam . . . undimmed by human tears.'"

—ANPA Chairman and President Alvah H. Chapman Jr.

"The National Security Council system is built to permit (Presidents) to put their own stamp upon our national security. . . . But basically it requires that they take charge. This President did not take charge, in this case. More than that, those under him did not fill the gap created by his failure to take charge."

—Edmund S. Muskie Tower Commission member and former secretary of state

"An eighth-grade Japanese student knows more mathematics than MBAs in the United States."

—Richard D. Lamm former governor of Colorado

"Within 15 years, old age will become a thing of the past. I don't know what will kill people."

—Michael Hooker, chancellor, University of Maryland, Baltimore campus

"Three people will die by tonight from cocaine. . . . Five years ago it was three a month."

—Peter B. Bensinger, former head of the Drug Enforcement Administration

"Make no mistake about it—drug testing in the workplace is investigative. It is search and seizure, as every federal and state court that has considered the issue has held."

—Allan Adler, legal counsel, American Civil Liberties Union

"Did I make a mistake by putting myself in circumstances that could be misconstrued? Of course I did. That goes without saying. Did I do anything immoral? I absolutely did not."

—former Sen. Gary Hart

"I would like to point out that it seems to me the issue is not The Miami Herald, it's Gary Hart's judgment."

—Richard G. Capen Jr., publisher, The Miami Herald

"I have a feeling I'm not going to make any news here today."

—Sen. Robert Dole

"This morning, I had planned to clear up U.S.-Soviet differences on intermediate-range nuclear missiles. But I decided to clean out Ronnie's sock drawer instead."

—Nancy Reagan

"I'd send him to Bulgaria."

—former UN Ambassador Jeane J. Kirkpatrick, on what she would do as President if a member of her administration leaked politically sensitive information to the press

"There's a tremendous advantage to being from immigrant stock, because my family had nothing to do with snookering the Indians out of anything."

—syndicated columnist Calvin M. Trillin

"Ladies and gentlemen, I'm sorry to announce that due to inclement weather, the Ellis Island ferry has been cancelled. Please make other arrangements."

—anonymous person stuck in the tunnel leading to the Ellis Island dock where the ferryboats could not go because the fireboat had run aground

"OK, Italians on the left, Poles on the right."

—another anonymous person in the tunnel

"You can get your 'I Escaped Ellis Island' T-shirts right after the meeting."

—Chapman

The wait for the ferryboats "did give some of us at least the possibility of replicating the experience of some of our ancestors—the 'huddled masses' part."

—David Laventhol, chairman, Convention Arrangements Committee

C. David Kamitsuka

A New York Fire Department fireboat puts on a patriotic demonstration to conclude the Ellis Island ceremonies. But moments later the vessel would run aground in the island's boat slip—delaying Convention-goers from their return to Manhattan.

C. David Kamitsuka

Monte I. Trammer, publisher of The Saratogian of Saratoga Springs, N.Y., and his wife, Hilda, enjoy a private viewing of works at the Metropolitan Museum of Art. The reception was sponsored by The New York Times Co.

Morgan says reports of U.S. drug abuse are overstated, as fellow panelists (from left) Adler, Bensinger and Willard listen.

Experts Debate Merits Of Workplace Drug Testing

Newspaper publishers heard four panelists give sharply contradictory advice about drug testing and drugs in the workplace in a spirited 90-minute debate about alcohol, marijuana, cocaine, crack and other drugs.

Allan Adler, legal counsel for the American Civil Liberties Union, sharply opposed drug testing by employers.

"Make no mistake about it," he said. "Drug testing in the workplace is investigative. It is search and seizure, as every federal and state court that has considered the issue has held.

"The administration's efforts to deputize employees to serve as surrogates for law-enforcement officials, to use techniques that the Constitution and other legal restrictions would not permit . . . is nothing more than criminal law enforcement in disguise as a health and safety campaign."

Adler said he has been involved with five or six people who have lost their jobs because of "preposterous actions" by laboratories and individual testers who did not know what they were doing.

"The landscape is already littered with bodies of people who have been fired because of inappropriate application of drug testing and because of technical failure problems and false positive results," he said.

Richard K. Willard, an assistant U. S. attorney general who drafted the Reagan administration's drug-testing proposals, said private industry, not the government, has led the way in the area of drug testing. "It wasn't the Reagan administration that made The New York Times start drug testing applicants for its employ, or numerous other large and small businesses around the country," he said.

Willard said "drug using employees are a third less productive, have three or four times more on-the-job accidents, and two and a *half* times more absenteeism" than other workers.

Responding to a question about whether crack, a cocaine derivative, is less "seductive" than alcohol, Peter B. Bensinger, former head of the Drug Enforcement Administration, said "if I were a publisher, I would post a written statement" warning employees not to bring drugs to work or to work under the influence of alcohol.

Further, said Bensinger, president of Bensinger DuPont & Associates, Chicago, he would warn employees that any drug-related arrest off-duty may spark further investigation by the company.

Bensinger said the use of marijuana has decreased in this country in recent years, but the marijuana now being smoked by an estimated 18 million persons at least once a month is "six to eight times more powerful than it was 10 years ago."

As for cocaine, Bensinger said, "Three people will die by tonight from (overdose of) cocaine. Five years ago it was three a month."

Bensinger said there are 6 million people using cocaine at least once a month, a 38-percent increase over the past two years. He said the number using "pills" is about stable, and there are 9 to 12 million people in this country with the disease of alcoholism.

On the other hand, the director of the pharmacology department at the City University of New York Medical School said reports of drug abuse in the United States have been largely overstated. Dr. John P. Morgan said that only a small minority of drug (including alcohol) users abuse the practice.

"By most measures of use," said Morgan, "the American problem of drug abuse has significantly diminished in the last few years, although I despair of convincing people of that because of the passion we're feeling and the fear that has been induced about drug use and abuse."

Morgan said it is essential to distinguish between drug use and abuse. He said that most people, as when using alcohol, can consume and not abuse other drugs as well.

In a question-and-answer period, Charles W. Utter, co-publisher of The Westerly (R.I.) Sun, noted alcohol is a drug and asked how many present "right now would like to take a blood alcohol test—and pass it?" □

Minority Hiring: 'We Haven't Really Tried That Hard'

A member of the U.S. Civil Rights Commission suggested steps newspapers can take to increase the "outrageous" 6.56-percent minority employment level in the newsrooms of U.S. dailies.

Newspapers should continue to support efforts to educate and train minorities, including programs aimed at young people who have not yet chosen newspapering as a career, Mary Frances Berry told the session on "Minorities in Our Industry."

Executives also should make sure their papers have and are following an affirmative action plan, she said.

Berry advised them to pay attention not just to hiring but also to promotions—the basis of many discrimination suits. She referred specifically to the recent case in which a federal District Court jury found the New York Daily News discriminated against four black editorial employees by giving them fewer promotions and lower salaries than white journalists with comparable records.

Such suits "should not be necessary," the commissioner said. "One-third of the readership of that paper is black, and if you add Hispanics and Asian Americans, what we are talking about . . . is real insensitivity to clientele."

The session also heard from the heads of two training programs for minorities: Charles A. Martin, president and chief executive officer of the Institute for Journalism Education at the University of California at Berkeley, and William J. Elliott, executive vice president of Leadership Education And Development, or LEAD, of Montclair, N.J.

A trio of newspaper executives responded to the speakers' remarks.

Martin applauded the ANPA Board of Directors for adopting a resolution at its May 2 meeting to expand "plans and strategies that encourage and aid newspapers to recruit, develop, promote and retain minority personnel." He called it a "major move" on ANPA's part. (See story, p. 84.)

Martin said IJE has suggested a "blueprint" for action by the newspaper business. He focused on two parts of the plan—management accountability, and education and development.

Managers must be given training to manage a diverse workforce as well as incentives so they will "feel the need to demonstrate the commitment to equity, parity and diversity," he said.

In the area of education and training, Martin cited several programs for minority high-school students sponsored by IJE and major newspaper companies, calling them "significant models."

Elliott provided information on LEAD, a national program to interest minority high school students in business careers.

In other advice to the newspaper executives on minority personnel practices, Berry of the Civil Rights Commission said if newspapers "make a mistake" in hiring a minority staffer, they should remember that hiring mistakes can happen with almost anybody. "It's not just black folks who turn out not to turn out," she said. "Other people do, too."

She advised the newspaper executives to "supervise people, keep good records" on their employees and "get rid of them if they don't do a good job—whatever color they are."

She said minority reporters provide a different "angle of vision," but she urged that they not be "ghettoized" in their areas of coverage. "Some black reporters say to me on whatever newspaper they are working on (that) they either have to work only on black issues or don't work on any black issues."

Although she said there "probably" will be improvements in the status of minorities in journalism and other professions, Berry said she was not sure the newspaper business will meet the goal set by American Society of Newspaper Editors that U.S. newspaper newsrooms have minority representation proportionate to the population by the turn of the century. "I'm sort of worried about that."

Loren F. Ghiglione, chairman of the industry-wide Task Force on Minorities in the Newspaper Business and a member of the Convention panel of responding newspaper executives, said he was "a little bit optimistic and upbeat about" the minority employment picture.

"No one is putting out a paper so small that there are not minorities who want to work for your paper," said Ghiglione, editor and publisher of The News in Southbridge, Mass. He said three of his paper's nine news staffers are minorities.

The publisher who insists on an active minority-hiring process will wind up with a diverse workforce, he said. "I almost think it is that simple. It's just that we haven't really tried very hard. We haven't connected it with the profitability of our businesses." □

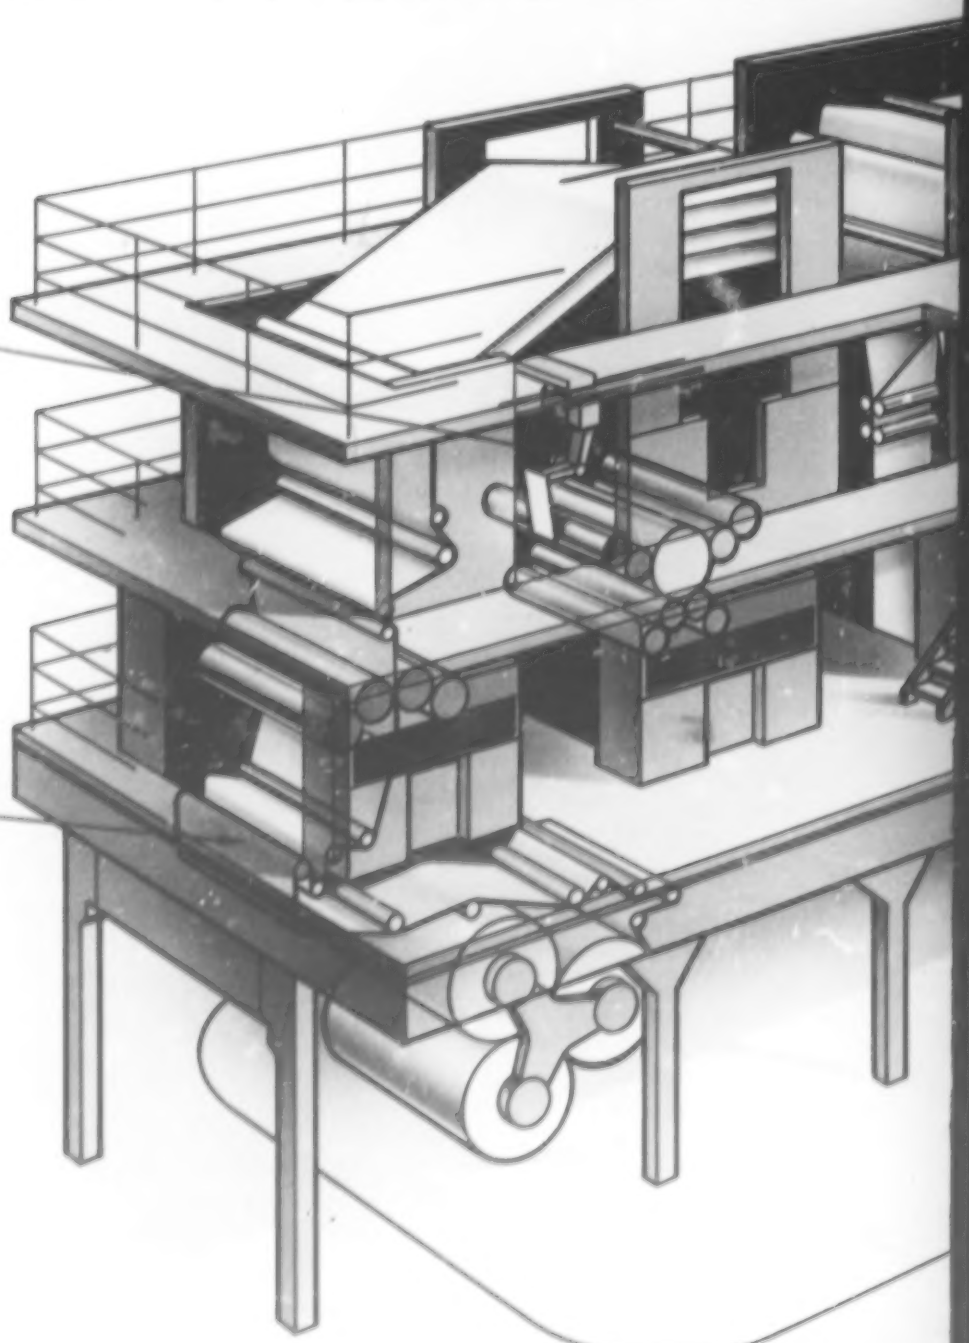
Events make big headlines at the centennial Convention.

Mitsubishi's automated newspaper press system gives you a controlling interest in newspaper productivity.



Robotic plate changer.

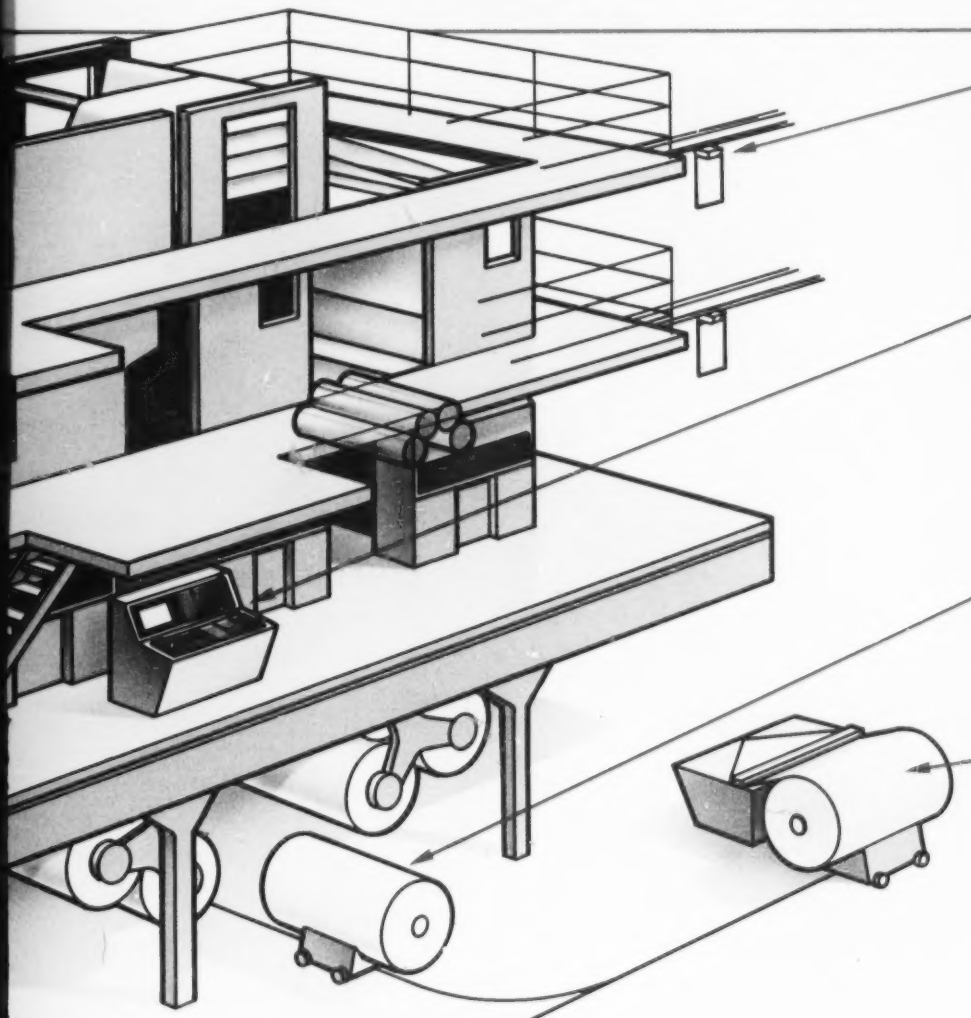
Automatic roll webbing system saves time by threading the web — even through the angle bars.

7899

From roll loading, web threading and plate lockup, to automatic presetting of the ink, folder, and compensator, Mitsubishi's automated newspaper press system gives you the control required to achieve greater, more cost-effective productivity — in every phase of printing — more reliably. With superior print quality. And with easier operation.

And you don't have to buy an entire system to gain a decided advantage. Mitsubishi will work with you, using our automation expertise to streamline your specific production stages and tailor our system to the needs of **your** newspaper.

Stop by our Booth No. 1680 at the Las Vegas ANPA/TEC '87 Exposition, June 6-10, 1987. We'll give you even more reasons to choose a Mitsubishi offset press, as well as our automated press system.



Automatic plate transport system can be used in conjunction with Mitsubishi's **robotic plate changer.** Result: rapid and accurate installation of plates.

Computerized press control system includes: presetting function (ink, folder & compensator); monitoring function (makeready & malfunction); running control, totalizer, productivity report and maintenance functions.

Automatic roll handling system transports rolls from storage and loads them onto machine reels.

Automatic paste pattern preparation contributes to a more efficient splicing operation.

A new standard of quality in newspaper presses.

A peek into the future
Future of Advertising update
What retailers want from newspapers

The Saga of a Candidate On His Way Out

One of the most memorable moments of all ANPA Conventions came when presidential candidate Gary Hart made his first public appearance after The Miami Herald broke the story about his socializing with a Florida model.

Hart's impassioned defense of his conduct was coupled with stinging criticism of the Herald's "misleading and false story that hurt my family and other innocent people and reflected badly on my character."

This prompted a dramatic confrontation with Herald Publisher Richard G. Capen Jr., who rose during the question-and-answer period to rebut Hart's charges. And while Hart was still speaking, Herald Political Editor Tom Fiedler mounted his own counterattack before microphones and cameras outside the Waldorf's Grand Ballroom.

With Hart's early-afternoon speech being televised live by NBC News and Cable News Network, the event gripped the nation as much as it did the more than 2,000 newspaper executives, guests and working press who jammed the room to be eyewitnesses to history. It was the first time in modern presidential politics that a leading candidate had ever been called upon to account for the possibility of an extramarital affair.

Hart admitted making a mistake "by putting myself in circumstances that could be misconstrued," but he denied doing "anything immoral."

Although he told the publishers, "let me assure you that my campaign has just begun," three days later Hart was back on national television to announce his withdrawal from the race. The prospect of stories in The Washington Post linking him to yet another woman helped end the campaign.

Hart's appearance was not without a touch of irony. The Association's chairman and president through the end of the 100th Anniversary Convention, Alvah H. Chapman Jr., presides over the company that owns the Herald, Knight-Ridder Inc. However, by previous arrangement Chapman's ANPA successor, George W. Wilson of the politically significant state of New Hampshire, moderated the luncheon in which Senate Minority Leader Robert Dole became almost a forgotten man.

At left: Hart defends his honor.

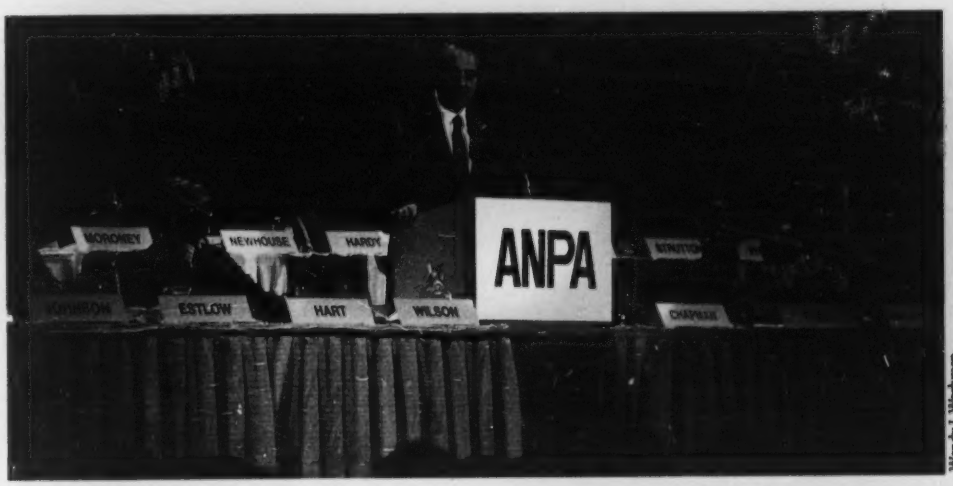
ANPA Director Edward W. Estlow (right) makes a point with fellow Coloradoan Hart just before the luncheon.

Dole makes the trenchant observation, "I have a feeling I'm not going to make any news here today."



Wendy J. Workman

As Hart walked into the room along with other head-table guests, the room began to stir and cameras began to whir. Following the meal, Wilson introduced Hart, who received the customary applause as he stepped to the lectern.

The former two-term Colorado senator and runner-up for the 1984 Democratic presidential nomination announced he would follow through on his intention to use the ANPA forum "to talk about America's future," but only after discussing the events of the previous weekend.

The May 3 story about his spending time May 1 and 2 inside his Washington townhouse with model Donna Rice "was written by reporters who, by their own admission, undertook a spotty surveillance, who reached inaccurate conclusions based on incomplete facts, who, after publishing a false story, now concede they may have gotten it wrong, and who, most outrageously, refused to interview the very people who could have given them the facts before filing their story, which we asked them to do."

He called on the newspaper executives to "ask yourselves some searching questions: about what is right and what is truthful; about the propriety of a newspaper conducting a questionable and inadequate surveillance of one presidential candidate; about whether the urgency of meeting a deadline is subordinate to hearing the truth; and about whether it's right or good journalism to draw an extraordinary conclusion before hearing some rather ordinary facts."

He eventually moved on to a discussion of the economic future of the United States, and probable Republican presidential candidate Dole followed him to the rostrum with the line: "I have a feeling I'm not going to make any news here today." Indeed, Dole's plea for the American people to stand by President Reagan during the Iran-contra hearings received virtually no media attention.

Then came the question-and-answer period that was the first of several showdowns Hart had with journalists before abandoning his campaign. Although the questions from the ANPA audience were not as pointed as the "Have you ever committed adultery?" Hart would soon face, they were sharp, nonetheless. For example, Frank Batten Jr. of The News Enterprise of Elizabethtown, Ky., asked Hart to "give your account of what went on on Friday and Saturday, and tell us, why should we believe you instead of the Miami paper?" Hart referred to statements by the principals involved and added: "At no time did we spend, the woman involved and I, spend an evening together or a night together."

In his remarks from the floor, Herald Publisher Capen said, "I would like to point out that it seems to me the issue is not The Miami Herald; it's Gary Hart's judgment. He's an announced candidate for President of the United States, and he's a man who knows full well that womanizing has been an issue in his past. We stand by the essential correctness of our story."

Capen also said his paper "never speculated about what went on during any of Mr. Hart's meetings with Miss Rice on these different occasions."

But "clearly, at a minimum, there's an appearance of impropriety," said Capen, who added that the thrust of the Herald story was "the integrity and judgment of a man who aspires to be President of the United States."

Capen's two-minute rebuttal over, Wilson said to laughter and applause: "Dick, what is the question?"

Capen: "My question, Mr. Hart, is: How can we assess your judgment given the factors of the past few days?"

Hart: "Well, that's clearly something that each of you will have to do, and more importantly, the American people. And the case is before them, and we'll see what their judgment is."

The tense atmosphere in the ballroom broke when Dole and Hart fielded a closing question about the "rights of children."

Dole cracked: "I think I'm for it."

Hart said: "First of all, given the circumstances, it's a very refreshing question." □

Wilson Succeeds Chapman At Helm of ANPA

George W. Wilson, president of the Concord (N.H.) Monitor, was elected chairman and president of ANPA at the Association's annual business meeting. He became the first executive from a newspaper of less than 25,000 circulation to lead ANPA since 1956-58 when his father-in-law, William Dwight of the Holyoke (Mass.) Transcript-Telegram, headed the Association.

Other officers elected were: Arthur Ochs Sulzberger, chairman of The New York Times Co. and publisher of The New York Times, vice chairman; William H. Cowles 3rd, president and publisher of The Spokesman-Review and the Spokane Chronicle, secretary; and Lloyd G. Schermer, chairman and chief executive officer of Lee Enterprises Inc., treasurer. Under ANPA's procedures, officers serve one-year terms and follow an annual succession to the chairmanship.

Two new directors were elected for two-year terms. They are Antonio Luis Ferre, president and publisher of El Nuevo Dia of San Juan, Puerto Rico, and Richard J. Warren, vice president/editor and publisher of the Bangor (Maine) Daily News.

Re-elected for two-year terms were Donald E. Newhouse of The Star-Ledger, Newark, N.J., and Charles S. Rowe of The Free Lance-Star, Fredericksburg, Va.

Retiring from the Board after completion of their normal tenure were former Chairman and President Richard J.V. Johnson of the Houston Chronicle and Charles E. Meredith III of The Free Press, Quakertown, Pa. Alvah H. Chapman Jr. of Knight-Ridder Inc., the immediate past chairman, will serve one more year on the Board.

ANPA membership decreased by a net of six newspapers since the 1986 Convention, according to the **membership report** presented by Membership Committee Chairman John G. Montgomery of Montgomery Publications Inc., Junction City, Kan. He said membership stood at 1,389.

"From a budget standpoint, last year was certainly a success," reported Cowles in his **treasurer's report**. The Association ended the year with a surplus of $254,880 after putting aside $650,000 for contingencies, he said. Revenue was $12,830,062 and expenses $11,925,182.

The membership voted to renew the Board's usual standby authority to increase the dues formula a maximum of 10 percent. Cowles noted there is "no intention to exercise this authority" at the present time. Over the past 25 years, he said, the Board has exercised this authority only eight times and only in 5-percent increments.

The Association plans to operate "in the black" again this year, said Jerry W. Friedheim in his **executive vice president's report**. Attaining a contingency reserve equal to 90 days of operating expenses had been an ANPA target for nearly 10 years, he said, and reaching that goal in January marked a "milestone" for the Association.

Friedheim also reported that various money-saving programs—including rental-car discounts with Hertz Co. and air-fare discounts with Delta and United airlines—saved member-newspaper executives more than $600,000 last year. □

Session Tapes Available

Cassette tape recordings are available for all Convention sessions except the seminar on "The Constitution: Separation of Powers 1987."

Prices are $9 per cassette or $120 for a full set of 14 tapes. There is a $2 handling charge for the first cassette, plus 50 cents for each additional tape up to a maximum of $5 (with additional charges for tapes shipped to Canada or overseas and for billing). Contact ACTS Inc., 1025 E. Clayton Road, Ballwin, Mo. 63011; (314) 394-0611.

NAB Chairman Frank A. Daniels Jr. presides over the bureau program.

Ad-Revenue Growth Will Depend On Willingness to Change

The Newspaper Advertising Bureau presented an update on its two-year-old Future of Advertising Project as well as its traditional report on the current status of newspaper advertising.

The need for the future was summed up by FOA Steering Committee Chairman Harold W. Andersen, chairman and chief executive officer of the Omaha World-Herald Co., who told the newspaper executives that "we've got to be willing to change some of our established ways of doing things if we are going to make our share of the advertising dollar grow."

The FOA report was structured so as to detail how the project is meeting three major objections voiced about newspapers by national advertisers: "You cost too much," You're too hard to use," and "We're unsure about your value."

Much of the information contained in the update has been previously reported [presstime, Jan. 1987, p. 52; March 1987, p. 54; May 1987, p. 80]. Newly reported developments included:

• **Cost.** The Pricing/Flexibility/Positioning Task Force has commissioned a study on newspaper rate setting by the marketing consulting firm of Moran & Tucker. Task Force Chairman Jerome S. Tilis, president of the Detroit Free Press and vice president of marketing for Knight-Ridder Inc., said, "Their report, when it's finished, isn't going to tell us how to go about setting our rates, either for circulation or for advertising. But it is going to allow us to see what we do in our own individual newspapers against the nationwide pattern of practices, and therefore, it should lead to greater efficiency in the future."

• **Ease of use.** Another task force chairman, Joe D. Smith Jr., said his Standardization Task Force is recommending that the newspaper business standardize policies relating to color advertising, including a lead time of not longer than two days for camera-ready color ads.

Smith, president of the Alexandria (La.) Daily Town Talk, also said the Marketing Data Task Force is working with the International Newspaper Marketing Association to produce a standard market data folder, and it will publish a standard glossary of advertising and technical terms used by newspapers.

• **Value.** Reg Murphy, president and publisher of The Baltimore Sun, said his Readership Task Force this fall will conduct "another major benchmark survey" of adult newspaper reading habits to compare with studies done five and 10 years ago for the Newspaper Readership Project.

Reporting on the activities of other project subgroups, Murphy said the Sales Structure Task Force has set up five sales teams comprised of newspaper sales people and NAB account executives; the Alternate Distribution Task Force is preparing a manual on starting and improving total-market-coverage operations; and the Sales Personnel Task Force will issue a report this summer on compensation, incentives, training and recruitment.

In the NAB report on the state of the newspaper advertising business, NAB President Craig C. Standen identified three trends working in favor of newspapers in their pursuit of national advertising: "regionalization of marketing" as the pendulum swings away from further centralization of advertising management at certain big companies; opening up of new ad categories, of which health care "may be the most striking example;" and more "innovative and creative use of newspapers."

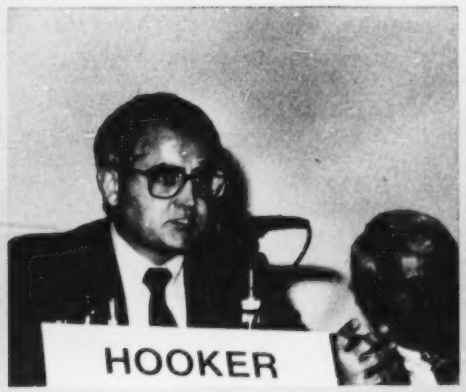
In the retail-advertising realm, NAB Executive Vice President Leo Bogart said advertisers "continue to demand total market penetration at a time when newspapers' circulation to household ratio has continued to decline." The answer, he said, is total market coverage, and 711 newspapers now have some kind of TMC system.

Other trends in the retail area identified by Bogart were increasing use of newspapers for image advertising; retailers' desire for more fashion-related editorial content; more industry-wide sales events like those for frozen foods and home furnishings; and growth of retail conglomerates, which makes it harder for newspapers to reach senior-level managers.

Standen announced that beginning June 1 the bureau is suspending for two years all fees for workshops and seminars conducted by NAB trainers for individual newspaper staffs or advertisers. (Fees ranged from a minimum of $300 to a maximum of $700, depending on the size of the newspaper. Newspapers will continue to pay travel and other expenses.)

Total NAB income for the fiscal year ending June 1 was an estimated $14,838,500, according to NAB Treasurer Richard E. Diamond, publisher of the Staten Island (N.Y.) Advance. Diamond reported that the market value of NAB's permanent reserves was $4,421,621. This, he said, represented 30.7 percent of the year's operating expenses. Since June 1, 1986, 28 new members joined and 26 resigned, with a net increase in annual dues of $9,500.

At the May 3 meeting of the bureau's board of directors, NAB's officers were re-elected for one-year terms. They are: Chairman Frank A. Daniels Jr., president and publisher of The News and Observer and The Raleigh (N.C.) Times; Vice Chairman Robert G. Marbut, president and chief executive officer of Harte-Hanks Communications Inc., San Antonio; Treasurer Diamond; and Secretary and Assistant Treasurer James Hoge, president and publisher of the New York Daily News. □



Margaret Canonge

Hooker (left in left photo) takes a far more optimistic view than fellow panelists Lamm (seated beside him) and Bok (right in right photo), with moderator Fanning.

Futurists' Opposing Views Pose Challenge for Press

Within the next 50 years, said futurist Michael Hooker, all the human problems that historically have beset humanity will be solved.

Cancer, disease, aging, energy and food problems—all will be eliminated, said Hooker, who is the author of several books and chancellor of the Baltimore County campus of the University of Maryland.

The one remaining problem, Hooker said, will be that there will be no problems to solve. This could be the biggest problem of all because problem-solving has been the driving force that has led to all human creativity, he said.

Hooker's optimistic view of the future was not shared by three other panelists who spoke on "The Next 100 Years."

"The real world is not like that," said Freeman Dyson, a physicist at the Institute for Advanced Study, Princeton, N.J. "I do not believe any of the things Mr. Hooker put forth. Problems are one resource not likely to be exhausted."

Dyson drew applause and laughter with his observation that "obviously, the most difficult problem we have is original sin. We all tend to dislike each other." He said civilization often disposed of this problem peacefully in the past by sending people they didn't like somewhere else, as when English convicts and religious dissidents came to colonize America.

The colonization of space is a possible solution to overcrowding and other problems on earth, he said.

Sissela Bok, philosophy professor at Brandeis University in Waltham, Mass., quoted philosopher Immanuel Kant, who predicted in 1793 that wars would become increasingly violent and widespread until there may be one final war—unless mankind acts to forestall it.

Kant advocated "freedom of the pen," Bok said, as a way to prevent that final war. But even in democracies, she said, there are many ways to restrict information. She cited the information leaked to the press by the Reagan administration last year on Libya's supposed plans to mount a terrorist campaign against the United States. This was an example of "disinformation" in which the government was trying to "bypass Congress, bypass the press and bypass the citizens," she said.

In the next century, Bok said, a key ingredient for survival is that the press and the citizenry must work against disinformation tactics and spread knowledge and facts.

Richard D. Lamm, former governor of Colorado and a visiting professor at Dartmouth College in Hanover, N.H., painted a gloomy picture for the United States in the next century unless trends change.

He said the U.S. rate of productivity growth is the lowest of any industrialized nation. "Our students are consistently in the lower one-third of students in the world," he said, adding that the nation has the highest rates of teenage pregnancy and crime of any industrialized country.

The panelists generally agreed that the industrialized nations, situated in the northern hemisphere, will in the future be pitted against the underdeveloped and Third World countries, situated mainly in the southern hemisphere.

Before turning the program over to the panelists, Theodore J. Gordon, former chief engineer for McDonnell-Douglas Corp. and now chairman of The Futures Group in Glastonbury, Conn., set the tone for the session by noting that the earth's population, now 4.6 billion, will expand to 6 billion by the year 2000 and grow to somewhere between 9 and 14 billion by 2050.

Biotechnology will breed new plants and animals to feed this population, Gordon said.

Katherine W. Fanning, editor of The Christian Science Monitor, moderator of the panel discussion, concluded: "The greatest challenge (for the news media) is to make sense out of all this." □

Thomas G. Clancy of the San Francisco Newspaper Agency poses a question to store executives.

Retailers Air Their Gripes About Advertising in Newspapers

Retail advertisers found plenty of fault with newspapers as an advertising medium and presented a variety of suggestions for change at the general session on the "Future of Advertising," which featured a panel of four major retailers and a retail stock analyst.

The retailers said they want newspapers that come up to the graphics and typographical standards of the advertising they carry, are better organized and easier to read, cost less to advertise in, know all about retailers' customers, and can deliver a particular ad to a particular customer.

On the matter of appearance of newspapers, "we almost are more critical of your end product than you are," said Gordon R. Cooke, executive vice president/sales promotion of Bloomingdale's. "We look for you to enhance your own production of your newspapers in terms of graphics and in terms of typography."

Bloomingdale's spends "a tremendous amount of money" designing ads "that are going to look spectacular," Cooke said. It is "amazing," he added, to see the difference in appearance of the same ads in The New York Times and in a newspaper in another market. He said newspapers lag "severely behind" what advertisers are doing in design.

Lee M. Dubow, senior vice president/corporate sales promotion, Belk Stores, echoed Cooke's remarks. "The kind of environment you are giving us to present our story, I think, is way out of date. I think newspapers are way back in the '20s some time."

Newspapers, he said, "have to get yourselves organized."

The "tremendous amount of clutter" in newspapers is one reason stores have flocked to preprinted inserts, he said. "They don't know how to use your pages, and as a result, they are creating their own." Four years ago, his Charlotte, N.C.-based chain of stores used only four inserts a year; this year, they will use 44. "That's a big diversion of ROP dollars," he said.

The head of Saks Fifth Avenue said newspapers have to understand the retail world. Speciality stores such as his need to build relationships with individual customers, while "general" retailers are trying to lure traffic into their stores.

Saks is able to identify its customers and create a profile of would-be customers. It communicates with them through direct mail, said Melvin Jacobs, Saks' chairman and chief executive officer. "We don't today to my knowledge have ability to do that with newspapers."

Although Saks has been very happy with an "image" advertising campaign it has run in newspapers for the past year and a half, Jacobs said the company makes no other use of newspapers because of their inability to target specific customers.

Stephen L. Pistner, chairman and chief executive officer of McCrory Corp., suggested newspa-

pers make better use of their research departments to find out who retailers' customers are.

"If you do your jobs well, your research departments will know more about those customers than we do and recommend the manner in which we will get to those customers."

Pistner also said that "our customers, in the main, are not newspaper readers." He urged the newspaper executives to make their papers "more readable" by presenting synopses of the news and putting longer stories in the back of the paper.

On the topic of color in newspaper advertising, one of the retailers said that although some stores have used spot color to dramatize their ads, color is not an advantage in selling products unless it is on high-gloss paper.

"I think you have to ask retailers, 'Does it help sell the product?'" added Bloomingdale's Cooke. "It definitely does when we use your magazine sections, especially when we are looking for direct response. But for the most part, we would just as soon have a black-and-white fashion ad."

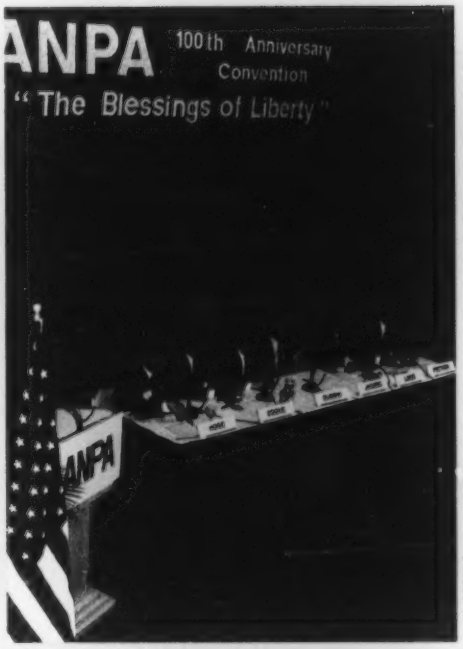
The issue of rates also came in for discussion by several of the retailers. Saks' Jacobs said retailers have to "lower our cost of marketing and do more marketing, rather than cut back" the amount of advertising as newspapers raise their rates.

Bloomingdale's Cooke said retailers often cannot generate the increases in sales to cover newspaper rate increases. "You are not giving us more circulation. Your rates are going up higher than inflation, and if we need to use you as our major partner, we have to find ways to be more effective with that circulation you're giving us."

Despite the drawbacks, Cooke added that Bloomingdale's is "definitely not drifting away from the medium."

Among the trends identified as having an effect on newspapers is that of consolidation of companies in the retail trade—a trend that Walter F. Loeb, principal/senior retail analyst with Morgan, Stanley & Co. of New York City, predicted will continue.

Pistner of McCrory Corp. said this means newspapers will have "fewer customers by far in the next few years." They will have to determine how to serve these "fewer, significantly larger masters."



C. David Rambo

Retailers warn newspapers they may lose some advertising if they do not pay more heed to design, content, research, circulation and competitive pricing.

Dubow suggested that with mergers of newspapers as well as retail stores, newspapers will have to find "whole new ways of selling us." Newspapers may set up ad-representative firms to call on retailers' headquarters, as they now do with national advertisers.

Asked about Florida's new sales tax on advertising, Dubow predicted it will spread to other states and will be a "nightmare" to collect. "It's going to make you people tax collectors," he said.

The retailers were bullish on the outlook for retail sales in 1987. However, Saks' Jacobs cautioned that customers will be a "little surprised when they see prices this fall." □

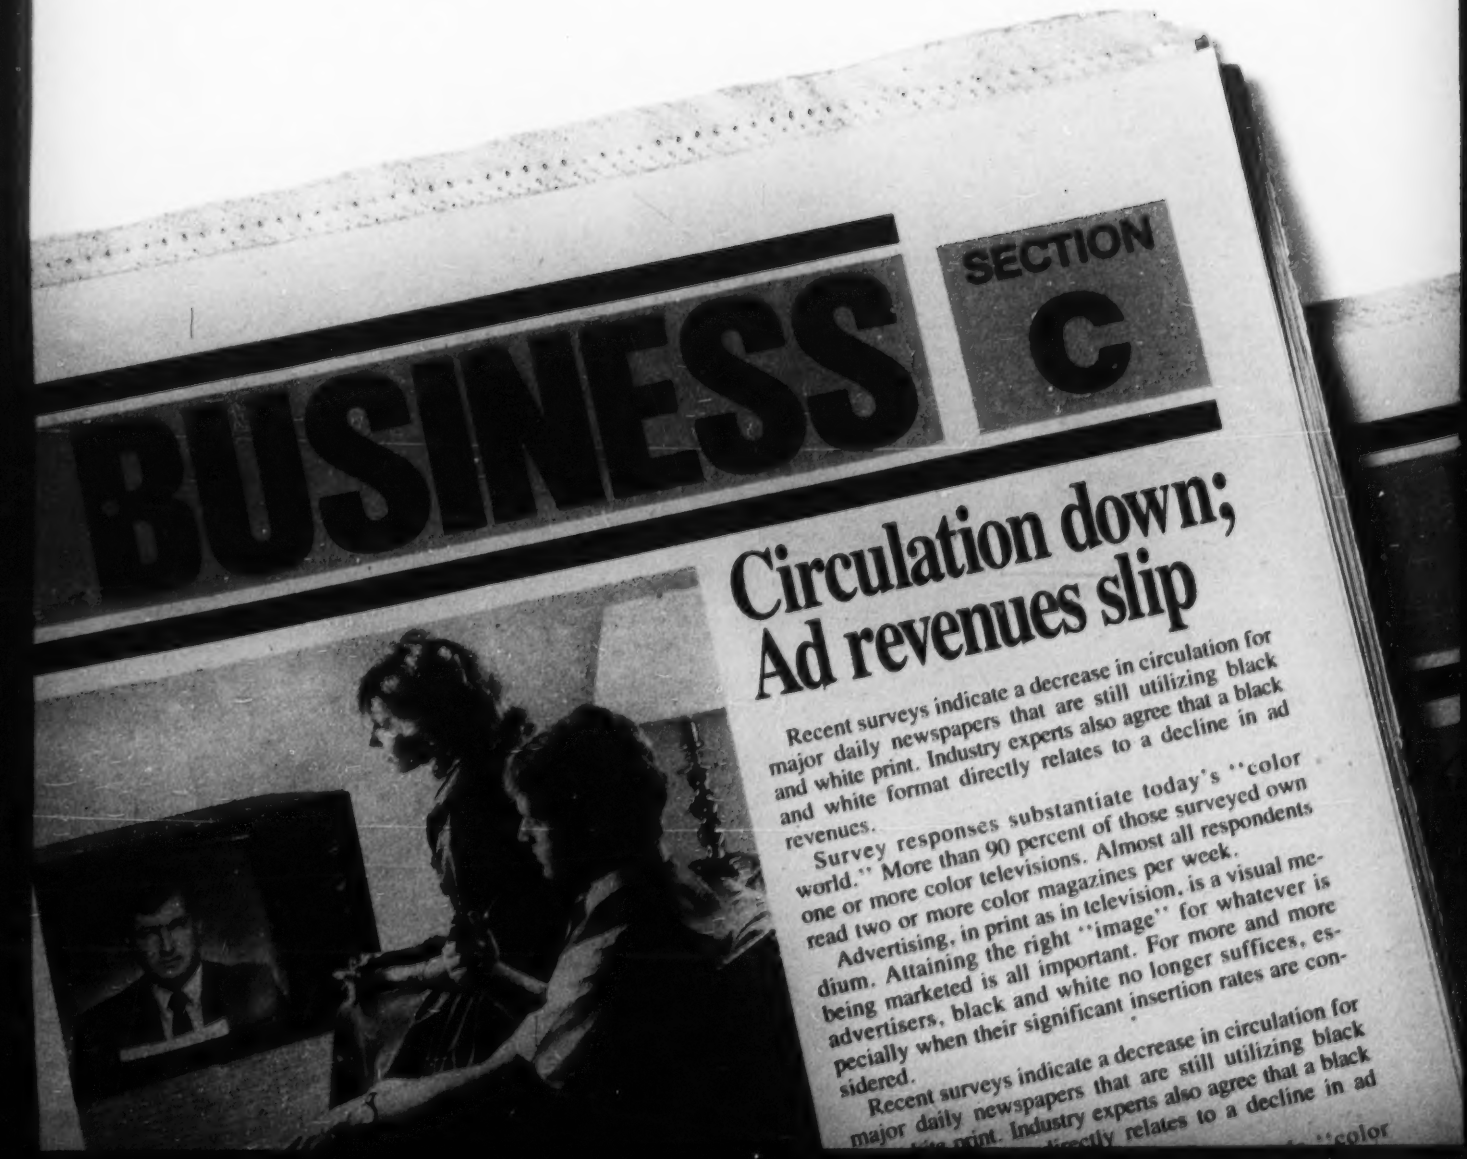
What used to be black and white and read all over...



BUSINESS
SECTION
C
Circulation down;
Ad revenues slip
Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black and white print. Industry experts also agree that a black and white format directly relates to a decline in ad revenues.
Survey responses substantiate today's "color world." More than 90 percent of those surveyed own one or more color televisions. Almost all respondents read two or more color magazines per week.
Advertising, in print as in television, is a visual medium. Attaining the right "image" for whatever is being marketed is all important. For more and more advertisers, black and white no longer suffices, especially when their significant insertion rates are considered.
Recent surveys indicate a decrease in circulation for major daily newspapers that are still utilizing black

USINESS
Circulation up;
Ad revenues rebound
The use of color is paying big dividends for newspaper publishers across the nation.
Recent industry surveys indicate a marked rise in readership and advertising revenues in major daily newspapers that have switched from black and white to color.
The use of new color technology has served a two-fold purpose; heightening reader interest through a more visually appealing format and reducing the time gap between news deadline and press time. Now, even the video camera can replace the traditional still photo camera in the field.
The move to color also results in significant cost savings. Although situations vary, the return on investment is quite favorable, with the new equipment paying for itself in three years, on average.
The use of color is paying big dividends for news-

DAY FOUR—WEDNESDAY
Jimmy Carter on Nicaragua
The Separation of Powers

Former President Carter Offers Opposing View on Contras

As the Convention's closing speaker, former President Jimmy Carter briefed the publishers about "life after the White House."

And, responding to questions from the floor, he denounced the same Nicaraguan policy that his successor had defended in the opening ceremonies on Ellis Island three days earlier.

He also offered some advice to the publishers but overall gave newspapers high marks for their performance.

Asked how the press can better perform its responsibilities, Carter said he regrets the frivolous nature of matters that tend to make front pages.

"There are so many deep and significant issues that are not adequately covered by most newspapers in this country," he said, including nuclear arms control, human rights, peace in the Middle East and the extent to which the Soviet Union has changed under Mikhail Gorbachev. "These are the kinds of questions that very seldom are adequately addressed in the news media."

However, he concluded his appearance by saying, "I think in general the press deserves congratulations and gratitude instead of condemnation or sincere criticism."

In answering the question about U.S. policy in Nicaragua, Carter called U.S. financing of contra forces "counterproductive and illegal under international standards and perhaps even against our own nation's . . . policies."

Urging a negotiated settlement between the Sandinista government and the contra rebels, he said "total freedom of the press" should be a component of any agreement.

The closing of the opposition newspaper La Prensa was "a terrible mistake by the Sandinistas—a crime against their own people, a violation of human rights," he said.

In describing his life as a former President, Carter noted that he and his wife, Rosalynn, have written three books—two by him, one by her. Now they're about to publish a joint volume on how to prolong life by following good personal habits and how to make the most of the rest of one's life.

"We've been married 40 years," Carter joked, "and (the joint writing project was) the most unpleasant experience we've ever had. . . . We thought for a long time the last chapter would be about our divorce.

"I write very rapidly—I can write a chapter in a couple of days. Rosalynn writes very slowly, sometimes taking a week to produce one or two paragraphs. I present my chapter to Rosalynn; she looks at it as a rough draft. When she delivers her writing to me, she's just come down off Mount Sinai; God has delivered to her the exact words and text and meaning."

At the end of his presentation, Carter was given a 40-second ovation. □

Margaret Genovese

"I think in general the press deserves congratulations and gratitude instead of condemnation or sincere criticism."

Constitution Is Fodder for Debate

A panel of leaders from the public and private sectors devoted three hours to a discussion of a hypothetical case that tested "The Constitution: Separation of Powers."

Funded by a $35,000 grant from The Hearst Corp., the event was conducted under the auspices of Fred W. Friendly, director of Columbia University Seminars on Media and Society.

The 18-member panel included journalists, lawyers, a federal judge, a U.S. senator, two U.S. representatives, and former heads of the departments of State and Justice, the CIA and the U.S. delegation to the United Nations.

At left: ANPA Directors at the closing lunch listen to Gannett Co.'s John J. Curley discuss next year's Convention in Honolulu.

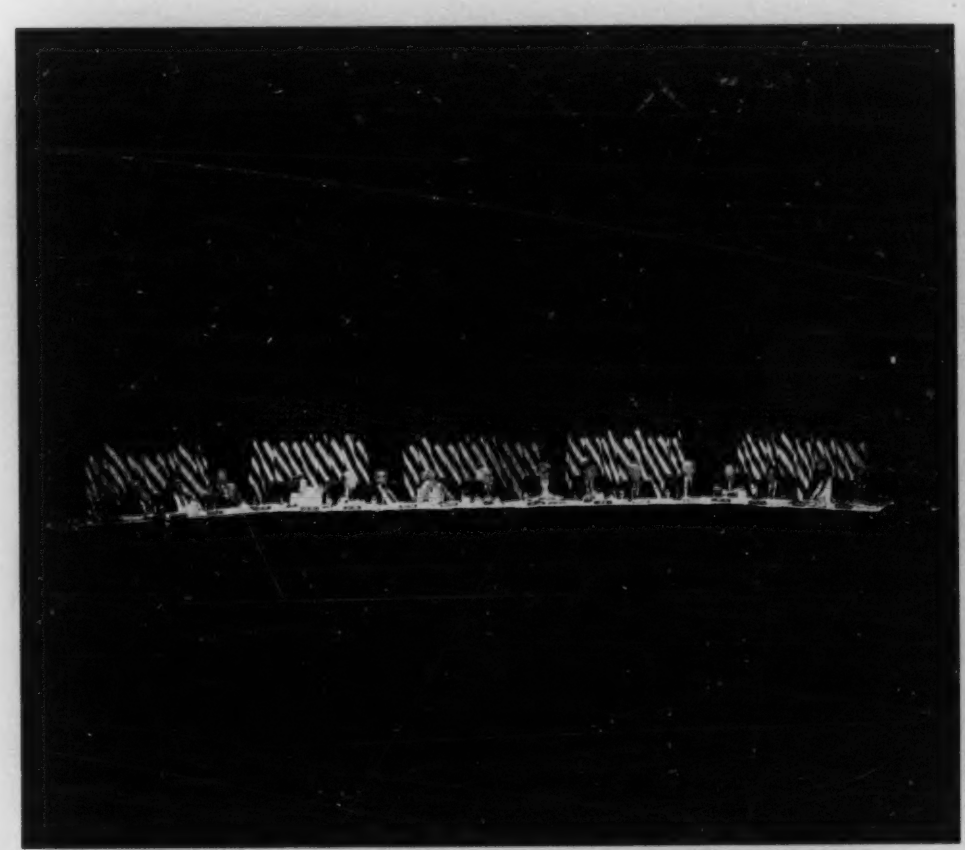
Photo by C. David Rambo

Before a large crowd in the Grand Ballroom, discussion was led first by Arthur R. Miller and then by Charles R. Nesson, both of the Harvard Law School. Much of it centered on legal issues regarding an American President's options in handling a politically sensitive arms-sale request from an ally. There also was argument on use of a special prosecutor—a private lawyer who may be called in to examine an incident involving the possibility of illegal action by a government official.

But there also were matters pertaining directly to the press.

Moderator Miller set up this scenario: Suppose someone close to the President has leaked word that the government is considering selling helicopter gunships to an ally that is strategically located near the Soviet Union and is also experiencing

Arthur R. Miller (far right) sets the scene: A small country in a sensitive part of the world wants to buy armed helicopters from the United States. What is the role of the President? Congress? The press?



Wendy J. Workman

Frank A. Bennack Jr. of The Hearst Corp. introduces seminar program.

domestic unrest. An account shows up in what Miller called "the you-know-what paper." A Cabinet officer who in fact did not release any information flunks a lie-detector test and is strongly suspected of being the source of the report.

If asked, should the newspaper tell the President the suspect is wrongly accused?

Helen Thomas, White House correspondent of United Press International, said she would "tell the President he's not my source and that's where I'd stop."

ABC News Correspondent Barbara Walters said she would reveal on the air that the person in question was not the leaker because of the newsworthiness of the government's wrongly accusing someone. "Why not report" it? Walters asked. Otherwise, "you're a news organization withholding news."

Walters later changed her mind, however, saying she would want the wrongly accused official to be interviewed on the air about the situation.

Syndicated columnist William Safire of The New York Times said he would not divulge such information because it would set a bad precedent. It could lead to requests from other people to get them off the hook, too. "It's a trap. The moment will come when someone will call and ask you to lie for them."

Benjamin C. Bradlee, executive editor of The Washington Post, said he, too, would not reveal the source, prompting moderator Miller to ask, "You don't make pacts with the devil?" "Yes, I do, occasionally," was Bradlee's quick reply to the delight of the early-morning crowd.

Jack Nelson, Washington bureau chief of the Los Angeles Times, said he would neither confirm nor deny the identity of the source because it would help the President track down the leaker.

Discussion also touched on the relationship between special prosecutors and the press. Both parties vigorously strive to gather information on the matter being investigated. But Leon Silverman, who was special prosecutor in the case against former Labor Secretary Raymond Donovan, said the press "does not have to be your partner in the prosecution or the investigation."

In fact, Silverman said, part of his job in dealing with the press "is trying to keep the savage beasts at bay."

There was one point that drew no dissent. It was that no matter how hard government officials try, they usually cannot keep information from the public indefinitely.

"A secret is very hard to keep in our society for very long," said Rep. Dante B. Fascell (D-Fla.).

Panelists observed that secrecy is harder to maintain as the number of officials privy to the facts grows. □

Convention Sidelights

Massive Press Attention

Helping out in the ANPA press room was Norma Graziano, wife of former middleweight boxing champ Rocky Graziano. It was the busiest press room she'd worked during her 13 years with the New York Convention & Visitors Bureau. "I think it had something to do with Senator Hart," she said in what qualified as a heavyweight understatement.

The press headquarters processed credentials for 373 members of the working press—of whom 269 registered on the Convention's third day, when Hart spoke.

The overall total did not include members of the Washington press corps who accompanied President Reagan to Ellis Island.

Convention Speeches Available from ANPA's Public Affairs Department

Sunday, May 3

Ceremonies on Ellis Island

- **Comments and Prayer, the Rev. Billy Graham** (comments not delivered because of impending rain)
- **Address by President Ronald Reagan**

Monday, May 4

ANPA Keynote Breakfast

- **Keynote address by ANPA Chairman and President Alvah H. Chapman Jr.,** chairman and chief executive officer, Knight-Ridder Inc., Miami

Associated Press Annual Meeting

- **Remarks of Frank Batten,** chairman of the AP Board of Directors and chairman of the board, Landmark Communications Inc., Norfolk, Va.
- **Remarks of Louis D. Boccardi,** AP president and general manager

Associated Press Annual Luncheon

- **Address by First Lady Nancy Reagan**

Tuesday, May 5

General Session

Newspaper Advertising Bureau

- **Overview and Sales Outlook, by NAB President Craig C. Standen and Executive Vice President Leo Bogart**
- **Report on the Future of Advertising Project by FOA Committee Chairman Harold W. Andersen,** chairman and chief executive officer of the Omaha World-Herald Co., and **Task Force chairmen Reg Murphy,** president and publisher of The Baltimore Sun, **Joe D. Smith Jr.,** president of the Alexandria (La.) Daily Town Talk, and **Jerome S. Tilis,** president of the Detroit Free Press

ANPA Luncheon

- **Remarks of former Sen. Gary Hart (D-Colo.)**
- **Remarks of Sen. Robert Dole (R-Kansas)**

Historic Visit for Hizzoner

Believe it or not, the trip to Ellis Island was a first for none other than New York City Mayor Edward I. Koch. But then again, there aren't any voters residing there.

Value-packed Convention

The $225 registration fee returns to the attendee about $15,000 in "hosting," considering the program, transportation, continental breakfasts, functions sponsored by newspaper companies and suppliers, etc., according to ANPA Senior Vice President Thomas C. Fichter.

Among the latter events were a brunch at Macy's, a reception at The Metropolitan Museum of Art, a gala at Carnegie Hall, a Broadway show, and receptions at Ellis Island, the South Street Seaport and the Waldorf-Astoria.

A Blissful Run

In what might be considered a preliminary to their trip together down the aisle later this summer, Owen Van Essen and Kathy Irwin, who are engaged to be married, captured first-place honors in **presstime's** Convention Fun Run. Van Essen, vice president of Lee Dirks & Associates in Birmingham, Mich., ran the two-mile course along Park Avenue in 11 minutes, 4 seconds. Irwin's women's best time was 11:31.

Tale of the Tapes

The session on "The Next 100 years" was the most sought-after Convention tape recording, according to Cheryl J. Rowland of ACTS Inc., which taped most of the proceedings. Other best-selling tapes were those of the Newspaper Advertising Bureau's session and the Associated Press meeting with its discussion of the Tower Commission Report. "The famous people didn't sell at all," Rowland said.

Videocassette Available

The multimedia presentation, "Freedom and Information: The Blessings of Liberty," shown at the Convention will be made available in videocassette form provided there is sufficient interest to justify the cost of reproduction.

The presentation—portraying the change and progress in the United States and the part newspapers have played in that growth—can be used by newspapers in promotional campaigns in their communities.

Price of the videocassette would be $100 each. A pull-out order form is included in this issue. □

Wendy J. Workman

Clement C. Winke Jr., president and publisher of the Boca Raton (Fla.) News, and his wife, Lori, pause in front of the Convention hotel to take in the sights of Park Avenue.

Literacy: A Meaningful Relationship Between People and Power

While America celebrates the bicentennial of the signing of the United States Constitution, one in three American adults may be unable to read the Bill of Rights.

An estimated 60 million Americans—more than the number who voted for President Reagan in 1984—are unable to fully participate in democracy because they are illiterate or semiliterate.

In October 1986, Jonathan Kozol authored a report on adult illiteracy commissioned by Cox Newspapers. The report* graphically outlines the growing dangers of illiteracy and presents specific recommendations on how newspapers can lead the fight for a more literate America.

Cox newspapers across the nation are searching for innovative solutions to local literacy problems. The power needed to participate in democracy is the power of the written word.

*"Where Stands The Republic/ Illiteracy: A Warning and a Challenge to the Nation's Press" by Jonathan Kozol. For a copy, contact Corporate Communications, Cox Enterprises, Inc., 1400 Lake Hearn Drive, Atlanta, Georgia 30319.

TAKING THE 'CORRECT'

In a break from the past, many newspapers now own up to their reporting and editing errors promptly, routinely

BY GENE GOLTZ
presstime staff writer

"A man who accidentally pushes you off the sidewalk into a muddy gutter will at least beg your pardon. But the newspaper which has pushed you into the gutter, rolled you in filth, even given you a kick or two in the ribs, will not only refrain from apologizing for its rudeness, but, if it pays any further attention to you at all, will usually jeer at you and make you the butt of the spectators, thus adding injury to insult."

—Fred Newton Scott, journalism teacher of the University of Michigan, quoted in a 1925 book, *The Conscience of the Newspaper*

There was a time in newspapering when corrections rarely caused an editor problems—because the editor wouldn't run them.

If an editor did grudgingly consent to rectify some horrendous error in a published story, one favorite trick was to have a reporter write a flattering feature, with flattering photo, of the offended party. It might even come to pass that the follow-up story would actually correct the previous error by sneaking in the correct fact, but that was by no means a mandatory part of the exercise.

And if an editor really could not avoid an outright correction, it most likely would appear in the classified section—and in agate type.

"I absolutely remember those days," says Arthur C. Nauman, former general assignment reporter and now ombudsman for The Sacramento Bee.

That was then. This is now: Corrections are nearly as commonplace in newspapers as the weather "ear"; many papers anchor corrections columns on the same page every day, adding to their prominence.

Newspapers' interest in setting the record straight dates from the late 1960s and early '70s, Nauman says, recalling: "You couldn't attend an editor's conference (then) without seeing a seminar on how to handle corrections. There was an eternal debate on handling corrections."

His analysis squares with research conducted for ANPA in 1973 by Professor Keith P. Sanders of the University of Missouri. Sanders found that events in the late '60s such as the shootings at Kent State University, violence at the Democratic National Convention in Chicago and urban riots stirred public criticism of the media.

As a result of the criticism, "Many newspapers have undertaken rigorous examinations of their performance," Sanders wrote. He found, in a nationwide survey of 200 newspaper editors, that 52 percent of the 135 respondents had instituted a formal system of accountability, such as a standing corrections column, ombudsmen or accuracy checks. (See story, p. 68.)

In the most recent study on newspapers' correction policies, released in February by the Gannett Center for Media Studies at Columbia University, all 12 newspapers surveyed reported having a systematic way to correct their errors. Research director D. Charles Whitney, associate professor of communications at the University of Illinois, found that most of those papers run corrections in a regular spot—typically, pages 2 or 3.

The survey participants, equally divided between large and small newspapers, gave mixed responses on whether they divulge sources of errors and on whether their correction items include an apology.

Overall, the survey, titled "Begging Your Pardon," served to confirm the belief that corrections are no longer a rare breed. As Whitney wrote: "Most recent commentary has suggested that more newspapers are correcting more errors than they once did, and editors of eight of the 12 papers we studied

APPROACH TO MISTAKES

agreed that their papers are running more corrections than they did five years ago."

(Whitney and his research colleagues, Eric Goldstein and Andrew Borinstein, both of Columbia University, noted the scarcity of studies on corrections: "The literature on newspaper corrections systems is remarkably sparse. There is no recent study of corrections policies at representative U.S. papers, what they correct, when and how.")

Eighteen editors, ombudsmen and academics randomly selected and interviewed by **presstime** confirm that most newspapers run corrections more willingly than in past years.

"Yes, I think that's changed a lot," says Robert E. Rhodes, executive editor of the Corpus Christi Caller and Times and president of the Associated Press Managing Editors Association.

Like Nauman of Sacramento, Rhodes traces the emergence of regular corrections columns to the '60s and '70s. "We began to be the target of a lot of criticism. A lot of editors got religion about that time."

WHO'S AT FAULT? There was one eyebrow-raiser in Whitney's research for the Gannett Center: that more errors were committed by copy editors than by the reporters who wrote the stories.

However, the editors interviewed by **presstime** overwhelmingly mentioned reporters, not editors, when they talked about errors, as if the term "reporter's error" was one word.

Salvatore J. Micciche, an assistant executive editor of The Boston Globe, compiled a list of Globe errors in 1982 while serving as the newspaper's ombudsman. He determined that the source most frequently was indeed reporter error. The Globe has continued an annual survey of errors since then and found that 18 percent are attributable to faulty editing.

Most editors interviewed agree that it is a good practice to tell the reading public who made the error. At the same time, many editors could think of instances where giving the source of the error caused trouble or would have if disclosed.

The Worcester (Mass.) Telegram and Evening Gazette normally do not disclose the source of the error, says Kenneth J. Botty, vice president and executive editor.

If a source gave the wrong information, the theory is that the newspaper easily enough could have—and probably should have—double-checked the facts, Botty says. "If a little old lady who is doing public relations for some group makes an error, we choose not to embarrass her."

There are other delicate situations. "In the case of editing errors, we usually choose not to tell the public where we screwed up," he says. "But if a reporter was correct and the copy desk fouled it up, we will on occasion mention where the error occurred." The reason is to preserve a reporter's credibility with sources and contacts.

Brian J. Cooper, executive editor of the Dubuque (Iowa) Telegraph-Herald, cites an example where a clarification was necessary to avoid further friction between a reporter and a news source, even though no error had been made.

The paper carried a news story about contract negotiations during a strike of Deere & Co. Before the union's ratification vote, the paper disclosed details of the proposed contract settlement, citing "sources"

Many papers anchor corrections on the same page every day, adding to their prominence.

inside the company.

Union members thought this implied that someone from the company's negotiating team had leaked the information. The employees were angry because there had been an agreement by both sides not to disclose the data.

To soothe hard feelings, the next day the newspaper printed a front-page clarification. It said none of the individuals on either side of the negotiating table had leaked the information—that it had been obtained elsewhere.

WHEN TO CORRECT. When Executive Editor Norman Isaacs helped establish the first newspaper ombudsman in 1967 at The Courier-Journal and The Louisville Times, he said: "Let us adopt the principle that the readers are entitled to have the record set straight in every case where the facts have gone astray."

Surveys and interviews indicate that "When in doubt, correct it" is a rule commonly followed by many newspapers today. Yet some editors question whether every single minor mistake should be corrected. Many say no.

A certain number of mistakes are just too trivial to be corrected, says Botty of Worcester. He cites a hypothetical story where a reporter might mention a canoe in a story. If a reader should call in with the objection that the boat was actually a dugout, Botty says he likely would not run a correction.

John Thomas, managing editor of the Corpus Christi Caller, recalls a story his

newspaper had run about high school clubs, not identified in the story, that had furnished beer to minors. One club with a past history of sponsoring beer parties felt it had been alluded to, and an officer of the club demanded a retraction.

Thomas told the person no error had been committed and dissuaded him from insisting on a follow-up story or correction. "If we start publicizing this," Thomas told the club official, "there's going to be more attention centered on your club than you'll ever want."

Another example comes from Joseph Laitin, ombudsman of The Washington Post. The Post on Jan. 25 ran a picture whose cutline read, in part, ". . . a scene from Oliver North's Vietnam movie, 'Platoon.'" Of course, it wasn't Lt. Col. Oliver North, a central figure in the Iran-contra controversy, who made the movie; it was author/director Oliver Stone.

Laitin says no correction was made because a copy editor had caught the mistake rather early in the press run. It is not known how many original copies reached the public, but no one called in to complain, the Post ombudsman says.

"When in doubt, correct it" is a rule commonly followed by many newspapers. Yet some editors question whether every single minor mistake should be corrected.

A more celebrated instance of a non-correction occurred in 1984 and involved not the public but rather two of the bigger names in the newspaper business—Washington Post Executive Editor Benjamin C. Bradlee and Allen H. Neuharth, chairman of Gannett Co.

In its September issue that year, the Washingtonian magazine published an exchange of letters between the two in which Neuharth wrote Bradlee complaining about a business story in the Post that said an analyst had recommended against buying Gannett stock. Neuharth said the story was a "misrepresentation" of the analyst's recommendation and also incorrectly quoted Gannett's closing stock price for the day.

Neuharth said, however, his letter was not a request for a retraction, correction or clarification. "Your clarification column already threatens to become the most rapidly growing section of your newspaper, and I do not wish to add to that burden," Neuharth wrote.

Bradlee replied that Neuharth was "simply wrong" about the analyst's recommendation, and he added in a postscript: "We did have one error. The stock did close at 40, up an eighth." □

Accuracy Checks Can Help Prevent Errors

What can newspapers do to keep mistakes to a minimum?

At least one daily and one weekly go to the extreme of checking stories with sources *before* publication [presstime, March 1986, p. 40].

A larger number—but still a vast minority of all newspapers published—seek to keep reporters on their toes by conducting so-called "accuracy checks"—contacting some of the people named in stories *after* their publication.

Robert E. Rhodes, executive editor of the Corpus Christi Caller and Times and president of the Associated Press Managing Editors Association, studied accuracy checks and found there were some obstacles to overcome to make them work.

"Papers that installed them had to overcome some initial suspicion" on the part of reporters, Rhodes says.

He notes that the checks were not made with people regularly in the news, like the police chief or the governor, because they know whom to call when they want to complain.

The individual who gets checked, Rhodes says, is the "'Joe Six-Pack' who finds himself in the news for the first time" after an automobile accident or some other event.

Newspapers that conduct accuracy checks use several different methods:

- Some send clippings to story subjects, asking for comments.
- Others send out preprinted forms asking such questions as whether the stories were fair and whether names, addresses and other facts were correct.
- Still others have an editor or the ombudsman make the checks.

An example of the latter is William Sunderland, assistant to the executive editor of the San Jose Mercury News. He is in charge of corrections and complaints, a job that includes sending out accuracy letters.

Every six months, says Sunderland, "I go through the paper, generally pick a batch of stories, and select everybody named in the story." He sends a letter to those people asking a series of questions: Was the story fair and accurate? Was your name spelled right? Were quotations correct? If not, why not? Was anything else wrong with the story?

"At least 50 or 60 percent (of the people checked) don't quibble about anything," reports Sunderland.

In the case of a story that is said to contain errors, the editor checks with the reporter. And if need be, Sunderland says, the paper runs a correction.

When does a good idea become better?

. . . when Custom-Bilt and web printers combine to use the Ad-A-Card format in newspaper inserts, or direct mail applications to make them more effective and highly productive.
Charles Communications did just that . . . and so can you!

WITH AD-A-CARD – ADD MORE CUSTOMERS . . .

Charles Communications, Long Island City, NY., recently installed Custom-Bilt Ad-A-Card machines on its eight-unit Harris M-1000 presses. The equipment was purchased for Product Movers inserts, a division of Charles. This capability has already attracted new customers, company execs say. Pictured are (left to right): Steven Bortner, executive vice president; Ken Bortner, vice chairman; and Jack Wark, plant supervisor.

Why do they have to show things like this in the newspaper?

© 1986 Knight-Ridder, Inc.

Yes, this is a grisly picture.

But in a glance, readers understood the enormity of what happened to the White City. No amount of words could equal this image and those that came with it.

It began on November 14, 1985.

Colombia's long-dormant Nevada del Ruiz volcano erupted. Photographers Carol Guzy and Michel duCille of Knight-Ridder's Miami Herald were dispatched to the Colombian town of Armero.

It was known as the White City because of its extensive cotton and rice crops. Now a brown tidal wave of mud, ash, melted snow and rocks had cascaded down the slopes.

Armero was no more.

To get to the scene, Guzy and duCille, along with two Miami Herald reporters, rode for five hours over twisting, fog-covered roads. Then, when the roads ended, they faced a five-mile walk. As they approached Armero, the mud was hip-deep.

Carnage and corpses surrounded them. Throughout the area, the roar of the eruption had been replaced by the quiet of dying.

Only 20 percent of the town's 28,000 inhabitants had survived.

Guzy and duCille sent back gut-wrenching pictures. They knew they'd be painful to print. But from a human perspective, they'd captured the truest pictures of the trauma and the tragedy of Armero. DuCille recalls, "I was shooting close-up shots of a dead baby, and all the time thinking, 'My God, this could be my son.' They were about the same age."

The Herald's pictures and stories about the devastation in Armero created an immediate, compassionate reaction in South Florida. Thousands of Herald readers brought food, clothing and medical supplies to local fire stations. Eventually, twelve truckloads of relief supplies were sent to Colombia.

Carol Guzy and Michel duCille won the 1986 Pulitzer Prize for Spot News Photography.

The Miami Herald had sent two reporters and two photographers 1,500 miles to get the story. A chartered jet had to be used to get the pictures back to Miami before deadline. In all, it was a herculean feat.

By comparison, no other news organization's coverage came close to the Herald's.

But The Miami Herald is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 28 daily newspapers.

SEIZE ABSOLUTE CONTROL WITH FINCOR'S NEW DIGITAL DRIVES

Digital control means absolute control. Our three phase microprocessor based drive is specifically designed to provide higher accuracy, higher reliability and absolute repeatability...at economical prices.

Startup is fast and sure. A 3-button keypad permits fast and simple programming of all drive functions. Digital settings of these functions eliminate troublesome adjusting pots and set parameters never drift.

Status of critical functions is continuously monitored by LED's and a visual multi-element display allows monitoring more than 100 operating parameters.

As a diagnostic tool, the new Fincor digital controllers provide instant access to critical data. They also feature first fault annunciating capabilities which means you can find and fix problems fast.

with other drives, personal computers or your mainframe. This enables critical drive parameters to be shared, stored, displayed, printed or changed from a remote location.

Both Fincor Series 3160 nonregenerative and 3260 regenerative controllers are available in ratings of 5 through 1,000 HP.

Constance Casey

To learn how one person became a crackerjack book editor, read on

BY MARY A. ANDERSON
pressTime staff writer

Shortly after Constance Casey signed on with the San Jose Mercury News to start a book section in 1983, she found that she had something less than clout with East Coast publishing houses.

"I couldn't get (a review copy of) Norman Mailer's *Tough Guys Don't Dance* to save my life," says Casey, who eventually went to a bookstore and paid for it.

Soon enough, Casey made her name—and her newspaper's—known to book publishers. In 1984, she won a position on the board of the prestigious National Book Critics Circle, whose annual awards make careers.

"Where I had previously called up and been shunned, now people say, 'Oh, yes.' Now I'm on the 'A list' for galleys," she says.

Casey, once so daunted by the prospect of an English major in college that she chose another course of study, is making her mark on the national literary scene.

"She's an absolutely engaging person who, by sheer force of personality, has made the San Jose Mercury News known in the New York book world, and that's very, very hard to do for a paper outside of a major city," says Nina King, book editor of Newsday in Long Island, N.Y., and president of the National Book Critics Circle.

That personality also makes her "one of the most persuasive people I know on the (NBCC) board of directors when we're debating our book award choices every year," King says. "At times, I think she's turned obscure books into serious contenders by her advocacy."

Fellow board member Joel Conarroe, president of the John Simon Guggenheim Foundation, calls Casey an "elegant and witty presence" and "a rare combination of sophistication, good sense and kind of an irrepressible good humor," in contrast to some of her "prickly" eastern counterparts.

When Casey talks about books, it is with a sense of discovery.

"If there's a Higher Power, if there's a mission, that a book editor has, it's to find books that are extremely good. When you find one, it's news."

The four to six-page Sunday section Casey single-handedly produces "is regarded on the (West) Coast as being one of the best book sections," says John F. Baker, editor of Publishers Weekly.

She also writes a regular column and prepares other features for the section—that is, when she is not opening 100 jiffy bags a day when books flood in during the peak publishing months of March, April, September and October.

As if that were not enough, Casey, 41, who is also the mother of two young sons, listens to Books on Tape during her 114-mile round-trip commute. Except on Friday, the "reading day" she wrested from her editors, she drives to her job in San Jose from the Victorian home she shares with her medical-researcher husband in San Francisco's Haight-Ashbury district.

As for many book editors, Casey's automatic stature in literary circles sometimes can bring her professional and personal lives too close for comfort.

Next year, her elder brother, novelist John Casey, publishes his latest work, a trilogy. "I don't know what I'm going to do. I think I'll find a reviewer who doesn't know him and doesn't know me, and put in a box" stating the relationship between author and book editor, she says. "But if it's a pan, it's going to be a hard decision."

They and three other Casey siblings grew up in Washington, D.C. Their late father, Joseph Casey, was a Democratic congressman from Massachusetts during the New Deal years. Their mother, a Democratic Party activist, still resides in Washington, D.C.

After earning a bachelor's degree in American studies from Barnard College, she worked for one and one-half years for Congressional Quarterly magazine. In 1970, she and her husband moved to San Francisco for his career. It was there that her lifelong passion for reading and writing set her upon a new career path. Because of the prominence gained through free-lance writing and reviews in the San Francisco Review of Books, her name was the first on many lips when the Mercury News sought in 1983 to expand its Sunday book page.

A distinguished book review had become a competitive necessity, says Mercury News Executive Editor Robert D. Ingle, because well-educated San Jose had become one of the best book markets in the country, now ranking as the nation's fifth or sixth largest.

Even though the budget only allowed for a part-time book editor for the first two years, Ingle says Casey "came in and literally organized things from the ground up and began recruiting reviewers."

"She had to put her chin out there and put us on the map, and I think she has done a remarkably good job at that," he says.

"California is an extremely rich area to recruit reviewers from," Casey says. "Right now, I'm trying to find some hitherto unused talent in California." She acknowledges, however, that some of her favorite reviewers are from the East and other regions.

Casey also manages to write a regular column—"an enormous achievement, when you are putting a section together," says Rebecca Sinkler, deputy book editor at The New York Times.

And, not surprisingly, she has some book ideas of her own. She has two collections of index cards "that might be two different novels," probably mysteries.

What would Casey recommend for the busy newspaper executive with time for perhaps one or two books on vacation?

In fiction, it would be the same two books she's pushed for the past 15 years: *Mrs. Bridge* by Evan Connell, "almost the perfect book," about a Kansas marriage; or *The Wife of Martin Guerre* by Janet Lewis, "another masterpiece."

Her non-fiction picks are *The Making of the Atomic Bomb* by Richard Rhodes and *The Fatal Shore* by Robert Hughes. The latter she calls "an amazing book. It has an awful lot of flogging in it." She says, only partly in jest, that the book would show executives "what management techniques not to follow. . . . Whipping people does not get you what you want." □

GOSS *Newspaper Products* *CT50* **RTP**

WHEN LESS MEANS MORE.

Less waste per splice and fewer rolls per run mean more salable copies. Which is what you get from the Goss CT50 microprocessor-controlled reel-tension-paster.

And with the Goss CT50, a unique constant-tension running-belt system reduces linting and assures better registration. A diagnostic fault code

display makes trouble-shooting fast and easy. And the exclusive AutoSlack feature simplifies webbing.

The CT50, for rolls up to 50", and the CT45, for 45" rolls, are available with the Goss Colorliner™, Flexoliner™ and Headliner Offset™ presses.

For more information, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. 312/656-8600.

The Press Is in Danger Of Manipulation When It Quotes Anonymous Sources

BY RICHARD SCOTT MOWRER

Whatever happened to "who"? Journalists used to be expected to point out who, what, when, where and why in their stories. Now, with increasing frequency, they are attributing their information to unidentified sources. Why aren't they named? Just who are they?

Richard Scott Mowrer

Time was when the current practice of printing statements by people willing, often eager, to disclose something on condition of anonymity would have been unacceptable. With a few exceptions, journalistic standards would not have permitted it.

This is no longer true. Major newspapers today seemingly have no qualms about quoting people who shun accountability for what they say.

The trend gained momentum in the early 1980s. At first, journalists evidently felt a bit uncomfortable about citing anonymous sources. They felt constrained to explain why they didn't name names. So, in the course of two days in November 1981, readers of The New York Times were treated to these phrases:

"Several State Department officials, who spoke only on the condition that they not be identified. . . . A senior Administration official who also refused to speak for attribution. . . . A State Department official who refused to be identified. . . . An official at Toyota, who refused to be identified. . . . The envoys, Asian and Western, who would not allow their names to be used. . . . According to officials who asked not to be identified. . . . High officials in both the State and Defense departments who spoke on the understanding that they would not be named. . . . Senior participants in the administration's deliberation who also spoke on the basis that their names not be used. . . . Several people close to the situation, all speaking only on condition that their names not be used. . . ."

This made for bumpy reading. Since then the going has been easier because, more and more, the justification for not naming the individuals cited is being dropped. An Aug. 8, 1985, dispatch from Washington in The New York Times featured a cascade of unnamed "officials" and "sources"—15 in all. Smooth reading, perhaps, but certainly cause for raised eyebrows.

Preserving anonymity cannot be outlawed entirely. There are legitimate cases in which a source has good and valid reasons for wishing to keep his or her identity secret, and a good reporter will recognize them and act accordingly.

But the exception has become the rule, and the implications are alarming. By accepting a trade-off—a story in return for the promise of anonymity—the media risk being used by those who, for whatever reason, seek to influence public opinion.

Unquestioning acceptance of source anonymity by the press is a boon for politicians and bureaucrats who seek to manipulate the news. They leak what they want, withhold what they want and aren't accountable. They can make accusations, destroy careers and remain hidden behind the cloak of anonymity. One has to wonder about their motives. The public, meanwhile, is denied the ability to judge the value of the source.

The media, too, can be hurt. Last Aug. 25, The Wall Street Journal published a front-page story to the effect that the United States and Libya were on a collision course, and another bombing of the North African nation was in the offing. The story cited sources on 34 occasions but identified none by name. The report turned out to be a dud, leading to charges that it had been planted as part of a disinformation operation.

The lesson to be learned is clear: Information provided to the media on condition of anonymity should be suspect from the start. The proferred disclosures should be noted and confirmation sought elsewhere, even if this takes more time and work. There is a lot to be said for the dictum, largely ignored today: Check it out. As a journalism professor told The Wall Street Journal: "Suspect everything. If your mother tells you she loves you, check it out."

Weird as it may seem, there are spokesmen who seek anonymity, possibly just to be in tune with the times. Thus, according to The New York Times of July 18, 1983, "a spokesman for Newsweek, who asked not to be identified, said (George Will's) column would continue in that publication."

The Times of Sept. 27, 1982, disclosed that "today an Administration spokesman, who asked not to be identified, said the number of people estimated to have died in the massacre (in the Shatila and Sabra refugee camps in Beirut) was 'now around 600.'"

Then there's the case of the two unidentified officials, one in Washington, the other in Greece, slugging it out in anonymity. The Times of July 4, 1984, reported from Athens: "Unidentified officials of the Reagan administration made the assertion (that Greece was lax in fighting terrorism) in press briefings last week. The Greek official, who himself asked not to be identified . . . denied the assertions."

Fittingly, the correspondent who filed the dispatch wasn't identified, either: The story carried no byline. □

Mowrer, a newspaper reporter and free-lance foreign correspondent from 1934 until 1976, lives in Chocorua, N.H. This article appeared previously in The Globe and Mail of Toronto and in the Manchester (N.H.) Union-Leader.

Some people just can't seem to let a good thing stand.

Take the Staggers Rail Act of 1980—one of the most successful pieces of legislation in history.

A group called Consumers United for Rail Equity (C.U.R.E.)—backed primarily by the coal and utilities industries—wants to take an ax to the Staggers Act.

They don't say that, of course. They say they want to "perfect" the act..."reform" it..."fine-tune" it.

But if you read the legislation they have proposed, you will quickly see that, in critical areas, they want to reimpose the same stifling regulation—and more—that almost destroyed the railroads.

Never mind that most railroad customers—87 percent of those questioned in a recent survey—are happy with the Staggers Act and don't want it changed. Never mind the observable fact that the partial deregulation provided by the Act brought the railroads back from the brink of disaster, resulting in efficiencies and improved service for all who use rail.

Never mind, even, that the freedom to set rates and make contracts with less regulatory interference did not result in massive rate increases.

Many rates—coal and grain rates in particular—have gone down in recent years.

The interests represented by C.U.R.E. think they can use federal and state governments to lower their rates still further.

That's the real story behind C.U.R.E. But like anything else, there's no free lunch.

If C.U.R.E. succeeds, other shippers and the public as a whole will pay the price. In higher rates. Declining service. And, ultimately, in a railroad industry back on the brink of collapse.

To us that goes far beyond pruning and fine-tuning. And if you're a journalist covering this story, you'll find the facts for leaving Staggers intact are much more powerful than C.U.R.E.'s assertions for chopping it to bits.

To get facts, write Media Information, Association of American Railroads, 50 F St., NW, Washington, DC 20001, Dept. 712. Or if you're against a deadline, call (202) 639-2555.

Electronic
Newspaper Publishing.
Bite Size.
The electronic publishing revolution is here, but boy– is it expensive!
You probably have a good idea what the major dailies are spending for the features they get in their big editorial and classified systems.
Now Camex gives you a way to bring all of these features into your operation without taking a second mortgage.
You can get them in affordable, bite-size installments–on networked PC's that add up to a powerful editorial and classified system.
Our display ad and full page laser output systems will fit right in when you're ready for them.
And on the way to your complete pagination system, you'll always have integrated, compatible components supported by *one* established newspaper system supplier.
This is the opportunity you've been waiting for.
Find out what the world leader in display systems has done for editorial and classified–especially for the smaller daily. At ANPA, Booth 1012.

How to improve your paper's circulation

Improving your paper's circulation in your *reelroom* has been our business for over thirty-five years.

The Jervis B. Webb Company was one of the first companies to apply material handling technology to newsprint roll handling. Our systems currently operate in newspaper publishing facilities across the U.S. and Canada, transporting newsprint rolls from receiving docks to presses in the most timely, efficient manner possible.

Our success in newsprint roll handling stems from an in-depth working knowledge of newspaper production and an ability to offer the widest range of alternatives to satisfy production requirements. We can design single-source systems incorporating a wide range of Webb products, including Towveyor® floor conveyors, Prontow® Automatic Guided Vehicles, appropriate control systems and Webb-Triax® Automated Storage and Retrieval Systems. Webb engineers design each system with the material handling products necessary to handle the demands of the facility it serves.

Implementing the right newsprint roll handling system may be the first step towards achieving the efficiency and quality you need to increase your readership. Contact a Webb representative for a free brochure on the latest newsprint roll handling techniques and see what we can do to improve your paper's circulation.

COURTS

Arbitration of libel cases explored

Three University of Iowa professors have started interviewing parties in libel cases for participation in a nationwide experiment to resolve libel suits outside the courts and without financial awards.

It's all part of the school's two-year Libel Research Project, which, supported by a $158,000 grant from the John and Mary R. Markle Foundation, seeks to redress grievances by arbitration in 30 or more cases that otherwise would be litigated seriously [**presstime**, April 1986, p. 38].

In a three-year study, the trio of professors—two in journalism, one in law—reviewed hundreds of cases between 1974 and 1984, interviewing possible plaintiffs, media defendants and lawyers.

The professors concluded that libel litigation is often unsatisfactory to both plaintiffs and defendants because it is costly and time-consuming, and frequently does not address a plaintiff's key concern: the alleged falsity of a published or broadcast statement.

"There had been lots of speculation about how reform of libel law—to focus on the accuracy issue—would work," said Gilbert Cranberg, professor of journalism at Iowa and one of the three involved in the research. "We felt the best way to resolve some of these questions is to try it out."

Parties may choose to go to a settlement conference, but cases that have not been settled will proceed to an arbitration hearing, ultimately resolving the cases within two or three months, Cranberg said.

The American Arbitration Association will administer the program, providing neutral individuals to hear the disputes and to issue a finding on the questions of reputational harm and the truth or falsity of challenged statements.

The most likely remedy is some form of publication of the arbitrator's finding, but the outcome is open, Cranberg said.

The Iowa professors will select the cases from those brought to their attention by the parties involved, libel insurers or other sources.

To take part in the program, both parties must sign a submission agreement to abide by the decision of the arbitrator—waiving the right to litigation and appeal—and to forgo monetary damages. □

LEGISLATION

ANPA opposes decree change

ANPA opposes a Justice Department recommendation to remove entirely the information-services restriction imposed in the AT&T consent decree, a Senate panel was told April 30.

"There have been no changes in the market that would justify this sweeping reversal of policy by the department, just three years after divestiture," said Robert M. Johnson, then vice chairman and now chairman of the ANPA Telecommunications Committee.

Testifying before the Judiciary Committee's Subcommittee on Antitrust, Monopolies and Business Rights, Johnson reiterated ANPA's position that owners of monopoly telephone transmission facilities should not be allowed to own or control the information that flows over those facilities. Johnson is president and publisher of Newsday, Long Island, N.Y.

Subsequently, on May 22, ANPA filed comments with U.S. District Judge Harold H. Greene restating its opposition to lifting the information-services restriction.

It added, however, that the BOCs can help facilitate the developing electronic publishing industry by making improvements in local exchange services that might include some "low-level" or "mid-level" information services. It asked Greene to consider requests for waivers or clarification of the restriction on a case-by-case basis where the BOC "can show that the service does not involve any control over or interest in information content, is subject to effective safeguards, and is necessary to improve network service" [**presstime**, April 1987, p. 45]. □

ANPA to file friend-of-court briefs

ANPA will file friend-of-the-court briefs in two cases the U.S. Supreme Court has accepted for review and one in which review is sought:

- *Hustler Magazine v. Falwell*, in which Hustler magazine publisher Larry Flynt is appealing a $200,000 jury award to evangelist Jerry Falwell for "intentional infliction of emotional distress." ANPA will join Richmond (Va.) Newspapers and The Free Lance-Star Publishing Co. of Fredericksburg, Va. [**presstime**, April 1987, p. 40] in supporting Flynt's case, which the Supreme Court has accepted for review.
- *City of Lakewood v. Plain Dealer Publishing Co.*, in which the court will hear an appeal filed by Lakewood, Ohio, concerning its newsrack ordinance.

A lower court ruling had struck down part of the city's ordinance governing permits, design and insurance for newsracks but had upheld Lakewood's ban on newsracks in residentially zoned areas.

- *Lee Enterprises v. Sible*, in which the media company is seeking reversal of a libel decision by the Montana Supreme Court. That court reversed a trial jury's unanimous finding that the Lee-owned Missoulian of Missoula had not displayed actual malice in reporting a sheriff's investigation into alleged theft by a deputy. □

LEGISLATIVE NOTES

• ANPA will study the possibility of seeking a **newsprint exemption** from a proposed duty of up to 1 percent on all imported goods.

The import tax is contained in trade legislation (S 490) approved May 7 by the Senate Finance Committee.

• Under a bill approved May 15 by the Senate Committee on Labor and Human Resources, businesses would have to give up to 180 days' **advance notice of a planned shutdown or layoff** if 50 or more workers are affected.

S 538 requires notice be given to employee representatives, the state dislocated-worker unit and the chief local elected official. A companion bill is before a House committee.

• A bill that would require the federal government to identify and notify workers at risk of **occupational disease** passed the House Education and Labor Committee May 19.

HR 162 would establish a risk assessment board within the Department of Health and Human Services to identify categories of workers at risk so they could be notified.

Gannett asks rehearing of new ruling in New Mexican case

Gannett Co. is seeking a rehearing of a case in which a federal appellate court ruled April 29 that control of The New Mexican in Santa Fe be returned to former owner Robert M. McKinney.

In the latest round of a nine-year battle over control of the paper, a three-judge panel of the 9th U.S. Circuit Court of Appeals upheld a lower court's decision that control should revert to McKinney for the remaining eight years of his initial 10-year contract with Gannett.

Thomas Chapple, attorney for Gannett, said he expected a decision by the end of May on the company's petition for the full appeals court to rehear the case. If its request is denied, the company will seek reconsideration from the three-judge panel that originally upheld the lower court.

McKinney sold the newspaper to Gannett in February 1976, under a 10-year agreement that he would remain in charge of business, operations, news and editorial policies for the first five years and remain in charge of news and editorial policies for the second five [**presstime**, Jan. 1984, p. 35].

McKinney filed suit two years after the sale, alleging that Gannett violated the terms of the contract. In 1980, a jury found that Gannett had breached the contract but dismissed a fraud claim. □

Court urges 'finer tuning' in gag cases

The full 1st U.S. Circuit Court of Appeals has issued a cautionary "addendum" to an earlier decision clearing The Providence Journal and its executive editor of a criminal contempt-of-court conviction for violating a gag order.

It affirmed the Dec. 31 ruling of the same court's three-judge panel. But the *en banc* opinion said that some "finer tuning" would "minimize the disharmony between respect for court orders and respect for free speech."

The court expanded upon the panel's warning that publishers should seek an emergency appeal of any gag order before violating it.

The panel had held that a lower court's order prohibiting the Journal from publishing information about a reputed organized crime figure was "transparently invalid" [**presstime**, March 1987, p. 48], and therefore the newspaper could not be held in contempt for violating it. □

C. David Rambo

Reviewing rate package are (from left) ANPA's Tonda F. Rush, ANPA Director Donald E. Newhouse, Maguire and ANPA Postal Committee Chairman Sandra Hardy.

Third-class hit hardest in proposed rate package

The cost of third-class mail will go up significantly if the Postal Rate Commission approves new rates recommended by the U.S. Postal Service.

More modest increases are proposed for second- and first-class.

In the rate-increase request announced May 5, the USPS Board of Governors proposed increasing by 22 percent the category used for most shared-mail pieces: carrier-route presort.

However, other increases for categories used by third-class mail in direct competition with newspapers would increase much more. The category allowing mailers as little presorting as possible would go up 32 percent. An intermediate category called the "five-digit" sort would increase 31 percent.

The Association in late May was analyzing the proposed new rates, which came in a nearly foot-high bundle of documents weighing about 16 pounds. But Vice President/General Counsel W. Terry Maguire said, "We think the proposal of the Postal Service is headed in the right direction with respect to many of the third-class rates."

Maguire expressed concern that the proposal for a first-class stamp costing a quarter is "still too high in the context of fair postal rates." ANPA long has contended that third-class rates are too low in relation to first-class, maintaining that if third-class were higher, first-class could be lower.

ANPA will intervene in the rate case to protect its postal interests, Maguire said.

Third-class mailers took sharp exception to the new rate package. "The third-class increases seem intolerably high," said Herb E. Gertz, chairman of the Third Class Mail Association and vice president of Donnelley Marketing in Chicago.

Among proposals for second-class are three increases and a decrease. The increases are: from 9.1 cents to 10 cents per-pound in-county; from 3.1-4.9 cents to 3.3-5.5 cents per piece in-county; and from 3.8-12.3 cents to 5.7-15.1 cents per piece outside of the county of publication. The decrease proposed is from 11.8-28.9 cents to 10.3-23.7 cents per pound outside of the county.

The governors said higher rates are needed because of increasing revenue needs of the Postal Service [**presstime**, May 1987, p. 62]. □

Change benefits TMC

Many newspapers no longer must quarterfold their total-market-coverage publications in order to use advantageous third-class rates, thanks to a change in size restrictions that took effect May 31.

Pieces mailed in the third-class carrier-route-presort category now may be no larger than 11 3/4 by 14 by 3/4 inches; the previous limit was 11 1/2 by 13 1/2 by 3/4 inches, causing many papers to have to quarterfold before putting copies into the mailstream [**presstime**, May 1987, p. 62]. □

ANPA supports Pacific Bell plan

The Federal Communications Commission should allow Pacific Bell to experiment with a new transmission technology without requiring full compliance with FCC rules guarding against anticompetitive behavior, ANPA said in comments filed with the commission May 15.

But in separate comments filed the same day, the Association said the agency should not approve a request by Bell Atlantic for permission to offer a voice message storage service until the company fully complies with anticompetitive safeguards.

Bell Atlantic is one of the seven regional Bell operating companies. Pacific Bell is a subsidiary of another BOC, Pacific Telesis. They are subject to regulation by the FCC to ensure that they do not restrain competition or improperly subsidize new computer-related ventures with revenues from their basic telephone service.

Pacific Bell's request relates to its proposed one-year trial of a technology called "Victoria" that would allow telephone lines to be used for access to electronic services at the same time they are being used for regular voice calls.

On March 20, the FCC staff said Pacific Bell must comply with the commission's rules and establish separate accounting and administrative procedures for the equipment to be placed in customers' homes during the test.

ANPA supported Pacific Bell's appeal of that decision. In its comments, the Association said it "believes that the possibility of anticompetitive harm from such a limited test is relatively small compared to the potential technological benefits that may result."

On the other hand, ANPA said there are several shortcomings in the plan filed by Bell Atlantic, including failure to propose ways to minimize costs for potential competitors offering similar services. □

Report mailed

"Connections II—New Tools for Managing Telecommunications," a report summarizing an ANPA seminar on managing telephone systems, will be mailed this month to member newspapers. □

JOIN THE GREATS

It's not only that more U.S. newspapers use VU/TEXT as their electronic library service than all others combined—it's that more of the best newspapers use us. Join them and we'll do the same fast, cost-efficient job for you. With our stand-alone and service bureau options, we provide a complete solution for all newspapers regardless of size. And if you're not in the market for an electronic library, you'll still want VU/TEXT—the information retrieval VU/TEXT—so your reporters can access the other greats.
For more information, call Joe DiMarino 800-323-2940.

Despite jail sentence, Cardenas goes to FIEJ to receive Golden Pen

Chilean magazine editor Juan Pablo Cardenas was expected to receive in person the 1987 Golden Pen of Freedom award from the International Federation of Newspaper Publishers, or FIEJ. This, despite the fact that Cardenas, editor of Analisis, once again was sentenced to jail on charges that he defamed Chilean President Augusto Pinochet.

According to FIEJ Director Timothy Balding, Cardenas left Chile within 24 hours of imposition of the 18-month sentence by the Supreme Court of Chile and planned to go to Helsinki, Finland, to receive the award May 24 during FIEJ's 40th Congress.

"We are pleased and we hope that the spotlight of publicity on the prize award in Helsinki will perhaps make the Chilean authorities see reason and revoke the sentence," he said.

Balding added that he was told that Cardenas' lawyers are continuing to work on his defense and that he planned to return to Chile.

Earlier in May, ANPA had sent a cable to Pinochet seeking revocation of Cardenas' sentence, saying the journalist's absence from the FIEJ meeting would be "noted worldwide." It pointed out that the award was being given "specifically to recognize Cardenas for his troubles resulting from his determination to express opinion."

According to Leonard A. Kusnitz, a regional affairs officer at the State Department, a Chilean newspaper reported May 15 that Cardenas had been sentenced to 541 days in jail by the "second courtroom" of the supreme court. That sentence can be appealed, he said. Cardenas' original sentence of three years' night custody had been overturned by an appeals court [pressetime, May 1987, p. 66]. □

La Prensa raided over one-page flyer

Nicaraguan security agents April 30 raided the plant of La Prensa in Managua after the long-closed opposition newspaper published a one-page flyer greeting members of the World Interparliamentary Union meeting there. The flyer urged "the Free World and the democrats who are visiting us join the clamor of Nicaraguans who demand freedom of the press."

The newspaper noted that it had been shut down by the Sandinista government 306 days earlier. □

Publishers on Parade

What changed in Dallas when Burl Osborne added Parade to his Sunday package?

BURL OSBORNE
PRESIDENT AND EDITOR, THE DALLAS MORNING NEWS

"Several years ago, the Sunday circulation battle in Dallas was close. Only a few thousand copies separated us and our crosstown rival. But when they gave up Parade, we picked it up and, within a year, our Sunday circulation lead grew to over 34,000. Today our Sunday advantage is 192,454.

"To me, that's proof of the Parade reader's interest, satisfaction and loyalty. What's more, by including Parade in our Sunday package, we were able to focus our Dallas lifestyle coverage on Dallas itself, while Parade provided an important national perspective.

"The overall results? We're still growing, we're number one in Dallas and we're seeing a substantial increase in advertising revenue for our complete Sunday package.

"Parade has been a big part of our Sunday success."

Featured in ov[illegible]newspapers every Sunday.

Florida high court studies tax on advertising while newspapers, other media await impact

At the request of Florida Gov. Bob Martinez, the Florida Supreme Court will issue an advisory opinion on the constitutionality of the new law that would apply the state's 5-percent sales tax to professional services, including newspaper advertising and circulation.

Oral argument is scheduled for June 22, with an opinion expected by the end of the month. The Florida Press Association is one of many industry groups filing briefs with the court opposing the new taxes.

What impact the opinion will have is unclear because of its advisory nature. But it would at least indicate prospects for success of lawsuits seeking to invalidate the tax, which is scheduled to go into effect July 1.

Barry Richard, one of several lawyers representing media interests, said if the Supreme Court believes the law is seriously deficient, "I'm sure the state would make no attempt to collect (the tax), and no one would pay it. So I think it will have the practical force of law."

As part of a last-ditch effort to derail the tax, several advertising associations commissioned a study, assisted financially by ANPA, into its adverse effects on the Florida economy. Conducted by Wharton Econometrics Forecasting Associates, the study projected $2 billion in lost personal income because of decreases in retail sales and tourism, and 46,000 lost jobs by 1989. (Those figures were based on the assumption that the tax would not cause advertising to leave the state.)

Florida newspaper executives, while expressing concern about the tax, tended toward optimism when addressing a group of financial analysts in New York City in early May.

"We expect some impact on the bottom line, but we don't know how much," said Richard G. Capen Jr., publisher of The Miami Herald. "Advertisers will cut back, but it's important to keep in mind the battle is not over."

Thomas P. O'Donnell, publisher of the Fort Lauderdale News and Sun-Sentinel, said he expects the tax will "impact our revenues by about a 1-percent overall factor, with less than 1 percent in increased expenses."

"I think advertisers would probably try to stay and do business there than pull out based on the 5-percent tax," he said.

The impact of the ad tax on The New York Times Co.'s Florida newspapers is "not clear but expected to be negligible," said company President Walter E. Mattson at the analysts' meeting. He predicted advertisers would cut back to the same degree as they would in response to a rate increase.

As for circulation, newspapers are planning various approaches to collecting the tax.

O'Donnell told the analysts that the Fort Lauderdale papers probably will absorb the tax on single-sale copies, and they expect no impact from adding the tax to subscribers' bills in small increments.

The New York Times Co. plans to absorb the tax on circulation, said Mattson. "We feel it's more profitable to increase circulation than to increase prices," he said.

So far, Salomon Brothers of New York City stands alone in downgrading stocks of newspaper and some other media companies with properties in Florida [presstime, May 1987, p. 62].

Another analyst, Curtis L. Alexander of Mabon, Nugent & Co., sounded a positive note. In that firm's newsletter, he reported, "We believe the risks are overstated, that the tax, if imposed, will be tantamount to an across-the-board 5 percent ad rate hike, and that advertisers will continue to advertise and media companies will continue to capitalize on this, chalking up hefty earnings gains."

However, Proctor & Gamble Co. and Clorox Co. have announced plans to pull print, television and radio ads from Florida media, with some other consumer product companies expected to follow.

Meanwhile, a number of groups have canceled meetings in Florida in protest of the tax, including the National Association of Broadcasters, the Association of National Advertisers, the Magazine Publishers Association and NBC. □

Libel capped by tort laws

About half of the tort reform measures considered by state legislatures this year would assist libel defendants by establishing limits on punitive damages, caps on noneconomic damages, or remedies for frivolous litigation, the Libel Defense Resource Center concluded in a recent survey.

Based on responses from press contacts in 34 states, the LDRC survey found that 32 have been considering tort reform this year and 17 of those considered broad legislation that could assist libel defendants.

These efforts "provide a rare opportunity for publishers to achieve some degree of relief from at least the most notorious excesses of libel litigation," LDRC General Counsel Henry R. Kaufman said in a memo to newspaper association managers.

But some of the proposals have drawn fire from the press. One measure, passed by a large margin of the Illinois House of Representatives May 22, aims to be the nation's first "restoration of reputation" law. Press interests vehemently oppose the bill, even though it would eliminate damage awards in some cases. The bill is before the Illinois Senate.

If the bill is enacted, libel plaintiffs could opt for trial to determine the truth or falsity of a news account—with no proof of malice or recklessness required. In the case of a report found to be false, a news organization either would have to run a retraction called a "judicial declaration of falsity" or pay a fine.

Most of the other 1987 bills have been broad-based and did not mention libel.

But media interests want to "ensure that there are no provisions in the legislation that would deny libel defendants the same type of relief as other tort parties," said Kevin Grant, ANPA state relations coordinator.

Press groups in Oklahoma, Iowa, Missouri, California, Illinois and Pennsylvania have been the most active in seeking reform to benefit libel defendants, Grant said. □

Phone tax takes toll on newspaper

A 10-percent tax on businesses' interstate telephone calls, approved May 15 by the Los Angeles City Council, will take a large toll on the city's biggest daily newspaper.

The Los Angeles Times, a heavy user of long-distance telephone services, will pay "close to $100,000" a year in tax, estimated Robert D. Hynes, telecommunications engineering manager.

The tax takes effect July 1. It will make Los Angeles the only major U.S. city to tax interestate calls, according to an AT&T spokesman. There is concern the idea may spread to other California communities. □

ANNOUNCING:

The DAWN™ of a new era in display ad creation.

Are you still living in the Dark Ages of display ad production—cutting and pasting type, logos and graphics into place by hand? Shed a new light on display ad creation with DAWN, an affordable, electronic production system that enables you to design and produce display ads with remarkable speed and ease. The combination of industry-standard hardware and innovative software makes DAWN a powerful, yet intuitive production tool. But most significantly, save time and money, as many of the steps normally required in the design and production of display ads are eliminated.

With DAWN, design your display ads right on the screen, and output them to either a plain-paper laser printer or high-resolution typesetter. The system offers many advanced composition features, such as true type display and a WYSIWYG editor; extensive draw capabilities, including circles, boxes, elliptical shapes, drop shadows, and fill patterns; the ability to pour text into shapes; and much more. And with our 19" high-resolution monitor, view full pages on the screen, and display 6-72 point type at actual size.

What's more, the extensive Compugraphic library of type, logos, and symbols is available, so that your DAWN output has exactly the look you want.

The DAWN system—tomorrow's technology today from Compugraphic. Call **(617)-658-5600** today to see the dawn of a new age.

ANPA Board increases its resolve for expanded minority opportunities

The ANPA Board of Directors passed a resolution May 2 stepping up the Association's efforts to improve opportunities for minorities at newspapers.

To implement the resolution, the Board directed ANPA staff to develop recommendations for goals and plans to be considered at the Board's September meeting.

Among the issues to be considered are: the relationship of ANPA and ANPA Foundation in the effort; whether and how to conduct an industry-wide survey of minorities; organization and support of the existing Task Force on Minorities in the Newspaper Business, of which ANPA is a member; and the question of goals.

Loren Ghiglione, chairman of the task force and publisher of The News in Southbridge, Mass., has mailed the ANPA resolution to other task force members seeking their feedback.

"Now ANPA is at a historic point, and it plans to back up its resolution with action," he wrote. "Wish lists" for action submitted by task force members will be compiled and analyzed so that cohesive recommendations can be made in September, he explained.

The ANPA resolution reads:

"Whereas, the American Newspaper Publishers Association, through its Foundation and in cooperation with numerous industry associations and the Task Force on Minorities in the Newspaper Business, is supporting programs to enhance newspaper opportunities for minority personnel and

"Whereas, ANPA, through its Board of Directors, dedicates itself to a larger direct role in support of minority participation within the newspaper industry, and

"Whereas, ANPA reaffirms its strong belief that all newspapers should continue to strengthen their efforts to foster fairness and diversity in the newspaper work force,

"Now, be it therefore resolved that

"ANPA will expand plans and strategies that encourage and aid newspapers to recruit, develop, promote and retain minority personnel." □

Newspapers reach out to Hispanic communities

Several newspapers produced new Spanish-language publications recently to reach potential readers in their large Hispanic communities.

Most focused on the Immigration Reform and Control Act of 1986, which went into effect May 5.

As part of its May 4 edition, the Los Angeles Times published "Becoming Legal: A Guide to the New Immigration Law," a 16-page tabloid section.

Bilingual sections focus on new law.

The bilingual section was produced in cooperation with La Opinion, Los Angeles' largest Spanish-language newspaper, which distributed it simultaneously. The Times distributed another 900,000 copies to organizations in Southern California that are working with aliens seeking legalization and to local school districts that requested copies for students.

Both daily newspapers in Dallas got into the immigration act:

- On May 3, the Morning News bilingually published questions and answers about the immigration law as part of its long-running "Immigration '86" and "Immigration '87" series.

Although the rest of the series did not run in Spanish, Deputy Managing Editor Bob Mong said many of the installments reached the Hispanic community through El Sol, a Dallas Spanish-language paper that translated stories from both of the city's dailies.

- The Times Herald produced a series March 22-25 titled "The Immigration Scramble" that a month later was turned into a 28-page broadsheet, "A Guide to Amnesty." In the series and reprint, the newspaper carried Spanish translations of many of the articles and of "How To" guides for illegal immigrants wishing to apply for amnesty. Several thousand copies of the reprint have been distributed to public officials, government agencies, immigration attorneys, the media and individuals who have requested it, according to Associate Editor Ernie Sotomayor.

Meanwhile, The Miami Herald—whose Spanish-language edition El Herald has long provided regular news coverage—launched a publication April 29 to approach Dade County's large Hispanic population from a different angle.

El Anunciador, a free-circulation advertising product, is being sent by mail weekly to 162,000 Hispanic households. It aims to reach the estimated 60 percent of Dade's Hispanics who do not buy the newspaper.

"Our priority is to make the Herald more accessible to Hispanic readers" and "to convince Hispanics that the newspaper is important to their lives," Publisher Richard G. Capen Jr. told a gathering of newspaper stock analysts May 7 in New York City. □

Navajo Times publishes again

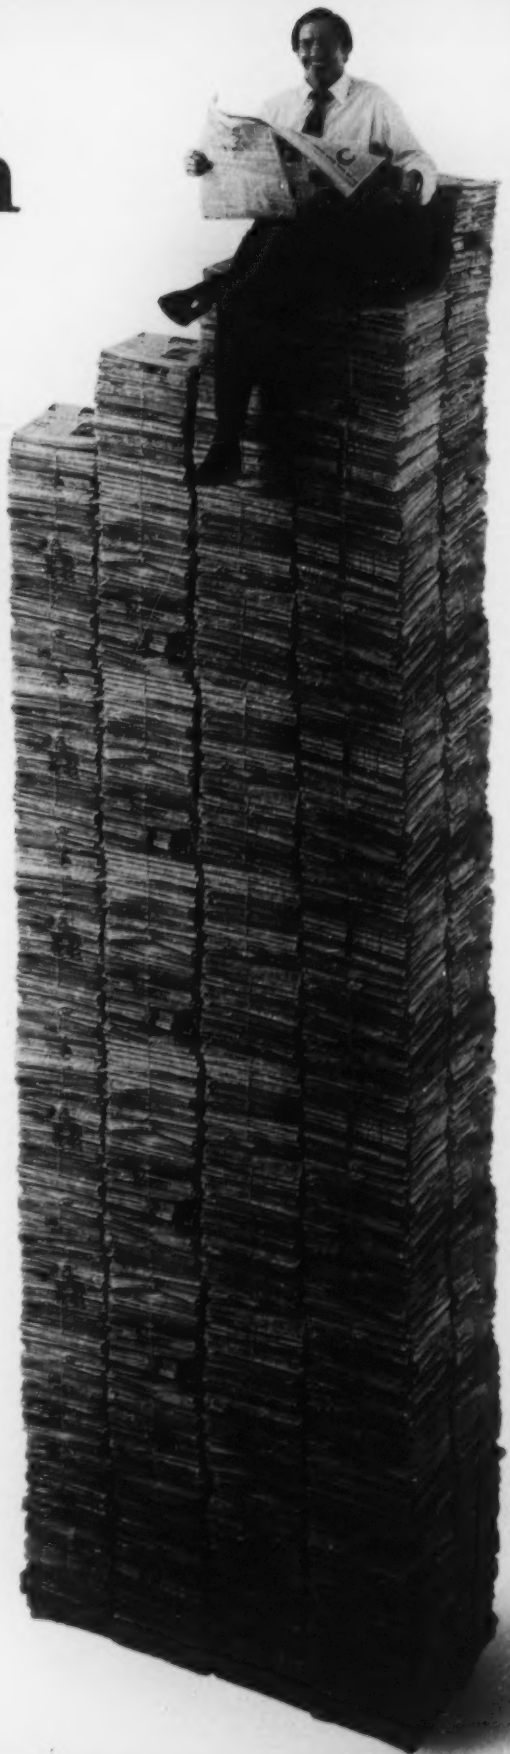
The Navajo Times of Window Rock, Ariz., resumed publication May 22 as a weekly with a $67,000 start-up grant from the tribal budget.

Willis Brown, former publisher of the Rapid City (S.D.) Journal, has agreed to act as Navajo Times publisher until the newspaper is "fiscally responsible."

Depending on the level of ad revenues, the paper may be able to publish semiweekly later this year. "In the very far distant future, I can see a daily again," Brown said.

Brown was part of an eight-member advisory committee that reviewed the newspaper's situation after it closed Feb. 19, burdened by annual losses of $700,000 or more [**presstime**, May 1987, p. 126]. □

Some of our customers run our 200,000-impression additive plate 400,000 times.



Our salespeople begged us to rate our new Conquest 200 plate for 400,000 impressions instead of the mere 200,000 we decided upon.

"Who will notice the difference?" they asked.

"We will," we replied. "It's true that after 200,000 impressions the image is still pretty darn sharp—but not the *razor* sharp image it started out with."

We're fanatics about accuracy and quality control.

That's why our plate ratings are minimums—not somebody's best guess as to what an average run *might* be.

That's why our standards for dimensional tolerance are among the highest in the industry.

That's why when it comes to cracking, scratching, toning, or oxidation, our plates are virtually problem free.

That's why—to get the most out of our plates—we developed our own line of specially formulated chemicals.

And that's why printers who don't like surprises, order their plates from us.

So when we rate our top of the line Conquest 200 plate at 200,000 impressions, that's exactly what you'll get.

After that, you're on your own.

Like to know more about our complete line of additive plates and chemistry? Call us toll free or stop by and see us at ANPA Booth No. 1448.

Making headway on the literacy front

Illiterate adults who may be too embarrassed to ask for help have a friend in READ UP, a 12-week literacy course designed and carried by the Tulsa World.

In addition to the lessons in the newspaper, the program provides audio tutoring via the newspaper's telephone information service CityLine (see story, p. 24) and video tutoring on a local cable television show broadcast five times daily.

The lessons take about 20 minutes a day, regardless of the method used, Executive Editor Bob Haring said.

It is the first program in the country to provide self-tutoring aids for reading students who do not have a tutor, according to Carolyn Ebel Chandler, ANPA Foundation's manager/literacy programs.

Two control groups—15 prison inmates and a dozen welfare mothers—are being monitored as they study the lessons for the entire 12 weeks to yield some indication of the program's effectiveness.

READ UP features a short story in each weekday paper written at the third-grade level, accompanied by a brief lesson. The first week's series provided a test whereby the non-reader could find his or her reading level, identify any physical problems that may impair reading ability, and be guided to other programs if the measured level turns out to be much higher than the third grade.

After the 12 weeks of lessons, the paper plans to issue reprints, plus tapes of the audio and video lessons. If the program proves successful, it may be repeated in fall 1988.

The paper developed the program in about three months, after having been involved in literacy projects for several years. "We tried to think of something that went a step beyond what anyone else was doing," Haring said.

In other news concerning literacy projects at newspapers:

- The Record of Hackensack, N.J. has begun a pilot program that matches employee volunteers with seventh graders who lack basic math and language skills. A bus picks up 16 students and takes them to The Record for tutoring at the individual employee's work stations. The Record claims it is the first program in the country to involve a major newspaper with in-plant tutoring.
- The Austin American-Statesman teamed up with a local television station to develop a cartoon strip, "Tex Reader." Each day the strip posed a trivia question stressing the importance of reading, and the answer was given during the evening TV newscast. The cartoon ran for a week along with public-service ads on literacy and a series on people who have overcome reading problems. Calls to the county's adult literacy council more than doubled in the following weeks, officials said.
- ANPA Foundation will hold a Literacy Creators Workshop Aug. 30-Sept. 2 to help newspapers develop programs in their communities to fight illiteracy. The workshop, limited to 20 participants, will feature presentations by national literacy organizations and newspaper executives. It will be conducted at the Xerox Training Center in Leesburg, Va. The fee, including seminar materials, meals and lodging is $500. Those interested should contact ANPA Foundation by July 1.

A list of other literacy projects conducted by newspapers is available from the Foundation's Chandler at The Newspaper Center, Reston, Va. □

Buck Jones (in T-shirt), 35, tells Tulsa World Book Editor Ken Jackson (left) and Executive Editor Bob Haring about his progress with READ UP.

University of Maryland opens collection from former Baltimore News-American

A newspaper may die, but its "morgue" can live forever.

Last December, The Hearst Corp., which seven months earlier had laid the Baltimore News-American to rest, donated the entire contents of the newspaper's library and other memorabilia to the University of Maryland.

On May 1, nearly a year after the paper's demise, the collection became officially available to the public, by reservation only. But much of the material, dating back to the 1870s, has not been microfilmed and is so fragile that research is limited to one relatively short period a week, said Peter H. Curtis, curator of "Marylandia" for the library and supervisor of the collection.

Curtis expects historians of Maryland to be the biggest users of the collection, along with members of the general public who want to research topics the newspaper may have covered.

A leased warehouse off the College Park campus provides more than 4,000 square feet of space for the huge collection: about 3 million newspaper clippings, about 1.1 million original photographs and negatives, and 3,000 bound volumes of newspapers.

Along with the miscellaneous books, Baltimore directories, plaques and paintings, Hearst contributed the original 15-foot aluminum eagle that adorned the News-American building and was represented in the masthead.

The collection "will be a very interesting sort of anchor for the new journalism library," completion of which is about three years away, said Reese Cleghorn, dean of Maryland's College of Journalism.

Meanwhile, curator Curtis said the university will need to raise at least $2 million for conservation of the entire collection, the bulk of which would be to preserve and microfilm the clippings. □

ACEJMC to open sessions; accredits 14 J-schools

The Accrediting Council on Education in Journalism and Mass Communications will open its previously closed deliberations on accreditation of schools.

The new policy, adopted at the council's semiannual meeting May 1-3 in New York City, will take effect next year for schools agreeing to the policy and in 1989 for all schools.

The council also adopted a dues formula based on the size of each member organization's budget. In the past, organizations made their own decisions on how much to give the council.

In accrediting actions, the council granted accreditation or reaccreditation to journalism programs at 14 schools.

Among them was the Medill School of Journalism at Northwestern University, which had not been sanctioned since 1982 when it withdrew its reaccreditation bid in a flap over accreditors' insistance on faculty salary information [**presstime**, Dec. 1983, p. 35].

Four schools received provisional accreditation or reaccreditation, which requires them to correct perceived deficiencies within a year or be denied accreditation.

ACEJMC denied reaccreditation to the journalism programs at three schools: the University of Wisconsin at Eau Claire, Kansas State University and St. Cloud (Minn.) University. The University of Wisconsin unit had been denied reaccreditation last year, but had appealed for and obtained provisional status last October [**presstime**, Nov. 1986, p. 51].

Three other schools with provisional status last year were granted accreditation or reaccreditation at the meeting: the University of Arkansas at Fayetteville, Murray (Ky.) State University and New York University. □

Publications, software get Foundation aid

Publications and software, recently produced with grants from ANPA Foundation, include:

- *Economic Structure and Performance of Communication Media*, a 72-page instructor's guide. Available for $6 from the author, Thomas Guback, research professor of communication, Institute of Communications Research, 222 Armory Building, University of Illinois, 505 East Armory Ave., Champaign, Ill. 61820.
- "Newspaper Management Game," a computerized game allowing players to "run" a small-town newspaper. A diskette and instructional booklet are available for $35 from Wayne Danielson, 2817 Glenview, Austin, Texas 78703.
- Materials from the Clearinghouse for Computer-Based Education in Journalism and Mass Communication at the University of Miami. For annotated list and prices, contact William R. Oates, P.O. Box 248127, Coral Gables, Fla. 33124. □

Artists, writers drawn to new syndicate

Since Creators Syndicate was launched earlier this year, it has received more than 1,300 submissions from artists and writers, founder Richard S. Newcombe said.

The syndicate has signed up artist Johnny Hart's comic strip "B.C.," formerly syndicated by North America Syndicate. Hart's other well-known strip, "The Wizard of Id," will stay with NAS.

Newcombe also said he expects to bring out a new comic strip by a well-known comic-strip artist. It will be available the latter part of June, he said.

Creators has agreed with the makers of "My Weekly Reader" to distribute a children's news service shortly, he said.

In addition, Newcombe said former President Richard M. Nixon has asked Creators to syndicate his book, *1999*, which is scheduled to be published next February.

Newcombe started the syndicate with the concept that artists should retain the rights to their own material and the names of their comic strips—a right that artists often sign away when they affiliate with other syndicates.

Asked why a cartoonist can't leave and start a new comic strip, Newcombe said some of the best cartoonists have tried just that and failed.

Newcombe scored a coup when Ann Landers switched her personal-advice column to Creators Syndicate [**prestime**, March 1987, p. 56]. Landers' home newspaper, the Chicago Sun-Times, has been seeking an advice-column successor since Landers jumped to the Chicago Tribune in March.

Her old contract expired with the sale of the News America Syndicate to The Hearst Corp., which renamed it North America Syndicate. □

Columbia Features plans expansion

The new owner of Columbia Features syndicate said plans for expansion include adding at least two columnists and two young, relatively unknown editorial cartoonists.

"We were looking for young guys who are going to develop into big names," Robert R. Ferguson said of the cartoonists he will begin syndicating. "Nobody ever heard of them," but the cartoonists—whom he did not identify—are talented people who currently work for "very small" newspapers, he said.

New York-based Columbia Features was founded in 1953 by Joseph Boychuk, from whom Ferguson purchased controlling interest in April. It sells 14 features to about 160 newspapers, Ferguson said. Offerings include "Today's Line," which gives odds on major sports, and a New York Post sports column by Dick Young. □

Daily color 'Peanuts' is catching on

An estimated seven to 10 newspapers have begun running the daily "Peanuts" comic strip in color since it was first offered in that form April 20, a United Feature Syndicate official said. Another 10 newspapers are "thinking about it," added Maureen A. Lysaght, assistant sales manager.

Among newspapers carrying the first-ever daily color comic are The Tacoma (Wash.) News Tribune and the Tampa Tribune [**prestime**, April 1986, p. 51]. □

Any color scanner makes separations.
This one makes deadlines.

Good news! Now there's a scanner that can handle the daily grind of producing the daily paper.

Our extremely reliable SG-608 is truly a workhorse of a different color. That's because it features a unique red-laser dot generator for greater on-the-job dependability and up to twice the service life with less downtime and fewer maintenance headaches.

The SG-608 lets you routinely handle the quick turnarounds and high-volume production that are a way of life in the newspaper business. And, unlike most scanners, you don't have to be a genius with computers to set up and operate one.

The economically priced SG-608 is probably all the scanner you'll ever need. But it's also the logical place to start if you're considering a complete page make-up system later on.

When we designed the SG-608, we had one thing in mind—reliability. That's because we understand: If you don't get your paper out today, there may not be a tomorrow.

Advo sues over syndicated research flap

A controversy over whether Advo-System Inc. should be able to buy syndicated newspaper research—and at what price—has resulted in Advo's filing an antitrust lawsuit against The New York Times Co.

The direct-mail firm, which is a chief competitor of newspapers for preprint advertising dollars, seeks punitive damages of $1 million plus other damages and costs.

Leonard Harris, spokesman for The New York Times Co., said the firm would not comment on pending litigation.

Advo named a number of "co-conspirators" who are not defendants but who are being dragged into the picture nonetheless. They include various unnamed newspapers, newspaper-business associations, Scarborough Research Associates, Simmons Market Research Inc., the Newspaper Research Council/International Newspaper Advertising and Marketing Executives Syndicated Research Task Force, and others "whose identities are at this time unknown to plaintiff."

Advo, which has headquarters in Windsor, Conn., filed the suit in U.S. District Court in Hartford. It alleged various violations of federal and Connecticut law, including using "unfair methods of competition and unfair acts or practices."

The company claimed that a Times Co. executive acted in violation of antitrust laws to block Advo's purchase of soon-to-be-released research data at "competitive" prices.

The executive named in the suit is Jack Vernon, vice president, group marketing, of The New York Times Regional Newspaper Group. He also is co-chairman of the NRC/INAME task force. Advo charged that he pressured Scarborough and Simmons into raising previously offered prices as much as five-fold.

Vernon said he had not seen the complaint.

Scarborough and Simmons in late 1986 offered to sell their 1987 syndicated studies for $10,000 and $17,500, respectively, Advo claimed. But after objections from Vernon, the direct mailer said, the prices went up to $50,000 or more.

In the case of Scarborough, Advo charged Vernon engaged in "successful efforts . . . to have a number of newspapers use their leverage as potential purchasers to pressure and threaten Scarborough" to withdraw its $10,000 sale offer. Advo said Scarborough later "verbally" offered to sell the data for a price more than would be paid by the highest-paying newspaper subscriber to the project, which would be at least $50,000.

Scarborough officials said at press time they had not seen the suit and could not comment. In April, however, Scarborough said it had withdrawn an offer to sell its findings to Advo. That action followed complaints from various newspaper executives and organizations [**presstime**, May 1987, p. 80].

In the case of Simmons, Advo charged the research firm reneged on an earlier price offer as the result of an "agreement" with Vernon, and boosted its price to $50,600.

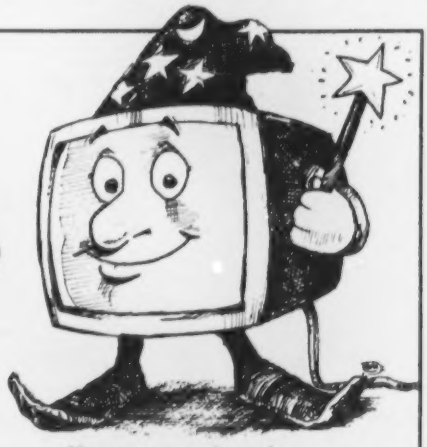
Simmons officials also said they could not comment because they had not seen the lawsuit. But in April, they had said the quoted price always had been $50,600.

According to the lawsuit, Advo on May 8 signed a subscription agreement for that amount.

Controversy over Advo's prospective purchase of newspaper market research data erupted in March. Newspaper executives then discovered that syndicated research results had been available to Advo and other competitors all along—in 1983 when such work was first performed and in 1985 when Simmons and Scarborough teamed up for a project. Advo never bought those results, however.

Newspaper executives complained that Advo should have to pay the highest subscription price, which is a common practice in the selling of syndicated research to competitors. □

You don't have to be a computer wizard to use Papertrak.™



At Data Sciences we understand that you're a newspaper expert, not a computer expert. We understand that you want a computer system to solve problems, not create them.

That's why we designed a computer software family which is easy to learn, and easy to use—Papertrak™.

Papertrak™ has the power to handle **Circulation Management, TMC, Display Advertising** and **General Accounting**.

Your personnel can be trained and running on this system in a matter of hours.

If Papertrak™ sounds too good to be true, call us for a free hands-on demonstration today. Decide for yourself just how easy the Papertrak™ system will be to use—for everybody.

Committee to examine feasibility of more refined circulation figures

The ANPA Circulation and Readership Committee has agreed to study a suggestion that industry-wide circulation figures be refined beyond the figures furnished by the Audit Bureau of Circulations.

Albert E. Gollin, vice president and associate director of research at the Newspaper Advertising Bureau, told the committee at its May 3 meeting that the figures can be made more accurate and up to date by starting with ABC audits and publishers' statements. Then further analysis could be conducted annually by ANPA, NAB and the International Circulation Managers Association, Gollin suggested.

John R. Harrison, committee chairman and president of The New York Times Regional Newspaper Group, said Gollin's suggestion was "a wonderful idea," providing the associations in question had the resources to do the analysis.

Gollin said that under current procedures, the timing of published newspaper circulation figures often results in distortion of the actual numbers [pressstime, Feb. 1987, p. 62].

Some organizations that compile circulation data, for instance, count certain business publications as daily newspaper circulation, and some do not, Gollin said. The data often are incomplete in the case of newspapers that do not belong to the ABC, he said.

Charles O. Bennett, vice president/communications at ABC, said later that the bureau's last survey of U.S. daily newspapers on Sept. 30, 1985 found there were 522 non-members.

Gollin also told the Circulation and Readership Committee, "When we quote the average (industry-wide) circulation for 1986, for example, we literally are not comparing the same time frame. Everybody starts with the Sept. 30 FAS-FAX numbers from ABC. Publishers' statements come into the picture to supplement (the FAS-FAX report) for non-ABC papers."

Albert E. Gollin

Then Editor & Publisher Co. sends out a questionnaire to newspapers, Gollin said, and compiles circulation figures which are reported in the annual *Editor & Publisher Yearbook*, which is usually published in late spring.

As a result, by the time the E&P figures are published, a newspaper's status may have changed significantly by fluctuations in circulation or even by going out of business, Gollin said.

Also at the committee meeting in New York City, Robert L. Burke, ANPA vice president/industry and public affairs, said a book is being prepared on circulation and news ideas that have been successfully applied at newspapers. The project is being handled jointly by the committee and the Future of Advertising Project's Readership Task Force.

Burke said the tentative plan is to send questionnaires to 30 newspapers, with 10 each in the circulation ranges of under 50,000, 50,000 to 100,000, and more than 100,000.

Harrison said perhaps the report should include suggestions on how to apply the ideas. Edward Mullins, dean of the School of Communications, University of Alabama, said: "If we don't, it (the report) will only gather dust."

Mullins said maybe one newspaper could be persuaded to try the ideas and techniques collected in the survey and then report back on how they worked.

ANPA's Burke asked committee members to look at a draft memo of the study and submit suggestions on how it should be conducted. He said it is hoped the report can be completed this fall.

In a discussion on readership, several participants remarked that people who said they had no time to read could be helped by shorter stories, indexes and news summaries.

Gollin said these practices "help the reader but hurt the advertiser."

Mullins said indexing and summaries are fine for a larger paper, "but for a small paper it's a lot of wasted time." □

We Are The Software Firm That Incorporates Accounting Principles & Human Resources Into Newspaper Management Systems

We're Collier-Jackson, and we've spent 12 years developing advertising, circulation, financial, accounting and personnel systems to help newspapers organize, process, analyze and present information more efficiently, more effectively.

We believe it is the creative ideas of our people that make our products so successful. People who know as much about ROP color linage as they do about reducing CPU, I/O and elapse times.

You see, it's the combination of newspaper expertise, accounting principles, human resources and software know-how that sets us apart as a company and differentiates our software from all others.

AWARD-WINNING SOFTWARE

Our unique way of working means our installation base is growing at a rapid pace.

Work which earns us numerous ICP Awards for products that have clearly evidenced their acceptability in the marketplace and their leadership as proprietary software systems.

Growth that keeps us ranked as an Inc. 500 and ICP 200 company.

It's the payoff for dedication. And it makes for satisfied customers in newspapers throughout the United States.

Board votes on bulk sales issues

The ANPA Board of Directors adopted four recommendations concerning bulk sales of newspapers at its May 2 meeting in New York City. The recommendations will be forwarded to the Audit Bureau of Circulations for consideration at its August board meeting.

The recommendations state that:

- School copies should continue to be reported as individual paid circulation and clearly identified as such.
- Group (mail subscription special) copies should be reported as individual paid circulation, and all newspapers should be allowed to report those copies in this manner, as national newspapers currently do.
- Further information is desired on the requirements for a sub-category called "business—for internal employee, waiting area use," which is listed in paragraph 1C/third-party (bulk) sales of the proposed publisher's statement.
- ANPA agrees with the ABC objective of developing a format that provides advertisers with full and complete information on newspaper circulation. However, the special value of average paid circulation (individually paid) should be recognized, and the report format should not imply parity between that circulation and third-party (bulk) sales. Therefore:

a. FAS-FAX reports should include only individual paid circulation. They should not include third-party (bulk) copies.

b. ABC rules should require that when member newspapers compare their ABC-audited circulation to other newspapers, those comparisons be restricted to individual-paid circulation.

The bulk-sales issue and other matters affecting newspaper publishers are expected to be addressed at the ABC Annual Conference Nov. 11-13 at the Fairmont Hotel in San Francisco.

The ANPA Board has consistently encouraged newspaper publishers to attend the conference. This year's meeting will be chaired by a newspaper publisher, R. David Threshie of The Orange County (Calif.) Register. □

Got a problem? Call the publisher

Michael J. Davies, editor and publisher of The Hartford Courant, gave readers his home telephone number and invited them to call with circulation complaints.

Happily, for his paper and for his family, few did.

In his weekly column of April 21, Davies listed the home phone number of his circulation director, Thomas W. Marquis, and then wrote, "If you are still unhappy, my home telephone number is 243-2987. Marquis and I would rather be called at home than lose a customer."

By mid-May, Davies had received 12 calls at home from customers.

He said only one was a complaint. The others were from readers expressing appreciation for being able to call the publisher about a circulation problem.

Bulky, unstable newspapers can cause even the best stackers to miscount by as much as 10%. Now, Icore offers the Mark III Newspaper Counter as an effective and economical solution to this problem.

Using a count by weight system, the Mark III accurately determines the number of papers in each bundle leaving the stacker. Because the Mark III is a true in-motion weighing device, you can maintain a maximum line throughput of 60 bundles per minute. The Mark III effectively monitors line performance with its easy-to-operate microprocessor electronics.

Cost-conscious newspapers like the *Louisville Times, Omaha World Herald, Richmond News,* and *Tallahassee News* rely on the Mark III to eliminate shorted stacks and reduce distribution costs.

To learn how the Mark III could figure into your operation, call Icore today. (612) 633-5150.

"For an accurate count, our numbers stack up."

The Ramsey/Icore
Mark III Newspaper Counter
from the world's leading manufacturer of In-Motion Weighing Systems.

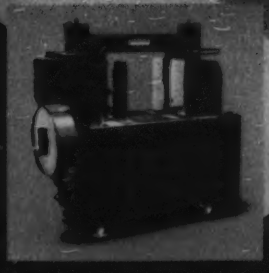
Building Our Reputation

POWER STRAP



Design innovation. Operator safety. Maximum dependability. Superior service.

The qualities we build into every Power Strap tying machine are building our reputation as an industry leader. Whether you choose state-of-the-art high production — as in our 45 bundle-per-minute PSN-5, pictured above — or simple, economical strapping, the Power Strap commitment to advanced design, safe operation, reliable performance, and customer satisfaction is part of the package.

Test our reputation. Contact Power Strap, 29299 Clemens Road — 101, Westlake, Ohio 44145. Call (216) 871-0053, or toll-free (800) 346-4600.

POWER STRAP

How Creative Data Systems and IBM have teamed up to bring winning business solutions to your team

1. We recognize that one solution won't solve every problem you may have.

Even though our systems are standardized and developed for the newspaper industry, there are 150 control files that give circulation, advertising and financial executives more than a million and a half options for their specific needs.

2. We utilize IBM equipment for its compatibility and dependability.

For seven years Creative Data Systems has worked closely with IBM. Our experience has affirmed the IBM reputation for excellence. As a result of our joint effort, we're in a position to offer you the most comprehensive systems that address your business processing needs.

3. We believe you should continue receiving quality support after installation.

The members of your team receive both on-site and off-site support from our team in the form of comprehensive training sessions. Two or more Creative Data Systems' staff members are assigned to your system; they're familiar with every portion of your system—including all specifications particular to your operation.

For more information . . . and to learn why more than 400 U.S. newspapers have already selected Creative Data Systems, call or write today.

Quine resigns by 'mutual arrangement' with API board

A search committee is seeking a replacement for Frank Quine, who resigned effective July 1 as director of the American Press Institute in Reston, Va.

John G. Finneman, API senior associate director will serve as acting director until a permanent director is named.

API Chairman William O. Taylor of The Boston Globe appointed board member Eugene C. Patterson of Times Publishing Co. in St. Petersburg as chairman of the search committee.

Quine, 49, joined API as associate director in 1969 and has been director since 1979. "The board explained to me that it wished to seek a new and different direction for API," he said in a May 8 letter to the 44 members of API's regional advisory boards.

He said in an interview that his resignation came by "mutual arrangement" and that he had not been given "much explanation" for the board's decision. "The board said it would prefer someone else" to lead the institute. "I lost the confidence of a certain faction of the board."

Taylor said he would "prefer not" to comment on the resignation beyond what he said in a May 4 press release: "Under Frank's leadership API has built a sound financial and professional basis for the future. The board and all of API's staff and alumni wish him well."

As for his future plans, Quine said he has "several irons in the fire" that are "quite intriguing." He said his goal "is to return to active newspapering in some kind of an operating role." Quine was a sports and news editor for the former Evening Independent in St. Petersburg before joining the institute.

Quine said his "biggest regret" in leaving API is that he will not be around to see a new executive development program, built around a computerized newspaper management simulation, to be introduced in early 1988. The program will allow seminar participants to manage a simulated daily newspaper over a five-year period.

Other search committee members are Larry D. Franklin of Harte-Hanks Communications, Madelyn P. Jennings of Gannett Co. and Robert G. McGruder of the Detroit Free Press.

Also leaving API is former director Malcolm F. Mallette, now director of development, whose retirement on June 30 was announced several months ago.

API was founded in 1946 as a training institute for the newspaper business. □

SOME NEWSPAPERS ARE ONLY PRINTING HALF THE STORY.

The papers that don't use Western Lithotech in the plateroom. They save a few pennies here and there and pay the price of quality. From plates going blind to total press stops.

But quality newspapers know the whole story. Because they depend on the *total systems* supplier that has been the leader for over 60 years. Depend on the famous plate names... Front Page... Metro Express... Final Edition... and more. On the industry's best chemistry and hardest working processors.

Plus Newstek,™ the new extra long run plate system designed for sharp 4-color inserts and supplements.

All backed by the most responsive technical team in the business.

Smoking rules inflame some

More newspapers are imposing restrictions on smoking at work, and in most cases the policies have been implemented smoothly. But a few unions are beginning to demand bargaining over the issue, and at least two locals have filed charges with the National Labor Relations Board over newspapers' smoking rules.

"Employees generally demanded some sort of a policy," said Gilbert A. Bogley, publisher of the Traverse City (Mich.) Record-Eagle, where a policy will become effective July 1.

The Traverse City daily will join a growing list of U.S. and Canadian newspapers with policies on smoking—at least 40 of them, according to the ANPA Human Resources Department.

Other newspapers are in the process of developing such policies. The Plain Dealer of Cleveland, for example, will have a written policy in place by Aug. 15 to comply with a new city ordinance. According to the ANPA department, there are about 100 local ordinances and nine state laws that regulate smoking in the workplace [presstime, Feb. 1986, p. 14].

In the first known case of its kind in the newspaper business, the union representing editorial employees at the Dayton (Ohio) Daily News/The Journal Herald filed charges with the NLRB April 16 alleging that the newspaper failed to bargain over a policy scheduled to go into effect June 1.

In a second case, Local 3 of The Newspaper Guild filed similar charges in May with the NLRB over a smoking policy at The New York Times, where since May 11 smoking has been prohibited in all work areas occupied by more than one person.

The NLRB cannot confirm that the charges in Dayton were the first filed on the subject involving a newspaper because the agency does not keep a file by subject matter. "We may have had a few (charges) that were settled informally," said Assistant General Counsel John P. Falcone, but he said the issue "is new on the horizon."

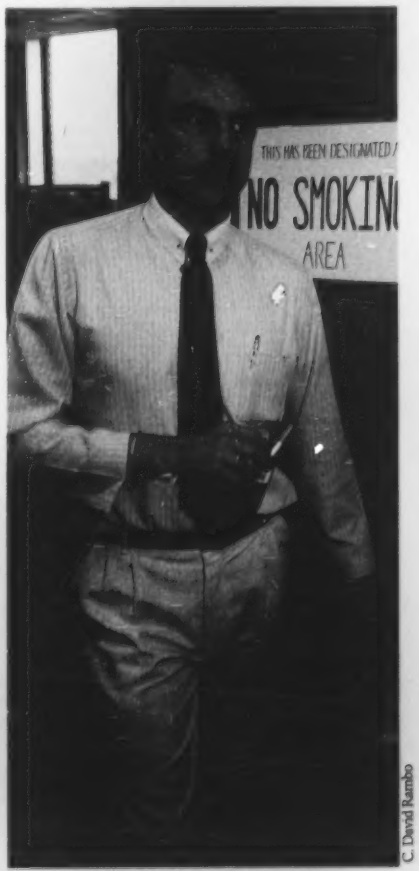
As for the Guild's view of the smoking controversy, delegates to the union's 1986 convention adopted a recommendation that local unions investigate environmental and health problems associated with smoking and, "where necessary," seek management action to combat them by such measures as seating separation, air purifiers, improved air circulation "and other steps acceptable to the majority" of affected members.

David J. Eisen, director of research and information, said the union's International Executive Board will recommend that this year's June 22-26 convention add language opposing disciplinary steps as an enforcement measure.

Meanwhile, newspapers continue to implement policies, usually with the advice of employee committees.

After management of the Quad-City Times in Davenport, Iowa, decided to establish a policy against smoking at work locations, an employee committee set the effective date of June 1. "The legal environment keeps tightening" around an employer's responsibility to provide a smoke-free workplace, said Human Resources Manager Darlene M. Hasselbacher.

To ease any individual problems arising from the policy, the Times, like some other newspapers, contracted with a local hospital to provide a smoke-stoppers program and a weight-management program. "Many smokers saw the policy as an opportunity to kick the habit," Hasselbacher said. She reported that 14 of the 17 employees who signed up for the smoke-stoppers program successfully completed it.



C. David Rambo

New policies require employees to leave their work area to smoke.

At the Traverse City daily, Publisher Bogley said a long-range goal is to make the plant smoke-free by July 1, 1988. To date, he reported, only one employee has complained that the smoking policy soon to take effect there constitutes "a violation of civil liberties."

According to Bogley, the Record-Eagle has offered to reimburse up to $100 to any employee who successfully completes a stop-smoking program, such as one provided by the American Lung Association.

Another newspaper in the Ottaway Newspapers group, The Standard-Times in New Bedford, Mass., will implement a policy July 1. Publisher Orren B. Robbins said it will apply even to individuals' offices. "We're treating all people the same," he said. Smoking will be allowed in designated areas.

The Hartford Courant no-smoking policy that will take effect July 1 also includes a ban on smoking in private offices.

The Journal-News of Hamilton, Ohio, leaves it up to department heads to ban smoking, said Editor William M. Coombe, who imposed a ban in the newsroom last February after a survey of employees showed most of them wanted it.

Coombe said there was no "suitable alternative" to a complete ban, and he reported that no problems have surfaced during the three months the policy has been in effect. The newspaper's business office also bans smoking.

In Florida—one of the nine states that has a law regulating smoking—the St. Petersburg Times policy makes supervisors responsible for implementing "the spirit of the law" and determining where employees can smoke, said Personnel Manager Allen R. Dwyer.

New York was scheduled to join the list of states with smoking restrictions, but a state Supreme Court judge blocked the scheduled May 7 implementation of the regulations issued by the New York Public Health Council. The judge ruled that only the state legislature had the power to issue such regulations. A state appeals court has agreed to review the case.

As the issue is debated in courts of law, state legislatures and private business, the effects on non-smokers from breathing so-called "sidestream" or "passive" smoke has

become an increasingly hot topic. The Los Angeles Times will implement a new smoking policy July 1 designed to protect nonsmokers from secondary smoke. The policy will limit smoking to designated areas.

Two years ago, the newspaper prohibited smoking in hallways and restrooms, and limited smoking in cafeterias and lounges. The new policy will extend to offices and other work areas.

Outside the newspaper industry, the National Treasury Employees Union has filed charges with the Federal Labor Relations Authority alleging that a smoking ban announced May 5 by the U.S. Department of Health and Human Services violates labor agreements requiring HHS to bargain on work-related matters. "We believe all parties, smokers and non-smokers and those who wish to quit, should be accommodated through negotiations at the work site," said George F. King, the union's public relations director.

Also on the national front, two public health groups—the American Public Health Association and the Public Citizen Health Research Group—recently asked the U.S. Labor Department's Occupational Safety and Health Administration to order an emergency ban on smoking in indoor workplaces. An OSHA spokesman said the agency is studying the issue but has not yet resolved whether tobacco fumes in the workplace pose an occupational hazard.

Guild appeals ruling on drug-testing policy

The NLRB regional director in Minneapolis has refused to issue a complaint against the Minneapolis Star and Tribune over its drug-testing policy.

The Newspaper Guild of the Twin Cities had filed charges with the agency alleging that the newspaper had unlawfully failed to bargain over the policy, which went into effect in January [**prestime**, March 1987, p. 62].

Regional Director Ronald M. Sharp said the dispute should be resolved under the grievance and arbitration procedures in the Guild's labor agreement with the newspaper.

The Guild is appealing Sharp's decision to the NLRB's general counsel in Washington, D.C.

The union has asked the counsel to seek a court injunction to stop the drug-testing program pending the outcome of bargaining.

(Minneapolis Star and Tribune Co., Case No. 18-CA-9938) □

NLRB will review decision on telemarketing personnel

The NLRB has granted a petition of The Seattle Times to review and to stay implementation of a regional director's decision that would add some 30 subscription telemarketing sales representatives to an established bargaining unit.

John D. Nelson, the NLRB regional director in Seattle, had granted a petition by Local 82 of The Newspaper Guild to include the employees in the circulation unit represented by the union.

The telemarketing employees work in an office in Northgate about five miles from the newspaper's downtown plant. The office was established in 1986 after the company discontinued an arrangement with independent contractors who had performed the circulation department's telemarketing functions.

The Times opposed adding the employees to the Guild's unit, contending, among other things, that their work was not the kind traditionally performed by Guild-represented employees.

The company also argued that the Northgate operation potentially constituted a separate bargaining unit where the employees could vote on whether they wished to be represented by the union.

However, Nelson said it was clear that the telemarketing group was "a fragment and part" of the circulation department. He found that the working conditions of the telemarketing employees were "quite similar" to those of other unit employees and that the group could not function in the absence of the main operation.

The regional director concluded that the Northgate unit could not "stand on its own" as a separate unit.

Out-of-court settlement reached in former columnist's suit

A suit filed by a former editorial employee of The Herald News of Passaic, N.J., against the paper's former president and publisher, Austin C. Drukker, has been settled for an undisclosed sum.

Former reporter and columnist Mitchell (Mike) J. Stoddard alleged that he had been harassed and demoted because of his union activities [**presstime**, May 1985, p. 72]. He said he could not discuss the amount of the settlement.

Stoddard, who now is director of media relations for Morris County, N.J., was involved in lengthy NLRB and court proceedings emanating from a union's 1980 organization campaign at the newspaper. His column was discontinued shortly after the union won a representation election. The NLRB ordered the paper to resume publication of Stoddard's column, but that order was overturned by an appellate court.

The board's publication order drew wide attention in the newspaper business, and ANPA filed a friend-of-the-court brief in the case, arguing that the order was unconstitutional.

Stoddard resigned from the newspaper in February 1985 and filed the suit seeking unspecified financial damages for emotional and mental stress.

The Herald News was renamed the North Jersey Herald News in 1985 after Drukker sold it to W. Dean Singleton and Richard B. Scudder. □

Board orders newspaper to turn over some but not all information sought by union

The NLRB has ordered the New York Post to provide certain requested information to Local 3 of The Newspaper Guild.

In so doing, however, the board modified an administrative law judge's recommended order [**presstime**, Sept. 1983, p. 34].

According to the board, the judge improperly ruled that the newspaper violated the Taft-Hartley Act by delaying delivery of a list of minority employees by name and job classification, along with a history of their promotions.

The judge also had ruled that the Post violated the act by refusing to supply the union with information regarding the use of sick leave by employees and the names and absenteeism records of individuals in the company's absentee-control program. The board said, however, that the judge made no provision for the protection of employee privacy. Accordingly, it modified the order to delete from the records information revealing the identity of the employees.

The Post also was ordered to give the union the names of people holding independent contractor, free-lance or stringer status with the paper in 1978 and 1979, excluding individual financial information.

The company did not appeal the board's order.

(The New York Post Corp. and Newspaper Guild of New York, 283 NLRB No. 60) □

NLRB elections

Albuquerque Publishing Co., Teamsters: Truck drivers voted 41-37 against representation by Local 492 of the Teamsters.
(NLRB Case No. 28-RC-4372)

Cincinnati Enquirer, Teamsters: Dockworkers voted 9-7 in favor of representation by Local 100 of the Teamsters rather than Mailers' Union No. 17.
(NLRB Case No. 9-RC-15085)

Memphis Commercial Appeal, CWA: Composing room workers voted 30-23 in favor of continued representation by Typographical Union No. 11.
(NLRB Case No. 26-RD-673)

Recent contract settlement

Minneapolis Star and Tribune, Teamsters: Three-year extension of agreement covering drivers, effective dates July 1, 1984, to June 30, 1989, extended to June 30, 1992.
(Details in June 1987 ANPA Labor & Personnel Relations Letter.)

ANPA committee will create task forces in human resources

There is "general agreement" among the members of the ANPA Human Resources Committee that its structure will evolve from three subcommittees dealing with labor, personnel, and health and welfare matters to a task force approach, its chairman said.

Committee Chairman Joseph F. Barletta said the creation of task forces "will get more professionals in the newspaper industry involved in projects."

Barletta said specific committee members will serve as chairmen of the different task forces.

The first task force will be assigned to planning ANPA's ninth annual Labor and Personnel Relations Conference Jan. 10-13, 1988, in Scottsdale, Ariz. At its May 3 meeting in New York City, the committee reviewed suggested task force projects such as newsroom turnover, retiree health-care benefits and future needs for technical personnel.

Barletta, director of newspapers for Freedom Newspapers Inc. in Irvine, Calif., has been appointed to another one-year term as chairman. □

NLRB dismisses GCIU bid to represent pressmen

A union's petition to represent employees of the pressroom at the Richmond (Ind.) Palladium-Item has been dismissed by the NLRB.

The pressmen are represented by the Palladium-Item Employees' Alliance, an independent union that represents a plant-wide unit of employees at the newspaper. But Local 508 of the Graphic Communications International Union sought to sever the pressmen from the existing unit, contending that the independent union was not a true labor organization within the meaning of the Taft-Hartley Act.

The NLRB regional director in Indianapolis, however, found that the Employees' Alliance had negotiated successive labor agreements with the newspaper since at least 1949 and had processed grievances on behalf of bargaining-unit members. He ruled that the purposes of the act would not be served by severing the pressmen from the plant-wide unit in view of the independent union's "long history of collective bargaining."

(Palladium Publishing Corp., Case No. 25-RC-8434) □

Introducing The Powerful Reuter News Pictures Terminal.

The Best Way To Receive The Reuter News Pictures Service.

The Reuter News Pictures Terminal is more than a promise. It's real. It's in production. And we're taking orders for it. Now.

It is, without doubt, the most advanced, fastest and easiest way for a photo editor to receive, select and edit the photos of the Reuter News Pictures Service as well as other wire service photos.

The Reuter News Pictures Service is as committed to excellence in photojournalism as we have been to news reporting since 1851.

Our worldwide network of nearly 200 full time photo journalists and stringers give you new choices—including exclusive coverage of many international events. And they work closely with our text journalists, to deliver all the dimensions of every major event.

It's a complete service—we also provide transmission facilities and fulfill special requests.

As for the terminal, you'll like the instant responses of the programmable keyboard and the unique advantage of having text and picture on one clear, flicker-free screen. And you'll master all the user-friendly functions in minutes.

You'll save editing time as well as substantial costs in paper and chemicals—because you can print just what you want to keep or only what you want to publish.

For all its compactness, the Reuter News Pictures Terminal is a powerhouse. You can view 16 pictures at a time, store 110 to 120 pictures and configure the 4 ports to receive photos from other wire services and your own photographers.

It interfaces with all standard printers, and it's backed up by a team of expert service technicians. And because it's modular, it can quickly incorporate future technological advances.

For more information about the Reuter News Pictures Terminal, call (212) 603-3576.

The First Name In News.

Give unions sale data, judge says

New England Newspapers Inc., former owner of the Dedham (Mass.) Daily Transcript, is appealing to the NLRB an administrative law judge's recommendation that it be ordered to provide financial information to two unions.

The case arose in 1986 when the corporate entity sold the newspaper to Harte-Hanks Communications Inc. Harte-Hanks is not a party to the NLRB proceedings.

The assets sale was finalized May 2, 1986. Harte-Hanks closed the Dedham production operations and moved them to a production facility in Framingham, Mass. In Dedham, printers represented by Boston Typographical Union No. 13 and pressmen represented by Boston Newspaper Printing Pressmen's Union No. 3 were dismissed.

Before and after the sale became final, both unions had requested a copy of the sales agreement. They were not provided a copy on grounds that it contained confidential business information.

Judge Norman Zankel ruled that the unions were entitled to a copy of the sales agreement. He said the information was "presumptively relevant" to the unions in order to fulfill their bargaining responsibilities. There was "no merit" to the company's claim of confidentiality, he said.

(New England Newspapers Inc., d/b/a Transcript Newspapers, ID-99-87) □

Jury to decide damages in Daily News case

A jury is scheduled to begin deliberations June 9 in a Manhattan federal District Court on the question of financial damages due four black editorial employees of the New York Daily News.

The jury found April 15 that the newspaper had discriminated against the four between 1979 and 1982 by giving them fewer promotions and lower salaries than were given white journalists with comparable experience and qualifications. The damages phase of the case was to have begun May 11 but was delayed by the presiding judge [**pressstime**, May 1987, p. 96].

The newspaper still faces a class-action suit brought by the Equal Employment Opportunity Commission on behalf of all black employees in the editorial department. □

Suspension backed

A one-week suspension has been upheld for a sports reporter at The Plain Dealer in Cleveland who lifted quotes, without attribution, from a wire-service story.

"The grievant was fortunate to have his penalty determined as a week's suspension without pay," said Arbitrator Edwin R. Teple in denying a grievance filed by the Cleveland Newspaper Guild. What the reporter did, said Teple, "bordered dangerously close" to plagiarism. "It was certainly highly unprofessional."

Teple said a violation of professional ethics does not require progressive discipline. He said the reporter's action was not in the same category as misspelling a name on numerous occasions or failing to turn in copy on time. "It was a major infraction." □

Senate monitoring bill

A bill has been introduced in the Senate to prohibit monitoring of employee telephone conversations without use of an electronic signal.

Under S 1124, sponsored by Sen. Paul Simon (D-Ill.), an audible "beep" tone would be required to notify employees and customers of the monitoring. A similar bill has been introduced in the House [**pressstime**, May 1987, p. 90]. □

Massachusetts rules driver was not employee; jobless benefits denied

A driver who delivered The Beverly (Mass.) Times was not an employee of the newspaper who would be entitled to unemployment benefits, the Massachusetts Division of Employment Security has ruled.

An examiner found that individuals such as the claimant were not employees because they:

- Are free to make deliveries in any designated order best suited to themselves
- May allow others to make deliveries in their place
- Use their own means of transportation for which there is no expense reimbursement
- Receive no benefits or insurance of any kind
- Are free to perform the same service for other publishers
- Are not required to give notice when they are unable to pick up newspapers.

The examiner said the drivers are "free from control and direction" in connection with the services performed. Therefore, he said, the services of such individuals do not constitute employment within the meaning of Massachusetts law. □

Additional arbitration awards

Cleveland Plain Dealer, Guild: Norman R. Prusa sustained the discharge of a part-time editorial department clerk for taking off from work after her request for an unpaid leave of absence had been denied.

Dayton (Ohio) Daily News/Journal Herald, GCIU: John J. Murphy ruled that the pressmen's union has jurisdiction over advertising supplements printed in the company's print shop.

Houston Post, GCIU: Paul Barron found that a discharged employee who had been reinstated was obligated to mitigate potential back-pay damages by actively seeking other work during the period of his discharge.

Philadelphia Inquirer and Daily News, Teamsters: Joseph M. D'Urso ruled that the company had the right to eliminate a 35-year-old delivery accounting system and substitute a commission system for single-copy sales drivers.

San Diego Union and Tribune, Guild: Thomas Christopher found that the company did not discriminate against an advertising department clerk by refusing to promote him to a higher position.

San Diego Union and Tribune, Guild: Edgar A. Jones Jr. ruled that the company did not violate the labor agreement by classifying a circulation department employee as a temporary rather than regular employee.

San Diego Union and Tribune, Guild: Louis M. Zigman upheld the two-day disciplinary suspension of a circulation department district manager for refusing to obey a supervisor's order.

San Jose Mercury News, ITU: Francis Richard Walsh sustained the discharge and permanent bar to re-employment of a printer who used abusive language and threatened physical violence against fellow employees.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

The solution is UCARLOX™ Laser Engraved Ceramic Anilox Rolls. Once an anilox roll's ink volume capability starts to diminish, so does your printing quality. But, in a four or five hour press run, there's no stopping the presses to replace worn anilox rolls.

UCARLOX Laser Engraved Ceramic Anilox Rolls are designed for a long life of printing quality. A tough, corrosion-resistant ceramic surface is precision-engraved in a variety of screens and ink volume ranges by computer-controlled lasers. The result is improved ink metering and higher quality for both flexographic and keyless offset printing, making every part of your news fit to print. For a long time.

UCARLOX Laser Engraved Ceramic Anilox Rolls offer you lasting, high quality printing backed by comprehensive surface technologies and expertise.

For additional information, call George Pappaioanou, 1-800-UCARLOX. Or, write: Union Carbide Corporation, Coatings Service, 1500 Polco Street, P.O. Box 24184, Indianapolis, IN 46224.

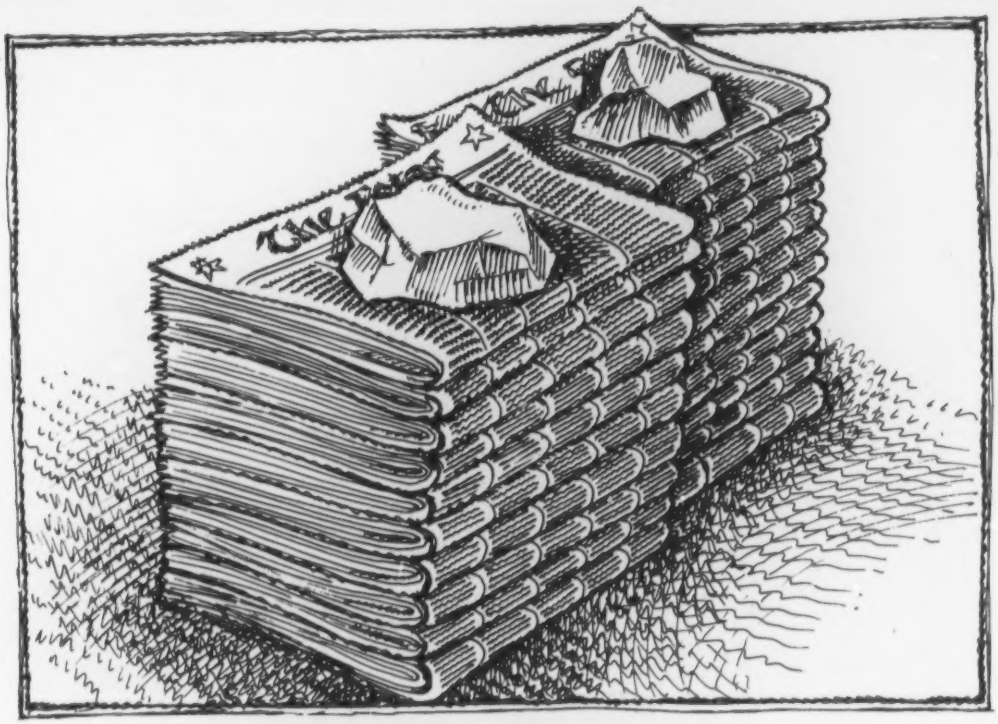
The rolls that are turning the industry around.



Mutual protects you against paper waits.

A lot of papers can pile up during a newspaper strike, and that means a lot of lost revenue. Even when a paper is able to continue printing and distributing, extra expenses such as additional security and advertiser boycotts can be burdensome.

That's why strike insurance from the Mutual Insurance Company of Hamilton, Bermuda, is so important. Strike insurance from Mutual minimizes the financial damage caused by strikes, and provides newspapers with the economic backing needed to endure a strike while a settlement is being negotiated.

A Mutual strike insurance policy covers net profits, fixed charges, and ordinary business expenses in the event of a full or partial strike. Mutual also provides for extra security to protect both personnel and physical plant. As unionization and resistance to automation increase, the protection that Mutual's strike insurance provides is now more valuable than ever.

Mutual offers strike insurance only once a year, with coverage effective from July 1st through June 30th, so contact Mutual immediately to qualify.

We're biased.

But we think the mentally retarded should be cared for.

Patty choked to death.

Bernard, once hyperactive, was inactive for days after being given too much medicine.

Richard ended up with second degree burns, when he was washed.

Each lives in Ohio. Each had been victimized by an intended "reform" movement that has left thousands in Ohio and elsewhere unattended and mistreated.

Originally, the concept of t king the retarded out of Ohio's Orient State Hospital was to make them feel less remote, more a part of a community.

But soon the fiscal benefits of closing state institutions overshadowed the humanitarian concerns.

The former residents of the state hospital were scattered at group homes and centers across the state.

The state "contracted out" with private companies to run the facility or build new ones. In some cases its selections of contractors were highly questionable. According to the *Cincinnati Enquirer*, a public official helped a local company get a $311,360 grant to buy ten group homes. At the same time the official was accepting substantial campaign contributions from the company.

Proponents of "contracting out" public services to private companies say you get more service at less cost.

But the truth is when all the costs are considered, "contracting out" usually ends up costing more, not less.

Private businesses have to make a profit. That often means cutting corners, hiring fewer and less experienced employees.

Going private means an agency is no longer accountable to the taxpayers. Minority hiring programs are often disregarded.

And there is the age-old problem of corruption.

So, what many officials are finding out is that "contracting out" in mental health, or many other fields looks better on paper than it does in practice.

But in Massachusetts, in Colorado, in Rhode Island, Governors like Mike Dukakis, Dick Lamm and Edward DiPrete have shown the answer. They've redeployed their state financial and human resources into state-operated, high quality institutional and community-based care for the mentally ill and the mentally retarded.

They've learned that privatization and profit don't help the homeless. They've learned that government workers want to make the changes America needs to make quality care available for people too poor and too sick to seek it on their own.

We want you to know more about the pitfalls of privatization. AFSCME has published a new book entitled *When Public Services Go Private*. We'd like to send you a free copy. Mail this coupon today.

Mill projects will add 950,000 tons of capacity

Mill projects scheduled to be completed between this year and 1991 will add about 950,000 metric tons of newsprint capacity in North America, according to a compilation by ANPA's Newsprint and Transportation Department.

In addition, 10 companies are considering other expansion projects, seven of which involve capacity increases that would total about 1.3-million metric tons. Planned capacity for the other three projects has not been disclosed.

Not factored into the 950,000-ton gain through 1991 are scheduled reductions in newsprint capacity totaling 168,000 metric tons.

In Alma, Quebec, Abitibi-Price Inc. plans to convert one 59,000-tons-a-year newsprint machine to other grades of paper this year and another to uncoated groundwood in 1988. MacMillan Bloedel Ltd. will reduce newsprint production by 50,000 tons this year at its Powell River, British Columbia, mill.

The charts below show expansion projects that have been announced, that are under consideration or that are on hold [**pressstime**, Jan. 1983, p. 44]. (The tonnage may not be available in the year indicated for completion.)

Newspaper companies own—or are considering investing in—portions of some of the projects in question. They include:

- Gaspesia Pulp & Paper Co.'s modernization of the Chandler, Quebec, mill that is 51-percent owned by Abitibi-Price Inc. and the rest owned by The New York Times Co. and The Washington Post Co.
- CIP Inc.'s proposed project to yield 225,000 tons in Gold River, British Columbia, in which several U.S. newspapers on the West Coast have expressed interest in participating.
- Great Lakes Forest Products Ltd.'s project on hold at Usk, Wash., which is a joint venture between Great Lakes and Knight-Ridder Inc., Kearns-Tribune Corp. of Salt Lake City, Central Newspapers Inc. of Indianapolis, McClatchy Newspapers of Sacramento and The Copley Press Inc. of La Jolla, Calif. □

Publicly Announced Newsprint Capacity Increases–North America

Company	Location	Approximate cost (millions)	Approximate annual capacity (metric tons)
1987			
CIP Inc.	Gatineau, Quebec[1]	$44	60,000
Great Lakes Forest Products Ltd.	Thunder Bay, Ontario[2]	—	14,000
Kruger Inc.	Corner Brook, Newfoundland[2]	$21	88,750
1988			
Donohue Malbaie Inc.	Clermont, Quebec[1]	$170	140,000
Crown Forest Industries Ltd.	Campbell River, British Columbia[2]	$25	50,000
Kruger Inc.	Corner Brook, Newfoundland[2]	—	124,250
F.F. Soucy Inc.	Riviere-du-Loup, Quebec[2]	—	20,000
1990			
Abitibi-Price Inc. (Gaspesia Pulp & Paper Co.)	Chandler, Quebec[2]	$113	22,000
Southeast Paper Manufacturing Co.	Vicinity of Dublin, Ga.[4]	—	190,500
1991			
Great Lakes Forest Products Ltd.	Thunder Bay, Ontario[3]	$215	240,000

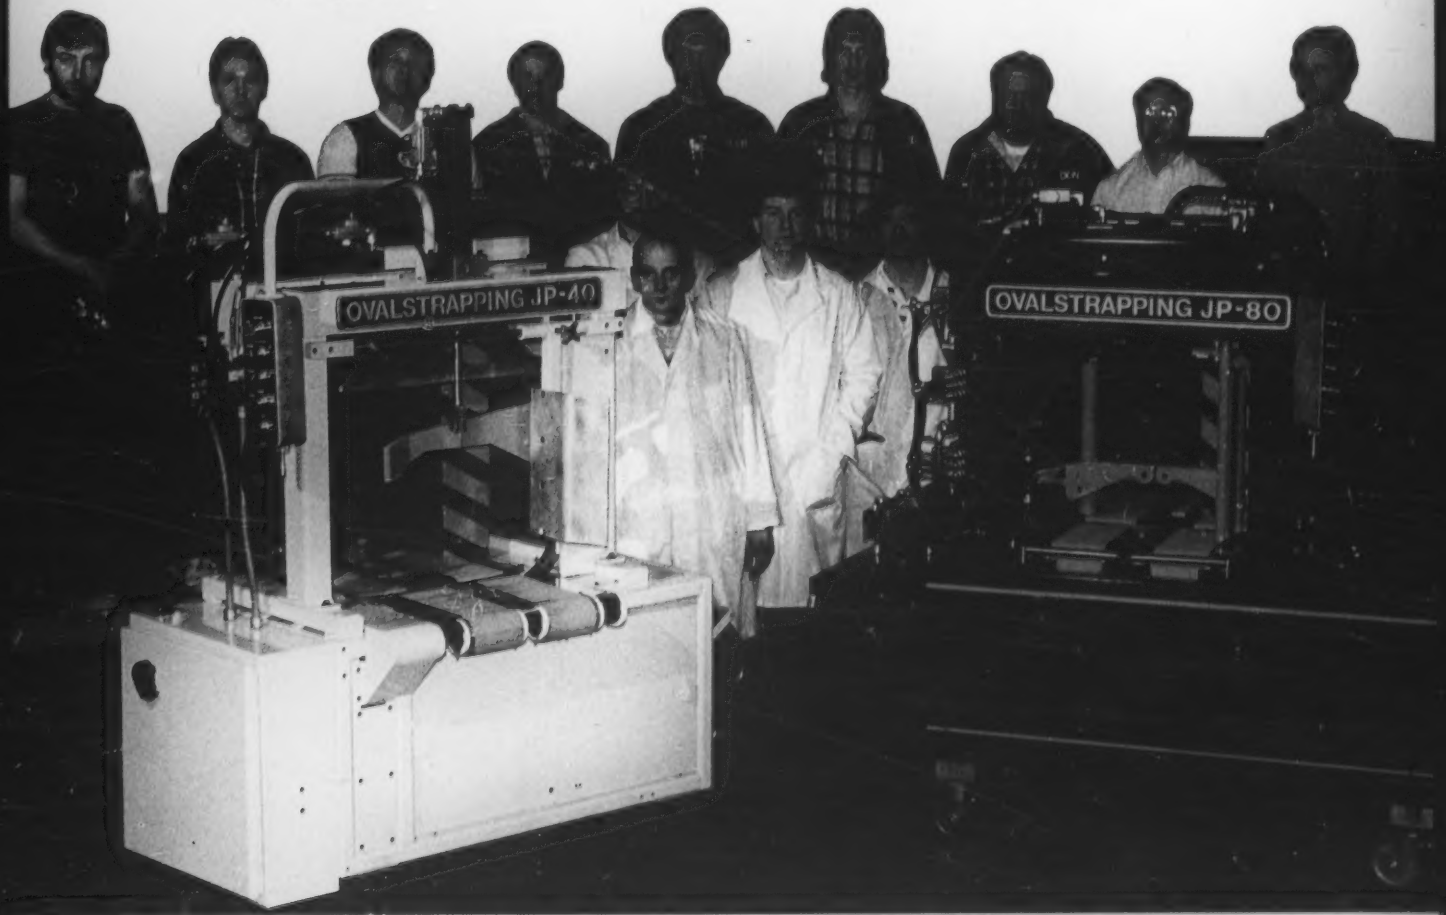
"What can we do to convince you that "Ovalstrapping" has the strapping machine you need?"

The JP80, made by Ovalstrapping, is the fastest strapping machine in the world. In addition, it's so well designed that, even with its speed, it's probably the most durable strapping machine in the world. Now, the JP80 isn't for everyone because not everyone needs to strap 40 bundles per minute. That's why Ovalstrapping also have a modified version of the JP80. It's called the JP40. The major differences are the speed (30 bundles per minute) and the price (considerably less than the JP80). Have we convinced you yet that we know what we're doing? Hundreds of customers, using these machines, can assure you that we know how to build a quality product. These same customers can also tell you that when we make a promise we deliver. It really doesn't matter that we have outstanding engineering capabilities or that our production lines are turning out strapping machines at a speed that makes most of our competitors very nervous. All that really matters is that you know that we are one of America's fastest (if not the fastest) growing strapping machine manufacturers and that we want your business. What else can we do to convince you that our machines belong in your plant?



DESIGNED AND BUILT IN THE U.S.A.

Shown are some of the people who design, engineer, manufacture and service Ovalstrapping's American built strapping machines.

Newsprint

CPU votes to strike against Abitibi-Price

The Canadian Paperworkers Union broke off negotiations with Abitibi-Price Inc. in May and voted 91 percent in favor of a strike.

The union is seeking a 7.1-percent wage increase in the first year and 8 percent in the second year of a two-year pact.

Talks were scheduled to resume May 25 with the assistance of Canadian government mediators. According to the CPU, the earliest the union could strike would be mid-June because of provincial regulations.

Meanwhile, CPU members at Rothesay Paper Ltd.'s newsprint mill in St. John, New Brunswick, whose contract expired Dec. 31, ratified a three-year agreement.

Workers will receive a 3-percent wage increase in the first year, vacation pay doubled in the second year and a wage increase of 62 cents an hour in the third [**pressstime**, May 1987, p. 116].

Negotiations were scheduled between the Confederation of National Trade Unions and Kruger Inc. at the Brompton-ville, Quebec, mill, where the contract expired May 31.

In the United States, negotiations also were scheduled between the United Paperworkers Union and Inland Empire Paper Co. at the Millwood, Wash., mill, on a contract to replace one that expired May 31. □

More firms announce price hikes

Two more newsprint firms have announced higher newsprint prices for U.S. customers. Donohue Inc. and Kimberly-Clark Corp.'s list prices will increase to $610 per metric ton on July 1 and Aug. 1, respectively.

As of late May, Champion International Corp. was the only major newsprint company in North America that had not announced an increase [**pressstime**, May 1987, p. 116]. □

Earthquake aftermath

Tasman Pulp & Paper Co. Ltd.'s recovery from a March earthquake in New Zealand has been faster than expected. Two of three newsprint machines are running normally at its mill in Kawerau, and the third machine is expected to be operational in July [**pressstime**, April 1987, p. 71]. □

With five new colors

Dry Cromacheck® meets the lion's share of your overlay proofing needs

The CROMACHECK* dry overlay proofing system has added red, blue, green, orange and brown to its four process colors to give your proofs a more flexible palette for commercial and package printing.

CROMACHECK is the first and only completely dry overlay proofing system. UV light from conventional plate exposure units is all you need—no wet processing. You can expose multiple colors simultaneously (limited only by the vacuum frame size). All of which makes CROMACHECK fast, accurate and simple to use.

CROMACHECK is also simple to get: call 1-800-642-5663 for the name of the nearest dealer. Or write Du Pont Company, CROMACHECK, Room X50631, Wilmington, DE 19898.

Consumption continues upward trend

Newsprint consumption by daily newspapers continues to outpace that for all U.S. users combined.

For all U.S. users, consumption was 1.8-percent higher in April than in the same month a year earlier, while U.S. dailies used 3.5-percent more. For the first four months of 1987, consumption was up 1.6 percent for all users and 2.9 percent for daily newspapers compared with the same period of 1986.

At the end of April, stocks of newspapers in ANPA's statistical sample totaled 41 days, down from 43 days a year earlier. North American mill stocks also were down—from 441,902 tons in April 1986 to 367,925 tons.

The mill operating rates in April were 99 percent in Canada and 93 percent in the United States. For the first four months, operating rates for Canada and the United States were 99 percent and 94.8 percent, respectively.

Worldwide shipments from Canadian mills for the first four months of the year were running 7 percent ahead of last year's level.

Quality and commitment: The most advanced news technology.

"We don't get bylines like editorial people," observes Brad Martin, a Kansas City technician whose job is to help keep The Associated Press news and photo reports moving to members. "The recognition comes from your co-workers and the members who depend on you."

Readers and listeners may not know Martin, who started as an AP office boy and grew up with its technology. Yet without the dedication of Martin and his 500 colleagues in AP's communications department — driving extra miles to fix a member's printer, working 12-hour days to wire a bureau at a political convention, or keeping up with the latest satellite technology — there would be no access to the world's most comprehensive news report.

AP pioneered the use of modern technology in the news business. It was the first to use computers and video terminals to send news. It was the first to send laser-scanned pictures and the first to own a satellite transponder. Its research and development staff in East Brunswick, N.J., continues work on more "firsts."

Technicians like Brad Martin make this advanced system work, bringing the miracle of instant news and picture transmission from around the world to the thousands of member newspapers and broadcasters who own AP.

"All the people I know in the communications department are committed to the AP. In communications, there is no halfway."

AP Associated Press
Quality. Commitment.

Brad Martin at his home base in the Kansas City bureau.

Bob Daugherty

Large exhibition, full agenda on tap for ANPA/TEC '87 in Las Vegas

ANPA/TEC '87, part scholarly gathering, part technical spectacle, will run June 6-10 at the Las Vegas Convention Center.

The latest in newspaper technology—both in equipment displays and symposium topics—always draws crowds, and this year will be no exception. Peter P. Romano, ANPA director/technical services, projects attendance of about 12,000 based on preregistration of about 6,500 and the sellout of the 6,200 rooms set aside at the 12 ANPA/TEC hotels.

Last-minute hotel information may be obtained from the ANPA Housing Bureau at (702) 383-9100. The bureau can offer suggestions on accommodations at other hotels, although choices will be limited.

On-site registration for ANPA/TEC will be available in the lobby of the convention center's rotunda from 10 a.m. to 5:30 p.m. Saturday and Sunday, June 6-7, and from 8 a.m. to 5:30 p.m. Monday, Tuesday and Wednesday, June 8-10. The $40-registration fee covers admission to all sessions and the equipment exposition, and use of the complimentary shuttle bus service from 10 a.m. to 6 p.m. June 6-7, and 8 a.m. to 6 p.m. June 8-10. Running at 15-minute intervals, buses will link the convention center with all the ANPA/TEC hotels except the Las Vegas Hilton, which is within walking distance.

Hertz is offering special car-rental discounts to attendees. For reservations or information call (800) 654-2200 and tell the agent the rental is in connection with ANPA/TEC '87.

More than 300 exhibitors have contracted for space at the 59th annual trade show, formerly known as the Operations Management Conference & Exposition. Exhibit space is expected to top 310,000 square feet in the East Hall and North Hall of the convention center—the second-largest convention facility in the United States [*presstime*, May 1987, p. 98].

Hours for the exposition are 11 a.m. to 5:30 p.m. June 6-7, and noon to 5:30 p.m. June 8-10.

Preceding the exposition on June 8-10 will be sessions assembled by the ANPA/TEC '87 Arrangements Committee, headed

Program for 59th ANPA Technical Exposition and Conference

Monday, June 8

General Session–9 a.m.-10:45 a.m.

Chairman: **Larry D. Stratton,** executive vice president, operations, Los Angeles Times

Welcoming Address: **Brian L. Greenspun,** president and associate editor, Las Vegas Sun; **Earl Johnson,** general manager, Las Vegas Review-Journal

Address by ANPA Chairman and President George W. Wilson, president, Concord (N.H.) Monitor

Theme: The Market

Speakers

"Editorial–Competing for News," Eugene C. Patterson, chairman and chief executive officer, Times Publishing Co., St. Petersburg

"Advertising–Competing for Advertising," Leo Bogart, executive vice president and general manager, Newspaper Advertising Bureau, New York

"Pulling It All Together," Stanton R. Cook, publisher, Chicago Tribune Co.

Three Concurrent Workshops–11 a.m.-12:30 p.m.

- ***Workshop I:*** **Coping with Pagination and New Technology in the Newsroom**

Moderator: **Eric Wolferman,** executive editor, The Reporter, Lansdale, Pa.

Panelist: **William H. Stroud,** assistant to the executive editor, The Philadelphia Inquirer; **Gilbert L. Fowler,** professor of journalism, Arkansas State University, Jonesboro, Ark. **Jules S. Tewlow,** director of special projects, Lee Enterprises Inc., New York; **Laura Schwed,** assistant managing editor/graphics, Westchester Rockland Newspapers Inc., White Plains, N.Y.

- ***Workshop II:*** **PC Options and Opportunities**

Moderator: **Wayne T. Patrick,** publisher, The Herald, Rock Hill, S.C.

Panelists: **Edward F. Baer,** director of computer services, Atlanta Journal and Constitution; **C. Morgan Brassell,** project development manager, Los Angeles Times; **Roger F. Fidler,** director of Knight-Ridder Graphics Network, Washington, D.C.

Workshop III: **Printing Inks**

Moderator: **George R. Cashau,** ANPA director/technical research, Reston, Va.

Panelists: **Jerold L. Underwood,** assistant production director, Houston Chronicle; **John T. Moynihan,** ANPA research chemist/technical research, Reston, Va.; **Bruce E. Blom,** assistant technical director, Flint Ink Corp., Ann Arbor, Mich.; **Thomas J. Pendergast,** superintendent press room, Providence Journal-Bulletin

Tuesday, June 9

General Session–9 a.m.-10:45 a.m.

Session Chairman: **Homer E. Taylor Jr.,** vice president/supply, Knight-Ridder Inc., Miami

Presentations: Editor & Publisher Exhibition Awards, Kodak "Run for the Money" International Newspaper Color Reproduction Contest Awards, Delta Air Lines Awards

Theme: The Issues

"Presses–Decision Dilemma," **Eugene Bell,** vice president/operations director, Chicago Tribune

"Ink–Cradle to . . . Grave Issue," **Gene McDavid,** vice president and general manager, The Houston Chronicle

"Kenaf Update," **C.A. (Chuck) Thompson,** vice president, CIP Forest Products Inc., Tarrytown, N.Y.

"Quality–A View from the Top," **Charles R. Blevins,** vice president/production, Gannett Co., Arlington, Va.

"Materials Handling"—Round Table Discussion

Moderator: **Ralph S. Roth,** vice president/technology, Knight-Ridder Inc., Miami

Panelists: **Thomas O. Might,** vice president/production, The Washington Post; **Stephen M. Majoski,** production manager, Times-Colonist, Victoria, British Columbia; **Joseph L. Donth,** vice president operations, Fort Worth Star-Telegram

Four Concurrent Workshops–11 a.m.-12:30 p.m.

- ***Workshop I:*** **Mandatory Drug Testing???**

Strutton

by Larry D. Strutton, executive vice president/operations of the Los Angeles Times.

General sessions in the Rotunda will begin at 9 a.m. except on June 8, when a multimedia presentation, "Freedom and Information: The Blessings of Liberty," will be presented beginning at 8:45 a.m. It was first shown at ANPA's 100th Anniversary Convention in May in New York City.

Speakers at the general sessions will discuss media competition, materials involved in newspaper printing, the future of electronic graphics, electronic photography and satellite transmission of advertising copy.

Following the general sessions will be workshops from 11 a.m. to 12:30 p.m. in the East Hall meeting rooms. They will be conducted concurrently—four on June 8 and three on each of the next two days.

Topics will include voice recognition and "artificial intelligence," pagination, printing inks, personal computers, press options, graphic-enhancement systems, ad composition, reclamation and disposal of printing products, and drug testing of employees. (See program details below.)

In addition, on June 8, ANPA will offer a college newspaper production symposium: "Computer Systems for Production—Getting One and Keeping It Healthy."

Moderator: **James W. Hopson,** publisher, The Middlesex News, Framingham, Mass.

Panelists: **John Seigenthaler,** chairman, editor and publisher, The Tennessean, Nashville; **J. Michael Walsh,** director of the office of Workplace Initiatives, National Institute on Drug Abuse, Rockville, Md.; **Paul Schrade,** co-chairman, Workers' Rights Committee, American Civil Liberties Union of Southern California, Los Angeles; **Wayne O. Buck, M.D.,** corporate medical director, Los Angeles Times/The Times Mirror Co.

• *Workshop II:* Press Options

Moderator: **Kim Breese,** vice president operations, Dow Jones and Co., Princeton, N.J.

Panelists: **William D. Rinehart,** ANPA vice president/technical, Reston, Va.; **James H. Norris,** vice president operations, Newsday, Long Island, N.Y.; **Sam D. Jenkins,** production director, Lancaster (Pa.) Newspapers Inc.; **John McGann,** editor and publisher, South Bend (Ind.) Tribune, South Bend, Inc.; **Paul R. Gledhill,** director/production, Los Angeles Times

• *Workshop III:* R&D–Reclamation and Disposal

Moderator: **Ralph E. Eary,** national director production and engineering/newspapers, Scripps Howard, Cincinnati

Panelists: **Edmund T. Punk,** director of marketing, Sun Chemical Co., General Printing Ink Division, Graphic Arts Laboratory, Carlstadt, N.J.; **Armando Gonzalez,** chief engineer, Miami Herald; **James D. Hitchman,** vice president production, Ottaway Newspapers Inc., Campbell Hall, N.Y.; **Charles J. Meesow,** director technical services/operational planning, Los Angeles Times

• *Workshop IV:* Guides to Quality Newspaper Reproduction

Moderator: **Charles R. Blevins,** vice president/production, Gannett Co., Arlington, Va.

Panelists: **Charles E. Rinehart,** technical associate, advanced market planning, graphic imaging systems division, Eastman Kodak Co., Rochester; **Sven Ahrenkilde,** assistant to the director, Technical and Educational Center of the Graphic Arts, Rochester Institute of Technology; **William R. Bogert,** vice president/production operations, USA Today, Arlington, Va.

Wednesday, June 10

General Session–9 a.m.-10:45 a.m.

Chairman: **Norman P. Dussesult,** vice president and assistant general manager, Times Publishing Co., St. Petersburg

Theme: The Futures

"AD/SAT Report": Elizabeth St.J. Loker, vice president/planning and advanced systems, The Washington Post

Introduction to Electronic Graphic Systems: Norman P. Dussesult

"Electronics and Photographs at the Chicago Tribune," Jack Corn, director of photography, Chicago Tribune

Electronic Photography: Geren Mortensen, national sales manager/still image systems, new business developments, video communications products, Sony Corp. of America, Lanham, Md.; **Richard J. Sansevera,** national marketing manager, Hell Graphic Systems Inc., Port Washington, N.Y.

Three Concurrent Workshops–11 a.m.-12:30 p.m.

• *Workshop I:* Ad Composition/Ad Tracking

Moderator: **David A. Sjosten,** vice president and general manager, Worcester (Mass.) Telegram and Gazette Inc.

Panelists: **George H. Bailey,** data processing director, Mississippi Publishers Corp., Jackson, Miss.; **Donald H. Patterson Jr.,** vice president and production director, The Virginian-Pilot and The Ledger Star, Virginia Beach; **John Irvin,** operations director, St. Petersburg Times; **Kathleen Hanley,** assistant production manager, Times Journal Co., Springfield, Va.; **Robert R. Rowell,** vice president/operations, Press-Telegram, Long Beach, Calif.

• *Workshop II:* Graphic Enhancement Systems

Moderator: **H. Philip Nesbitt Jr.,** graphics director, The Record, Hackensack, N.J.

Panelists: **David B. Gray,** managing editor/graphics, The Providence Journal and The Evening Bulletin; **Timothy W. Loker,** editorial systems manager, Newsday, Long Island, N.Y.; **Craig D. Wells,** production director, Daily Camera, Boulder, Colo.

• *Workshop III:* Voice Recognition and Artificial Intelligence

Moderator: **James J. Rogers,** business manager and director of production, Oregonian Publishing Co., Portland

Panelists: **Peter V. Pennisi,** director of marketing, Knowledge Systems, Unisys Corp., Blue Bell, Pa.; **Morton S. Balban,** advanced products manager, graphic systems division, Goss Products, Rockwell International, Chicago; **Harry M. McHugh,** marketing and sales director, AT&T Convergent Systems, Columbus, Ohio

And on June 7, for the third straight year, **preastime** will sponsor a Fun Run in connection with the event. It will start and end at the convention center, beginning at 7:30 a.m. Runners, joggers and walkers are invited to sign up between 9 a.m. and 5:30 p.m. June 6 in the Rotunda lobby. Trophies will be awarded to the top finishers in the men's and women's divisions, and all who complete the two-mile course will receive a **preastime** T-shirt commemorating the event and ANPA's 100th anniversary. A continental breakfast will be served to participants. □

NEWSPAPER STUFFING PROBLEMS?

Only McCAIN gives you 4 ways to open jackets for inserting:

★ WIRE AND LAP
★ VACUUM BELT
★ MECHANICAL SHEAR
★ ROTATING DISC

No one offers more stuffing options than McCain. No matter how you're stuffing now, we can show you a faster, more productive, better trouble-free way. Write or call for details.

Press clean-up gives more time for planning

What does a newspaper do with a 26-year old press—originally designed for 60-inch web and stereoplate printing—that looks like it went through World War II but still works like an old Army mule?

For Production Director Gene Rosenberger and his press crew at the Bucks County Courier Times in Levittown, Pa., the answer was to return the presses to an almost new look and therefore get more time to study long-range press options.

The first order of business was to shape up the pressroom. The walls, floors and ceiling were cleaned and painted by an outside firm. Then work started on the presses.

Units were painted one at a time—the reel room section followed by the upstairs portion. The Courier Times publishes every day except Saturday, and painting was done on Friday morning to obtain maximum drying time prior to the next run. On the day before a unit got its fresh coat of paint, the press crew cleaned and sanded it.

"When we originally decided to paint the press, we obtained a few outside bids for the job, and the price curled my hair," Rosenberger said. The press crew directed by Al Farrell, press and plateroom superintendent, volunteered to provide the labor for the paint job.

By doing the job with its own personnel, the newspaper held the cost to less than $300 per unit. Only three and a half hours of overtime were involved in the nine months of refurbishing.

Detergent and water clean the press easily now and in half as much time, Rosenberger said. Potent solvents were found to be unnecessary.

The newspaper also called in George R. Hall Contracting to "tell us what we should do to make our ink train and rollers stop throwing ink and make the workplace safer, cleaner, healthier and less expensive to maintain," Rosenberger said.

The Courier Times is still waiting to see what happens in the press marketplace now occupied by two printing processes—offset and flexography. But it's doing so in a much cleaner and safer atmosphere. □

Drive The New RPS 6100 Daylight Camera...

And Experience The Performance!

Move into the fast lane with the industry's fastest, high performance camera system on the track today! From zero to the finish line, the 12" × 18" RPS6100 will reproduce black & white linework, halftones and continuous tones with COPYPROOF® — and full color reproductions from prints and transparencies with COPYCOLOR® **— at the amazing track record of up to six per minute!**

Looking for the ultimate in speed, handling, versatility and high performance? Stop by an Agfa show room today, and get the feel of a new RPS6100. **The return on your investment will out distance any other imaging system.** It's another reason why we've earned the reputation as — The Original Graphic System Company!

The Original Graphic Systems Company!

TECHNOLOGY NOTES

• CText Inc. has acquired **North American marketing rights** for Archetype Inc.'s newspaper pagination equipment, including ADept, a display-advertising makeup terminal that will be introduced at ANPA/TEC '87.

The companies will jointly develop editorial and advertising hardware and software for newspapers.

• Crosfield Data Systems has **curtailed its research and development into "artificial intelligence."**

James D. Salmon, president and chief executive officer, said hardware costs and software maintenance costs "were such that they were unlikely to provide any tangible cost benefit" to the technology's use "in the foreseeable future."

Crosfield Data will devote its resources to other technologies, he said, including the continuing use of personal computers in the company's larger editorial and classified systems.

• A **new reference work,** *The Desktop Publishing System Comparison Charts Book,* offers information on 48 systems. Copies are available for $25 each from Durbin Associates, 3711 Southwood Drive, Easton, Pa. 18042.

QUALITY AND VALUE

...just in time

NAPPflex®—the first ready-to-use newspaper flexographic printing plate, manufactured on state-of-the-art production equipment to the closest tolerances of any photopolymer plate sold anywhere, is now available for your evaluation. Using steel backing and water washout in simple, reliable processing equipment, the NAPPflex system is both the easiest to use and highest quality newspaper flexographic system.

If you are considering a flexo decision, please contact Vince Lapinski at (619) 744-4387 and stop by Booth #2472 at ANPA/TEC in June. We'll show you NAPPflex—a printing plate that will take you into the 21st Century.

Purchases of pressroom and computer equipment highlight billion-dollar spending plans

Newspapers participating in ANPA's annual survey of capital expenditures spent more than $1.1 billion on new buildings, plant expansions and equipment in 1986, the second time the reporting surpassed the billion-dollar figure.

Respondents also projected expenditures of $1.2 billion for this year. (See charts below.)

All 1,100 plants that print ANPA-member newspapers were sent copies of the survey, but the number of respondents—434—was down from 475 last year [pressstime, June 1986, p. 86]. Year-to-year comparisons should take into account the fluctuating sample of newspapers, said Peter P. Romano, ANPA director/technical services.

In 1986, the 422 U.S. and 12 Canadian responding plants spent $475 million for building expansion and modernization, including additions, land and new facilities. This compared with $363 million in 1985. Projections are for 1987 expenditures of $344 million.

New equipment purchases totaled $661 million in 1986 (virtually unchanged from 1985), and they are projected at $907 million this year.

Expenditures for telecommunications equipment (excluding telephones and radio systems) are declining—from $9 million in 1985 to $6 million in 1986 and a projected $3 million this year.

The survey also revealed:

- The pressroom remains the area of the greatest amount of spending by U.S. and Canadian newspapers. Last year, pressroom expenditures totaled $240 million, up from $227 million a year earlier. And this year, $334 million in pressroom equipment is expected to be purchased.
- Newspapers continue to spend heavily in the post-press production area. In 1986, $97.3 million was spent on mailroom equipment (about the same as the year before), and responding newspapers project expenditures of $115 million this year.
- Expenditures for front-end computer systems for editorial, classified and advertising use also continue to rise. Last year, $100.2 million was spent, up from $88.5 million in 1985. The estimate for 1987 is $173 million.
- Newspapers spent $12.9 million on energy, power and security management systems in 1986. That was nearly three times the amount ($4.5 million) spent in 1985. This year, the total is expected to be $18.6 million.
- There was a steep decrease in the amount spent on new office furniture and office equipment last year—from $40 million in 1985 to $25.6 million. This year, $28.4 million is expected in this category of spending.
- Purchases of commercial and job printing equipment, which some newspapers have used in recent years to generate additional income, have declined sharply in the past two years and apparently will continue. In 1986, U.S. and Canadian newspapers spent $5 million in that category, down from $9.9 million in 1985. For this year, expenditures are projected at $3.7 million.
- Composing room expenditures were $22.2 million in 1985 and $15.7 million in 1986. This year's estimate is $37 million.

The ANPA questionnaire asked newspapers to list expenditures in 22 categories in an attempt to obtain as specific information as posssible. However, newspapers placed a variety of items in the final category—"other"—ranging from mowing equipment to an airplane. □

Chart 1—1987 Estimates

Newspaper Plants Participating[1]	U.S. 422	Canada 12	Totals 434
Plant Expansion and Modernization

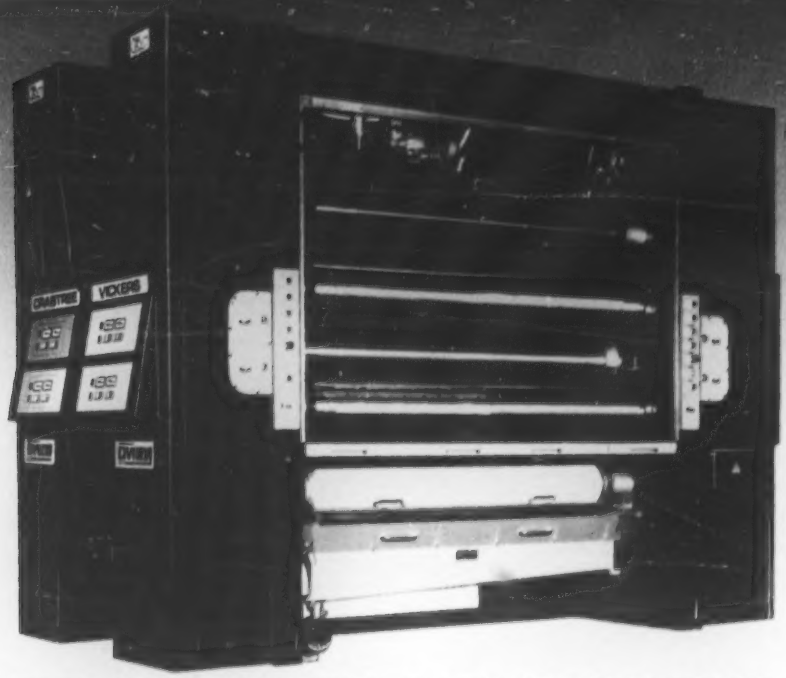
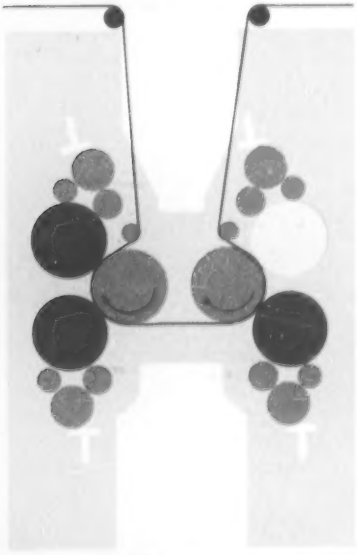
CIVILOX™ +4



A SIMPLER AND EASIER WAY TO ADD PROCESS COLOR TO NEWSPAPER LETTERPRESS PRINTING EQUIPMENT.



Already newspaper tested and proven, this is the ultimate in full process color letterpress printing – a non-reversible 4-color printing unit incorporating the world-famous Civilox keyless inking system.

- easily introduced to most makes of press
- simple to operate
- no ink controls or settings
- removes variables and uncertainties of ink lay-down
- no dampening
- no cylinder trips
- no need for complex wash-up
- precision pin-register system
- magnetic plate lock-up for steel backed photopolymer plates

ANPA Tec. 87

Hints on what to do, and what not to do, can help newspapers in planning new facilities

Newspapers are in a building boom these days, replacing their cramped, antiquated plants with larger, more efficient facilities.

As executives of such newspapers soon discover, plant expansion presents an array of challenges, from maintaining certain temperature and humidity levels for newsprint to planning for future growth [**presstime**, Feb. 1987, p. 8].

William D. Rinehart, ANPA vice president/technical, said ANPA has compiled a list of suggestions regarding newspaper plant design and construction. The information also may prove useful to newspapers with no current plans to leave existing plants, he said.

Following are the pointers on what to do and what not to do:

Newsprint and preprint storage areas

These areas should be heated to at least 60 degrees Fahrenheit. It takes weeks for heat to penetrate to the center of cold newsprint rolls, and below-temperature rolls are a disaster to run on the press.

There's little to be gained by adding humidity to a newsprint storage room, however, because moisture will not penetrate the wrapped rolls.

(Humidifiers are recommended for the pressroom and mailroom, however, because unwrapped paper benefits from moisture in the air.)

Sprinklers are strongly recommended. It is important that the sprinkler lines and heads are installed as high as possible, tight to the ceiling, to avoid knocking off the sprinkler heads when fork lifts are in use. During construction, a check should be made to ensure that plumbers are doing the job properly.

Storage rooms with sprinklers should be crisscrossed with multiple drains. They can be topped with perforated, iron covers. The pattern of the drains can be such that a sprinkler is at the center of the crisscross. The purpose of the drains, of course, is to protect the stored materials except in an area of a discharging sprinker.

If possible, the storage area should be designed with smoke- and heat-release doors located in the roof. These look like old-fashioned, exterior doors to a cellar. They spring open when heat of a fire melts low-temperature spring links and thus reduce the heat of the fire and the chance of its spreading.

Sprinklers should be connected to an automatic calling system so that once they are activated, the nearest fire department would be alerted.

Press and post-press

Always plan for expansion. The new plant should be configured so that the pressroom, mailroom and loading dock can be expanded someday without disrupting everyday operations.

Expansion plans should be such that no original structural columns, plumbing, electrical, duct work, etc., would require relocation to permit expansion. It also is advisable to build the original structure with bolted exterior wall sections in the pressroom and mailroom. These sections can be easily removed to permit the movement of large equipment in or out of the building. They also can be reassembled to form the outside wall of an expanded facility.

The future expansion of the press also should be taken into account. An expanded foundation can be provided in the initial construction, or the exterior end of the foundation can be of a "step-down" design, whereby a "step" joint can lock an expanded foundation to the existing foundation.

Unwrapped paper can lose or gain moisture in seconds. The pressroom and mailroom area heating systems should be designed so that a relative humidity of at least 45 percent can be maintained. Dry air results in abnormal problems with pressroom and mailroom eqipment.

Other considerations

Careful consideration should be given to fire hazards plant-wide.

It is recommended that computer areas be protected with a Halon fire-extinguishing system.

To facilitate movement of firefighting equipment, double doors should be provided from hallways into all production work areas. In some areas, large roll-up fire doors can be installed.

Newsprint and even presses burn. Replacement newsprint is almost always quickly available; presses, however, are not. Consequently, it is best that newsprint not be stored in proximity to presses. If newsprint rolls are kept in an adjacent location, the room should be equipped with heat-release fire doors to isolate it from the pressroom in the event of a fire.

It can be advantageous to build a small, separate building to store waste matter or other material that could be considered flammable or hazardous. Such a building usually does not need heat or light.

SEE US AT BOOTH 763

along a track should be designed carefully, so that the rolls, when turning, won't hit building or press columns.

If the facility is to be located in an adverse weather area, an under-surface pipe system of glycol-based heaters can be installed to keep truck areas clear of ice and snow.

Steps should be taken to accommodate a satellite dish. If it's going to be placed on the roof, a steel platform should be provided with 110-volt power connections beneath and a conduit to carry cables from the dish into the plant.

Newsrooms are always subject to change of equipment—telephones, VDTs, picture receivers, etc. Consequently, it makes sense to design this area with a floor that is elevated 6 to 12 inches and has removable squares. This facilitates hooking up electronic equipment and eliminates cords on the floor.

If economically feasible, two separate power feeds should be provided from the electric utility. This is to try to avoid blackouts caused externally. □

Labor, technology issues get Las Vegas forum

The fifth annual ANPA Labor Relations and Technology Seminar June 5-6 in Las Vegas has attracted more than 40 registrants, a sizable increase over the 24 who attended the 1986 meeting. The seminar is held in conjunction with ANPA's annual trade show, ANPA/TEC '87.

During the two-day session, newspaper executives will examine a number of issues, including the impact of technology on production personnel and on white-collar workers, ergonomics, pagination work assignments, and jurisdictional disputes.

For more information, contact Mary Sepucha of the Association's Human Resources Department at The Newspaper Center, Reston, Va. □

Ferag makes rebate to Philadelphia dailies

An agreement reached between Philadelphia Newspapers Inc. and Ferag Inc. provides for a partial rebate on an $18-million installation of inserting equipment in the mailroom of The Philadelphia Inquirer and Philadelphia Daily News.

The amount of the rebate was not disclosed.

The inserting equipment did not meet PNI's expectations in handling 128-page newspapers [**presstime**, April 1987, p. 64]. □

Why gamble with your color... when we offer you a sure bet

At Huber, we understand every aspect of newspaper production that can contribute to color quality. That's why we:

- Look into your plate preparation, color separation, print density and lay
- Analyze your present ink formula, ink/water balance, and the paper that you use
- Study your presses, their type, makeup, configuration, and their running speed
- Look at the overall appearance of your printed sheet — page set-off, smearing, rub-off and dot gain
- Investigate your delivery and handling procedures • Collect data on acceptance by your advertisers

We really get to know your operation. We compile our findings in a permanent record — and place your "Fingerprint" on file for future reference. Then, and only then, do we customize a color ink formula just for you — and we supply it with the consistency, dependability and service that have made Huber an industry leader for over a century. If you want quality color, don't leave anything to chance. Call on Huber today...it's a sure bet.

For more details about a comprehensive analysis of your operation, call Andy McDonnell, Market Manager, Newsinks (201) 906-1760.

Think ink...think Huber.

TRIPLE VALUE FROM TRIPLE-I

The newspaper market requires greater electronic control of its processes. And Information International has added three electronic systems to improve prepress operations.

Layout ADvisor

The 4200 Layout ADvisor is an easy to learn, easy to use interactive electronic ad layout system. It operates alone to produce paper ad stack dummies or interfaced to a complete newspaper pagination system to produce plate-ready or camera-ready ad stacks.

The Layout ADvisor satisfies every newspaper's "wish list." It automatically lays out an entire paper, a selected section or a single page; moves ads from one page or section to another; reserves space for other uses; shows the size of the newshole for each column and page. And it accepts late ads, kills, and changes. Information International is pleased to offer this superior software package developed and production proven at the *Journal-Bulletin* in Providence, Rhode Island.

TECS/2 by Morris

Introducing TECS/2 *by Morris*, a distributed database front-end system for editorial and classified, developed by Southeastern Newspapers Corporation of Augusta, Georgia. Now this production proven system is available exclusively from Information International. Replace or enhance your present front-end system.

Once you see the quick response, the versatility and reliability of TECS/2 *by Morris*, opportunities to extend the life of your existing front-end with this exciting new product will be apparent. Buy two terminals or 200. The advantages of this system can be realized by large and smaller newspapers alike.

The Lasercomp

The "laser connection" between Information International and Monotype creates a truly superior pagesetting system. It is an interface from our 2300 Image Network Processor to Monotype's complete line of Lasercomp typesetters including the Mk2i, the Checkmaster and Monotype's newest model, the Lasercomp Express.

The combination gives newspapers the full capabilities of our black and white ad makeup system, plus the efficiency of the Lasercomp recorders. These capabilities are further supported by triple-I for rotation of graphics and other tasks.

Take a closer look at triple-I's triple value.

See all three products at ANPA/Tech '87, BOOTH 648.

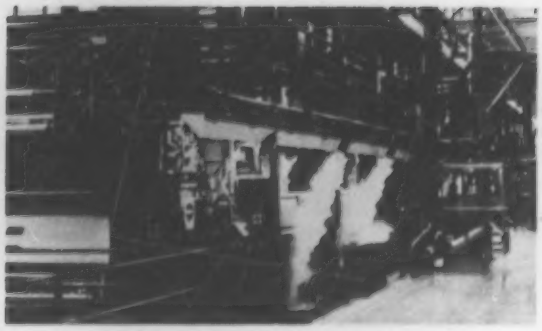
Protect your pressroom from fire

Let Chemetron show you how to reduce the risk



This sequence of photos shows a Chemetron carbon dioxide fire suppression system at work protecting a press line in a newspaper printing plant. Within minutes of the end of discharge, production can resume because there is no mess, no clean-up, and no damage to equipment by carbon dioxide. Imagine the problems created if a sprinkler system were to activate on your press line.

Multiple hazards, the potential for serious loss

There are a number of areas in printing plants which are potential sources of fire, such as ink and paper storage areas, composing rooms and the bindery. But perhaps nowhere else in the printing plant is the potential for fire greater, and the result more crippling, than in the pressroom, the heart of the newspaper operation.

Immediate, effective, non-disruptive protection

Lengthy shutdowns can spell financial disaster for the newspaper industry. That's why pressroom equipment requires fire protection that is immediate, effective and causes a minimum of disruption.

Chemetron automatic fire protection systems suppress fires without the need for enclosing walls. Unlike sprinkler systems, there is no contamination of ink, printed material, press rolls, bearings, electrical drives or controls. This means downtime is held to a minimum. Self-contained, the Chemetron low pressure carbon dioxide system operates even during a power failure.

Put Chemetron experience to work for you

Protecting printing plants is our specialty. Over the past 40 years, Chemetron has put in service between eight and ten thousand low pressure carbon dioxide fire protection systems, and has pioneered many other developments in fire protection.

Ask about Chemetron's new microprocessor based control panel and how you can use it to reform out of date technology on your existing carbon dioxide system.

Free video demonstration

Publishers, Production Managers, Pressroom Supervisors: Send us your business card and we will give you a copy of our videotape on fire protection for printing plants. Learn about efficient, cost-effective solutions to fire problems in modern printing plants.

Rail strike possible in Canada

A Canadian railroad strike could occur this month if negotiations over a new two-year labor agreement are unsuccessful.

Railroad employees in Canada have worked without contracts since Dec. 31. Talks in late May were in a conciliation stage involving a Canadian government labor-relations officer.

Canadian National Railways and Canadian Pacific Rail have asked for a 5-percent rollback in the wages of hourly and clerical workers, retroactive to Jan. 1.

They also want employees to contribute 50 percent of the cost of health and certain other benefit plans now funded entirely by the railroads. □

ICC approves boxcar plan

The Interstate Commerce Commission has approved an arrangement to make railroad boxcars more easily available for shipping pulp and paper. The ruling took effect in May, and mills should have access to the new system by mid-June.

The ICC ruling will allow a central management company to coordinate use of boxcars that might otherwise make return trips empty. Most of these cars in question are specially designed for shipping pulp and paper. □

Conrail stock goes on sale

Nearly 59 million shares of Conrail stock have gone on sale, with the price in late May about $32.40 per share.

The offering is expected to raise $1.65 billion for the government's 85-percent share in Conrail. Current and former employees own the remaining 15 percent [*pressstime*, April 1987, p. 70]. □

Claims guide available

A "Telephone Claims Guide" that can be used as an aid in processing loss and damage claims for freight moved by truck is available through the National Freight Claim & Security Council of the American Trucking Associations.

Cost is $15 for orders of one to five copies. Write the council at 2200 Mill Road, Alexandria, Va. 22314. □

The Bettman Archive

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

Hearst pays more for Houston Chronicle; Cowles enters Southwest

The Hearst Corp. completed its acquisition of the Houston Chronicle by agreeing to pay an additional $15 million in promissory notes. The agreement brings the total purchase price to $115 million in notes and $300 million in cash.

Hearst also agreed to raise the interest on the notes from 5 percent to 7 percent, following negotiations with Texas Attorney General Jim A. Mattox, who had authority to review purchase of the Chronicle from the Houston Endowment, one of the largest charitable foundations in Texas.

If Mattox had not approved of the sale, he could have filed suit to stop it because the state regulates charitable trusts.

William Dean Singleton, owner of the Dallas Times Herald and other newspapers, had said the endowment had rejected his higher cash bids of $500 million and $415 million [**prestime**, April 1987, p. 75].

According to the president of the Houston Endowment, J.H. Creekmore, the letter of intent to sell to Hearst for $400 million already had been signed when Singleton's $415-million bid came in. He also called Hearst's the "highest credible offer at that time."

At Hearst, President and Chief Executive Officer Frank A. Bennack Jr. said, "We believe our original offer was full and fair. . . . We agreed to the increase . . . so that this purchase can be completed without further delay and upon a basis which satisfies everyone involved."

BUSINESS ROUND-UP

In other recent business developments of concern to newspapers:

• **Cowles Media Co.** of Minneapolis expanded into the Southwest by agreeing to purchase the Scottsdale (Ariz.) Progress (evening, circulation 20,600) from the Jonathan Marshall family. Terms of the sale were not disclosed. Scottsdale is an affluent suburb of Phoenix.

• **Knight-Ridder Inc.** sold three small Mississippi papers, two dailies and one weekly, to Morris Newspapers Corp. of Savannah, Ga., for an undisclosed price. The dailies are the Daily Times-Leader of West Point (evening, 4,284) and the Starkville Daily News (morning, 8,314). They and the weekly Webster Progress-Times of Eupora were part of Knight-Ridder's acquisition last year of the State-Record Co. of Columbia, S.C.

• The estate of the late **Samuel I. Newhouse** is seeking to settle its $600-million estate tax dispute with the Internal Revenue Service by the fall, following the IRS' withdrawal of its demand for a civil fraud penalty.

• **Le Matin,** which entered the crowded Montreal market as the city's fifth daily last February, shut down in April after publishing 38 issues. Circulation was less than 20,000, far below the owners' expectations. □

Sunday circulation figures changed

Preliminary figures on Sunday newspaper circulation in ANPA's "Facts About Newspapers '87" were incorrect. The final total of 1986 Sunday newspaper circulation is 58,924,518, not the 61,515,214 reported on page 3 of the report.

Editor & Publisher Co., which provided the figures, attributed the discrepancy to several instances of duplicative circulation figures submitted by two or more newspapers that share a single Sunday edition. Its 1987 yearbook contains the final, corrected figures.

The revised figure means that Sunday circulation rose over the previous year by 98,540 copies, or .17 percent, rather than almost 2.7 million, or 4.6 percent, as previously reported [**prestime**, May 1987, p. 124]. □

Recent acquisitions

Dirk Ippen of West Germany acquired full ownership of the Eagle Times, Claremont, N.H., daily circulation 10,023, from Ursula Ingersoll of Lakeville, Conn.

The family of John Costello Sr. of Lowell, Mass., acquired 100-percent ownership of The Lowell Sun, daily circulation 55,247.

Sotex Newspapers Inc., an affiliate of MediaNews Group of Dallas, acquired majority ownership of Sun Publishing Corp. of Hobbs, N.M., publisher of the Hobbs Daily News-Sun, circulation 9,974.

Thomson Newspapers Inc. of Des Plaines, Ill., acquired the Worthington (Minn.) Daily Globe, circulation 15,281, from Midwest Newspapers Inc. of Ames, Iowa.

Mid-Iowan Newspaper Group Inc. of Charles City, Iowa, acquired the Charles City Press, daily circulation 3,646, from Mid-America Publishing Corp. of Des Moines. □

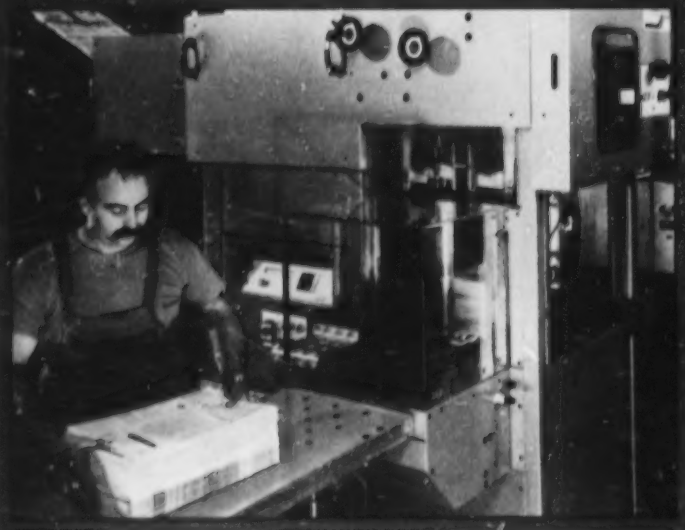
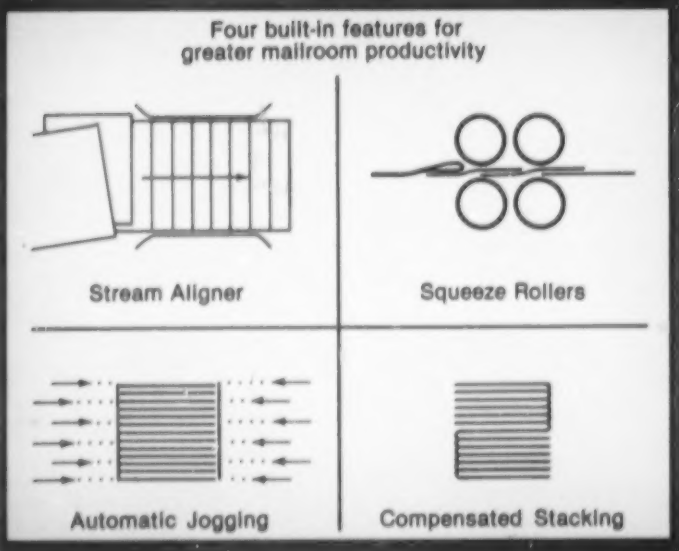
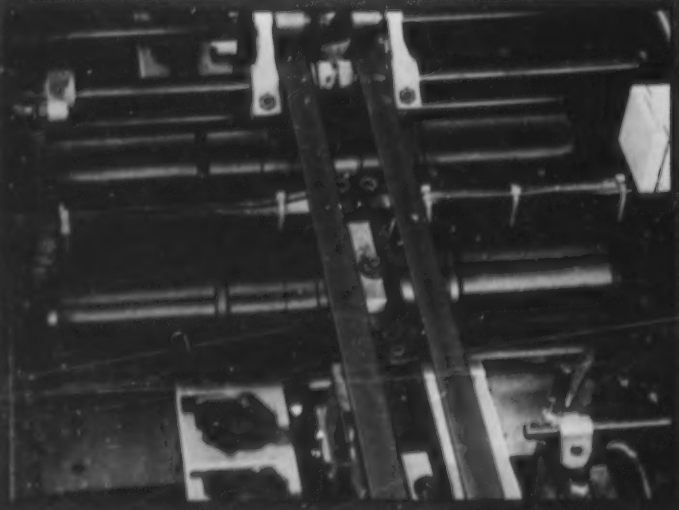
Mailroom Supervisor's Dream







If you now have more than one person at your stacker delivery, take a good look at the Muller Martini PrintStack CN-70.

The CN-70 complementing press speed Stacker handles a wide range of products, including newspapers, preprinted sections, inserts and commercial work.

If you wrote your own mailroom stacker "wish" list, it would probably include everything that makes the CN-70 so special:

- Built-in preweighing unit for dependable operation
- Automatic bin loggers eliminate extra handling when loading off-line inserters, mailing machines or TV-stitchers
- Two sets of pneumatically controlled squeeze rollers ensure a tight fold for efficient processing
- Microprocessor controls with self-diagnostic capability
- Neat, square stacks to preserve the quality appearance of your paper — no more dipped, curled, dog-eared copies

STACKS ONE ADVANTAGE ON TOP OF ANOTHER

The CN-70 Stacker is your key to mail room productivity and allows more efficient processing. One person handles output without need for manual flagging.

Analysts get positive forecasts for newspapers

Newspaper executives and analysts alike are optimistic about the earnings potential of newspaper companies through 1987, despite rough spots in markets with ailing local economies.

And the prognosis for 1988 is as good or better, according to newspaper executives addressing the 16th annual Morton Forum, in New York City May 7-8 immediately after the ANPA Convention.

Executives of the 15 publicly held newspaper companies tracked by analyst John Morton and his Morton Research team at the firm Lynch, Jones & Ryan in Washington, D.C., made presentations to about 100 analysts and institutional investors.

The forum and meetings such as PaineWebber Group Inc.'s annual Outlook for the Media conference help the financial world assess what the future holds for newspapers financially and gives analysts a chance for a personal exchange with the management of newspaper companies whose stock is publicly traded.

Recurrent questions from the floor concerned the impact of newsprint price hikes, the Florida ad tax (see story, p. 82), and current softness in national advertising.

Newspaper stock analysts also were interested in acquisition strategies, capital investment plans and ad rate and circulation price increases.

The current year "will be another good year, although we don't expect spectacular gains as last year," said William O. Taylor, chairman of Affiliated Publications Inc. and publisher of The Boston Globe. Like many other companies, Affiliated cited some circulation erosion. But it said the trend should be reversed through improved color, more promotion and new sections.

For The Times Mirror Co., executives gave an assessment that, in its emphasis on the different economic climates around the country, was typical of those of several other companies with scattered newspaper properties. This year should be "splendid" for the Los Angeles Times, said Times Publisher Tom Johnson.

And Eastern Times Mirror newspapers should have strong gains based on the "unusual prosperity" in their markets, said Group Vice President Peter C. Goldmark Jr. But The Denver Post has "a mixed outlook, at best," Johnson said, with advertising "very sluggish" because of a lackluster local economy.

On the acquisition front, executives of many companies said they are looking for newspapers to buy but are finding the prices beyond what they're willing to pay, prompting one analyst to ask whether prices are "so high as to be prohibitive."

Walter E. Mattson, president of The New York Times Co., said, "In recent months, we went after two newspapers. We stood up at the plate and took a mighty swing and missed the ball altogether. Prices are very high indeed."

Undaunted, Gannett Co. is eyeing newspapers with more than 20,000 circulation. "There are about 230 left that Gannett can acquire, so we think there's plenty of room," said Douglas H. McCorkindale, vice chairman and chief financial officer. □

Can You Measure The Quality Of Your Newsprint?

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

The Technibrite™ MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate Technibrite MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Speeches

Gary L. Watson

Alejandro Miro Quesada Garland

William E. Brock

Harold Wolfe

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Strategic Planning and Newspapers
ANPA Chairman and President George W. Wilson, president, Concord (N.H.) Monitor. International Newspaper Financial Executives spring conference, Marco Island, Fla., May 11

The Future of Newspapers—Changes and Choices
Allen H. Neuharth, chairman, Gannett Co., Arlington, Va. Downtown Atlanta Rotary Club meeting, March 16

1986: A Year to Remember for Times Mirror
Robert F. Erburd, chairman and chief executive officer, The Times Mirror Co. Annual shareholders meeting, Los Angeles, April 29

Major Challenges for Newspapers in the 1990s
Gary L. Watson, president/Community Newspaper Division, Gannett Co., Arlington, Va. The Poynter Institute Management Development Seminar, St. Petersburg, Feb. 8

The Economics of Newspapers: What Is Happening and What It Means
Michael G. Gartner, editor, The Courier-Journal, Louisville. The Changing Economics of News conference sponsored by the Gannett Center for Media Studies, New York City, April 28

How the Abuse of Press Freedom Threatens Human Rights
Alejandro Miro Quesada Garland, president, Inter American Press Association, and president, El Comercio, Lima, Peru. Statement before the United Nations Commission on Human Rights, Geneva, March 4

Low-paying Service Work Is a Myth
U.S. Secretary of Labor William E. Brock. National Press Club luncheon, Washington, D.C., March 5. (Or see May 1, 1987, Vital Speeches of the Day, 389 Highway 17 By-Pass, Mount Pleasant, S.C. 29464.)

Fortune and Misfortune in the Agency Business
Leonard S. Matthews, president, American Association of Advertising Agencies. AAAA annual meeting, Boca Raton, Fla., March 25-28

A Canadian Newsprint Company in an International Arena
Bernd K. Koken, chairman and chief executive officer, Abitibi-Price Inc., Toronto. Annual shareholders meeting, Toronto, April 27

From the Newspaper Purchasing Management Association annual conference, Baltimore, April 12-15:

Professional Development of Management and Staff
Dennis J. Fox, general services manager, The Seattle Times

Capital Spending
Kari Lopez, puchasing agent, St. Petersburg Times

A Newsprint Forecast
Harold Wolfe, office manager, The Blade, Toledo

The Future Lies In New Technology, and we've come prepared.

Presenting Flint Ink's New Research Center

The printing industry faces some key issues today: availability and cost of raw materials... environmental concerns... health and safety considerations... the computerization of press-side and prepress operations.

Meanwhile, the emphasis on quality and the demand for increased productivity have never been greater.

Changing technology has created many of these issues. New technology will be required to resolve them, and meet the challenges of the future.

Foreseeing this need in the early 80's, Flint Ink Corporation developed a plan for the future. At the heart of this plan was a state-of-the-art Research Center in Ann Arbor, Michigan. Today, the 75,000-square-foot facility is a reality, reaffirming Flint Ink's strong, positive vision of the future, and our commitment to the printing industry. We invite you to visit this new center and experience the energy and sense of anticipation that exist there.

At Flint Ink, we believe the Future Lies In New Technology, and we've come prepared to turn today's possibilities into tomorrow's reality.

Have You Looked at Your Yellow Pages; Lately?

It's Grown, Hasn't It?

And now you probably have 2 or even 3 directories in your market where there was just one a few years ago. Perhaps you haven't looked at the Yellow Pages as competition, but they may be your biggest competitor for local ad revenue.

American Consulting Services in Vancouver, Washington, has developed a marketing program for the newspaper industry which can teach your ad reps how to convert Yellow Page dollars into newsprint contracts. Millions of dollars have already been recaptured by the newspaper industry through this training program. You have an opportunity this year to increase your bottom line by simply checking into this cost-effective seminar.

FOR A TRULY AFFORDABLE VACATION ....A WEEK WITH HERTZ

MIAMI	NEW ORLEANS	HOUSTON	SAVANNAH	CHICAGO
Subcompact limited availability	Subcompact limited availability	Subcompact limited availability	Subcompact limited availability	Subcompact limited availability
$49.00	$89.00	$79.00	$89.00	$99.00

Above rates are for subcompact cars only and are not discountable.
Affordable rates and discounts are available at participating Hertz locations, subject to change without notice and include a limited number of miles per rental with a charge for excess miles. Weekly rentals require a 24 hour advance reservation. Minimum weekly rental period is 5 days, including a Saturday night. Minimum weekend rental periods apply. Holiday/seasonal blackout periods and other surcharges may apply. Taxes, optional refueling service charges, CDW, PAI, PEC, LIS (where available) charges extra. Car must be returned to renting location except in certain areas. Hertz standard age, credit and driver qualifications apply. Cars subject to availability. Call Hertz for details.

ANPA MEMBERS SAVE EVEN MORE

Just contact the Hertz "Members Only Desk" at **1-800-654-2200** and identify yourself as an ANPA member with ID#12992.

You can take advantage of our special low rates for subcompact cars (like the Affordable Weekly Rates sampled above) and you get discounted daily rates, 10% off Affordable Weekly Rates and 5% off Affordable Weekend Rates when renting a compact, mid-size, full-size 2-door, or full size 4-door car.

You don't sacrifice service for these low prices. Computerized Driving Directions, the highest liability protection coverage, 24-hour emergency road service, and an invitation to join the Hertz #1 Club are yours for the asking—Free of course. Call Hertz for details.

Present this coupon at the time of rental

HERTZ $20.00 OFF A WEEKLY CAR RENTAL

Compact through full size 4-door

Get $20 off when you reserve your car at least 24 hours ahead and rent for 5 consecutive days or more, including a Saturday, at Affordable Weekly Rates. Just present this certificate along with your Discount ID card when you pick up your car.

Call **1-800-654-2200** for Reservations and Information. (In Oklahoma call 1-800-522-3711.) See terms and conditions below. Expires December 31, 1987.

HERTZ TERMS AND CONDITIONS

This offer is valid at participating locations for compact, mid-size, 2-door full size and 4-door full size cars. Rates include a limited number of miles with a charge for excess miles. Rates higher for drivers under 25 years of age. Cars must be returned to renting location. Taxes, optional refueling service, CDW/PAI/PEC/LIS (where available) charges extra. Hertz standard rental qualifications apply.
Call HERTZ for details. Certificate has no redeemable cash value and must be surrendered at time of rental and is deemed fully used once surrendered. HERTZ standard rental qualifications apply. This offer may not be combined with discount or other promotion. Reservations are required at least 24 hours in advance and rental must be for a minimum of 5 days including a Saturday. Only one certificate per rental transaction. Not available in Manhattan, NY and Hawaii. If rental conditions are not met higher rates may apply.
HERTZ RENTAL AGENT: Please enter PC 14280 in the PC box on the RA along with customer's CDP ID #12992.

You don't just rent a car. You rent a company.™

Lasercomp Express

The first laser imagesetter that gives you a page-a-minute with everything in it.

Lasercomp Express, the latest generation in Monotype's world-renowned line of laser imagesetters, offers the most advanced features and capabilities ever available. With it, newspapers, magazines and any other time-critical printing application users can finally take full advantage of all the speed, quality and cost-saving benefits laser typesetting systems can provide.

Express, as its name implies, has its roots in speed and performance. Express is the first laser imagesetter that allows a complete newspaper page with text and integrated graphics to be output in one minute. And, unlike other systems, it has the capability to accept and output every element within a page, including logos, line illustrations and halftones. At 1000 lines per inch, it assures the highest resolution type and graphics.

If you need more performance than this, add the dual processor option. With this option the Express is capable of concurrent input and output—further improving its already impressive throughput performance.

With Monotype's expertise in interfacing—we interface to over 60 different front-end systems—Lasercomp Express integrates easily with either your existing system or your choice of the most up-to-date, interactive systems.

Express features an 82 pica width and can hold more than 200 fonts, each containing 128 characters. You can select these from Monotype's vast and continually expanding library of digital typefaces.

More than any other laser typesetter, Express defines state-of-the-art. So no matter what business you're in, you can depend on Lasercomp to beat your deadlines without compromising your bottom line.

Stark promoted; five others named ANPA and Foundation managers

ANPA Foundation has named a new assistant director and three new department managers, and ANPA has named two new department managers.

At the Foundation, Rosalind G. Stark was appointed assistant director. Stark joined the Foundation in 1984 as publications editor and will continue to be in charge of publications. She replaced Linda B. Skover, who resigned to pursue a graduate degree.

Betty Sullivan has joined the Foundation as manager/Newspaper in Education. Formerly curriculum services manager of USA Today, she received a master's degree from Columbia University Teachers College and bachelor's and master's degrees from the University of Mississippi.

Terri Dickerson-Jones, formerly minority projects coordinator, was named manager/minority affairs. And Carolyn Ebel Chandler, formerly literacy project coordinator, was named manager/literacy programs.

Michael J. Genick will become ANPA manager/meetings and services July 1. Currently manager of membership services, Genick joined ANPA in 1966.

Genick will be assisted by Priscilla C. Shingleton, who was named meetings planner. Shingleton, an ANPA staff member since 1972, has worked on ANPA Convention arrangements in the office of Thomas C. Fichter, ANPA senior vice president.

Also effective July 1, Steven M. Smith will become ANPA manager/membership development. Smith joined ANPA in 1982 and currently is a member of the Association's environmental services staff. □

Rosalind G. Stark

Betty Sullivan

Terri Dickerson-Jones

Carolyn Ebel Chandler

Michael J. Genick

Steven M. Smith

Brumback elected Foundation chairman

Charles T. Brumback, president and chief executive officer of the Chicago Tribune Co., was elected chairman and president of ANPA Foundation at a May 6 meeting of the Foundation's Board of Trustees.

Sandra C. Hardy, vice president of Calkins Newspapers of Levittown, Pa., was elected vice chairman.

They will serve for one year.

ANPA's two newly elected directors were elected as trustees for two-year terms; two other directors were re-elected as trustees for additional two-year terms, and ANPA's four new officers were re-elected to one-year terms as trustees. The terms of 13 directors/trustees did not expire. In addition, ANPA's immediate past chairman and president, Alvah H. Chapman Jr., will serve a one-year term as a trustee. □

Press manning gets a new look at Chicago Tribune

Cathy Cline selected April 1 as the day to assemble the Chicago Tribune's first all-women press crews, but she views the endeavor as much more than a lark.

Cline (right in photo at right, with press operator Pam Smith), a pressroom crew supervisor, organized nine women for the morning shift, which printed the Tempo and classified sections, and seven women who printed 112,000 newspapers for the next morning's "five-star final."

"The idea began as a fun thing, really, but I also thought it would be a good way to remind the gals they can do anything the guys can," says Cline. "It was also a way to give the gals a sense of togetherness."

She says she received a great deal of support from production managers at the newspaper as well as from other pressroom employees, male and female.

The idea of an all-woman crew occurred to Cline about eight years ago when she began her pressroom career at the St. Petersburg Times. However, there weren't enough women there to make it a reality, she says.

Things were different when Cline moved to the Tribune about a year ago and became the newspaper's first female crew supervisor. She found women in a variety of pressroom jobs, many of whom had been hired as replacements for striking pressmen. She normally supervises two women on her crew and invited women, including two other supervisors, from other shifts to join together on April Fools' Day.

The women wore blue T-shirts that read "April 1, 1987, ALL WOMAN press crew," and several whimsically tied pink ribbons to the presses and wore pink ribbons in their hair.

The project was such a success Cline plans to make it an annual event. "I wish things went that smoothly every day," she adds.

These two newspaper carriers were a mite upset by state's age limitation

Jennifer Urekew, 8, and Alicia Bail, 9, were miffed when they were dropped as newspaper carriers, and they told the Massachusetts House Committee on Commerce and Labor they thought they'd been wronged.

The girls had to stop delivering The Holyoke Transcript-Telegram after the state Department of Labor began enforcing a 1913 state law against hiring anyone under age 12.

After the girls' testimony April 22 (Jennifer is speaking in photo below), two legislators introduced bills to lower the allowable working age to 10 and to "grandfather" carriers working prior to 1987.

Urekew's route consisted of nine elderly customers. "It's easy," she says. Picking up her papers in mid-afternoon, she completes deliveries in 20 minutes.

Alicia Bail handled a 50-paper route in Chicopee. She also says it is a snap; the route is in an apartment building next door to her home.

Francis J. Smith, Transcript-Telegram circulation director, says someone apparently filed a complaint with the state. Smith, who says he was unaware of the law, had to dismiss 128 young carriers.

Newspaper numbers

20,236—number of people who have participated in American Press Institute seminars from its inception in 1946 through the end of May.

22—median number of headlines written per day by a copy editor on a normal work shift, according to a survey this year at an API News Editors and Copy Desk Chiefs Seminar.

33,901—number of members of The Newspaper Guild—an all-time high—recorded in the fiscal year ending March 31.

6,262—average circulation of a U.S. weekly newspaper in 1987.

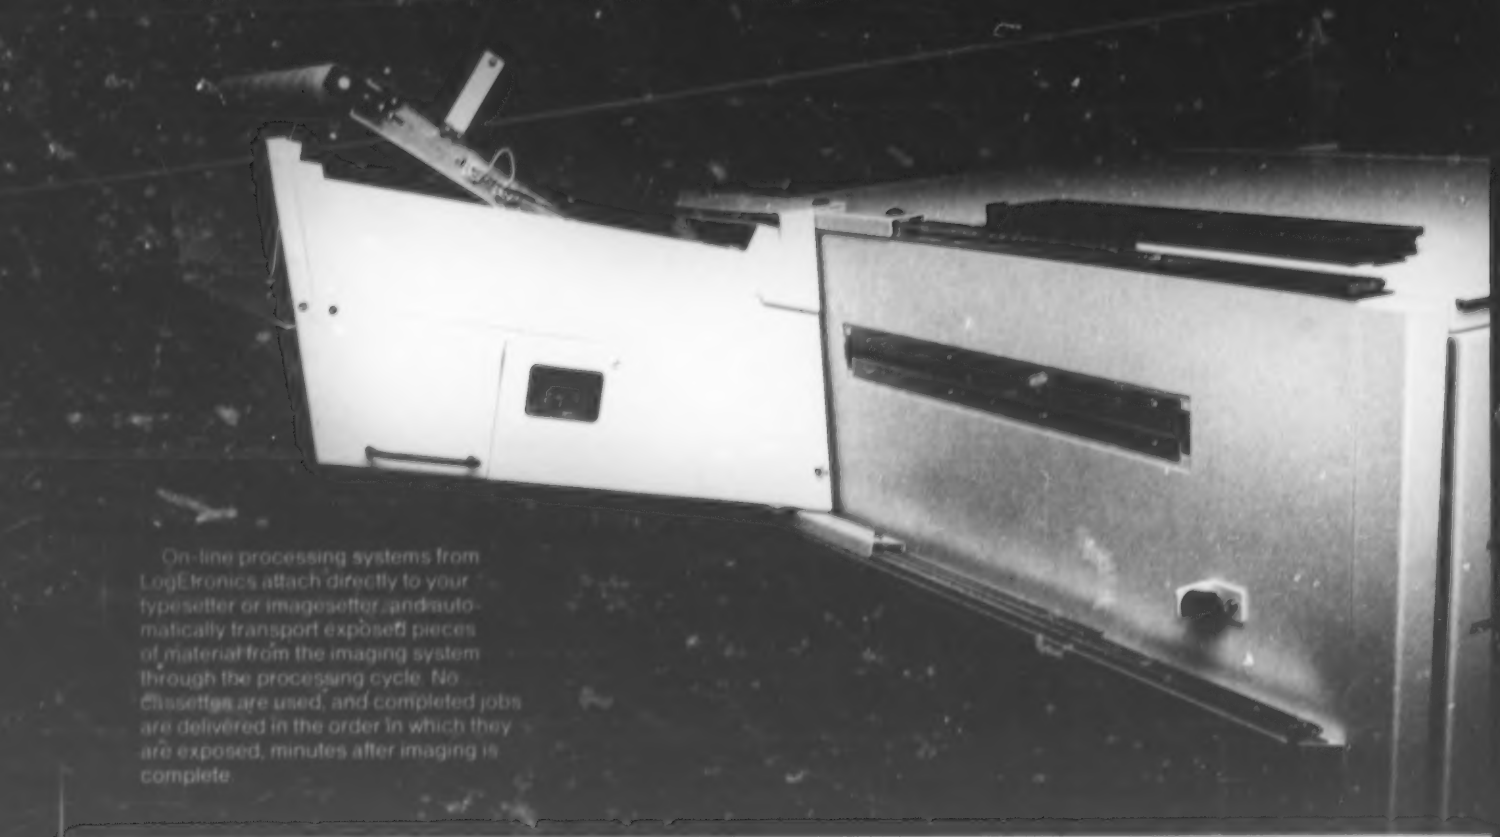
In the media Americans trust

Americans trust the media on this side of the Atlantic significantly more than citizens of major European nations trust theirs.

A series of polls was conducted in April by Louis Harris International in five countries, asking about peoples' confidence in various national institutions.

Sixty-nine percent of Americans expressed confidence in the media, compared with about 47 percent in Spain and France, and 40 percent in Britain and West Germany.

LogE On-line Systems: The Efficient, Automatic Way to Process Your Images.



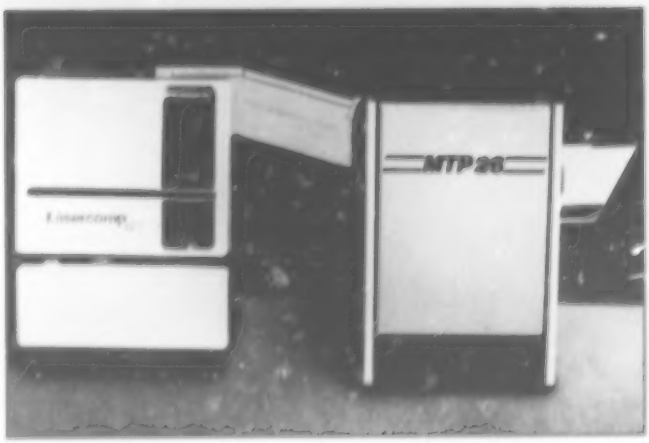
On-line processing systems from LogEtronics attach directly to your typesetter or imagesetter, and automatically transport exposed pieces of material from the imaging system through the processing cycle. No cassettes are used, and completed jobs are delivered in the order in which they are exposed, minutes after imaging is complete.

LogE offers a family of these products to interface with many different type and imagesetters, including:

- AD/SAT
- AUTOLOGIC
- CAMEX
- LINOTYPE
- MONOTYPE
- And Others

Contact LogE for more information about On-line Processing Systems for your imaging system.

Also, visit LogE at the ANPA Show in the Las Vegas Convention Center, June 6 through June 10, booth #548, and see a wide range of LogE On-line Processing Systems.



KEEP AMERICA STRONG.

Mutual protects you against paper cuts.

Telling the whole story sometimes means taking risks, but with libel suits becoming more common (as well as more expensive for winners and losers alike), it might be tempting to cut questionable stories in order to reduce those risks.

The Mutual Insurance Company of Hamilton, Bermuda, believes that newspapers need to be secure in their reporting. So, for more than twenty-five years, Mutual has provided newspapers throughout the United States, Canada, and the Caribbean with the financial protection they need to endure lengthy and expensive libel suits.

During those twenty-five years, Mutual has handled more than 4,500 suits in the libel field. It is this kind of experience that makes Mutual the insurance company of choice for newspapers that want to protect themselves against the unpleasant fact of libel suits.

Mutual offers ANPA-member publications libel insurance that provides punitive damage coverage across the United States. A policy from Mutual pays up to 10 million dollars per occurence, rather than an annual aggregate. With low deductibles to minimize your loss, a libel insurance policy from Mutual is your best protection against libel litigation, the unkindest cut of all.

The Mutual Insurance Company

How to improve your paper's circulation

Improving your paper's circulation in your *reelroom* has been our business for over thirty-five years.

The Jervis B. Webb Company was one of the first companies to apply material handling technology to newsprint roll handling. Our systems currently operate in newspaper publishing facilities across the U.S. and Canada, transporting newsprint rolls from receiving docks to presses in the most timely, efficient manner possible.

Our success in newsprint roll handling stems from an in-depth working knowledge of newspaper production and an ability to offer the widest range of alternatives to satisfy production requirements. We can design single-source systems incorporating a wide range of Webb products, including Towveyor® floor conveyors, Prontow® Automatic Guided Vehicles, appropriate control systems and Webb-Triax® Automated Storage and Retrieval Systems. Webb engineers design each system with the material handling products necessary to handle the demands of the facility it serves.

Implementing the right newsprint roll handling system may be the first step towards achieving the efficiency and quality you need to increase your readership. Contact a Webb representative for a free brochure on the latest newsprint roll handling techniques and see what we can do to improve your paper's circulation.

Any color scanner makes separations.

This one makes deadlines.

Good news! Now there's a scanner that can handle the daily grind of producing the daily paper.

Our extremely reliable SG-608 is truly a workhorse of a different color. That's because it features a unique red-laser dot generator for greater on-the-job dependability and up to twice the service life with less downtime and fewer maintenance headaches.

The SG-608 lets you routinely handle the quick turnarounds and high-volume production that are a way of life in the newspaper business. And, unlike most scanners, you don't have to be a genius with computers to set up and operate one.

The economically priced SG-608 is probably all the scanner you'll ever need. But it's also the logical place to start if you're considering a complete page make-up system later on.

When we designed the SG-608, we had one thing in mind – reliability. That's because we understand: If you don't get your paper out today, there may not be a tomorrow.

INDEX | VOLUME 9, NUMBER 7 | JULY 1987

ANPA/TEC '87 *The five-day run of ANPA's 59th Technical Exposition and Conference was another record-smasher, attracting nearly 13,500 people to the massive Las Vegas Convention Center. There, 316 vendors filled more than 300,000 square feet of exhibit space with the latest in newspaper production equipment, supplies and services. Equipment was not the only drawing card. Discussion of timely topics ranging from materials handling to press options to drug testing was featured at three general sessions and 10 workshops.* **20**

Research proliferates *Newspaper research has expanded beyond gathering market data. Today, polling possibilities are wide open.* **6**

Promotion alternatives *More newspapers are interested in providing employees with job enhancement in lieu of advancement.* **10**

Where are they now? *A year-and-a-half after the Columbus Citizen-Journal closed, almost half of its editorial staff is still in newspapering.* **12**

Coping with cycle changes *An exchange of publishing times by Knoxville's dailies provides a unique look at the effects of such flip-flops on staffers.* **18**

"Whole journalism" *To compete in the future, newspapers have to do it all—integrate words and images, provide local news and worldwide perspective.* **49**

Profile: Alberto Ibargüen *Newsday's chief personnel and legal executive takes a hands-on approach to the challenges of newspapering.* **52**

Essay: Signed editorials *Affixing the author's initials to an editorial may be a remedy for blandness, suggests Professor Robert Schmuhl.* **54**

Anti-tax strategies *Florida's new ad tax is being fought on several fronts: in the state supreme court, in the political arena and through boycotts.* **60**

Constitutional celebration *ANPA Foundation-sponsored "Celebration of Citizenship" becomes the centerpiece of Bicentennial Commission events.* **62**

Checking citizenship *Newspapers find some problems in complying with a new immigration law, but most say the chore is not onerous.* **68**

Farm-fresh ink? *As tests continue to be positive, newspapers, ink companies and farmers are all enthusiastic about the prospects of ink made with soybean oil.* **80**

CHAIRMAN'S CORNER

Technical gains notwithstanding, more R&D needed for newspapers

The ANPA Technical Exposition and Conference was a stimulating and profitable experience for the nearly 13,500 attendees who gathered to exchange information and view the latest in newspaper technology. The highest number of exhibitors ever, 316, spread their offerings over a record 302,300 square feet of floor space in the cavernous Las Vegas Convention Center. Speeches and panel discussions by colleagues seemed unusually informative and helpful this year.

George W. Wilson

Significant advances were reported. Still video cameras now enable photographers to capture images in digital form for rapid transmission to electronic editing devices that can enhance the pictures and produce color separations for printing in minutes instead of hours. More printing press units are on order now than ever before in our history, and newspapers have an unprecedented choice of printing methods. It is possible to automate all newsprint roll-handling functions. Soybean oil is replacing petroleum in some printing inks. New, moderately priced imagesetters for graphics and text are proliferating.

Future wonders were predicted. Erasable, reusable laser disks will emerge from laboratories this year and give newspapers immense data-storage capacity at low cost. This is just the breakthrough needed to make photo and graphics storage feasible in pagination systems. Kenaf lives! Prolonged tests in harvesting and processing this prolific, subtropical plant to use in making newsprint show encouraging results. And Vice President/Technical Bill Rinehart talked of new imaging technology, seen first in offices, that will make it possible to image complete newspapers, at speed, directly from electronic memory. Goodbye heavy presses?

Newspapers have changed dramatically because past investments in research produced such innovations as photocomposition, offset printing, photopolymer plates and computers everywhere—for editing, writing, page dummying, graphics, ad composition, TMC programs and business applications.

My newspaper reflects what has happened. In 1962, the Monitor had 17 people in the composing room and seven in the newsroom. Today, a much larger newspaper has 15 people in the composing room and 35 in editorial. Technology has enabled all newspapers to shift substantial resources to news coverage. Readers were the winners.

What about the long-term future? Are we setting aside enough seed money to assure a future harvest of technology?

Last year, the automobile industry invested 2.4 percent of its sales in research and development. The industrial machinery industry invested 3 percent of sales in R&D. The electrical industry, 3.3 percent. The appliance industry, 1.7 percent. The computer industry, 8.3 percent.

Working cooperatively through our Association, we invested less than .002 percent in technical R&D. Think about it.

TRIPLE VALUE FROM TRIPLE-I

The newspaper market requires greater electronic control of its processes. And Information International has added three electronic systems to improve prepress operations.

Layout ADvisor

The 4200 Layout ADvisor is an easy to learn, easy to use interactive electronic ad layout system. It operates alone to produce paper ad stack dummies or interfaced to a complete newspaper pagination system to produce plate-ready or camera-ready ad stacks.

The Layout ADvisor satisfies every newspaper's "wish list." It automatically lays out an entire paper, a selected section or a single page; moves ads from one page or section to another; reserves space for other uses; shows the size of the newshole for each column and page. And it accepts late ads, kills, and changes. Information International is pleased to offer this superior software package developed and production proven at the *Journal-Bulletin* in Providence, Rhode Island.

TECS/2 by Morris

Introducing TECS/2 *by Morris*, a distributed database front-end system for editorial and classified, developed by Southeastern Newspapers Corporation of Augusta, Georgia. Now this production proven system is available exclusively from Information International. Replace or enhance your present front-end system.

Once you see the quick response, the versatility and reliability of TECS/2 *by Morris*, opportunities to extend the life of your existing front-end with this exciting new product will be apparent. Buy two terminals or 200. The advantages of this system can be realized by large and smaller newspapers alike.

The Lasercomp

The "laser connection" between Information International and Monotype creates a truly superior pagesetting system. It is an interface from our 2300 Image Network Processor to Monotype's complete line of Lasercomp typesetters including the Mk2i, the Checkmaster and Monotype's newest model, the Lasercomp Express.

The combination gives newspapers the full capabilities of our black and white ad makeup system, plus the efficiency of the Lasercomp recorders. These capabilities are further supported by triple-I for rotation of graphics and other tasks.

Take a closer look at triple-I's triple value.

Today's Researchers

BY GENE GOLTZ
presstime staff writer

From snowbirds to high school grades, newspaper research departments tackle a wide variety of subjects

Newspaper research continues to expand to a seemingly inexhaustible range of subjects. Once confined to surveys for advertisers, research at many papers now touches all phases of the operation.

"We serve any and every department in the newspaper," says Jane Peppard, research manager of the St. Petersburg Times (morning, circulation 314,696). "We keep a very close contact between the newsroom and all other departments in the paper."

Some observers trace the expansion of industry research to the 1977-83 Newspaper Readership Project and to the formation in 1977 of the Newspaper Research Council.

One measure of that expansion is the growth of the research council itself—from 90 to 240 members in the past 10 years. The organization's semiannual conference has grown correspondingly, with 160 researchers attending the one in Nashville this past spring.

To get an indication of the types of research currently in vogue, presstime conducted a random survey of researchers at 15 newspapers represented at the conference, plus three national research firms. The survey confirms the notion that while most newspaper research today continues to be market-oriented, there is a willingness to tackle any subject in which either advertisers, readers or newspapers have a stake.

Some recent examples include: a poll asking residents of an Indiana city if they were interested in having a state lottery; a Florida "cruise survey" asking people before boarding a ship about themselves and their reasons for taking a cruise; an advertising-related survey conducted on behalf of a dairy group in Nebraska asking about public awareness of the beneficial presence of calcium in milk; and a survey in Virginia asking parents whether high schools were grading their kids fairly.

ONE OF THE BEST. One broader survey that attracts widespread attention each year is that of Phoenix Newspapers Inc., publisher of The Arizona Republic (morning, 343,723) and The Phoenix Gazette (evening, 111,253). "Phoenix does the best research job in the country," says C. Harry Murphy, director of corporate research at Landmark Communications Inc. of Norfolk.

The Phoenix papers have been producing a major retail report for more than 30 years, says Ellen Baar Jacobs, manager of their market research department. For the current report, "Inside Phoenix," 2,050 households were interviewed.

The interviewees, selected at random, are first questioned by telephone. Then they get an eight-page mail questionnaire. A follow-up phone call completes the survey.

Questions cover demographics, shopping preferences, purchasing behavior and media use.

Results are published in a book that is presented to the public in Symphony Hall, which is filled to its 2,500-person capacity for the annual event. This year it was presented May 11 to an audience composed of retailers, marketers, real estate people, government officials and others. One copy of the 108-page book is given free to each person in attendance; additional copies sell for $10 each.

The report discloses such things as the racial and income characteristics of the Phoenix market, percentage of the population reached by the newspapers, how many and what kind of people view television and listen to the radio, and what magazines are being read.

"The real estate people especially love it," says Mary Wilcox, assistant marketing manager for the Phoenix newspapers. "They're our biggest fans."

While most larger dailies have their own research programs, many newspaper groups conduct research for papers they own. At Landmark Communications, for example, research director Murphy says that since 1966 his company has conducted a comprehensive marketing survey for its flagship newspapers, The Virginian-Pilot (morning, 144,809) and The Ledger-Star (evening, 80,961) of Norfolk.

About 2,000 people are asked a few questions over the phone and then are sent a "very long, complicated questionnaire" to be returned by mail, he says. Follow-up telephone questioning completes the information-gathering part of the project.

From the survey the newspaper finds out such facts as age, income and buying habits of readers. It publishes a master book, *Vital Statistics*, usually about 48 pages long, and a series of other publications (sometimes running more than 100 pages) derived from statistics contained in the main one. These publications have titles like "Shopping Areas," "Supermarkets," "Automotive Buyers," "Real Estate," "Department/Discount Store Buyers" and "Consumer Groups."

Using one or more of the survey books, a retailer can find out, for example, how many Sears customers also shop at Penney's, what kind of people they are and what kind of merchandise they buy, Murphy says.

SPECIFIC TARGETS. Many newspapers also use research as a tool for addressing specific situations.

For example, Frederick W. Hebert, marketing director of The Home News (evening, 59,052) in New Brunswick, N.J., has two research projects under way that may have a major impact on the paper's future readership and circulation. Results are expected to guide the editorial department in determining what types of stories will best attract and retain readers.

In the New Brunswick and Princeton areas, Hebert says, there are three large housing developments classified as adult/retirement communities. Hebert estimates these developments contain up to 8,000 households inhabited by retired or semi-retired people who moved there after having worked in New York City or elsewhere.

The fact that they are older means they probably read a paper, Hebert says. But because they are "immigrants" to the area, and perhaps accustomed to reading The New York Times or other large metropolitan papers, they may not readily adapt to reading The Home News.

"We can't compete with The New York Times" in carrying national and international news, Hebert says. Moreover, he says it is possible local news will have little appeal to this segment of the population because they

Will Tackle Anything

Landmark Communications' Murphy studies Norfolk demographics.

lived most of their lives in other places. To complicate matters, about a third are "snowbirds"—they winter in Florida.

Through research, Hebert says, the newspaper is seeking to "find out what their interests are and find out what we have to do" to land them as subscribers.

On the other side of the coin, The Home News is also in a fast-growing market area with a large number of younger people moving in. "Maybe these are not avid newspaper readers," the marketing director says, "but they are swelling the household count, and it won't look good for our household penetration if they don't read the paper."

He adds, "Maybe we will try to attract them with human-interest stories. Maybe we'll try to get them interested in local news. We just don't know. We have to find out."

Other examples of research topics:

• In Omaha, the Nebraska Dairy Council wanted to know whether an ad would be effective warning women of osteoporosis (disintegrating bone mass) if they did not get enough calcium in their diets. The research department of the Omaha World-Herald (all-day, 222,053) did a pre-test awareness survey to find out how much women knew about osteoporosis and the effectiveness of calcium in the diet; then the ads ran, and later a post-publication survey was made.

The post-publication research showed that women were reading the ad, which urged consumption of dairy products to build up calcium levels, and that the newspaper's general readership had become more aware of osteoporosis.

• In St. Petersburg, the Times newsroom asked the research department to find out what residents perceived as their greatest problem. In all three counties surveyed, traffic conditions and street congestion turned out to be the major concern. This resulted in news articles focusing on the need for street improvements.

• In Richmond, Va., parents of kids headed for college have faced a peculiar problem. The schools in Richmond and surrounding counties use a stiff grading system, in which a grade of 95-100 percent is an "A," and minimums of 88 percent a "B," 81 percent a "C," 75 percent a "D," and below 75 percent an "F."

When graduating seniors send their transcripts to colleges, they find they compete for admission with students who earned an "A" with grades as low as 91.

In one school district, Henrico County, parents asked the school board to standardize grades, and the board agreed to put a notation in transcripts explaining the grading system.

Meanwhile, Media General Inc., which publishes the Richmond Times-Dispatch (morning, 141,544) and The Richmond News Leader (evening, 109,103), decided the issue was of sufficient importance to be asked in a wider area. Its research department surveyed parents in Richmond and in five surrounding counties about the fairness of grading systems.

The survey results showed that 6.09 out of every 10 people answering the questionnaire thought the present grading system was fair, but that an average of 6.24 out of 10 thought easing the grading standards slightly would be even more fair. However, the parents were against making things too easy for their kids. Only 4.59 out of 10 favored a grading system that would award an "A" for 90 percent correct answers; "B" for 80; "C" for 70, "D" for 60; and anything below 60 an "F" grade.

SMALL BUT BIG-TIME. Hebert of The Home News says it is unusual for a newspaper smaller than 50,000 to 60,000 circulation to conduct research on its own.

A notable exception is the Gwinnett Daily News (evening, 28,114) in Lawrenceville, Ga. The marketing director there, Kenneth F. Brown, runs a remarkably sophisticated research operation for a paper of its size.

Brown, 40, was an ad salesman for The Wall Street Journal in 1969. He became the Journal's midwest marketing research director, was marketing research director for the Dallas Times Herald and for Southern Living magazine, formed his own company, Ken Brown & Associates, and ultimately returned to Gwinnett County, where he grew up and where four generations of his family have lived.

Brown says he went to the Daily News and told the owners, "Here's what I can do for you," and was hired. The newspaper is in the heart of the area northeast of Atlanta that Dun & Bradstreet has identified as the nation's fastest-growing among counties with more than 100,000 population.

Brown uses up to 12 telephone researchers who conduct 200 interviews every night. Computers process the data. Every eight weeks he produces a research report, and every two years he does a comprehensive demographic survey in which 355 questions are asked of each of 500 selected households.

"This tells us a whole lot of everything," he says. "For example, we can come up with a shopper profile for 100 different advertisers."

Brown estimates his research breaks

Literacy: A Meaningful Relationship Between People and Power

While America celebrates the bicentennial of the signing of the United States Constitution, one in three American adults may be unable to read the Bill of Rights.

An estimated 60 million Americans—more than the number who voted for President Reagan in 1984—are unable to fully participate in democracy because they are illiterate or semiliterate.

In October 1986, Jonathan Kozol authored a report on adult illiteracy commissioned by Cox Newspapers. The report* graphically outlines the growing dangers of illiteracy and presents specific recommendations on how newspapers can lead the fight for a more literate America.

Cox newspapers across the nation are searching for innovative solutions to local literacy problems. The power needed to participate in democracy is the power of the written word.

*"Where Stands The Republic/ Illiteracy: A Warning and a Challenge to the Nation's Press" by Jonathan Kozol. For a copy, contact Corporate Communications, Cox Enterprises, Inc., 1400 Lake Hearn Drive, Atlanta, Georgia 30319.

down this way: 60 percent for the advertising department, 25 percent for circulation and 15 percent for editorial.

For circulation, he will conduct surveys to determine when service was unsatisfactory, when circulation employees were rude, etc. For the newsroom, the surveys range from analyzing the editorial content of the competition (the Atlanta newspapers), to surveying public opinion on topical issues, to readership surveys from which "a wealth of editorial story lines" are obtained.

Brown says the research also enables the newspaper to keep up with lifestyle changes of readers and the extent of their involvement with the community.

In June, The New York Times Co. announced it will purchase the Daily News from The News Co. in addition to several paid and free non-daily publications. No purchase price was announced.

SYNDICATION. In addition to research that newspapers themselves conduct, outside firms produce research under contract to newspapers.

Of particular importance in recent years has been the standardized, syndicated research of the top 50 metropolitan markets, first carried out in 1978.

Produced by Simmons Major Market Research Inc. and Scarborough Syndicated Research Associates [**presstime**, June 1987, p. 90], the surveys are intended to help advertisers gain insights into the diverse newspaper readership. By asking the same questions of people in New Orleans and in Houston, for instance, a syndicated survey obtains comparisons of "apples to apples," says L. Kay Schultz, director of Simmons. When papers in New Orleans and Houston conduct their own surveys the methods usually are different, and "you end up comparing apples to something else," she adds.

Both Simmons and Scarborough ask a wide variety of questions designed to provide complete demographic information. They include such things as frequency of air travel, kinds of cars driven and other brand information.

Besides the benefits of providing standardized information, says Jeffrey W. Rodgers, vice president/newspapers and marketing for Scarborough, the syndicated surveys have at least two other advantages: They are cheaper than having a great many surveys done separately in each city—the cost of the syndicated studies is spread among many clients—and advertisers like the objectivity provided by outside firms.

The largest survey firm specializing in research for newspapers is Belden Associates Inc. of Dallas. It conducts more than 100 studies a year for newspaper clients, large and small.

"Each study," says Sheila Miller, vice president for special projects, "is tailored to the individual newspaper." Belden does any kind of study the newspaper desires, including readership, advertising, editorial and circulation.

Other companies in the field include Minnesota Opinion Research Inc., Minneapolis; Urban & Associates, Cambridge, Mass.; Market Opinion Research, Detroit; Omni Research, West Palm Beach, Fla.; E&P Research Inc., Spring House, Pa., Clark, Martire and Bartolomeo Inc., New York City; and RMH Research Inc., San Antonio.

The proliferation of research being done for and by newspapers over the past decade has been tremendous, particularly at nonmetro newspapers, says Glenn Roberts, executive director of the Newspaper Research Council.

Roberts, who worked for 39 years for the Des Moines Register and Tribune before becoming the NRC's chief of staff, believes that research has come to be more highly regarded by publishers—reflected in the fact that "more research people are being tapped to move up to higher management positions in newspapers."

This is a break for researchers, says Roberts, because in the past, "If you were in research, you stayed in research." □

MORE POWER THAN THE PRINTED PAGE

The electronic archive. It's the most powerful resource for reporters, editors, bureaus and the newsroom library. Your newspaper archive can be instantly accessed by your present editorial terminals with a DataTimes in-house or service bureau system.

More powerful than clipping files, DataTimes allows keyword and full text searching, multiple access and permanent storage. The news you print today will be usable for years to come.

Give your newspaper more power than the printed page — the archive system chosen by the most publishers. DataTimes.

Alternatives to Promotion

Recognizing the Need for Recognition

BY CLARK NEWSOM
presstime labor writer

Newspapers need to do a better job in recognizing talent without having to move a person to another position.

That's the view of a number of executives in the business, such as Ferguson E. Rood, vice president of research and marketing for Cox Newspapers in Atlanta.

"A person shouldn't have to feel that being promoted is the only way to be recognized," Rood says.

It is not right, say others, for people to be placed on a career ladder and pushed up to their "Peter Principle" level of incompetence.

"Some people don't want a promotion to a job where they would have to supervise others," says Patricia P. Renfroe, ANPA manager/personnel relations.

The "Newsroom Management Handbook," published by the American Society of Newspaper Editors Foundation, notes that job enhancement is the key to maintaining productivity when promotion opportunities aren't available or desired. "The most effective job-enhancement programs are those that help staff members come closer to being what they want to be," the handbook says.

> *"The point is, writing is the most important thing we do," and pay should reflect it.*

Although some newspapers have had alternative-to-promotion programs for years, more are expressing an interest in them. "You can't do too much in recognizing the people who do well," says Sheldon (Shelly) L. Greenberger, vice president and director of advertising for the Fort Lauderdale News and Sun-Sentinel.

The programs are most common in editorial departments. This year, for example, The Pittsburgh Press named its second "special editor"—Mary Pat Flaherty—to join the 1986 special editor in a three-year progam designed to recognize superior performance and to bring fresh ideas to management. The designation of special editor carries a one-time stipend of $1,000, attendance at a professional seminar and the opportunity to take part in management matters for three years while continuing one's own field of work [presstime, March 1986, p. 56].

The program is "going extremely well," says Managing Editor Madelyn Ross. "Both (special editors) are able to spend the bulk of their time reporting but also participate in management meetings. It's helped us a lot in making decisions."

So far, the program has not been extended to any of the other 13 dailies in the Scripps Howard group.

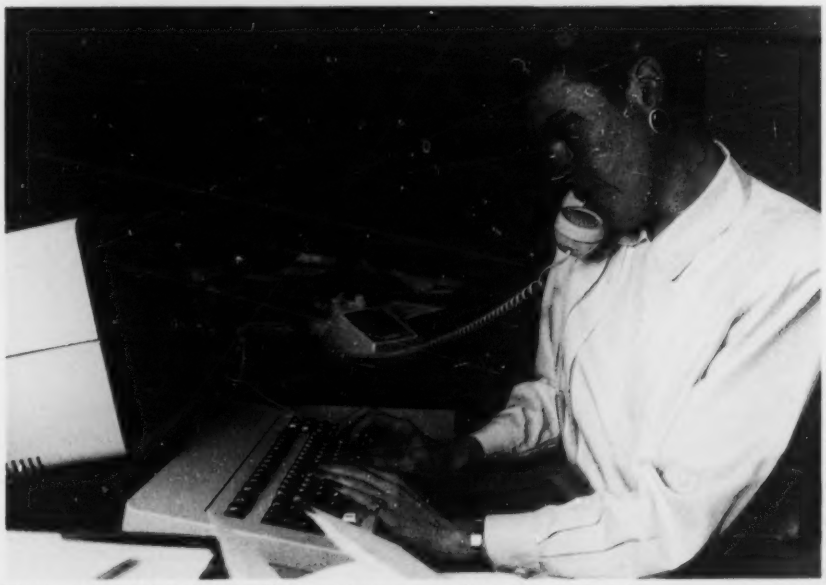
"A number of newspapers internally in their newsrooms have an informal program," says Linda Grist Cunningham, executive editor of The Times in Trenton, N.J., and chairman of ASNE's Human Resources Committee. For those veteran performers "who have paid their dues," the reward, in addition to increased pay, might be work on special projects that takes them away from the daily grind. In some cases it might be freedom in choosing events to cover, or even a company car.

At least four dailies use the title "senior writer" to reward outstanding editorial department employees. The programs vary in their details.

The Nashville Banner started its program the beginning of this year with the appointment of five permanent senior writers in the political, medical, education, business and entertainment fields. Their salaries were increased to equal or surpass that of department heads.

Also, three one-year appointments were made in state news, sports and copy editing. Those writers receive $10,000 each in additional pay during the year. The copy editor's first project was to revamp the Banner's stylebook.

The program was designed not only to improve the quality of reporting but also to



Tom Ondrey, The Pittsburgh Press

Pittsburgh Press Special Editor Flaherty devotes most of her time to reporting.

provide a career path for staffers who choose to write instead of moving into alternative editorial positions. "We're already seeing teriffic benefits," says Executive Editor Joe Worley. With interpretive and investigative reporting by the senior writers, "We're providing in-depth stories that are pertinent to our readers," he says.

"The point is," Worley says, "writing is the most important thing we do. Writers should get the pay editors get."

Senior-writer positions were created at the Roanoke (Va.) Times & World-News in 1964. Vice President Forrest M. Landon says he has promoted six people to that position since he became executive editor in 1982. "Senior writer is a genuine promotion," he says. "It carries a raise and is restricted to the best reporters and writers." At least eight years' writing experience is required before a person can be named to the position. Senior writers at the Landmark Communications Inc. daily act as public relations representatives, fill in occasionally for city desk editors and serve as team leaders in covering major stories.

"We say if you don't want to be a supervisor, aspire to this," Landon says. At the time the position was created, the statement was made: "We hope this will be a goal for many who find in writing the best satisfaction in newspaper work."

Ben Beagle, a 32-year veteran newsroom employee in Roanoke, was among the first senior writers named at the Times & World-News. When the program was announced, "I thought it was great," he says. "It held the promise of being a writer and equaling the wages of editors." The program has lived up to what it promised, he says.

A senior-writer program was started at another Landmark daily, the Greensboro (N.C.) News & Record, in 1985. Designees must have a total of seven years' writing experience, at least four of them in Greensboro. Ben J. Bowers, vice president and executive editor, says the nine senior writers at the newspaper all have a speciality. "We're not creating a star system," he says.

When he announced the program, Bowers (who was executive editor in Roanoke between 1973 and 1982) said it was his "strong feeling" that people who want to make a career out of reporting for the News & Record "should be able to do so on our newspaper rather than feel they have to become editors in order to grow professionally."

The concept of senior writer has been applied at larger papers, too. The Los Angeles Times created the position in 1973, noting that promotions were impossible for people who wished to remain writers.

The six senior writers at the Times, who serve three-year terms, act as an advisory group and meet monthly with the four top editors. Normally, two are appointed each year. In addition to the recognition, they receive a pay increase that remains a part of the individual's salary structure after the term ends. The program "recognizes people who have made significant contributions" to the newspaper, says James W. Duncan, director of employee relations.

On the advertising side, Cathleen B. Coffey, vice president of advertising at the Atlanta Journal and Constitution, says one way to encourage veteran account executives is to give them responsibility in coaching new sales assistants. Another is to reward them with time off to serve on task forces at the newspapers, or even to work outside the company, such as serving on a Chamber of Commerce committee. "We try hard to keep professional salespeople and have a good track record of doing that," she says.

Besides giving exceptional employees a special status in the organization, newspapers can, of course, recognize them in material ways, such as giving them company stock, bonuses and merit-pay increases.

But "what motivates most people is the feeling of being a part of the team," says Louise Leonard Galvin, human resources director of The Hartford Courant. "It's not primarily money that motivates people." □

USA TODAY
chooses
DataTimes

USA TODAY, the nation's most widely read newspaper, has chosen DataTimes, the world leader in electronic publishing and information networks, to provide its electronic library services.

USA TODAY and the **Gannett News Service** will join the DataTimes electronic information network of over 170 newspaper, newswire, and business databases serving thousands of commercial businesses worldwide. **USA TODAY** joins the world's leading newspapers on DataTimes, and will be available for public access September 1, 1987.

The DataTimes system will allow reporters, editors and newsroom libraries instant computer access to previously printed information directly from their own newsroom terminals.

DataTimes is proud to welcome **USA TODAY** and the **Gannett News Service**, from the Gannett Co. Inc., the nation's largest newspaper group, to its world of information.

Life After Death

The demise of the Columbus Citizen-Journal illustrates what happens to employees when a newspaper folds and how the closed paper can help them

BY MARILYN S. GREENWALD

In June 1985, John C. Torry, now a reporter for The Blade of Toledo, Ohio, knew time was running out for him. Torry, then 33, loved his job as a statehouse reporter in the capital city of a politically active state. He worked on the 123,000-circulation Columbus (Ohio) Citizen-Journal.

Like the approximately 60 other editorial employees on that newspaper—known in the community as the C-J—Torry was well-aware that in six months he would be out of a job.

The C-J, a Scripps Howard paper, was in the 26th year of a 26-year joint operating arrangement with Dispatch Printing Co., publisher of the evening Columbus Dispatch. Dispatch officials had announced two years before that they would not renew that agreement when it expired Dec. 31, 1985.

Greenwald, an assistant professor of journalism at Ohio University in Athens, was a reporter for the Columbus Citizen-Journal when it ceased publication.

Thirty-three of the 68 editorial employees have jobs with other newspapers.

Torry and other C-J staff members had only slim hopes that someone would buy the paper. Because the Dispatch handled business functions of both newspapers, all a prospective buyer could "purchase" would be the editorial employees themselves. The C-J owned no presses, computer terminals or delivery trucks. The staff knew a purchase was not likely.

So what did Torry and the other reporters, editors and photographers do when the Citizen-Journal folded on Dec. 31, 1985? "We cried," he says. And what did they plan to do in the long term? "Same thing."

But 18 months after the C-J printed its "Goodbye Columbus" edition, former staff members don't seem to have much to cry about. Thirty-three of the 68 editorial employees who left Dec. 31 have jobs with other newspapers. And nearly all the others have found jobs in public relations, advertising, television and related fields.

Staff members' success in moving on to other news outlets no doubt surprised many of them. Before the paper closed, the editorial employees expressed fears that with the national decline in the number of newspapers being published, they would have little chance of finding jobs on other papers. Still others did not want to leave their homes in Columbus, and they knew that with only one daily remaining there, they might have to change careers.

In 1982, C-J staff members had seen many of their counterparts 150 miles away

The C-J staff gathers one last time to put out the "Goodbye Columbus" farewell issue.

Wanted: Writing Job or Any Job

The classified ads in The St. Louis Journalism Review say it all:

"Former Globe-Democrat employee has experience as layout artist, copywriter and proofreader. Good with details, fast learner."

"R.I.P. Globe-Democrat. But life is for the living. Former Globe feature writer, looking for full- or part-time work. . . ."

Since that newspaper's closing last year, about half a dozen such ads have appeared each month in the review. Informal surveys and discussions with former employees indicate few have found equivalent jobs on newspapers.

"Many are working part-time, in PR or working as stringers," says William P. Mayr, a copy editor with The Dispatch of Columbus, Ohio, and former suburban editor for the Globe-Democrat. Mayr left the Globe-Democrat before it folded.

Those who hung on until the end simply did not want to leave St. Louis, he believes, and many of them are still unemployed in that city. "The other paper (the Post-Dispatch) just wasn't hiring many (Globe-Democrat employees)," Mayr says.

Results of an informal poll published by the journalism review in February, show that of 83 former editorial employees, 21 were in a new line of work. Forty-six were doing free-lance writing, working part-time or unemployed. Only 16 were working for a newspaper or wire service.

in Cleveland be thrown out of jobs when the Cleveland Press folded. It frightened them that some of those people were still unemployed three years later. Many others had taken jobs outside of newspapers.

"It's easy to look back now and say we had a high-quality staff and that's why people found jobs so quickly—but I believe that's true," says William S. Keesee, the C-J's metro editor when it folded. Now a congressional aide, Keesee was in charge of a job-placement service the paper established for employees several months before the shutdown.

Besides the job-placement service, the relatively young age of the staff (most under 40) and the advanced notice of the closure helped many get jobs on other papers, Keesee says. Staff members' intense drive to stay in the business and their willingness to relocate also improved their chances, he adds.

The C-J's placement service assisted in preparing resumes and paid for the services of Job Bank, a national placement service that helps find jobs for journalists. For three months after the paper closed, a small room in the old C-J newsroom was set aside so employees could make long-distance calls, check jobs listings, use typewriters and chat with each other.

HARDSHIPS. Keesee says the job-placement service gave many people technical and moral support. "It was a good rallying point for some people," he notes. "It was a good outlet for their emotions and helped them deal with the closing."

Thomas J. Birdsong, a C-J assistant city editor and now a night city editor for The Pittsburgh Press, says he considered establishing his own public relations firm when the newspaper folded. He was reluctant to try that, however, because, like other newspaper reporters and editors, he felt his primary talents were in newspapering. "I feel like I can't do anything else. I can't be a stockbroker."

He continually visited the small placement office, eventually lined up several job interviews at newspapers and was offered the job at the Press within three months.

Despite his ability to land an equivalent newspaper job, Birdsong and other C-J employees found that the paper's folding caused hardships and dramatic changes in their lives.

While the combination of youth and newspaper experience helped the employees in some ways, it hurt them in others. Because most large newspapers base salaries on experience, some C-J employees found themselves in a bind; they were young and enthusiastic but experienced enough to merit journeyman wages—the top of the scale. Younger, more inexperienced reporters from elsewhere who demanded less pay were getting the few available jobs. Reporting and editing jobs that paid $31,000 a year—top scale at the C-J—were hard to find.

"I feel like I can't do anything else (but newspapering). I can't be a stockbroker."

George R. Plagenz, the C-J's religion writer for its last two years, believes age worked against him in two newspaper foldings. Plagenz, now in his mid-60s, worked for the Cleveland Press for 12 years before it closed. He was out of work for about two years before the C-J hired him. He has continued writing a syndicated religion column, but last year was unsuccessful in his search for a full-time newspaper job.

Plagenz, an ordained minister with nearly 40 years of newspaper experience, is currently personnel director for the county treasurer's office in Columbus, but he says he would still like to work for a newspaper.

Several months before the end of the Columbus JOA, The Dispatch announced it would take over the morning slot at the beginning of 1986. To prepare for that conversion, The Dispatch hired dozens of editorial employees during the last four months of 1985. C-J staffers watched sadly in late 1985 as more new bylines appeared in the rival newspaper—that of a religion writer.

Although The Dispatch eventually hired six former Citizen-Journal employees, it would not interview anyone from the C-J until after the JOA was dissolved. C-J staffers, many of whom were due large severance-pay checks on Dec. 31, felt they could not quit before the end. Others did not have the stomach to apply for a job at a newspaper that was once the competition.

Plagenz and some other C-J reporters also found that by having specialized in one form of writing, their chances of finding a comparable job at other newspapers were diminished.

Nancy Miller Lewis, the C-J's only fashion writer, was a one-person fashion section, responsible for writing, editing and laying out those pages. She sought a fashion-writing job at other newspapers, but learned that openings were rare because so few in that specialty leave their jobs. Lewis now works for an advertising agency in Columbus.

Former statehouse reporter Torry and a few other C-J reporters confronted the problem of over-specialization by changing their specialties a year or so before the paper folded. After about six years as a sports writer, Torry switched in 1984 to political reporting in the belief that this would make him "more marketable. I wanted to double my chances of getting a job."

After several interviews, Torry landed a job as a general assignment reporter on The Blade—and none too soon, he says. "After six months, I was going stir crazy. I was stringing for UPI—not for the money, but to do something. I spent two years building up sources for the '86 election, and there I was, sitting on the sidelines."

Television reporting became the field for

Electronic Newspaper Publishing.

Bite Size.

The electronic publishing revolution is here, but boy– is it expensive!
You probably have a good idea what the major dailies are spending for the features they get in their big editorial and classified systems.

Now Camex gives you a way to bring all of these features into your operation without taking a second mortgage.

You can get them in affordable, bite-size installments–on networked PC's that add up to a powerful editorial and classified system.
Our display ad and full page laser output systems will fit right in when you're ready for them.

And on the way to your complete pagination system, you'll always have integrated, compatible components supported by *one* established newspaper system supplier.

This is the opportunity you've been waiting for.
Find out what the world leader in display systems has done for editorial and classified–especially for the smaller daily.

society columnist Larrilyn C. Edwards and political writer and columnist Joseph H. Dirck. Both were hired by WCMH-TV, the NBC affiliate—Edwards with some previous experience in TV news, Dirck with none.

FAMILY COMMITMENTS. Like many other C-J staff members, Dirck's family commitments kept him from leaving Columbus: His wife heads the statehouse bureau of The Plain Dealer of Cleveland.

Dirck and Edwards were two of the few who managed to stay in Columbus and continue to report the news.

Karen K. Doyle, for example, took a reporting job at the C-J in November 1985 with the hope that a last-minute buyer would rescue the paper.

When none showed up, she was forced to end a 10-year newspaper career because she wanted to stay in Columbus where reportorial jobs were scarce. Doyle now works in the marketing department of a modular-home construction firm but hopes to "get back into newspapers someday."

Many of those who did return to newspaper work did so at great personal sacrifice. Sandra L. Theis, an investigative reporter, lined up a job at The Cincinnati Enquirer before the C-J folded. The situation seemed perfect; her husband, an attorney, had recently been offered a job as a clerk for a federal judge in Cincinnati.

But Theis did not enjoy working at the Enquirer and recently started reporting for the Dayton Daily News/The Journal Herald—a switch that means plenty of driving and some living apart for the couple. Theis still lives in Cincinnati, and she makes the 50-minute drive to Dayton daily. At the end of the year, her husband will return to a job in Columbus, and the couple will live in Yellow Springs, Ohio—an hour's drive from both Dayton and Columbus.

But the maneuvering doesn't bother her. "I never considered leaving (the newspaper business)," she says. "I like what I do."

Gerri Willis, formerly a C-J general assignment reporter, enjoys her job as business writer for The Virginian-Pilot of Norfolk, but she admits missing the Citizen-Journal and her family in southwest Ohio. "Leaving my friends was hard, but what was hardest was saying goodbye to a paper I really liked working for," she says. "But I never considered leaving newspapers."

The main lesson she and her colleagues learned was to check a newspaper's economic standing before accepting a job. Most former C-J employees agree they could not endure another folding.

"I definitely would think twice before going to a paper that was perceived to be in trouble," Willis says. □

How Creative Data Systems and IBM have teamed up to bring winning business solutions to your team

1. We recognize that one solution won't solve every problem you may have.

Even though our systems are standardized and developed for the newspaper industry, there are 150 control files that give circulation, advertising and financial executives more than a million and a half options for their specific needs.

2. We utilize IBM equipment for its compatibility and dependability.

For seven years Creative Data Systems has worked closely with IBM. Our experience has affirmed the IBM reputation for excellence. As a result of our joint effort, we're in a position to offer you the most comprehensive systems that address your business processing needs.

3. We believe you should continue receiving quality support after installation.

The members of your team receive both on-site and off-site support from our team in the form of comprehensive training sessions. Two or more Creative Data Systems' staff members are assigned to your system; they're familiar with every portion of your system—including all specifications particular to your operation.

For more information . . . and to learn why more than 400 U.S. newspapers have already selected Creative Data Systems, call or write today.

Switch in Publishing Cycles Disrupts Employees' Routines

BY JERRY HILLIARD

"Overall, the switch has not ruined my life. I don't think it has helped either. . . . This is just semi-hell; copy editors can ask for no more."

Not all assessments were stated so colorfully, but in many ways this comment represents feelings of newsroom personnel toward a historic cycle switch involving the two daily newspapers in Knoxville, Tenn.

One year ago, in a move unprecedented in recent U.S. newspaper history, The Knoxville Journal, owned by Gannett Co., changed from morning to afternoon publication; Scripps Howard's The Knoxville News-Sentinel switched from p.m. to a.m.

The conversion was part of the renewal of the joint operating arrangement between the two newspapers. Under the JOA, which had been in existence since 1957 and which had been scheduled to expire in 1987, the papers share the News-Sentinel's facilities as well as business, production and circulation operations. Under the new agreement, the News-Sentinel continues to publish the city's only Sunday editions, and both papers publish in the morning on Saturdays.

Scripps Howard had entered JOA negotiations intent upon changing to morning publication, and Gannett eventually decided to go along with the changeover instead of building its own plant and taking on the News-Sentinel in a head-to-head morning battle.

The change was announced four and a half months before it took effect [**presstime**, March 1986, p. 69], allowing both papers time to campaign to keep old readers and entice new ones.

But they also faced another important "selling" job. Their own staffs had to be convinced that the change was a positive one. Although the schedules of about 75 percent of the two news staffs, particularly reporters, would not be changed significantly, the other one-fourth—35 people—would see their lives virtually turned around.

As an employee at the News-Sentinel that summer, I conducted a study to assess effects of the cycle switch on those whose schedules were altered most drastically. Two questionnaires were administered—one about a week before the switch, and the second about seven weeks later.

The survey covered all full-time newsroom employees of both newspapers whose normal work days would begin eight or more hours earlier or later.

Sixteen of the 18 News-Sentinel staffers falling into that category participated, as did 11 of the 17 eligible people at the Journal.

The typical Journal employee in the survey held a non-writing desk editor's job and was a male under 40 years old who had never been married. His full-time newspaper experience totaled fewer than 10 years, less than five years of which were with the Journal. He had been starting work between 3 p.m. and 5 p.m., and had never worked a schedule similar to the early-morning shift he was about to begin.

Compared with their counterparts at the Journal, newsroom staffers at the News-Sentinel who would experience drastic change were veteran journalists. The typical respondent was a male over 40 who held a non-writing desk position, was married and had children. He had accumulated nearly 20 years of newspaper experience—more than 10 with the News-Sentinel. Although his regular workday started between 4 a.m. and 5 a.m., he had previously worked a schedule similar to the nighttime hours he could expect after the changeover to the a.m. cycle.

With the change, one-fourth of the staff would see their lives virtually turned around.

Just as the typical staff members of the two newspapers differed in age, marital status and newspaper experience, they differed in their outlook toward the cycle switch. In the first questionnaire, the typical Journal newshand indicated a distinctly negative outlook, predicting overall adverse effects upon himself and the newspaper. The typical News-Sentinel worker wasn't exactly overjoyed at the prospect of changes in his personal life, either, predicting about an equal number of positive and negative effects. However, he did believe the overall effects on the paper would be positive.

Six weeks after the change, Journal staff members' opinions had not changed significantly. On the other hand, almost two-thirds of News-Sentinel employees said the switch to morning publication had had a positive effect on them personally.

In that follow-up questionnaire, Journal employees said the most negative effects of the switch to p.m. publication all related to sleep habits. Most positive effects they cited were the parking availability, ease of travel from home to work, amount of time available for participation in civic and social organizations, opportunity to eat meals at home, chance to unwind before going to bed, and amount of time available for exercising.

Conversely, News-Sentinel employees viewed the switch to a.m. most positively because of sleep-related factors: time to awaken completely before reporting to work, amount of sleep they could get by reporting for work later in the day, and compatability of the workday sleeping schedule with that on days off. Viewed most negatively were traffic and parking problems, and lack of time for civic and social organizations, for socializing and for attending sports events.

Some of the same factors have been cited by employees of other papers that went from p.m. to a.m. publication [**presstime**, May 1984, p. 6], as more than 100 have since 1976.

These major areas of concern should be considered by newspapers contemplating changes that would result in drastically different schedules for employees. □

Hilliard, an associate professor in the Department of Communication at East Tennessee State University, Johnson City, spent the summer of 1986 working on the copy desk of The Knoxville News-Sentinel and experienced firsthand the paper's publishing-cycle switch.

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

Shorter in Name, Larger in Scope: That's ANPA/TEC '87

The Future of Newspapering Comes into Play

In a city where everyone arrives hoping for a big payoff, ANPA's 59th annual trade show didn't disappoint.

In Las Vegas parlance, the show is on a roll. The June 6-10 event was the largest ever by two measurements: It had the most exhibitors—316—and occupied the most exhibit space—302,300 square feet. Registration of 13,320 people was highest since ANPA began charging for admission to the exhibit hall, and it was the second-largest total ever.

About the only thing small about the show was its name, which was shortened this year to ANPA/TEC ("TEC" standing for Technical Exposition and Conference) from the previous mouthful: ANPA Operations Management Conference & Exposition.

"Dazzling" is the word ANPA Chairman and President George W. Wilson used to describe the exhibition in the massive Las Vegas Convention Center. "It is a stunning display of inventiveness and wizardry in mechnical, electronic, chemical and optical technology," he said. "Such innovation, on such a scale, augurs well for the newspaper business."

Outside, there was gaudy neon and desert sun. Inside the exhibit hall, the spotlight was shared by just-aborning electronic cameras, more versatile ad-makeup and editorial computer systems, speedier mailroom equipment and, of course, behemoth presses. The booths projected a sleek, sophisticated look. But they didn't lack for glitz, either, as vendors vied for attendees' attention with everything from a vintage Wurlitzer juke box to a hot-red Ferrari.

All in all, the exhibits presented an unprecedented array of options for newspaper executives. In considering a purchase, should a newspaper take a chance on something new and different or stand pat?

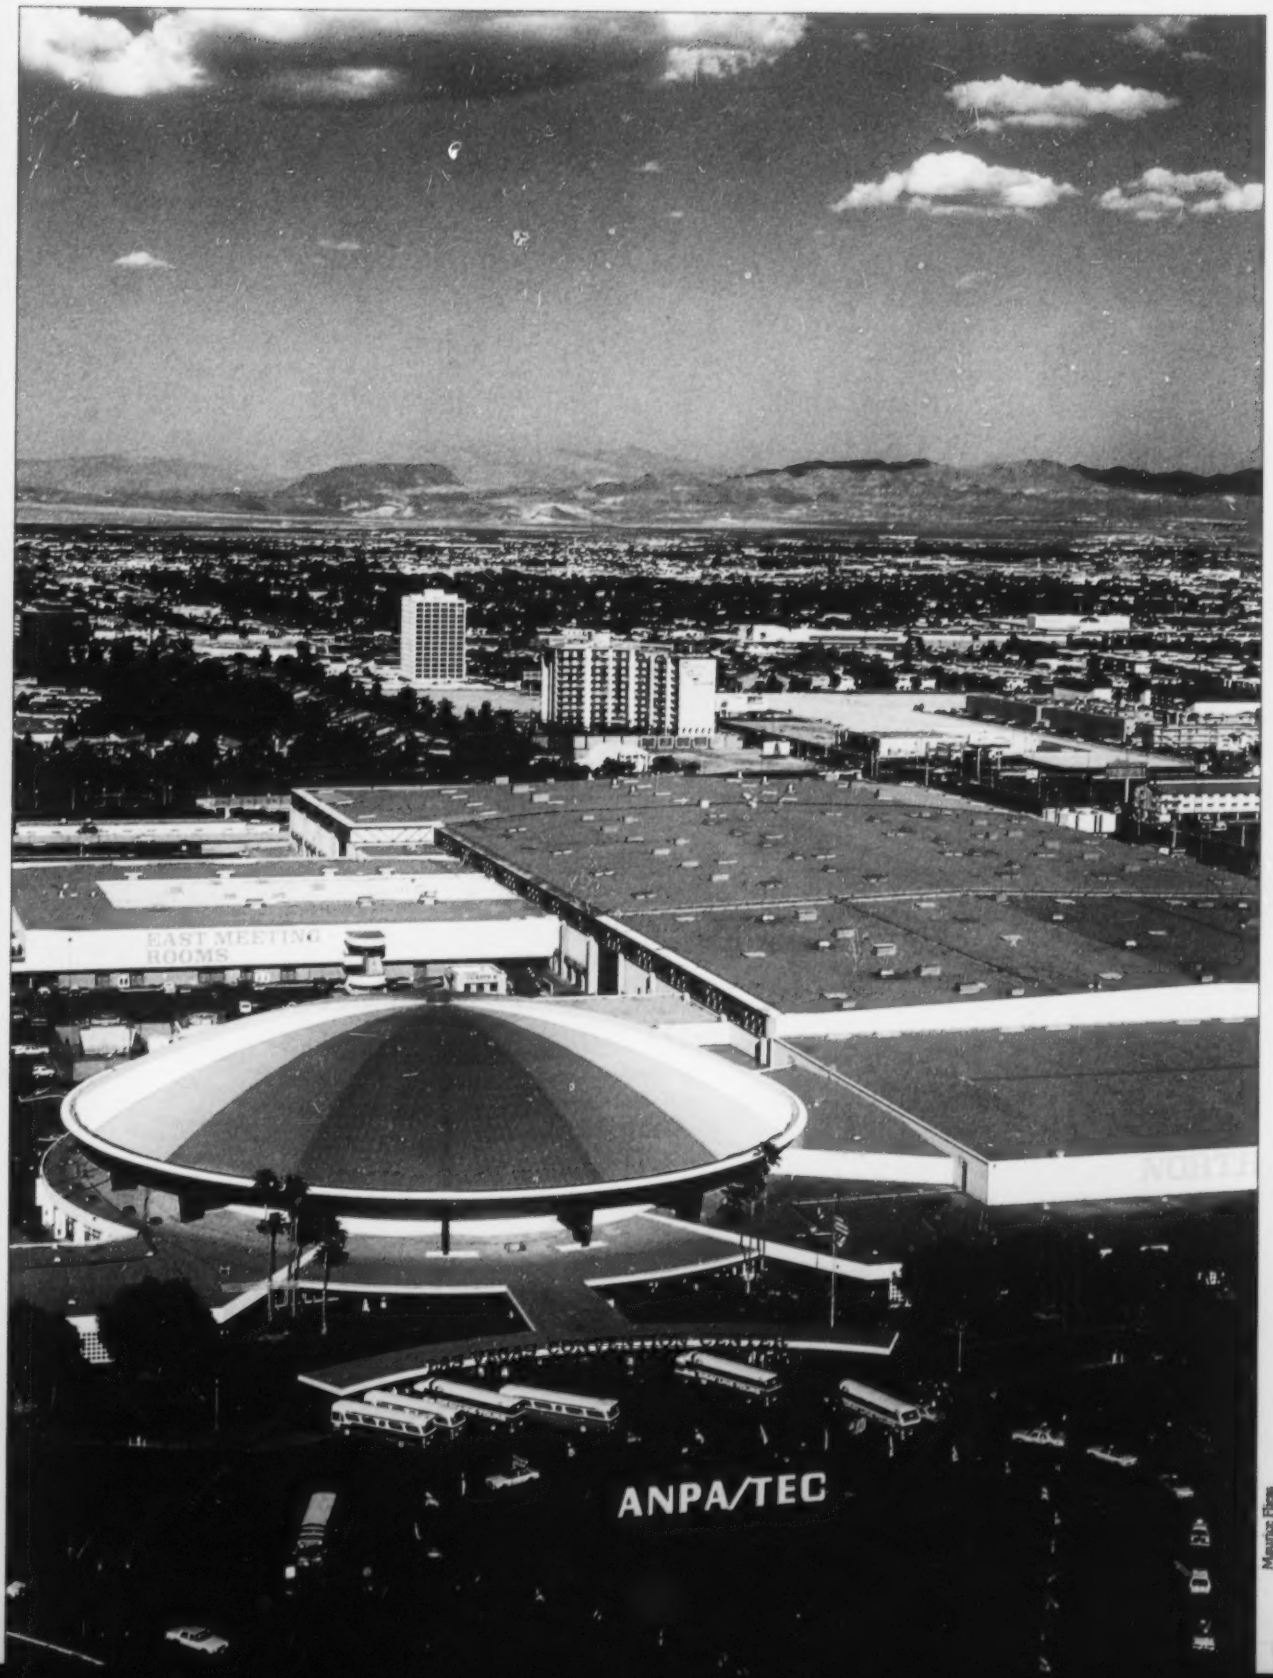
The conference portion of the event tried to answer that question as experts from newspapers and vendor companies provided insights into such things as personal computers, printing inks and presses. The sessions went beyond production topics, however, and delved into such "people" issues as drug testing and the effects of pagination and other new technology on newsroom employees.

Mention was made of the fact that this is the 100th anniversary year for ANPA and 40th anniversary of the founding of the ANPA Mechanical Research Department, but far more time was spent looking forward than backward. "While there's no denying that there have been tremendous developments over the past 25 years, I'm confident that the future June conferences will offer even greater technological developments that will enable newspapers to improve their efficiency as a news and advertising medium," ANPA Vice President/Technical William D. Rinehart told a group of newspaper labor and other executives meeting in conjunction with ANPA/TEC.

The challenge ahead was crystallized by several speakers. More than one expressed concern that the newspaper business is not spending enough, compared with other industries, in research and development.

And to sustained applause, Eugene C. Patterson, the head of the Times Publishing Co. in St. Petersburg, urged newspapers to invest more in quality. "The news business is suffering from the same virus as the nation's business: Too often we're taking a financial approach to a creative enterprise, investing for short-term earnings instead of betting on long-term quality, settling for fatness of the bottom line now rather than building muscle for a stronger tomorrow...." □

At right: Las Vegas and its huge convention hall host record-breaking show.



Maurice Rios

ANPA/TEC

BY ROSALIND C. TRUITT
presstime technical writer

In Las Vegas, a town where thousands of dollars can disappear with a roll of the dice, exhibitors at ANPA/TEC '87 emphasized the bottom line and translated the bells and whistles of technology into specific cost savings.

Whether extolling the virtues of mainframe computer systems or "desktop publishing" equipment, presses or mailroom machines, vendors at the June show hammered home the notion that sophisticated circuitry can provide newspapers with a more competitive edge.

Two other themes resounded throughout the huge Las Vegas Convention Center during the Association's 59th Technical Exposition and Conference. "User friendly" was applied to equipment ranging from computerized press controls to color scanners, and exhibitors touted integrated product lines linking the equipment of several companies.

"Newspapers are demanding more and more common interfaces between different types of equipment," William D. Rinehart, ANPA vice president/technical, said. "No one wants equipment that functions alone. It's just not practical."

No one category appeared to dominate ANPA/TEC '87, and observers noted the equipment represented a continuing evolution in technology.

Most vendors offered significant enhancements, said George Cashau, ANPA director/technical research. "I don't see a lot in the way of breakthroughs, but there's a lot of sophistication on the (exhibit) floor."

Increasing automation, as evidenced by robots that move newsprint rolls into position in the press room and others that prepare newsprint rolls for the automatic splicer, was the main attraction at some booths.

Randy Tunnell

Jeff Dowd (left) of Canon USA shows new electronic camera to Nik I. Kamil (center) and Dato Z. Ariff of The New Straits Times Press, Kuala Lumpur, Malaysia.

Electronic photography also got a lot of attention.

As many newspapers are faced with replacing front-end computer systems that are a decade or so old, state-of-the-art systems of all types were a popular draw. Personal computers were everywhere—creating weather maps and other graphics or linked to laser printers for desktop-publishing use.

Many of the front-end vendors also were demonstrating methods of incorporating the stand-alone machines into their "dedicated" systems.

Display ad-makeup systems, of both the personal computer and mainframe variety, caught the interest of many visitors.

Interest in flexographic printing remained apparent, but new offset presses with expanded color capability were also displayed, as were methods of modernizing letterpress units for color.

Gene McDavid, vice president and general manager of the Houston Chronicle and chairman of the ANPA Technical Committee, said it was "our biggest and best show

1987

Randy Tunnell

Margaret Genovese

Information International's pagination and other products get a demonstration.

yet," adding with a laugh, "I say that every year."

It was biggest in terms of floor space occupied by the booths—302,300 square feet —and in the number of exhibitors—316. Attendance of 13,320 was the greatest since ANPA began charging admission to the exhibit hall in 1982.

Larry D. Strutton, executive vice president/operations for the Los Angeles Times and chairman of the ANPA/TEC '87 Arrangements Committee, was pleased with both the content of the exhibits and the overall look of the show. "The vendors did an exceptional job on the booths this year," he said. "There's hardly a tacky job in the bunch."

In turn, the vendors were pleased with the quality of attendees and with the serious attention paid to their equipment. Even though Las Vegas is a city of considerable distraction, throngs of people were in the convention center through most of the Exposition's five-day run.

Exhibitors said requests for demonstrations kept their personnel so busy that lunch and other breaks were virtually non-existent during show hours.

"This is my 15th ANPA show, and Saturday was the busiest first day we've ever had," said Alden L. Edwards, president of System Integrators Inc. of Sacramento, a front-end hardware and software firm. "In fact, by Sunday, we had scheduled more demonstrations for the rest of the week than we did during all of last year's show."

Among the show highlights were these:

ELECTRONIC IMAGING. Sony Corp. of America, the only vendor of an electronic camera at the 1986 Exposition in Atlanta, was joined this year by Canon USA Inc. and Nikon in the field of filmless photography.

"Electronic photography isn't replacing conventional photography, it will be an adjunct," said ANPA's Rinehart. "But I believe in the next three to five years, most newspapers will be using some form of electronic photography. . . . They'll be able to get more late-breaking coverage, whether it's a big basketball game that runs late or some kind of disaster, into the newspaper."

Sony introduced its ProvMavica single-lens-reflex camera that records still images plus sound (for captioning) on a floppy disk.

The company first exhibited a prototype of the camera in 1981, and Joseph A. Wielock, national sales manager/still image systems, said the technology has advanced since then from images with about 190,000 pixels (picture elements) per 5-inch-by-7-inch image to a resolution of about 360,000 per image today. Conventional film photographs are made up of several million pixels, however.

The company is marketing the camera, a portable still-image player/recorder, an optical disk storage device and a digital transmitter.

Sony's camera, transmitter and recorder/

Randy Tunnell

Digital Equipment Corp. demonstration features newspaper operations role-playing.

player are lightweight. Operating at a baud rate of 9,600, the equipment can transmit a black-and-white photograph over telephone lines in 70 seconds and color photographs in about 110 seconds. Sony demonstrated the technology at ANPA/TEC's concluding general session. (See story, p. 42.)

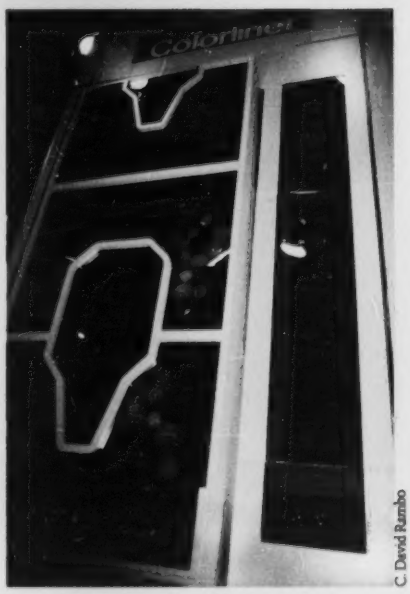
Canon also demonstrated a still video system, including a camera, recorder, printer and transceiver. Nikon placed a still video camera in the Associated Press booth that visitors could examine.

(And just before ANPA/TEC opened, Eastman Kodak Co. announced it will introduce a line of still video products later this summer for both professional and consumer use. Konica USA Inc. plans to enter the market this summer.)

The electronic manipulation of photography doesn't end with the capture of an image, however. Technavia S.A., Crosfield Data Sytems, AP, United Press International, Reuters, Cilas Inc. and Agence France Presse all demonstrated electronic photo desks or electronic darkrooms that can be used to crop, enhance or otherwise change photographs through the use of computers.

UPI's Pyxys, for example, was demonstrated by staffers who sized photographs and corrected color on the screen. Pyxys allows simultaneous viewing of several images, and its high-resolution printer can produce three color separations of different sizes.

UPI said digital transmission will result in better pictures. Analog transmissions result in a loss of clarity as pictures move from camera to negative development to print transmission and manipulation.



C. David Rambo

Electronic display offers detailed look at how Goss' newest offset press works.

AFP demonstrated its Pixar photo terminal with digital reception, which has three input-output ports. The unit also can be used for rotation so that the image can be viewed at different angles, cropped and enlarged.

Reuters' News Picture Terminal features a programmable keyboard and the ability to view up to 16 pictures at once.

The Cilas DIPAS electronic darkroom, which uses personal computers, can link with ECRM, Scitex and Monotype imagesetters for output.

Photographs aren't the only pieces of art being transmitted digitally. In their booths, both UPI and AP demonstrated their new graphics networks.

Beginning this fall, AP GraphicsNet will deliver news graphics via satellite to AP-member newspapers. Harold G. Buell, AP assistant general manager/newsphotos, said graphics will be transmitted automatically to newspapers in much the same way photographs are sent via the LaserPhoto process now.

Newspapers with Apple Macintoshes currently can dial up the graphics computer in New York and have specific graphics transmitted over telephone wires. "We like to give newspapers a choice," he said.

Digitization also is being incorporated into scanners. Hell Graphics Systems Inc. demonstrated its new Chromagraph DC 380 scanner that will allow operators to use digital technology to make more precise color adjustments on separations.

AD-MAKEUP SYSTEMS. Creating display advertisements on a computer screen rather than cutting and pasting by hand saves time, and when last-minute insertions or changes need to be made, time is money. Perhaps that's why the vendors demonstrating such equipment were so busy during the show.

Some companies have taken the personal-computer route. Compugraphic Corp.'s Dawn system has a 19-inch high resolution monitor, a 40-megabyte hard disk and a WYSIWYG (What You See is What You Get) format that displays type in actual size from 6- to 72-point. After being created on a computer screen, ads can be sent to either a laser printer or a typesetter.

CText Inc. also introduced a personal computer-based ad system, ADept, that has menu-driven software and more than 90 fonts. The system has kerning capabilities and can flow copy from column to column and across page boundaries.

Mycro-Tek's AimTouch display makeup terminal with a 32-bit processor chip allows the user to preview a broadsheet page before being set in type. It can flow copy around photographs and other graphics, facilitating the creation of "wraps."

Dewar Information Systems Corp. demonstrated the DISCovery ad-makeup terminal that has a zooming feature to enlarge or reduce point sizes quickly. The terminal also can create standard rules and boxes, rounded and inverted corners, shadow boxes, and special borders such as those for coupons.

C. David Rambo

Cybergraphic Systems Inc. stacks the deck with Apple Macintoshes.

Randy Tunnell

Western Lithotech employees demonstrate the company's Lithoplater platemaking machine, then hand out plates as souvenirs.

Crosfield Data Systems' AdWizard can change typeface, column measure or point size within seconds. Objects on the screen can be stacked or even made to look transparent. All files are stored on two different disks on two different terminals or file servers.

Information International Inc. purchased the marketing rights to the Layout ADvisor, a system that was developed by the Providence Journal and Bulletin. It can produce camera-ready or plate-ready pages when linked to a pagination system, or it can create paper advertising dummies as a stand-alone system.

EDITORIAL SYSTEMS. In demonstrating editorial systems, computer companies emphasized current or future links to pagination systems.

System Integrators, living up to its name, is developing both hardware and software. Its Tahoe hardware for editorial use has a 32-bit microprocessor and can stand alone or be included in a network of terminals. Its NewsDesk software that drives the Tahoe is also designed for either stand-alone or network use, and offers both word processing and spreadsheet functions.

Digital Equipment Corp. and Atex Inc. both stressed integration of equipment and the idea that technology used correctly can mean cost control.

The DEC booth dramatized how a newspaper would use various DEC and DEC-related products to edit text and reconfigure pages quickly—allowing the newspaper to meet its deadlines while producing a completely up-to-date newspaper for readers.

Atex also used a dramatization to show how editors can monitor the status of pages, insert display ads shortly before a press run and create splashy feature pages.

Newspapers looking for something a bit smaller weren't disappointed either. International Business Machines demonstrated its IBM Personal System/2 that uses PageMaker software to merge text and graphics and has 43 different type faces. The IBM Personal System/2 Model 30 and Model 60 have color displays with up to 256 colors at a time, which can be selected from a palette of 256,000 possibilities. The Model 60 can be linked to other computers in a local area network, and the Model 30 supports a printer, keyboard, mouse and modem.

Compugraphic introduced its Intrepid III, a personal computer with color monitor for editorial use. The Intrepid III is designed for larger newspapers and has a 20-megabyte hard disk.

Pongrass Australia Pty. Ltd. uses DEC computers for its MicroTMS system that integrates classified advertising, display advertising and typesetting. PCs can be hooked into into the system for editing purposes.

Concept Publishing Systems demonstrated its NewsSet software on a Macintosh. It features on-screen hyphenation and justification, programmable keys, variable paragraph indentation and kerning.

PAGINATION. Pagination systems attracted their share of attention.

System Integrators demonstrated a prototype of its Sierra page-design software with WYSIWYG display.

Information International showed how its pagination system now can send pages to a raster typesetter.

A new feature of Crosfield's NewsPro terminal adjusts newsholes automatically, flowing copy around graphics.

Other companies such as CText offered classified pagination systems that are menu-driven and paginate by numerical classification.

PRESSES. Computers even play a large part in the pressroom these days, from keeping track of the number of copies printed to alerting crews that web breaks have occurred. However, the three presses running on the floor at ANPA/TEC '87 —two offset presses for small to medium-size newspapers and one flexographic model—drew much of the attention.

Using a Motterflex three-color unit and a basic FX unit that lays down black as a fourth color, Motter Printing Press Co. printed a four-color, 16-page Las Vegas Show guide. The press also featured an electronically controlled reel stand.

King Press Co. and Solna Inc. ran offset printing presses.

A Japanese press manufacturer, Mitsubishi Heavy Industries Ltd., entered the U.S. market recently, and the company showed videotapes of a completely automated offset press system. It has a splicing preparation robot, an automatic roll-loading device, an automatic paper threader, automatic plate conveyors and a computerized press control system. Company representatives said a sim-

ilar system is in operation at a daily newspaper in Japan.

The Graphic Systems Division of Rockwell International displayed electronic models of Goss presses. The display models included the Colorliner, a new offset press that prints color on both sides of the web; the Flexoliner, the company's entry into the flexographic market; and the Goss Headliner offset press. All have optional computerized control systems. A booth highlight for many visitors were electronic displays that illustrated how a press works and the options that are available.

Crabtree Vickers displayed its Civilox + 4, a printing unit that adds process color to letterpress presses. The keyless inking system requires no dampening, ink controls or settings and has a precision pin-register system.

Tokyo Kikai Seisakusho showed a videotape of an automatic unit that prepares newsprint rolls for autopasters. One unit can handle eight reels.

MAN Roland USA displayed its Colorman 75, a heavy-duty offset press for metropolitan dailies, as well as its Flexoman that can be installed as a complete new press or as units slipped into an existing letterpress or offset press superstructure.

PRINTING PLATES. Western Lithotech, an offset plate manufacturer, emphasized environmental issues at demonstrations at its booth. The company introduced the Envirotech, a new developer and finisher that doesn't irritate the skin, and the Eliminator, a high-speed, plate-processing unit that separates various insoluable compounds (ranging from resins to pigments) from waste water. The solid waste can be disposed of safely, and waste water can be allowed to go down the drain.

Margaret Genovese

Kurt Brandt of CIP Forest Products Inc. (left) and Thomas P. Grillo of the Birmingham News examine kenaf plants that grew two inches during the show.

Hoescht Celanese Corp., formerly American Hoescht Corp., displayed presensitized offset plates that the firm said eliminate fuzzy dots and improve ink and water balance.

Research and development of flexographic plates continues, with Hercules displaying a photopolymer platemaking system, and NAPP Systems (USA) Inc. demonstrating its NAPPFlex plate and a tabletop exposure unit. Concerns remain over plugging on black halftones, and the companies said research continues in the area of plate chemistries to help solve those problems.

MAILROOM. Increasing automation, more accurate counting of newspapers and inserting machines capable of handling larger newspaper packages were showcased by mailroom equipment manufacturers.

Automated guided vehicles that substitute machine might for human brawn were demonstrated by FMC Corp. and Idab. FMC showed a robotic palletizing system for inserts, and Idab had a roll-handling forklift vehicle.

TKS showcased its new M-250 counter stacker that uses a laser to count up to 75,000 metro newspapers per hour.

Hall Processing Systems, a new joint partnership between Rockwell International and Scripps Howard, showed its Monitor HT stacker that is microprocessor-controlled and has a touch screen. A laser counter is optional.

Denex Systems Technology also demonstrated a laser counter, one which can count up to 125,000 newpapers per hour.

Graphic Management Associates Inc. demonstrated a 20-into-one inserter.

Muller Martini Corp. showed its Print Roll system that compresses, then rolls preprints and jackets onto large, stationary rolls for storage until time for insertion.

In the Editor & Publisher magazine competition for outstanding exhibits, Rockwell International won first place for large booths, Sony for medium-size booths, CIP Forest Products Inc. for small booths and The Pellegren Corp. for non-island booths.

In the Kodak "Run for the Money" contest, the Shin Min Daily News of Kuala Lumpur, Malaysia, was named "World's Best." In the United States/Canada division, the Chicago Tribune won for large offset newspapers, the Pottsville (Pa.) Republican won for medium offset and the Fairbanks (Alaska) Daily News-Miner for small offset. The Syracuse (N.Y.) Herald- Journal was the letterpress winner, and the Stratford (Ontario) Beacon Herald was the top DI-LITHO™ entry. □

ANPA/TEC Keeps Growing To the Delight of Vendors

Next Year's Show Already Sold Out

How much bigger can it get?

That's what participants were asking at ANPA/TEC '87 as exhibit space at the world's largest newspaper trade show cracked the 300,000-square-foot barrier for the first time. The 302,300 square feet used represented 11.5-percent growth from the 271,000 figure recorded last year.

Here's another way to look at it. What began in 1927 as the annual ANPA Mechanical Conference didn't exceed 100,000 square feet of exhibit space until 1975. It took only six years, until 1981, for the show to top 200,000 square feet. Another six years and the 300,000-square-foot level was surpassed.

Back to the basic question: How much bigger can it get?

Officials got a short-term answer on the last two days of ANPA/TEC '87 as vendors bid for space at next year's show June 11-15 in Atlanta. "We sold it all, wall-to-wall," said ANPA Manager/Technical Services John J. Ford, who along with Director/Technical Services Peter P. Romano oversees the equipment Exposition for the Association. In fact, the floor plan for the Georgia World Congress Center had to be modified to add booths where none were planned. Even part of an area allotted for a restaurant was sold, Ford said.

Demand appeared to be not at all impeded by a $1-per-square-foot increase in fees for 1988 booths—to $8.75 per square foot for those of 400 or more square feet, and $9.25 per square foot for smaller ones. The last increase in booth costs was in 1985.

When the scramble for 1988 space was over, vendors had committed themselves to occupying more than 330,000 square feet of the Atlanta facility.

If that number holds, ANPA's Romano noted, ANPA/TEC will be well on its way to its next milestone—400,000 square feet.

He cited two primary factors for the show's continuing growth: Many vendors are expanding the size of their exhibits, and their number is rising—from 267 in 1986 to 316 this year and to a projected 320 in '88. "Exhibitors are pleased with the high percentage of decision-makers who attend," Romano said.

Jerry T. Marshall, general manager of the St. Louis division of United Exposition Service Co., said ANPA/TEC is clearly one of the fastest-growing trade shows in the country. United, the nation's largest service contractor for expositions, spent 10 days directing the setup of the Las Vegas show. About 1,000 workers were involved in the installation of carpeting (five miles' worth for the aisles alone), 3.5 million pounds of equipment and a variety of other booth items including "a botanical garden of floral displays," Marshall said.

Even before the most recent spurt in growth, the ANPA show ranked as one of the largest annual trade fairs in the United States. According to William Hamilton, directories editor for the publication Tradeshow 200, it was 39th in exhibit size in 1986. □

The Word from Las Vegas

"We are reaping the benefits of wise investment in technology. But . . . are we investing enough in research and development now to produce future benefits? I worry that we are not."

—ANPA Chairman and President George W. Wilson

"When the electronic camera can stop Walter Payton or Larry Bird in mid-air with sweat dripping off their faces, and output that information to my prepress department, and I can see it when I pick up my paper in the morning, the electronic cameras will be ready for newspapers."

—Jack Corn, director of photography, Chicago Tribune

"As I travel the country, I am appalled by many of the washed-out, out-of-register, four-column photographs I see on page one that would never be there in black-and-white. Research tells us clearly that bad color is worse than no color."

—Leo Bogart, executive vice president and general manager, Newspaper Advertising Bureau

"We should never lose sight of the fact that for all of our technical achievements, we are only as good as the people who operate our equipment, write our stories and create our advertising."

—Stanton R. Cook, president and chief executive officer, Tribune Co., Chicago

"It's good to see presses running. But I find it ironic when a newspaper orders a press, it takes the press company two or three years to manufacture it and get it running. At the show, they can assemble a press in a few days, and they're running smoothly and without any problems."

—Gene McDavid, vice president and general manager of the Houston Chronicle and chairman of the ANPA Technical Committee

"We believe that the pioneering work has been done in flexographic printing, and we are entering in time to take advantage of the leading edge of a new newspaper technology."

—Sam D. Jenkins, production director, Lancaster (Pa.) Newspapers Inc.

"Until now, the only affordable and practical tool for (newspaper computer graphics) has been the Apple Macintosh, and I believe that will be true for some time to come."

—Roger F. Fidler, director of graphics and newsroom technology, Knight-Ridder Inc.

"Successful quality reproduction requires putting 80 percent of the effort into preparing to run and 20 percent into monitoring the run."

—Charles R. Blevins, vice president/production, Gannett Co.

"The era when newspapers had to address the (press) supplier as 'sir' has changed around."

—William D. Rinehart, ANPA vice president/technical

"If you demand cheap inks, you'll buy inks with pigment levels cut. It also causes blend colors to go far off shade. It's like buying an expensive Mercedes car and then using drugstore motor oil."

—Rinehart

Latest Developments in Printing Inks

Wilson Challenges Industry To Address Problem Areas

Newspaper Business Spends Too Little on R&D, He Says

ANPA Chairman and President George W. Wilson at the opening general session described changes in operations at his own small, New England daily over the past quarter century to illustrate how new technology has dramatically improved newspapers and to identify several areas that still beg solution.

Although he said "prospects are bright" in the newspaper-technology area for the near future, Wilson was less sanguine about the long term.

"Are we investing enough in research and development now to produce future benefits?" he asked the audience of about 1,500 newspaper executives and equipment suppliers. "I worry that we are not."

Automobile companies invested 3.5 percent of their 1985 sales in research and development; the industrial machine industry invested 4 percent; the electrical industry, 3.2 percent; the appliance industry, 1.7 percent; and the computer industry, 7.7 percent, according to Wilson.

But the newspaper business, he said, "working cooperatively through our association," invests less than 0.002 percent in technological research and development.

Wilson, president of the 21,501-circulation Concord (N.H.) Monitor, cited the following problems he would like to see technology address:

• **Newsprint.** "High prices for newsprint deprive me of dollars for the news product. New papermaking machines cost $200 million, and the technology is 100 years old; it is necessary to get that cost down. Kenaf has great promise as a replacement or supplementary fiber for wood. . . . I would like to see another fiber for papermaking."

• **Post-press.** "We need faster, more reliable and automated inserting machines."

• **Prepress.** "I want to be able to tie different suppliers' machines together to integrate all prepress production work on computers and terminals. And I want as much of the hardware as possible to be generic, personal computer hardware. I will pay for applications and networking software, but I don't want to be locked into high-cost service contracts to maintain proprietary iron that will be made obsolete in five years."

• **Delivery vehicles.** "I need a way to speed up delivery and increase the productivity of motor route drivers so we can pay them better."

• **Library.** "I want an electronic library for use by our staff and the community, but I want the cost to come down substantially."

• **Presses.** "I want better, cheaper printing presses. In 1969, the Monitor bought a new press to meet its current and future needs. The cost . . . was equivalent to about 17 percent of one year's revenues. Today, a press meeting the same needs would cost an amount equal to more than 60 percent of a year's revenues. That's too much."

Wilson made it clear that—his list of problems notwithstanding—newspapers owe much of their current prosperity and vigor to the technological breakthroughs of the past.

As an example of that, he detailed the progress of the Monitor, which, he said, is "pretty typical" of daily newspapers in the United States, 85 percent of which have circulations under 50,000.

When he started there exactly 25 years ago, he said, the last previous technological decision had been made 40 years earlier—"whether to buy Linotype line-casting machines or Intertype machines."

The "entrenched" production department was "totally resistant to change," he said. Management was "functionally illiterate on technical matters"; type was set at five lines a minute; all copy had to be rekeyboarded; and only two or three pictures a day could be published because they had to be sent out for expensive zinc engravings.

The Monitor employed new technology as it emerged, he said, and today there are 15 people in the composing room instead of 17, 35 people in editorial instead of seven; the paper averages 40 pages a day instead of 16; it publishes 20 pages of news a day instead of eight. The paper, he said, "is better in all respects—appearance, content, organization and service to our customers."

From his experience in Concord, Wilson said two things are clear to him:

"If we hadn't had photocomposition, offset printing, photopolymer plates and the computer revolution, we would be a second-rate business today.

"Secondly, no amount of managerial skill, enlightened personnel policies, devotion to editorial excellence or energy applied to sales and promotion would have brought newspapers to their current state of improvement, strength and promise without those technological breakthroughs."

Noting that this year marks the 100th anniversary of ANPA and the 40th anniversary of the establishment of ANPA's Mechancial Research Department, the ANPA chairman said the Association "will live to celebrate its 200th anniversary" if it continues to help newspapers perform as "the single, indispensable medium that informs and unites a people uniquely entrusted with the responsibility of self-government and the blessings of liberty.

"ANPA will serve that end if for the next 40 years it stimulates technological innovation, fosters research and helps its members use technology wisely. I'm sure it will." □

Wilson cites his New Hampshire paper to chart technological revolution.

C. David Kimble

Editors, Ad Executives Alike Must Pay Heed to Readers

The Bottom Line Hinges on Quality

The different worlds of competition for news and advertising came into focus in the first of three general sessions with a Wall Street theme, "The Market."

Eugene C. Patterson, chairman and chief executive officer of Times Publishing Co. in St. Petersburg, said newspapers' chief competitors in the news-gathering process are other newspapers.

On the other hand, newspapers are faced with a growing number of outside competitors in the battle for advertising dollars, said Leo Bogart, executive vice president and general manager of the Newspaper Advertising Bureau.

Patterson dismissed the notion that television poses newspapers' primary competition for news with this stinging line: "We've handled those bozos for 40 years now." Nor are radio, magazines, cable TV, other electronic information services or shoppers the real competition, he said.

"Competing with one another for news is still our newspapers' warmest external challenge, and the healthiest one," he said.

Patterson scolded those in the newspaper business who apply a bottom-line mentality to journalism. "Too often we're taking a financial approach to a creative enterprise," he said, by "investing for short-term earnings instead of betting on long-term quality; settling for fatness in the bottom line now rather than building muscle for a stronger tomorrow; mistaking money and numbers for journalistic strength; buying and selling instead of sowing and reaping; making like the village banker instead of the town tribune; and getting pretty complacent about what's expected of us in the way of public service."

In the marketplace, he said, such attitudes "can get newspapers blind-sided as painfully as the automakers and electronic companies got hit" when they ignored the rising tide of car imports "and lost touch with quality control."

To avert that fate, newspapers should practice what Patterson called "whole journalism." This means thinking of words, illustrations and page design as one unit to be "handled whole."

It also means moving news coverage onto two parallel tracks "that simultaneously narrow local coverage and widen our view of the world so that the two parts make a greater whole," he said. Readers want intensified coverage of "the communities and neighborhoods where they're raising their families, paying their taxes and cussing potholes"; at the same time, as they become more cosmopolitan, they are demanding "less parochial" coverage of world events.

Patterson said that by practicing whole journalism, newspapers can achieve that elusive goal, quality. (The bulk of his speech is reprinted on pp. 49-50.)

NAB's Bogart picked up on Patterson's theme by noting that a 19th-century Indiana newspaper "had a motto on its masthead that would probably resonate with a lot of publishers in our business today: It was 'Not for love, honor, or fame, but for cash.'" That publication "didn't last very long," he said, "proving that newspapers must generate love, honor and fame through journalistic excellence in order to produce a respectable cash flow."

Bogart said newspapers can meet the escalating competition for advertising only by maintaining and strengthening "the one asset our advertisers are interested in: our readership."

Noting that "baby boomers" are now "maturing into the ages where newspaper reading is at its peak," he said weekday circulation and penetration should be climbing, but aren't. In fact, "reading frequency" has continued to decline, said Bogart, who jolted the early-morning session with this rawboned formula: "For every 1-percent drop in our level of daily readership penetration, there has been a decline of 0.5 percent in our advertising share."

He added: "The problems that face us in this area are extremely complex. They involve distribution and pricing, as well as the creative side of the product."

Bogart disputed the belief that people who do not read a newspaper have insufficient time to do so. "It's just not true," he said. "Our studies show that they've got more time on their hands than the rest of us. They've simply got to be convinced that reading the paper saves them time, and that it's more valuable to them than the hours they squander on TV.

"Not just hours, but money. Last year, our readers spent $8 billion to buy our papers. They spent $10.5 billion on their cable TV subscriptions."

Fear of losing still more readers has led newspapers to hold down circulation-price increases below the rate of general inflation, resulting in pressure to increase ad rates, Bogart said. Ad rates have climbed an average of 76 percent since 1980 while the consumer price increase has risen 21 percent, he said. Whereas advertising accounted for 75 percent of newspaper revenues six years ago, it now brings in 81 percent.

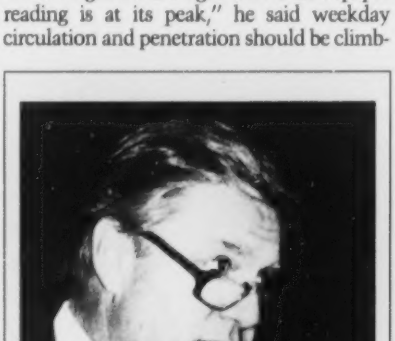
The higher ad rates have been put into effect, he said, even though "new forms of competition are popping up all the time."

One potential competitor that Bogart discussed at length is electronic classified advertising. "Ten years ago, a lot of people in our business were fearing Armageddon. If we're no longer worrying about it, that may also be a mistake," he said, noting that "classified is up to 34 percent of total advertiser investments in newspapers and represents 40 percent of our ad revenues."

Videotex or teletext forms of classified advertising have not proved themselves in the marketplace, Bogart said, but growth could come in specialized listings systems for real estate brokers, employment agencies or car dealerships. "These will become an attractive supplement to general mass advertising and will siphon off revenues that might otherwise come to us."

To meet this challenge, newspapers should get into the electronic classified business and should standardize entry of classifieds from remote terminals, he said.

Like Patterson, Bogart deplored complacency as a common pitfall in the newspaper business. But he said "technology in the form of 'desktop publishing' may reinvigorate the seeds of competition in newspaper markets where complacency has reigned." □



The chairman of the Arrangements Committee, Larry D. Strutton, presides at opening session.

Newspapers Are Benefiting From the Power of PCs

Better Laser-Printer Quality Is on the Way

Newspapers' growing use of personal computers is resulting in better and more profitable publications, according to panelists at the workshop on "PC Options and Opportunities."

Future possibilities seem almost unlimited.

Roger Fidler, director of graphics and newsroom technology of Knight-Ridder Inc., said PCs "have the power to revolutionize the entire prepress operation of publications."

Other speakers were C. Morgan Brassell, project development manager of the Los Angeles Times, who described an emergency typesetting plan that incorporates eight Apple Macintosh computers and off-the-shelf software; and Edward F. Baer, director of computer services of the Atlanta Journal and Constitution, who outlined a systematic approach to putting PCs to work in various departments.

Fidler, a pioneer in use of computers to create newspaper graphics, offered his view of "tremendous future opportunities" afforded by PCs in:

• **Pagination.** Several hundred smaller newspapers are using personal computers and laser printers "to at least partially paginate their pages," and he would not be surprised "to see metropolitan newspapers using Macintosh IIs and laser printers next year to fully paginate their tabloid sections."

Laser-printer quality, generally at 300 dots per inch, is not as good as traditional typesetters' 1,200, but improvements are expected. Varityper has introduced a printer with 600 dpi resolution, and "more companies are expected to announce similar systems in the next few months."

• **Digital photography.** Some advanced personal-computer models, specifically the new IBM Personal System/2 and Macintosh II, are powerful enough to handle digital photographs, but there is not yet software available to "edit and process images from digital cameras and scanners. Once this is available, you are likely to see an explosion of digital photography in newspapers."

• **Color.** Macintosh software is available—and is being used—to make black-and-white separations of line art. "Other applications that make it possible to prepare color separations for complete tabloid and broadsheet pages are expected soon."

Much of Fidler's talk focused on virtues of the Apple Macintosh. Introduced in 1984, the original machine and its progeny have become the "de facto standard for newspaper computer graphics," he said.

Macintosh attributes include low cost, ease of use, relatively high-quality output, and the ability to let users "share graphics in the way we have shared wire stories" through the Knight-Ridder Graphics Network and the Associated Press Access service, he said. In contrast, IBM personal computers are popular for word processing and "number crunching," Fidler said, but "they are not graphics machines." Even the latest generation of IBM personal computer, the Personal System/2, has no graphics software yet.

Fidler stressed that he did not want to seem "like a Macintosh salesman." But he was not the only one to praise the Apple equipment.

"The beauty of the Macintosh is that if all else fails, you can still get the paper out," said Brassell of the Los Angeles Times. He said if an earthquake or other disaster ever knocked out up to two of the Times' three production facilities, the newspaper still would be able to produce a 16-page, all-editorial edition with Macintosh computers that are used normally for routine office functions. "This concept was basic in planning and system design," he said.

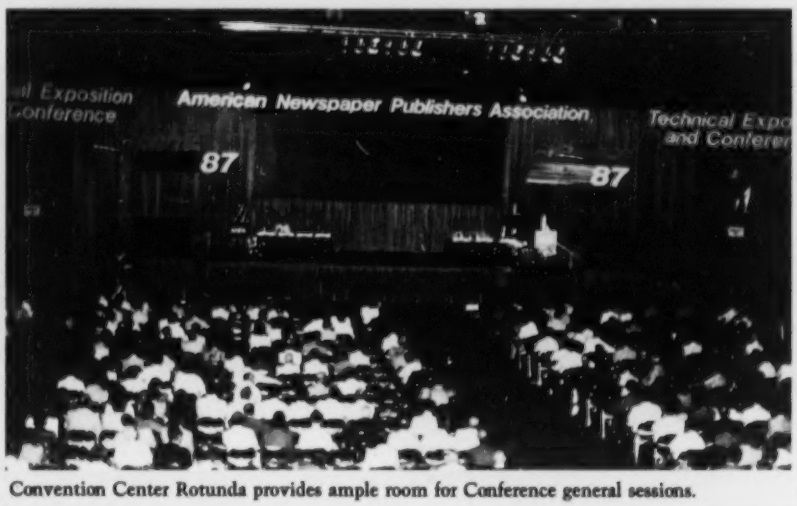
Brassell issued a warning to front-end system manufacturers in light of PCs' performance and proliferation. "The established newspaper system vendors are under siege," he said. "They must broaden their vision. They cannot continue to ignore new developments in the PC world. Technology and competition from PC developments will force them to provide us better systems."

Baer of the Atlanta newspapers said one way to put PCs to work throughout a newspaper plant is the "laissez-faire" approach. People are allowed to "do your own thing," and there are no restrictions on hardware or software used and no common-usage guidelines. A benefit is that people find creative ways to use their computers. But the freewheeling atmosphere also can result in a "Tower of Babel" in which different computers cannot work together.

On the other end of the spectrum is the "unilateral approach," Baer said. A designated person or committee dictates everything regarding PC policy. The policy would promote standardization, but it "would kill creativity," he said.

The Journal and Constitution took a "middle of the road" approach. Users develop their own applications for the computers, but guidelines are established for "more esoteric aspects like backup, security and documentation."

Though the PC workshop was replete with details on high-tech capabilities, there also was a message for more human considerations. Fidler summarized: "We must not forget that computers, no matter how powerful, are only as creative and skilled as the people who use them." □



Convention Center Rotunda provides ample room for Conference general sessions.

Some Editors Feel 'Ambushed' by Pagination

Effects on People Often Have Been Ignored

Publishers who have adopted pagination have done so to save time and cut costs, but the effect of that technology on people often has been ignored, the moderator of a workshop on the subject said.

"While the technicians and the computer wizards have been dazzling us year after year with more and more spectacular machines, something ominous has been brewing in our newsrooms," said Eric Wolferman, executive editor of The Reporter in Lansdale, Pa.

Wolferman, who has been a consultant to a number of other newspapers on pagination, said "It is the feeling of many paginating newsrooms that they have been ambushed by pagination. They have simply been unprepared to deal effectively with the technical, organizational and management issues that pagination presents."

Those observations were supported by preliminary findings from a study conducted last fall and winter at 32 U.S. newspapers using pagination equipment.

Gilbert H. Fowler, a journalism professor at Arkansas State University, said that after electronic page makeup began, employees indicated they were having less personal contact with their colleagues, experiencing greater job intensity, expressing more dissatisfaction about their jobs and feeling a loss of autonomy.

Not surprisingly, employees who had been asked for their views prior to the pagination system's selection were more satisfied with the equipment and more content about the effects the technology was having on their jobs.

According to the survey, editors spend an average of four and a half hours a day on pagination terminals. "The more hours they spent on the terminal, the more likely they were to say, 'I became obsolete the day my newspaper installed pagination,'" Fowler said. "Which makes one believe that we need to look at retraining, reskilling, informing them of how it's going to impact on their particular job."

The survey also found there was less confusion when one person in the newroom had overall responsibility for the system.

Introduction of pagination systems has meant that some jobs once considered within the province of the production department are now handled in the newsroom. This has led to tension between workers in the two departments, the workshop on "Coping with Pagination and New Technology" was told.

One panelist suggested that the division between editorial and production stems from the fact that many young people entering the newspaper business these days start at fairly large papers.

"On a small weekly newspaper, you had the experience of doing everything, from making halftones to selling ads to putting a page together on an old flatbed press," said William H. Stroud, assistant to the executive editor of The Philadelphia Inquirer.

"We used to grow a lot of generalists in this country, but too many people who come out of journalism school . . . don't have a clue as to how a newspaper is put together. It's a total mystery to these people," said Stroud, who is project manager for installation of an Atex Inc. pagination system at the Inquirer.

Jules S. Tewlow, director/special projects of Lee Enterprises Inc., said he believes a journalism education should include a healthy dose of technology. "They (students) need to know how newspapers function from top to bottom. They need a cooperative, cohesive effort not only to understand how technology works but how people can best work together."

Laura Schwed, assistant managing editor/graphics for the Westchester Rockland Newspapers Inc. in White Plains, N.Y., said that in order for pagination technology to function properly, editorial people must become more technically oriented, and production personnel must learn more about how the newsroom operates. □

The Exposition and Conference drew 13,320 people and three ducks.

Tapes Available

Cassette tape recordings are available of all ANPA/TEC '87 general sessions and workshops.

Recordings of the three general sessions cost $18 for each session; recordings of the 10 workshops cost $9 each. A full set of tapes is $137.

To order, contact ACTS Inc., 1025 East Clayton Road, Ballwin, Mo. 63011; (314) 394-0611.

At the show, the hottest-selling general-session tape was "The Futures," according to ACTS Vice President Janice M. Hollandsworth. Most popular workshop tapes were those on "Coping with Pagination and New Technology," "PC Options and Opportunities," "R&D—Reclamation and Disposal," and "Ad Composition/Ad Tracking."

The World of Inks Has Become Very Complex

Experimentation Continues on New Formulations

When newspaper people think ink, they no longer think of just one kind of substance. That fact was made clear at the workshop on "Printing Inks."

Representatives from two newspaper companies, an ink company and ANPA's research staff gave progress reports on several developments: using offset ink on a letterpress press, using water-based ink, the newspaper industry's switch from untreated to treated petroleum in ink, and ANPA's work to develop ink made from oils from soybeans and trees.

Jereld L. Underwood, assistant production director for the Houston Chronicle, reported on his newspaper's six-month experiment with offset ink on a letterpress press. The goal is to improve reproduction without replacing the newspaper's 87 letterpress units.

The Chronicle calls the process it developed "Aqua Flex." Underwood noted that it uses components of all three of the major printing processes currently used in newspaper publishing. Aqua Flex takes from the offset process a light impression as well as non-glycol, web-offset ink. From flexo, it takes a soft, water-resistant plate. And the ink is used on a letterpress press.

One factor in the success of the experiment to date has been the type of newsprint used. When using newsprint made from spruce trees, press runs were problem-free 90 percent of the time, Underwood said. The success ratio dropped to 60 percent when pine newsprint was used.

The Chronicle is studying the feasibility of adapting a complete nine-unit, Goss Mark II press to Aqua Flex, Underwood said. He estimated the cost to modify one unit at up to $30,000. Forty-seven percent of that cost is "reclaimable," he said, because the spray-bar dampening system can be retained when, at some time in the future, a new offset press is purchased.

The project is "highly experimental," Underwood stressed. "Where it's going to take us we don't know. Hopefully, it will extend the life of our letterpress."

Water-based ink was discussed by the pressroom superintendent of the Providence Journal and Bulletin, Thomas J. Pendergast. He said his crews are "about 98 percent of the way home" in learning to print with the ink.

The newspapers, which have been experimenting for several years with water-based ink in flexographic printing, are almost ready to move into a new printing and distribution facility that has a new flexo press.

"We still have a few problems, of course," he said. "Fill-in of halftones and mottling of solids continues to come and go. We feel that we have made great strides in these areas." But he reminded the audience that these problems are "common," no matter what printing process is used.

In the year and a half since the newspaper industry switched to so-called "treated oil" inks, prompted by implementation of the federal government's "hazard communication" standard, some users have complained that the new inks don't perform as well as the old inks made with untreated oil, said Bruce E. Blom, assistant technical director of Flint Ink Corp. Although Blom said the complaints were not unanimous—and some users even said the new inks ran better than the old ones—Flint decided on some comparison testing.

Conducted at ANPA's technical laboratory in Reston, Va., the tests showed that "cleanup"—measured by the number of copies printed before there was no background toning—was "slightly less" with untreated ink. However, the treated ink showed more flexibility in balancing the mix of ink and water in offset printing. In general, he said, results were better for both cleanup and ink-water range when "soft" water was used rather than "hard" water. Best results were obtained with an independent dampener as opposed to an ink-train dampener, he added.

Flint also asked three manufacturers of press blankets to compare the effects of treated and untreated inks on blankets. It did so after receiving complaints that print quality was deteriorating but could be improved dramatically with packing under the blankets, Blom said.

As a result of the testing, the ink company and blanket manufacturers theorized that the blankets were wearing out faster when treated oil inks were used because these new inks do not cause the blankets to swell as much as the old, untreated oil inks did.

"Blanket manufacturers felt that they could deal with this problem by changing some component of the blanket structure, and I have been told that this has been done and is working successfully," the ink executive said.

Blom also addressed complaints about low-rub inks made from treated oils. Their development got "caught up" in the swift change to treated oil, and some users complained about pipe-roller buildup, he said. New formulations currently being tested "seem to meet the criteria set by the user."

The final speaker turned attention to the development of non-petroleum inks by ANPA. The Association's research on non-petroleum inks began in 1980, soon after the second oil shortage hit the United States, said John T. Moynihan, ANPA research chemist.

Starting in 1983, the Association began obtaining patents on ink using "tall oil," a byproduct of the wood-pulping process. Even though the supply of raw materials for this ink is good at present, it was tight as recently as two years ago, Moynihan said.

Consequently, the Association developed ink that uses a much more available source, soybean oil. "It is faster growing soybeans than treees," Moynihan said. "If shortages develop, more soybean can be planted and the oil extracted. Soybean oil also has good properties for use as an ink vehicle, and its use in printing inks could provide a boost to United States farmers."

Fun Run Rewards

The third annual Exposition and Conference Fun Run sponsored by **pressstime** was won by Edward J. Cloos Jr. of Gannett Rochester Newspapers and Fiona Dunn of the Calgary (Alberta) Herald.

In the photo above, **pressstime** Advertising Manager Jonathan A. Reed presents a plaque to Dunn, whose time of 14 minutes and eight seconds for the two-mile course was best in the women's division. Cloos (right) captured the men's division for the second time, finishing in 12:33.

TUESDAY—SESSION DAY TWO

Press Technology Demands Many Decisions

The Fountain of Ink Issues

Achieving Quality Reproduction

Abundance of Press Options Is a Boon to Newspapers

Prices Stabilize in Once Narrow Field

The unprecedented range of printing possibilities was covered in the workshop on "Press Options."

"Never before in the entire history of the newspaper business have you had so many press options when considering newspaper printing press equipment," said William D. Rinehart, vice president/technical of ANPA.

"Just a few years ago, you had no basic options except from which manufacturer you would buy a press, and even then your supplier options were very limited," he said. "The shift to many potential, excellent manufacturers has stabilized prices and possibly reduced them, and offers many different press configurations."

Rinehart also observed, "The era when newspapers had to address the supplier as 'sir' has changed around."

Other panelists explained their newspapers' decisions to buy new offset or flexographic presses, or to convert existing units to the anilox inking system.

Sticking with the older offset process but choosing different brands were two Times Mirror Co. newspapers, Newsday of Long Island, N.Y., and the Los Angeles Times.

Newsday decided in early 1985 to buy six M-72 offset color units manufactured by Tokyo Kikai Seisakusho, the Japanese company more commonly known in North America as TKS. During the first quarter of 1986, one of the new units was added to each of six existing presses as part of a plan to expand color capability. Later, Newsday bought three M-72 presses of 10 units each.

James H. Norris, vice president operations, said the initial selection was based in part on the fact that the configuration of the TKS unit lent itself better to being installed in the newspaper's Melville, N.Y., plant.

Another factor was TKS's commitment to preassemble, test and dismantle the units before shipping. This "promised that many of the customary start-up problems would be addressed before the presses ever entered our plant," Norris said.

At the Los Angeles Times, which recently announced a $385-million press-replacement project, the choice was Goss Colorliner offset presses. "Although the Colorliner is still on the drawing boards and the design is unproven, the Goss Company will install a prototype unit at our San Fernando Valley plant in January 1988," said Production Director Paul R. Gledhill.

Gledhill said one particularly attractive feature is its "building block" design that "will allow us to add or possibly change color locations without a major impact on cost or existing operations." Flexo presses were ruled out, he said, "because of the size of our 18-press, three-plant operation and a very compressed page flow."

Flexography, and specifically the Flexoman of MAN-Roland USA Inc., found a customer in Lancaster (Pa.) Newspapers Inc.

Noting that flexo has received some unfavorable reviews in certain trade publications, Production Director Sam D. Jenkins commented, "You may be wondering why anyone would choose flexographic rather than lithographic (offset) printing. If, on the other hand, you are actively involved in making a new press-purchase decision and have been able to view the current printing being done on flexo presses, the decision takes on a different hue."

Two years ago, when the company that publishes the Intelligencer Journal and the Lancaster New Era began looking at flexo, "The unknowns," Jenkins said, "were far more numerous than the knowns."

But progress since then has "largely . . . put to rest" the "concerns and fears" raised

Randy Tunnell

about the flexo's adaptation to newspaper production. Jenkins told the crowded workshop that the pioneering stage of newspaper flexography is over, "and we are entering in time to take advantage of the leading edge of a new newspaper technology."

The Flexoman presses ordered earlier this year will enable the Lancaster papers to eliminate the use of chemicals in the pressroom because flexo's water-based ink system can be "washed up with plain water, and there are no blankets to wash and no rollers in the ink train."

Jenkins added: "I believe that the average home-delivered newspaper from a flexo press will be superior to an average home-delivered newspaper printed by other means. The complete lack of ruboff of the ink, the brightness of the colors available, and the consistent density from page to page and beginning to end of the press run will let us concentrate the efforts to achieve quality in other areas."

Another press option is to renovate existing units rather than replace them, and that was the decision of the South Bend (Ind.) Tribune. Paul J. McGann, editor and publisher, said he was told many years ago, "You don't wear out a press, you outgrow it." And in the case of the Tribune, the 18-unit Goss Mark I letterpress press with eight color half decks will provide ample capacity for many years, he said. So the 35-year-old press is being converted to the anilox (keyless) inking system known as Civilox, a product of Crabtree Vickers Inc.

The order was placed last August, and the first unit was converted during a seven-day period in February. "So the lead time in making this kind of a press change is not very far," McGann noted—unlike the order of a new press that can take two or more years to be filled. Cost of the anilox conversion and the refurbishing of the Tribune's reel room will be less than $5 million, whereas a new press of comparable size would carry a price tag of $20 million to $30 million, he said.

Unlike flexography, which transfers ink directly from the anilox drum to the plate cylinder, an anilox conversion uses two form rollers to transfer the ink. But McGann said the conversion yields many of the same benefits as flexo.

ANPA/TEC audiences also heard some discussion of the press options of the future.

In the general session that preceded the workshop, Eugene Bell of the Chicago Tribune urged the newspaper business to keep the pressure on press companies to meet changing needs. "We as an industry should demand even more options from press manufacturers," said Bell, vice president/operations director. "We need more automation by way of controls, sensors, microprocessors and less opportunity for human errors."

And in the workshop, ANPA's Rinehart reported "there are considerable developments coming out of the electronic world which will make it possible to image paper directly from electronic memory." Potentially, this will enable a newspaper company to customize the news and advertising content for each subscriber.

Rinehart predicted that "the next generation of newspaper production executives won't be debating what to buy—offset or flexo—but looking at new electronic direct-imaging systems." □

Promising Future of Kenaf

Since 1979, when newspapers conducted the first press trials of newsprint made of kenaf, "great strides" have been made to develop the fast-growing annual plant as a source of fiber for newsprint, according to C.A. Thompson, vice president of CIP Forest Products Inc.

"The results to date indicate that kenaf can provide a long-term, reliable source of fiber for the production of high-quality newsprint in the Southern United States," Thompson told the general session on "The Issues."

CIP has been working on kenaf development with Kenaf International, a company partially owned by The Bakersfield Californian. The U.S. Department of Agriculture also has joined with KI, providing financial support for an evaluation of a kenaf production system, he said.

Thompson reviewed the kenaf project regarding seed and fiber production, harvesting and handling, the pulping process and pulp quality, and papermaking and newsprint quality.

On papermaking, he said the initial paper machine trial was made on a relatively slow-speed Fourdrinier machine. To establish how kenaf would perform on a high-speed, twin-wire machine, trials were run earlier this year at a mill in Beloit, Wis.

For comparison purposes, newsprint was also made on the same machine from two other types of newsprint "furnishes," both primarily of groundwood—one from a Canadian mill and the other from a southern U.S. mill.

"The newsprint produced from kenaf compared well in tear, tensile and burst strength with the newsprint made from the Canadian mill furnish and was superior to that produced from Southern mill furnish," Thompson said. Optical and printing properties of the kenaf paper were better than either of the others, he added.

The next step will be a commercial machine trial, which Thompson said is scheduled for July 12 at CIP's mill in Trois-Rivieres, Quebec.

Also under way is the development of economic and engineering estimates for a kenaf pulp and paper mill, the CIP executive reported. If results are favorable, marketing and detailed engineering design will commence, he said. The final step would be construction of a kenaf mill in southern Texas.

It's a Lot Easier to Buy Ink Than To Get Rid of It

Recycling Programs Are Found Effective

What is 15 times more costly to dispose of than to purchase as a raw material?

The answer is petroleum-based ink.

"West Texas crude oil right now is selling for nearly $20 a barrel," said Gene McDavid, chairman of the ANPA Technical Committee. Yet many newspapers are paying $300 per barrel to get rid of waste ink, he reported. "We no longer have a friendly landfill operator who will take our waste."

Every newspaper has its own "horror story" regarding disposal of waste ink, said McDavid, vice president and general manager of the Houston Chronicle. In the case of the Chronicle, the story began when, unbeknownst to newspaper officials, the operator of the landfill where the newspaper had been dumping its oily waste informed one of the newspaper's truck drivers it no longer would accept it as of a certain date. The driver proceeded to dump the waste-ink barrels anyway, McDavid said. "That led to a fistfight, our driver was thrown in jail and the Chronicle had a lawsuit on its hands."

McDavid's address at the general session on "The Issues" was titled "Ink—A Cradle to . . . Grave Issue." He said the title referred to the fact that ink problems begin with the raw materials that are used in its manufacture, continue during its use and end with its disposal.

In the "cradle" portion of his speech, McDavid spoke of newspapers' changing perspective on ink. "In the good ol' days, we weren't concerned that ink used in printing our papers was made from petroleum. . . . But no more." For one thing, he said, the supply of oil is no longer assured.

Gene McDavid

He also cited the change from untreated to treated oil in the manufacture of ink, prompted by federal health and safety regulations and said it will be important for ink suppliers and newspaper executives to keep up with changing regulations.

The focus is now on whether there are differences in the properties of treated oils, he said.

McDavid also discussed changes made for safety reasons in the pigments used in color inks. "It is important that no newspaper slips into the trap of ordering cheap, nonconforming ink," he said. "The ultimate price of nonconformity is very high."

The "grave" portion of his speech set the stage for a subsequent workshop session on "R&D—Reclamation and Disposal."

Ottaway Newspapers Inc. selected a recycling system from Alternative Resource Management, said James D. Hitchman, vice president, production.

Among the reasons for choosing the system were its ability to recycle both ink and solvents, its use of a metal filter rather than disposable paper filters, its safety and its adaptability to a newspaper's requirements.

The "test system," installed at Ottaway's Times Herald-Record in Middletown, N.Y., uses distillation to reclaim waste solvent and a process of heating and filtering to reclaim waste ink.

With regard to the recycled ink, ink company tests found it "acceptable" for runability, Hitchman said. The system has reduced the newspapers' "hazardous ink monthly output" from more than three 55-gallon drums to only 10 gallons, he added.

The system, designed to handle the group's four New York papers, cost $60,000, with an additional $12,000 for ancillary ink piping. Hitchman said it will pay for itself in just over two years by reducing waste disposal fees and providing recycled ink and solvents.

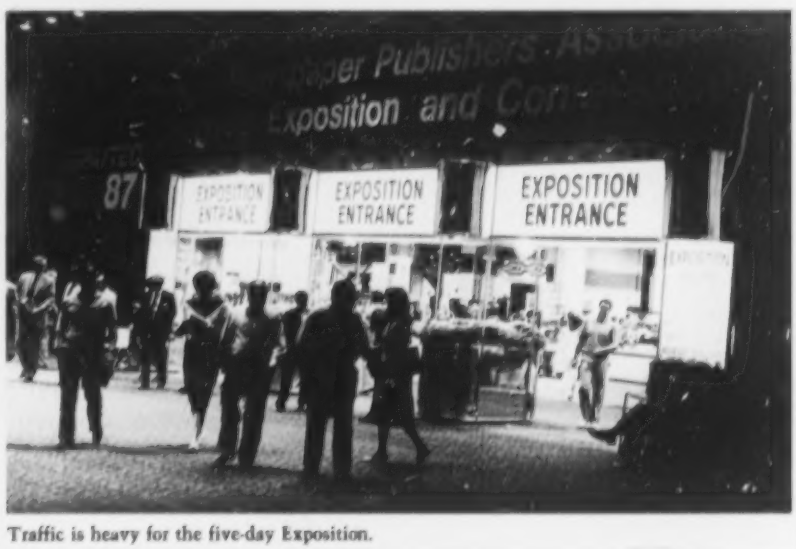
The problems of coping with waste ink and solvents at The Miami Herald are varied because the newspaper has four different kinds of presses. "Each printing method has its own waste characteristics," said Armando J. Gonzalez, chief engineer.

In addition to using several ink-recycling techniques, the Herald recycles blanket wash by putting the used wash into a drum and letting impurities settle to the bottom. The top portion is pumped away and used to wash floors and the press; the remainder is combined with waste ink and buried.

At the Los Angeles Times, a comprehensive ink-recycling project is on the drawing boards.

Charles J. Morrow, director of technical services/operational planning, said California law now requires that generators of hazardous waste have a program to reduce—and wherever possible recycle—the material. Printing ink is considered a hazardous waste in the state, he said.

But federal officials are advocating waste reduction and elimination, rather than recycling, treatment or incineration, he observed. "They say we as generators have to eliminate the problem. Now, if this is true, we as an industry have to analyze why we generate so much waste and get back to our vendors and equipment manufacturers to help us resolve this problem." □



Traffic is heavy for the five-day Exposition.

Margaret Genovese

Opinion Differs Widely On Action Against Drugs

'Pushers Are There in the Plants'

The experts on the panel didn't resolve the basic question formulated by the title of their workshop—"Mandatory Drug Testing???"—but they did get an earful about the scope of the drug-abuse problem in the newspaper business and the need for action.

The important questions of how to set up a fair testing program, the accuracy of tests and privacy considerations dominated the 90-minute session, but the immediacy of the issue was brought home dramatically toward the end when a union leader spoke from the floor.

"There's problems in the plants, I'll tell you right now, and somebody better start doing something about it," said George Tedeschi, president of the 2,000-member Local 406 of the Graphic Communications International Union, Farmingdale, N.Y. "Pushers are there in the plants," he said, "and don't think they're not, 'cause they're there."

Tedeschi said "some union officials feel that testing is totally wrong, it's unconstitutional and everything else, but we have to start somewhere, and pre-testing employees is important. It's very, very important." Pre-employment testing may be only "the tip of the iceberg," he said, "but it's going to stop the influx of maybe the real bad cases."

Indeed, no one was denying the problem. Moderator James W. Hopson, publisher of The Middlesex (Mass.) News, opened the session noting that a recent survey showed that "19 percent of employed 20- to 40-year-olds used illegal drugs in the last month."

"There's probably no reason to assume that the newspaper industry has a greater drug problem than the nation as a whole, but there's also no reason to believe that our industry's problem is any less, either," Hopson said.

Panel members Dr. Wayne O. Buck, corporate medical director of The Times Mirror Co., and J. Michael Walsh, director of the Office of Workplace Initiatives of the National Institute on Drug Abuse, supported testing programs if they are, in Walsh's words, "done right."

Their panel colleagues, Paul Schrade, co-chair of the Workers' Rights Committee of the American Civil Liberties Union of Southern California, and John Seigenthaler, chairman, editor and publisher of The Tennessean in Nashville, generally opposed testing for drugs.

Dr. Buck described in detail the Los Angeles Times' testing program, which includes pre-employment tests and "for cause only" tests of existing employees.

Since pre-employment tests were established in 1985, he said, the percentage of applicants testing positive has decreased 50 percent—from 13.6 to 6.85. For existing employees, tests may be requested when their behavior is "bizarre, irrational, violent" or when supervisors or fellow workers make a referral.

Nearly nine out of every 10 employees seen by the newspaper's counseling service for drug-related reasons are between the ages of 20 and 49 and are veteran employees with five or more years of service—"people whom you value," Buck said. And drug abuse is by no means strictly a "blue-collar" issue, he said. "Exempt and salaried employees utilize the counseling services more frequently than do the hourly workers."

The ACLU's Schrade said of the Times' approach, "Generally, it's a good program . . . but I see no real evidence where drug testing really helps solve the problem of drug abuse and drug dependency."

Schrade repeatedly attacked testing on two counts: First is what he called the constitutional argument. "There is no compelling interest to override the right to privacy," he said. Second is the accuracy of the tests. "There are serious accuracy questions in drug-testing labs, particularly since labs are now being set up on a very random, unregulated basis just to get into the act because there's a lot of bucks to be made here."

Walsh, who oversees a national program of research, evaluation and public information on drug testing and employee-assistance programs to create a drug-free workplace, said the trend is toward gradual, selective testing.

"Generally, employers only test current employees when there is some cause or suspicion which justifies doing so," he told the workshop. "This approach really seems to be gaining acceptance, and I don't think it's very far from the ACLU's general position as well."

Walsh endorsed mandatory random testing in certain cases, citing airline employees as one example.

As for the accuracy of tests, he said standard procedures are evolving. "Technical and scientific guidelines recently issued by the Department of Health and Human Services specify required procedures for all federal programs," he said, "and we hope they will be a model for all other programs."

Seigenthaler agreed the trend at newspapers, like that at other businesses, is toward testing. However, he said he and his paper's parent Gannett Co. have "grave concerns" about testing.

At newspapers the burden on managers to help ensure a drug-free environment "particularly weighs heavy on newsroom managers," he said. It's vital for reporters to be drug free, he said, because it's inevitable that, whatever their beats, they will have to confront drugs as part of the stories they cover. If they are not drug free, "it is inevitable that those reporters will be held to account just as they are holding in account those in other segments of our society."

Nevertheless, he said, "education, monitoring by management and counseling when problems can be identified are a much more preferable approach" than testing.

The disagreement over approaches notwithstanding, it was clear at the session that the old ways of dealing with such problems must give way. Union leader Tedeschi made that point when he related the following from an older union officer talking to him about drug and alcohol problems:

"Years ago, when we had a problem with somebody, we used to hide him from the company and hide him from everybody. And at that time it was basically alcohol, and we were protecting that man's job. We were making sure that man didn't get fired. But little did we know we were killing him and his family because the person in most cases—not in all, but in a good many cases—the person gets worse. And with the hardship we're putting on the person and his family, we're not helping the person. We help the person by getting him into an EAP (employee-assistance program), by hopefully stopping him and having him not be abusive in drugs and alcohol." □

Planning Is Crucial To Achieving High Quality

Kodak-RIT study shows promising results

Planning is one of the most important factors in high-quality printing, according to experts at the workshop on "Guides to Quality Newspaper Reproduction."

The tone of the session was set by moderator Charles R. Blevins, vice president/production of Gannett Co., who also delivered remarks on the subject at the earlier general session. He suggested an axiom: "To fail to plan is to plan to fail." Stated another way, "Successful quality reproduction requires putting 80 percent of the effort into preparing to run, and 20 percent into monitoring the run."

Another speaker, William R. Bogert, vice president/production operations of USA Today, explained how Gannett's national daily achieves consistently high reproduction quality. And Sven Ahrenkilde of the Rochester Institute of Technology and Charles E. Rinehart of Eastman Kodak Co. reported initial results of a three-year, Kodak-RIT study on newspaper printing quality.

Blevins said high-quality reproduction is essential to meet the needs of readers and advertisers. "USA Today has proven that if you produce consistent quality, there are national ads to be gained," he said. Advertisers will run color ads "if they are printed well."

"The bad news is that unless the national advertiser feels confident that the (newspaper) industry as a whole can print well, the industry will not benefit," Blevins said. In general, he added, larger newspapers are doing well in efforts to improve reproduction, but smaller ones "must do better."

Elaborating on some of the quality-control techniques employed at USA Today, Bogert said the newspaper follows "established quality standards (and) performance standards," and "measures actual results to compare with the established standards." Those standards are adhered to at all of USA Today's 30 domestic and two overseas printing sites.

For example, type density from typesetters is checked with a densitometer on each shift. All processed negatives are checked for dot structure and size. All plates on a shift are punched by the same person to enhance registration.

In discussing first-year results of the quality study, Ahrenkilde of RIT said newspapers appear to be making progress in efforts to improve their printing. At least it seems that "people are working toward a common goal," said Ahrenkilde, assistant to the director of the Technical and Educational Center of the Graphic Arts.

For example, he said, among offset newspapers worldwide, solid-ink density appeared consistent when comparing yellow, magenta, cyan and black. They also displayed favorable ranges of dot gain.

The voluntary study involved 189 newspapers from the more than 500 contestants in the annual Kodak "Run for the Money" color-quality contest. Most test participants, 163, print by the offset process.

Rinehart, technical associate in advanced market planning for Kodak's Graphic Imaging Systems Division, said the survey next year will examine ink; and in the third and final year, it will address prepress issues and original photography.

"There is a need to learn more about how to produce quality results," he said. "This survey provides another mechanism—hopefully a powerful mechanism—for achieving that goal."

Invididual contestants' results each year will be reported to them confidentially. Aggregate results will be reported to the industry.

"It is our hope that this three-year approach will allow newspapers to bring one set of variables under control, then move on to another set in subsequent years," Rinehart said.

The contest and study have stirred controversy. A publisher in the workshop audience, William E. Brooks Jr. of the Vincennes (Ind.) Sun-Commercial, said his newspaper has not participated in the "Run for the Money" contest and the quality study because it believes the program to be "a piece of fluff" for Kodak. "Most newspapers would take the position that that is a piece of advertising promotion."

He suggested that another way to get a cross-section of industry print quality could involve ANPA's distributing a color promotional piece to all newspapers. The subject of the piece could be literacy or some other newspaper-business-related subject that most editors gladly would run. (This year's Kodak-supplied "Run for the Money" color picture featured Walt Disney characters.)

Brooks said another weakness of the Kodak program is that it imposes no deadline constraints. Production departments have weeks or months to prepare for the press run containing the contest picture. A better test would be how well newspapers print color when art is submitted the day before it goes to press, or even on deadline. "That's the proof of the pudding," he said. □

Rinehart (left) and Ahrenkilde (center) discuss quality issue with George E. Botsko of the Burlington County Times, Willingboro, N.J.

Production Executives Diagnose Materials-Handling Headache

Take Two Robots and Call in the Morning

Ever sit down and figure out how many times Sunday preprints are handled from the time of arrival at the newspaper plant until they're stacked in trucks, ready for delivery to customers?

Production executives at The Washington Post did and got this answer: 12 times.

That was the average, according to Thomas O. Might, vice president/production. "In a worst-case scenario at The Washington Post," he said, "the answer is 24 times! This includes such follies as remote storage, pre-inserting, multiple hand-inserting and remote dispatching. I bet most of you have a similar scenario every week at your newspaper."

Speaking at the general session titled "The Issues," Might reminded the audience that "the advertiser is only paying us for one (handling)—feeding the hopper. The other 11 are non-value-adding moves for which the publisher is paying. Most of them can be eliminated."

Might said newspapers can learn from commercial printers that have handled, stored and otherwise kept track of "billions" of magazine signatures and preprints for years. He showed slides of rack-storage systems at commercial printing firms that use bar codes to help employees keep track of inventory.

In addition, commercial printers manage to feed inserts into hopper loaders with fewer workers than is typically the case in the newspaper business, he said.

Attendees at the session segment on "Materials Handling" also heard moderator Ralph S. Roth urge newspaper executives to continue to automate their operations where practical.

Roth, vice president/technology for Knight-Ridder Inc., said just as automation substantially reduced composing room costs, it will do so elsewhere in the plant. "Savings opportunities exist in the printing and packaging department and in other important areas of the newspaper through automation and through the introduction of more efficient methods and systems, particularly in the area of materials handling," he said.

Examples of state-of-the-art automation are the fleets of automated guided vehicles, or AGVs, being used by newspapers such as the Fort Worth Star-Telgram to transport newsprint rolls. Joseph L. Donth, the paper's vice president/operations, said factors besides cost savings were considered before purchasing the robotic devices from FMC Corp.

"It has been our experience that cost justification based solely on labor savings

Presstime questions showgoers:

What Equipment Did You Come To See?

Patrick A. Robertson, director of operations and commercial printing of the Port Arthur (Texas) News

I was looking specifically for front-end systems, typesetters and ad-composition equipment. We're budgeted to replace the entire equipment next year. . . . There's more than you want to look at here. With PCs being added to the front-end systems, you've got the high-end vendors low-balling. You've got the low-end vendors trying to show how good an installation they can do. It's opened up the market. And who's going to be here next year? I think they're going to integrate systems by ironing out the weak ones.

Morlin P. Oldham, production manager of the Utah County Journal, Orem

I came to see presses, mostly, and postpress, mailroom equipment (such as) counter-stackers. . . . We've been looking, for example, for a variable counter. . . . I've got three guys out (in the mailroom) counting. We already have a computer. We just need something that mechanically will do that counting. (Vendors) are close, but I haven't found anything that really addresses that need."

Janet E. Owen, camera and platemaking manager of the San Jose Mercury News

A system to proof the color we are now getting off our new Hell NewsPlan system. . . . Right now, our (proofing) system is real cumbersome, time-consuming. It takes us close to 20 minutes to do a proof. . . . We found something that would suffice. We found systems that were inexpensive, less time-consuming, but still rather labor-intensive. And we found systems that were far superior to anything we need. There was no middle of the road.

tends to be overestimated," Donth said.

"In the newsprint warehouse, the additional benefit of robotics is in the ability to ensure proper rotation of inventory and to control the handling of special paper," he said. In the reel room, "the benefit is to assure good roll delivery flow to the press units and to reduce handling damage (of newsprint rolls).

"In the mailroom, (the benefit is) to be able to optimize the flow of pallets and products during the inserting and truck loading operations."

Donth said that after weighing potential cost savings and benefits, the Star-Telegram decided to automate only the reel room at this time.

The system has 10 AGVs that pick up rolls of newsprint at two stripping stations and deliver the rolls to reel stands. Routes the vehicles take are programmed by computer, and the AGVs travel along a wire embedded in the floor. Donth termed the system "highly reliable."

Further automation will be restudied in the future, he said. □

ANPA/TEC Sidelights

Security Crackdown

ANPA's beefed-up security paid off. "To my knowledge, there were no incidents at all reported," said ANPA's Peter P. Romano. Several reported thefts of videocassette recorders at the 1986 Exposition in Atlanta prompted the crackdown.

For the first time this year, people who wanted to be on the floor after the close of the show each day had to sign in with security. "We knew exactly who was on the floor, when, why and where," Romano said.

Good Samaritan Pays Price

Exhibitor Arnold Sasseen performed a costly bit of first aid on the exhibition floor. When the executive of Oxy-Dry Corp., of Roselle, N.J., saw an attendee collapse, apparently suffering a seizure, Sasseen "practically hurdled" equipment he was demonstrating and stuck his hand into the man's mouth to prevent him from choking. Reflexively, the man bit Sasseen's index finger, causing it to bleed profusely.

After the seizure victim had been taken away to a hospital, Sasseen took himself to a nearby clinic. He got an anti-tetanus shot, another one of penicillin—and a $72 bill.

Old Tech in Press Room

After seeing the sophisticated electronic equipment on the exhibition floor, a reporter from a Las Vegas TV station aired a story wondering why the ANPA press room was equipped only with manual typewriters.

Did You Find What You Were Looking For?

John O. Emmerich Jr., publisher of The Greenwood (Miss.) Commonwealth

Color separation equipment—not to buy it but to find out more about it—desktop publishing equipment, pin-registration systems for presses for better color. Probably some front-end systems. I just want to keep up with what's changing. And last I would say business systems. I have acquired some newspapers that don't have computerized business systems. You come to a show like this and you can keep up with what is going on even though you're not looking for anything specifically. . . . It's all here. Whether I can find it or not I don't know.

Charles (Rick) Bellatti, associate publisher of the Stillwater (Okla.) News Press

Number one is a plain-paper laser printer. Being a newspaper of about 11,000 (circulation), to buy another high-priced typesetter seems rather silly at this point. The other piece of equipment we are looking for—and I have not found it at the show—is a table-top OCR (optical character reader). . . . I see the amount of time and effort we put into setting legals, setting real estate ads, news releases. . . . You have to ask some very talented people to do a very simple job.

Thomas R. Libby, systems manager of The Boston Herald

Basically computers, front-end systems, display ad systems. . . . Someone made a comment to me earlier today: There are approximately 1,400 newspapers in the country and there are 1,500 computer vendors. There's not an integrated package out there . . . not for a major, metropolitan newspaper. . . . We have a situation where we have several different types of computers. It would be nice just to have them talk to one another.

WEDNESDAY—SESSION DAY THREE

Update on Electronic Photography

Successful Electronic Ad Composing, Tracking

Major Advances in Graphics Enhancement

Considerable Progress Reported In Electronic Photography

But More Work Is Needed To Achieve Quality of Film

Marvels of the fast-growing field of electronic photography were the focus of the concluding general session, "The Futures."

"The quality of electronic imaging has progressed to the point where it is acceptable for a wide variety of publishing applications today," said Geren Mortensen, national sales manager/still image systems of Sony Corp. of America. "We're not ready to replace film," he said. "What we want to offer is a fast, simple, economical alternative for many uses."

That theme was reinforced by another vendor on the panel, Richard J. Sansevera, national marketing manager of Hell Graphic Systems Inc. Output from electronic photography systems currently is acceptable for use with his company's prepress equipment, he said.

"We believe electronic photography is just the next step in the long list of breakthroughs that in many ways began with Mr. Gutenberg," Sansevera said.

Jack Corn, director of photography of the Chicago Tribune, shared their enthusiasm. But he said electronic cameras do not yet offer high-enough quality. "The electronic cameras, as they now exist, are not sufficient for the Chicago Tribune," he said. "They need a real breakthrough in technology. This could be a year. It could be five years. They are close. But I don't want to go backward in time" in picture quality.

"When the electronic camera can stop Walter Payton or Larry Bird in mid-air with sweat dripping off their faces, and output that information to my prepress department, and I can see it when I pick up my paper in the morning, the electronic cameras will be ready for newspapers," he said.

Still, Corn said he looks forward to the day that electronic photography can deliver high-quality photos that can be handled quickly on deadline. "It cannot be too soon for me. I'll take it tomorrow."

The session featured a live demonstration of the electronic photography process. Mortensen began by taking a picture using Sony's new digital still camera called the ProMavica. The device, resembling some conventional 2 1/4-inch-format cameras, records images on a floppy disk slightly larger than a frame of 35mm film. The recording medium also can provide up to 20 seconds of audio with each picture, according to Mortensen.

Jack Corn

The demonstration showed how digital pictures can be transmitted over phone lines from long distances. As the audience watched, a picture taken with the ProMavica just moments before at USA Today headquarters in Arlington, Va., took full form in several minutes on a large screen. It was sent over conventional phone lines by Paul Whyte, USA Today director of photography, using a Sony transceiver.

Mortensen explained that once received, pictures may be stored on another Mavica disk for future use, or in archive fashion (along with hundreds of thousands of other images) on a recordable laser video disk system.

They also can be printed on the spot in black-and-white or in color. Or a complete set of color separations can be made on a Sony printer in four minutes. The Sony printer can also produce a color picture of any frame of a television broadcast that has been taped on a videocassette recorder.

Sony's portion of the morning's demonstration also included the unveiling of a new, "super-high-resolution" video camera. Mortensen said the camera can photograph or "scan" conventional images such as color slides and negatives, prints or other flat artwork. The resulting digital information then is passed along to a color scanner for separations, a pagination system or any other graphics-manipulation device.

"We're working with a number of companies to ensure that our data stream will flow smoothly from our equipment to theirs," Mortensen said.

He also described another new Sony product, the CSS-100 Still Video Filing System that uses 12-inch recordable laser optical disks. The technology is known variously as "DRAW" (direct read after write) or "WORM" (write once, read many). Up to 8,000 pictures or 3.28 gigabytes of other data—the equivalent of 1.6 million double-spaced pages—can be stored on a single disk, Mortensen said. A system can be configured "so that millions of images can be stored, catalogued and easily retrieved."

The demonstration session then turned to Hell Graphic Systems' Chromacom NewsPlan page-assembly system. As the audience watched, an operator electronically retrieved the photographs taken by Sony, cropped them and incorporated them into electronically paginated pages.

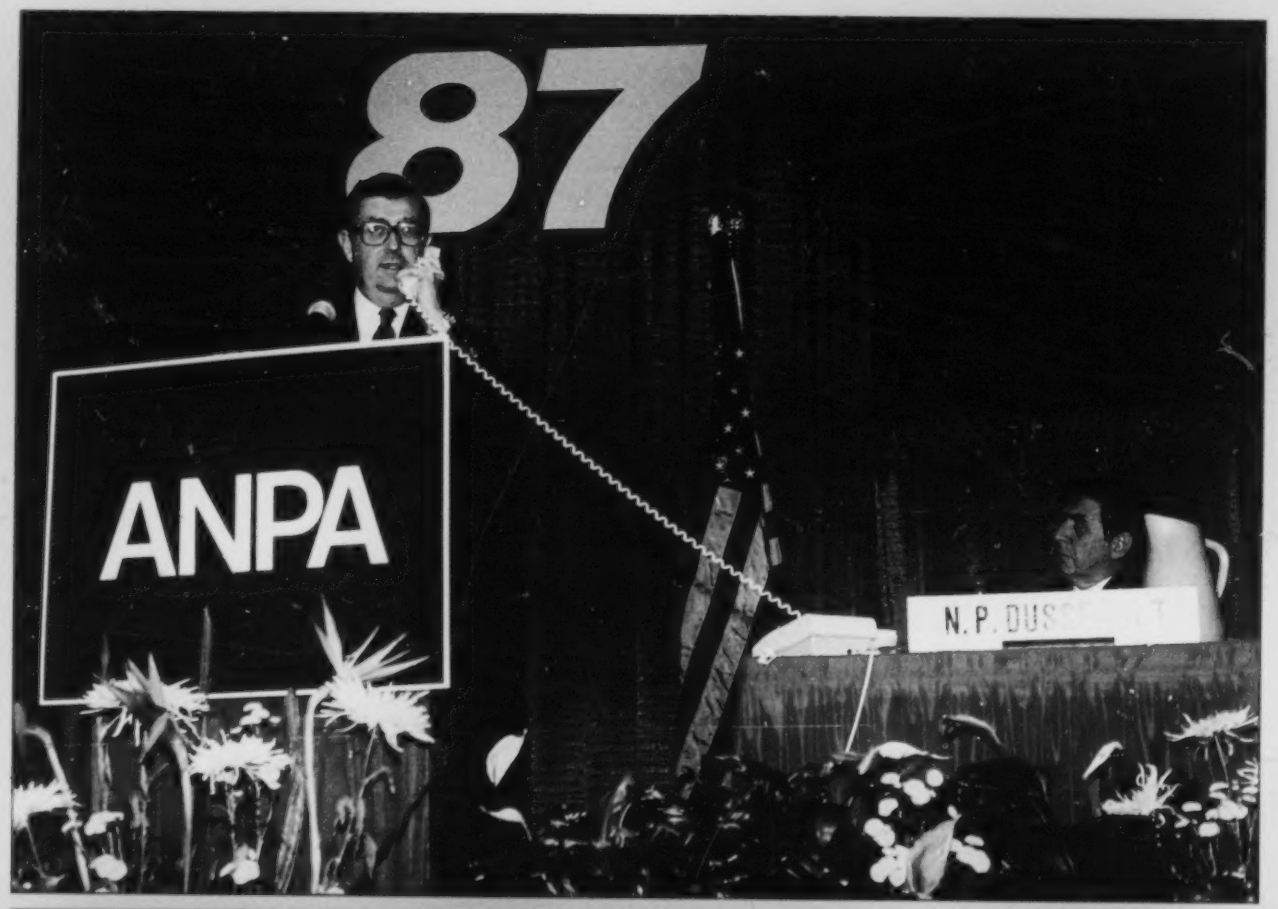
Sansevera, explaining the various steps in the process, said the Hell equipment can enhance the photos through such things as altering contrast and making color corrections. It even can produce special effects.

After a full page had been paginated using the Sony-supplied photos, Mortensen and Sansevera played out a mock deadline scene in which Mortensen exclaimed that "late-breaking news" required replacing one of three photos on the page.

Another Sony representative then took a photo of General Session Chairman Norman P. Dusseault, vice president and assistant general manager of Times Publishing Co., St. Petersburg. The photographer handed the floppy disk on which the picture was stored to the Hell operator who, in just a few minutes, replaced one of the old photos with the new one.

Mortensen said the results of testing such systems have been so much more than "promising" that "we're convinced that filmless photography will have a profound impact on almost every facet of the publishing and graphic arts industries."

At right: Sony's Mortensen (top photo) completes phone link to USA Today in Arlington, Va. Hell's Werner Knepper then operates graphics and pagination equipment.



Maurice Rios

He noted that "scores" of companies besides Sony are developing electronic photography equipment, including Canon, Nikon, Konica, Fuji, Copal, Minolta, Rolleiflex, Casio, Panasonic, Scitex, AT&T, Kodak, Crosfield, 3M and DuPont.

The term "electronic photography" also encompasses systems that still use silver-based film for shooting, but that use new electronic ways to transmit conventionally developed pictures from a remote site to the picture desk. Corn described the Chicago Tribune's use of one such system involving a Scitex transmitter. The transmitter accommodates negatives or slides; there is no need to make a paper print.

Although the machine at 240 pounds is difficult to take to faraway events, it saves an hour to an hour and a half over more conventional transmission means. Plus, it yields photos that he said are "as good or better" than color prints made in the darkroom.

Corn faulted equipment manufacturers for dealing primarily with newspaper production people when developing and designing new equipment. He said vendors also should consult with editorial staff members responsible for producing the original artwork. □

Electronically Composing, Tracking Ads Win Praise from Coast to Coast

Time Savings Are Cited as One Big Benefit

The latest developments in the composition and tracking of newspaper ads were outlined by a five-member workshop panel.

Robert R. Rowell, vice president/operations at the Press-Telegram in Long Beach, Calif., said an advertising pagination system manufactured by Information International Inc. was installed there in July 1986—more than a year after an editorial pagination system was installed and 11 months later than originally scheduled. Total cost of the two systems was $2.7 million.

"At present," Rowell said, "virtually all news-text pages are paginated, all classified pages are paginated and all display ads are composed on the Triple-I Ad Make-up Stations. We have just started to electronically position finished ads to the page.

"For the most part, we output full pages with all news text, halftones and line art . . . and then we paste down separately-output display ads in composing." By the end of the year, the Press-Telegram plans "to handle placement of all display ads to the page electronically," he said.

The newspaper also is using the advertising pagination system to design "speculative ads" to be shown to advertisers in lieu of hand-drawn sketches, Rowell reported. A "spec" ad can be stored electronically; once sold, it can be modified easily to suit an advertiser's wishes. However, he said the cost-savings once projected for this arrangement have yet to materialize.

Two panelists from Virginia newspapers discussed their move from manual pasteup of ads to electronic composition on Camex video display terminals.

Donald H. Patterson said it was not the intention of The Virginian-Pilot and The Ledger-Star of Norfolk to be on "the cutting edge" of ad-composition technology. Its goal was "to remain strategically positioned to get the maximum enhancement from equipment and in position to catch the next wave."

Camex Breeze terminals were selected because they "represented an incremental approach to pagination," said Patterson, vice president and production director. Installation of seven terminals began in January 1986, and after a slower-than-expected training program, the Norfolk dailies are enjoying the benefits. They have even been able to "recapture" some business from the direct-mail firm Advo-System Inc., thanks to the versatility of the new equipment, he said.

At The Times Journal Co. in Springfield, Va., use of Camex terminals made it possible to advance display-ad deadlines by 24 hours, according to Dorothy Seymore, newspaper system manager.

© David Rambo

Patterson describes Camex system.

"We found that this is a system that works for us," she said. "It works as a tool for our advertising department, and it makes sure that an ad-markup (composition) person does the job he's employed to do, and that is to generate, design and create ads—not to act as an assembly piece . . . for their production."

The company, which publishes a network of dailies in several suburbs of Washington, D.C., and a variety of other publications, also has moved to pagination of its classified pages. Manual pasteup of the pages had been taking an average of seven hours a day; electronic makeup has cut that by five hours and also produced a major savings in photographic-film use, Seymore said.

Keeping track of the advertising as it moves from one stage of production to another was the topic of discussion by two representatives of other Southern newspapers.

Ad tracking means "The lost-ad syndrome can become a memory of yesteryear," said John Irvin, operations director of the St. Petersburg Times. It also means managers can obtain "statistics for any departmental process, even down to individual staffers' production performances." And by looking at a screen or a computer printout, a Times employee can determine "how much has been done and what's left to do" to an ad before going to press.

Over a period of a year, the Times developed for $71,799 what Irvin called a "home grown" system to monitor its ads.

When an insert order is prepared for an advertisement, the computer generates a bar code that enables Times personnel to keep track of the ad as it moves through the various stages of the production process. Irvin said that since the system went into operation a little over a year ago, each week it "has flawlessly managed over 90,000 column inches that make up 4,000 ads."

A commercially available bar-code system is being tested at The Clarion Ledger and Jackson (Miss.) Daily News. George H. Bailey, data processing director of Mississippi Publishers Corp., said the Atex Inc. system—in use for only two weeks at the time of his talk—"looks very promising." □

AD/SAT: Not All Sweetness At the Speed of Light

Washington Post Executive Describes a Few Early Glitches

Satellite transmission of newspaper advertising holds great promise. Like all new technical systems, however, there have been kinks to work out in AD/SAT. They were discussed in a general session address by Elizabeth St. J. Loker, vice president/planning and advanced systems of The Washington Post.

Elizabeth St.J. Loker

One of the earliest glitches came during a demonstration period last fall when equipment failed at one of 12 test newspapers, she said. Other equipment problems have included ads lost because of "tricky" film and cassette operations at the receiving equipment, and "faults" in the system's link to equipment of the Associated Press—used at newspapers in conjunction with receiving ads.

"But in general, these were all faced up to directly," Loker said. "And solutions have been found for most of the technical issues.

"Some of the administrative problems have been a little tougher to work out, but most of these are at least being talked about openly—and there are no surprises or 'gotchas' lurking in the background."

Loker said her most serious question about the new service involves "service and reliability" of AD/SAT receivers at newspapers. The machines capture incoming ads on photosensitive paper that is developed chemically like paper from a phototypesetter. Service is provided by the AP, and newspapers are strongly discouraged from performing anything but "the most basic clean-up type maintenance on the equipment," Loker said. So far, no parts are stored on site. Instead, they are housed in AP facilities in New Brunswick, N.J.

Response times for service calls have been "pretty good," she added, "but if they need a part, they have to send to New Brunswick to get it. This makes a lot of us nervous. In our own systems, we would not operate this way."

Loker said AD/SAT has suggested that several service-related improvements to the current system will be feasible as the system expands. For example, spare receiving machines can be stored in areas that have a high concentration of receiving sites. Also, newspapers may be able to develop "buddy" systems and "mutual back-up agreements" with nearby AD/SAT users.

"Thus far the test papers have reluctantly gone along with" AD/SAT's long-range service plans, Loker said. "We remain concerned about it as an issue, particularly as site installations grow, straining the technical resources at the same time that ad traffic is expanding."

AD/SAT by late June had signed up 108 newspapers. Service is scheduled to be phased in by the end of October following installation of personal computers serving as messaging equipment and of facsimile receivers manufactured in Japan.

Among other issues Loker outlined:

- All ads are sent "at the least-common-denominator screen," meaning that if one newspaper uses a 65-line screen and another paper uses an 85-line screen, AD/SAT sends it only in the 65-line format unless the advertiser prepared two ads. "AD/SAT tells us this is an issue we need to work out with the advertisers, not with them."
- AD/SAT plans to install equipment allowing digital storage of incoming ads. "This is a high priority since the majority of problems with the ads we process are poor developing, ads that don't go completely into the cassette and therefore get exposed to light." Newspapers currently must ask for retransmission of the ad in the event of a mechanical foul-up. That may be increasingly difficult to arrange as volume grows.
- A user advisory group is being organized to provide feedback to AD/SAT officials.

The Post executive said the next six months "will be crucial for all of us as we see what rapid growth does to the service. Clearly, growing from 12 to 100 papers is going to be a strain on all facets of AD/SAT's operations." □

Graphics Enhancement Can Help Papers Compete

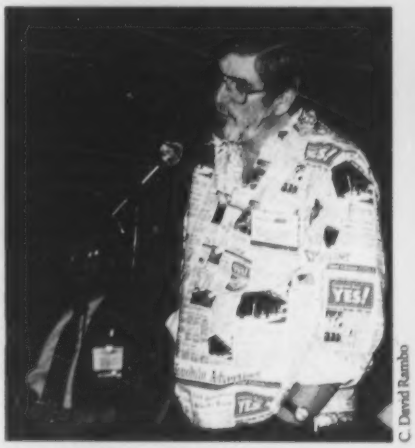
Quality in Other Media Has Raised People's Expectations

Those vividly colored photographs splashed across newspaper pages each day get there in large part because of increasingly sophisticated graphics systems—systems that are allowing newspapers to compete more readily with the seductive visuals of other media.

"There is no question that the technology of graphic enhancement is and will become an even greater positive influence on newspapers," H. Philip Nesbitt Jr., graphics director of The Record in Hackensack, N.J., told those attending the workshop on "Graphic Enhancement Systems."

"We are still far behind the electronic manipulation found in the video arena and must contend with audiences who are now more visually oriented than ever before," said Nesbitt, who also pointed to the high reproduction quality in magazines. "All of these things have brought the average reader to a very, very high level of sophistication. Compare that to what we are doing in newspapers today. It's not a really fair comparison."

Graphics enhancement systems vary, Nesbitt noted. They range from tint-generation scanners, like the ones manufactured by Royal Zenith Corp., to the graphics-manipulation systems from Scitex America



C. David Rambo

Mike Middlesworth of The Honolulu Advertiser poses a graphics-related question.

Corp. All enable newspapers to produce "higher quality images for reproduction in newspapers," he said.

According to Nesbitt, two things need to happen if such equipment is to be utilized effectively: An electronic digitization system capable of accepting a variety of sizes and kinds of hard-copy photographs must be developed; and an industry standard allowing newspapers to link equipment from different manufacturers must be established. (See story, p. 82.)

Use of the new graphics equipment is spreading in the newspaper industry, even at newspapers of less than 35,000 daily circulation.

Each month, for example, the Daily Camera in Boulder, Colo. (morning, circulation 30,511), uses a DS America Inc. laser dot generator to produce an average of 160 color separations and 100 spot-color jobs for the editorial department, and two for the advertising department.

"The ease and speed at which the scanner operates has allowed us to improve color deadlines to editorial while continuing to meet on-time press start deadlines," said Craig D. Wells, production director. "We have accepted color slides as late as 40 minutes before press starts and successfully made deadline."

The introduction of new technology into a newspaper can be smooth, but it can result in a reordering of responsibilities.

At Newsday of Long Island, N.Y., the newspaper's graphics equipment is shared by the editorial, production and data processing departments, said Timothy W. Lasker, editorial systems manager. Editorial artists work on Scitex terminals to design pages. The data processing department has charge of the hard disks that store digital data for the system. And the Scitex hardware and software are linked to a Hell Graphic Systems scanner in the production department.

As wonderful as the graphics equipment is, there are pitfalls, moderator Nesbitt observed. The technology exists to change colors on a computer screen, or to add or subtract various picture elements—moves that can alter the reality that was captured by the photographer.

"The bottle . . . is uncorked, the genie is half-way out and already granting our wishes. However, we have to be careful of what we wish," he said. □

ANPA/TEC Speeches Available

Single copies of the following ANPA/TEC '87 speeches are available without charge from the ANPA Public Affairs Department at The Newspaper Center, Reston, Va.:

Saturday, June 6

Labor Relations & Technology Seminar

• **Future Newspaper Technology, William D. Rinehart,** vice president/technical, ANPA, Reston, Va.

Monday, June 8

General Session

• **Address by ANPA Chairman and President George W. Wilson,** president, Concord (N.H.) Monitor

Theme: The Market

• **Editorial—Competing for News, Eugene C. Patterson,** chairman and chief executive officer, Times Publishing Co., St. Petersburg

• **Advertising—Competing for Advertising, Leo Bogart,** executive vice president and general manager, Newspaper Advertising Bureau, New York

• **Pulling It All Together, Stanton R. Cook,** president and chief executive officer, Tribune Co., Chicago

Concurrent Workshops
PC Options and Opportunities

• **Edward F. Baer,** director of computer services, Atlanta Journal and Constitution; **C. Morgan Brassell,** project development manager, Los Angeles Times; **Roger F. Fidler,** director of graphics and newsroom technology, Knight-Ridder Inc., Washington, D.C.

Printing Inks

• **Jereld Underwood,** assistant production director, Houston Chronicle; **John T. Moynihan,** research chemist/technical research, ANPA, Reston, Va.; **Bruce E. Blom,** assistant technical director, Flint Ink Corp., Ann Arbor, Mich.; **Thomas J. Pendergast,** pressroom superintendent, Providence Journal-Bulletin

Tuesday, June 9

General Session

• **Homer E. Taylor Jr.,** vice president/supply, Knight-Ridder Inc., Miami

Theme: The Issues

• **Ink—Cradle to . . . Grave Issue, Gene McDavid,** vice president and general manager, Houston Chronicle

• **Kenaf Update, C. A. (Chuck) Thompson,** vice president, CIP Forest Products Inc., Tarrytown, N.Y.

• **Quality—A View from the Top, Charles R. Blevins,** vice president/production, Gannett Co., Arlington, Va.

Material Handling—Round Table Discussion

• **Thomas O. Might,** vice president/production, The Washington Post; **Stephen M. Majorki,** production manager, Times-Colonist, Victoria, British Columbia; **Joseph I. Donth,** vice president/operations, Fort Worth Star-Telegram

Concurrent Workshops
Press Options

• **William D. Rinehart,** vice president/technical, ANPA, Reston, Va.; **James H. Norris,** vice president/operations, Newsday, Long Island, N.Y.; **Sam D. Jenkins,** production director, Lancaster (Pa.) Newspapers Inc.; **Paul R. Gledhill,** director of production, Los Angeles Times

R&D—Reclamation and Disposal

• **Armando I. Gonzalez,** chief engineer, The Miami Herald; **James D. Hitchman,** vice president/production, Ottaway Newspapers Inc., Campbell Hall, N.Y.; **Charles J. Morrow,** director of technical services/operational planning, Los Angeles Times

Guides to Quality Newspaper Reproduction

• **Charles E. Rinehart,** technical associate, advanced market planning, Graphics Imaging Systems Division, Eastman Kodak Co., Rochester; **Sven Ahrenkilde,** assistant to the director, Technical and Educational Center of the Graphics Arts, Rochester Institute of Technology; **William R. Bogert,** vice president/production operations, USA Today, Arlington, Va.

Wednesday, June 10

General Session—Theme: The Futures

• **AD/SAT Report, Elizabeth St.J. Loker,** vice president/planning and advanced systems, The Washington Post

• **Electronics and Photographs at the Chicago Tribune, Jack Corn,** director of photography, Chicago Tribune Co.

• **Electronic Photography, Geren Mortensen,** national sales manager/still image systems, new business development, Video Communications Products, Sony Corp. of America, Lanham, Md.

Concurrent Workshops
Ad Composition/Ad Tracking

• **George H. Bailey,** data processing director, Mississippi Publishers Corp., Jackson; **Donald H. Patterson Jr.,** vice president and production director, The Virginian-Pilot and The Ledger Star, Virginia Beach; **John Irvin,** operations director, St. Petersburg Times; **Robert R. Rowell,** vice president/operations, Press-Telegram, Long Beach, Calif.

Graphic Enhancement Systems

• **H. Philip Nesbitt Jr.,** graphics director, The Record, Hackensack, N.J.; **Timothy W. Lasker,** editorial systems manager, Newsday, Long Island, N.Y.; **Craig D. Wells,** production director, Daily Camera, Boulder, Colo.

Progress Being Made In 'Artificial Intelligence'

Newspaper Applications on the Horizon

If a newspaper has experts in the pressroom or elsewhere who would be hard to replace, it may be a candidate for an "expert system," a type of artificial intelligence.

Artificial intelligence is a field of study that is attempting to make computers understand people, according to Peter V. Pennisi, director of marketing for Unisys Knowledge Systems. Pennisi spoke at the workshop on "Voice Recognition and Artificial Intelligence."

In addition to computers that understand people, the workshop heard about computers that speak in human-like voices and understand the spoken word.

Expert systems are just one kind of artificial intelligence, Pennisi explained. He defined an expert system as an "intelligent computer program" that is used to solve difficult problems that require human expertise for their solution.

The programs may combine the knowledge of a number of human experts. One problem, he said, is that some experts don't know why they are experts. "You can ask somebody 'Why did you come to that conclusion?' and they'll say 'I don't know, I just felt good about it.'"

According to Pennisi, "thousands" of expert systems are being developed today.

The Graphic Systems Division of Rockwell International is developing one for the newspaper publishing business. Morton S. Balban, advanced products manager, said it will aid in the complex task of press "impositioning"—the layout of pages on the press.

Experts from The Times Mirror Co. collaborated in development of the system, the third version of which is being tested.

Expert systems apply to the printing industry because much of the industry's knowledge "is based on long-term experience and skills which require a lot of study and long apprenticeships," Balban said.

There also are newspaper applications for voice-recognition systems, another kind of artificial intelligence, according to Paula Wilson, national account manager for AT&T Conversant Systems.

Wilson described four areas in which voice recognition is used:

- "Terminals and devices to which you can talk." The "voice-activated typewriter" falls into this category.
- "Factory use," especially in the quality control area, where inspectors dictate their findings rather than taking notes, thus freeing their hands
- "Network based applications" that would, for example, allow a person to pick up a telephone and say "fire" and be connected to the fire department
- "Attendant automation and information services," which involves replacing a switchboard operator with a computer system that takes signals from a touch-tone phone and gives out the same type of information the operator would, except that it is prerecorded.

At a newspaper, a voice-response system can be used to answer the telephone and direct callers to press certain numbers on a touch-tone telephone to reach desired departments, such as classified advertising or circulation, Wilson said.

Once in the circulation department, the system can be used to allow the caller to do such things as suspend or restore service. "This can help you offset some of the problems of seasonal peaks in which people are going on vacation and suspending their service quite frequently."

In the classified department, the system can be to used to inform callers about payment systems and advertising formats before an advertising representative takes the call. If all ad reps are busy, the system can take a recorded message.

Not all of Wilson's suggestions met with immediate approval from her newspaper audience. "I enjoyed everything you said except that business where they (subscribers) have the opportunity to cancel their subscriptions with the push of a button," said workshop moderator James J. Rogers, business manager and director of production at the Oregonian Publishing Co. in Portland. "But we can work around that." □

Visitors leaving the Las Vegas Convention Center get a reminder that the show will return to the Eastern United States next year.

C. David Rambo

International Flavor

An unusually large number of people from countries other than the United States and Canada attended this year's Exposition and Conference.

The total was 1,224—nearly one in every 10 registrants. They came from 57 countries, seven of which had delegations of at least 50 people: Japan (166), England (138), Australia (101), Mexico (87), France (85), Brazil (71) and West Germany (63).

In conjunction with the event, the Inter American Press Association conducted a special program for Latin American members of the organization. And the International Press Telecommunications Council held its annual general meeting. Major topics of discussion at the latter meeting included worldwide availability of satellite-distribution facilities and world standards for the transmission of digitized news photographs.

Armotek's ULTR-A-LOX® precision engraving system delivers perfectly identical anilox cylinders for newsprinting.

ULTR-A-LOX cylinders don't need a pretty picture to tell their story. It's a story being told from coast to coast and border to border in EVERY SUCCESSFUL NEWSPAPER FLEXOGRAPHIC PRESS.

ULTR-A-LOX cylinders don't promise anything in the future—They deliver successful printing today, every day, and everywhere.

At Armotek the committment to supplying the newspaper industry is over six years old and growing. In fact, we've increased capacity 30 percent in 1986 alone. When newspaper flexography needs output capacity, Armotek is ready.

Call Armotek for more information. Or better yet, call any newspaper printing flexographically. They already know the ULTR-A-LOX success story.

Newspapers' Bottom-Line Mentality Threatens Vigorous Journalism

BY EUGENE C. PATTERSON

To discuss competing for news in the future is to be assigned a rather obvious subject. It reminds me in its obviousness of a comment made by former Gov. Marvin Griffin of my home state of Georgia when he ran for re-election in 1962 and was defeated. He went to a TV station and they stuck a mike under his nose and said, "Mr. Griffin, to what do you attribute your defeat?" "Well," he said, "it appears to me that somebody has been eatin' my barbecue and votin' for the other fella."

It's equally obvious what we have to do to compete for news. Competing for news with whom?

It's not television. We've handled those bozos for 40 years now. We have the advantage of time over them. They have time only to sideswipe the news.

Radio we've handled for even longer.

Magazines? We have immediacy over them, plus mass marketing.

Our competition is not even shoppers and direct mail, because we have the news and they don't. That means that their demographic group is largely going to be confined to those people who move their lips when they read.

It's not cable, or computers or electronification in all manner and form. No, they don't represent our primary competitors for news.

I suggest that competing with one another for news is still our newspapers' warmest external challenge, and the healthiest one, as our aging cities mutate and sprawl out, and our suburbs become cities and sprout newspaper challengers to our aging, incautious dailies.

But for the true competition, I go "Pogo": The enemy is us.

The news business is exposed to the same virus that's infected the nation's business. Too often we're taking a financial approach to a creative enterprise: investing for short-term earnings instead of betting on long-term quality, settling for fatness in the bottom line now rather than building muscle for a stronger tomorrow, mistaking money and numbers for journalistic strength, buying and selling instead of sowing and reaping, making like the village banker instead of the town tribune, and getting pretty complacent about what's expected of us in the way of public service in return for that constitutional shield we wear.

Yes, in too many particulars we're reflecting the nation's economic problem. American manufacturers generally are paying an alarming price for their complacent sacrifice of quality on the altar of short-term gain, for their readiness to acquire instead of invent, to pile up debt instead of proving worth, and to produce fluff and glitter in place of lasting value.

I'm believer enough in fate and in the marketplace to believe that such drifting can get newspapers blind-sided as painfully as the automakers and electronic companies got hit when they quit counting the progression of the trade deficit and lost touch with quality control.

So, in addressing the future competition for news, I suggest we admit that our number-one liability is self-inflicted. We are seeing a lot of seemingly prosperous newspapers being nibbled by ducks because we're playing financier instead of publisher—saving money, we think, by ignoring quality instead of investing long term to increase it. On top of that, some of us are jacking up revenues in the short term by ratcheting up circulation rates even though that erodes the long-term asset of market share and invites in the competitor who only wants to eat our lunch. Professor Myron Tribus of the Massachusetts Institute of Technology said it well: "Quality is never your problem. It is the solution to your problem."

So on that theme—that quality in newspapers costs less than the long-term expense of ignoring it—I suggest we steal a line from Casey Stengel and start asking ourselves: Don't anybody around here still love this game and not just the money in it?

WHOLE JOURNALISM. Competing for news will require us to practice journalism whole. So what is whole journalism? It means—and I'm talking about our handling of news now—it means that editors will widen the view of our work, so that words, illustrations and page design are thought of as one, not apart, and handled whole. Machines are already doing that, you say. Macintoshes, electronic darkrooms, pagination and other technology generally are making

C. David Rambo

Patterson receives congratulations after delivering ANPA/TEC address.

Patterson, once a Pulitzer Prize-winning editorial writer, is chairman and chief executive officer of Times Publishing Co., St. Petersburg. This article is adapted from a speech he delivered June 8 at ANPA/TEC '87 in Las Vegas.

this blend of words and images for us. But you know that's not so. They're only dumb tools. Using them intelligently to integrate words and images will depend on the way we lead people to think about the blend.

In whole journalism, news coverage is moved onto two tracks—parallel tracks that simultaneously narrow local coverage and widen our view of the world so that the two parts make a greater whole. Our cities are growing and spreading and flowing together with their suburbs, so that our readers are becoming more cosmopolitan, demanding wider horizons, and seeking more worldly and less parochial coverage of the large news. At the very same time, those same readers are resisting being swallowed up in the metropolis and are demanding intensified, close-in coverage of the smaller parts of the metropolis—chicken-dinner coverage, if you will, of the smaller events that define the communities and neighborhoods where they're raising their families, paying their taxes and cussing the potholes. There's no contradiction here, just a doubling of the challenge.

These two tracks—hometown coverage of component communities and a more sophisticated view of a wider world—are complementary.

People are the indispensable element in making journalism whole.

So, heightened integration of words and images, deepened coverage of local and larger news—that's practicing journalism whole. The practice of this vision goes nowhere, of course, without our people. Our people make this whole thing happen. And our people have to be led by those of us who hired out to lead, and who owe them leadership toward the best long-term investment we can make: in quality.

In the news business, I submit, quality is going to have to mean color, well-printed color, generously and routinely used in our pages. We can't expect to compete with the brilliant color images in television and magazines without stretching ourselves to our own far limit. We can't be blobs of gray and last long in a media sky crossed with rainbows.

Quality surely is our cheapest investment in the future, because without it we might have no future.

Our people can make it all happen if we equip them intelligently, commit them aggressively toward the goal of quality and lead them with respect. People are the indispensable element in making journalism whole. Machines are simply the tools we hand them. It is our people who do the ultimate job that's necessary to compete for news and to prevail. It is we who have to remember that even though the news business is big business now, it needs to exemplify in its daily presence the big dream that freedom produces a more lasting value than a quick lick for a fast buck.

Whole journalism can infuse America with quality and worth, and fill our staff members with justified pride so they can tell their grandchildren they were not in this business just to make a living but to make a mark. □

SOME PUBLISHERS CAME TO VEGAS AND GAMBLED ON THEIR FUTURES.

Alberto Ibargüen

Down-to-earth approach keeps him moving toward lofty heights

BY MARY A. ANDERSON
presstime staff writer

Alberto Ibargüen's first newspaper job carried a lofty title: senior vice president for finance and administration. But in that position at The Hartford Courant, the lawyer and one-time banker showed he had a common touch, as he helped to deflate a 1984 effort by the Teamsters to organize transportation employees.

"He was very well-liked, particularly by the rank-and-file," Courant Publisher and Editor Michael J. Davies recalls. "During that organization effort by the Teamsters, he rode circulation trucks and threw bundles of papers around and went out from midnight to 4 a.m., as a way to listen to the truck drivers and listen to what their grievances really were."

Ibargüen's willingness to go the extra mile, literally, caught the attention of the publisher of another Times Mirror Co. daily in the Northeast, Robert M. Johnson of Newsday, who was called in to assist the Courant during the labor dispute. "I was extremely impressed . . . not only with his intelligence, but with his can-do attitude," Johnson says. "What he lacked in experience in the newspaper business he more than made up [for] in intelligence and enthusiasm and everything else."

Now, three years later and at the age of 43, Ibargüen has another exalted title: assistant to the publisher [Johnson] and vice president for human resources and legal affairs at Newsday.

Johnson says Ibargüen is off to an impressive start, crediting him with much of the success of recent negotiations with the newspaper's pressroom, maintenance and transportation employees. Agreements to extend contracts three years—reached a full year ahead of expiration dates—assure the Long Island, N.Y., daily of settled labor relations for the next four years as it continues its push westward into New York City.

The Puerto Rican native's circuitous, 20-year route to the newspaper business began with a five-year stint with the Peace Corps in the late 1960s. Fresh from Wesleyan University in Middletown, Conn., with a bachelor's degree in history, he worked in Venezuela's Amazon territory and in Colombia.

Returning to the United States, Ibargüen enrolled at the University of Pennsylvania Law School, graduating in 1974. He then worked as a Legal Aid attorney serving Hartford's Puerto Rican community. Later, he became a private practitioner in commercial and real estate law, a bank executive, a television pundit, and the appointee of Connecticut Gov. William A. O'Neill and former President Jimmy Carter to a variety of commissions and agencies concerned with the arts, education, election law, corrections and Latin American affairs.

Ibargüen considers one of his earliest achievements to be his acclimation to the United States after his father, an executive for a pharmaceutical company, moved the family from Puerto Rico to Philadelphia. Alberto was 8 years old at the time and spoke only Spanish.

That experience has affected, and strengthened, him to the present day. "To meet that kind of challenge without dropping back, to meet it successfully, I think has a lot to do with a person's attitude about any kind of challenge later on," he says.

"My mother was insistent all of her life that we remember what our origins were," he recalls. "My father was just as strong that we had to adapt."

"My mother, till the day she died, spoke to me in Spanish. My father felt we had to master English. At our dinner table, if you didn't speak both, you were likely to lose half of the conversation."

While at Wesleyan, Ibargüen edited the college paper, the Argus, and considered journalism as a career before deciding on other pursuits. He found his way back to newspapers after five years as vice president and deputy general counsel at Connecticut National Bank. At the time, he was serving as a trustee of the Hartford Courant Foundation, where Publisher and Editor Davies got to know him.

"I wasn't seeking anything. I was perfectly happy where I was," Ibargüen says. When Davies offered him the senior vice presidency at the Courant, "I thought, why didn't I do this a whole lot earlier? I should have thought of this myself! I think nothing quite moves a community like a newspaper does."

During the two years Ibargüen worked at the Courant, his "great passion for ideas and politics" was very much in evidence, Davies says. "Even though he was on the business side with us, it was very difficult to keep him out of the newsroom. He likes news people, and he's interested in the kinds of issues they deal with."

Among the concerns in his human resources vice presidency at Newsday are programs to bring minorities to newspapers in greater numbers, and to develop them, and women, for greater leadership roles. Some of the traditional ways of thinking and hiring at newspapers hinder recruitment of qualified minority candidates, he says.

"I think there's a speed trap and an insularity trap," he adds. "I think both of those tend to work against outside groups" getting into the business.

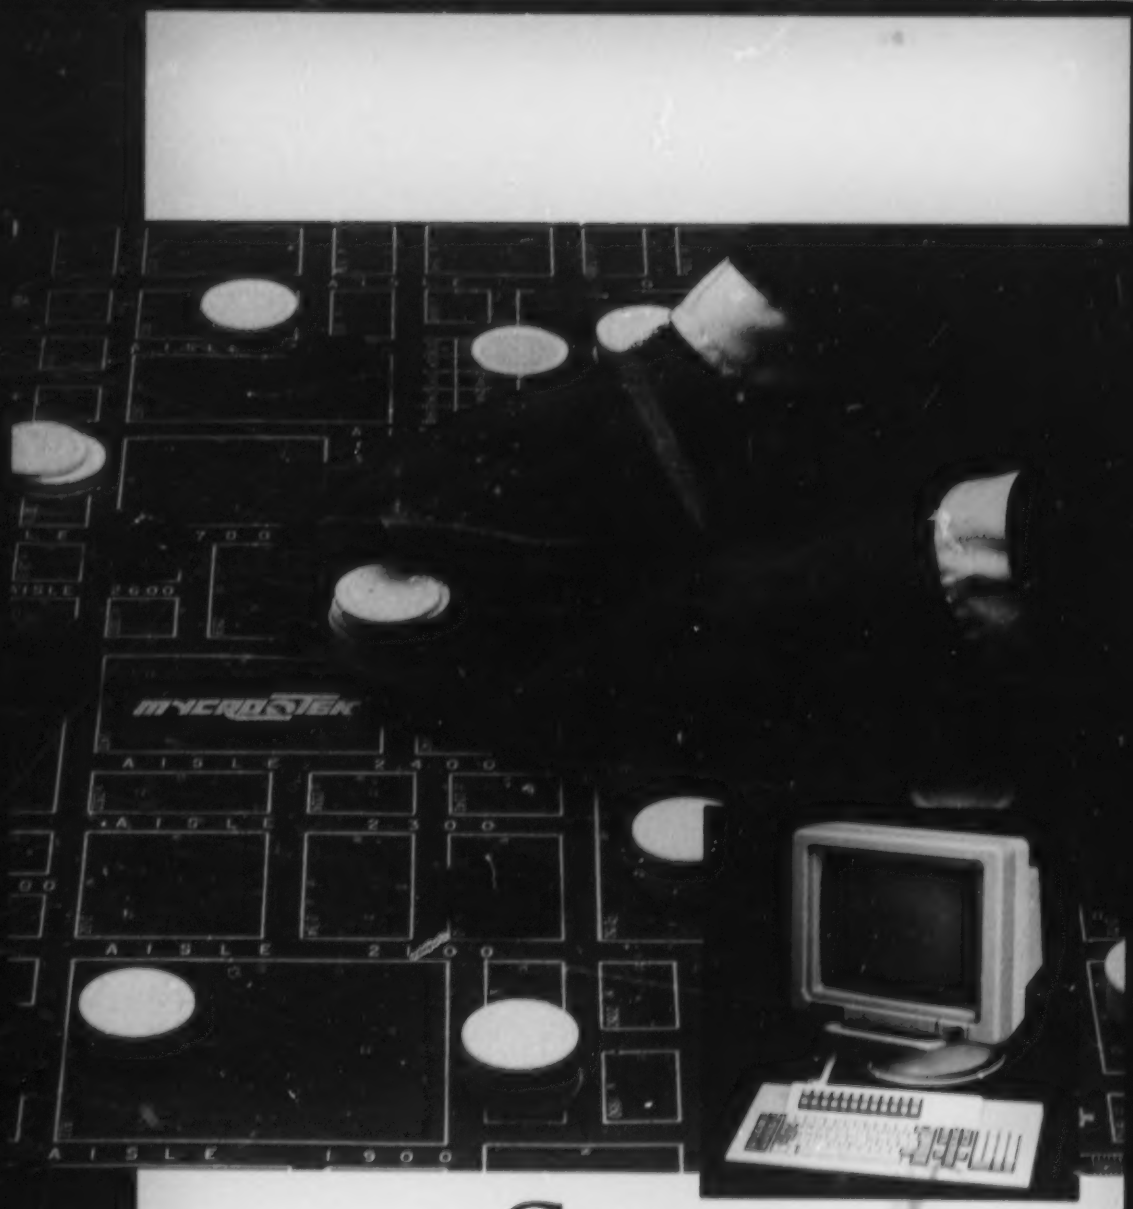
He explains: "Newspapers tend to fall into the 24-hour syndrome—you have an opening and, like everything else at a newspaper, it has to be filled yesterday." And newspapering "tends to be an insular type of industry." Coming from other businesses into newspapering, "I am still surprised at how much people know about other people in the business in other cities." The effect is that the industry grapevine is a powerful influence in filling positions.

One way that Newsday recruits minority candidates is to have one senior editor devote full time to that effort. Although he says the program needs more time to show conclusive results, Ibargüen says "I am satisfied we're making a serious effort at this time."

Several of Ibargüen's friends and associates, asked where they see him headed, repeatedly picture him as a future publisher. That would be "wonderful," he responds, but says his present goal is to do the best he can to achieve Newsday's goals on Long Island and in New York City.

"I think, long-term, he has three real areas of opportunity," Johnson says. "I think he could be whatever he wants to be in the community affairs area. He could be the senior human resource person at any newspaper in the country. Or, with a little more grounding in the newspaper business, he has some broader general-management potential. Certainly, he has the intellect, the manner of dealing with people about him."

Ibargüen and his wife, Susana, have a 12-year-old son, Diego. □



SOME DIDN'T.

Buying a publishing system today is a high-stakes venture. Unfortunately, it can be a risky one too. With suppliers merging, technology accelerating and changing, there aren't many sure bets. But you *can* put the odds in your favor.

Here's how.

Put your money on Mycro-Comp™ and NORTEXT® systems from Mycro-Tek. Today you'll find more than 1300 of these systems at work, in operations ranging from small weeklies to major dailies.

Only Mycro-Tek offers you a SAFE system – System Architecture For Expansion. It's a simple philosophy that says as you grow your system grows, with features, power and performance to meet your needs. Your initial Mycro-Comp or NORTEXT investment remains an integral part of your system, no matter how much you add on or upgrade. So you never have to start over.

It's a SAFE bet.

When you decide on a Mycro-Comp or NORTEXT system from Mycro-Tek, you get more than just an excellent system. You also get the training, service and support that make the entire package the almost perfect purchase.

Before you gamble on your future, call us. We can show you how to reduce the risks and play it SAFE. **CALL TOLL FREE 1-800-835-2055 IN KANSAS (316) 681-0550**

Eliminating Anonymity In Editorials Can Make Them Sharper

BY ROBERT SCHMUHL

As an exercise in a course about opinion writing, I asked students earlier this year to read the editorials in several newspapers, large and small, and to select one that seemed especially successful for its substance and style. One student added a postscript to his comments on the editorial he chose: "Why is the writing of so many editorials bland and boring? It's as though there's no one behind what's being said."

The student's question and observation raise an issue that has received scant attention in recent years—the merit, or lack of it, of attributing the authorship of editorials.

After reviewing the debate over signed versus unsigned editorials, it's easy to see why the overwhelming majority of U.S. newspapers publish their views and opinions without crediting an individual writer. An editorial is an institutional rather than a personal statement. It deserves to be treated differently from personal commentary or whatever else appears on the editorial page.

In my opinion, however, anonymity is a principal factor contributing to the "bland and boring" editorials that troubled the student and seem so prevalent today. Absence of credit can reduce the pride a writer takes in his or her work, resulting in editorials that—in the phrase of Time journalism critic Thomas Griffith—"discuss the issues with the evenhandedness of a sociologist and the fervor of an accountant."

I think it's possible to remove the mask of anonymity without undercutting the editorial's integrity as an institutional statement. The technique I favor involves placing the writer's initials at the end. This practice already exists at a few U.S. newspapers, including the Emporia (Kan.) Gazette, which—at the direction of William Lindsay White, son of William Allen White—began to initial its editorials in the 1940s.

Schmuhl is associate professor of American studies at the University of Notre Dame, South Bend, Ind.

Initialing editorials provides authorial recognition in an understated yet useful way. The writer receives credit for composing the editorial, while the finished product appears in a manner quite distinct from a bylined column or even a signed editorial. Affixing this modest attribution can help spur the previously anonymous writer to present the views of the newspaper in a more engaging, spirited and possibly more persuasive way.

Robert Schmuhl

The history of editorial writing suggests it is time for a fresh approach to an old problem.

Back in 1951, James J. Kilpatrick asked in an essay in The Masthead, the publication of the National Conference of Editorial Writers, "Why do editorial pages, so much of the time, read like the treasurer's report at an Elks' convention?"

In the introductory essay to *Pulitzer Prize Editorials: America's Best Editorial Writing, 1917-1979*, W. David Sloan observed, "Though most recent winning editorials have been of acceptable quality, a large number of them seem to have at least one of two common problems: dullness of writing and lack of unity. Dullness seems much more prevalent today than in the early years of the award."

It is wishful thinking to suggest that assigning initials to editorials would provide a total cure. But this subtle form of credit gives the writer a greater stake in what's published, and this attitude can sharpen one's thinking and writing.

In addition, the practice (especially at larger newspapers) could engender a feeling on the part of readers that a human voice is speaking on behalf of what many people perceive to be an impersonal and remote institution. Someone would be behind a newspaper's stands and proposals, even though—and this is crucial—that individual would continue to use the first-person plural pronoun, "we," rather than the first-person singular, "I."

As I see it, a newspaper could carry the full names of its editorial writers in a box appearing on the editorial page. Readers could then match the initials with the names. Undoubtedly, given the institutional nature of editorials, the initials of more than one writer might appear in some cases.

Not every editorial would have to be initialed. A writer for a variety of reasons might not want any type of identification. What I advocate would be strictly voluntary.

Recently proposed legislation in South Carolina, which for the sake of accountability would prohibit unsigned editorials and result in a misdemeanor charge and a possible fine of $200, is both absurd and unconstitutional.

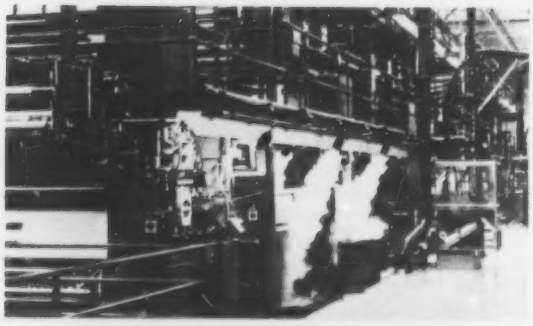
Earlier this year, Mobil Oil spokesman and media commentator Herb Schmertz proposed doing away altogether with "this turgid tide of intellectual pontification." In his syndicated column, he noted: "Editorial writers themselves refer to most of their pointing-with-pride and viewing-with-alarm as 'thumbsuckers.' It's time to find honest work for all those busy fingers."

Like so many proposals for reform, this one is easy but wrong. Editorials have a definite and significant role to play in the life of a newspaper and of the public it serves.

But awarding a small measure of authorial recognition through initialing would prove to be another step on the road to good writing throughout journalism. □

Protect your pressroom from fire

Let Chemetron show you how to reduce the risk



This sequence of photos shows a Chemetron carbon dioxide fire suppression system at work protecting a press line in a newspaper printing plant. Within minutes of the end of discharge, production can resume because there is no mess, no clean-up, and no damage to equipment by carbon dioxide. Imagine the problems created if a sprinkler system were to activate on your press line.

Multiple hazards, the potential for serious loss

There are a number of areas in printing plants which are potential sources of fire, such as ink and paper storage areas, composing rooms and the bindery. But perhaps nowhere else in the printing plant is the potential for fire greater, and the result more crippling, than in the pressroom, the heart of the newspaper operation.

Immediate, effective, non-disruptive protection

Lengthy shutdowns can spell financial disaster for the newspaper industry. That's why pressroom equipment requires fire protection that is immediate, effective and causes a minimum of disruption.

Chemetron automatic fire protection systems suppress fires without the need for enclosing walls. Unlike sprinkler systems, there is no contamination of ink, printed material, press rolls, bearings, electrical drives or controls. This means downtime is held to a minimum. Self-contained, the Chemetron low pressure carbon dioxide system operates even during a power failure.

Put Chemetron experience to work for you

Protecting printing plants is our specialty. Over the past 40 years, Chemetron has put in service between eight and ten thousand low pressure carbon dioxide fire protection systems, and has pioneered many other developments in fire protection.

Ask about Chemetron's new microprocessor based control panel and how you can use it to reform out of date technology on your existing carbon dioxide system.

Free video demonstration

Publishers, Production Managers, Pressroom Supervisors: Send us your business card and we will give you a copy of our videotape on fire protection for printing plants. Learn about efficient, cost-effective solutions to fire problems in modern printing plants.

COURTS

ANPA, others support Flynt in damages awarded Falwell

Courts violate the First Amendment if they exact damages for hurt feelings that inevitably arise when public figures are satirized, however outrageous that satire may be, ANPA and other media interests have told the U.S. Supreme Court.

The joint friend-of-the-court brief filed June 15 supports Hustler magazine Publisher Larry Flynt in his appeal of a $200,000 award to evangelist Jerry Falwell for "intentional infliction of emotional distress."

The Roanoke, Va., jury that determined the award had rejected the evangelist's claims of libel and invasion of privacy concerning Hustler's parody of a liquor ad—a fictitious interview that had Falwell describing his "first time" with his mother in an outhouse.

The verdict was upheld by the 4th U.S. Circuit Court of Appeals [**presstime**, June 1987, p. 78].

Parties in the brief in addition to ANPA are Richmond (Va.) Newspapers Inc., The Free Lance-Star Publishing Co., Fredericksburg, Va., The New York Times Co., The Times Mirror Co., the Virginia Press Association and the Magazine Publishers Association. The Association of American Editorial Cartoonists has filed a separate brief.

If the appellate court's decision stands, the joint brief argued, it would threaten all publishers' "ability to express freely their views in editorials, in editorial cartoons, and in other commentary on subjects of public concern, and to report harsh or provocative views expressed by others."

It added: "The publication out of which this case arises was, in the eyes of many, indecent and outrageous. Amici are supporting Hustler only because of the principle at stake in the case."

In other developments, the court:

- Declined to review a libel decision by the Montana Supreme Court that threw out a unanimous jury verdict favoring The Missoulian of Missoula and ordered a new trial. ANPA had filed a friend-of-the-court brief supporting the request by the newspaper's parent company, Lee Enterprises Inc., for review [**presstime**, June 1987, p. 78].
- Reinstated in a 5-to-4 decision the first-degree murder conviction and death sentence of John Harvey Adamson in the 1976 slaying of Don Bolles, an investigative reporter for The Arizona Republic.

Adamson's conviction had been upheld by the Arizona Supreme Court but struck down by a federal appeals court on double-jeopardy grounds. He was brought to trial after he reneged on a plea agreement to testify against others allegedly involved in the murder.

- Was asked to review a federal appeals court decision that threw out a jury's $2-million libel judgment against The Washington Post in the case brought by former Mobil Corp. President William P. Tavoulareas [**presstime**, April 1987, p. 41]. □

COURT BRIEFS

- The Justice Department announced June 16 it had terminated a two-year grand jury investigation into the 1982 **closing of The Cleveland Press** without taking any action.

It was investigating allegations of antitrust violations in the sale of certain assets of the Press to The Plain Dealer of Cleveland [**presstime**, Aug. 1985, p. 23].

- Former Sen. Paul Laxalt (R-Nev.) **dropped his $250-million libel suit against McClatchy Newspapers** [**presstime**, Jan. 1986, p. 35].

Both sides claimed victory under the settlement, in which neither party paid damages.

A joint statement said there had been no substantiation of a story that federal tax agents had suspected skimming at a casino while it was owned by Laxalt and his family.

- NASA is considering whether to appeal a federal judge's order to **release the tape of the final words** spoken by the crew of the ill-fated Challenger space shuttle. The ruling arose from a lawsuit by The New York Times.

- The 10th U.S. Circuit Court of Appeals has turned down Gannett Co.'s request for rehearing of its decision that **control of Santa Fe's daily newspaper**, The New Mexican, should be returned to former owner Robert M. McKinney. Gannett, which bought the paper in 1976, has not decided whether to mount a further appeal [**presstime**, June 1987, p. 79].

LEGISLATION

Efforts under way to exempt newsprint from proposed tax

ANPA has written to all 100 members of the U.S. Senate protesting the inclusion of newsprint in a proposed duty on imported goods.

The Association is seeking to get newsprint exempted from the tax, which could be as much as 1 percent of the value of the imported item.

"The imposition of such a duty runs counter to a 74-year history of duty free status," said Jerry W. Friedheim, ANPA executive vice president, in the letter to the senators.

ANPA traditionally has opposed any import duty on newsprint and in 1913 was successful in gaining the removal of a newsprint tariff that had been imposed at the time of the Civil War. Today, the only fee on imported newsprint is a customs "user fee" passed by Congress in 1986. ANPA also opposes that fee, according to Claudia M. James, ANPA assistant general counsel [**presstime**, Nov. 1986, p. 52].

Friedheim told the senators that newsprint typically accounts for about 25 percent of a newspaper's publishing costs and that based on the projected $4 billion in newsprint imports in 1987, the duty would "penalize" U.S newspapers $40 million. He called that a "heavy hand of federal taxation and a troubling precedent some future, less-enlightened, government could use as an economic lever over a formerly free press."

The import tax is part of a trade bill (S 490) that is pending in the Senate [**presstime**, June 1987, p. 78]. Tax revenues would be used to fund an assistance program for workers displaced by imports. In a position paper on the bill, ANPA argues that newspapers' importation of newsprint causes no dislocation to American workers because U.S. newspapers already purchase all of the domestic newsprint produced. □

'Fairness Doctrine' veto

President Reagan June 20 vetoed legislation to install the Federal Communication Commission's "fairness doctrine" as law. The American Society of Newspaper Editors was among the media groups that advocated the veto.

Also, the U.S. Supreme Court June 8 refused to review a federal appeals court ruling that the doctrine is not required by law [**presstime**, Oct. 1986, p. 47]. □

Soviet, Singapore officials defend policies at FIEJ

FIEJ, the International Federation of Newspaper Publishers, injected controversy into its annual meeting this year with speakers from the Soviet Union and Singapore, who defended their nation's press policies.

About 280 delegates and 190 guests gathered in Helsinki May 24-27 for the federation's 40th World Congress—50 more delegates than ever before, according to FIEJ Director Timothy Balding. Seventeen attendees were from the United States.

Balding attributed the response to the program featuring two controversial speakers, Gennadi Gerasimov, spokesman for the Soviet Union's Ministry of Foreign Affairs, and Brig. Gen. Lee Hsien Loong, Singapore's minister for trade and industry.

"We had tried to introduce an element of conflict that really had not existed in past FIEJ Congresses," said Balding, who recently became the federation's chief of staff. "There had been certain criticism that it was really a forum for publishers to preach at each other. This time, a deliberate attempt was made to introduce controversial questions, and I think the final speakers' lineup reflected that."

Gerasimov spoke about the new Soviet policy of *glasnost*, or openness. He quoted Winston Churchill on the Soviet Union and then amended the late British prime minister's statement. "Sir Winston said once that Russia is a riddle wrapped in an enigma. . . . My amendment is that the Russian riddle is not wrapped in an enigma any more. And if you have a closer look, there is no riddle at all. Because now we have *glasnost*."

Gerasimov suggested that the Soviet Union is more open to foreign views than are foreign countries to Soviet views. "We are purchasing 2,200 titles of foreign newspapers and magazines totaling over 4.2 million copies to be sold at newsstands or delivered to subscribers," he said. "We spend almost five times as much on purchasing Western periodicals compared to what Western countries are paying to buy Soviet periodicals."

The head of the ministry's Information Department, Gerasimov described what it does to assist foreign correspondents based in Moscow and criticized the treatment of Soviet journalists elsewhere. He said that while the Soviet Union does not limit the number of foreign press, some Western countries, including the United States, Canada and Great Britain, impose quotas on Soviet journalists. He also complained about the length of time it takes Western countries to issue visas and to accredit Soviet journalists.

He labeled as "abnormal" the working conditions of Soviet journalists in the United States, saying they are discriminated against in obtaining official documents from the White House, the State Department and Congress.

In his address, Lee defended Singapore's action limiting the circulation of The Asian Wall Street Journal and the Asian edition of Time magazine for refusing to print corrections demanded by the government. He described the measures as being designed to prevent misinforming citizens of his country.

Singapore "does not object to foreign correspondents reporting about us in any way they choose to foreign audiences, provided they get their facts right," he said. However, when "foreign-based journalists with significant circulations in Singapore start to report on Singapore for a Singapore audience, the government has to take care."

Among other developments during its congress, FIEJ passed a resolution supporting efforts of the Dominican Newspaper Society to repeal laws requiring the licensing of journalists.

In another recent meeting, the International Press Institute staged its General Assembly in Latin America for the first time. Among seven resolutions passed were two concerning the region: One welcomed recent advances in press freedom, particularly in the host countries of Argentina and Uruguay; the other expressed concern about the status of press freedom in such countries as Colombia, Chile, Paraguay and Nicaragua. □

UNESCO postpones media conference

After Western media associations announced they would boycott it, a planned conference on UNESCO's 1978 Mass Media Declaration was postponed—"probably until December," organizers said.

The UNESCO-sponsored conference, being arranged by the Prague-based International Organization of Journalists, was to have taken place in June in Tampere, Finland [**presstime**, April 1987, p. 45].

The Western media groups are concerned the meeting would reopen controversial issues. □

ANPA looks favorably on rate proposal

Although ANPA continues to analyze new rates proposed in May by the U.S. Postal Service, the Association has concluded on a preliminary basis that the rate package looks favorable to the newspaper business.

"We applaud the Postal Service for beginning to move in the right direction by recognizing more than in the past the value that third-class mail has for its users," said Donald E. Newhouse, an ANPA director and chairman of the Association's Postal Rate Case Group. The group was formed recently by ANPA Chairman George W. Wilson to plan ANPA's participation in the pending rate case. It replaces the Joint Postal Task Force, which has been disbanded.

Newhouse, president and general manager of The Star-Ledger in Newark, continued: "We hope that during the rate case the increases in first-class rates can be moderated. And we trust that the Rate Commission will continue to give great weight to the educational and cultural value of second-class mail."

Under the USPS proposal, third-class rates would rise 22-32 percent [**presstime**, June 1987, p. 79]. Relatively modest increases are proposed for second-class. The benchmark first-class stamp would increase from 22 to 25 cents.

Also in the rate case, ANPA, Merrill Lynch & Co. and other volume first-class-mail users have formed a group that will argue first-class bears excessive USPS costs. □

'Plus' comment sought

The Postal Rate Commission has asked for proposals on whether postal regulations should be changed regarding "plus issues," another term for total-market-coverage programs.

The commission said it wants to ensure that the rules effectively preclude TMC programs from using second-class rates, as both the commission and U.S. Postal Service want [**presstime**, Feb. 1987, p. 41]. □

Canada Post struck

Canada Post letter carriers in late June were engaged in a "rotating" strike that was having little impact on newspapers.

Only larger mail centers had been struck, said a Canada Post spokesman. Workers remained on the job in smaller communities where newspapers rely more heavily on mail delivery. □

Some people just can't seem to let a good thing stand.

Take the Staggers Rail Act of 1980—one of the most successful pieces of legislation in history.

A group called Consumers United for Rail Equity (C.U.R.E.)—backed primarily by the coal and utilities industries—wants to take an ax to the Staggers Act.

They don't say that, of course. They say they want to "perfect" the act..."reform" it..."fine-tune" it.

But if you read the legislation they have proposed, you will quickly see that, in critical areas, they want to reimpose the same stifling regulation—and more—that almost destroyed the railroads.

Never mind that most railroad customers—87 percent of those questioned in a recent survey—are happy with the Staggers Act and don't want it changed. Never mind the observable fact that the partial deregulation provided by the Act brought the railroads back from the brink of disaster, resulting in efficiencies and improved service for all who use rail.

Never mind, even, that the freedom to set rates and make contracts with less regulatory interference did not result in massive rate increases.

Many rates—coal and grain rates in particular—have gone down in recent years.

The interests represented by C.U.R.E. think they can use federal and state governments to lower their rates still further.

That's the real story behind C.U.R.E. But like anything else, there's no free lunch.

If C.U.R.E. succeeds, other shippers and the public as a whole will pay the price. In higher rates. Declining service. And, ultimately, in a railroad industry back on the brink of collapse.

To us that goes far beyond pruning and fine-tuning. And if you're a journalist covering this story, you'll find the facts for leaving Staggers intact are much more powerful than C.U.R.E.'s assertions for chopping it to bits.

To get facts, write Media Information, Association of American Railroads, 50 F St., NW, Washington, DC 20001, Dept. 712. Or if you're against a deadline, call (202) 639-2555.

Proposed fee could boost bills for information services

The Federal Communications Commission June 10 proposed requiring "enhanced service" providers such as packet-switching companies to pay a fee for connection to local telephone networks. Currently, such companies have an exemption from these interstate access charges.

The change would mean dramatically higher costs for some newspaper companies' electronic information services.

"Anyone who offers an electronic information service is likely to be affected to the extent that they use packet-switched networks," said Jane Wilson, ANPA assistant director/telecommunications affairs. "That would include such services as Dow Jones' News/Retrieval and Knight-Ridder's VU/TEXT."

The FCC estimated the added cost could be as much as 9 cents a minute, or $5.40 an hour.

"We are very concerned about it," said Thomas Pace, communications counsel for Dow Jones & Co. It could mean a doubling of communications costs, said Pace, vice chairman of the ANPA Telecommunications Committee. Currently, communications costs average about $5 an hour, he said.

In the case of News/Retrieval, subscribers don't pay the communications costs directly; they are "imbedded" in the cost of the service. The prospect of an increase in communications costs raises "some really interesting marketing questions," Pace said.

By press time, the FCC had not released the text of its proposal or a date for public comments. □

Justice Department says NYNEX service violates AT&T consent decree

After an investigation requested by ANPA, the Justice Department has concluded that operation of a public-access videotex system by NYNEX Corp. violates the AT&T consent decree.

Operation of the system, at the Jacob Javits Convention Center in New York, "appears to be an information service," said Barry Grossman, chief of the Communications and Finance Section of the department's Antitrust Division.

The AT&T consent decree prohibits any of the divested Bell operating companies such as NYNEX from providing information services. Grossman added that even if the videotex system is not an information service, NYNEX may not provide it, absent a court granted waiver, because it is not "exchange telecommunications" or "exchange access service"—the only activities expressly allowed under the decree.

NYNEX must cease the prohibited activities or modify its involvement in the project to include only those activities allowed under the decree and under waivers granted to NYNEX, Grossman said.

A NYNEX spokeswoman said the company was preparing a response to the Justice Department and declined comment "until the Department of Justice has had a chance to react to our response and conclude its investigation." □

Greene to hold hearings on BOC proposal

Three days of hearings on the Justice Department's recommendation to allow the regional Bell operating companies to provide information services and for other changes in the AT&T consent decree have been scheduled by U.S. District Judge Harold H. Greene.

Publishing companies and ANPA will be given 20 minutes on July 1 in which to make their case against removal of the information services restriction [**presstime**, June p. 78].

They will be represented by Washington, D.C., attorney Richard E. Wiley. Greene asked the parties to address, among other questions, how a videotex service like France's Minitel could be offered.

Additionally, the Justice Department in late May modified its recommendation concerning the conditions to which a BOC must agree before it may provide information services directly or through an affiliate.

The department said the changes are intended to make clear that the conditions are meant to prohibit "discrimination that would affect competition between BOC information services and other information services." □

Media-related parties try to scuttle Florida tax

Media interests, advertisers and marketing executives are sticking to three strategies in last-ditch efforts to derail Florida's new 5-percent tax on professional services that goes into effect July 1: lobby, litigate or leave.

The emphasis is on the latter two, as attempts at persuasion and threats of advertising boycotts have not budged Gov. Bob Martinez, Florida legislators and revenue officials [**presstime**, June 1987, p. 82].

Now the threats are becoming a reality as at least seven national advertisers and dozens of associations and corporations have canceled plans to advertise or hold meetings in the Sunshine State.

The biggest hope of tax opponents is that the Florida Supreme Court will find the levy constitutionally deficient. The court's advisory opinion, expected in early July, would not have the force of law but probably would make enforcement impossible, media lawyers say.

If the court gives the tax its blessing, however, "we would then pursue it at the federal level," said Richard Shelton, executive director of the Florida Press Association.

In the meantime, Florida coffers may not receive all proceeds of the tax for some time. Some newspapers and other businesses might collect the tax, but hold it in escrow until the legal issues are resolved, he said.

State revenue officials issued their regulations to implement the tax June 23, the day after the Supreme Court heard oral arguments for and against it.

While the focus has been on Florida, other states have rejected new taxes on advertising or circulation.

In a close call, the West Virginia legislature struck a 5-percent advertising and circulation tax from its budget bill just two weeks before the July 1 effective date.

In Texas, a tax on circulation was repealed. □

Media tax upheld

Los Angeles-area newspapers have lost the latest round in their four-year battle to overturn a city tax on media revenues that assesses $1.25 a year per $1,000 in gross receipts [**presstime**, Dec. 1983, p. 21].

A California appeals court upheld the tax, saying it does not impede publication. The newspaper companies, including The Times Mirror Co. that has paid $4 million under the tax since 1983, plan to appeal the case to the California Supreme Court. □

SOME NEWSPAPERS ARE ONLY PRINTING THE STORY.

The papers that don't use Western Lithotech in the plateroom. They save a few pennies here and there and pay the price of quality. From plates going blind to total press stops.

But quality newspapers know the whole story. Because they depend on the *total systems* supplier that has been the leader for over 60 years. Depend on the famous plate names... Front Page... Metro Express... Final Edition and more. On the industry's best chemistry and hardest working processors.

Plus Newstek,™ the new extra long run plate system designed for sharp 4-color inserts and supplements.

All backed by the most responsive technical team in the business.

Publishers' plan to evaluate programs spurs charges of accrediting duplication

Publishers in the Pacific Northwest have embarked on a $200,000, two-year pilot program to evaluate and support undergraduate journalism programs that "share our commitment to quality and improvement in newspaper-related programs."

The program, sponsored by the publishers' regional association, Allied Daily Newspapers, has come under fire in some quarters. Journalism educators and other critics have charged that it may duplicate the accreditation work of the national Accrediting Council on Education in Journalism and Mass Communications. They also have said that the publishers are trying to manipulate the academic domain with standards stressing practicality over theory [**prsestime**, July 1986, p. 70].

Some newspapers combat illiteracy with these T-shirts on which they imprint their own nameplate. Cost is $5 apiece plus shipping for bulk orders of more than 100. For information, contact Carolyn Ebel Chandler, ANPA Foundation manager/literacy programs, The Newspaper Center, Reston, Va., (703) 648-1251.

Allied President Ted M. Natt, publisher and editor of The Daily News, Longview, Wash., said the program is intended to be positive. It's a chance for publishers "to put some money where our mouth is to improve the quality of journalism education in the region."

"We're not in the accrediting business. We're in the evaluating business," Natt said.

The project calls for member newspapers to pay 2.5 cents per paid subscriber this year, and 5 cents next year, thus raising $100,000 per year beginning in 1988 for scholarships, internships at newspapers for educators, on-campus programs and a $10,000 "Excellence in Journalism Education" award to the most exemplary institution, in the judgment of the publishers.

The newspapers also will focus their job-recruitment efforts on the schools they designate as "recommended," based on the evaluation. Those that are trying to achieve the criteria will be "provisionally recommended."

Any of the 14 colleges and universities in the region can opt not to participate. Those that do participate will return a questionnaire by Sept. 30, before evaluating teams from the newspapers begin their visitations in October.

Some of the criteria include:

- Practical, professional backgrounds of faculty and continuing efforts to refresh their practical experience at least once every four years
- Involvement with newspapers through programs that bring editors or other newspaper executives to the schools
- Active intern programs in all sequences
- A curriculum that places a premium on basic skills, with checks on student competency and adherence to the accrediting standard that graduates earn 75 percent of their credits in non-journalism courses, such as the liberal arts or business
- Research programs with strong practical value and application
- The quality of the library, physical plant and equipment
- Active job placement programs
- Active minority recruitment programs. □

Bicentennial 'Celebration of Citizenship' gets $900,000 more in funding

With nearly $1 million in new corporate support for "A Celebration of Citizenship," the Sept. 16 event honoring the 200th anniversary of the U.S. Constitution has expanded beyond the schools to involve the U.S. general public.

With its broadened scope, the event has been labeled the "premiere event" for programs of the Commission on the Bicentennial of the United States Constitution. The commission is cosponsoring the "Celebration of Citizenship" with ANPA Foundation and 12 national educational organizations.

Of the $900,000 donated by Xerox and Nabisco Brands Inc., $500,000 will support the Foundation's administration and promotion of the program, and $400,000 will go to the commission for expenses of a public event being planned on Sept. 16 in Washington, D.C.

For a nationwide telecast that day at 1 p.m. EDT, top administration and government officials are being invited to lead the Pledge of Allegiance, and retired Chief Justice Warren E. Burger—head of the bicentennial commission—will read and explain the meaning of the Preamble to the Constitution.

"There are many ways for newspapers to become involved, through editorials, advertising and coverage," said Claudia Haskel, ANPA Foundation's project director for "A Celebration of Citizenship."

Also on the 16th, schools throughout the nation will conduct teach-ins about the Constitution in preparation for the following day's observance of the signing of the document [**prsestime**, March 1987, p. 58].

The New York Times is designing two public service advertisements about the televised event and about ways citizens can learn more about their rights and responsibilities under the Constitution. The camera-ready, full-page ads and a media kit with updated program information will be mailed to ANPA-member newspapers in early August.

Newspaper In Education coordinators have been sent copies of suggested teaching guidelines for the Sept. 16 activities. With the increased corporate funding, they will now receive additional copies in camera-ready form to distribute in their communities, plus new "how-to" guides for parents and other interested adults. □

Task Force sets schedule for job fairs

The Task Force on Minorities in the Newspaper Business has announced its schedule of fall job fairs to increase employment of minorities in all newspaper departments. The fairs will be jointly sponsored with the American Society of Newspaper Editors.

The schedule is:

- Oct. 9-10 in Tucson, together with Tucson Newspapers Inc.
- Oct. 15-17 in Washington, D.C., with The Courier-Journal of Louisville
- Oct. 29-31 in Miami, with The Miami Herald.
- Nov. 5-6 in Chicago, with the Chicago Tribune.
- Nov. 5-7 in San Francisco, with the San Francisco Chronicle.
- Nov. 12-14 in Ann Arbor, Mich., with The Ann Arbor News and Booth Newspapers Inc.
- Nov. 12-14 in Atlanta, with the Atlanta Journal and Constitution.
- Nov. 12-14 in Denver, with The Denver Post.

Additionally, one fair will be sponsored solely by ASNE: Oct. 22-24 in Raleigh, N.C., with The News and Observer and The Raleigh Times. □

Foundation invites minority fellowship applications

ANPA Foundation is now accepting applications for minority fellowships for the last six months of 1987.

The fellowship program, which began in 1981, will enable 12 minority employees at newspapers to attend one of 11 newspaper-business seminars.

The seminars are sponsored by such organizations as ANPA, the American Press Institute, The Poynter Institute for Media Studies, the American Society of Newspaper Editors and the Newspaper Personnel Relations Association.

Fellowships pay for seminar, travel, hotel and meal expenses. Nominations by newspaper executives, journalism school administrators or by potential fellows themselves (with a supervisor's recommendation) are due by July 31. For more information, contact Nancy Osborn of the Foundation at (703) 648-1053. □

Ombudsmen, journalists' insularity, Sunday magazines are explored

BY GUIDO H. STEMPEL III

Is the newspaper ombudsman a press critic or a public-relations practitioner?

A study by James S. Ettema, associate professor of communication studies at Northwestern University, and Theodore L. Glasser, associate professor of journalism at the University of Minnesota, reports there are elements of both.

Guido H. Stempel III

They sent a questionnaire dealing with the role of the ombudsman to the 33 members of the Organization of Newspaper Ombudsmen. Thirty-two members responded.

The questionnaire included a list of 11 activities—six related to public relations and five to press criticism. Respondents were asked to rate them on a six-point scale. Four of the public-relations activities had higher ratings than any of the press-critic items: giving readers a sense the paper cares, sensitizing reporters and editors to readers' concerns, sensitizing management to readers' concerns, and changing the way readers see the paper.

Heading the press-criticism activities in importance were providing hard-hitting critiques of reporters' and editors' work and changing the way reporters and editors do things.

The ombudsmen also were asked about their orientation or loyalties—whether toward readers, the newspaper or divided between the two. The finding was that their strongest loyalty is to readers.

On the other hand, they indicated that the most important source of problems they deal with is that readers don't understand problems journalists face.

This study is reported in the spring 1987 Journalism Quarterly.

• • •

Several studies in recent years have suggested that journalists may be too insulated from the public. A study reported in the spring 1987 Journalism Quarterly suggests this problem may have been overstated.

Judee Burgoon, Michael Burgoon and David Buller of the Department of Communication at the University of Arizona and Charles Atkin of the Department of Communication at the University of Michigan studied two groups of journalists.

One was 489 journalists at 10 newspapers selected with the help of the American Society of Newspaper Editors. The other was 1,118 journalists from 83 group-owned newspapers from all geographic regions.

Sixty-two percent of the ASNE sample said they had "a lot of contact with people in walks of life different from my own," and 75 percent said they discussed news events with non-journalists. Sixty-eight percent said non-journalists ask them about things in the news, but only 46 percent seek non-journalists' opinions about the news.

In the ASNE sample, 46 percent said they think journalists should be involved with outside groups and activities, but only 35 percent said that they actually were.

Results for the larger sample were similar.

In my April column, I reported on a study that asked newspaper publishers about Sunday magazines. It found that a majority did not feel that a Sunday magazine affected either circulation or advertising.

A study Belden Associates of Dallas conducted in the Detroit market last September for Parade, the nationally distributed Sunday magazine, offers a somewhat different perspective. Readers did express some affinity for Sunday magazines.

Respondents were asked how disappointed they would be if the Sunday magazine were no longer distributed with the paper. Fifty-seven percent of the Detroit Free Press readers said they would be very disappointed or somewhat disappointed if Parade were no longer included.

The study also found that 34 percent of the Free Press readers said Parade contributed very much to their enjoyment of the paper. Another 36 percent said the magazine contributed somewhat to their enjoyment of the newspaper. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

TV news 'myth' debunked

An article in TV Guide magazine debunks the popular notion that readers get more news from television than from newspapers.

The article by staff writer Joanmarie Kalter cites results from several studies to disprove what she calls a "myth."

The misconception began with this question asked by the Roper Poll since 1959: "I'd like to ask you where you usually get most of your news about what's going on in the world today." Latest results show that 66 percent cite television, and only about a third say newspapers.

Critics say the question is too general because most people can't recall precisely where they picked up a given piece of information. "It asks you to sort through the issues in your mind, pinpoint what and where you learned about each, tag it, and come up with a final score," Kalter wrote. "Not too many of us can do it, especially since we get our news from a variety of sources."

Kalter said that when a person is asked specifically whether he or she watched a TV newscast or read a newspaper *yesterday*, the results are different. For example, in a study by sociology Professor John Robinson of the University of Maryland, 67 percent of those interviewed said they read a newspaper the previous day, compared with 52 percent who said they had watched a local or network TV newscast. □

SPJ,SDX to consider code of ethics change

The board of directors of The Society of Professional Journalists, Sigma Delta Chi, has recommended dropping a censure provision from its code of ethics.

The provision was included when the current code was adopted in 1973, but some members have felt trying to enforce sanctions could result in lawsuits.

The board recommendation will be submitted to the full membership at the society's annual meeting Nov. 11-14 in Chicago. □

This year 8 Pulitzer Prizes went to newspapers with VU/TEXT electronic libraries.

Could this be coincidence?

For information on how VU/TEXT can help make you a prizewinner, call Joe DiMarino at 1-800-313-2940 (USA). 215-574-4400 (PA).

New weekly offering targets people over 50 years old

A syndicated weekly news package designed for readers over 50 years of age is being offered by The New York Times Syndication Sales Corp.

Maturity News Service will consist of a weekly package of about seven news and feature stories, a column by a contributing editor, and photos and graphics.

The service is the brainchild of Rob Roy Buckingham, formerly an editor for United Press International and The New York Times News Service. Buckingham approached the American Association of Retired Persons, which agreed to finance the service's launching.

Buckingham said a feasibility study showed there was a need for coverage for people over 50, who will represent 23.4 percent of the population by the year 2000, according to U. S. Bureau of the Census figures. □

Woman-man duo to replace Ann Landers

A headline in The New York Times put it this way: "Ann Landers's Footsteps: 4 Feet Will Fill Her Shoes."

A woman and a man were selected by the Chicago Sun-Times to replace advice columnist Landers (real name Eppie Lederer), who changed syndicates and skipped to the Chicago Tribune in March [**prestime**, June 1987, p. 88].

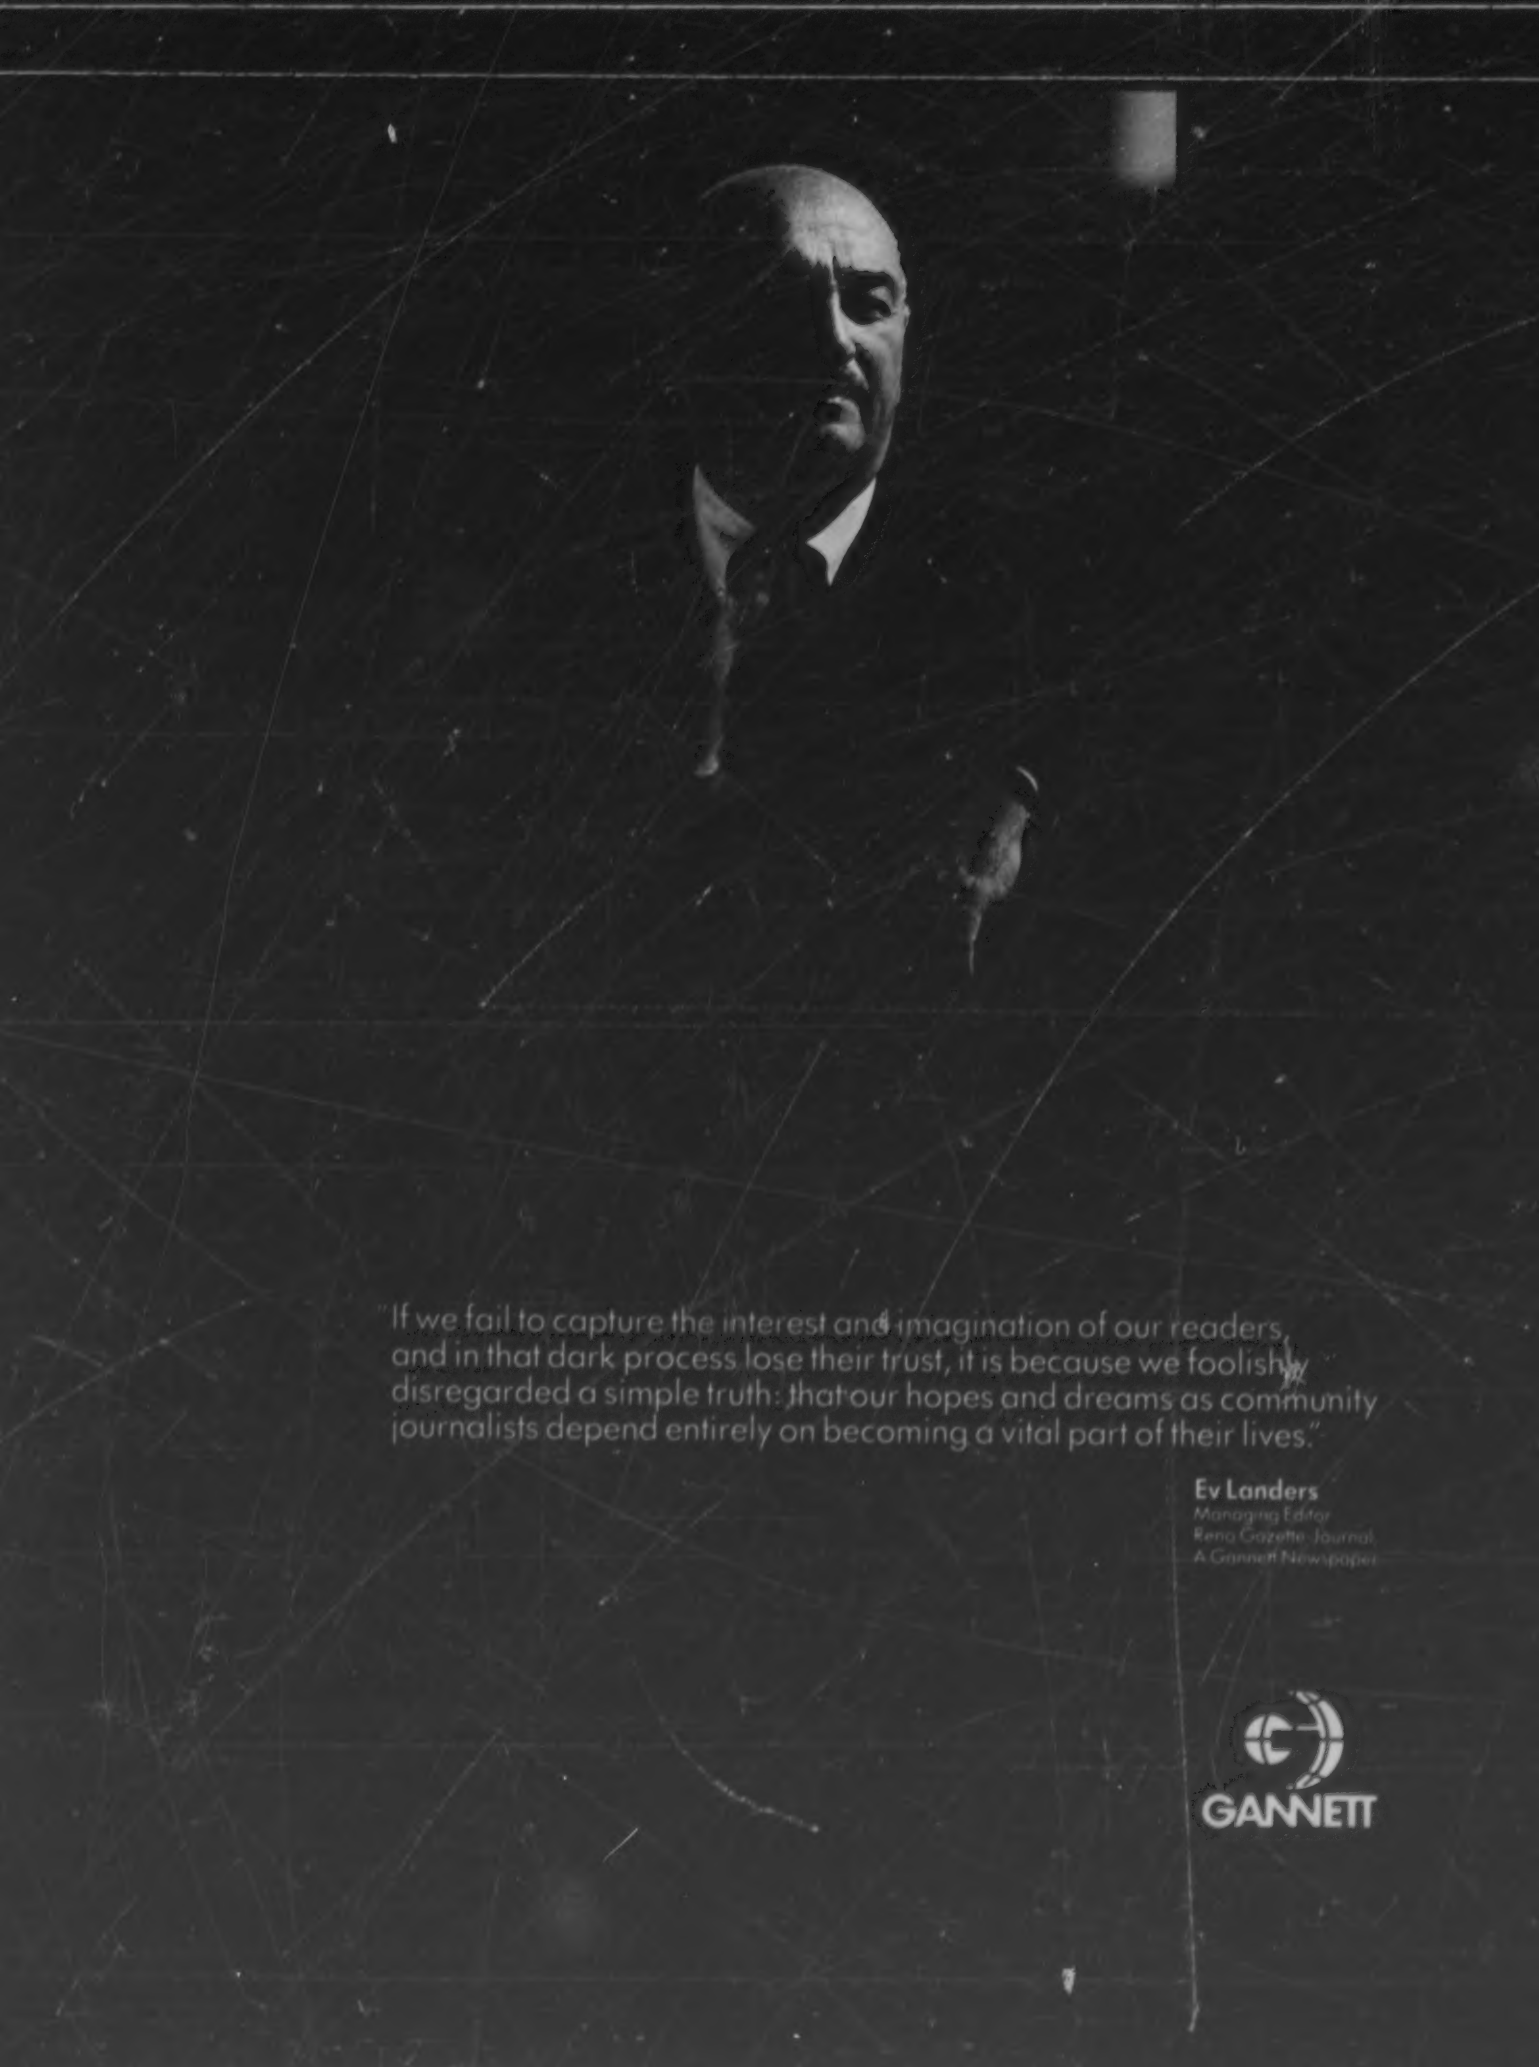
The two are Diane Crowley, 47, a Springfield, Mass., lawyer and divorced mother of two grown sons whose own mother, Ruth Crowley, wrote the original Ann Landers column for the Sun-Times until her death in 1955; and Jeffrey Zaslow, 28, a Wall Street Journal staff writer.

The two will give up their other occupations to write their columns, which were scheduled to make their debut June 28. After that, the columns were scheduled to appear on alternate days.

Crowley's column will be called "Your Problems", Zaslow's will be called "All That Zazz." □

Herblock joins Creators

Herbert L. Block, three-time Pulitzer Prize-winning syndicated editorial cartoonist with The Washington Post as "Herblock," joined the new Creators Syndicate June 1 [**prestime**, March 1987, p. 56]. □



"If we fail to capture the interest and imagination of our readers, and in that dark process lose their trust, it is because we foolishly disregarded a simple truth: that our hopes and dreams as community journalists depend entirely on becoming a vital part of their lives."

Newspapers honored for fleets' driving records

Twenty-one U.S. and Canadian daily newspapers won awards in the annual Safe Driving Campaign sponsored by ANPA and the International Circulation Managers Association.

Awards were made to the three newspapers with the best safety records of their delivery vehicles, based on miles traveled in 1986, in each of seven divisions.

The 726 newspapers participating in the 1986 campaign operated 14,761 vehicles a total of 319,316,737 miles and achieved an accident rate of 1.46 per 100,000 miles. More than 150 newspapers had no reportable accidents during the year, and each received a certificate of merit.

Since the campaign began in 1941, participating newspapers have recorded more than 8 billion miles of driving and experienced an overall accident rate of 1.72 per 100,000 miles.

The campaign has two principal goals: to reduce fatalities and injuries, and to reduce insurance premiums for vehicles used in newspaper delivery [**presstime**, June 1986, p. 66].

Winners for 1986 were:

Private motor carrier division

Group A: Newspapers with daily circulation up to 20,000; 92 newspapers operated 325 vehicles 5,839,109 miles with 64 accidents.

• First place: **Portsmouth (Ohio) Daily Times** operated 21 vehicles 572,555 miles without an accident.

• Second place: **Agana (Guam) Pacific Daily News** operated 19 vehicles 247,529 miles without an accident.

• Third place: **Medicine Hat (Alberta) News** operated nine vehicles 225,903 miles without an accident.

Group B: Newspapers with daily circulation 20,001 to 50,000; 158 newspapers operated 1,159 vehicles 22,082,538 miles with 325 accidents.

• First place: **Casper (Wyo.) Star-Tribune** operated 6 vehicles 641,220 miles without an accident.

• Second place: **Mesa (Ariz.) Tribune** operated 33 vehicles 388,053 miles without an accident.

Practice makes perfect for drivers.

• Third place: **Ravenna (Ohio) Record-Courier** operated 35 vehicles 387,904 miles without an accident.

Group C: Newspapers with daily circulation 50,001 to 100,000; 95 newspapers operated 1,012 vehicles 20,083,006 miles with 498 accidents.

• First place: **Lubbock (Texas) Avalanche-Journal** operated 21 vehicles 807,532 miles without an accident.

• Second place: **Tulsa Tribune** operated one vehicle 50,985 miles without an accident.

• Third place: **Rockford (Ill.) Register Star** operated five vehicles 30,908 miles without an accident.

Group D: Newspaper with daily circulation in excess of 100,000; 209 newspapers operated 7,066 vehicles 153,312,450 miles with 3,484 accidents.

• First place: **Orlando Sentinel** operated 31 vehicles 734,202 miles without an accident.

• Second place: **Tulsa World** operated seven vehicles 155,064 miles without an accident.

• Third place: **Columbia (S.C.) State and Record** operated 31 vehicles 1,542,870 miles with one accident.

Contract motor carrier division

Group A: Newspapers with daily circulation up to 25,000; 128 newspapers operated 1,866 vehicles 34,060,671 miles with 59 accidents.

• First place: **Dover (Del.) State News** operated 61 vehicles 1,576,080 miles without an accident.

• Second place: **Ashland (Ky.) Daily Independent** operated 52 vehicles 978,391 miles without an accident.

• Third place: **Clarksville (Tenn.) Leaf-Chronicle** operated 50 vehicles 813,518 miles without an accident.

Group B: Newspapers with daily circulation 25,001 to 100,000; 101 newspapers operated 2,205 vehicles 50,002,036 miles with 63 accidents.

• First place: **Boise (Idaho) Statesman** operated 130 vehicles 3,598,580 miles without an accident.

• Second place: **Saginaw (Mich.) News** operated 99 vehicles 2,473,190 miles without an accident.

• Third place: **Alexandria (La.) Daily Town Talk** operated 117 vehicles 2,405,676 miles without an accident.

Group C: Newspapers with daily circulation in excess of 100,000; 39 newspapers operated 1,128 vehicles 33,936,927 miles with 165 accidents.

• First place: **Wichita Eagle-Beacon** operated 62 vehicles 1,876,496 miles without an accident.

• Second place: **Tulsa World** operated 50 vehicles 1,370,567 miles without an accident.

• Third place: **Los Angeles Herald Examiner** operated six vehicles 598,553 miles without an accident. □

Carriers give editors news tips from their routes

Adult carriers at The Ledger in Lakeland, Fla. (morning, circulation 79,023), are doubling as news tipsters. Circulation Director Samuel Diaz said the newspaper has run several stories that originated from one of the paper's 200 carriers.

The Ledger's executive editor, Louis M. (Skip) Perez, said: "The carriers are our eyes and ears. They're really an indispensable news source."

Because the carriers are out early in the morning, they often see things like automobile crashes or fires and see or hear of other newsworthy events that reporters may not find out about until later, Perez said.

The carriers and district managers have been provided with a list of editors and photographers who can be called in predawn hours, Perez said. He and Managing Editor Bruce Giles try to attend breakfast meetings with the carrier force at least once a month to compare story ideas. □

Bismarck Tribune tries three-tier pricing

In a newspaper-business rarity, The Bismarck Tribune (morning, circulation 28,341) has begun charging three different single-copy prices—35 cents for weekdays except Wednesday, 50 cents for Wednesday and $1.25 for Sunday.

The Wednesday paper, which is the food-day edition replete with grocery ads and coupons, averages 48-52 pages, said Paula Redmann, promotion manager and human resources coordinator.

Other weekday editions, including Saturday, average 20-24 pages, and the Sunday paper averages 72.

"I've been wanting to try this for years," said William N. Roesgen, publisher of the Lee Enterprises Inc. paper. "Circulation is always higher on those two days (Wednesday and Sunday). Obviously there is a perceived greater value for those two papers."

The Tribune, which switched from an evening to a morning publication schedule April 6, instituted the three-tier price system June 7. Its vending machines were modified to accept the three different levels of payment on the appropriate days.

Roesgen said there has been no dropoff of circulation since the price change.

The Toronto Star also has three prices—$1 for the large Saturday weekend paper, 60 cents for Sunday and 25 cents weekdays. □

Papers adapt to law on aliens

Compliance with the new Immigration Reform and Control Act has not proved to be onerous, newspaper executives say.

In fact, some got a head start and began checking the citizenship status of new hires well before the law's requirement to do so kicked in June 1.

"It's no big deal for us," said Jo-Ann Bradley, human resources director for the Fort Myers (Fla.) News-Press, one of the newspapers that started checking earlier. "We thought the biggest problem would be in hiring night inserters for the mailroom, but it did not arise."

Still, some grumbles are being heard within the industry because of requirements of the new law, which went into effect Nov. 6 and provides criminal and civil penalties for employers who knowingly hire aliens not authorized to work in the United States [**presstime**, Dec. 1986, p. 70]. The U.S. Immigration and Naturalization Service, citing a delay in mailing a handbook explaining the law to employers, said it would wait until July 1 before issuing warning citations to employers who violate the law.

Newspaper executives say the biggest burden is going back and getting required documentation from people hired between Nov. 7 and May 31. Employers have until Sept. 1 to record on INS Form I-9 information about those employees, but for those hired after May 31 the form must be completed within three business days of the hire.

That documentation must be kept on file for possible inspection by INS personnel.

[The Senate in late May approved a budget-bill amendment that would, if enacted, suspend enforcement of the act's penalties on employers until Oct. 1.]

The St. Petersburg Times revamped its employment application forms before June 1 to explain the law to applicants and to tell them what documentation they must provide if hired. Acceptable documents include one showing identity, such as a driver's license with a picture, and one showing authorization for employment in the United States, such as an original Social Security card, a U.S. birth certificate or an unexpired INS employment authorization form. One form of identification that establishes both identity and employment eligibility is a U.S. passport. The employer must certify that the documents have been examined by a company representative.

In the beginning, said Allen R. Dwyer, personnel manager of the St. Petersburg paper, some job applicants were indignant when they found out they would have to prove their eligibility to work. "There's not too much resistance now," he said.

The burden of compliance is, of course, heaviest on those who hire many employees, especially newspapers like the Times that use employees to deliver. In 1986, for example, the Times hired 1,188 part-time and 313 full-time employees.

"It's another administrative chore," said Cleatis R. Carroll, personnel director for Donrey Media Group in Fort Smith, Ark. Carroll and others report squabbles with people who say they have lost their Social Security cards or who do not have a driver's license containing a photograph.

Gerald W. Wright, director of personnel and industrial relations for The Tampa Tribune, said the company makes a photocopy of all documents submitted, although that is not required by the law.

"It's a burden to follow up by the third day," he said. "Our adult carriers are employees scattered in 20 counties throughout the state."

Wright said a training program for circulation area and district managers was started to explain to them what they are required to do before they place a person on a route. "If you let a person slip through, you've got potential problems with the Immigration and Naturalization Service if they make an inspection. These people [carriers] never go through the personnel office" where the paper work is normally done by experienced people.

One of the largest employers in the newspaper business, the Los Angeles Times, is also in the state with the largest number of immigrants. The Times normally hires about 200 full- and part-time employees a month, said Gerald J. Alcantar, manager/staffing and policy communications.

The newspaper has conducted training programs for managers and supervisors in outlying offices to explain the law and the requirement that all applicants be treated the same. Alcantar noted that certain illegal immigrants can be hired until Sept. 1, 1987, if they certify they have applied or intend to apply for amnesty under an INS "special rule."

The law is "not difficult to apply," Alcantar said. "It's just the logistics. It will become commonplace."

ANPA member-newspapers desiring information about the new law should contact either the Human Resources Department or the Legal and Government Affairs Department at The Newspaper Center, Reston, Va. Also, INS has opened a toll-free, 24-hour hot line to provide information—(800) 777-7700.

—Clark Newsom

Ralph Barrera, Austin American-Statesman

A notice about the new law, in English and Spanish, is posted in the employment office of the Austin (Texas) American-Statesman.

Arbitrator sustains discharge in drug-testing case

The discharge of an Albuquerque Publishing Co. mailer for refusing to take a drug test has been sustained by an arbitrator.

The case is the second known arbitration in the newspaper business involving drug testing. In 1986, an arbitrator overturned the discharge of a truck driver at The Baltimore Sun for refusing to submit a urine specimen for drug screening [**presstime**, Dec. 1986, p. 69].

The Albuquerque case arose from a surprise search for drugs and alcohol at the company [**presstime**, July 1986, p. 74], which handles non-editorial functions for the Albuquerque Journal and The Albuquerque Tribune. Hearings have been concluded in another arbitration there involving the discharge of a mailer who tested positive for drug use; a decision is expected later this summer.

In upholding the mailer's discharge for refusing to take the blood and urine test, Arbitrator J.C. Fogelberg found "reasonable" a posted rule that states: "Employees who appear to be under the influence of alcohol, drugs or other substances . . . will submit to blood/urine or other accepted tests if requested to do so by the employer."

Fogelberg pointed out that the rule does not constitute random testing and is limited to those employees who appear to be "under the influence." The grievant had failed to pass a "field sobriety test" administered by the company's security director, who had extensive experience in giving such tests.

The arbitrator said the formulation of rules was reasonable "given the circumstances of drug usage and dealings in the plant." In 1985, a mailroom employee was injured on the job, and drugs were discovered to have played a part in the accident.

The grievant was represented by Mailers' Union No. 156, which had agreed to observe the company's rules so long as they did not conflict with the labor agreement. The arbitrator found the grievant was aware of the rule.

"The record does not support the charge of unreasonableness, bias or improper conduct on the part of management as the union has alleged," Fogelberg said. "Rather, it demonstrates that a serious problem existed, that management undertook a careful and somewhat lengthy study of the problem, and then implemented a wide-ranging program to deal with it." □

Additional arbitration awards

Des Moines Register, Mailers: Clifford E. Smith ruled that the company did not violate the labor agreement when it hired an extra crew to work on Sunday inserts, which deprived journeymen of overtime work.

Greensburg (Pa.) Tribune-Review, CWA: Irwin J. Dean Jr. upheld the union in finding that lifetime job guarantees in a labor agreement covering printers survived the agreement's expiration date.

Houston Post, GCIU: John F. Caraway sustained the five-day disciplinary suspension of a union steward for failure to obey a supervisor's orders.

New York Daily News, Deliverers: Janet Maleson Spencer reduced the punishment of a delivery department foreman who falsified payroll records; instead of being discharged, he was suspended for 21 months and demoted to driver.

Newsday, Long Island, N.Y., CWA: Daniel House upheld the dismissal of a disabled printer who had last worked in 1977.

San Jose Mercury News, Guild: William B. Gould IV found that a reporter was transferred in violation of the agreement.

Seattle Post-Intelligencer, Guild: Alan R. Krebs ruled that the company violated the labor agreement when it refused to allow a photographer to include seven letters from co-workers in his personnel file in response to a supervisor's warning letter.

Seattle Times, IBEW: Philip Kienast upheld the union by ruling that swing or graveyard shift premium pay should be included in the pay for vacations and holidays not worked.

Tacoma (Wash.) News Tribune, Mailers: Kienast ruled that job guarantees given mailers by the newspaper's former owner ceased when the paper's assets were sold.

Private investigation ignites NLRB case and lawsuit

Local 41 of The Newspaper Guild is appealing the refusal of a National Labor Relations Board regional office to issue a complaint against the Providence Journal Co. for investigating a Guild employee.

In a related action, the person who was investigated is suing the Journal Co. and a private investigative agency.

The case began when the Providence Guild filed charges with the NLRB alleging that the company violated the Taft-Hartley Act by hiring Equifax Inc. to check the background of Susan Zucker, the union's new interim administrator.

Michael F. Walsh, the NLRB acting regional director in Boston, concluded there was insufficient evidence that the company had violated the act.

"Essentially," he said, "the investigation extended only to the educational background and employment history of Zucker, and was ordered by the employer for the limited purpose of permitting the employer to become more knowledgeable about the professional qualities of the person with whom it could reasonably expect to be dealing in collective bargaining."

There was no evidence that the investigation unlawfully interfered with the administration of the union, Walsh said.

In a separate action, Zucker is suing the company and Equifax for $1,050,000. Filed in U.S. District Court, the suit alleges that the two companies illegally used computerized personal information about her.

The Guild represents more than 450 editorial and commercial employees at The Providence Journal and The Evening Bulletin. □

Wage and salary survey project expedited

Efforts by ANPA in conjunction with the Inland Daily Press Association and other newspaper associations to establish an annual, industry-wide wage and salary survey are progressing.

The ANPA Board of Directors has designated the project "high priority" and directed that it be expedited. ANPA Senior Vice President Thomas C. Fichter said a proposal for conducting the survey and disseminating the information gathered soon will be considered by an advisory group of newspaper compensation experts.

Planning for the survey began in October 1986 [**presstime**, Nov, 1986, p. 74]. □

After six-day Sunpapers strike, Guild comes to terms

The first U.S. newspaper strike in more than a year ended June 17 when striking editorial and commercial employees returned to their jobs at The Sun and The Evening Sun in Baltimore.

Non-union and supervisory personnel continued publication and distribution of the two papers during the six-day strike by Local 35 of The Newspaper Guild. Members of five other local unions representing engravers, mailers, pressmen, printers and truck drivers observed the Guild picket lines.

The company rented trucks, driven by supervisory and managerial personnel, to deliver the papers.

"It is normal in the collective-bargaining process for disputes to arise," said Publisher Reg Murphy. "This one simply got out of hand."

The Guild struck one day after the labor agreement expired. Members of the same local representing editorial and commercial employees at The Washington Post have continued to work since their contract expired July 9, 1986.

Key issues in the Baltimore negotiations were general salary increases, payment of health insurance premiums and a two-tier wage system under which suburban reporters are paid less than those in the city.

The Guild had been seeking an annual 8-percent wage increase in a three-year contract. The company's final offer, which was accepted by the union's members, will increase wages an average of 4 percent a year. The top minimum pay for reporters with five years' experience will go from $700 to $790 in the final year of the contract.

The agreement also calls for employees to help pay for health insurance premiums for the first time. The premiums will cost employees up to $7 a week, depending on the coverage they choose. Under one available plan, employees will pay nothing. Future premium increases will be shared by the company and employees.

The two-tier wage system will continue, but the pay of suburban reporters will increase from 50 percent to 60 percent of city salaries at the end of the three years.

Guild members ratified the new agreement 258 to 110 in a paper-ballot vote.

The Sunpapers were purchased in 1986 by The Times Mirror Co. of Los Angeles. □

Union members form picket line at entrance to Baltimore newspaper building.

Pension plan covering UPI technical workers will be terminated

A pension plan covering technicians and operators at United Press International who are represented by Division 47 of the United Telegraph Workers is being phased out under an agreement with the union.

But contrary to published reports that the plan would be terminated Aug. 1, Division 47 Chairman and Secretary-Treasurer Gerald Balistreri said in late June that no termination date had been agreed to by union members of a joint pension committee. The committee has three union representatives and three from the company.

He said the union had agreed with UPI to terminate the plan "as soon as possible" during negotiations for the most recent labor agreement. It did so when it also agreed to the elimination of 16 of 51 jobs [**presstime**, Jan. 1985, p. 66].

The wire service proposed terminating the plan Aug. 1, but Balistreri, who is one of the plan's six trustees, said he "has no figures" on which to base a decision and needs more time.

Under the termination plan, pensioners would receive an annuity that would pay them an amount equal to or more than their current pensions. Balistreri said 27 employees represented by Division 47 are still working at UPI. Plan participants who have not retired would receive lump-sum payments under a formula to be determined by the trustees.

UPI said the plan is over-funded and that a notice of the intent to terminate it will be filed with the federal Pension Benefit Guaranty Corp., an agency within the U.S. Department of Labor. □

Recent contract settlements

San Francisco Newspaper Agency, Guild: Forty-three-month agreement covering editorial and commercial employees, retroactive to July 1, 1986.

Seattle Post-Intelligencer, Guild: Four-year agreement covering editorial and business office employees, effective July 22, 1986.

Seattle Times, Guild: Four-year agreement covering editorial and commercial employees, effective July 22, 1986.

(Details in July 1987 ANPA Labor & Personnel Relations Letter.)

The Pulitzer Team from left, Flora Rathburn, metro editor; Andy Schneider, public health writer; Vince Musi, photographer; Angus McEachran, editor, holding Pulitzer Gold Medal; Henry Daubner, editorial writer; Matthew Brelis, general assignment reporter; Madelyn Ross, managing editor. Missing is Rob Rogers, editorial cartoonist.

JOURNALISM'S HIGHEST HONOR SHARED WITH THE TEAM

When the winner of the 1987 Pulitzer Gold Medal for public service was announced over the wire at The Pittsburgh Press, the spotlight was on Andrew Schneider and Matthew Brelis. It was their documentation of medical and substance abuse problems among commercial airline pilots that led to major reforms in pilot medical reviews—and increased passenger safety.

Yet Schneider and Brelis were the first to shine the spotlight elsewhere, to recognize metro editor Flora Rathburn, who edited the series; photographer Vince Musi, who illustrated it; the many staff members who helped in numerous other ways; and the editors who have made a commitment to in-depth reporting.

The efforts that led to the second consecutive Pulitzer for The Pittsburgh Press represent a commitment to excellence that dominates the newsroom.

Two in a row isn't luck.

Rather, it's proof of the value of leadership that motivates, requires journalistic quality and integrity and demands the best from each individual for the sake of the team.

The results are worth gold. Ask anyone at The Pittsburgh Press.

SCRIPPS HOWARD NEWSPAPERS

COMMITTED TO EXCELLENCE

New York Daily News settles race-discrimination suit

The New York Daily News reached an out-of-court settlement June 10 with four black editorial employees who had sued the newspaper for racial discrimination.

A Manhattan federal District Court jury found in April that the newspaper had discriminated against the four between 1979 and 1982 by giving them fewer promotions and lower salaries than were given white editorial workers with comparable experience and qualifications.

The settlement, undisclosed by the parties but widely reported as a $3.1-million package, came two days after the damages phase of the case began June 8 [**presstime**, June 1987, p. 102].

John M. Dunleavy, assistant to Daily News Publisher James Hoge, would neither confirm nor deny the $3.1-million figure. He said Hoge had no comment on the settlement beyond a joint statement by the News and the plaintiffs. That statement said the settlement was "a method of putting this unfortunate dispute to rest while accommodating the interests and concerns of both sides."

The settlement also enabled the News to resolve a related suit brought by the federal Equal Employment Opportunity Commission.

David W. Hardy, the lead plaintiff, said the settlement "bodes well for the future of minorities at the News, as well as the paper itself."

About $1.5 million of the settlement will reportedly go for lawyers' fees and other expenses, such as repaying a $90,000 loan from New York Local 3 of The Newspaper Guild, half of which was a loan to the local from the parent union. The plaintiffs will divide the rest. □

Judge reduces $550,000 award in discharge case

A judge has reduced from $550,000 to $64,000 a jury's award of damages to a discharged classified advertising manager at the Visalia (Calif.) Times-Delta.

A jury had awarded Mark Johnson $325,000 for breach of implied contract, $75,000 for negligent infliction of emotional distress and $150,000 in punitive damages [**presstime**, April 1987, p. 62].

But Judge David L. Allen threw out the award for emotional distress and punitive damages. And he reduced to $64,000 the "excessive" damages for breach of contract.

He said the jury's awarding of $325,000 was based on the assumption that Johnson's level of income would never match or exceed the salary he received at the Times-Delta. There was no evidence that Johnson would continue to suffer a loss of earnings the next 27 years of his work life as the result of his discharge, the judge said.

Johnson refused to accept the $64,000 and has appealed to the California Court of Appeal.

(Johnson v. Visalia Newspapers Inc., No. 122968) □

Newspapers shut down in British Columbia during general strike

Ten of the 17 daily newspapers in British Columbia were among the casualties when up to 300,000 union members participated in a 24-hour general strike.

Among those not publishing on the day of the demonstration, June 1, were the dailies in the province's two principal cities, Vancouver and Victoria. Also, The Globe and Mail of Toronto was unable to print its national edition in Vancouver but shipped in copies printed in adjacent Alberta.

The strike was called by the British Columbia Federation of Labor to protest proposed changes in the province's labor laws that would reduce the power of unions. The legislation would, among other things, put restrictions on the ability of unions to strike.

All industries in British Columbia were crippled by the strike, and union leaders warned the government that more demonstrations can be expected unless the labor bill is withdrawn. □

Minimum wage increase set in Ontario, Quebec

The general minimum wage in the Canadian provinces of Ontario and Quebec will rise from $4.35 to $4.55 an hour effective Oct. 1, 1987. The increase amounts to 4.6 percent, and the rate will be reviewed annually.

In the United States, bills are pending in Congress to increase the federal minimum wage in three steps from the current $3.35 an hour to $4.65 by Jan. 1, 1990. □

A Proven Sales Training Program with a Money Back Guarantee. Impossible, right?

It's true. You can invest in a training program for your salespeople that is guaranteed to bring you plus business or your money back.

We are **American Consulting Services** in Vancouver, Washington and we have developed a marketing program for the newspaper industry which involves selling against the Yellow Pages. As of today, more than 200 dailies in the United States and Canada have invested in our services and the results they are having are unbelievable. Millions of dollars have already been recaptured by newspapers around the country by utilizing our simple consulting techniques. You have an opportunity this year to slow the growth of the Yellow Pages in your market with absolutely no down-side risk.

How can we offer a guarantee on sales training? Because we teach a 5½ hour **How-To** session rather than some philosophical overview. We train your people on what to say, when to say it and how they can consult their way into a sale. Then we spend about an hour with your managers and supervisors sharing implementation techniques that 200 other newspapers have utilized. We sell results. It's as simple as that.

Guarantee

If your salespeople don't recover the investment of our seminar within 30 days of your kickoff, we will return to your community, go out with one of your people and write the business for you. If we fail to do so within 10 days, we will issue a refund.

By the year 2000, 2 out of 3 Americans could be illiterate.

Read that again, just to be sure you read it correctly.

Because, believe it or not, it's true.

Even today, about one American adult in three can't read adequately. And, each year that goes by, reading skills continue to decline while the standards for literacy keep rising. By the year 2000, Americans will need greater reading skills than ever before, but fewer Americans will have them. If these trends continue unchecked for two decades, *U.S. News & World Report* envisions an America with a literacy rate of only 30%. Which means that the average person with three grandchildren could find that two of them are considered illiterate.

Before that America comes to be, you can stop it by joining the fight against illiteracy today. It takes no special qualifications. If you can read, you can tutor or help us in countless other ways. You'll be trained to work in programs right in your own community, sharing the satisfaction of seeing people learning and growing. And you'll know that you're not just helping them but their children and grandchildren, too. Because you're stopping illiteracy before it reaches them.

So join the effort. Call the Coalition for Literacy toll-free **800-228-8813.** You'll be fighting illiteracy for generations to come.

Volunteer Against Illiteracy. The only degree you need is a degree of caring.

Ad Council

Coalition for Literacy

ANPA state-by-state survey details record newsprint consumption

Daily newspapers in the United States consumed a record 8,865,127 metric tons of newsprint in 1986, an increase of 1.6 percent from the previous record of 8,724,521 tons set a year earlier.

ANPA's annual state-by-state survey of newsprint consumption also shows that Vermont had the largest percentage increase between 1985 (7,486 tons) and 1986 (8,716), 16.4 percent. Next highest were New Hampshire (9 percent), Virginia (8 percent), Maine and Maryland (7.2 percent each) and Wyoming (6.4 percent).

New York, which used 924,216 tons, had the biggest increase in actual tonnage consumed—19,967 tons. California remained the number-one state in newsprint consumption, using 1,209,945 tons—13.6 percent of the national total.

Net increases were recorded in 32 states as well as in the District of Columbia.

Alaska had the largest percentage decrease, 10.6, or 2,480 tons. Texas had the biggest decrease in tonnage 38,174 tons (710,621 vs. 748,795).

Regionally, the Northeast had the largest percentage increase in newsprint use between 1985 (2,139,702 tons) and 1986 (2,215,977)—3.6 percent. The North Central states followed at 2.2 percent. Then came the South at 0.7 percent and the West at 0.2 percent.

The annual ANPA survey [presstime, July 1986, p. 81] covered 1,751 general-circulation daily newspapers as well as some foreign-language, college and special-service dailies such as trade newspapers. Together, they accounted for 74.3 percent of 1986's estimated newsprint consumption by all U.S. users of 11,937,000 tons—an increase of 3 percent and also a record. All users include weekly newspapers, commercial printers, free-distribution publications, comic sections and the government.

The 1.6 percent increase in consumption by U.S. dailies supersedes a preliminary estimate that had indicated an increase of 2.5 percent [presstime, March 1987, p. 72]. The preliminary estimate was based on stratified data from newspapers in ANPA's statistical sample.

The new consumption report was based on a poll of every daily newspaper in the United States. □

CPU, Abitibi-Price ratify new 3-year contract

The Canadian Paperworkers Union and Abitibi-Price Inc. ratified an agreement in June on a new three-year contract.

Workers will receive a 25-cents-an-hour increase in the first year, 45-cents-an-hour increase in the second and a 4.5-percent raise in the third.

The contract also includes better pension benefits.

Union membership had approved a strike vote in May [presstime, June 1987, p. 108], but the subsequent agreement averted a walkout.

However, members of the CPU and the Pulp, Paper & Woodworkers of Canada held a peaceful strike June 1 that idled 18 mills in British Columbia for a day. It was part of a province-wide strike called by the British Columbia Federation of Labor to protest a legislative measure that would give employers and the government broader powers to intervene in labor negotiations. (See story, p. 72.)

The BCFL has threatened to repeat the work stoppages until the proposed legislation is dropped.

In the United States, negotiations continue between the United Paperworkers International Union and Inland Empire Paper Co. at Inland's Millwood, Wash., mill and between the Association of Western Pulp & Paper Workers and Boise Cascade Corp. at its Steilacoom, Wash., mill. The contracts expired May 31. □

We're making news in newsprint technology.

May consumption climbs for dailies, others

Newsprint consumption for all U.S. users in May was 3-percent higher than May 1986. The consumption increase for the first five months of the year was 2.3 percent.

For U.S. daily newspapers, consumption increased 5.1 percent in May and 3.6 percent for the five-month period.

Production at Canadian mills increased 4.2 percent in May and was up 6 percent for the five months.

U.S. production was 1.8-percent above the May 1986 figure and 1.7-percent higher for the five months.

The May operating rates were 97 percent for Canadian mills and 94.2 percent for U.S. mills.

Domestic shipments from U.S. mills in May increased 3.3 percent from the same month a year earlier, while exports decreased by 16.2 percent.

Canada's May shipments to the United States increased 4.6 percent, while those within Canada were up 3 percent and those to overseas customers rose 13.2 percent.

How FMC systems keep business in motion

FMC systems integration. The power to offer you a complete line of roll handling equipment, software, and technical service. Designed to work in harmony. Keeping complex systems in motion, reliably and efficiently, day after day.

That's why the nation's leading dailies have turned to FMC for over twenty-five years for their roll handling needs. Because FMC knows the newspaper business can never stop.

If you're looking for a total roll handling system—start with a good role model. Contact FMC Corporation, Material Handling Systems Division, 3400 Walnut Street, Colmar, PA 18915. (215) FMC-2487, Telex 846491. In Canada: FMC of Canada Ltd. Material Handling Systems Division 650-2 Hood Rd., Markham, Ontario L3R4S7, Canada (416) 474-7500, Telex 06-986282.

Soybean-oil ink tests continue; good mileage, vivid colors cited

Testing of both black and process color ANPA-INK® has been more extensive in recent weeks, and preliminary findings are similar to those from earlier, more limited testing of the soybean oil-based ink—good "mileage" and smooth "lay-down."

However, production executives at some of the offset and letterpress-printed newspapers where the ink is undergoing scrutiny said additional testing with larger quantities is needed to determine whether the ink will live up to its early promise.

Especially promising, at least in the early going, is the process color ANPA-INK.

Michael W. Mylett, general manager of General Printing Ink, believes the color ink will gain popularity quickly because it prints so vividly. GPI, a division of Sun Chemical Co., is one of the holders of an ANPA-INK license.

Newspapers and ink companies aren't the only ones excited by the potential of the ink's success. According to the American Soybean Association, farmers clearly would welcome a new market for soybeans because bumper crops in the past have kept prices low.

The soybean group said 500,000 bushels are currently stockpiled. It estimated that even if all newspapers switched to soybean-based ANPA-INK immediately, there are enough soybeans currently in storage to manufacture all the newspaper ink the United States will need for the next two decades.

Most newspaper inks currently in use have a petroleum base, and ANPA-INK enthusiasts emphasize that unlike the volatile market conditions that send oil prices up and down, soybeans would be a fairly stable commodity for ink manufacturing. The ink was also developed to address environmental concerns.

A sweeping switch to soybeans won't occur, of course, until wider testing over a longer period of time is accomplished. George Cashau, ANPA director/technical research, believes that will happen as more companies make the ink and more newspapers try it.

GPI is producing ANPA-INK in bulk quantities, and other companies may do so after the ink has undergone more field testing.

At The Ink Co., Robert B. Throckmorton, manager/sales and marketing, said there is a "tremendous amount of interest" among his newspaper customers in ANPA-INK. The company has produced small amounts of the ink, but customer demand has not yet dictated tanker-car-sized batches, said The Ink Co. executive.

GPI's delivery of black soybean-oil ink in a 2,300-gallon-capacity tanker attracted farmers and news media to the Cedar Rapids (Iowa) Gazette one day in May [**prestime**, May 1987, p. 11].

Of late, that offset newspaper has been using ANPA-INK for all its printing, including commercial jobs. "We're encouraged by the way the ink lays down and by the way it performs on the press," said Lon Myers, director/operations.

Meanwhile, soybean ANPA-INK tests are being conducted on letterpress presses at The Post-Standard and the Syracuse (N.Y.) Herald-Journal. Production Manager Michael Stern has pronounced the results good—and far superior to an earlier formula tried at the newspapers more than a year ago.

"My initial reaction has been very enthusiastic," Stern said, after printing eight pages on one letterpress unit with the soybean ink. "For all practical purposes, you couldn't tell the difference between the soybean ink and the oil-based ink we normally use."

Letterpress ANPA-INK also was tested at The Home News of New Brunswick, N.J., during one press run in late May. James P. Quinn, vice president/operations, said the test involved newsprint from four different mills. The newspaper ran black ANPA-INK and conventional process color ink to print the newspaper's front page, Quinn said, and detected no "appreciable difference between the soybean ink and the standard ink the newspaper normally uses."

The Syracuse and New Brunswick papers plan more extensive testing with larger quantities of ANPA-INK this summer.

One matter for further study is ink rub-off. Both Quinn in New Brunswick and Myers in Cedar Rapids said it was more pronounced with ANPA-INK. But Quinn called the difference "not significant," and Myers noted that his paper had been using a low-rub ink prior to switching to ANPA-INK.

So far, those testing ANPA-INK generally have been pleased not only with its printing performance but also in its mileage—the amount of ink used in a press run. Even if it costs more, ANPA-INK can be cost-competitive because of the mileage factor, Myers said. He plans to compile extensive mileage data over the course of the summer.

Task Force addresses need for standards in electronic-photography transmission

The ANPA Wire Services Guidelines Task Force will attempt to devise voluntary technical codes and standards needed by wire services, equipment manufacturers and newspapers to transmit pictures digitally now that electronic photography is being introduced to the newspaper business.

Now is a good time to examine the question of technical compatability—the ability of computers to "talk to one another"—before various parties step out in divergent directions in electronic photography, said Task Force Chairman James D. Hitchman, vice president/production of Ottaway Newspapers Inc., Campbell Hall, N.Y.

The task force discussed the situation at a meeting held during ANPA/TEC '87 in Las Vegas in June. The panel currently is studying a proposal on electronic photography codes submitted by the International Press Telecommunications Council, which also met during ANPA/TEC.

Hitchman said anyone interested in the matter should contact him or Donald V. Teschner, ANPA technical services engineer, The Newspaper Center, Reston, Va.

One of the wire services represented on the task force, the Associated Press, held a seminar during ANPA/TEC to introduce the electronic PhotoStream system it plans to have in place within a year.

AP officials explained to more than 150 photo editors and other guests that electronic photography requires analog material to be translated into digital form. Analog material is represented by a continuous current, whereas digital information is transmitted through a series of on and off pulses.

The objective is to keep photographs in digital form as much as possible until time to print them. "The purpose is to reduce quality loss associated with pictures printed on photographic paper and quality lost in the engraving cycle," said Harold G. Buell, AP assistant general manager/newsphotos.

A picture taken in the field will be developed and transmitted over a fiber-optic circuit to the nearest control center in Los Angeles, Chicago or Washington, D.C., where digital identifications will be added. The control centers will then send the photographs to New York City.

From an "uplink" there, in a minute or less, a high-speed digital circuit called T1 will beam the impulses for the photograph up to a satellite and then back down to satellite dishes at AP-member newspapers. Finally, it goes to the newspapers' electronic darkroom or to a LaserPhoto receiver.

Color photographs that once took 30 to 40 minutes to transmit will take three minutes or less, while black-and-white photographs will take less than a minute.

Once received, photographs will be cropped, enhanced and color-adjusted on a computer terminal screen. They will be stored (up to 1,000 frames) or sent to whatever prepress system the newspaper uses. □

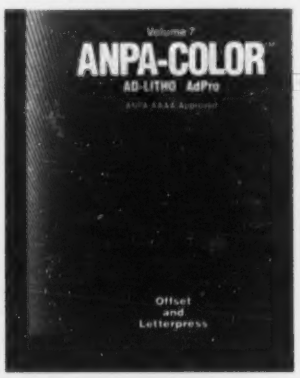
ANPA publishes updated, expanded color ink book

Orders are now being accepted for the *ANPA-Color™ AD-LITHO AdPro® Offset and Letterpress ROP Newspaper Color Ink Book, Vol. 7.* Updated for the first time since 1981, the book specifies ANPA's new run-of-paper colors.



It is intended to provide newspapers, advertisers and ad agencies with an exact visual sample of 50 colors. There are three ANPA-COLOR™ process colors, four blending inks, a mixing white, four spot colors, and 38 assorted mixes created from the eight basic inks.

The new book also contains offset and letterpress ink formulations. AD-LITHO is the offset ink and AdPro is the letterpress ink.

Ink companies are submitting ink samples to ANPA for testing and certification that they meet the book's color specifications [**presstime**, May 1987, p. 114]. The book has an August 1987 publication date.

The book, which combines letterpress and offset colors into one volume, was produced by ANPA with the assistance and cooperation of its Color Standardization Task Force, the American Association of Advertising Agencies, and the News Ink Committee of the National Association of Printing Ink Manufacturers.

The new volume supersedes both the *AD-LITHO/81 Offset, Volume 2* and the *AdPro/81 Letterpress, Volume 6* ROP newspaper color ink books dated January 1981. It is the only color ink book recommended by ANPA and AAAA for both offset and letterpress newspaper printing.

Newspapers are encouraged to use the standard colors in the *ANPA-Color* book in order to ensure consistent and superior quality color reproduction. The book is third in a recent series of guides designed to improve newspaper reproduction. The other two are *The Guide to Quality Newspaper Reproduction*, which was published in 1986 and "ANPA-Check," in 1987.

Orders for the new ink book are being accepted by the ANPA Technical Services Department at The Newspaper Center, Reston, Va. Cost is $50 for one to nine copies or $45 for 10 or more. For more information, contact Teresa Fletcher at (703) 648-1210. □

They printed 23,000 issues of the Polka City Rustic Republican and 250,000 copies of the Mink Madness Sale Catalogue, all on the same day, all on the same press.

You can get that kind of speed and versatility with a Solna Distributor 30 web offset press.

The exclusive 2 + 1 printing unit lets you print two colors on top of the web, one color on the bottom. Three pairs of cylinders give you three different web threading options. Combine 2 + 1 units with standard 1 + 1 perfecting units and the possibilities are endless.

Add the F36 folder and you can run up to eight webs on one former. For newspapers only, add the high performance F40 folder and run up to 12 webs.

All this, and no bearers. The Distributor doesn't need them, doesn't have them. The unique cylinder arrangement lets you quickly adjust blanket-to-blanket pressure with a simple handwheel—even while the press is running. You change stock thicknesses in a flash. You finish a long run without time-consuming readjustments.

From the bearer-free design to the one-man paper loader to the one-panel start-up system, every aspect of the Distributor 30 is geared to rapid changeover, quick make-ready, and high-speed printing—up to 30,000 iph. It's not surprising that there are over 4,000 units in use worldwide.

If you're in the market for a proven press that combines speed and versatility, write to us at the address below. For fast action, call toll free.

Precision Printing Equipment From Sweden

6050 Connecticut Avenue
Kansas City, MO 64120

TECHNOLOGY NOTES

• Under agreements signed recently, Computer Peripheral Sciences, a manufacturer of newspaper display advertising and pagination equipment, will **market a variety of products** as part of its Total System Concept product line.

CPS will market the IBX, a 1000 dots-per-inch typesetter manufactured by Celgraph, and Xitron Corp.'s XIP laser printer.

The firm also obtained exclusive newspaper marketing rights to a color separation and composing system made by Media Net.

• The **USA Today/ Gannett Online Library** will be available on DataTimes' electronic archives, beginning Sept. 1. DataTimes subscribers currently have access to 170 U.S., Canadian and Australian newspaper, newswire and business databases.

TECHNOLOGY CALENDAR

• A **Desktop Publishing Conference for Newspapers,** sponsored by the National Newspaper Association, will be July 9-11 at Infomart in Dallas.

• The **Seybold Seminars' Desktop Publishing Conference** will be Sept. 9-12 at the Santa Clara (Calif.) Convention Center.

• **Impact 1987: Technology on the Move,** the annual conference of the New England Newspaper Operation Association, will be Sept. 17-20 at Killington Village in Killington, Vt.

• The annual **Western Newspaper Production Conference** will be Sept. 24-26 at the Westin Bayshore Hotel in Vancouver, British Columbia.

• **Graph Expo '87** will be Nov. 15-18 at McCormick Place in Chicago.

MICRO-ARTS WELCOMES YOU TO THE FUTURE!
THE FUTURE OF COMPUTER GRAPHICS

COME JOIN THE FUTURE TODAY...

••• The MICRO-ARTS system is the latest computer graphics workstation especially designed for the newspaper industry.

••• The MICRO-ARTS PC-based enhanced graphics workstation is the most flexible workstation available today. It's capable of producing a wide range of output creations.

••• The MICRO-ARTS system is not only an editorial tool. Its flexibility extends to your advertising, marketing/research and promotion departments. It can be used for enhancing your sales force on sales opportunities, and creation capabilities with research materials.

If you're not taking advantage of the MICRO-ARTS system today you're not making the best use of your computer graphics capabilities.

Enhancement sought in desktop publishing for newspapers

With the purchase of an Apple Macintosh SE, an Apple LaserWriter and a 20-megabyte hard disk, ANPA will conduct research into ways that "desktop publishing" can be improved for newspapers.

In desktop publishing, a personal computer is linked to a laser printer for camera-ready typesetting on plain paper. Some newspapers are satisfied with laser-printer reproduction of 300 to 400 dots per inch, but ANPA computer researchers said much higher resolution is necessary for consistently sharp reproduction.

Desktop-publishing hardware and software are relatively inexpensive and require little instruction for use, factors many publications are finding attractive.

In the newspaper industry, the technology is being embraced primarily by small dailies and weeklies [**presstime**, March 1987, p. 22]. By and large, though, newspapers are taking products made for a general audience and modifiying them for newspaper use.

"We would like to experiment with the equipment to see if there are better ways of adapting desktop publishing for newspapers," said George Cashau, ANPA director/ technical research.

Preliminary plans are to conduct research with various types of software to gauge usefulness for newspapers and to determine the printing potential of the software. Knight-Ridder Inc. is donating to ANPA hookup time on its graphics network, PressLink, through which a variety of line art is received. □

Marketing agreements announced

Hell Graphic Systems Inc. and 3M have agreed that Hell will be the exclusive North American distributor for a new color-modification and image-enhancement system developed by 3M.

Known as CWS, the system can be linked to Hell or other scanners. It performs a variety of pre-press functions, including dot etching and masking. Images can be viewed as they are being scanned.

Another marketing agreement has been signed by the Controls and Composition Division of Harris Corp. and Linotype.

The agreement links the Harris 8300 Page Layout System with Linotype's Linotronic 300 and 500 imagesetters and the Linotype Graphics System. □

Conrad Black acquires Unimedia; Horvitz holdings put up for sale

Amid protests from the Parti Quebecois, owners of Unimedia Inc. on June 18 closed their deal to sell the French Canadian newspaper company to Toronto publisher and financier Conrad Black.

Black's company, Hollinger Inc., reportedly will pay about $90 million to take control of Unimedia, the Montreal-based owner of French-language dailies in Quebec City, Ottawa and Chicoutimi, Quebec.

Black will manage the Unimedia holdings in partnership with the company's current owners, Jacques G. Francoeur and Jean-Guy Faucher. Francoeur, Unimedia's 62-year-old president and majority partner, decided to sell because none of his four children has expressed interest in running the company.

The purchase further expands Black's media empire, which includes 57.8 percent of The Daily Telegraph in London, nine Canadian dailies and 23 dailies in the United States [presstime, May 1987, p. 6].

Through American Publishing Co., the U.S. unit of Hollinger Inc., Black reportedly plans to buy about 10 U.S. newspapers this year in the circulation range of up to 25,000 daily.

BUSINESS ROUND-UP

In other business news concerning newspapers:

• The five **Horvitz** family newspapers are on the block and are attracting interest from numerous media groups. The dailies—four in Ohio and one in New York—could sell for as much as $300 million, according to industry analysts.

Publisher Harry Horvitz said in late June that about 15 newspaper groups, out of 40 that made initial inquiries, were in the running to buy the papers.

The Horvitz papers carried front-page stories reporting the family's disagreements and plans to dismantle its $700-million empire by July 31. Besides the five dailies, it includes nine cable television franchises in Ohio and Virginia, a real estate firm in Florida and a road construction company in Ohio.

• Another family dispute has left **Freedom Newspapers** intact. After 30 days of trial, a California judge dismissed Harry H. Hoiles' five-year lawsuit against the families of his sister and late brother over control of the California-based group, which owns 29 newspapers and several television stations. The judge said he had found "no pervasive abuse of authority or persistent unfairness" by Hoiles' relatives.

Hoiles' attorney said an appeal is probable [presstime, April 1987, p. 75].

• **USA Today** turned a profit in May for the first time in 55 and a half months of publishing. Gannett Co. long had projected the paper's profitability for the fourth quarter of 1987.

Although the first black ink flowed earlier than projected, officials said they expect the paper to dip back into the red during the summer before turning a "meaningful profit" in the fall quarter.

The national newspaper (daily circulation 1,311,792 plus bulk sales of 279,997) had an operating profit of $1.1 million in May. For the first five months of 1987, advertising pages increased 22 percent and advertising revenues were up 45 percent.

• **USA Weekend**, the Gannett-owned newspaper magazine, as of June 19 was carried by 274 newspapers with a circulation of about 14 million.

The circulation of its rival, **Parade**, was 31.8 million through 303 newspapers. Parade said additional contracts will push those numbers to 32 million and 309 newspapers by Sept. 13.

• **Guy Gannett Publishing Co.** and **Ingersoll Publications Co.** reached agreements in May to control large groups of suburban newspapers in Minneapolis-St. Paul and Long Island, N.Y., respectively.

Guy Gannett plans to complete the acquisition this summer of Minnesota Suburban Newspapers Inc. and Post Publications Inc. The former publishes 19 weekly community newspapers and one shopping guide with a combined circulation of 298,000. The latter publishes five weeklies and four shoppers with a combined weekly circulation of 254,000 in the northwestern suburbs of Minneapolis.

Ingersoll is forming a joint venture partnership with Chanry Communications Ltd. of Farmingdale, N.Y., which publishes 47 free-distribution newspapers throughout Nassau and Suffolk counties, Long Island. The papers have a combined circulation of 575,000.

• **The Washington Post Co.** and CBS Inc. have agreed to sell their partnership interests in SportsChannel cable networks to the third partner, Cablevision Systems Corp.

Neither the Post nor CBS would disclose terms of the agreement, which is expected to close by the end of the year. But Cablevision Systems Corp. said the transactions are worth about $56.2 million. The Post expects an after-tax gain of about $6 million.

• Although he missed a previously announced June start-up date, a **Cleveland** restaurateur said he hopes to complete financial arrangements soon for his **proposed new daily newspaper** [presstime, Oct. 1986, p. 71]. J. Charles Fox said 40 Goss press units he purchased are being converted to flexographic printing. He is projecting paid circulation of 250,000 for his weekday morning paper and its Saturday weekend edition. □

New INMA book helps evaluate effectiveness of newspaper promotion

Managers can read about the latest techniques to monitor, measure and improve promotion programs in a new research manual, *Evaluating the Effectiveness of Newspaper Promotion*.

The 124-page book, published by the International Newspaper Marketing Association, establishes "measures of performance that work," said Michael G. Kane, assistant to the executive director of INMA and one of the book's authors.

"Recent studies have shown that newspaper promotion spending has increased to the point that measures of promotion performance are necessary to justify a worthwhile investment," Kane said.

The book covers circulation, advertising and other promotions.

Eight chapters examine steps in the process of evaluating promotions, such as goal setting, telephone surveying and copy testing. An appendix provides examples of methods used by several newspapers to measure the impact of their promotion programs, including blank questionnaires and other forms that any newspaper can use or tailor to their needs.

Copies are available for $37 each for INMA members or $47 for non-members from INMA, The Newspaper Center, 11600 Sunrise Valley Drive, Reston, Va. 22091. □

UPI to replace computer system

United Press International said it signed a five-year, $4.75-million contract with Digital Equipment Corp. for a new, worldwide computer system.

Christopher J. Smith, UPI director of corporate communications, said the system will multiply the wire service's computer storage capacity 12-17 times. UPI's existing editorial computer system is a Sperry Rand installed in 1969. It handles about 13 million words a day, which is close to its maximum, Smith noted.

DEC will provide all hardware and software and related needs, including more than 800 editorial terminals.

Smith said the new equipment eventually will interact with UPI's new electronic photography system, Pyxys. It also opens up possibilities for UPI to enter the commercial database business, he said. □

Recent acquisitions

The R. H. Fackelman Group of Panama City, Fla., acquired The Daily News of Richmond, Mo., circulation 3,905, from the Enterprise Group of Slidell, La.

Harmony Press Inc. of Slidell, La., acquired the Daily Times of Slidell, circulation 6,590, from the Enterprise Group of Slidell.

Griffin Lovett and DuBose Porter of Dublin, Ga., acquired The Courier Journal of Dublin, daily circulation 10,166. □

Correction

Part of the description of newspaper acquisitions by the Liverpool Daily Post and Echo Ltd. in the May issue was incorrect.

The group, now known as Trinity International Holdings plc, in addition to acquiring The Daily Calumet in Chicago in 1980 also acquired the weekly Calumet Day and two groups of Illinois weeklies, not three Illinois weeklies as reported. The group's 1978 purchase in Pittsburgh was of 11 weeklies, not 9. The group's acquisitions continued with another group of Illinois weeklies added in 1982 and a group of weeklies in the Pittsburgh area in 1983.

Presstime regrets the errors. □

Hart appearance ranks high in Convention survey

The dramatic appearance at the May ANPA Convention by then-presidential candidate Gary Hart was rated most valuable by people returning a post-Convention questionnaire.

Convention attendees were asked to rate sessions on their value, using a scale of 1 to 6. Other highly rated segments were the seminar "The Constitution: Separation of Powers 1987"; the appearance of U.S. Sen. Robert Dole (R-Kan.), who spoke at the same ANPA luncheon as Hart; the panel discussion on the future of retailing; and the appearance of Nancy Reagan at the Associated Press luncheon.

President Reagan did not fare as well as his wife in the ratings. The Convention's opening ceremonies on Ellis Island at which the President spoke was among the lowest-rated program segments. Written comments indicated that much of the dissatisfaction related to the bad weather and transportation and other logistics problems associated with the event.

A total of 210 persons responded to the mailed survey. □

Calgary stampedes for Herald promotion

The Calgary (Alberta) Herald received more than the usual reader response from a recent promotion.

In conjunction with a Calgary radio station, the newspaper bought and gave away 13,000 tickets to a Beach Boys concert. One part of the promotion invited people to send in requests for tickets on company stationery. Those selected in a drawing would get tickets for the entire office.

Unexpectedly, some entrants attached their letters to things exemplifying their work. A plumbing supply firm sent a urinal. A prosthetic supply house sent two artificial limbs begging, "We'd give an arm and a leg for Beach Boys tickets!" A meat packer sent a calf's heart with a note saying, "Have a heart; send us some tickets."

The Herald received more than 75,000 entries to the promotion and reported a 6- to 8-percent increase in vending-machine sales during the six-week campaign.

Newspaper numbers

2,000—number of breakfasts held by Godfrey Sperling Jr., senior Washington columnist for The Christian Science Monitor, for print journalists and political guests from February 1966, when the event began, until late May.

11.5 million—number of visually impaired Americans who could benefit from larger type in reading material, according to the National Center for Vision and Aging.

1,667—number of newspaper audits conducted by the Audit Bureau of Circulations for the 12-month period ending June 30.

461,300—number of people in the United States employed in the newspaper business in 1986, a new high.

403.62—average dollars paid weekly to beginning reporters in Canada, according to 19 labor agreements on file at ANPA, compared with $369.57 in 123 U.S. agreements.

Jacksonville Journal photographer Bob Self makes an afternoon deadline by attaching film to the leg of a carrier pigeon, following a late-morning memorial service May 22 at Mayport Naval Station for sailors killed aboard the USS Stark. The Secret Service kept news media at the naval base until President Reagan could depart on Air Force One (in background).

The original selling price was 4 pence, but this Pennsylvania daily now costs more

An unidentified private collector paid $110,000 to an unidentified party for an original edition of the Pennsylvania Packet and Daily Advertiser for Sept. 19, 1787. That edition carried what is believed to be the first public printing of the U.S. Constitution.

The paper was sold at auction by Sotheby's auction house in New York City. The successful bid, offered by an agent, was four times the amount previously paid for a newspaper.

Sotheby's had estimated the copy would bring $50,000 in this, the year of the Constitution's bicentennial. In 1983, another copy of the Packet of the same date was sold for $23,400.

The Pennsylvania Packet had printed a copy of the Declaration of Independence in 1776. In 1784, the paper was consolidated with the Daily Advertiser—yes, mergers happened in the early years of the republic, too—and became the country's first successful daily, according to several journalism historians. Through subsequent mergers and consolidations, the Packet evolved into The Philadelphia Inquirer.

Freedom fillers

The Rocky Mount (N.C.) Evening Telegram is printing notable quotations about press freedom on its front page through July. The quotes, taken from the booklet "Speaking of a Free Press" published by ANPA Foundation, have been anchored at the lower left of the page since June 1.

"We have received a number of favorable comments from people around town," says Publisher Carl E. Worsley.

The booklet was mailed to ANPA-member newspapers in April [**presstime**, May 1987, p. 76].

Medium is message for Cleveland callers stuck on hold

When callers are put on hold at The Plain Dealer in Cleveland, they don't get the typical music-to-wait-by. Instead they get a recorded message about the newspaper with snappy musical accompaniment.

"We just thought it might be a nice idea, a way to keep someone's time . . . better occupied," says Katherine H. Luengo, telecommunications manager.

The messages are "friendlier" and more personal than music alone, she says. The newspaper uses the opportunity to promote special features and company-sponsored events.

They have gone over "fairly well," says Luengo. The only ones that weren't well-received promoted special advertising deals. They were vetoed by the paper's staffers, who also get the recordings when they call within the Plain Dealer plant.

Currently, some of the messages give interesting facts about the newspaper, including the number of rolls of newsprint used to print one day's edition, the number of carriers, and this one, which is probably of little solace to a stranded caller: "Did you know that during a normal business day, 5,000 calls are routed in and out of The Plain Dealer every hour? Yours is one of them. We appreciate your patronage."

The solution is UCARLOX™ Laser Engraved Ceramic Anilox Rolls. Once an anilox roll's ink volume capability starts to diminish, so does your printing quality. But, in a four or five hour press run, there's no stopping the presses to replace worn anilox rolls.

UCARLOX Laser Engraved Ceramic Anilox Rolls are designed for a long life of printing quality. A tough, corrosion-resistant ceramic surface is precision-engraved in a variety of screens and ink volume ranges by computer-controlled lasers. The result is improved ink metering and higher quality for both flexographic and keyless offset printing, making every part of your news fit to print. For a long time.

UCARLOX Laser Engraved Ceramic Anilox Rolls offer you lasting, high quality printing backed by comprehensive surface technologies and expertise.

For additional information, call George Pappaioanou, 1-800-UCARLOX. Or, write: Union Carbide Corporation, Coatings Service, 1500 Polco Street, P.O. Box 24184, Indianapolis, IN 46224.

Quality and commitment: The best in pictures.

"In news photography, the moment is a fragile thing. It's fleeting, sometimes even unseen by the naked eye. Our job as AP photographers is to make sure we do not miss that moment."

Bob Daugherty of The Associated Press is one of the top photographers in the Washington news corps and has spent 24 years at AP, capturing fragile moments on film, making them endure.

"It's an awesome responsibility. Sometimes you're the only AP photographer on a particular breaking story. And more than a thousand newspapers are depending on you for *the* definitive picture. There's no room for being second best."

Bob Daugherty's dedication is shared by AP photographers everywhere — whether covering a dangerous war, a routine press conference, or illustrating a feature. Sixteen Pulitzer Prizes attest to their skill and determination.

Thanks to modern communications, the images they shoot are shared almost instantaneously around the world, increasingly in color, for the benefit of the thousands of member newspapers and broadcasters who own AP.

Like Daugherty, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment of everyone in AP.

"A good picture is like a well-written story. AP photographers have a tremendous amount of pride in their product. They are, regardless of the assignment, shooting their best."

AP Associated Press
Quality. Commitment.

Diminishing Presence Of Independent Dailies

"If local newspapers don't tackle the big issues in their communities, no one will. We must devote the time, energy and resources to give our readers meaningful reports on community concerns—along with solutions. Our readers expect and deserve this in-depth reporting, and our communities are the better for it."

GANNETT

Why gamble with your color... when we offer you a sure bet

At Huber, we understand every aspect of newspaper production that can contribute to color quality. That's why we:

- Look into your plate preparation, color separation, print density and lay
- Analyze your present ink formula, ink/water balance, and the paper that you use
- Study your presses, their type, makeup, configuration, and their running speed
- Look at the overall appearance of your printed sheet — page set-off, smearing, rub-off and dot gain
- Investigate your delivery and handling procedures • Collect data on acceptance by your advertisers

We really get to know your operation. We compile our findings in a permanent record — and place your "Fingerprint" on file for future reference. Then, and only then, do we customize a color ink formula just for you — and we supply it with the consistency, dependability and service that have made Huber an industry leader for over a century. If you want quality color, don't leave anything to chance. Call on Huber today...it's a sure bet.

For more details about a comprehensive analysis of your operation, call Andy McDonnell, Market Manager, Newsinks (201) 906-1760.

Think ink...think Huber.

WHEN IT COMES TO POLLUTION CONTROL, MANY NEWSPAPERS ARE IN OVER THEIR HEADS.

Dan Sells, Vice President of Newspaper Sales at Western Lithotech, explains a new concept in cost-effective pollution control.

Dan, what is this concept?
Well, it involves two systems: Envirotech clean chemistry and a special processor called Eliminator.* And together, they are the best available technology for additive plate processing.

How do they work?
First, they're designed to work exclusively with Western Lithoplater® plate processors. Envirotech is a new, odorless developer and finisher chemistry – so clean it meets tough government regulations.

Then our new Eliminator system is connected to the Lithoplater processor, removing solids from effluent waste. So what goes down the drain is safe and virtually clear.

So what happens to the solid waste?
It's easily disposed of by your waste haulers.

Give me three good reasons why a newspaper needs the Envirotech and Eliminator Systems.
Here are four: EPA, OSHA and state regulations *and community responsibility.*

The big question: Just how much can these new systems save me?
Plenty! Consider the alternatives: government fines of up to $10,000 a day; possible shutdowns; personal injury suits; or designing an approved system of your own.

What about switching to a subtractive plate system?
It's less expensive to use Western. No start-up costs, personnel retraining or lost production time, and not all subtractive plate chemistries comply with EPA and OSHA guidelines.

What about other environmental additive chemistry on the market?
They just don't do the job, because additive plate processing produces polluting sludge. Our Eliminator makes all the difference. Remember, it's not just the chemistry which must pass government regulations *...it's what goes down the drain.*

The Choice is Clear.
For complete technical information, call 1-800-325-3310 (in Missouri, 314-225-5031). Or write Western Lithotech, 3433 Tree Court Industrial Boulevard, St. Louis, MO 63122.

CHAIRMAN'S CORNER

'A Celebration of Citizenship' should involve each newspaper and its entire community

Because of the major role ANPA Foundation is playing in the bicentennial celebration, I invited to be guest columnist this month Charles T. Brumback, chairman of ANPA Foundation and chief executive officer of the Chicago Tribune Co. *—George W. Wilson, ANPA Chairman*

September is, in many ways, the start of a new year. School begins. Vacations are over. Businesses and community organizations launch new projects.

This September marks the start of a special new year—the beginning of the U.S. Constitution's third century. And ANPA Foundation is leading a national program on Sept. 16 to commemorate the occasion, called "A Celebration of Citizenship."

Charles T. Brumback

You have received some announcements concerning "A Celebration of Citizenship." More will arrive soon. It is a program that has been in the planning stages for more than a year. The Foundation has joined the Commission on the Bicentennial of the U.S. Constitution and many major educational organizations to invite teachers, students and their parents in schools throughout the country to pause for a day to observe the privileges of citizenship in our democracy.

The scope of the program has grown tremendously in recent weeks. Corporate sponsors, state and local bicentennial commissions, and business and community leaders are organizing ways for adults to follow the lead of the young people—especially the Sept. 16 mid-day broadcast during which President Reagan has been invited to lead the nation in reciting the Pledge of Allegiance.

The planners of "A Celebration of Citizenship" look to newspapers as major organizers of this occasion in their communities. ANPA Foundation is providing materials—ready for printing and distribution—to teachers who need ideas for making Sept. 16 a day to remember. Ad slicks to run in-paper will be sent to you to alert the entire community to the happenings and significance of the day.

As chairman of ANPA Foundation, I encourage you to organize special local celebrations—a ceremony on the steps of the town hall, for instance, or school visits by community leaders. One publisher has told us he is capping the day with a town-wide celebration at the local high school football field that evening.

Every day's issue of every newspaper in the country carries information convincing us that it is vital for young people to recognize their responsibilities and opportunities as citizens. We can give them and ourselves the gift of revitalized awareness through "A Celebration of Citizenship."

Stolen Childhood

—a special report from Cox Newspapers

"Stolen Childhood" reads like a horror story from the worst days of 19th century sweat shops. Unfortunately, this Cox Newspapers special series is today's news.

Children working 16 hours a day, seven days a week in deplorable working conditions for pennies – that's the harsh reality of life in the Third World. "Stolen Childhood" is a series that reveals the shocking facts of child labor in South America, Asia and India.

Cox Newspapers foreign correspondent Joseph Albright and his wife, special correspondent Marcia Kunstel, traveled tens of thousands of miles interviewing hundreds of people while covering this shocking story. Albright and Kunstel spent more than nine months preparing "Stolen Childhood." Cox illustrations editor Rick McKay accompanied our reporters and took many of the photographs in this report.

Our team traveled from one-room carpet factories in Brazil where seven-year-old girls labor for 55 hours a week to Filipino brothels where teenaged girls are often sold into prostitution by their families.

The implications of this project extend far beyond the borders of faraway Third World countries. We must ask ourselves how much of the luxury we enjoy in the United States is bought at the expense of an impoverished Third World.

"Stolen Childhood" is a story that needed to be told. It raises many questions and offers hope for change. Our thanks to Albright, Kunstel and McKay for this report on a global problem that threatens the future of an entire generation of Third World children.

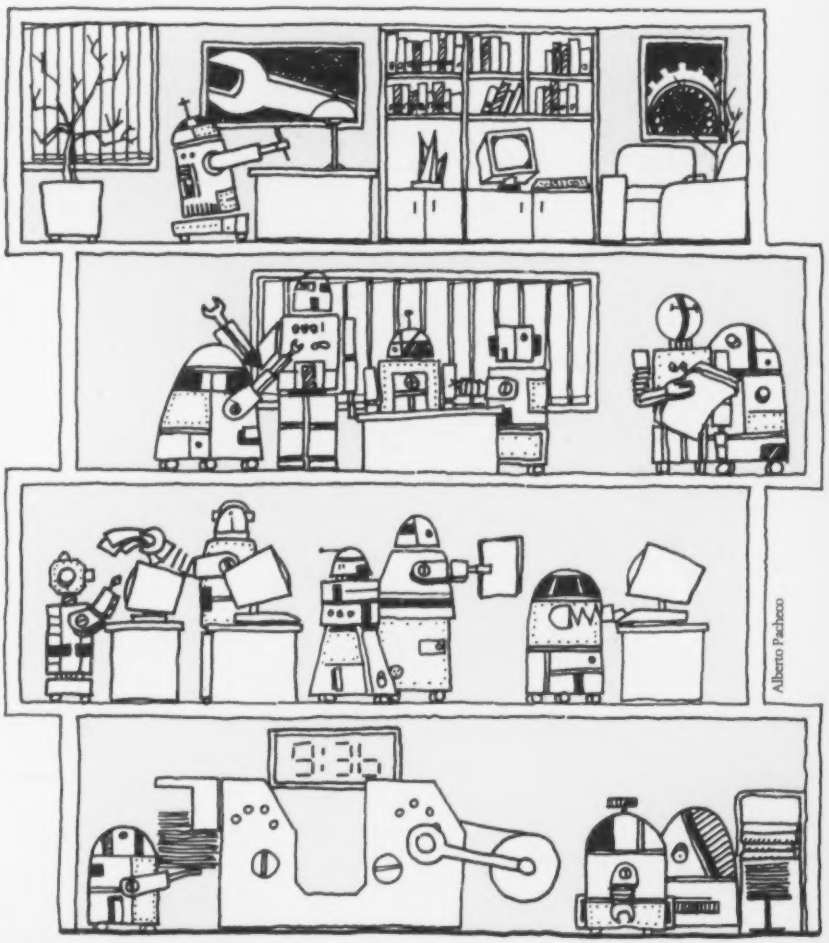
There May Be Robots in Your Paper's Future



They're already handling newsprint rolls, and in Japan two companies are testing elaborate pressroom systems

BY ROSALIND C. TRUITT
presstime technical writer

With a mannequin's head, cap and sunglasses, the press-plating robot at the 1986 ANPA trade show in Atlanta looked eerily human as it methodically worked before large, curious crowds.

At ANPA/TEC '87 in Las Vegas, robots were more in evidence. But the whimsical was out, the workaday was in.

Suppliers offered models that not only change printing plates but also automatically prepare rolls for pasters, put them on the proper reel and thread the web through the press. Also in evidence, as has been the case the past three or four years, were automated guided vehicles, or AGVs, that newspapers are finding useful for materials handling.

The arrival of the technology raises questions of how much of an impact robots are having on newspapers, and how widespread their use will become. The short answers are the impact so far has been modest, but newspaper use is expected to rise, perhaps dramatically, in the near future.

At the beginning of this decade, the use of industrial robots increased rapidly in the American workplace but the use has slowed somewhat in the past two years or so.

According to Jeffrey A. Burnstein, director/marketing and public relations for the Robotics Industries Association, there are currently 25,000 robots at work in various industries in the United States.

However, a recent article in Time magazine noted that number is far short of earlier projections that some 250,000 would be on the job in the United States by the 1990's. The magazine also said sales of U.S. robots are expected to decline from $580 million in 1986 to $400 million this year.

Nearly half of all industrial robots in the United States are in the automotive industry. Burnstein says that although newspapers account for a very small percentage of robotics use today, growth is expected.

Interviews with manufacturers and newspaper executives indicate less than a dozen U.S. and Canadian newspapers are

using robotic technology. "But I know a lot more than that have plans on their drawing boards," says George Cashau, ANPA director/technical research.

Robots most commonly are used in industry for welding, spray painting and to facilitate materials handling. Understandably, newspapers have little use for the first two capabilities, but AGVs that move newsprint rolls from storage to the press are finding favor.

"Robotics in the form of AGVs are coming to newspapers and they are coming quickly," says Bruce A. Stouffer, product manager/automated materials handling systems for FMC Corp., one of three companies producing AGVs for the newspaper business. "It's not as important to look at the number of newspapers that currently have the technology as it is to look at those considering it. Nearly 100 percent of the larger newspapers constructing new facilities are considering it."

He says he has talked with a number of such newspaper executives and nearly all are, at the very least, considering AGVs for their plants.

Visualizing a different role for robots at newspapers is William D. Rinehart, ANPA vice president/technical. "In the not-too distant future, the pressroom will be completely robotically operated," he says, adding that the technology displayed the past two years at the ANPA show is just a hint of what's to come.

Rinehart says he believes automation will be developed for other areas of the newspaper production process, too.

A narrower usage is seen by Jules S. Tewlow. He is director of special projects for Lee Enterprises Inc., which owns a number of newspapers and other media properties. Newspapers, he says, "are not makers of widgets" and thus do not need assembly line-oriented robots.

"What we do need to do and do efficiently is move big hunks of material around from one place to another, and robots are very good for that," he says.

Tokyo Kikai Seisakusho, the Japanese press manufacturer that demonstrated the press-plating robot at the '86 ANPA show, is one company that has a number of other robotic applications for newspapers under research and development.

At ANPA/TEC '87, TKS showed a videotape of a robot the company has developed that can prepare newsprint rolls for the autopasting process. Heretofore, humans were required to detect scratches and other imperfections in the rolls and prepare the leading edge of the web to be spliced onto the spent roll.

One TKS robot can handle eight newsprint reels, and with a roll of paper needing replacement every 15 minutes or so when a press is running at full speed, that can be important.

James R. Price, president of Taft Equipment Sales Co., marketing representative for TKS in the United States, says the system is currently being tested under production conditions at a large-circulation daily newspaper in Japan. Fierce competition between dailies there preclude naming the paper, he says.

Nor will Price speculate on how soon the TKS robot plater shown at the 1986 show or other aspects of the company's robotically operated pressroom system will be available for purchase in North America.

Another Japanese company, Mitsubishi Heavy Industries Ltd., presented a videotape at this year's show illustrating its automated offset press system, from splicing-preparation robots to an automatic roll-loading device.

Robots are industrious. "They don't argue, and they don't take coffee breaks."

This equipment, too, is being tested at a Japanese daily newspaper, and Mitsubishi representatives at this year's show said they would like to sell the completely automatic pressroom systems to a U.S. or Canadian newspaper as soon as possible.

TIRELESS WORKERS. Robots are industrious and offer a versatility lacking in other forms of automation that are designed to perform a single function, their champions say. (See story, p. 8.)

Robots have other advantages as well. They:

- Can follow procedures appropriately each time
- Don't get tired, bored or distracted and thus perform the task the same way each time, barring a malfunction
- Can perform their job in environments that humans would find unpleasant or even intolerable. For instance, they can spray paint in areas with very high temperatures, a great deal of noise and little or no ventilation.
- Can learn in a few moments skills such as welding that can take humans much longer to master
- Can work around the clock, aren't paid overtime, don't get sick, are immune to drug and alcohol problems, and perform readily jobs that humans would find tedious

"They don't argue, and they don't take coffee breaks," jokes Donald W. Kay, pressroom manager at the Fort Worth Star-Telegram, which has been using a computer-controlled system of AGVs for newsprint handling for about a year [presstime, July 1987, p. 40].

Robots are not perfect, however. They can break down. And when this happens, either a replacement must be readily available or work halts until repairs are made.

Before the technology got so advanced, humans could take the place of robots in an emergency, but that rarely works today, according to experts. Most robots work in conjunction with other computer-controlled machines synchronized by control systems. When one machine goes down, all go down.

A NEW MARKET. Nothing is absolutely fool-proof, but newspapers using robotic AGVs have been very enthusiastic about the technology and about the reliability of the equipment. For that reason, manufacturers of robots have targeted newspapers as a growth market as their sales to the automotive companies have leveled off.

Michael C. Dempsey, marketing manager for Portec Inc.'s Automated Systems Division, another company that manufactures AGVs, says he believes newspapers are one of the top areas AGV manufacturers will pursue.

"Newspapers have a lot of materials to move around, and the old-fashioned towline systems have been in place for a number of years," Dempsey says, referring to the most commonly used systems for transporting newsprint. "Increased automation makes sense for newspapers. A few newspapers have tested the waters as far as the equipment goes, and now the mainstream newspapers are ready to jump in."

Advancements in technology will mean moving robots into other areas, such as the mailroom, Dempsey says. "We will see that before too much longer. A few newspapers are considering it seriously now. You can move stuff around easily and store vast amounts of preprints by palletizing. You really don't need people for a lot of these jobs. Machines can handle them."

At FMC, "We see a big market in newspapers," says Stouffer, "Newspapers are a healthy industry, and there are a lot of extremely labor-intensive areas that would definitely benefit from more automation. And we'll see the technology getting cheaper, so it will make sense for newspapers of all sizes."

Depending on the sophistication of the technology, industrial robots currently range in price from $10,000 to several hun-

dred thousand dollars, Burnstein of RIA says. The average price is $65,000.

AGV systems range from $250,000 for the least complicated to $5 million or more, depending upon the number of vehicles and sophistication of the system. One manufacturer said the vehicles average $120,000 each.

That would seem to dictate only larger newspapers could cost justify the technology. However, the Arkansas Gazette in Little Rock, a 136,814-circulation daily, is using AGVs to move newsprint rolls around its pressroom, and Ronald R. Krengel, vice president/production, says the efficiency more than makes up for the cost.

The impact of robotics on the payroll may be less significant than is generally believed. Newspaper executives say the robotic equipment at their publications has resulted, for the most part, in the redeployment of workers rather than a cutback in positions. And robot enthusiasts emphasize that the bulk of jobs replaced are mundane or dangerous. For newspapers, that currently means hauling newsprint rolls. In the future, it may mean feeding hopper loaders with preprints.

EFFICIENCY STRESSED. If newspapers in the future expand their use of robots as expected, it may be due in part to the industry's satisfaction now being experienced with AGVs.

Reflecting this, the number of AGV manufacturers may soon be increasing. In addition to FMC of Colmar, Pa., and Portec of Lisle, Ill., AGVs for newspapers currently are manufactured by IDAB Inc. of Hialeah, Fla. However, a few other manufacturers of robots are beginning to move toward the newspaper market.

Most AGVs are self-propelled vehicles that follow a wire buried beneath the floor. They have rechargeable industrial batteries and are programmed by computer. The wire is imbedded three-fourths of an inch deep, so cutting a pattern for a new configuration is simple, says Karl Ziegler, manager/marketing services for IDAB.

AGVs also are used by some large commercial printing firms to retrieve skids of preprinted materials from storage. Many experts say newspapers will begin adopting AGVs for such use in the future.

At the Star Tribune of Minneapolis, Curtis Bok says efficiency and flexibility were determining factors in the decision to purchase an IDAB materials-handling system for its new printing plant.

Installation is scheduled to begin this month and will take place over the next several months, says Bok, manager of the new plant. When completed, it will consist of 10 AGVs to carry newsprint rolls to the presses and four automatic forklift vehicles.

"Cost savings were a consideration, of course, but the flexibility it gives us is even more important," Bok says. "We can redirect these vehicles as needed or add to the system if we need additional press capacity in the future."

When first approached about AGVs for newsprint roll handling in the new $73-million production facility at the Fort Worth Star-Telegram, Pressroom Manager Kay was skeptical, saying, "We don't need any new toys."

A year of watching the AGVs dispense rolls to the presses has convinced him the newspaper made the right decision. The 10 vehicles and the system as a whole require very little maintenance, Kay says.

After clamp trucks deliver rolls from the storage area to stripping stations, rolls are weighed and stripped. Each day the AGV control system is programmed for delivery assignments. A press operator desiring a roll presses a "call" button, and the AGV nearest the roll is directed to pick it up. The AGV retrieves the roll, takes it to the designated press unit and places it on a dolly. The dolly automatically moves onto a transfer table at the reel stand, and the roll is prepared by pressmen.

The AGVs also transport newsprint waste from the stripping station and reel room.

The system can transport as many as 72 rolls per hour, which over a week's time translates into 1,300 tons of newsprint. With AGVs, the Star-Telegram has experienced fewer accidents, Kay says, and 15 workers now perform paper-handling duties that once required 23. There is also less newsprint waste.

"Every time a roll gets banged or bumped, the damaged paper cannot be put on the press," he says. "The AGV system saves us a considerable amount of paper waste, since the built--in sensors will stop the vehicle before the paper roll can be damaged. And since the rolls are not damaged, we no longer have to interrupt production to make cut-outs on banged-up rolls."

An even more elaborate FMC system will be installed beginning this fall at The Boston Globe. According to Anthony F. Alessi, director/building facilities, it will use 23 vehicles and completely automate newsprint roll handling.

The system at the Arkansas Gazette is much smaller, using just two AGVs that workers there have dubbed "Pete" and "Repete."

"They certainly live up to their billing," production chief Krengel says. "It's a much more efficient system than the old chain in the floor. That system was constantly in motion. With this, the vehicles stand waiting until you call them."

Krengel says of manning requirements: "We can move 50 percent more newsprint with the same number of people." Workers who formerly handled the newsprint rolls have been shifted to other positions.

"I'm also pleased that from a cost standpoint, the technology makes sense for a newspaper our size," he says. "This kind of technology shouldn't be limited to the largest newspapers." □

Questions and Answers About Robots

What is a robot?

The Robotic Industries Association offers this definition: "A reprogrammable, multifunctional manipulator designed to move material, parts, tools or specialized devices through variable programmed motions for the performance of a variety of tasks."

The key words are "reprogrammable and multifunctional." According to the trade association, less sophisticated automation can perform specific tasks. Robots, however, can perform specific tasks plus a variety of tasks not specified in advance by the designer.

How do these sophisticated machines work?

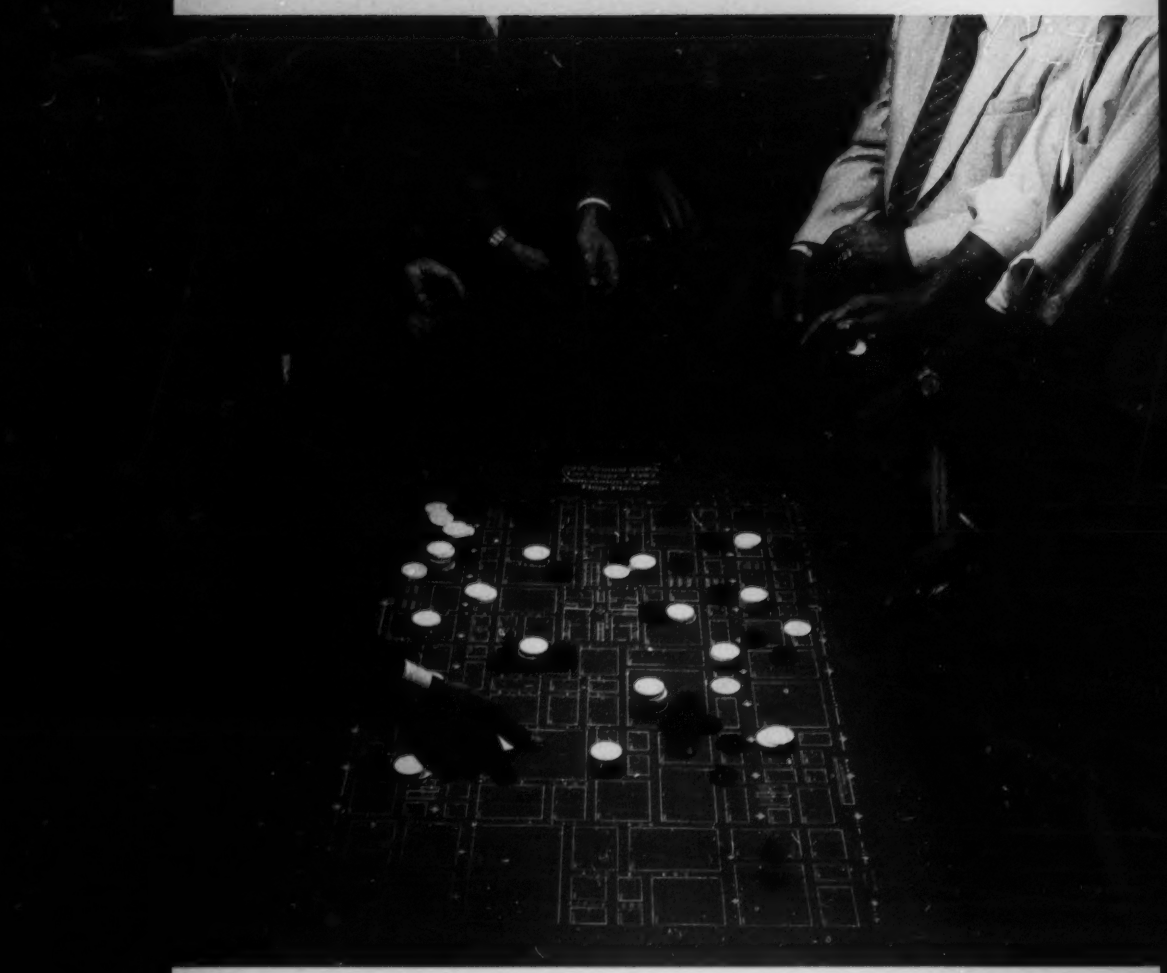
In *The Robot Revolution*, author Tom Logsdon wrote in 1984 that robots are controlled by one or more programmable microprocessors. Each microprocessor "is like a railroad switching yard built on microscopic scale. Electronic pulses are routed through tiny switches called transistors lying on the surface of the chip. A command such as 'Move claw to position 26' will cause a string of electronic pulses to flow along tiny wires through thousands of transistors. The transistors translate the command into new pulses to activate and control 'muscles' powering the robot's limbs."

What do robots look like?

Even though science-fiction writers and artists tend to endow robots with human qualities, industrial robots are rather ugly-looking machines.

When were robots invented?

Their use dates back more than a quarter century. In fact, the term was coined by Karel Capek, a Czechoslovakian playwright, in the 1920s. In Czech, "robota" means servitude or forced labor.



SOME PUBLISHERS CAME TO VEGAS AND GAMBLED ON THEIR FUTURES.

Copley Leaves Library as Legacy

BY DAVID E. PEASE

In the eight years of illness before his death in 1973, newspaper publisher James S. Copley collected numerous historical items including 6,000 books, several important manuscripts and journals, 230 paintings, and 400 letters from Presidents, founding fathers and other distinguished Americans.

This formed the basis of the Copley Library in La Jolla, Calif., an institution that is unique in the newspaper business. Housed in a 15,130-square-foot brick building, the Copley collection has grown to more than 14,000 books and 4,000 letters and documents.

Copley—like his widow, Helen—expressed great interest "in American history and especially in the teaching of it to Americans," says the facility's curator, Richard Reilly. "That's why we host so many school tours."

James Copley's initial collection consisted of materials from the Revolutionary War era, which emerged as the major theme of his subsequent acquisitions. He started this collection in his home with rare books and expanded to letters, pamphlets, broadsides, and documents such as the first printing of the Declaration of Independence and an early annotated copy of the U.S. Constitution. This collection now includes more than 1,600 rare books and pamphlets and about 400 letters and documents.

The library was officially founded by Copley Newspapers on June 15, 1966. Reilly became curator with instructions to collect "anything that reflects the vigorous intellectual and creative spirit of our country."

At that time, the collection was moved from the Copley home to one wing of a two-story, board-and-batten building near the company's headquarters in La Jolla.

The library, which then occupied 800 square feet of space, was opened to scholarly reading in any of the subjects on which the library was forming collections. This included American Revolutionary War history, Samuel Clemens (author Mark Twain), Benito Juarez (who fled to the United States in the mid-1850s and returned to Mexico where he was eventually elected president) and California explorer and senator John Charles Fremont.

However, the visiting researcher was and still is required to write a request accompanied by "letters of recommendation from two persons of recognized standing in the academic field who can testify to his or her qualifications as a scholar."

Reilly says "the library is somewhat of a museum" as it strives to capture the personalities involved and not merely the events that constitute American history. For example, the library collects personal letters from Presidents such as Washington and Lincoln, and authors such as Clemens and James Fenimore Cooper. It even has the Bent Hickory chair in which Lincoln was sitting when he received the dispatch announcing his nomination for the presidency.

Copley wanted his library to be a place for important art as well as writings, so he purchased many paintings. The most famous one, by Jeremiah Paul, shows George Washington, his wife, Martha, her daughter and grandchildren, and Washington's valet. The painting had been missing for about 150 years after being sent, shortly after completion, to London so that engravings could be made for producing future copies.

As the collection began to outgrow its 800-square-foot quarters, Copley decided to give the library its own building. Before his death, he reviewed architectural renderings for a proposed new facility.

Helen Copley, now chief executive officer of Copley Newspapers, was the motivating force behind making her late husband's dream of a full-fledged library become reality. In the fall of 1980, construction began on the new building; it was finished in mid-1981. The building and the acquisitions for it have been funded by Copley Newspapers.

With its increased space and security, the Copley Library is now better able to accommodate more researchers, school groups, and small tours, curator Reilly says.

Librarian Suzanne Carnes says the library is giving tours to local civic and student groups in hopes of raising the level of sophistication of students regarding the gathering of information and making the library better known and more accessible to people living in Southern California.

The library is involved in California's Project CLIMB (Cooperative Library Instruction for Maximum Benefit). The project aims to make students, as well as the general public, aware of the extensive research resources available at no cost.

Currently, an average of about 15 scholars and 150 people on tours visit the library each month.

Carnes and a temporary assistant are now listing all the library's holdings in a computer that is part of the OCLC (On-Line Computer Library Center) database so that its resources can be made available to 6,000 other libraries.

For instance, Reilly says, students at Princeton University "could do research at their own library for a thesis on, say, George Washington. If they find letters or something (on their computerized bibliographies) they would like here in La Jolla, all they need to do is send a letter stating their request, and we'll send them an invitation to the library. We can also photocopy or photograph the resources they need. . . . We are very ready to share information."

The library plans to keep looking for acquisitions along the lines of its existing collections. Rare editions of American and English literature are high on the wanted list. It also seeks to collect more material regarding women's suffrage.

Asked whether further expansion lies ahead, the curator says, "We're at the limits of our property, but we've got plenty of room (within the building). We are still working on filling the 100,800 feet of shelving that remains." □

SOME DIDN'T.

Buying a publishing system today is a high-stakes venture. Unfortunately, it can be a risky one too. With suppliers merging, technology accelerating and changing, there aren't many sure bets. But you *can* put the odds in your favor.

Here's how.

Put your money on Mycro-Comp™ and NORTEXT® systems from Mycro-Tek. Today you'll find more than 1300 of these systems at work, in operations ranging from small weeklies to major dailies.

Only Mycro-Tek offers you a SAFE system – System Architecture For Expansion. It's a simple philosophy that says as you grow your system grows, with features, power and performance to meet your needs. Your initial Mycro-Comp or NORTEXT investment remains an integral part of your system, no matter how much you add on or upgrade. So you never have to start over.

It's a SAFE bet.

When you decide on a Mycro-Comp or NORTEXT system from Mycro-Tek, you get more than just an excellent system. You also get the training, service and support that make the entire package the almost perfect purchase.

Before you gamble on your future, call us. We can show you how to reduce the risks and play it SAFE. **CALL TOLL FREE 1-800-835-2055**

Where's the Sleaze?

'Supermarket Tabloids' Are Less Lurid

BY TOM KELLY

Let's play "Name That Newspaper!"

Which American newspaper not only has brought about the adoption of more than 200 hard-to-adopt children but also recently won a national award from the Arthritis Foundation?

Need another clue? Which newspaper honored a group of "American heroes" in the U.S. Capitol on the 25th anniversary of the space flight of Sen. John Glenn a few months ago?

Still stumped? Which newspaper celebrates every December by erecting the world's largest Christmas tree and turning its Florida grounds into a mini-Magic Kingdom to the delight of hundreds of thousands of visitors?

Here's your final clue: Which newspaper scooped the world's press by publishing photographs that proved former presidential candidate Gary Hart's Bimini weekend with model Donna Rice was something more than a campaign strategy meeting?

Kelly, current president of the Florida Society of Newspaper Editors, is former editor of the Palm Beach Post.

> *"We have a worldwide and well-paid professional staff that thoroughly researches every story we print."*

The answer, which should be obvious by now, is the National Enquirer, the Lantana-based tabloid whose 4.5-million weekly sales buttress its modest masthead claim of "LARGEST CIRCULATION OF ANY PAPER IN AMERICA." Since nearly four people are estimated to read each tabloid sold, more than 17 million may see each week's issue.

When all six of America's major "supermarket tabloids" are tabulated, their 13 million sales translates to more than 50 million readers.

© David Rambo

"High-end" tabloids say they compete with women's and celebrity magazines.

Shoppers who may not have picked an Enquirer out of a supermarket rack for several years may be surprised by the once-scandalous tabloid's determined drive for respectability. No longer is the Enquirer the repository of the weird and the sleazy that it was when owner Generoso Pope launched it in the 1950s in New Jersey.

The new Enquirer is a slick-paper, four-color product replete with full-page displays from such major-league advertisers as Marlboro, Salem and Winston cigarettes, Palmolive dishwashing liquid, and Kraft cheese.

As it matures in its 30s, the Enquirer has acquired not only typographical sheen and editorial polish, but it also has adopted a philosophical tone that is nearly as upbeat and flag-waving as that of USA Today. The new formula is paying off in attracting national advertisers lured by the relatively low cost and carefully targeted audience.

"I'm very happy to say we're not the 'old Enquirer' any longer," says Publisher James Martise. "Since 1980, our editorial approach has moved in the direction of service, food, marriage and children, the family unit, women's fashion, beauty," he says.

"We have established strong credibility in the medical area, and we have moved to recognize and feature people who typify American values of honesty, charity and bravery."

Still, celebrity stories—with an emphasis on television personalities—make up some 35 percent of the editorial content of every issue. The stories are mostly chatty and noncontroversial, perhaps not coincidentally in reaction to the $1.6-million libel award won by comedienne Carol Burnett from the Enquirer in 1981. (An appellate court later reduced that amount to $200,000, and after Burnett said she would seek a new trial, the two sides reached an out-of-court settlement for an undisclosed sum.)

THE COMPETITION. To hear the Enquirer people tell it, they have little in common with the other five tabloids in the supermarket racks aside from superficial appearances. Their competition is not really Rupert Murdoch's slick (and slightly larger-

sized) Star (3.5-million weekly sales) or Globe Communications Corp.'s Globe (nearly 2 million) and National Examiner (1.1 million), but rather the traditional women's magazines such as Good Housekeeping, Ladies' Home Journal and McCall's. The big four tend to turn up their noses at the two "low-end" tabloids—the National Enquirer Inc.-owned Weekly World News (1.1 million) and Globe Communications' Sun (500,000).

"We're daft, but believable," sniffs an editor of one of the big four. "Those two are daft also, but too far off the wall for all but the terminally gullible."

The New York City-based Star perceives its competition as People and Us magazines. Indeed, it even refers to itself as a magazine, not as a newspaper and never, ever, as a tabloid. It sells for 69 cents, four cents higher than the Enquirer and 10 cents more than the Globe, Examiner and Sun.

Peter Eldredge, a former advertising director for New York magazine and until recently the Star's publisher, has said, "The Enquirer may have upgraded, but they haven't changed the product. They're still a tabloid newspaper. We're a magazine."

The Enquirer has moved itself out of the traditional tabloid arena in the 1980s, perceiving that the celebrity-gossip field had become glutted not only by People and Us, but also by the women's magazines, which suddenly began featuring television stars instead of recipes on their covers.

Indeed, Iain Calder, president and editor of the Enquirer, resents being lumped with the other publications. "Any comparison is unfair because we are only generically related to the other tabloids. We have a worldwide and well-paid professional staff that thoroughly researches every story we print. There are great differences between us and the lower-end tabloids," he says.

The Enquirer of the '80s is merely another demonstration of the publication's chameleon-like ability to change its style to keep up with the changing tastes of its readers.

And who are these millions of readers? Calder talks about the mythical "Mrs.Smith from Kansas City," who has a high-school diploma, a home and a family, is God-fearing and patriotic, shops for her groceries in a supermarket, and prefers to treat her family's ills with over-the-counter remedies. The preponderance of Enquirer ads also suggest that she is overweight, prone to aches and pains, chain-smokes, would like to get rich quick and believes in miracles.

While not denying the "Mrs. Smith" theory, Martise prefers to describe the Enquirer's target market as the "pink-collar" woman, as differentiated from the white-collar professional-managerial type and the blue-collar maid-waitress type. The pink-collar woman holds down a job as well as being a homemaker, and her numbers are increasing.

GLOBAL VIEW. Although the Enquirer's strategy appears to be succeeding, the folks at feisty Globe Communications describe themselves as the defenders of a fine old tradition of pure tabloidism.

"Whenever you read that a tabloid has named a fashion editor and a food editor, you know right away that it has sold out," says William Burt, who edits the National Examiner and who, like Calder, is a native of Scotland. "The Examiner would lose its flavor if it ever tried to act like a magazine."

The Examiner and its sister tabloids—the Globe and Sun—are produced in a sleek modern building whose Boca Raton neighbors are high-tech giants IBM and Seimens. Thus five of the six U.S tabloids are published within 15 miles of each other in Palm Beach County, Fla., creating a veritable "Tabloid Valley."

Globe Editorial Director Mike Nevard, like Burt an alumnus of the National Enquirer, makes no apologies for his publication's emulation of the Enquirer.

"That's why we moved to Florida in 1982—to be near the Enquirer," says Nevard, who estimates that half his editorial staff of 80 consists of former Enquirer journalists. Globe staffers earn about 20-percent less on the average than their colleagues at the Enquirer, where reporters pull down more than $50,000 and senior editors earn well over $100,000. Many of the ranking journalists are veterans of London's sensational Fleet Street tabloids.

Globe's entries compete at some distinct disadvantages. Because the parent company's presses are located in Canada—in Calgary, Toronto and Montreal—and because supermarkets for logistical reasons require the Globe papers to arrive five days before going on sale, they must be "locked up" editorially nearly two weeks before they hit the supermarket racks. Nevard and Burt find themselves constantly trying to anticipate which stories and personalities will be "hot" two and three weeks in advance.

The Enquirer and Star, by contrast, hold their press starts until four or five days before they go on sale each Tuesday. That enables them to get a jump on topical stories, such as the Star's original splash on the Gary Hart-Donna Rice affair in its May 19 issue.

When the Globe people find a hot story, they tend to ride it for weeks. Jim and Tammy Bakker were on the cover of the Examiner in three of four recent issues, dovetailing neatly with unfolding events in the televangelism scandals.

The Enquirer and Star may spend millions on television ads and sophisticated market research, but the approach at the Globe is more basic. One wall of Editor

How Creative Data Systems and IBM have teamed up to bring winning business solutions to your team

1. We recognize that one solution won't solve every problem you may have.

Even though our systems are standardized and developed for the newspaper industry, there are 150 control files that give circulation, advertising and financial executives more than a million and a half options for their specific needs.

2. We utilize IBM equipment for its compatibility and dependability.

For seven years Creative Data Systems has worked closely with IBM. Our experience has affirmed the IBM reputation for excellence. As a result of our joint effort, we're in a position to offer you the most comprehensive systems that address your business processing needs.

3. We believe you should continue receiving quality support after installation.

The members of your team receive both on-site and off-site support from our team in the form of comprehensive training sessions. Two or more Creative Data Systems' staff members are assigned to your system; they're familiar with every portion of your system—including all specifications particular to your operation.

For more information . . . and to learn why more than 400 U.S. newspapers have already selected Creative Data Systems, call or write today.

Newspaper software professionals.

Burt's office is covered with the last 77 National Examiners. In the lower left-hand corner of each is a handwritten legend showing the number of copies sold.

"This is our market research department," laughs Burt, gesturing at the wall. He points to an April cover that sold 1.4-million copies. It featured "The Marriage Secrets of Jim and Tammy Bakker." Burt says the story (like the Enquirer's reported $25,000 payment for the Hart-Rice photographs published June 2) was a product of checkbook journalism. "It cost us $21. We ordered three of their own books for $7 apiece from Heritage USA."

Less successful was a Cary Grant cover that sold fewer than 900,000 copies. The story described some of the late actor's bizarre practices and beliefs. Burt learned a lesson from that one. "People don't want to hear unpleasant things about their idols." Brightening, he points out that the Examiner was the first national publication to feature Vanna White on its cover July 1, 1986. "That sold 1,271,000 copies," he chortles. The TV game-show personality has been on the Examiner's cover at least once a month in the last year.

Globe Communications' Nevard concedes that "the established press looks down on the tabloids, but they have borrowed the gossip and service stories from us. Our papers are very professionally produced by professional journalists. Attorneys read every word of every issue before it goes to press. We are aiming to entertain, not educate, and we don't look down on our readers. They're ordinary people with a lot of doom and gloom in their lives, and we want to improve their home life and communicate with them. We talk their language."

It is becoming increasingly apparent that the tabloids are talking the advertisers' language as well. The Enquirer claimed a record for national ad pages with 364 in 1986. The Star has signed on a raft of big-name advertisers, including Lorillard, R. J. Reynolds, Procter & Gamble, Phillip Morris and Plough.

What the tabloid world seems to be coming to is a kind of respectability. That may be music to the ears of the publishers and accountants, but it saddens the rumpled veterans of the screaming-headline wars

"People used to talk about the four s's whenever they talked about tabloids—sleazy, sensational, sexy and scandalous," recalls Burt. "Then they added a fifth 's'—supermarket."

Burt doesn't even want to think about his profession acquiring any more "s-words." Could this spasm of scrupulous sanity be steering the shameless tabloids straight to stagnant solemnity? Stay tuned to your neighborhood checkout counter. □

Publishers on Parade

Why does the Pulitzer Prize winning Lexington Herald-Leader order 7,280,000 PARADES a year?

The Lexington Herald-Leader, a leading Knight-Ridder paper, has carried Parade since 1974. Back in those days, Sunday circulation was 83,476, far below today's net paid 136,969.

Creed Black, publisher of the Lexington Herald-Leader, says, "Adding Parade was one of the first steps our company took, after acquiring the Herald-Leader, to make the Sunday paper a complete package. It was an immediate hit and undoubtedly has been a major contributor to the steady circulation growth we've enjoyed ever since.

"Our readership surveys show that Parade remains consistently popular. We think its editor and nationally known writers produce a newspaper magazine that is fresh, interesting and provocative. The positive response from our readers over the years tells us that they agree."

CREED C. BLACK
CHAIRMAN AND PUBLISHER, LEXINGTON HERALD-LEADER

Featured in over 300 newspapers every Sunday.

For information on why Parade is important in major markets, contact Carlo Vittorini at (212) 573-7111, and talk publisher to publisher.

Ranks of Independent Newspapers Continue To Fade

The number is at 434 and dropping as families feud, pay high estate taxes and are tempted by purchase offers

BY MARY A. ANDERSON
presstime staff writer

(Editor's note: For the purposes of this Special Report, an "independent" daily is defined as a general-interest newspaper, or co-located newspapers, owned by a family or company that has no other dailies. The tally of 434 U.S. independents was derived from a listing maintained by ANPA that was cross-checked by presstime *with all 50 state press associations as well as industry analysts.)*

The extinction of the independent newspaper has been predicted since at least 1903, when press lord Frank A. Munsey declared in his Munsey's Magazine, "In my judgment it will not be many years—five or ten perhaps—before the publishing business of this country will be done by a few concerns—three or four at most."

Last December, a modern-day media mogul made a similar declaration. "In the sophisticated society in which we now live, [the global information and communication industry] will become dominated by 10 or so major corporations," said British publisher Robert Maxwell to a group of analysts. "I put myself forward as a candidate for one of the 10 places."

As long as press lords have aspired to dominate the mass media, owners of independent newspapers have sought defenses against the perceived evils of non-local, group ownership.

When someone asks him to sell his newspapers, Douglas L. Manship, publisher and editor of the Morning Advocate and State-Times of Baton Rouge, says he replies: "It's always worth a

David E. Pease, a Duke University senior and summer intern for presstime, *conducted some of the research for this article and the accompanying charts and table.*

dollar more to me than it is to you because I have sweated. I have put time and care and patience into it." One hopeful acquisitor recently offered $250 million for the papers (combined circulation, 115,986), he reports.

His older brother, President Emeritus Charles P. Manship Jr., does not have heirs, but each of Douglas Manship's four children has gone into the family business. "At least we are safe for the next generation," he says.

Long-term, however, "I am not sure that they (his two sons and two daughters) wouldn't say, 'What the hell'" and sell. "I think eventually, with very few exceptions, newspapers are going to all be chain operations."

The trend toward fewer independently owned newspapers has roots early in this century, but it has accelerated in recent years as acquisition-hungry groups roamed the country in search of profitable newspapers to buy.

An average of about 50 U.S. dailies a year changed hands from 1977 through 1985. Many represented group acquisitions of independents, but there were also group-to-group sales and occasional instances where an independent owner acquired a paper from a group.

The number of sales jumped to 103 last year, spurred in part by the Tax Reform Act of 1986, which imposed a higher tax on capital gains effective this year.

Lately, the activity has slowed, with 26 newspapers sold during the first six months of 1987. But many observers expect the pace to pick up in the months ahead.

"I think the trend will continue, and I think there will be fewer independent or family-owned newspapers," says Douglas H. McCorkindale, vice president and chief financial officer of Gannett Co. "In some cases, it's sad; in other cases, not so sad. Society is changing."

McCorkindale may well be the acquisitions czar of the newspaper industry. During the past 16 years, his involvement in closing more than 60 deals for dailies has helped make Gannett the nation's largest newspaper group in daily circulation and second (to Thomson Newspapers Inc.) in numbers of newspapers owned. Gannett's circulation has tripled and holdings have doubled during that time.

These days, McCorkindale says, newspaper owners are more likely to come to him than vice versa. "In the late '60s, early '70s, there was more courtship than exists today, but today you don't have to tell a newspaper owner, if he wants to sell, Gannett is a company he should talk to."

Sell they do. Currently, just 434 out of 1,657 U.S. daily newspapers—26 percent—remain under independent ownership. They account for about 19 percent of daily circulation.

Their ranks have been dwindling since 1910, when 2,140 were independent and only 62 were group-owned. (See chart, p. 18.) The balance shifted in 1960, when the group-owned dailies first outnumbered the independents.

In Canada, independent ownership is even less pronounced. Of the country's 111 daily newspapers, 21 (18.9 percent) are independently owned.

How low will the number go? Executives of newspaper groups, independent publishers, analysts and brokers agree that there will always be independent newspapers—but not very many of them. By the year 2000, according to varying estimates, anywhere from a handful to 250 will remain.

Hoping his paper will be among them is Alfred T. (Ted) Fritts, co-publisher with his brother Donald of The Bakersfield Californian. He says that "no price" could get his attention. "My brother and I are making plans to be sure the paper remains within the family."

McConnell (left) and Henry Slane, chairman of the board and chief executive officer, oversee one of the largest remaining independent newspapers.

Pressure has increased to sell the 82,500-circulation daily, particularly as word spread that Donald Fritts is ill with Huntington's disease, leaving him unable to take an active part in running the company. "The vultures descended. People are short of ruthless but pretty blunt—recklessly blunt," says Ted Fritts, who himself plans to leave management of the newspaper at the end of the year to start a theatrical production company in Los Angeles.

The Fritts brothers and their sister, Virginia F. Cowenhoven, plan to maintain their ownership interest and entrust the paper's operations to Chief Executive Officer Jerry K. Stanners. Cowenhoven, currently a reporter for The Milford (N.H.) Cabinet and the only sibling with children, has been considering taking the publisher's chair.

REASONS FOR SELLING. The resoluteness of families like the Frittses and the Manships notwithstanding, there are powerful pressures on independent publishers to sell:

- Estate tax laws act as an incentive for selling because the laws value a newspaper property at the inflated price it would fetch on the open market. Although the estate-tax rates have been reduced from 70 to 55 percent, the Internal Revenue Service's cut is a sobering test to even the most determined heir's commitment to keep a newspaper in family hands.
- Irreconcilable differences within a newspaper family are the least predictable and least controllable of the forces that put independent newspapers on the block. Shareholder divisiveness increases as branches of the family tree become more numerous, particularly in the fourth or fifth generation. In such cases, the financial toll of trying to buy out a relative's stock at high market values may outweigh the emotional toll of selling the family newspaper.
- Lack of a successor—either an heir or a handpicked professional—is another primary reason to sell.

Alberto Pacheco

• Continuing high prices for newspapers, usually in combination with any of the above, activate what securities analyst John Morton says is the most powerful inducement to sell: "the golf factor." Morton explains: "Here's a guy, he's lived a prosperous life but he goes to work every day and he finds the only thing that separates him from being part of the idle rich is to say, 'Yes.'"

Just about any independent newspaper publisher has that option, especially those in non-competitive growth markets. "Everybody who's got an independent paper can find attractive offers," says newspaper broker Gerald D. Reilly of Greenwich, Conn. "There's an infinite amount of money chasing these properties."

Resisting the lucrative offers takes more than a determination to just say no. Behind the intricate legal and financial strategies constructed by independent newspaper owners are deeply held values.

Newspapers provide a handsome living, with recent profit margins for public newspaper companies averaging more than 20 percent. But at a time when prices are averaging 10-15 times the yearly operating cash flow, the reasons that most families hang onto their papers are distinctly non-pecuniary.

"There's a kind of psychic income that comes with having a newspaper, that you have a special position in the community," says Susan E. Tifft, a Time magazine writer. She and her husband, New York Times reporter Alex S. Jones, will publish a book next year about the issues in family newspaper ownership represented by strife within the Bingham family of Louisville, who sold The Courier-Journal and The Louisville Times to Gannett last year.

When the debate turns to the relative quality of independent or group-owned papers, each side has articulate partisans, but journalism researchers have found no consensus.

One of them, Philip Meyer of the University of North Carolina, says "I just can't find any differences. There are good group papers and bad group papers."

Writer Tifft says, "One of the things I have discovered: It's very hard to make generalizations with any accuracy because there are many kinds of newspaper owners out there, both among the chains and the individuals."

To those independent publishers interviewed by **presstime**, however, the grass remains greener on their side of the fence. They may concede that group ownership has improved many independent papers, but the long-held principle that independent is preferable has no stronger roots than at home.

To many, perhaps the most powerful motive to remain independent is the desire to pass on a legacy.

Horton P. Beirne, third-generation publisher of the Covington Virginian (evening, circulation 8,385), says that is the only reason he is holding out. Otherwise, "I don't think it makes any difference" whether his paper is independent or group-owned. Because he hopes to give his two children the same head start in the business he had, he turns down one or two offers a month from groups interested in buying his daily deep in the Allegheny Mountains.

Cowenhoven, one of The Bakersfield Californian's three co-owners, has three children who would be the only fifth-generation heirs to carry on the family business. "I know there's probably a fair amount of money involved," she says. "But if I am going to pass on a legacy to my children, (the paper) is a much more rewarding and exciting and more decent legacy than just money."

Plain distaste for group ownership also has inspired some independent owners to keep their newspapers in local hands.

In the case of the Peoria (Ill.) Journal Star, former majority owner Henry P. Slane ushered in an employee stock ownership plan in 1983 that currently holds 83 percent of the stock. "It's a visceral kind of thing," says President and Publisher John T. McConnell, Slane's son-in-law. "There's some logic behind it. But he doesn't like the idea (of group ownership). He thinks a newspaper is a driving force in the community and should be locally owned."

As word spread that a family member in Bakersfield was ill, "The vultures descended. People are short of ruthless but pretty blunt—recklessly blunt."

WHO ARE THE INDEPENDENTS? If there were an "Independent Newspaper Belt," it would cut a northeasterly swath from Texas through Pennsylvania. Those two states and Oklahoma, Kansas, Missouri, Indiana and Ohio are the only ones that sustain 20 or more of this diminishing breed. (See map, p. 20.)

They are predominantly small- to middle-market newspapers. Nearly half of them have less than 10,000 circulation, and only 16 have more than 100,000 circulation. (See chart, facing page, and list, p. 22.)

They range from large metro dailies like the Chicago Sun-Times, The Milwaukee Journal and the Oakland Tribune, to small ones like the Jonesboro (Ark.) Sun, The Courier Herald of Dublin, Ga., and The Daily News of Longview, Wash.

Plenty of mid-size dailies such as those in Bakersfield and Peoria round out the list.

A few are even part of publicly traded companies that own no other newspapers: The Boston Globe, The Tulsa Tribune and The Albany (Ga.) Herald. Sixteen of the independents are published as part of one of the 21 joint operating arrangements under the Newspaper Preservation Act, designed to maintain competitive newspaper editorial "voices."

For the most part, independent newspapers are private, family-owned and kindred spirits with many of the small, family-owned

groups [presstime, Nov. 1983, p. 47]. In fact, of the current 146 newspaper groups, 53 have just two U.S. dailies and 43 others have no more than five.

McClelland Newspapers in Washington state was an example of such a group until its holdings were divested earlier this year. The series of transactions returned The Daily News in Longview to independent status, as Publisher and Editor Ted M. Natt purchased full ownership from other members of his family. "It's home base. This one's the one my grandfather (J.M. McClelland Sr.) founded in 1923," Natt says. "At 45, I was not ready to retire by any manner or means, and I have two children either in the field or in J-school. Not only do I want to carry forward, but I want the kids to have the same sort of opportunity I had."

Since the moment he took over, Natt has heard from groups that covet his paper. "The ink hadn't even dried on our deal when I got letters and phone calls: 'Get in touch with me if you ever want to sell.'" But his plan is to hold on and to take advantage of growth opportunities himself.

The Baton Rouge daily is expected to be run for at least another generation by the Manships. Flanking the bust of first-generation owner Charles P. Manship Sr. are (from left) Charles P. Manship Jr., Douglas L. Manship Jr., Dina Manship and Douglas L. Manship Sr. Not shown are David Manship, a vice president of the paper, and Richard Manship, general manager of the family's television station.

Just about all independent owners are receiving at least as much attention from groups, brokers and bankers as Natt. "Nearly all are desirable, with very, very few exceptions," says newspaper broker Lee Dirks. "The biggest factor in undesirability is if it is the much weaker paper in a directly competitive market."

According to analyst Morton of Lynch, Jones & Ryan in Washington, D.C., "The only time you'll find a paper that nobody wants is when it has lost a large part of its market. If a paper has done even a half-decent job, it will be attractive for acquisition."

Even negative factors such as a depressed economy or profitability can make a paper "more attractive because it keeps the price down and maybe narrows interest to those potential buyers who feel they can do something to turn the paper around," says Bruce Thorp, another Lynch, Jones & Ryan analyst.

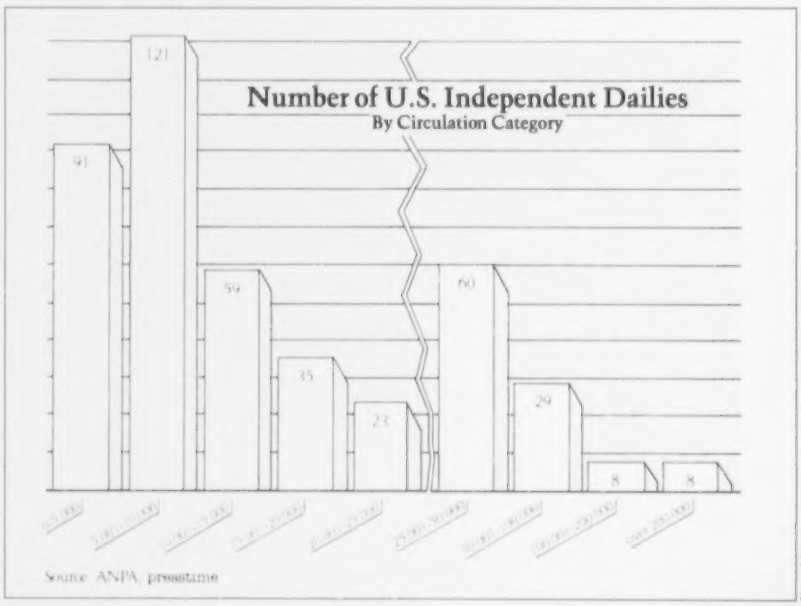
About 40 of the 434 independents are the real plums, Morton says, but he believes several choice properties will never be sold because of the nature and strength of ownership, such as the St. Petersburg Times, the Peoria Journal Star and The Daily Oklahoman of Oklahoma City.

THE ACQUISITORS. Prices of independent dailies have gotten so high that some newspaper groups are backing away from the marketplace. "They have been interested but said, 'We're not going to play this game,'" observes Benjamin M. Compaine, executive director of Harvard University's Program on Information Resources Policy.

Several group executives said as much in a Morton-sponsored meeting of analysts following the ANPA Convention last May.

"Sale prices of newspapers sold in recent years and months have been practically prohibitive, which makes it impossible for a company of our size to make acquisitions," said Donald J. Barhyte, chief financial officer and president of Multimedia Newspaper Co., Greenville, S.C.

Even the New York Times Co., known to pay top dollar under some circumstances, has lost a few heated contests for newspaper properties. Walter E. Mattson, president and chief operating officer, put it this way: "In recent months, we went after two newspapers. We stood up at the plate and took a mighty swing and missed the ball altogether. Prices are very high indeed."



A strong inducement to sell is "the golf factor." The owner "finds the only thing that separates him from being part of the idle rich is to say, 'Yes.'"

Robert W. Decherd, chairman and chief executive officer of A.H. Belo Corp. in Dallas, told the analysts, "A test of reasonableness should be applied. Therefore, acquisitions in Belo's case are limited to a few high-quality opportunities."

A "reasonable" newspaper price, of course, is in the eye of the beholder.

"There's no limit," says broker Reilly. "If there was a limit, it was exceeded umpteen times over by the Naples sale"—a reference to Scripps Howard's acquisition last year of the Naples (Fla.) Daily News. The price for the independently owned, 34,380-circulation p.m., published in one of the nation's boom towns, was undisclosed but estimated by analysts to be about $160 million.

Morton, though, frowns on the price tag. "I have grave doubts that it was worth it," he says, estimating that it amounted to about nine times the paper's annual revenue or more than $5,000 per subscriber. Prevailing yardsticks have been $900-$1,600 per subscriber or two to six times gross revenues.

Compaine of Harvard says he is "constantly amazed the price keeps going up. I scratch my head and say, 'No way can they make money on this,' but that's nothing compared to what is paid a year later. The acquirers have sharp pencils, and they seem to know what they're doing."

If Naples is at the high end of the spectrum, what is the minimum one can spend for a paper these days? "Probably the least you could buy a newspaper for, in a head-on competitive market or a newspaper in trouble, would be less than one times revenue," says Gannett's McCorkindale.

Gannett is known as one of the most aggressive and highest-paying bidders for properties. Other leading players at this time, according to analysts and brokers, are Thomson, William Dean Singleton's MediaNews Group, Ingersoll Newspapers Inc., Donrey Media Group and The New York Times Co.

The acquisitions are being processed through different channels than 10 years ago, when arrangements were handled largely by brokers who generally had worked in the business. Now the biggest sales, such as The Des Moines Register in 1985, have become the province of investment bankers, leaving traditional newspaper brokers with lesser transactions. "The deals I am having now an investment banker wouldn't touch," says Reilly. "Right now, communications are hot. [Bankers] go where the action is, but they don't want a $3-million deal because that wouldn't cover their lunch at Morgan Stanley."

Another broker, Leroy Keller, recalls, "Used to be, a man decided who he wanted to sell to." The owner would provide a list of potential buyers, and the broker would find out which ones were interested in the property.

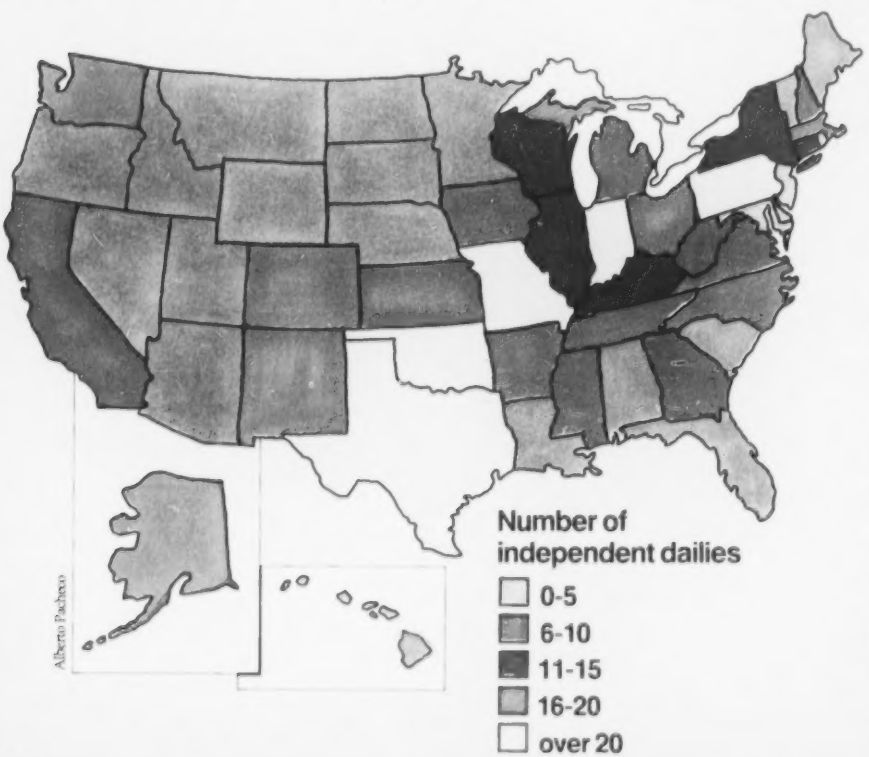
Now the buyer woos the seller, sometimes through a broker or banker, but in the cases of the big groups, often without any intermediaries. For example, Gannett's acquisition of the Arkansas Gazette of Little Rock last year was a one-on-one deal with the Patterson family, McCorkindale says.

But generally the acquisition process involves an investment banker or broker. "For the most part, we don't have anyone representing Gannett," McCorkindale says, "but in the acquisition process, someone has to pay the [banker's or broker's] fee. The seller pays, but it just becomes part of the price."

With the advent of the investment banker, newspaper publishers have discovered that auctions are likely to fetch higher prices than the broker's quiet negotiations. "Money is the final answer," broker Keller says. Publishers selling their newspapers "can talk all they want about the quality of their paper, but they will often take the most money."

Still, some acquisitors like The New York Times Co. find that journalistic standards are important to sellers. "We are in a fortunate position in that there have been very few situations where a newspaper owner has decided to sell a paper where we have not been contacted," Mattson told the analysts' gathering last May. "When a family owns a newspaper, it's a highly emotional thing, and it's like a child, and they want someone to take care of it. And we pride ourselves on taking care of the papers in our group."

Another factor affecting



acquisitions is that the different companies have carved out their own niches. "There's not so much rush (by big groups) to buy papers of less than 10,000 circulation," says broker Dirks. "Big groups just don't chase these because if they add $1 million to $3 million to revenues, it doesn't amount to much of a difference."

Yet those very small papers are just what some companies, such as Canadian Conrad Black's Hollinger Inc., are seeking [**presstime**, May 1987, p. 6].

Gannett, on the other hand, has compiled a list of 230 newspapers and small groups "that would qualify for acquisition," McCorkindale says. "I excluded all newspapers under 20,000 circulation and all (those owned by) the significant groups and all those that compete with Gannett." It is not a "shopping list," he says, but a "mechanical counting" developed in response to Wall Street concerns that, given the prolonged, brisk period of acquisitions, there might be nothing left to acquire. "We think there's plenty of room."

SURVIVAL STRATEGIES. Staunchly independent newspaper publishers seek defenses not only from acquisitors but also from heavy estate-tax burdens.

On the latter point, estate taxes are declining, for the moment. A 1981 reduction in the rate has dropped levies from 70 to 55 percent, and a further decrease to 50 percent is scheduled to be phased in next year. But a possible increase in estate taxes is being eyed by some tax writers as one means of narrowing the gap between federal expenditures and revenues.

"If you have a family business and that's your only major asset . . . and you have to pay $25 million in estate taxes, you can't get that money anywhere except selling," says Martin Casey, ANPA's manager/government and international affairs. "That's always been our (ANPA's) concern."

ANPA and the National Newspaper Association joined forces in the late '70s and early '80s to seek broad relief for all family-owned businesses—recommending, among other things, that businesses be valued for estate taxes as going concerns, a far lower basis than fair market value. The lobbying effort was unsuccessful.

Given the current attitude among many members of Congress to raise revenue and reduce the deficit, Casey says, "I don't think there's a great opportunity in Congress to argue this position effectively."

How a family deals with the estate-tax question is the linchpin of a total strategy to keep a newspaper independent. A publisher cannot plan too much.

"It's pretty tough," says K. Prescott Low, publisher of The Patriot Ledger in Quincy, Mass. "There's no stability in the tax law, whether in personal or corporate taxation." He calls the government "the primary villain to the family, closely-held-ownership situation." And to have a chance of surviving the ever-changing tax laws, he says, "You have to have a host of advisers and lawyers."

A fourth-generation independent publisher (see profile, p. 30), Low plans to choose one of his two children to control The Patriot Ledger. Both are already interested in working at the paper. Although both would have a financial stake in the venture, he believes the one who becomes publisher should have voting control of the majority of the stock while the other receives dividends.

He rejects the idea of a trust that splits control among various family members, which is prevalent at many family papers, calling it a "time bomb" that takes authority away from the publisher.

St. Petersburg Times CEO Patterson (center), designated successor Barnes (left) and Executive Vice President and General Manager John O'Hearn examine progress of $12-million addition to the newspaper's downtown building.

A stategy such as Low's fits well within a number of plans to minimize estate taxes, says Scott A. Richards, senior valuation analyst at Management Planning Inc. in Princeton, N.J. Many independent newspapers have turned to that firm for help in estate and other financial planning to perpetuate family ownership. In fact, newspapers make up 15 to 20 percent of its clientele.

Depending on how liquid the owner is willing to make his estate, Richards says, publishers can help retain family ownership through several means, including:

- Giving non-voting stock to their children to reduce the market value of the controlling owner's stock.
- "Estate freezing" to cap estate-tax liability by issuing preferred stock in exchange for common stock—structured so the active owner's stock will not increase in value but retain voting power.
- Buy-back agreements with arbitration provisions to ensure a company can buy back stock at a fair price from a shareholder who insists on selling. Such a buy-back provision allowed John Costello, publisher of the Lowell (Mass.) Sun, to obtain his brother's 50-percent ownership for $28.5 million last January.

Big groups don't chase papers of less than 10,000 circulation. "If they add $1 million to $3 million to revenues, it doesn't amount to much of a difference."

"What has really helped in this matter is that publishers are very knowledgeable, and they understand their estate problems and they seem to pay a little more attention to them than owners in other industries," Richards says.

The cost of remaining independent can be especially high when trying to overcome family disputes. "In the Lowell instance, (the buy-back) is going to handcuff them for awhile," says Richards, whose company appraised the property for Costello. "But it's their money. They could have invested it in equipment modernization or maybe bought another paper."

According to analysts, brokers and others involved in the newspaper marketplace, the last independent newspapers in America will be those with the most iron-clad estate plans. Among them, they agree, will be the St. Petersburg Times.

Its defense against acquisition was the late publisher Nelson Poynter's gift of all the controlling stock in trust to The Poynter Institute for Media Studies. Originally known as the Modern Media Institute, it was founded in 1975 with a twofold purpose: to establish an educational institution to elevate the practice of journalism, and to "absolutely assure the independence of this paper," says Eugene C. Patterson, chairman and chief executive officer of Times Publishing Co.

To ensure that the Times would remain out of group or non-local hands, Poynter had considered, and rejected, such alternatives as employee stock ownership plans or leaving it to his alma mater, Yale University.

Because the institute is an accredited educational institution, the dividends paid by the trust's stock are tax-exempt and put directly to educational purposes. (Under federal tax law, accredited educational institutions may own a newspaper's controlling stock, but charitable foundations may own no more than a third. The Houston Endowment, a charitable foundation, sold the Houston Chronicle this year to comply with the law.)

Implicit in Poynter's plan was a "trust between professionals" by which the chief executive officer—currently Patterson—votes the proxy of the stock and designates a successor, trained in the years prior to the CEO's retirement. As Poynter chose him, Patterson has chosen current Times President and Editor Andrew Barnes.

"I hope to hand down the principles, as Nelson did, that professionals will be able to manage a newspaper company in perpetuity without the difficulties that seem to arise in family or in chain ownership," Patterson says.

However, Patterson doesn't expect other independent owners to follow Poynter's example. "For a publisher to do as Nelson did, he must give away the fruits of his life's work," he notes.

ONE LESS AMERICAN DREAM. The motivation behind such an extreme action is the belief that whenever an independent newspaper is sold to a group, something valuable is lost. And from his St. Petersburg vantage point, Patterson is one of the more vocal critics of group ownership.

Although acknowledging that good and bad papers exist under both group ownership and independent ownership, Patterson believes that non-local, group newspapering does not bode well for American journalism over the long term.

"In the second to third generation of (non-locally) hired managers, that's the point at which I have concern," Patterson says. "And I believe it's already become visible that short-term earnings gains are replacing journalistic concerns, that editorial quality is being placed second to financial considerations, and that centralized budgets are being too heavily emphasized. I do not see enough innovation and effort being made on the part of the chains, generally, to devise yardsticks to measure performance beyond the bottom line."

Fritts of The Bakersfield Californian worries that the passing of local ownership changes the relationship between newspaper and community—perhaps imperceptibly at first, but unalterably. "I think you lose a sense of passion or a sense of dedication that comes with generations of devotion, of integration, of mutual cause and effect," he says. "You may antagonize, but the people know you. There's trust and real passion from this community. And I don't think you can replace that."

For others, the value of local ownership is just the beginning of the debate.

"I don't think that the quality-of-the-product argument is an issue. I think it's a red herring," says Quincy's Low. "The question is whether the founding fathers, in this, the 200th year of the Constitution, had something in mind relative to diversity of opinion when they gave the press special status. My thinking is that they did, that they did not foresee the idea the press would be controlled by a dozen or more people."

Yet analyst Morton earlier this year viewed the situation differently. In his annual report on newspaper ownership, he posed this question: "How many other industries are there where the 25 largest companies produce ONLY one-third of the products and ONLY two-thirds of total sales of those products?"

Morton agrees with Low, however, that some of the more discordant voices in the chorus of American newspapering would

"I think we have been through a period of obliteration. Now, I think free enterprise will start biting away at the ankles of these giants."

be silenced under the baton of group ownership.

In a recent column for the Washington Journalism Review, Morton lamented the loss of independent crusading publishers such as the late William E. (Ned) Chilton III of the Charleston (W. Va.) Gazette and William Loeb of The Union Leader in Manchester, N.H. If they were dedicated to moral outrage, if they were hot in an age of cool, they were at least never boring to their readers, Morton maintained. "In this era of bland and prosperous newspapers," he wrote, "they should be the norm for the breed."

Low says, "I, too, equate Chilton and Loeb as birds of a feather, though no two people could be further apart. Both represented a kind of feisty maverick that almost everybody disagrees with but they are sort of an equal-opportunity antagonist. They represent the kind of diversity of opinion you're not likely to get out of the kind of vanilla publisher you are likely to get out of Gannett. I don't know what flavor Ned Chilton was, but it sure wasn't vanilla."

Harvard's Compaine takes the other side. "I think there's plenty of diversity. Just because someone's loud and shrill and obnoxious, as opposed to being reasoned in their approach, doesn't mean (the industry) is more diverse."

Yet when all the arguments for and against independent ownership have been made, a conflict between logic and emotion sometimes remains.

Analyst Thorp says that while many people may think back fondly to an era of more independent newspapers and fewer groups, "They might not remember how awful some of those papers were then. I think you could make an argument that there's been so much improvement in the quality of papers that reading one paper today gives you a much better view of the world than reading two or three papers 20 or 30 years ago."

Sadder than the sale of an independent newspaper to a group, he says, "is what happens when a paper fights so hard to remain independent and it disappears. The Bulletin might still be in Philadelphia if it had been owned by a group a long time ago. There's a higher value than independent ownership—and that's survival."

DIMINISHING BUT NOT DISAPPEARING. Even as analysts and brokers expect fairly brisk sales to continue through the end of the century, they do not believe independent newspapers will disappear from the scene entirely.

"There will always be some adroit managers who, through astute estate tax planning, will be able to keep their newspapers," Morton says. "But that number will get smaller and smaller for all the reasons they have in recent years."

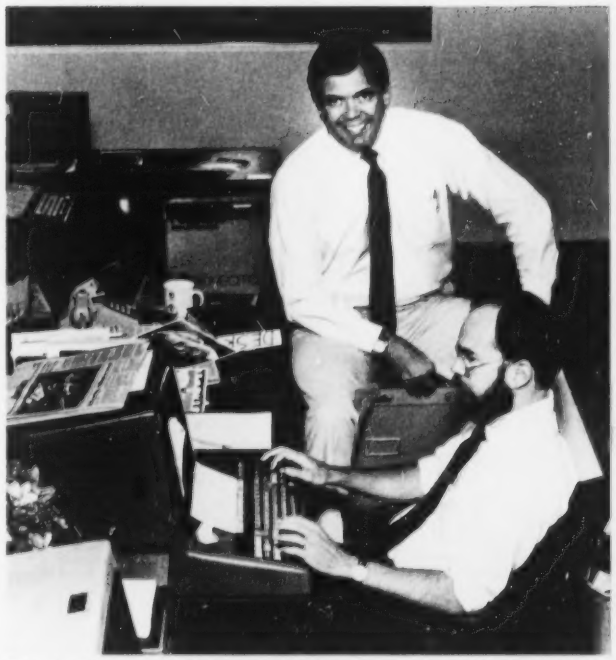
If, "conservatively" speaking, dailies are sold at a rate of 35 a year, "that would be more than 400 sold by the year 2000," he says. "I would say most of those newspapers would be owned by some larger company."

Viewing the situation from his broker's perch, Dirks sees two coming trends: that the remaining independents will become ever more resistant to offers to buy, and that the increasing scarcity of properties for sale will slow down the acquisition rate while pushing prices still higher.

"I think we're going to continue to see independent ownership," Dirks says. He predicts "there will be well over 200 or 250 by the year 2000. I could name at least 100 papers where descendants will still own the papers in the year 2000."

Could new independent buyers enter the arena, given today's high prices?

Patterson of St. Petersburg thinks so. He cites the recent emergence of new publishing entrepreneurs, some of whom left



Natt (top) is carrying on his grandfather's legacy in Longview, Wash.

executive positions with newspaper groups to become owners. Examples include former Harte-Hanks executives Tucker Sutherland and Richard Gozia, who now head separate newspaper companies; and former executives of The Des Moines Register Michael G. Gartner and Gary G. Gerlach, who have formed their own newspaper company.

"I think this free-enterprise system creates competition as well as obliteration," Patterson says. "I think we have been through a period of obliteration. Now, as conglomerates become evident, I think free enterprise will start biting away at the ankles of these giants."

Certainly, a resurgence of independent newspaper publishing would be welcome news to those who believe that diversity of viewpoint is endangered as independent newspapers dwindle in number.

But so long as the tax code is stacked heavily against the passing of newspapers to a family's next generation, newspapers will remain especially vulnerable to group acquisition. Nor are the best-laid estate plans any guarantee of the family harmony or journalistic dedication necessary to keep newspapers for future generations.

For those who want to stay independent, however, there might be some solace in knowing that the consummate acquisitor company, Gannett, believes it can be done. Says McCorkindale: "I still think any family that wants to continue to own can find ways to own. There's no real need to sell." □

TALKING TO READERS

Newspapers are trying to be more accessible, and to explain their sometimes-mysterious ways to the public

BY MARGARET G. CARTER
presstime staff writer

A 7,360-circulation morning daily in southeastern Minnesota, the Owatonna People's Press, is trying hard to live up to its name.

Last March, Editor Debra J. Flemming overheard some readers expressing surprise that the paper covered a particular community issue. Flemming addressed the matter in her weekly column. The answer to the question of how to get the newspaper to discuss an issue or an upcoming event is "very simple," she wrote. "Phone or stop by the newsroom."

Flemming uses her column to discuss editorial decision making, to talk about the role of the newspaper in the community and to explain how the newspaper works, including how news makes it into print.

It's just one of many devices newspapers around the country are trying in an effort to build rapport with readers and to improve their image of being accessible to them.

"How did it come to be that only the circulation department talks to readers on most days?" asked Jennie Buckner, managing editor/p.m. editions of the San Jose Mercury News, at a recent convention of the International Newspaper Marketing Association. "We need to expose everyone who works in our newsrooms to readers much more regularly," even if that means spending time riding circulation delivery vehicles.

At Ottaway Newspapers Inc., which publishes the Owatonna daily, Vice President/News A.N. Romm comments: "I think the whole industry is in the new mode, or coming to it, of sharing problems and decisions and reasons with the reader." Readers may think of newspaper people as being in an "ivory tower," he says. "It is to our advantage to present ourselves as mortal, rather than superhuman."

Most of the editors, and in some cases the publishers, in the Ottaway group of 22 small- and medium-size dailies write columns to readers, Romm says. "We encourage this kind of communication. We are community newspapers, and we want all the links we can with our readers."

Large papers, too, are making an effort. For example, the Los Angeles Times has a public information desk that fields inquiries, conducts seminars for publicity agents, sponsors face-to-face meetings between community leaders and editors, conducts community forums, distributes a brochure advising how to get press releases into the the paper, runs a speakers' bureau and offers building tours.

"These sorts of programs are important, particularly for a large newspaper like the Times," says Laura L. Morgan, public information supervisor. "We are, as are all newspapers, in the business of communicating with people. This makes our public relations programs especially important."

Not only is communicating with readers good public relations, it can result in better news coverage. Owatonna's Flemming says, "We are constantly trying to get readers to understand that three news reporters can't cover a city without their help with story ideas."

Los Angeles Times Suburban Editor Bob Rawitch (left) leads visitors on a tour.

FORMS AND FUNCTIONS. The Modesto (Calif.) Bee recently introduced a colorful approach to its public relations program. It repackaged and color-coded the materials provided to readers for such things as engagement announcements, press releases and photo reprint requests.

"They were all in disarray," Marketing Director Samuel C. Gonzalez says of the explanatory booklets and forms. "One form looked completely different from another. We thought it was time to make them complementary."

Booklets are a common element in newspapers' programs to improve relationships with readers, but there are variations among them.

For instance, where the Modesto paper provides different ones for different functions, other papers take a more comprehensive approach. The Baltimore Sun's eight-page booklet, "Sharing Your News, A Newspaper Relations Guide," includes in-

WHOSE MARKET STUDIES PAY FOR THEMSELVES IN JUST ONE YEAR?

The answer is obvious: Market Opinion Research. MOR's comprehensive surveys of retail shopping behavior arm you with powerful data. Data that documents the challenges and opportunities in your retail community. Data that demonstrates how newspaper advertising is an indispensable part of a successful marketing plan for every advertiser. Data that pays for itself . . . presentation after presentation.

MOR: the research company that's growing faster than the information industry itself. Serving the newspaper industry with expertise in strategic research and planning, market analysis, consulting services and database management. For MOR information, contact Ronald Mulder, Vice President for Media Research, at 1-800-521-0570.

MARKET OPINION RESEARCH

243 West Congress, Detroit, Michigan 48226
1-800-521-0570 or 1-313-963-2414

formation on all the newspapers' news needs, including deadlines. An updated list of editors' names and office telephone numbers is inserted every couple of months, says Gerry V. Smolinski, public affairs manager.

The booklet also contains telephone numbers of other newspaper departments and public-service programs, such as circulation, advertising and Newspaper in Education.

Typically, these booklets are available upon request and from racks in the newspaper lobby, are mailed to community leaders, distributed to new subscribers, or handed out at events at which the newspaper has a presence, such as when an editor speaks to a community group.

EDITORS UP CLOSE. The Baltimore Sun distributes its booklet at the "media conferences" it holds several times a year for people assigned to do publicity on a part-time basis for civic and fraternal organizations. The conferences feature a local public relations professional, who talks about media relations in general, and a panel of Sun staffers, who talk about the newspapers' specific news requirements.

Some newspapers conduct meetings for the public at large, or specific segments of it.

Every three weeks, The Boston Globe invites about two dozen residents with similar occupations or interests to its dining room for breakfast with the newspaper's top editors. Invitees have ranged from college deans, chiefs of police and superior court judges to bartenders, cabdrivers and operators of shelters for the homeless.

Although the sessions are off the record, "I get a lot of story ideas," says Executive Editor John S. Driscoll. "I also get a sense of where they think we might be going wrong in our coverage of their area of interest. Sometimes it's subtle points. Sometimes it's bad misses on our parts. Sometimes it's just a reinforcement that we are doing something right. But at least what it gives us is an opportunity to explain to people that we are accessible."

Similarly, the Los Angeles Times invites business and government leaders to a morning-long session with editors. After introductions, the attendees break into small groups. With the assistance of a Times editor, each group assembles a Times front page. "Our goal was to establish a real one-on-one dialogue with people in the community . . . and help them understand the process of putting together a daily newspaper," says the Times' Morgan.

The Hartford Courant's approach is to invite a small group of residents each month to spend an afternoon at the Courant and watch the newsroom in action. "No matter how well-informed, most of them don't know beans about what goes on inside the newspaper," says Henry McNulty, the Courant's "reader representative."

McNulty recalls an occasion when the "citizen observers" sat in on a meeting in which editors were grappling with whether to use the name of a 13-year-old junior high school student who had killed a janitor. All of a sudden, one of the editors turned to a member of the group and asked what he would do. "It really brought it home to them that these are real decisions, made by a real person," he says.

The Courant also invites a member of the public to serve as a member of its editorial board [**presstime**, Sept. 1986, p. 44].

When the Austin American-Statesman holds its public forums, they are on an everyone-may-come basis. In 1984, the first year he was the newspaper's editor, Arnold Rosenfeld held the forums on a monthly basis, each one in a different location. Now, he conducts them quarterly.

Rosenfeld began hosting such gatherings in 1976 when he was at the Dayton (Ohio) Daily News, and he believes he may have been the first editor to do so. He calls the meetings "a good listening post" in the community. "People who wouldn't ordinarily come down to your office or even write you a letter show up."

Recently, he introduced a new twist into the meet-the-editor program. He invited readers to call into the newspaper's classified advertising phone banks with their questions and comments, and about 150 of them did.

Other communicate-with-the-reader programs range from finding out whether people were quoted accurately in the paper, to turning readers into columnists:

- Accuracy questionnaires. At The Morning News and Evening Journal in Wilmington, Del., people mentioned in stories are selected at random to receive forms that ask whether the story was accurate [**presstime**, June 1987, p. 68].
- House ads. The Seattle Post-Intelligencer runs one entitled "How to get in touch with the Seattle P-I."
- Computer bulletin board. The Middlesex News of Framingham, Mass., has just begun providing readers with access to a computer database in which they can leave messages as well as retrieve news and information.

Since March, the News also has published a daily op-ed page written almost entirely by readers. One column is devoted to comments phoned in by readers. "We've all been wrestling with this question of access, trying to make the paper accessible," says Editor Kenneth O. Hartnett. "It's fun to try out these things, and I think they work." □

Some people think this photograph is more explosive than this bomb.

No pictures allowed.
Not of civil unrest. Not of the police.

Not in South Africa after the government's harsh press restrictions were announced in June 1986.

The only way photographer David Turnley of Knight-Ridder's Detroit Free Press could do his job was to risk getting arrested. Turnley was detained, searched, interrogated and released.

Despite the ban, Turnley, based in Johannesburg, has continued to document the struggle. The imbalance of power between South Africa's 24 million blacks and 4.8 million whites. Living under apartheid. In a land borrowing time. In a place perpetually in mourning as thousands die in Soweto, Swaziland and Mamelodi.

A 16-page collection of David Turnley's photographs was published in the Detroit Free Press last December. It won the Overseas Press Club Award for photographic reporting abroad.

He feels that if restrictions get tighter, those photos might be the last portrait of South Africa for years to come.

In South Africa, David Turnley is one of 18 staff members working at 15 Knight-Ridder foreign bureaus around the globe.

He has traveled for more than a year throughout South Africa, photographing a land of astonishing contrasts, in its worst time of strife. Few newspapers would put this kind of effort into a story. But the Detroit Free Press is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of five Pulitzer Prizes in 1987, is a worldwide communications company with eight television stations, cable systems, business information services and 32 daily newspapers.

Contending With 'Jumps'

Newspapers look for new ways to deal with the old problem of continuing stories to another page

BY GENE GOLTZ
presstime staff writer

Despite surveys through the years that have attested to readers' dislike for "jumps" in newspaper stories, they are more prevalent today than two decades ago. Emphasis now is on trying to make them more palatable.

"The question of what to do with jumps is repeatedly brought up in seminars" at the American Press Institute in Reston, Va., says Donald E. Lippincott, associate director. "They are a continuing concern in most of the discussions we have here."

The extent to which jumps have increased was documented in a 1985 report of the Associated Press Managing Editors' Changing Newspaper Committee. Examining 33 daily newspapers, the committee found only 27 percent of front-page stories were jumped in 1965, compared with 68 percent in 1985.

The greater use of jumps reflects a variety of changes in newspaper design: a narrower newspaper page that contains six instead of eight or nine columns of type, horizontal makeup, use of promotional boxes and more white space, larger graphics, and bigger type.

Yet like ink ruboff or a paper that gets thrown into the bushes, the jump is one of those annoyances that draws readers' ire.

The greater use of jumps in recent years reflects a variety of changes in newspaper design.

The unpopularity of jumps is well-documented by such studies as the American Society of Newspaper Editors' 1984 and 1979 surveys on "Relating to Readers in the '80s" and "Changing Needs for Changing Readers," respectively. In the 1984 study, from 32 to 41 percent of readers complained that their newspapers had "too many stories that skip to other pages."

There is also the matter of how many readers actually follow a story as it jumps from page to page.

Newspaper designer Edmund C. Arnold, professor emeritus of journalism at Virginia Commonwealth University, estimates that 70 percent of readers are unwilling to do so.

An Indiana University study in 1980 found that a majority of readers did not follow jumps.

A different finding was reported by designer Mario R. Garcia, associate director of The Poynter Institute for Media Studies in St. Petersburg, in a 1987 edition of his book, *Contemporary Newspaper Design*. Garcia quoted a study by a doctoral student at Syracuse University, indicating that 91 percent of readers of The Forum in Fargo, N.D., continued to the jump.

But newspaper researcher Ruth Clark, president of Clark, Martire and Bartolomeo Inc. of New York City, says the numbers are immaterial. "The real question," she says, "is not how many people will follow a jumped story. It is whether they will follow it happily or willingly."

Clark offers this one-word description of the jump: "entrapment."

JUMP TECHNIQUES. Garcia says his own studies show that most readers read the front page as a unit, then read the jumps. This reading pattern would seem to be a good argument for jumping all front-page stories to the same inside page, so the reader does not have to search for multiple continuations.

When The Washington Times began publication in May 1982, it followed such a reader-friendly policy on jumps. They all appeared . . . the last page of the section. The reader merely had to turn the section around to continue the story.

Yet the paper eventually dropped the system. The exigencies of design and content dictated a change, explains Harvey M. Kabaker, news editor.

The newspaper believed it would be a more prudent use of the high-visibility back page to anchor a four-color weather map and expanded weather report there, as well as a popular cartoon. "That left us with 72 column inches," says Kabaker. "Seldom is that enough to carry all jumps."

The Washington Post is known for publishing long stories and therefore long jumps—a situation defended by News Editor Richard R. Crocker.

"Most of our readers may not be typical readers," says Crocker. "Obviously, if you're talking about a 40-inch story, you're going to have 30 or more inches that are not going to make it on the front."

The Post tries to help the reader through "packaging." All the stories on the Iran-contra affair, for example, are packaged in the same section, and jumps go to the same page or pages. "You can help direct the reader and give him some signposts along the way," Crocker says.

The New York Times is another paper that is not shy about running long stories and jumping them.

But unlike The Wall Street Journal and many other papers, the Times violates one of designer Arnold's cardinal rules by jumping some stories from one section to another.

There are few things more exasperating, says Arnold, than finding a story continued in a section of the paper that some other member of the household is reading.

Researcher Clark also abhors section-jumps. She says when she is traveling, she often carries only the first section of a newspaper because the whole paper is too bulky.

When Clark finds a story that jumps to another section, she regards it as "absolutely an insult."

Allan M. Siegal, an assistant managing editor, says The New York Times' rationale is to jump a front-page story to the topically appropriate section. A business-related story jumps to the business section; a local story jumps to the metropolitan news section. A national or international news story is continued inside the front section.

ALTERNATIVES. Even though the problem of jumping stories is an old one and has been subjected to much scrutiny, it is one that plagues publishers to the present day. Both the ANPA library and the Industry and Public Affairs Department receive several inquiries each year from newspaper executives seeking guidance on how other papers might have solved the riddle of jumps.

If the truth be known, none has.

A bizarre jump system that originated in Scandinavia was tried by several U.S. newspapers two decades ago. Front-page stories were jumped to the back page of the first section, and that page was printed upside down. A reader simply flipped over the section from top to bottom and continued reading.

One paper that adopted the system was the Johnson City (Tenn.) Press-Chronicle. In mid-1968, after a year and a half, the practice was discontinued. Surveys showed that even with the flip-over system, 30 percent to 50 percent of readers still weren't reading the jumps, says E. Tom Hodge, editorial director of the paper now known as the Johnson City Press.

Clark suggests that newspapers set aside part of the front page for synopses of the day's major stories, noting the pages where those stories are published in their entirety. "We have found that people are perfectly willing to read the brief description of a story and then turn to the page where it is," the research expert says.

USA Today uses news summaries extensively and, of course, runs shorter stories that minimize the necessity for jumps. Only one article per section is allowed to jump from the section front, and the jumps move uniformly to a section's second page.

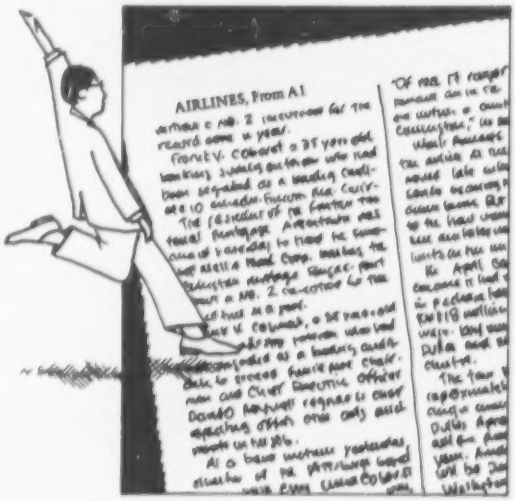
Design expert Daryl R. Moen says USA Today's use of the word "Please" on the jump line—"Please see COVER STORY, next page"—is one of the little things newspapers can do to encourage readers to make the leap from page to page.

At the Alexandria (La.) Daily Town Talk, which Moen finished redesigning last spring, a small logo is inserted on the front-page jump line and on the inside jump head to make it easier for the reader to spot the story.

Moen, who is a professor of journalism at the University of Missouri, notes that newspapers have tried a variety of strategies in writing the jump headline itself. Some use only a label that corresponds to the jump line on the front page, such as, for example, "COL. NORTH." Another strategy is to repeat the headline verbatim on the jump page. Or an entirely new headline can be written, emphasizing another aspect of the story—perhaps something appearing in the copy on the jump page.

Moen says each of these devices has both good and bad points, which is another way of saying there is no perfect answer to the jump problem.

Clark says her research has uncovered another problem with jumps. Many readers interested in a front-page story don't mind following the story to another page, she says, but then they never return to the front page.



Eliminating jumps altogether has been tried. Newspapers as diverse as the weekly Reston (Va.) Times and The Seattle Times did it but subsequently returned to jump systems in order to get additional worthy material on Page 1.

"I can't tell you anybody is particularly happy about jumping," says Robert B. Covey, the design director in Seattle. "But of all the alternatives, it gives us the best flexibility. It gives us the best use of photos and (other) art."

Similarly, Moen observes that despite their numerous deficiences, "Jumps are here to stay." □

K. Prescott Low

A fervent independent publisher

BY CLARK NEWSOM
pressstime staff writer

Independently owned dailies are important because they represent "an element of diversity that is more and more lacking" in the media today, says K. Prescott (Scott) Low, the fourth-generation publisher of The Patriot Ledger in the Boston suburb of Quincy, Mass.

"It's not an issue of quality," says Low. "It's the long-term issues, like concentration of ownership and people's perception of the media. A lot of people already have a poor perception of the ownership of the media. I think the power of the media is a public-policy issue that will be more visible over the next 15 to 20 years."

K. Prescott Low

Low's views about ownership are indicative of his quietly stated but strongly held convictions about a host of newspaper-business issues. The 46-year-old publisher of Massachusetts' largest evening newspaper (circulation 90,518) has developed those views during long periods of service to various press organizations at home and abroad.

He is an industry activist.

"There are few people I know who put more time and effort into overall support of the newspaper industry, particularly freedom of information throughout the world," says Byron C. Campbell, former publisher of the Daily News of Los Angeles. "I wish there were more Scott Lows in this business."

Newspapering came naturally to Low. His great-great-great-great-grandfather was Benjamin Russell, who published The Massachusetts Sentinel in Boston in the 18th century. Although a solid-as-a-rock New Englander, Low never became provincial. Before and after his graduation from Middlebury College in Vermont, he spent two summers driving across the country. Now he travels widely throughout the world.

In his soap-box pitches on behalf of locally owned newspapers, Low observes that a local owner "knows the people" and has an "inherent sense of identity" with the community and its long-term interests. Local ownership teamed with a commitment to exemplary news coverage produces outstanding newspapers, he says.

His own paper attests to it. The New England Newspaper Association judged The Patriot Ledger the region's best this year in the 50,000-to-100,000-circulation category.

"He is one of the most forward-thinking chief executive officers in our business," says Paul B. Flynn, president and publisher of the Pensacola (Fla.) News Journal. "His marketing sense in suburban Boston continues to amaze me." Flynn worked in the sports department of The Patriot Ledger when Low was in high school, working as a copy boy. "Even in his younger years, he was fiercely interested in the information part of newspapering and that the bottom line never interfere with the news."

Low has not always worked for the family paper. He spent three years at The Times of Trenton, N.J., first as a management trainee and later as assistant to the general manager, before returning to The Patriot Ledger in 1968 as assistant to the publisher. The following year he was named associate publisher and became publisher in 1973. At that time, he was given voting control of the company, his two sisters received dividend-paying stock but not voting power in decisions affecting the newspaper.

In addition to being publisher of The Patriot Ledger, Low is president of George W. Prescott Publishing Co. of Quincy, which includes 20 weekly newspapers in the state and many tourist publications. His company's holdings notwithstanding, he worries that media concentration is destined to become a matter of government concern "not just in the United States but around the world. Information is an international commodity."

Low's tendency to put matters into a global context comes naturally. "It's genetic," he says. In 1955, as a teenager, he accompanied his father, G. Prescott (Pres) Low, to a meeting of the International Press Institute in Zurich, Switzerland. (The elder Low, 74, is still active as chairman of the publishing company and is remembered in technological circles as a pioneer in the development of the Photon photocomposition machine, a breakthrough in the development of cold type.)

Scott Low, who says he speaks French "a little bit," is striving to become more fluent to improve his effectiveness in world affairs. He has served as director of the IPI's American committee, is a member of the Executive Committee of the Inter American Press Association, and senior vice president of and ANPA's designated representative to the International Federation of Newspaper Publishers, or FIEJ.

Before he became involved in international media issues, Low experienced world events first-hand in 1964-65 when he came under fire in Vietnam as an Army lieutenant. He received the Bronze Star and Air Medal with two Oak-Leaf Clusters.

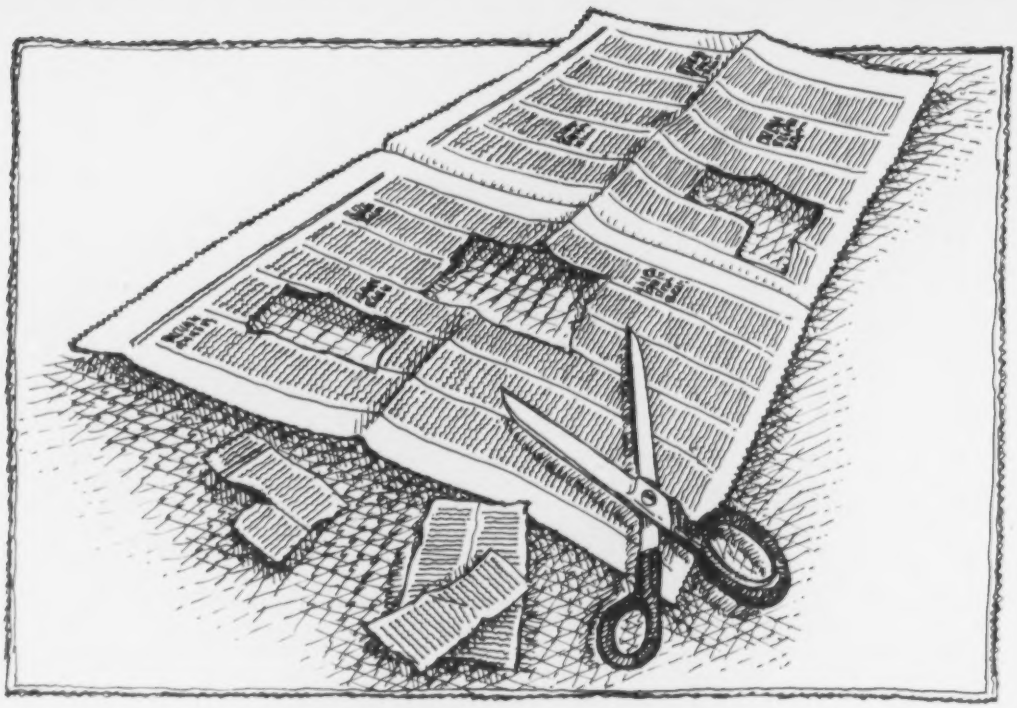
Domestically, Low is a director of the Inland Daily Press Association. He served on the ANPA Board from 1978 to 1986, including two years as secretary and four as chairman of the Government Affairs Committee.

"He's a prodigious worker," says Scott C. Schurz, publisher of the Daily Herald-Telephone of Bloomington, Ind. As an example of Low's dedication to the newspaper industry, Schurz relates how last year, when both were on a search committee for a new Inland executive director, Low flew from a FIEJ meeting in Europe to attend a one-day committee meeting in Chicago and then returned to the FIEJ meeting.

Fellow New Englander Richard J. Warren, editor and publisher of the Bangor (Maine) Daily News, says although Low is "very dedicated to the industry in general" he still "enjoys putting his feet up and relaxing, as we all do. He has a dry sense of humor and is a great punster. He's very devoted to his two children."

In fact, Low quickly answers "my family" when asked about interests apart from the business. He and his wife, Susan, have a 15-year-old son, Seth, and an 18-year-old daughter, Lisa, who is spending the summer working for Le Monde in Paris as a trainee in marketing and with Minitel, a consumer videotex system.

Low says both children will have the opportunity to work in the business. If they are interested, The Patriot Ledger, which has been locally-owned for its entire 150-year history, will be under independent control well into the next century. □



Mutual protects you against paper cuts.

Telling the whole story sometimes means taking risks, but with libel suits becoming more common (as well as more expensive for winners and losers alike), it might be tempting to cut questionable stories in order to reduce those risks.

The Mutual Insurance Company of Hamilton, Bermuda, believes that newspapers need to be secure in their reporting. So, for more than twenty-five years, Mutual has provided newspapers throughout the United States, Canada, and the Caribbean with the financial protection they need to endure lengthy and expensive libel suits.

During those twenty-five years, Mutual has handled more than 4,500 suits in the libel field. It is this kind of experience that makes Mutual the insurance company of choice for newspapers that want to protect themselves against the unpleasant fact of libel suits.

Mutual offers ANPA-member publications libel insurance that provides punitive damage coverage across the United States. A policy from Mutual pays up to 10 million dollars per occurence, rather than an annual aggregate. With low deductibles to minimize your loss, a libel insurance policy from Mutual is your best protection against libel litigation, the unkindest cut of all.

TO SELL OR NOT TO SELL,

TWO OWNERS OF SMALL, INDEPENDENT

(Editor's note: In these two articles, owners of two independent daily newspapers describe how they have been courted by newspaper groups, and how they reached a decision to sell or not to sell. Deciding not to sell was Suzanne G. Millholland, president and treasurer of the Hickory (N.C.) Daily Record [evening, 27,388]. Deciding to sell was Robert M. White II, who last year sold The Mexico (Mo.) Ledger [evening, circulation 11,027], to Thomson Newspapers Inc. He is a former director and treasurer of ANPA and former president of Sigma Delta Chi.)

BY SUZANNE G. MILLHOLLAND

My father bought the Hickory Daily Record in the fall of 1929, moving his family south after owning a couple of papers in Indiana. He was a journalist through and through, so newspapering was his life. We seem to have inherited this love of our newspaper—it runs in our veins.

After buying the Hickory paper, he put his heart and soul into making it the very best in Hickory, in Catawba County and outstanding in North Carolina. The Daily Record quickly began to grow under his direction, and he bought land in downtown Hickory, building a home for the newspaper in 1935-36. Later, he added to it in 1953 and 1965.

We have, of course, been plagued by buyers over the years—particularly after many papers around the country and also in North Carolina started selling to chains for various reasons, many times when estates had to be settled. My father did toy with the idea after my sister was killed in a tragic auto accident. His reason was, "What's the use?" But this idea was very brief, for his love was his paper.

He also gave a thought to selling as he got older and was not feeling too well. He was concerned about the responsibility he was leaving mother and myself. But he carried on until a few months before his death in July 1969.

Mother and I decided to carry on for Dad as long as we could. Of course, there were (and are) plenty of people making efforts to buy through phone calls, letters and personal contact.

We prospered, and my children were interested in this newspaper. They had worked part-time summers and any other time they could in any phase possible so long as they were helping Granddad. Our son David started full-time shortly before his grandfather died. He had among other jobs helped in the advertising department, so he went there and eventually took over. Now he is director of advertising and mainly in charge of the inserts. Our older son, John, came out of the Army and joined us in the summer of 1971. With his knowledge of computers and electronics in general, he serves us as promotions director. He helped with our conversion to offset and computers in 1972. We have tried to keep up to date with all our equipment, progressing with the times.

> *Most chains asking us if we're interested get the same, definite, "No, we are not interested."*

Family says the Record is not for sale.

Hickory and we as a newspaper have grown so much that now we are having to expand by buying land and building a new building. We haven't room for all our employees and have outgrown our present press. This is an exciting venture—one that was put off as long as possible.

We have coped with everything so far by sticking together and making major decisions as a family unit. We had no one but ourselves to deal with at the time of my father's death and then mother's in July 1985.

The question of whether to sell or hold onto the paper has been a fairly easy one for us all. We've all been interested in the business and taken a firm approach when contacted by potential buyers. Most of the chains and people asking us if we're interested in a change get the same, definite "No, we are not interested." We usually hang up then, but if they keep on we say we'll keep them in mind for the future. We know deep in our hearts that we probably won't need the name, and we give them little hope.

From time to time, we still hear from someone, but not too often any more. Most know we mean what we say and plan to carry on.

No one knows what's down the road, of course, but we hope to stay independent for quite some time. One does not make a fortune, and the hours are long. We have to put all our time and energy into the business—it's a way of life.

Two key words are Devotion and Determination. John's daughter, Maggie, who is 12, says she plans to make her career the Hickory Daily Record. As she says, "Grandma, of course, it's in our blood." □

THAT IS THE QUESTION

NEWSPAPERS TELL THEIR DIFFERENT STORIES

BY ROBERT M. WHITE II

The most difficult thing about selling The Mexico Ledger was making myself think about selling.

The paper had been in my family for 110 years—my grandfather bought it in 1876.

I had been editor and publisher and owner about 35 years. I loved every column inch of it.

Through the years, a month seldom passed without letters or phone calls from someone trying to buy it. I wasn't interested. Not at all.

Then slowly, taking far longer than any cold business decision should take, I realized I had to sell.

There were several reasons.

First, my family has always made a point of treating our children alike. Each of my four, after growing up around the Ledger, has worked for other newspapers. My son, now 24, works for the Fort Lauderdale Sun-Sentinel; one daughter is a senior editor of Medical Economics, another strings for the Kansas City Star and Times. My third daughter once worked for the Daily Camera in Boulder, Colo.

Upon my death, the Ledger would go into a trust with the four of them as trustees, any three able to override the fourth. However, estate taxes would force the sale of the paper.

Should I wait and leave the problems of the sale to my children? None had worked on the business side of a newspaper very long.

Further, the 1986 tax-law changes indicated I should sell before '87, when the tax on capital gains would go from 28 to 38 percent.

Next, I had to face the economic facts of life about my wonderful town, Mexico, Mo., and its trade area, "Ledgerland."

Our primary industries are farming with its sobering difficulties and refractories (basic to steel) going through the leaning-down and reorganization typical of most industries in the 1980s.

All in all, however, the key reason for selling was the future of my children. I had enjoyed the wonderful life that comes from 100-percent ownership of a small newspaper—for me, perhaps the almost perfect estate of man.

For each of my children, if I didn't sell, there could be the classic wrenching or worse that comes from minority ownership of a family business in its fourth generation. That anguish has happened too often.

So I sold. It was the most painful, agonizing and heartbreaking thing I ever did.

Yet, I knew it was the right thing to do. That conviction makes it acceptable. I sleep well. At least, pretty well.

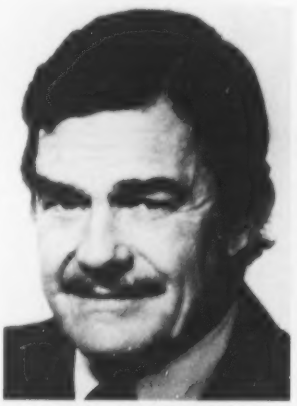
How did I sell?

Today, there are no individual buyers. Not really. So I reviewed the groups. They long ago made the market and set the prevailing price at so-many-times gross revenue.

In reviewing groups, I was keenly aware of editorials I had written through the years regretting the surging growth of groups and pointing out that executives of group papers look to group headquarters for approval, not solely to their town.

Granted, some group papers are better than some independent papers. All of which is to say some groups are better than others at producing good papers.

In my case, I quickly eliminated some groups and decided to approach a friend high in the pecking order of an excellent group. He was appreciative and helpful but did not make an offer. His company was interested in bigger papers in areas of vigorous growth. I was shocked, frankly. I had assumed all groups would automatically offer me overwhelming reward for the great opportunity I was giving them.



Robert M. White II

Selling was the most painful, agonizing and heartbreaking thing I ever did.

Before going any further, I went back to square one. Should I get a broker? I decided I would and retained Robert Bolitho. It was a good decision and a good choice. Bob helped me analyze the offers he brought in—and later, with many of the details of the sale.

Among other offers was one from Thomson, a highly successful outfit. At that time, Thomson owned 94 U.S. papers, mostly small dailies. However, I was aware of the company's reputation—some of it good, some of it not good; the not-good mostly dating back to a blistering article written by the editor of an Indiana paper after he was fired. I checked with some former owners of papers Thomson had bought recently. I checked with some employees of those papers.

I did the same sort of checking on other interested groups. I then started negotiating with key Thomson officials. Their offer was not—repeat, not—the highest I received. But I liked what I had learned about them, I liked the fact they specialized in small papers in small towns, I liked their policy of respecting the news-side and dedication to local coverage. I sold to them.

After the sale, I was invited to join Thomson's board of directors. I accepted.

Today, a year later, I find the organization to be better in many ways than I expected and not as good as it could be in very few ways. Overall, it is efficient, hard-working and dedicated to still better newspapers serving their communities still better.

So, I sold. I sold because I had to.

Today, I continue as editor, while my former managing editor is doing a great job as publisher and general manager.

The paper itself is good, very good—in fact, even better, which is as it should be.

Yet, between us, now and then I look back for a moment at that blessing I had for so long—"the almost perfect estate of man." □

COURTS

Media-law experts optimistic over nomination of Bork

In sharp contrast to the apprehension greeting last year's nomination of Supreme Court Justice Antonin Scalia, prominent First Amendment attorneys are enthusiastic about Supreme Court nominee Robert H. Bork's opinions strongly supporting a free press.

They are also betting that Bork will eventually be confirmed, perhaps narrowly, after a long and bruising battle on Capitol Hill that could keep him from joining the high court until after it convenes in October.

On July 1, President Reagan nominated the 60-year-old jurist, who now sits on the U.S. Court of Appeals, District of Columbia Circuit, to succeed retiring Justice Lewis F. Powell.

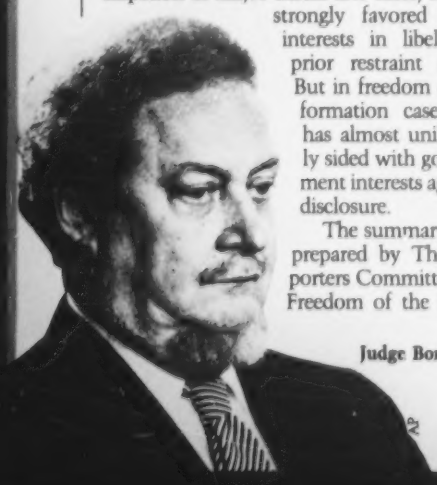
Bork has been branded a "right-wing idealogue" and "neanderthal" by Democratic liberals seeking to prevent his confirmation. But the media attorneys agree that his track record on press issues would be a welcome balance to the harsh press-law views of Scalia [**pressTime**, July 1986, p. 62], a conservative who drew relatively little fire during his confirmation hearings.

"He's the best nominee for the press we could have from the Reagan administration," says W. Terry Maguire, ANPA vice president/general counsel.

Attorney Bruce W. Sanford of Washington, D.C., a libel expert, put it this way: "The opinions that he has written himself show a sensitivity to First Amendment matters and a depth of understanding that's very hopeful." In contrast, Scalia "has a clear track record of antipathy toward the First Amendment," said Sanford, counsel for The Society of Professional Journalists, Sigma Delta Chi.

According to a summary of Bork's participation in major media law cases, he has strongly favored press interests in libel and prior restraint cases. But in freedom of information cases, he has almost uniformly sided with government interests against disclosure.

The summary was prepared by The Reporters Committee for Freedom of the Press.



Judge Bork

Executive Director Jane E. Kirtley said no Reagan nominee is likely to be her "perfect candidate," but Bork is better than others whose names surfaced following Powell's retirement. "He's a very outspoken commentator on free speech," she said. "He might be a disaster on FOI, but how many FOI cases go to the Supreme Court anyway? It might be best to get him off the circuit, where he could do more harm."

The most enthusiasm has stemmed from Bork's lengthy concurring opinion in *Ollman v. Evans*.

"It's a ringingly beautiful defense of the First Amendment in the field of libel and opinion," commented Richard M. Schmidt of Washington, D.C., counsel to the American Society of Newspaper Editors.

In that 1984 opinion, the full appeals court affirmed a lower court ruling that allegedly libelous statements in "a scathing article" by syndicated columnists Rowland Evans and Robert Novak about Bertell Ollman, a Marxist professor of political science, were protected commentary.

Scalia's dissenting opinion labeled the column "classic and coolly crafted libel."

Bork's argument was, in part, a conventional defense of the robust political debate that, regardless of inaccuracy or bias, the First Amendment was intended to protect. "In our world, the kind of commentary that (Evans and Novak) have engaged in here is the coin in which controversialists are commonly paid," he wrote.

But in language that Scalia and other conservatives said smacked of judicial activism, Bork wrote that the Ollman case "arouses concern that a freshening stream of libel actions, which often seem as much designed to punish writers and publications as to recover damages for real injuries, may threaten the public and constitutional interest in free, and frequently rough, discussion."

Bork added: "The evidence is mounting that juries do not give adequate attention to limits imposed by the First Amendment and are much more likely than judges to find for the plaintiff in a defamation case. . . . In cases like this, it is the task of the judge in this generation to discern how the framers' values, defined in the context of the world they knew, apply to the world we know. . . . The evolution of doctrine to accomplish that end contravenes no postulate of judicial restraint."

Other important media-related opinions authored by Bork include:

• *Lebron v. Washington Metro. Area Transit Auth.*, in which Bork wrote that the transit authority engaged in unconstitutional prior restraint when it refused to lease display space in a subway station to an artist who wanted to display a poster critical of the Reagan administration.

• *McBride v. Merrell Dow and Pharmaceuticals Inc.*, in which Bork partially affirmed and partially reversed a district judge's dismissal of a medical expert's libel action. He stated: "This case highlights the problems posed by contemporary libel law. . . . Libel suits, if not carefully handled, can threaten journalistic independence."

Yet to be seen is Bork's position on commercial free speech, said Seattle lawyer P. Cameron DeVore, who specializes in such issues and has found no key cases in which Bork has participated.

But on libel and prior restraint issues, Bork "is absolutely right down the line," observed Henry R. Kaufman, general counsel of the Libel Defense Resource Center in New York City.

Given Bork's recent rulings, neither Kaufman nor other media attorneys interviewed by **pressTime** are concerned about a 1971 law-review article in which Bork, then a Yale law professor, stated that the First Amendment protects only "speech that is explicitly political."

He has since broadened his view but said, in an interview in Bill Moyers' recently televised series, "In Search of the Constitution," that the charge that he has turned into a First Amendment activist is "nonsensical."

"If you have a threat to a provision in the First Amendment that's rising from a change in the law—and libel law has been changing—I see no reason why it's activist to protect a free press from that change," he told Moyers. A free press is jeopardized by an upsurge in libel cases and awards, just as security from government intrusion in the home is jeopardized by electronic surveillance, he said. "If we confine ourselves to threats that the framers knew about, that document would gradually become meaningless."

When Moyers asked what he thought about becoming when he was young, Bork replied unhesitatingly, "I wanted to be a journalist." —*Mary A. Anderson*

LEGISLATION

Senate tables exemption for fee on newsprint

The Senate July 21 refused to exempt newsprint from a new import fee included in a major trade bill.

Senators voted 69-29 to table an amendment that would have exempted newsprint from the fee, which could be as much as 1 percent of the value of the imported item.

The amendment, sought by ANPA to continue newsprint's 74-year-long duty-free status, was offered by Sen. Thomas A. Daschle (D-S.D.).

"My amendment attempted to reflect the compelling argument made by the newspaper industry that the fee will have an adverse effect on an industry which relies heavily on imported products," Daschle said following the vote.

Sen. Bob Packwood (R-Ore.) offered the motion to table. The ranking Republican on the Senate Finance Committee, Packwood made no statement in doing so.

"We did expect that there were a couple of members of the Finance Commitee, specifically, who had problems with the exemption, and we expected an objection to be raised from that point," said Greg T. Billings, Daschle's legislative director. "But we felt that as long as the objection didn't come from the leadership of the committee, we felt we had a good chance."

Three senators—Bill Bradley (D-N.J.), John D. Rockefeller IV (D-W.Va.) and John Heinz (R-Pa.)— spoke against the amendment, arguing that it would open the bill up to a series of special exemptions.

ANPA Executive Vice President Jerry W. Friedheim expressed regret that the Senate technically sidestepped the issue by voting on a tabling motion rather than on the amendment itself. "It's disappointing that the Senate chose not to face the issue that an import fee on newsprint, however small, is neither economically necessary nor constitutionally wise," he said. "Many senators had responded positively in discussions with newspaper executives from throughout the country. Had Sen. Packwood not moved to table the Daschle amendment, we believe it would have passed."

Friedheim said the Association will "seek other avenues to point out that in a free society the government should not make even a modest beginning toward economic leverage over and taxation of the chief raw material of a free press. It is for good reason that we have duty-free newsprint; and while an import 'fee' may be thought by some not to be a 'tariff' or a 'duty,' it looks and smells much the same."

Revenue from the import fee would fund an assistance program for workers displaced because of imports. ANPA argued that newspapers' importation of newsprint does not dislocate U.S. workers because U.S. newspapers already purchase all of the domestic newsprint produced.

Under the Senate bill, the tax level would be set by the President based on the estimated cost of that assistance program, not to exceed 1 percent. The tax would take effect 30 days after the President reaches an agreement under the General Agreement on Trade and Tariff allowing such a fee to be imposed, or two years after enactment of the bill if an agreement is not reached.

The Senate bill now goes to a House-Senate conference committee to be reconciled with the trade bill passed earlier by the House. That bill provides the President with the authority to negotiate an import fee.

The future of the trade package is unclear. A veto has been threatened by the Reagan administration, which opposes certain aspects of the Senate bill, including a plant-closing provision. (See story, p. 51.)

Senators voting to table the ANPA-supported amendment:

Adams (D-Wash.), Armstrong (R-Colo.), Baucus (D-Mont.), Biden (D-Del.), Bingaman (D-N.M.), Bond (R-Mo.), Boschwitz (R-Minn.), Bradley (D-N.J.), Burdick (D-N.D.), Byrd (D-W.Va.), Chafee (R-R.I.), Cochran (R-Miss.), Cohen (R-Maine), Cranston (D-Calif.), D'Amato (R-N.Y.), Danforth (R-Mo.), Dodd (D-Conn.), Dole (R-Kan.), Domenici (R-N.M.), Durenberger (R-Minn.), Evans (R-Wash.), Exon (D-Neb.), Ford (D-Ky.), Fowler (D-Ga.), Garn (R-Utah), Glenn (D-Ohio), Graham (D-Fla.), Gramm (R-Texas), Grassley (R-Iowa), Harkin (D-Iowa), Hatch (R-Utah), Hatfield (R-Ore.), Hecht (R-Nev.), Heinz (R-Pa.), Helms (R-N.C.), Hollings (D-S.C.), Humphrey (R-N.H.), Karnes (R-Neb.), Kasten (R-Wis.), Kennedy (D-Mass.), Lautenberg (D-N.J.), Levin (D-Mich.), Lugar (R-Ind.), McCain (R-Ariz.), McClure (R-Idaho), McConnell (R-Ky.), Metzenbaum (D-Ohio), Mikulski (D-Md.), Mitchell (D-Maine), Murkowski (R-Alaska), Nunn (D-Ga.), Packwood (R-Ore.), Proxmire (D-Wis.), Reid (D-Nev.), Riegle (D-Mich.), Rockefeller (D-W.Va.), Rudman (R-N.H.), Shelby (D-Ala.), Simpson (R.-Wyo.), Stafford (R-Vt.), Stevens (R-Alaska), Symms (R-Idaho), Thurmond (R-S.C.), Trible (R-Va.), Wallop (R-Wyo.), Warner (R-Va.), Weicker (R-Conn.), Wilson (R-Calif.) and Wirth (D-Colo.).

Senators voting against tabling the amendment:

Bentsen (D-Texas), Boren (D-Okla.), Breaux (D-La.), Bumpers (D-Ark.), Chiles (D-Fla.), Conrad (D-N.D.), Daschle (D-S.D.), DeConcini (D-Ariz.), Dixon (D-Ill.), Heflin (D-Ala.), Inouye (D-Hawaii), Johnston (D-La.), Kassebaum (R-Kan.), Kerry (D-Mass.), Leahy (D-Vt.), Matsunaga (D-Hawaii), Melcher (D-Mont.), Moynihan (D-N.Y.), Nickles (R-Okla.), Pell (D-R.I.), Pressler (R-S.D.), Pryor (D-Ark.), Quayle (R-Ind.), Roth (R-Del.), Sanford (D-N.C.), Sarbanes (D-Md.), Sasser (D-Tenn.), Specter (R-Pa.) and Stennis (D-Miss.). □

COURTS

ANPA to urge court review of Salinger case

ANPA will file a friend-of-the-court brief in support of Random House Inc. and author Ian Hamilton in their petition for U.S. Supreme Court review of an injunction against publication of a biography of J.D. Salinger.

The injunction, issued by the 2nd U.S. Circuit Court of Appeals in *Salinger v. Random House and Hamilton*, holds that unpublished works—such as Salinger's letters quoted or paraphrased in the Hamilton biography—are not covered by the fair-use defense under the Copyright Act.

"The case, if accepted and affirmed, could significantly restrict the ability of reporters to gather and report the news," said ANPA Executive Vice President Jerry W. Friedheim.

W. Terry Maguire, ANPA vice president/general counsel, said the basic issue is "the extent to which unpublished materials can be used by the media without securing prior consent." He said it would be particularly applicable to newspapers that run across letters and other unpublished materials in the course of story research. □

COURT BRIEFS

• The New York Court of Appeals ruled 4-3 that the state's **shield law** does not protect non-confidential material from disclosure.

The ruling resulted from a subpoena for outtakes from an Albany, N.Y., television station. Attorneys for Knight-Ridder Inc., the station's owner, are considering whether to ask for a rehearing.

• Ninety-six former carriers for the St. Louis Globe-Democrat are seeking $83.4 million in damages through a newly filed **antitrust suit**. The plaintiffs allege a conspiracy between Pulitzer Publishing Co. and Herald Co., a Newhouse subsidiary that published the now-defunct Globe-Democrat under a joint operating arrangement.

Media act to head off tax-deductibility limit

ANPA and other media and advertising groups are opposing efforts to limit the tax deductibility of advertising expenses as a way of raising revenue to meet federal budget targets.

The idea surfaced in a document prepared for the House Ways and Means Committee by its staff and the staff of the House-Senate Joint Committee on Taxation. The idea of limiting the deductibility of advertising expenses was also raised last year by the Treasury Department when the Senate was considering tax revision legislation.

The House committee document, describing "possible options" to increase revenues, proposed three with regard to advertising expense deductibility:

- Requiring that 20 percent of advertising costs be amortized over a four-year period, rather than being fully deductible in the tax year in which they are incurred
- Denying deduction for 20 percent of corporate advertising costs and amortizing the remainder over two years for firms with more than $5 million in gross receipts
- Denying any deduction for advertising for, or promotion of, alcohol and/or tobacco products.

At a Ways and Means Committee hearing July 7, representatives of the Magazine Publishers Association, the National Association of Broadcasters, the Association of National Advertisers and the American Association of Advertising Agencies spoke against the proposal.

ANPA endorsed the MPA testimony and submitted a separate statement to the committee. "Discrimination against advertising among the many costs of doing business would be unwise public policy," ANPA said. "Government action which discourages speech, including commercial speech, is contrary to sound basic concepts in our society." The same statement was submitted to the Senate Finance Committee, which conducted hearings July 15-17. Media and advertising groups were represented by the American Advertising Federation. □

ANPA, ASNE oppose ideology as reason to deny visas

ANPA and the American Society of Newspaper Editors have urged Congress to eliminate ideology as a basis for denying visas or deporting aliens.

"America's principal editors and publishers have serious First Amendment concerns with the nation's immigration laws and their implementation," said Edward W. Seaton, editor and publisher of The Manhattan [Kan.] Mercury, in testimony submitted to the House Judiciary Subcommittee on Immigration, Refugees and International Law. "We believe aliens should be able to enter the United States or remain here regardless of their beliefs, associations or what they may say."

He suggested that legislation be enacted guaranteeing that aliens cannot be denied entry or expelled based on grounds that "would be protected by the First Amendment if they were citizens."

The issue gained prominence last fall when a Colombian journalist, Patricia Lara, was denied entry into the United States [**presstime**, April 1987, p. 45].

The subcommittee is considering HR 1119, sponsored by Rep. Barney Frank (D-Mass.), which would revise and narrow the grounds under which visas can be denied and aliens can be deported. The Newspaper Guild has endorsed the bill.

A bill has been introduced in the Senate to address the same issue [**presstime**, Feb. 1987, p. 40]. □

REGULATIONS

Test focuses on carcinogenic impact of treated oil

An oil refining company has developed a test to predict the potential of treated oil to cause skin cancer. And it appears to cast doubt on the federal government's interpretation of how oils used to manufacture printing inks should be treated to ensure they are non-carcinogenic.

But the Occupational Safety and Health Administration said it does not plan to change its policy.

Sun Refining & Marketing Co. of Philadelphia said its new test is simple and inexpensive. The company said the test predicts whether treated petroleum oil will pass animal skin cancer tests.

According to a company official, Sun tested the treated oil it sells to ink manufacturers and it passed the test. That oil is refined from crude oil from the Texas-Louisiana Gulf Coast.

However, when Sun tested samples of treated oil from other crude oil sources, they failed, said Norman R. Klingerman, manager of transportation, planning and pricing. "We believe that the OSHA standard alone does not ensure non-carcinogenicity."

The issue of treating oil used in the manufacture of printing ink arose in 1985, prior to implementation of OSHA's "hazard communication" standard. At that time, ink manufacturers stopped using untreated oil and went to treated oil in order to avoid having to label their products as a cancer hazard.

In interpreting the hazard communication standard as it relates to oil, OSHA has said oil that is only "mildly hydrotreated"—that is, hydrotreated at a pressure of 800 pounds per square inch or less, at temperatures up to 800 degrees Fahrenheit—must be labeled as carcinogenic.

According to Klingerman, the Sun test results show that "you just can't set a standard on hydrotreating pressure."

Sun has identified a list of about a dozen other "operating variables," leading with the type of crude oil used. In addition to the crude oil from the Gulf of Mexico, crude oil used in the manufacturing of printing ink also comes from California, South America and Africa, he said.

Klingerman said the only "true test" to determine the carcinogenicity of an oil is a "dermal bioassay test" in which mice are painted with the oil. However, he said, it takes two to three years to get results from this type of test, which costs close to $50,000. The new Sun-developed test is "a good correlator to the results that you get from dermal bioassay work," he said. "We are saying that this predictor test can give you a good idea as to whether that oil is safe or not."

The test is composed of "two simple laboratory tests," Klingerman said. One evaluates the viscosity of the oil. The other, a standard test of the federal Food and Drug Administration, determines how well the oil is "cleaned." These tests take only a couple of hours and cost only a "few hundred dollars" to conduct, he said.

A paper describing the Sun test will be published in the November issue of the American Industrial Hygiene Association Journal. □

ANPA says USPS has not shown detached-label 'efficiencies'

ANPA has fired yet another volley in its battle against what it regards as excessively cheap rates for third-class detached-label mail.

The Association took dead aim at the U.S. Postal Service's claim that the labels, delivered with third-class materials or "flats" as a single piece, save enough money to justify getting nearly a free ride.

"No study has been produced that documents and quantifies these alleged efficiencies," ANPA said in testimony submitted to the Postal Rate Commission. "Thus, the only justification offered by the Postal Service for the treatment of the detached card and the flat as a single mail piece is unsubstantiated."

The "common sense" position was outlined in testimony prepared for ANPA by economist Sharon L. Chown of Cambridge, Mass. The comments were filed as part of the Association's pending complaint to the rate commission about detached-label policies.

At the heart of the ANPA complaint is the definition of the term "piece of mail." The Association has asked for a clarification [**presstime**, Jan. 1987, p. 48].

"Without a consistent and workable definition . . . for rate purposes," Chown said, "there exists the potential for arbitrary and inequitable classification rulings and regulations, such as the one that permits detached cards and their accompanying flats to travel in the mailstream for one per-piece rate."

She suggested a definition establishing this test for a piece of mail: The item is handled individually by any postal worker during any stage of mail processing, transportation or delivery. □

Association supports 'plus' issue proposal

ANPA has suggested that the Postal Rate Commission adopt one of its own suggestions. It concerns implementing rules for "plus" issues—the term used by postal authorities for total-market-coverage programs mailed via second-class.

The commission's proposal is to limit the number of non-subscriber copies mailed second-class to the number of subscriber copies delivered via that mail category. The intent is to limit use of second-class for TMC [**presstime**, July 1987, p. 58].

While ANPA disagrees with that purpose, it said the proposal in question would apply evenly to all publications, unlike some earlier proposals that the Association said discriminated against daily newspapers.

The Association said the proposed new rule is a "marked improvement over the existing regulatory scheme, touching neither too much nor too little."

It asked the commission to discard an existing Domestic Mail Classification Schedule rule and to urge the Postal Service to repeal certain sections of the Domestic Mail Manual, replacing them all "with this simple and understandable rule."

The rate commission's decision will be a challenge not only because of the complexity of the issue, but also because mailers disagree widely on the matter. □

House votes full funding

The U.S. House of Representatives voted to appropriate enough postal funding for the 1988 fiscal year to keep in-county, second-class rates at current levels.

The House voted to allocate $517 million for "preferred mail," including newspapers mailed within the county of publication.

The Senate had not acted by late July. But observers said chances were good that it also would vote to hold rates steady [**presstime**, Nov. 1986, p. 55]. □

New contracts set for Canada, U.S. workers

Canada Post and the Canada Letter Carriers Union settled on a new, 31-month contract July 4 that ended a "rotating" strike in larger mail centers.

Union members were expected to ratify the agreement early this month, partly because the union was considered to have won the most ground in negotiations [**presstime**, July 1987, p. 58].

Meanwhile, the U.S. Postal Service and its two largest employee unions July 21 announced agreement on a new, 40-month contract. Workers will receive pay increases of between $1,700 and $1,866 over the life of the contract, which must be ratified by the rank-and-file union members. □

Simmons shows readership up on Sundays

Simmons Market Research Bureau Inc. has completed its 1987 Newspaper ratings survey of the top 50 markets, and Scarborough Research Corp. was expected to have its survey finished in late July.

The Simmons study indicates that readership of Sunday newspapers is up substantially since the last syndicated study in 1985, but weekday readership of daily newspapers is down slightly, said L. Kay Schultz, director of the firm's subsidiary, Simmons Major Market Research Inc.

However, Schultz cautioned that exact comparisons cannot be made because the markets and newspapers surveyed differed slightly in the two studies.

Simmons found that 72.3 percent of all adults surveyed this year said they read a Sunday newspaper, compared with 69.7 percent in 1985.

Just over two-thirds (67.1 percent) of adults said they read a newspaper on an "average weekday." The 1985 study had found 68.4 percent were weekday readers.

The new Simmons survey also found that management, professional and more affluent adults read newspapers more than the average.

The study classified those surveyed into "newspaper imperative" or "television imperative" people, depending on whether they relied more on newspapers or TV for various types of information. Those with higher educations and incomes were more "newspaper imperative" than the average adult. For example, 44 percent of college graduates were newspaper imperative and 22.6 percent were television imperative. Of those with household incomes of $75,000 or more per year, 43.2 percent were newspaper imperative and 22.1 percent were television imperative.

The Simmons study was based on data for 123 U.S. daily newspapers and 93 Sunday newspapers in 56 major markets, including the top 50 Areas of Dominant Influence, or ADI. Simmons signed up 125 ad agencies as clients for the information.

Scarborough had 81 ad-agency clients and 98 newspaper clients as of July 21, said Jeffrey W. Rodgers, vice president/newspapers and marketing. Its study covers the top 50 ADI plus Des Moines.

After conducting separate studies for several years, the two firms in 1985 made a joint study. Then they discontinued the combined effort [**presstime**, June 1987, p. 90]. The new studies are the first for each since then. □

Newspaper to appeal fine over photo chemical disposal

The Tacoma (Wash.) News Tribune plans to appeal a $6,000 fine assessed against it by the state for discharging photographic processing waste into the local sewer system.

The fine resulted from an inspection of the newspaper plant last October by Washington state's Department of Ecology. In May, the department notified the newspaper that it was being fined for illegally disposing "extremely hazardous waste" into the sanitary sewer system.

The newspaper's attorney questioned the state's inspection methods. Department of Ecology personnel insisted that test samples be taken as the waste came from the processors, said Steven V. Robinson. "It was always our understanding that the tests were going to be done at point of discharge" into the sanitary sewer system, he said. At that point, the waste would have mixed with other waste water and diluted.

Robinson said the newspaper also is "confused as to why the News Tribune was singled out." The newspaper plans to file an appeal this month with the Pollution Control Hearings Board, the attorney said.

Lately, Robinson reported, the paper has been putting photographic waste in containers for disposal.

Richard W. Neergaard, ANPA manager/environmental services, said he believes the state misapplied its solid-waste regulations in the case.

The U.S. Environmental Protection Agency and environmental agencies in some other states long have considered photographic processing wastes to be an "industrial liquid waste discharge," not a solid waste, he said.

Neergaard said he believes photographic waste should be excluded from Washington's "dangerous waste regulations" under a section that exempts industrial waste-water discharges subject to regulation under the federal Clean Water Act. Photographic processing waste is subject to regulation under that law, he said.

As recently as 1986, Neergaard said, the federal EPA determined that the "volume and relative toxicity" of newspaper waste "is not significant enough in terms of the total waste stream going to sewage treatment plants" to require pretreating.

Large photo processing operations are required to pretreat their waste, and newspapers technically could come under these rules, Neergaard said. But federal rules exempt operations that process less than 1,600 square feet of film a day. Neergaard said he knows of no U.S. newspaper processing that volume of film on a daily basis.

Clark G. Haberman, regional manager for the state Department of Ecology, said he believes the enforcement action is correct within the state's regulations. "The states always can choose to be more stringent" than the federal government, he said.

In response to the Tacoma case, Allied Daily Newspapers—a regional newspaper association in the Pacific Northwest—recently held a one-day seminar for its member newspapers from Washington state. Speakers included manufacturers of waste treatment equipment and representatives of toxic waste disposal operations.

Allied Executive Director Paul R. Conrad said he has recommended that newspapers confer with local sewage authorities as to whether they want newspapers to pretreat photographic waste.

ANPA's Neergaard said although the step is not required, he encourages newspapers to process their photographic waste through a silver-recovery system. It can save the newspaper money while decreasing the treatment burden for the local sewage treatment facility, he said. □

Some newspapers routinely release photo waste down the drain.

Some states don't apply sales tax to postage portion of subscription costs

Does a state's sales tax apply to the postal costs included in the price of a mailed subscription?

State press associations are getting different answers from state tax authorities.

The Kentucky Tax Policy Division told the Kentucky Press Association that the state's sales and use tax does not apply to postal costs for mailed subscriptions. A similar response was obtained by the North Carolina Press Association from that state's Department of Revenue.

However, when the Georgia Press Association made a similar inquiry to the Georgia Department of Revenue, Commissioner Marcus Collins replied that the sales tax is owed on the full amount of the subscription because the department has no authority to allow newspapers to separate out postal costs. According to GPA General Counsel David E. Hudson, Collins said the department would consider information on how other states handle the matter.

KPA Executive Director David T. Thompson said a discussion at the Newspaper Association Managers' annual legislative conference last December at ANPA headquarters in Reston, Va., prompted him to pose the question to state revenue officials. For some newspapers, postal costs can account for as much as 60 percent of the subscription price, he said. □

Open records challenge withdrawn in California

Following a court ruling granting the San Jose Mercury News access to records of California's Fair Political Practices Commission, a legislator withdrew a bill, which had been vigorously opposed by the press, to exempt the FPPC from the state's open records law.

The FPPC requested the exemption after the Mercury News filed suit to gain access to certain records. Superior Court Judge William Lally ruled in favor of the newspaper on most of the records it sought.

Assemblyman Elihu Harris then took his bill from the agenda of the Senate Governmental Organization Committee, saying he wanted to study the matter further. □

Media persist in opposing Florida ad sales tax

The Florida Supreme Court's advisory opinion on the state's 5-percent sales tax on advertising—that it is "facially constitutional"—has not deterred media and advertising organizations from going ahead with plans to keep fighting the levy in court.

The advisory opinion was approved 4-1, with two abstentions. The dissenter said "the tax on advertising represents an unconstitutional restraint on free speech." The two justices who abstained expressed reservations that advisory opinions erode the doctrine of separation of powers.

"In our view, it wasn't a strong opinion at all," said Richard D. Shelton, executive director of the Florida Press Association. "It simply said on the surface that the court felt that the sales tax in general was constitutional. It almost seemed to invite specific litigation."

The primary impact of the opinion is on Gov. Robert Martinez, who wanted a favorable opinion as an endorsement before implementing the new tax-collection procedures [**presstime**, July 1987, p. 60].

Attorneys for various newspapers and the FPA will work on a unified action challenging the tax based on First Amendment and interstate commerce grounds, Shelton said.

The Florida Bar already has filed two suits against the measure, and they will be heard in September.

Also under way is a referendum drive to repeal the tax. Initiated by a group called Stop Taxes Oppressing People, or STOP, the campaign needs nearly 350,000 signatures by August 1988 to qualify for the ballot.

In other recent actions to protest the new tax, a number of media organizations have joined those deciding to move future conferences out of the state. New additions include the Inland Daily Press Association, the Association of Newspaper Classified Advertising Managers, the International Newspaper Advertising and Marketing Executives, the National Newspaper Association and the National Newspaper Publishers' Association.

ANCAM had planned to hold its 1988 conference in Fort Lauderdale, and Inland had planned its 1989 winter conference for Tarpon Springs. INAME officials had been close to signing contracts for future meetings in Orlando. NNA canceled its 1989 convention in Orlando. NNPA, representing the black press, had scheduled its next mid-winter workshop in Miami.

Advertising blackouts also have become a regular occurrence during broadcasts. By mid-July, 36 national advertisers had eliminated or reduced their volume of advertising in Florida.

In many cases, the FPA's Shelton said, the time remains paid by the advertiser—but instead of a commercial message, a message protesting the advertising tax is aired.

Some advertisers have canceled contracts with newspapers, he said, but the amount of revenue lost thus far is unknown. □

County attempts VDT regulation

A local government on Long Island, N.Y., has approved a bill regulating the use of video display terminals for the first time in the private sector.

However, on July 22, Suffolk County Executive Michael LoGrande vetoed the bill. The county legislature has until Aug. 11 to attempt to override the veto.

The bill applies to all employers using 20 or more VDTs.

Among other things, the legislation requires that employees who operate a terminal more than 26 hours a week get a 15-minute break for alternate work every three hours. It also sets work-station standards for equipment purchased after Jan. 1, 1989.

The bill was passed by the county legislature June 23 by a 13-2 vote, with three abstentions. Twelve votes would be needed to override LoGrande's veto.

Representatives from Newsday, ANPA and the Washington, D.C.-based Center for Office Technology testified in opposition to the bill at legislative hearings. After passage, they urged LoGrande to veto it.

Newsday Vice President Alberto Ibargüen said the legislation was unnecessary and "mandates artificial work rules and working conditions."

ANPA Manager/Environmental Services Richard W. Neergaard said it could be "counterproductive to the goal of improving the VDT workplace."

Supporters of the bill included the Communications Workers of America.

The Center for Office Technology reports that VDT legislation in some form is under consideration by four state governments—in California, New York, Ohio and Pennsylvania. □

Newspapers exempt from telemarketing curbs in Florida

Newspapers are exempt from a new Florida law restricting telemarketing. The law, which takes effect Oct. 1, is the first of its kind in the United States.

It prohibits sales calls to consumers who add the line "no sales solicitation calls" after their names in the telephone directory. It also prohibits sales calls to people whose telephone numbers are unlisted at their request. Each violation carries a $10,000 fine.

According to Richard D. Shelton, executive director of the Florida Press Association, newspapers sought the exemption because, with Florida's highly transient population, they regularly solicit new residents whose numbers are not yet in directories. The newspapers therefore would be at risk of inadvertently calling people who had requested unlisted numbers. "In effect, it would have put newspaper sales out of business," he said.

The law covers sales calls for tangible personal property, time-share real estate ventures and cemetery plots. Newspapers are the only items exempt from the tangible-personal-property category. "They were exempted based on the unique circumstances and the concerns for free circulation of newspapers," said Shelton.

According to the Direct Marketing Association, similar bills, sometimes called "asterisk" bills because consumers could indicate their desire not to receive sales calls by an asterisk next to their directory listing, are pending in legislatures in Illinois, New Jersey and New York [**presstime**, May 1986, p. 66]. DMA said it maintains a list of consumers who do not want sales calls and makes that available to telemarketers. □

Friedheim to become NAM president

Jerry W. Friedheim will assume the presidency of the Newspaper Association Managers at the group's convention Aug. 9-13 at the Tamarron Resort in Durango, Colo.

Friedheim, ANPA executive vice president and currently NAM vice president, will succeed Edwin W. Tucker, general manager and executive secretary of the New Jersey Press Association.

About 55 members and their families are expected to attend the 64th annual convention, which will include presentations on promotion, publications, financial planning, newspaper production, and people management. □

Eagle-Beacon says readers helped free jailed journalist

A Kansas newspaper claims a letter-writing campaign by its readers has helped gain the release of an imprisoned Taiwanese journalist.

The Wichita Eagle-Beacon had urged its readers to write to Chiang Ching-kuo, president of the Republic of China (Taiwan), on behalf of journalist Huang Hua.

"I am convinced that they helped a great deal," said George Neavoll, editor of the editorial pages, who spearheaded the effort through his columns and editorials.

"Readers are just so great about writing," he said. "It is very heartening to see them respond in this way for someone they don't know . . . and have little likelihood of seeing."

Huang, 47, who was released May 30, had spent more than 21 years as a political prisoner. Five other prisoners, including two other journalists, were also released.

According to Neavoll, Huang is the fourth political prisoner to be the beneficiary of an Eagle-Beacon reader campaign. Readers also wrote on behalf of journalists in Paraguay and Uruguay, and the general secretary of the Presbyterian Church in Taiwan. All three were subsequently released [presstime, April 1983, p. 18].

The newspaper currently is championing the cause of Luis Rodriquez Rodriquez and Guillermo Rivas Porta, identified by Neavoll as "reportedly the last two journalists remaining in Cuban prisons." □

WORLD PRESS NOTES

• The government of Singapore July 13 lifted its **restriction on circulation** of the Asian edition of Time magazine, but limits on the circulation of The Asian Wall Street Journal remain [presstime, July 1987, p. 58].

The Singapore High Court is expected to hold a hearing in mid-August on the newspaper's motion to quash the government order restricting Journal circulation to 400 copies a day.

• The restriction on Time magazine was ended less than a week after a **delegation from the World Press Freedom Committee** called upon officials of the Singapore government to request that the limitations be removed and that the law permitting the government to restrict the sale and distribution of foreign publications be repealed. The WPFC mission was the first conducted with the cooperation of the Fund Against Censorship, established earlier this year at the urging of an international conference of journalists in London [presstime, May 1987, p. 66].

• With the United States casting the only negative vote, the United Nation's 70-nation Committee on Information adopted a resolution that calls for establishment of a **"new world information and communication order."** Thirteen other free-press nations abstained.

The resolution was adopted after the United States and Great Britain had opposed an earlier resolution that also advocated the so-called NWICO but in other respects was generally more favorable to free-press concerns.

• A **handbook for African journalists** has been published by the WPFC. The 132-page book was written by 15 African journalists and journalism teachers. Initially, 1,500 copies will be distributed in English-speaking parts of Africa by Callix Udofia, a former professor of communications in Nigeria, who served as coordinator and co-editor for the project. George Beebe, former director of the WPFC assistance program, was the other co-editor. Beebe retired from his WPFC position June 30 and was succeeded by Malcolm F. Mallette, who retired that date as director of development of the American Press Institute in Reston, Va.

• The 15th **Management & Marketing Symposium** of the International Federation of Newspaper Publishers will be Oct. 22-23 in Madrid, Spain. Executives of ANPA-member newspapers who wish to attend may obtain application forms from Martin Casey, ANPA manager/government and international affairs, at The Newspaper Center in Reston, Va.

• A group calling itself The Committee of Journalists to Free Terry Anderson has been formed to **work for the release of kidnapped journalists** Anderson and Charles Glass in Lebanon.

Southam Syndicate, Scripps news service will cooperate

Canada's fledging Southam Syndicate is scheduled to sign a contract Sept. 1 with Scripps Howard News Service whereby the organizations will distribute each other's news and features, said the syndicate's sales manager Valerie Carter.

The move is the latest in a series of growth moves by the syndicate, which was formed Jan. 1 by the Southam News division of Toronto-based Southam Inc. "We have a very aggressive program," Carter said. "We are planning on developing relations with other American syndicates."

The syndicate was established to market the Southam News wire service offering news, features and graphics. It plans to add columns and editorial cartoons.

It is already the Canadian distributor for The Washington Post Writers Group.

Southam News is well-established in Canada, with about 24 large dailies subscribing to it, Carter said. U.S. clients include The Miami Herald and other Knight-Ridder newspapers and The New York Times, she said. □

Faulk buys features service

Words by Wire, a syndicated news service that supplies light or "offbeat" features to about 40 newspapers, has been acquired by Faulk International of New York City. Purchase price was not disclosed.

The news service was founded in Washington, D.C., three and a half years ago by Laura Bernstein, who remains as publisher, and Francis Combs.

W. Gilbert Faulk Jr., president of Faulk International, is a former vice president at Dow Jones & Co. and played a role in the start of the Dow Jones News/Retrieval Service. □

Sylvia Porter joins L.A. Times Syndicate

Sylvia Porter has transferred her financial column to the Los Angeles Times Syndicate from Universal Press Syndicate, effective Aug. 1.

The column, "Your Money's Worth," runs three times a week and is in its 40th year. Porter is the author of several books on personal finance and is editor-in-chief of Sylvia Porter's Personal Finance magazine. □

Copy editor-reporter job switching offers valuable insights into editorial process

If a reporter believes a copy editor consistently mangles his or her precious prose, and if a copy editor believes reporters are universally illiterate, what happens when they switch assignments?

It's an education, for sure, according to copy editors and reporters who have done just that, temporarily, at The Hartford Courant (morning, circulation 221,962).

Executives there believe the Courant is the only newspaper in the United States that has a regular, compulsory program of switching assignments between reporters and copy desk editors. The program began several years ago, and the exchanges normally last a month.

Copy editor Marjorie K. Ruschau said it was something of a shock at first when she moved from the copy desk to the education reporter's beat. "I did not know this ahead of time, but the board of education was very antagonistic to reporters," Ruschau said. "They were not very nice at all. When you're a reporter, you've got to have that iron skin. I don't like bothering people, and when you're a reporter you always have to bother people constantly."

Being a copy editor has its frustrations, too [**pressime**, May 1987, p. 71]. John Hyland, who switched with Ruschau, said of his month on the copy desk: "It took some getting used to, just to sit for eight hours and read other people's copy. One of your first impulses is to change the copy to suit yourself, but I had to remember how upset I got when this was done to me."

Another reporter, Kathleen A. Megan, had similar concerns before moving to the

Ruschau (left) and Megan watch Hyland work on a story at The Hartford Courant.

desk. She was "really worried about messing up a reporter's copy" and "concerned it would be difficult sitting at a tube eight hours a day. I was used to talking on the phone and running all day long."

But the copy desk "actually turned out to be a lot of fun and interesting," she said. "The most fun part was writing headlines. It seemed like a video word game."

Megan said it also was an experience for her to be challenging reporters about their information.

"I remember how one day I asked some questions that I thought were really reasonable," she said. "The reporter just kind of glared at me, and I suddenly realized what happens. I learned how to ask questions diplomatically. The reporter thinks he's done with the story once he writes it, and all of a sudden somebody is asking all these questions."

Megan said her replacement, David P. Wakefield Jr., was initially perplexed at covering the "social sciences beat." "The thing that bothered him at first was the uncertainty," she said. "The beat is not a breaking kind of beat. It drove him crazy because it takes a while to develop stories like that."

A one-time police and government reporter, Wakefield said going back to reporting for a brief spell "was certainly a refresher course, certainly a lesson to me."

Michael G. Prager, an assistant news editor, had the same kind of reaction when he took a turn as a reporter. He and a colleague wrapped up a special project on Friday, and Prager assumed that was that. But he got a phone call at home Friday night from an editor, and he and the other reporter spent four hours Saturday morning doing additional work on the story.

"I was reminded what it was like having a story go through three or four editing levels before it even got to the copy desk," Prager said. "It reminded me of how frustrating it can be."

Copy editor Ruschau said one of her colleagues liked his reporting stint so much he became a bureau chief. Conversely, one reporter became a permanent copy editor.

But she said the great majority breathe a sigh of relief when the temporary switch comes to an end. —*Gene Goltz*

NAB predicts stronger ad growth in '87

Based on U.S. daily newspapers' strong performance thus far this year, the president of the Newspaper Advertising Bureau predicted growth will exceed his January forecast in two of three newspaper advertising categories.

At a July meeting of the International Newspaper Advertising and Marketing Executives, Craig C. Standen estimated expenditures for retail advertising in U.S. dailies will increase 8 percent in 1987, not 7 percent as he had previously predicted [**presstime**, March 1987, p. 54]. Classified expenditures will be up 12 percent, not 8 percent, he added.

But Standen predicted that national advertising will grow only 3 percent instead of the 5-percent gain he had foreseen earlier.

He told the INAME gathering in San Diego that ad expenditures as a whole will rise 8 percent, not 7 percent.

Robert J. Coen, senior vice president and director of forecasting at McCann-Erickson Worldwide, also has revised his 1987 ad spending forecast. Expenditures in all media will rise 7.5 percent, not the 7.6 percent he predicted last December [**presstime**, Jan. 1987, p. 6].

Coen now projects local (retail and classified combined) advertising expenditures in newspapers will rise 9 percent, up from the 7-percent rise for retail and 8 percent for classified he had predicted earlier.

But like Standen, Coen said he expects national ad expenditures to be less than previously thought—3 percent, not 4.5 percent. Newspapers are experiencing problems in this category because of a decline in orders from cigarette, liquor and computer marketers, he said.

Other advertisers have intensified cost-cutting efforts, Coen said, with some of them shifting from full-run to partial-run schedules.

In a separate report released in late July, NAB said that during the first four months of the year retail ad expenditures in U.S. dailies rose 9.2 percent from the same period in 1986, to an estimated $4.602 billion; classified was up 15.8 percent to $3.385 billion; and national increased 2.4 percent to $1.132 billion.

Overall, ad expenditures for the period increased 10.6 percent to $9.119 billion. □

Knauer, ANPA discuss issues

President Reagan's special adviser for consumer affairs met July 21 with officials of ANPA and ANPA Credit Bureau Inc. and heard about their work in helping newspapers identify fraudulent advertisers.

"If we could have more screening of ads voluntarily, I think we could protect the public in a very substantial way," said Virginia Knauer, following her visit to The Newspaper Center in Reston, Va. Knauer said she was not "threatening" to seek mandatory screening procedures.

The invitation to visit ANPA headquarters came after Knauer criticized newspapers' ad-screening practices in a statement to an advisory committee of the Commodity Futures Trading Commission. The accuracy of Knauer's information subsequently was questioned by several newspaper executives [**presstime**, May 1987, p. 84].

She did not address that subject in her visit to ANPA.

Credit Bureau Vice President James Ralph said Knauer's visit was a "first meeting," and there will be more discussions between ANPA/CBI and the U.S. Office of Consumer Affairs.

ANPA and Credit Bureau officials also have met with Fowler C. West, chairman of the Advisory Committee on CFTC-State Cooperation.

According to Ralph, subscribers to the credit-checking service and ANPA-member newspapers will be sent a packet of materials on how to detect consumer fraud. The information was prepared by a variety of sources including the CFTC, the U.S. Postal Service, the North American Securities Administrators Association, the Council of Better Business Bureaus and the National Futures Association. □

Knauer meets with Ralph (right) and ANPA's Thomas C. Fichter.

Anti-drug program seeks more media participation

The Drug-Free America Program is calling for further volunteer participation in the public-service advertising campaign against drug use in the United States.

Twelve advertising agencies have completed 28 newspaper and magazine ads, 25 television commercials, and six radio spots. Sixteen other agencies are developing a second round of ads, which will be available shortly.

Newspapers participating in AD/SAT will be able to receive the ads through that satellite-delivery network.

The Newspaper Advertising Bureau sent the first-round ads to daily newspapers in May [**presstime**, May 1987, p. 80].

Twenty-eight councils of local agencies set up by the program have solicited space and time commitments from various publications and broadcasters. □

1988 Advertising Planbook available

The 1988 edition of the *Newspaper Advertising Planbook* is available from the Newspaper Advertising Bureau.

Newspapers may order in any of four format options: hard cover without imprinting of the newspaper logo at a cost of $5.60 per copy for up to 49 copies, $5.20 per copy for up to 99 copies and $5 per copy for 100 or more; hard cover with imprinting, add 90 cents per copy to regular hard-cover costs; soft cover without imprinting, $4.50 per copy; and soft cover with imprinting, $5.40 per copy. The minimum order for imprinting is 50. Deadline for placing imprinting orders is Aug. 22.

The book features calendar pages from November 1987 to January 1989, a four-step advertising plan and other advertising tips.

Encouraging early orders, NAB Vice President and Creative Director Hank Simons said "last year's printing of 80,000 copies sold out in record time."

To order, contact NAB's Creative Department, 1180 Avenue of the Americas, New York, N.Y. 10036. □

New slogan being written for classifieds

The staff of the Newspaper Advertising Bureau has been given the task of coming up with a slogan for classified advertising. This comes after a slogan selected in a nationwide contest failed to pass muster at a meeting of classified ad executives.

The results will be unveiled next January, according to Larry D. Franklin, chairman of a subcommittee working to develop the slogan for NAB's Future of Advertising Project. Franklin, executive vice president and chief operating officer of Harte-Hanks Communications Inc., made the announcement in San Diego at the July 12-15 sales conference of the International Newspaper Advertising and Marketing Executives.

According to Franklin, more than 450 entries were submitted to the slogan contest, sponsored by the FOA subcommittee [**presstime**, Jan. 1987, p. 53].

The winning slogan, "Classified—Fine Print Worth Reading," was submitted by two employees of the Detroit Free Press. On the advice of Minneapolis agency Rice & Rice Advertising Inc., which was hired to develop creative uses of the slogan and logo, the saying was revised to: "Classified—It Pays to Read the Fine Print."

That slogan was presented at the June 21-24 conference of the Association of Newspaper Classified Advertising Managers, also held in San Diego. Attendees were evenly divided in their response. "We didn't feel it was enough of an endorsement to continue with that slogan," said Darrell C. Rooney, classified advertising manager for the St. Paul Pioneer Press Dispatch, a spokesman for the slogan project.

Those who disapproved were bothered by the phrase "fine print," which they related to a legal contract, he said.

According to Rooney, $35,000 has already been spent on the project with another $35,000 expected to be spent to prepare promotional materials for purchase by newspapers.

New ANCAM officers elected at the conference were President James T. Conner of the State Times and Morning Advocate in Baton Rouge, President-elect Bill D. Horton of the Fort Worth Star-Telegram, Second Vice President Ronald G. Beach of the San Jose Mercury News, Third Vice President Nancy K. O'Connell of the Providence Journal and Bulletin, and Secretary Treasurer David A. Benoy of The Patriot Ledger in Quincy, Mass.

The conference attracted a record number of registrants, 354. □

Ad bureau eliminates fees for many workshops, seminars

BY CRAIG C. STANDEN

On June 1, the Newspaper Advertising Bureau suspended the fees traditionally charged for staff or advertiser workshops and seminars conducted by bureau trainers for individual member newspapers or newspaper groups.

Eliminating these fees, which ranged from $300 to $700 depending on circulation of participants' newspapers, should make NAB membership more useful and valuable for newspapers.

Craig C. Standen

When the bureau began conducting staffwide retail workshops and retail advertiser seminars in 1962, the policy was to charge a fee. This was to cover the salary of the trainer while out of the office conducting the workshop or seminar, the cost of developing and producing the workshop materials, and the trainer's out-of-pocket travel, lodging and meal expenses.

In those days, our "trainer" was a young man named Bill Solch, and training was a minor part of his duties in the bureau's Retail Department.

Today, training has become one of our most important member services—with a dozen staff members directly involved—and Bill Solch has been promoted several times and now is our vice president for membership services.

We currently offer more than 30 different workshops, seminars and programs covering not only retail staff training and sales development but also competitive media, co-op advertising, telemarketing, innovative thinking, marketing, and several areas of classified: automotive, employment, real estate and outside sales.

Our training services fall into three categories:

• **Staffwide workshops and advertiser seminars.** Conducted for individual newspapers (or groups of cooperative newspapers), they account for nearly 90 percent of all bureau training activities and are the ones for which we're suspending the fees. So now, when one of our trainers conducts an on-site workshop for a newspaper's staff or a group of its advertisers, all we ask the paper to pay are actual costs incurred, such as travel, lodging and meals plus workbooks and similar training materials. Newspapers also provide the meeting facilities and control the attendance.

• **Regional workshops and seminars.** These workshops, held in major cities in the United States and Canada, allow newspapers to send as many or as few of their employees as can be expected to benefit from the training. The only charge to the newspaper is on a per-attendee basis, usually from as low as $50 each for some one-day workshops to as much as $250 per person for a three-day program, depending on our costs. Regional workshops include "train the trainer" programs in which a newspaper sends one person to be trained by us and in turn become the trainer for the rest of the staff, and "The Selling Way," a limited-attendance, intensive, two-and-a-half-day sales training program for experienced newspaper sales people.

• **Consulting services.** They include co-op audits and our new classified and telemarketing consulting services, by which bureau experts work with a newspaper staff on situations and problems peculiar to the local market and recommend appropriate strategies and actions to help maximize opportunities.

These services and some other staff workshops that are customized for newspaper groups, will continue to be charged on a fee-plus-expenses basis.

The bureau's board of directors has authorized us to suspend the fees for two years and, if all goes well, to eliminate them permanently. It's another step in our continuing effort to make NAB membership more valuable to newspapers and to be as responsive as possible to our members' needs.

I hope your newspaper will take advantage of this change and schedule more workshops.

If you would like more information, call Bill Solch at (212) 704-4530, or Eric Anderson, NAB senior vice president/classified, co-op and training, at (212) 704-4514. □

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to **presstime**.

U.S. publishers visiting France's Teletel system find the diversity principle at work

The thing a visiting delegation of U.S. newspaper executives liked most about the French Teletel videotex system was that the French national telephone company that operates it avoids providing content for the system.

"Basically it was a working model of the diversity principle," said Uzal H. Martz Jr., chairman of the new ANPA Diversity Principle Task Force and president and publisher of the Pottsville (Pa.) Republican. The French Postes Telephones Telecommunications, or PTT, "is not a major content provider and does not compete with the people who have to use the facilities," he said.

A similar system "could be possible in the United States without major changes" in the consent decree governing the AT&T breakup that bars phone companies from providing information services, Martz said.

ANPA Telecommunications Committee Vice Chairman Thomas Pace, communications counsel of Dow Jones & Co., agreed that the PTT has tried very hard to stay out of the content business.

As for how the Teletel system is faring, however, much of the reaction of the delegation who traveled to France to see it can be summed up this way: *Plus ça change, plus c'est la même chose*. The more things change, the more they stay the same.

Delegates reported there is no service on the French system that is not currently being offered or has not been tried by videotex systems in the United States, with the exception of the electronic telephone directory that was Teletel's original reason for being.

"I didn't see anything new and revolutionary that I said, 'My God, if we had had that we would have really been able to do something,'" said James Holly, who headed The Times Mirror Co.'s Gateway consumer videotex service that was shut down in March 1986.

However, there are differences between the U.S. and French experiences with videotex, and one of the major ones is the "seeding" of the Minitel terminals—from which the service gets its popular name—by the French telephone company. Commercial operation began in 1982. By the end of this year, PTT will have distributed about 3 million terminals free to French households.

According to Jules S. Tewlow, director of special projects for Lee Enterprises Inc., for every 10 terminals that have been distributed thus far, five go out of use after the first bill comes in for two months' usage. Of the remaining five, four are used approximately 95 minutes a month for various services. One terminal in 10 supplies more than 50 percent of the network traffic, he said. Seventy percent of the usage is in interactive communication services, what the French call "messageries" and what are dubbed "chat" services in the United States.

Holly, now director of Times Mirror's Electronic Information Services, noted that in their preference for chat services over passive information services, the French videotex users are like their U.S. counterparts.

However, what one delegation member termed a "bombshell" is the popularity of chat services with a sexual orientation.

"What seems to be driving the usage there is sex," said Reid Ashe, who headed Knight-Ridder Inc.'s Viewtron videotex service that also was shut down in March 1986. "We didn't really understand that, and had we understood it, I think we could have generated a lot more usage. But I don't think we would have been willing to promote an electronic bordello," said Ashe, who now is publisher of The Wichita Eagle-Beacon. —*Margaret G. Carter*

Teletel Program Manager Jean-Paul Maury explains system to ANPA delegation.

Hearings over, Greene to decide on information services

After three days of hearings, the question of whether the regional Bell operating companies will be allowed to provide information services is in the hands of U.S. District Judge Harold H. Greene. Greene has given no indication when he will issue his ruling, according to his office.

During the hearings, Greene referred to the "information services problem" as the "most difficult" of all those before him.

ANPA was represented at the hearings by Washington, D.C., attorney Richard E. Wiley, who argued against the Justice Department's recommendation that the information services restriction be removed from the consent decree governing the breakup of AT&T [**presstime**, July 1987, p. 60]. "The information service prohibition is still vital to the development of electronic publishing in this country," he said.

"No other public interest factors" justify removal of the restriction, Wiley said, most of all assertions that the American people are deprived of public services available to people elsewhere, an apparent reference to the French Teletel system and others (see story, this page).

Wiley said electronic publishing is "becoming a significant force in the United States" in the "competitive environment" fostered by the consent decree. □

Some mobile radio systems found to be illegal

Many newspapers operate mobile radio systems. Some of them recently found out that they have been operating them illegally.

The revelations came about as ANPA was fulfilling its new duties as "frequency coordinator" for the Relay Press Radio Service, a group of frequencies set aside for priority use by newspapers and wire services. The Association sought, and obtained, the status of frequency coordinator from the Federal Communications Commission last year [**presstime**, Oct. 1986, p. 48].

In late June, ANPA's Telecommunications Department sent a letter to approximately 1,500 newspapers, most of them dailies, whose names did not appear in a computer database of Relay Press Service licensees. The database was compiled for ANPA from FCC records.

The letter warned the newspapers that if they are operating mobile radio systems, they apparently are not authorized to do so, at least not in the Relay Press Service.

In little more than two weeks, ANPA heard from more than 200 newspapers, according to Deborah Walker, ANPA telecommunications systems specialist. About two-thirds of the respondents said they are operating mobile radio systems and thought they were licensed to do so. "It's been a real shock to us, and to them," Walker said.

So far, ANPA has investigated about 50 of the cases, she said. In a few instances, it determined the newspapers are licensed but did not appear in the database because of a computer glitch or clerical snafu, such as the license appearing in the name of the newspaper's corporate parent.

In other cases, however, there were more serious problems.

Some newspapers were operating with expired licenses. Normally, said Walker, equipment vendors make the initial license application to the FCC on behalf of the newspaper. But the licenses must be renewed every five years—something newspaper personnel may not realize.

The Association suspects a few license applications may have been mishandled. Walker said the newspaper should have a copy of the license issued by the FCC.

However, most of the newspapers operating mobile radio systems but not in the database were found to have valid licenses in services other than Relay Press. For example, a newspaper also qualifies to be licensed in the "Business Radio Service," Walker explained.

While this is "perfectly legitimate," she said, ANPA does not think it is "necessarily the best thing for the newspaper." There may be greater potential for interference in the general business service, she said. There is also a risk of losing the frequencies if they are not used by newspapers.

Some equipment vendors may not know that the Relay Press Service exists, she said. It is important for newspapers to make the fact known.

ANPA is assisting newspapers with problems to come into compliance with licensing requirements. The penalty for operating with an invalid license is a fine of up to $10,000 and a possible jail sentence, according to Richard P. Sutter, staff engineer in the FCC's Mobile Services Division. The severity of the penalty depends on whether the illegal operation was intentional or merely resulted from an oversight, he said. □

Post Co. announces sale of remaining cellular holdings

The Washington Post Co. will be out of the cellular telephone business altogether if the Federal Communications Commission approves its plans to sell remaining holdings in Florida.

The company plans to sell its Miami-Fort Lauderdale system and its 13-percent interest in a system serving Palm Beach County to McCaw Communications Cos. Sale price was not disclosed, but one published report—in the company's flagship property, The Washington Post—said the amount likely was more than $200 million.

McCaw Communications is 45-percent owned by Affiliated Publications Inc., publisher of The Boston Globe.

The Post Co. previously agreed to sell its 20-percent interest in the Washington-Baltimore cellular system to Southwestern Bell Corp. and its 18-percent interest in Detroit cellular to Pacific Telesis Group. □

Media groups analyze new rules on satellite remote-sensing

ANPA representatives and members of several other news organizations planned to meet July 26 in Washington, D.C., to coordinate reaction to the U. S. Commerce Department's long-awaited rules on regulating satellite remote-sensing images.

The regulations, which take effect Aug. 9, allow the departments of State or Defense to restrict the launch of commercial satellites or the use of space photographs on national security grounds [**presstime**, April 1987, p. 50].

Initial media reaction to the rules was mixed.

Some media representatives said the new rules, which have been under consideration for a year, could violate First Amendment rights against prior restraint.

The Commerce Department did, however, adopt ANPA's recommendation that "Nothing in these regulations is intended to place any limits on access to images that would not be placed on such access here on Earth."

W. Terry Maguire, ANPA vice president/general counsel, said the Association plans no specific action to protest the rules. "We would hope that actual implementation of the rules would adhere to the policy of not promulgating more stringent rules than are applied on Earth," he said.

Some news organizations, however, reacted strongly to the rules. Ernie Schultz, president of the Radio-Television News Directors Association, said: "The decision was expected, but it was still bad news because they didn't take our recommendations. We are disappointed that NOAA [National Oceanic and Atmospheric Administration] did not adopt the First Amendment standard which courts have required and which RTNDA proposed." He said the standard would have prohibited restrictions on media remote sensing except to prevent "a serious and immediate threat to distinct and compelling national security and foreign policy interests."

Mark Brender, an ABC News assignment editor and chairman of the Media in Space Task Force organized by RTNDA, said the Commerce Department decision could encourage media use of foreign satellite images because the restrictions apply only to domestic satellites. Brender said he had made arrangements to meet late in July with representatives of Soyuzkarta, a Soviet Union trade organization that is marketing space photos with better resolution than those available commercially in the West.

Groups planning to attend the media task force meeting in addition to ANPA and RTNDA are the American Society of Newspaper Editors, The Society of Professional Journalists, Sigma Delta Chi, and several broadcasting organizations. □

Minority Affairs

Multicultural program fellows selected

The Multicultural Management Program at the University of Missouri has selected its second class of fellows.

Sixteen journalists from throughout the United States will receive four intensive weeks of newspaper management training at the Missouri School of Journalism [**presstime**, Dec. 1986, p. 46]. Thirteen already hold management positions in the newsroom.

The new class of fellows includes five women and 11 men and is composed of four whites, three Hispanics, eight blacks and one Asian-American.

Executive Director Ben Johnson said the program's objective is to develop good management skills, including sensitivity to ethnically diverse news staffs and a commitment to more balanced news coverage regarding cultural and racial aspects of American communities.

Financial supporters of the program include Pulitzer Publishing Co. of St. Louis, Blade Communications of Toledo, Cox Newspapers of Atlanta, Josephus Daniels Foundation of Raleigh, N.C., Detroit Free Press, Gannett Foundation, Graham Foundation of Washington, D.C., Johnson Publishing Co. of Chicago, Sengstacke Newspapers of Chicago, Knight-Ridder Inc., Los Angeles Times, McClatchy Newspapers of Sacramento, and Time Inc. □

NABJ Convention Aug. 18-23 in Miami

The National Association of Black Journalists will hold its 12th annual convention Aug. 18-23 in Miami.

Since its founding, the NABJ has worked toward the goal of making the number of black journalists in newsrooms reflect their proportion in the United States. That goal will be the theme of the convention, which also will serve as a job fair.

About 1,500 print and broadcast journalists are expected to attend. Featured speakers are scheduled to include Chicago Mayor Harold Washington, presidential candidate the Rev. Jesse Jackson and the four reporters who successfully sued the New York Daily News in a recent discrimination case.

For more information, contact Carl Morris, executive director, NABJ, The Newspaper Center, Box 17212, Dulles Airport, Washington, D.C. 20041. □

Education

Stauffer newspapers put emphasis on academic success

As the Newspaper in Education project put the newspaper into the classroom, the 20 Stauffer Communications Inc. newspapers this fall will introduce a program to put more of the classroom into the newspaper.

The "A Plus" program was introduced in 1983 at one Stauffer paper, The Blue Springs (Mo.) Examiner, where then-Publisher and Editor Kim Sexton decided newspapers have put enough emphasis on athletic feats. "I promised that my newspaper would start giving just as much, if not more, ink to academic achievement."

The program involves publishing the names of honor-roll students, holding academic contests, covering academic success stories and promoting local shopping discounts for honor students.

Stauffer officials believe the program can have a significant impact on education, improve the newspaper's image in the community, and attract current and future readers. Sexton attributes a 15-percent increase in Examiner circulation to the program.

"A Plus" also will become a profit center for Topeka, Kan.-based Stauffer if Sexton can sell enough one-year "licenses" to other newspapers or broadcast stations, enabling them to conduct the program in their markets.

Marketing the licenses, for an annual fee of $99.95, is Media Additions, a Stauffer subsidiary being managed by Sexton. "They can't do this themselves as reasonably as we are doing it," he said.

Participating newspapers will receive a guide to use in working with local school officials and businesses to recognize student achievements. It includes step-by-step materials, forms and a list of 101 story ideas.

With "A Plus," Sexton said, critics can no longer charge that newspapers are interested only in "bad news about 'Jane' and 'John.' When we gave play to 'Jane' for winning the math contest, the next thing she wanted to do was win another one."

As evidence of the project's success, Sexton said the number of Blue Springs High School students with a 3.5 or better grade point average steadily increased by a greater percentage than increases in enrollment. □

Circulation

Empire seeks more newspaper support

Empire State College will continue its circulation-management curriculum even though its founding director has left.

Walter L. Frykholm, newly named acting director of the circulation management program at Empire State, said the college is seeking additional financial support from newspapers. Newspapers contributed funds to help launch the program in 1983.

Empire State also is seeking a three-year federal grant to install computer equipment to allow remote teaching of students as they stay on the job at their newspapers.

"One of the problems is our students are scattered all over the country," Frykholm said. "And publishers often don't want to send their students here." Empire State, with administrative headquarters in Saratoga Springs, N.Y., operates an individualized course for circulation managers, resulting in a two-year associate degree or four-year bachelor's degree in circulation management. The college borrows or rents space at seven New York State University buildings across the state, but the bulk of the work is done individually by students in their own locales [**presstime**, July 1985, p. 64].

More than a dozen degrees have been awarded and numerous seminars conducted during the program's four years of operation, Frykholm's said.

His predecessor, Scott Chisholm, who helped found the Empire State program, will begin directing a circulation-management program this fall at Utah State University in Logan. □

Dukakis considers lower minimum carrier age

"Little merchants" in Massachusetts who lost their jobs last spring because they were under the age of 12 can go back to their routes soon if Gov. Michael S. Dukakis signs a bill to change the minimum carrier age to 9.

A 1913 state child labor law prohibited youngsters under 12 from delivering papers, but no one questioned the law until the state Department of Labor suddenly enforced it at The Holyoke Transcript-Telegram [**presstime**, June 1987, p. 144].

The chief sponsor of the recently passed bill, Rep. Stan Rosenberg, said he expects Dukakis to sign it because youth carriers are "an American tradition." □

Speeches

Thomas Vail

James K. Batten

Robert Richardson

Richard W. Raiford

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Challenges and New Technology Add Up to Remarkable Times in Newspaper Advertising
ANPA Chairman and President George W. Wilson, president, Concord (N.H.) Monitor. Association of Newspaper Classified Advertising Managers conference, San Diego, June 22

Integrity of Purpose and the Protection of Our Freedoms
Thomas Vail, president and publisher, The Plain Dealer, Cleveland. Washington Correspondent and Consumer Journalism Awards, National Press Club, Washington, D.C., June 24

From the International Circulation Managers Association annual sales conference, Chicago, June 28-July 1:

Personnel, Perception and Planning in Newspaper Circulation
John J. Curley, president and chief executive officer, Gannett Co., Arlington, Va.

The Neglected Circulation Battle: Retaining Subscribers
James K. Batten, president, Knight-Ridder Inc., Miami

From the International Press Telecommunications Council annual general meeting, Las Vegas, June 11-12:

Impact of Telecommunications on Newspapers—Today and Tomorrow
Uzal H. Martz Jr., president and publisher, Pottsville (Pa.) Republican

Satellite Communications and Applications at USA Today
William O. Hider, vice president/telecommunications, Gannett Co., Arlington, Va.

The Telecommunications Situation in Japan: 1986-87
Akira Kawaguchi, chairman, and Shinji Kimura, vice chairman, Telecommunications Committee, Nihon Shinbun Kyokai

From the International Newspaper Financial Executives spring conference, Marco Island, Fla., May 10-13:

Strategies That Can't Wait Until Tomorrow
Robert Richardson, director of operations, The Gazette, Montreal

The What and How of Strategic Planning in Newspapers
Chester C. Warzynski, management consultant, Ottaway Newspapers Inc., Campbell Hall, N.Y.

Newsprint—What's Ahead?
Richard W. Raiford, executive vice president, Southeast Publishers Newsprint Sales Co., Atlanta

How to Conduct a Firing
Douglas Wesley, principal consultant, The Hall Wesley Group Inc., Lakeland, Fla.

Alternatives to strikes tested

Charles A. Perlik Jr., president of The Newspaper Guild, observed at the union's recent convention that new technology has rendered a union's ultimate weapon—the strike—"often feeble."

Thus, unions are seeking alternatives to strikes, such as boycotts and rallies, to put the public spotlight on the employer.

"The purpose of a strike is to bring economic pressure on an employer," said J. William Blatz, director of field operations for the Guild. "That's precisely what you do when you have a boycott."

Many of the strike alternatives are not new. A "byline strike" that occurred July 9-10 at The Washington Post, where Guild-represented editorial employees requested that their bylines be withheld, followed similar actions in such cities as Cleveland [**presstime**, Feb. 1987, p. 51].

The AFL-CIO often puts companies where a labor dispute exists on its "unfair list," urging union members not to buy products from companies on the list.

In California, McClatchy Newspapers is becoming a testing ground for Guild strike alternatives. At two of the company's dailies, The Fresno Bee and The Sacramento Bee, management has declared an impasse in bargaining for new labor agreements and posted working conditions contained in the final offers. Guild members at the papers voted not to strike but to "take any and all economic action as if we were on strike." Union members in the two cities are urging readers to cancel their subscriptions to the Bee dailies.

According to the company, however, the boycott has not been successful. "The effect of the subscription boycott is absolutely statistically insignificant," said Keith R. Fuller, McClatchy's director of employee relations.

The opening day of the Guild's June 22-26 convention in San Diego (see story, next page) was devoted to a forum on alternatives to strikes. Union representatives from Fresno and Sacramento described their actions at the McClatchy dailies, such as lunch-time "informational picketing" with signs saying "Negotiate."

In addition to boycotts, informational picketing and rallies as strike alternatives, attendees at the Guild forum suggested such tactics as mass coffee breaks, wearing anti-management T-shirts and buttons, picketing the homes of company directors, and requesting health and safety investigations.

Unions are "back where we were in the '20s and '30s" and must develop new tactics, Service Employees International Union President John J. Sweeney told the Guild delegates. "All companies have vulnerabilities that can be found."

> *"Unions can do a lot of things in the shop to put pressure on management."*

An officers' report to the convention said that Guild leaders "must become thoroughly familiar with innovative bargaining strategies, in the plant and outside the plant." The report noted that leaders of newspaper unions have formed a task force to work out a program for coordinated bargaining in the newspaper industry [**presstime**, April 1987, p. 60].

Following the convention, several hundred Guild members and supporters attended a rally in Fresno for members there.

In the Sacramento area, a computerized project called GROWS, an acronym for Growing Resources of Workers' Salaries, is being put together by the Guild and other unions to apply economic pressure on publishers and other employers when needed, including a possible boycott of advertisers.

Twenty-seven unions with about 70,000 members are involved, said Robert L. Bondi, a Guild member and the administrator of the project. "We're major contributors to the economy," Bondi said. "We're trying to impress the business people and get their support."

The byline strike at The Washington Post was called to protest the lack of a labor agreement for a year.

The Post published a statement July 10 to give readers "our side of the story." It pointed out that Post reporters' salaries average more than $50,000 a year. The company said its most recent offer contained an economic package providing increases of between 4 and 5 percent annually for three years, but the Guild "wants more."

Tom Sherwood, a Post reporter and chairman of the Guild bargaining unit, said the fact that the Post published the in-house ad "was an indication we got the company's attention." He said the byline strike was successful in that it sent a message to the company that "we were not satisfied" with the progress in bargaining and "got the issue closer to management's front burner."

Although in recent months the Guild has been the most active union in strike alternatives, craft unions have used similar tactics, too. William Moody, information director for the Graphic Communications International Union, said that one of the most effective weapons in the printing industry has been to refuse to work overtime, adding that this happens more frequently in commercial printing than at newspapers.

"Unions can do a lot of things in the shop to put pressure on management," he said. At the same time, "We must operate within the contract and within the law. We don't suggest quality (of work) be lessened."

Another possible tactic at newspapers, he said, would be a "work-to-the-rule" job action similar to those used by unions representing teachers and transportation workers.

Moody quoted Victor Ciuccio, the GCIU's contract and research director, as telling a recent seminar of local union leaders: "Don't go out on strike. Drive them crazy inside." —*Clark Newsom*

NLRB elections

Elgin (Ill.) Daily Courier-News, CWA: Editorial employees voted 19-0 against further representation by Chicago Typographical Union No. 16.
(NLRB Case No. 13-RD-1750)

Muskogee (Okla.) Daily Phoenix and Times-Democrat, Teamsters: A unit of all employees voted 91-15 against representation by Local 516 of the Teamsters.
(NLRB Case No. 16-RC-8918)

San Bernardino (Calif.) Sun, Guild: News, production and commercial employees voted 158-126 against representation by Local 69 of The Newspaper Guild.
(NLRB Case No. 31-RC-6127)

Syracuse Herald-Journal and Post-Standard, CWA: Composing room employees voted 28-3 against further representation by Typographical Union No. 55.
(NLRB Case No. 3-RD-930)

Guild convention approves new organizing activities

Members of The Newspaper Guild will vote in mid-September on a convention-approved dues increase of $1 a month to be used for organizing activities. The union says the proposal would generate about $400,000 a year.

In recommending the increase, the union's International Executive Board said the Guild is the only union in the newspaper industry that has maintained membership levels during the past year.

As of March 1, membership stood at a record high of 34,018 active members. A poll last year indicated that most members would be willing to pay the additional $1 a month for organizing purposes [**pressstime**, Jan. 1987, p. 58].

J. William Blatz, the union's director of field operations, estimated there are 6,000 non-members, called "free riders" by the union, working under Guild contracts.

Also at the union's 54th annual convention, the 231 delegates, by acclamation, elevated Charles B. Dale to a two-year term as president, beginning Oct. 15. Retiring President Charles A. Perlik Jr., after 18 years in the office, announced earlier this year he would not be a candidate for re-election [**pressstime**, April 1987, p. 62].

John C. Edgington, administrative officer of the San Diego local, was elected secretary-treasurer, succeeding Dale.

In a farewell address to the convention, Perlik sounded a warning: "Events of the past year have shown that we are confronted by perhaps the most serious crisis since the Guild's early years. The proliferation of new technology and the increasingly anti-labor climate brewed by the political right in both our countries (the United States and Canada) have put the publishers in the saddle. And they are beginning to use the whip."

New equipment "renders the strike weapon often feeble," he said, "and with the labor boards, the courts and the governing authorities turning neutral ground into partisan territory, they are seeking to take back all that we have won over the years."

Perlik, noting that political endorsements by the Guild "are a perpetual source of controversy," said it had not been decided whether the union would endorse a presidential candidate in 1988. The convention, however, subsequently adopted a committee report that said the union's executive board should endorse a candidate after considering recommendations from local unions.

The June 22-26 convention in San Diego adopted another committee report calling for a ban on smoking in the workplace "where acceptable by the majority of affected members." But such bans should not be enforced by discipline, the report said.

In other action, the delegates from 55 locals in the United States, Canada and Puerto Rico voted to retain language covering video display terminals in the union's "model contract." □

Veronika Andrasovsky, The Guild Reporter

Delegates line up behind Shiela M. Nason of the Glens Falls, N.Y., unit to address the chair.

NLRB judge rules against Guild in union-dues case

A National Labor Relations Board administrative law judge has ruled that a local of The Newspaper Guild violated the Taft-Hartley Act by seeking the discharge of two employees of The Seattle Times for their failure to pay an assessment as part of their union dues.

The labor agreement between Local 82 and the newspaper contains a so-called "union security" provision that requires membership in the union as a condition of employment. Under the provision, the company must discharge, on request by the Guild, employees who fall behind in dues.

The two employees—advertising department artists—had resigned from the union in 1981 but agreed to comply with the union-security provision by paying to the union the equivalent of "periodic dues," thus becoming what are called "financial core" members rather than "full" members.

The dispute arose in August 1985 when the Guild went from what it refers to as "reduced dues" to "regular" dues. This increase in dues was in effect until February 1986.

The two employees refused to pay the difference on grounds it was a "special assessment" for the union's defense (strike) fund. However, after the Guild said it would request their discharge, they paid the disputed portion of the dues under protest and filed charges with the NLRB.

At issue, said Administrative Law Judge Jerrold H. Shapiro, was whether the difference in amount between the usual monthly dues and the increased dues falls within the meaning of "periodic dues" as that term is used in Taft-Hartley. The act does not allow an employer and a union to condition employment upon the payment of uniform "assessments," he said.

The judge ruled that the increased dues constituted an assessment. He noted that the money from the increased dues was to be used to enable the defense fund to make an interest-free loan of $750,000 to the Guild for buying or building a headquarters building.

Shapiro said the difference between calling the increase "dues" or an "assessment" was "only a matter of semantics." He recommended that the board order the union to refund to the two employees, with interest, the increased dues they paid.

A Guild spokesman said the union will appeal the decision to the board.

(Pacific Northwest Newspaper Guild Local 82 and Johnston, ID[SF]-63-87) □

NLRB hears oral argument on bargaining to an impasse

In a case involving The Blade of Toledo, the National Labor Relations Board heard oral argument July 7 on the extent to which a company can implement its proposals after an impasse in bargaining has been reached.

The case arose in 1982 when The Blade conditioned its assent to a new agreement on Typographical Union No. 63's continued acceptance of a provision that allowed management to bypass the union and offer retirement and separation incentives directly to individual employees with lifetime job guarantees.

The union went to the NLRB, and a complaint was issued against the newspaper.

The NLRB general counsel contended in the oral argument that such a demand emasculates the union's right to represent the workers and that the company should not be allowed to implement the proposal even when the parties are at an impasse.

A lawyer for the union argued that the publisher's proposal would "circumscribe and circumvent" the union's status as exclusive bargaining representative.

A Blade attorney maintained that the job guarantees belonged to the employees, not to the union.

Appearing on behalf of The Blade at the hearing, ANPA Manager/Labor Relations Charles D. Cole said the issues were of "vital interest" to a number of newspapers. He said early-retirement incentives for printers in overstaffed composing rooms were a "recognized method of dealing humanely with people who no longer had a job to perform."

By resisting voluntary separation incentives or transfers, the union "is attempting to preserve a status quo to the detriment of both its members and their employers," Cole said. "The obstinacy of the union is certainly of no benefit to the employees of the Toledo Blade composing room."

(Toledo Blade Co., NLRB Case No. 8-CA-16067) □

Montreal daily publishes without pressmen

The Gazette of Montreal was continuing publication in late July without pressmen, mailers and maintenance workers represented by the Graphic Communications International Union.

In a pre-emptive move against a threatened GCIU strike, Publisher Clark Davey locked out the pressmen and maintenance workers July 10 after the union refused to accept proposals for new scheduling clauses. The mailers, whose contract expires Aug. 14, then refused to cross a pressmen's picket line.

Work usually performed by the approximately 250 locked-out employees was being handled by management personnel. Labor laws in the province of Quebec forbid the hiring of replacement workers.

The labor agreement covering the pressmen expired June 30, 1987.

Personnel represented by The Newspaper Guild, including editorial and advertising employees and delivery truck drivers, continued to work, as did printers represented by the Communications Workers of America.

The company obtained an injunction to limit picketing after a clash between pickets and truck drivers that resulted in the arrest of one GCIU member. □

Chicago Tribune labor dispute is two years old

The two-year mark of a strike against the Chicago Tribune was reached July 18.

The strike by printers, pressmen and mailers was called over new labor agreements. The strikers were replaced by new employees soon after the walkout began.

Negotiations for a settlement continue.

Private mediator W.J. Usery Jr. is attempting to negotiate a settlement of one lawsuit brought by the printers. At issue is whether the Tribune is obligated to rehire all of the printers who made an unconditional offer to return to work [**presstime**, April 1986, p. 66]. The parties have agreed not to discuss his mediation efforts.

Usery, who is a former Secretary of Labor and a former director of the Federal Mediation and Conciliation Service, could not be reached for comment.

Human resources experts urged to seek new ways to attract talent

The heads of two newspaper publishing groups have urged specialists in human resources to find new ways of bringing into the business the most talented and resourceful men and women available.

"We must attract, and keep, people with imagination, skill, knowledge, intelligence and honesty," said Malcolm A. Borg, chairman of Macromedia Inc. of Hackensack, N.J., which owns The Record in that city and The News Tribune of Woodbridge, N.J.

"There are still some newspapers that are having a difficult time acknowledging that it's June 1987," Borg said at the 39th annual conference of the Newspaper Personnel Relations Association June 28-July 1 in Chicago. "They're being pushed into the last part of the 20th century, and they're not looking ahead to the fact the year 2000 is only twelve and a half years away."

"If they don't immediately begin paying attention to the world around them," some newspapers "will be waiting in line to hire people," he said, adding: "Compensation systems must reward performance and innovation."

Also stressing the importance of hiring the best people and paying them accordingly was William Dean Singleton, chairman of the Dallas Times Herald and president of the Dallas-based MediaNews Group, which owns 50 daily and weekly newspapers. For a newspaper to be efficient, he told the 130 registrants, it needs "fewer people, better people and larger paychecks."

At the association's business meeting, A.N. (Nelder) Dawson Jr., director of personnel and employee relations for the Alexandria (La.) Daily Town Talk, was elected president.

Terry T. Travelstead, vice president/personnel of USA Today, Arlington, Va., was elected vice president and president-elect; and John J. Swingle, employee relations manager of The Peoria (Ill.) Journal Star, secretary-treasurer.

"We look at ourselves as a growth organization," Dawson said. "We're looking at expanding into the United Kingdom, while continuing our strong alliance with the Canadian newspapers." One goal of the association, he said, is to "increase the exchange of ideas," including an expanded newsletter that will include a section on training and a section on compensation and benefits.

Dawson also said the association would strengthen the annual NPRA/ANPA personnel workshop by placing more subjects on the program. □

Congress ponders labor bills

BY CLAUDIA M. JAMES AND LESLIE A. BARHYTE

Labor committees in both the House and Senate are considering a host of legislation affecting the workplace. And with Democrats now in control of the Senate, prospects for such legislation have increased significantly.

The following is a review of key workplace proposals currently before the Congress.

Minimum wage. Legislation to raise the minimum wage is a high priority of the AFL-CIO for the 100th Congress. The legislation introduced by Senate and House labor committee chairmen Edward M. Kennedy (D-Mass.) and Augustus F. Hawkins (D-Calif.) would raise the minimum wage in stages from the current $3.35 to $4.65 by 1990. Hearings are under way in both chambers [**pressstime**, May 1987, p. 90].

Although no committee has approved such legislation yet, it is likely that some version will be passed in this Congress.

Plant closings. Both the Senate and House labor committees have approved legislation introduced by Sen. Howard M. Metzenbaum (D-Ohio) and Rep. William D. Ford (D-Mich.) that would require an employer to provide up to 180 days' notice before a plant closing or mass layoff. An applicable closing or layoff is one in which 50 or more people lose their jobs at any site during any 30-day period. Also required under the House bill would be consultation with union officials and disclosure of financial information prior to a closing or layoff.

Similar yet weakened language included in the omnibus trade bill, which passed the Senate July 21, provides for an employer with 100 or more workers to give 60 days' notice of a plant closing or layoff affecting at least one-third of its regular, full-time workforce. Mandatory consultation provisions are not included in the Senate version.

Last year the House narrowly defeated a plant-closing bill [**pressstime**, Feb. 1987, p. 48]. A version of the legislation is likely to be passed this Congress either as part of the trade bill or as a separate measure.

High risk notification. Legislation to require notification and monitoring for employees who are at increased risk of exposure to hazardous substances has been approved by the House labor committee and a Senate labor subcommittee. The Senate labor committee was expected to complete action in late July.

Under the bills, proposed by Metzenbaum and Rep. Joseph Gaydos (D-Pa.), a risk-assessment board, made up of physicians and scientists appointed by the secretary of Health and Human Services, would be set up to identify occupational hazards and workers at risk.

It is likely that some version of legislation increasing the minimum wage will be passed.

The cost of medical monitoring would be borne by the company if some part of the hazardous exposure occurred in the course of a person's current employment with the firm. Otherwise, the employee would bear the cost. Some version of the proposal may pass in this Congress.

Telephone monitoring. Bills that would require employers to use audible warning tones when monitoring workers' telephone conversations [**pressstime**, May 1987, p. 90] have been introduced by Sen. Paul Simon (D-Ill.) and Rep. Don Edwards (D-Calif.). A House subcommittee July 15 held hearings on the bill, which has 133 cosponsors. More hearings may be held. The legislation is supported by the Communications Workers of America.

Polygraph testing. The House Education and Labor Committee has approved legislation introduced by Don Williams (D-Mont.) to prevent private employers from using lie-detector tests to screen job applicants or to investigate current workers. Similar legislation passed the House last Congress and undoubtedly will pass this Congress.

Federal, state and local governments would be exempt, as would be private employers that have defense contracts giving them access to sensitive material. The Senate labor committee held a hearing on the issue in June.

The legislation is given a fair chance for Senate approval.

Health insurance. Companion bills have been introduced by Kennedy and Rep. Henry Waxman (D-Calif.) requiring all employers to enroll their workers and families in health-benefit plans. The bills, supported by labor and many medical organizations, would mandate insurance coverage for all necessary hospital and physician care, diagnostic tests, prenatal and pediatric care, and catastrophic care.

The bills also call for a $3,000 out-of-pocket cap with limitations on deductibles of $250 per person and $500 per family. Employers would be required to pay 80 percent of insurance premiums for people who work at least 17.5 hours per week and 100 percent of the cost for workers who earn less than minimum wage.

Hearings have been held in both the House and Senate, and some form of the legislation may pass this Congress.

Parental leave. Similar bills have been introduced by Sen. Christopher Dodd (D-Conn.) and Rep. Bill Clay (D-Mo.) that would allow employees to take up to 18 weeks of unpaid family leave as a result of the birth or adoption of a child, or a serious illness among offspring (or parent, under the House bill). The bills also would allow up to 26 weeks of unpaid medical leave as the result of a serious health condition and provide that, upon return, employees be entitled to salary, status and benefits equivalent to those before leave was taken.

The House measure has been approved by three subcommittees. Four hearings have been held on the Senate bill.

Despite strong opposition, some version of the bill may pass this Congress. □

James is ANPA assistant general counsel. Barhyte is ANPA legislative assistant.

One seat filled at EEOC; vacancy remains

The U.S. Senate has confirmed Evan J. Kemp Jr. as one of five members of the Equal Employment Opportunity Commission.

A former Securities and Exchange Commission attorney, he replaces William A. Webb. His five-year term expires July 1, 1992.

There is still one vacancy at the commission. Fred W. Alvarez left in June to join the U.S. Department of Labor as an assistant secretary of labor. President Reagan is expected to nominate Joy Cherian, a native of India and the president of the Asian-American Voters Coalition, to fill the vacancy. □

After biggest pressroom test to date, Bakersfield daily says kenaf makes the grade

Kenaf newsprint was used to print the "A" and sports sections of 65,000 copies of The Bakersfield Californian on July 13. Afterward, newspaper production experts had nothing but praise for newsprint's brightness, strength, smooth ink laydown, reduced ink ruboff and crisp color reproduction.

George Cashau, ANPA director/technical research, said the printed product "looked great." Doris E. Kleintop, ANPA technical supervisor/newsprint quality, agreed.

Kleintop said she planned to obtain kenaf newsprint on which to conduct tests for a more detailed evaluation.

Kenaf is a fibrous plant that grows prodigiously in warm climates. ANPA, the U.S. Department of Agriculture and others have been studying the feasibility of making newsprint with it since the 1960s.

The successful Bakersfield test means kenaf is ready to move "out of the research lab and into the commercial arena," said Daniel E. Kugler of USDA's Cooperative State Research Service.

C.A. Thompson, vice president of CIP Forest Products, agreed. He said that even though that pulp and paper company in the coming months will continue to run lab tests for such qualities as strength, brightness and opacity, emphasis has shifted from research to engineering studies for construction of a kenaf mill near Brownsville, Texas, and to securing the financing for the mill [**pressstime**, July 1987, p. 36].

Project backers have said they would like to have the mill operating by 1989 or 1990.

The Bakersfield daily, Agrifuture Inc. of Bakersfield and Charles S. Taylor are partners in Kenaf International, a venture capital company that was formed in 1981 to carry forward kenaf research begun by ANPA and other parties. Taylor has moved from Maryland to McAllen, Texas, in preparation for the mill's planned construction.

The test at The Bakersfield Californian culminated a 17-month joint effort involving KI, USDA and CIP. The kenaf was grown, harvested and baled in Texas. It was pulped at the C.E. Sprout Bauer Mill in Springfield, Ohio. The pulp was turned into newsprint at CIP's Trois-Rivieres mill in Quebec and at the Beloit Corp. mill in Beloit, Wis.

The chief executive officer of the Bakersfield daily, Jerry K. Stanners, said 12 tons of kenaf newsprint were used in the test, and "We were very pleased with the run." A story on page 1 explained to readers that the paper they were holding was something special.

"It looks like standard newsprint but it's much brighter," Stanners said.

Once news broke about the successful press run, Stanners was inundated with telephone calls from various quarters, ranging from publishers of other newspapers to potential investors in kenaf.

USDA put out a press release in which Orville G. Bentley, assistant secretary for science and education, said: "We hope to see kenaf emerge as a major crop across the southern tier of the United States."

U.S. dailies used nearly 9 million metric tons of newsprint in 1986, and demand is expected to grow.

Although the Bakersfield experiment was the first on a large scale, kenaf newsprint has been tested in a newspaper production environment for a decade.

In 1977, several hundred pounds of kenaf newsprint were used to print part of a press run at the Peoria (Ill.) Journal Star. In 1979, six other newspapers—The Yuma (Ariz.) Daily Sun, The Wall Street Journal, The Miami Herald, the St. Petersburg Times, the Nashville Banner and the Pine Bluff (Ark.) Commercial— tested kenaf on their presses.

Kugler, a USDA economist who works to find so-called alternative crops for American farmers, said the earlier tests prove that kenaf newsprint has yet another advantage: Unlike that made with wood pulp, it does not yellow with age.

Kugler has a copy of the Peoria paper from 1977, and he said it looks freshly printed. The botanical and chemical explanation is that wood-fiber newsprint contains lignin, a brownish substance that cements together the cells of wood tissue; its decomposition causes the yellowing.

According to Ralph E. Imhoff, printing plant manager for the St. Petersburg Times, kenaf also offers a public relations bonus. "Now when people come to the newspaper for tours, they ask, 'How many trees went into that roll of newsprint?' Even though the newsprint mills do a good job of reforesting, it's still a concern the average person has. Kenaf is a resource that isn't limited by 30 years of growth."

In late July, the Times, the Houston Chronicle and The Dallas Morning News were scheduled to conduct limited tests using several rolls of kenaf newsprint each.

—Rosalind C. Truitt

Champion hikes price

Champion International Corp. will raise its list price for newsprint to $610 a metric ton Sept. 1. All other newsprint companies previously had announced that price for customers in the eastern United States, effective July 1, or—in the case of Kimberly-Clark Corp.—Aug. 1 [**pressstime**, June 1987, p. 108]. □

Quebec pacts approved; one mill on strike

Two Canadian pulp and paper unions have ratified three-year agreements at four Quebec newsprint mills. But Donohue Normick Ltd.'s Amos, Quebec, mill has been shut down since early July because of a strike by the Canadian Paperworkers Union.

CPU members approved new contracts at the Trois-Rivieres, Grand Mere and Shawinigan mills of Consolidated-Bathurst Inc. The mills had been shut down for 14 days in late June and early July because of a strike.

The fourth new contract, ratified by the Confederation of National Trade Unions, is at St. Raymond Paper Co.'s Quebec mill.

All of the agreements were along the lines of an earlier one at Abitibi-Price Inc., which calls for wage increases of 25 cents an hour in the first year, 45 cents an hour in the second and 4.5 percent in the third.

Elsewhere in Canada, the CPU and the Eastern Canadian Newsprint (bargaining) Group have reached a tentative labor agreement that also is similar to the Abitibi-Price pact.

Another such agreement has been reached at Boise Cascade Canada Ltd.'s Kenora, Ontario, mill.

In the United States, members of the United Paperworkers International Union ratified a new four-year contract at Bowater Southern Paper Co.'s Calhoun, Tenn., newsprint mill. It provides for no wage increases in the first year, 3 percent in each of the second and third years, and 3.5 percent in the fourth.

Another three-year contract was ratified by the UPIU at Inland Empire Paper Co.'s mill in Millwood, Wash. Workers will receive a lump sum of $1,200 in each of the first and second years, and 45 cents an hour in the third. □

U.S. dailies lead six-month increase in consumption

Newsprint consumption by all U.S. users increased 0.6 percent in June and 2.1 percent during the first six months of 1987, compared with year-earlier figures.

U.S. daily newspapers had greater increases in newsprint usage—1.7 percent in June and 3.2 percent for the first half of the year.

Newsprint inventories for newspapers in ANPA's statistical sample totaled 46 days in June, one day less than a year previously. Stocks at North American mills were 25 percent below June 1986 levels.

Canadian production in June exceeded that of June 1986 by 4.7 percent. U.S. production was up 5.9 percent during the month.

Shipments from Canadian mills increased 6.2 percent in June and 6.6 percent for the first half. The increases for Canadian shipments to the United States were 9 and 6.1 percent, respectively.

Domestic shipments from U.S. mills exceeded last year's by 7.7 percent in June and 4.1 percent during the six-month period.

Newsprint

3 newsprint projects ready to proceed; others studied

Three newsprint projects have recently been given approval to proceed.

Finlay Forest Industries Ltd. will install a new 216,000-metric-tons-a-year newsprint machine at its Mackenzie, British Columbia, mill. The project will cost $198 million (Canadian), and completion is expected in 1989 [**pressTime**, June 1987, p. 106].

Great Lakes Forest Products Ltd. and five newspaper publishers will construct a newsprint mill at Usk, Wash. The project will have capacity of 180,000 tons annually and will cost $300 million. Completion is expected in 1989 or 1990. Newspaper firms involved are Central Newspapers Inc. of Indianapolis, Kearns-Tribune Corp. of Salt Lake City, McClatchy Newspapers of Sacramento, The Copley Press Inc. of La Jolla, Calif., and Knight-Ridder Inc. of Miami. Ponderay Newsprint Co., a unit of Great Lakes, will build and operate the mill and have a 40-percent interest in it.

Newsprint South Inc. secured financing for construction of a 203,000-metric-tons-a-year mill at Grenada, Miss. Completion of the $320-million mill is expected in 1989.

In other developments:

- Kruger Inc. completed upgrading of one of its newsprint machines at Corner Brook, Newfoundland, at a cost of $21 million. Capacity will increase about 89,000 metric tons a year. It was the third newsprint machine to be rebuilt there since 1984, and rebuilding of another machine is scheduled to be completed next year.
- Alberta's government has asked a consulting firm to determine the feasibility of building a newsprint mill in the province. Paper from the mill would be shipped to the U.S. Midwest and overseas.
- CIP Inc. may install a 200,000-metric-tons-a-year newsprint machine to replace two older machines at its Dalhousie, New Brunswick, mill. □

Smorgon buys FSC

Smorgon Consolidated Industries Pty Ltd. of Melbourne, Australia, acquired FSC Paper Corp. from Interscope Holdings Corp. and Media General Inc. Interscope owned 80 percent and MGI, 20 percent.

FSC, which was put up for sale nearly two years ago, owns a recycling mill for newsprint in Alsip, Ill.

With experience in recycling corrugated materials and in producing linerboard, the new owner intends to operate the Illinois mill with existing personnel. □

Transportation

Canadian rail unions approve strike vote

Members of nine Canadian railway unions have approved a strike against Canadian National Railways and Canadian Pacific Rail.

A strike would be legal seven days after the federal government releases a conciliation commissioner's report on contract negotiations. That means parties could return to the bargaining table—or a rail shutdown could take place—sometime this month [**pressTime**, June 1987, p. 128].

In other labor developments affecting transportation of newsprint and other materials:

- A mediator has been appointed to intervene in stalled contract talks between BC Rail and seven unions in British Columbia. Provincially owned BC Rail is Canada's third-largest railroad. Contracts expired June 30.
- A tentative agreement has been reached between the Seafarers International Union of Canada and ship owners. Union members operate ships on the Great Lakes.
- The Ottawa-based St. Lawrence Seaway Authority is negotiating with the Canadian Brotherhood of Railway Transport and General Workers union on renewal of a contract that expired Dec. 31. Talks have reached the conciliation stage.
- The International Longshoremen's and Warehousemen's union, which covers longshoremen, clerks and foremen on the West Coast of the United States, reached a tentative, three-year contract settlement with shipping management [**pressTime**, Sept. 1984. p. 53]. Industry sources said the agreement provides for no wage increase in the first year and increases totaling 10 percent in the ensuing two years. □

Greyhound agrees to buy Trailways property

Greyhound Lines has contracted to buy $80 million in assets from financially troubled Trailways Lines Inc. Greyhound agreed to buy some Trailways buses, terminals and garages, and to operate some Trailways routes.

Greyhound said the Trailways name will be retained. The firm vowed to maintain service for at least one year to communities served by either carrier that have no other bus service [**pressTime**, March 1987, p. 73].

The U.S. Justice Department recently approved the acquisition, saying it satisfies requirements of the "failing company" doctrine and therefore would not violate antitrust laws. Approval by the Interstate Commerce Commission is pending. □

Federal driver's license law takes effect

Commerical driver's licenses will be suspended for driving under the influence of alcohol, leaving the scene of an accident or use of a vehicle in a felony under new federal regulations that took effect July 1.

The new rules are part of the Commercial Motor Vehicle Safety Act of 1986 that established a federal commercial driver's license replacing state commercial licenses. Some drivers held numerous state licenses.

Covered are operators of commercial vehicles weighing at least 26,000 pounds, vehicles designed to carry at least 15 passengers and vehicles that transport certain hazardous materials. The Federal Highway Administration will enforce the regulations until individual states adopt their own enforcement statutes or regulations, the U.S. Department of Transportation said.

New regulations also require drivers to notify their home state and employer of driving violations and license suspensions, and to provide to a prospective employer a history of any commercial driving experience in the previous 10 years. □

TRANSPORTATION NOTES

- The Interstate Commerce Commission denied a petition to reopen proceedings on the merger of the **Atchison, Topeka and Santa Fe Railway Co.** and the **Southern Pacific Transportation Co.**. The ICC had rejected the merger last fall [**pressTime**, Nov. 1986, p. 72].

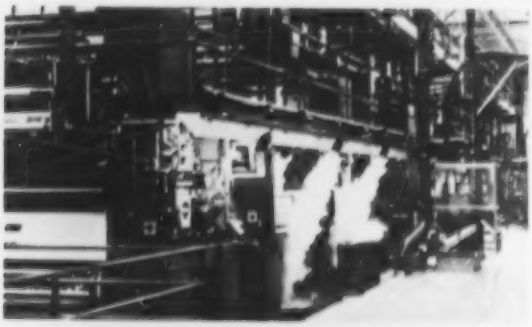
  The commission also ordered the parent company, Santa Fe Southern Pacific Corp., to get rid of one or both of the railroads. A divestiture plan must be filed by October.

- The American Automobile Association has released the **1987 Digest of Motor Laws** for the United States and Canada.

  Copies of the summary of state and provincial laws are available for $6 each from most AAA clubs.

Protect your pressroom from fire

Let Chemetron show you how to reduce the risk



This sequence of photos shows a Chemetron carbon dioxide fire suppression system at work protecting a press line in a newspaper printing plant. Within minutes of the end of discharge, production can resume because there is no mess, no clean-up, and no damage to equipment by carbon dioxide. Imagine the problems created if a sprinkler system were to activate on your press line.

Multiple hazards, the potential for serious loss

There are a number of areas in printing plants which are potential sources of fire, such as ink and paper storage areas, composing rooms and the bindery. But perhaps nowhere else in the printing plant is the potential for fire greater, and the result more crippling, than in the pressroom, the heart of the newspaper operation.

Immediate, effective, non-disruptive protection

Lengthy shutdowns can spell financial disaster for the newspaper industry. That's why pressroom equipment requires fire protection that is immediate, effective and causes a minimum of disruption.

Chemetron automatic fire protection systems suppress fires without the need for enclosing walls. Unlike sprinkler systems, there is no contamination of ink, printed material, press rolls, bearings, electrical drives or controls. This means downtime is held to a minimum. Self-contained, the Chemetron low pressure carbon dioxide system operates even during a power failure.

Put Chemetron experience to work for you

Protecting printing plants is our specialty. Over the past 40 years, Chemetron has put in service between eight and ten thousand low pressure carbon dioxide fire protection systems, and has pioneered many other developments in fire protection.

Ask about Chemetron's new microprocessor based control panel and how you can use it to reform out of date technology on your existing carbon dioxide system.

Free video demonstration

Publishers, Production Managers, Pressroom Supervisors: Send us your business card and we will give you a copy of our videotape on fire protection for printing plants. Learn about efficient, cost-effective solutions to fire problems in modern printing plants.

Cheaper ink can cost more

The old saying, "You get what you pay for," can be applied to newspapers that try to save money by purchasing color inks that do not meet ANPA's suggested standards.

Charles R. Blevins, chairman of the Association's Quality Evaluation Task Force, said many newspapers practice false economy by purchasing cheaper inks, which in many cases are made less expensive through a reduction in pigment strength. Pigment gives ink color and other optical properties like opacity or transparency, and it is the most expensive component of the ink.

Offset inks, in particular, must have strong color because the ink is transferred from the plate to blanket and then to newsprint.

"I don't know how widespread the problem is, but it happens often enough that it affects all newspapers working to win over national advertisers," said Blevins, vice president/production for Gannett Co. That goes for newspapers with advertisers such as Sears and K mart that some papers might regard as local accounts, he said.

"We (the task force) are trying so hard to generate (advertising) agency business for newspapers, but the advertisers say, 'We know the reproduction will look fine in USA Today or in the Chicago Tribune, but there are so many other people out there who can't produce the same quality.' Everyone loses out when the agencies think that way," he added.

Blevins noted that his task force and the full ANPA Technical Committee have produced a series of reference books aimed at improving the printing quality of newspapers.

The latest to be published, Volume 7 of the ANPA *ROP Newspaper Color Ink Book*, contains ink standards for the newspaper industry [presstime, July 1987, p. 82]. Advertisers have copies and are using them in preparing process-color ads.

But when ads are printed by a newspaper using inks with less pigment strength, he said, "The advertisers may not know exactly why, but they know the advertisements just don't look right."

Those same advertisers might look elsewhere the next time they have a message for customers, Blevins said.

The cheap-ink problem was addressed at an ANPA/TEC '87 workshop in Las Vegas in June. William D. Rinehart, ANPA vice president/technical, observed: "There are newspapers that spend tens of millions of dollars on process color units. They have spent considerable amounts on electronic color separation equipment. Yet some of these newspapers are printing fair to poor color reproduction."

The problem, he said, is that when management passes the word to cut costs, production departments often decide to buy less expensive inks.

But Rinehart and Blevins said cheaper inks often cost more in the long run because press operators tend to apply more ink to compensate for faded colors—and reproduction is still substandard.

In addition, "Using more ink means more ruboff," Blevins said.

ANPA-member newspapers that want to have their inks tested for pigment strength or other properties should send samples to the Technical Services Department at The Newspaper Center in Reston, Va. □

Margaret G. Carter

Russel A. Shook, ANPA ink technician, uses the Association's new computer and spectrophotometer to test color ink samples submitted by ink companies for compliance with shade and strength standards contained in ANPA's just-published *ROP Newspaper Color Ink Book* [presstime, July 1987, p. 82]. Previously, these tests were done by the human eye. Now, ink companies receive reports indicating the amount their sample deviates from the standards.

St. Pete Times first to test color anilox

The St. Petersburg Times has begun testing a keyless color offset system developed by the Graphic Systems Division of Rockwell International.

The Times is the first newspaper to test color anilox offset printing [presstime, Nov. 1986, p. 60]. Black-and-white anilox offset printing has been tested at The New York Times and The Commercial Appeal in Memphis.

Limited press runs were made in July, and the results were encouraging, said Ralph E. Imhoff, printing plant manager for the Florida newspaper. He said the color reproduction was good, and the amount of newsprint waste was significantly reduced compared with the newspaper's conventional offset printing.

More extensive production testing of keyless color offset is expected to begin early this month.

In late July, the Times was waiting for some parts to arrive so that equipment conversions could be completed.

Two units of a Goss Metroliner press are being converted to keyless inking, and Imhoff said when the tests are fully under way, the paper expects to print eight to 16 pages daily with them.

The next round of tests is scheduled to last for 10 weeks.

ANPA developed a keyless inking system for letterpress that paved the way for flexographic newspaper printing. ANPA researchers also developed the keyless offset process. □

Participants in desktop-publishing conference urged to exchange information

Publishers and editors of small-circulation daily and weekly newspapers should research desktop-publishing technology and exchange information with their peers as much as possible.

That was one of the major messages delivered to attendees of the National Newspaper Association's first Desktop Publishing Conference in Dallas in July.

The conference offered publishers and editors a chance to exchange tips on software applications and to discuss the larger issues represented by the technology.

Several participants observed that systems, which use uncomplicated personal computers and laser printers, could be a mixed blessing. They can make it possible for newspapers to save money compared with the costs of conventional front-end systems and phototypesetters, but they also might spark competition for newspapers in some markets.

"It would be very easy for someone to buy $10,000 worth of equipment, put out a shopper and move into your market," noted Don Comedy, publisher of the weekly Haskell (Texas) Free Press. "Not only that, but they could put out a publication that looks better than yours does. It's important for newspapers to understand how this technology works, because it can make them as strong as possible in their own markets."

Comedy said his Apple Macintosh desktop-publishing system, which has been in place for about 16 months, not only is saving money but also has made his employees more productive.

For example, he publishes special sections on an annual basis and says advertisers often place the same basic ad with a few minor changes. Rather than starting from scratch in composing the ad, employees at the Free Press take out the computer disk on which the information has been stored and with a few keystrokes make the updates the advertisers want.

"We're thrilled with the system" he said. "In fact, it's so easy, I have my nine year-old daughter setting ads."

Comedy and James C. Whelpton, publisher of The Bulletin Times, a weekly in Bolliver, Tenn., spoke at a session designed to answer specific questions about setting up a desktop system.

"I think the biggest problem the newspaper industry has is that publishers are talking to computer people who generally know nothing of the needs of publishers," Whelpton said. "Publishers need to become knowledgeable so they can relate their problems to computer people. Computer people need to learn more about how newspapers operate, too."

In his case, he learned a lot of what the equipment could do by "hit and miss. For that reason, it is important for people to share tips on how they accomplish various tasks."

Concerning the need for more industry-

Resolving the question about type resolution

Although some people in the newspaper business question the quality of the type in desktop publishing, ANPA Vice President/Technical William D. Rinehart thinks the matter is a non-issue.

Until earlier this year, 300-dots-per-inch resolution was fairly standard for laser printers that typeset on plain paper. A few companies have introduced 400 dpi printers, and two now offer 600 dpi. (Phototypesetters have resolution of 1,200 or more dots per inch.)

Most desktop publishing users still have 300 dpi printers, though, and Rinehart said he believes readers can be happy with that level of resolution.

Rinehart noted that this degree of resolution is similar to that of the rotogravure process, which is used to print color advertising preprints, Sunday magazines and postage stamps. Rotogravure-produced typefaces have the same serrated or ragged edges that laser printers produce, he said.

"One of the adverse comments most often heard (about desktop publishing) is that the type is not perfect," Rinehart said. However, when comparing copy from a laser printer with rotogravure

across the sky. By late Novemb would not rise at all. When it rea late January, it would shine on a l fates and soot that would rer spring storms flushed them out.

Eight nations touch the Arctic ed States, the Soviet Union, Ca land, Iceland, Norway, Swe Denmark (Greenland). Who sc

National Geographic type

For some months now, fans of Apple's Macintosh have been able to point out a limitation of the IBM PC and compatibles: Desktop publishing, which is the personal computer rage this year, was the sole province of the Macintosh.

Because the Mac is built around a highpowered chip and uses a

Laser-printer 300-dpi type

type from National Geographic magazine (see samples above), "One will see that the National Geographic-reproduced type has the same ragged edge as the desktop (type)," he said. "National Geographic, of course, uses high-quality typesetting machines, but they use rotogravure to print the magazine."

Rotogravure printing involves "etching the cylinder with all its type at about 300 lines per inch, resulting in a type that appears to the reader about the same as the desktop (type)," Rinehart said. "We have yet to hear one person criticize the type in the National Geographic, which is considered to be one of the finest (magazines) in the world."

ANPA has begun conducting research into desktop publishing in hopes that software better suited for specific newspaper industry needs can be developed (**presstime**, July 1987, p. 84). Rinehart said ANPA researchers also are exploring "how the laser printer might be married to electronic photography to generate halftone pictures as well as other applications that could be useful to newspapers."

specific equipment, both publishers acknowledged they cannot use their Macintoshes to do full pagination, but neither felt that is a major handicap. Nor did Comedy or Whelpton have any problems with the typesetting resolution they currently receive from their laser printers.

"No one has noticed a difference in our product since we switched to the laser printer," Whelpton said. "I've been happy with the resolution.

Generally, the two publishers agreed with the consensus view that desktop publishing has been a boon for smaller publications [**presstime**, March 1987, p. 22].

"It's the first time in a long, long time that something has come along that clearly benefits smaller newspapers. That's why it's taken off so quickly," Whelpton said.

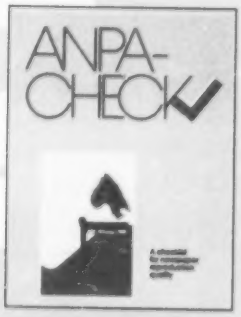
However, some skepticism was expressed at the conference, too.

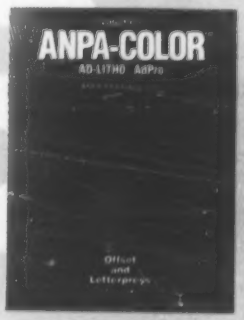
One speaker, Dana Sohr, said afterward, "I believe desktop publishing has been oversold to newspapers." Most of the products associated with it were not designed specifically for newspapers and do not take into consideration the complexities of newspaper publishing, he said. Sohr, who owns Technical Communications Inc. of Silver Spring, Md., that prepares instructional computer documents, also writes a computer column for NNA's Publishers' Auxiliary newspaper.

Joanna Buckley, NNA's director of membership services, said 120 newspaper people and 15 vendors attended. □

Apple Macintosh and LaserWriter can produce graphics quickly.

Quality is as easy as . . .





with ANPA's Quality Series.

Now three ANPA publications are available to help you achieve the quality you need to meet your competition. The ANPA Quality Series is a growing group of publications aimed at helping newspapers attain the highest possible reproduction quality. Two of these, **Guide to Quality Newspaper Reproduction** and the **Color Ink Book**, are also valuable sales and communication tools to be used between your advertisers and production personnel.

The **Guide to Quality Newspaper Reproduction** is 55 pages packed with color and B&W illustrations to help your advertisers prepare materials that produce the highest quality reproduction. (Cost: $5)

ANPA-Check is a checklist designed to help newspaper executives and production people increase quality awareness and identify quality reproduction problem areas. (Cost: $5)

The newest edition of **ANPA Color™ AD-LITHO™/AdPro® ROP Newspaper Color Ink Book** includes run-of-paper colors for both offset and letterpress, replacing Volumes 2 and 6. Exact samples of 50 colors aid communication and help maintain quality control. (Cost: $50)

Order your copies of these publications by calling (703) 648-1210 or writing to: ANPA Technical Services Department, The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041.

Camex terminals help win back food advertiser

Executives at The Virginian-Pilot and The Ledger-Star of Norfolk were understandably dismayed when Star Food Markets, one of their top advertisers, decided to forego newspaper advertising and use Advo-System Inc.

So they fought back, with a big assist from new technology, and saved the account.

According to Donald H. Patterson, vice president/production director, the newspapers found Camex Breeze terminals an effective weapon against the direct-mail company that competes with newspapers for advertising business [**presstime**, July 1987, p. 44].

The Norfolk dailies demonstrated to Star Food how the terminals could be used to compose the text and graphics for the grocery store's six-page tabloid. The papers emphasized that with the ad-layout terminals, they could offer the supermarket later deadlines for price changes and could provide proofs of the advertisements overnight, Patterson said.

"The key is that we could handle their ads on short notice and still remain competitive," he said. "We're not doing any of this at the expense of our other advertisers."

With the equipment, Patterson said, artwork is scanned quickly and formats are easily created. Ads are stored in the terminal's memory so that if the customer wants to rerun it with a minimum of changes, that can be done expeditiously.

The Norfolk newspapers have been using the Camex Breeze terminals since the fall of 1985. Patterson said the decision to buy Camex was based on the belief that the company was the "furthest along" in graphics capability.

The equipment has received periodic upgrades, and employees have become more adept at using it, Patterson said. The terminals are now being used for all of the Norfolk dailies' run-of-paper display advertising. □

Press symposium set for October

ANPA will sponsor a symposium, Pressroom Options IV, Oct. 19-21 at the Hyatt Regency O'Hare in Chicago. Offset, flexographic and letterpress equipment and materials will be discussed.

Program information will be mailed to ANPA-member newspapers this month. □

TECHNOLOGY NOTES

• Rockwell International's Graphics Systems Division will **more than double its manufacturing facilities** in Cedar Rapids, Iowa. The company purchased a 320,000-square-foot building and 30 acres of land from FMC Corp. and will make some structural changes, including raising a roof so that four-story Colorliner offset presses may be erected.

The facilities will be used for the assembly and storage of Goss printing products.

• AM International Inc., a company that sells graphics-related equipment to the newspaper industry through various divisions, announced recently it will **sell its Varityper division.**

Earlier this year Varityper introduced a 600-dots-per-inch laser printer designed for those needing higher resolution printing for "desktop publishing."

• The Providence Journal and Bulletin have begun receiving **bulk shipments of flexographic ink**, the first newspapers to do so.

The first six units of the Rhode Island dailies' 18-unit Windmoeller and Hoelscher press have been installed, and if installation continues on schedule by June 1988 the newspapers will become the first in the United States to be printed completely by the flexo process.

• 3M has **consolidated its Printing Products and Graphic Preparation Systems divisions** into the Printing and Publishing Systems Division.

Products manufactured by the new unit include presensitized offset printing plates and proofing paper. No significant personnel layoffs are planned, the company said.

TECHNOLOGY CALENDAR

• **Art-X '87,** computer graphics seminars and trade show, will be Aug. 12-14 at the Washington Hilton in Washington, D.C.

• The annual meeting of the **International Newspaper Group,** formerly the International Newspaper Conversion Group, will be Sept. 9-11 at the Marriott Desert Springs Resort, Palm Desert, Calif.

• The **Seybold Seminars' Desktop Publishing Conference** will be Sept. 9-12 at the Santa Clara (Calif.) Convention Center.

• **Impact 1987: Technology on the Move,** the annual conference of the New England Newspaper Operation Association, will be Sept. 17-20 at Killington Village in Killington, Vt.

• A Graphic Arts Technical Foundation seminar, **Color Reproduction: How Color is Perceived from Transparency to Press Production**, will be Oct. 24 at the Stouffer Concourse Hotel in Arlington, Va.

• The annual **Western Newspaper Production Conference** will be Sept. 24-26 at the Westin Bayshore Hotel in Vancouver, British Columbia.

• **Composition Technologies,** a typography seminar, will be Nov. 9-10 at the Key Bridge Marriott in Arlington, Va.

• **Graph Expo '87** will be Nov. 15-18 at McCormick Place in Chicago.

Worst is over for some papers in depressed oil states

Newspapers in areas hit by the depressed oil industry are continuing cost-cutting programs, including reductions in the workforce. But it appears the worst is over.

Carol H. Green, vice president for human resources and legal affairs at The Denver Post, said that paper is reaching its goal of reducing 200 positions by the end of the summer. She said 157 employees have accepted early-retirement bonuses offered to about 800 employees, including managers. As a result, there will be no need for layoffs.

William W. Fletcher, president and general manager of the Rocky Mountain News in Denver, said his paper is being "selective" in replacing anyone who leaves. "We were pretty lean to begin with," he said.

Earlier this year, both Dallas dailies made cutbacks. The Dallas Morning News reduced its non-editorial staff by 68 full-time and 26 part-time people. Most of the reductions were in the production area. The Dallas Times Herald reduced its staff by 47 employees, none in the newsroom.

The Fort Worth Star-Telegram has not had to lay off employees, but hiring and salary freezes are in effect.

At the same time, the two dailies in Houston report an increase in business [presstime, July 1986, p. 85]. "The economy in Houston is starting to turn up," said Elmer C. May, employee relations director of The Houston Post. "Advertising has been up for six consecutive weeks. We're running well ahead of levels a year ago." The Post has been operating on an "attrition basis" to reduce non-newsroom staff, May said.

During a 12-month period ending last March, the Houston Chronicle reduced its payroll by 184 employees, including those who left through two early retirement plans, said Lainie Gordon, public relations coordinator. There are "good economic signs" in Houston, she said. "Retail advertising is up from a year ago."

Encouraging reports also are coming from Oklahoma. Ben Blackstock, executive vice president of the Oklahoma Press Association, said newspaper advertising linage there began climbing during the spring for the first time since 1985. "The best news is that the price of oil has gone up and passed the $20-a-barrel mark," he said. As a result, there is an increase in drilling activity. □

Planes carrying newspapers crash

Three pilots have been killed in recent months when their small planes being used to carry newspapers crashed.

The latest incident occurred July 20 near Midway Airport in Chicago when a twin-engine Cessna 402 apparently lost power in one engine, glanced off a house and hit two garages. The pilot was the only person aboard. According to press reports, he was taking newspapers to Kansas City.

That accident bore a strong resemblance to one last Sept. 28 in which a pilot was killed when his plane experienced engine trouble near Midway Airport and crashed into a house.

On June 26, a twin-engine Piper Seneca crashed in Boston's Dorchester section, destroying three homes. The pilot was killed. □

Pentagon press pool activated for tanker escort

The first activation of a press pool for an actual military mission was carried out in secrecy July 18. The Pentagon flew 10 journalists to the Gulf of Oman to board Navy warships that were about to escort oil tankers through the Persian Gulf to Kuwait.

The pool was flown from Andrews Air Force Base near Washington, D.C., to Fujairah in the United Arab Emirates after a stop in West Germany.

There were two newspaper reporters in the pool, one from Knight-Ridder Inc.'s Washington bureau and the other from The Washington Times. A rotating list of 24 newspaper companies determines which will participate.

Other pool members were reporters from the Associated Press, Time magazine and ABC radio; photographers from United Press International and Time; and a television crew from Cable News Network.

Although the test was a success in terms of secrecy, at least one formal protest was lodged with the Pentagon after pool members began filing stories. Clark Hoyt, Knight-Ridder Washington bureau chief, complained in a July 22 letter to Robert B. Sims, assistant secretary of defense for public affairs, of Pentagon delays in transmitting pool reports.

Replying in a July 23 letter, Sims took "vigorous exception" to the complaint. He said the purpose of the pool was not to ensure that it reports the news first, but to ensure that news representatives are present for operations where there would otherwise be no independent, on-the-scene reporting. He said almost all pool reports were released promptly on receipt at the Pentagon. All that were held contained precise details about future operations.

For the purpose of improving pool procedures, Sims said he plans to have a meeting of bureau chiefs. It was the seventh time a pool has been activated, but the first six exercises were tests [presstime, March 1987, p. 78]. The pool concept arose from the government's refusal to allow reporters to accompany troops on the 1983 Grenada invasion. □

Recent acquisitions

Greater Media Inc. of East Brunswick, N.J., acquired The Register of Shrewsbury, N.J., daily circulation 21,000.

The New York Times Co. is acquiring the Gwinnett Daily News of Lawrenceville, Ga., circulation 27,436. □

Horvitz to sell to Ingersoll

The Horvitz family has agreed to sell its five newspapers to Ingersoll Publications Co. Publisher Harry R. Horvitz said the transaction will be completed Aug. 31. He would not disclose the purchase price.

Horvitz said he would remain "in some sort of consulting capacity" for the dailies—four in Ohio and one in New York. They have a combined daily circulation of 225,000.

The family also agreed to sell its nine cable television franchises to Adelphia Communications Corp. for $222 million.

The Horvitz family trust is liquidating its $700-million empire, which includes real estate and a construction company, under a probate-court order arising from ongoing disagreements among the three sons of late founder Samuel A. Horvitz [presstime, July 1987, p. 86].

In other business news concerning newspapers:

• Another family-owned newspaper group, citing problems other families have experienced in keeping their businesses intact, said it may sell some shares to the public in order to preserve family control. **McClatchy Newspapers** President C.K. McClatchy and other family members said in a letter to employees that going public would result in "the best hope of preserving our newspapers' independence and integrity in the years ahead."

McClatchy officials would not comment beyond the letter.

McClatchy would become the 18th public newspaper company. The last to go public was Pulitzer Publishing Co. [presstime, Dec. 1986, p. 78].

BUSINESS ROUND-UP

• **The Minneapolis Star and Tribune** said it will make a big push into the St. Paul market Aug. 31 by becoming a "metro-wide newspaper for the Twin Cities." It will change its name to Star Tribune: Newspaper of the Twin Cities and begin publishing a daily St. Paul edition. "The Twin Cities has really become one metro area," said Publisher and President Roger Parkinson.

John T. Henry, president and publisher of the St. Paul Pioneer Press and Dispatch, said newspaper competition in the Twin Cities area "has been stepping up, particularly over the last three to four years." His Knight-Ridder Inc. paper has its own long-range plans, he said, and "certainly will be aggressive" in carrying them out.

• **Torstar Corp.** of Toronto said it is interested in spending "several hundred million dollars" to buy non-newspaper publishing companies in the United States. The firm said it does not believe foreign concerns should own newspapers in Canada and therefore does not believe it should own newspapers in the United States. Torstar properties include The Toronto Star. □

Changes in command

Suburban Newspapers of America, at its summer management conference June 24-26 in San Francisco, elected the following new officers:

• *President*—Stephen F. Rose, Sun Publications, Overland Park, Kan.

• *First Vice President*—Lewis Fisher, Fisher Publications Inc., San Antonio

• *Second Vice President*—Christopher Larsen, Imprint Inc., West Hartford, Conn.

• *Secretary*—Charles A. Lyons, Chesapeake Publishing Corp., Easton, Md.

• *Treasurer*—Roger Miles, MPG Communications, Plymouth, Mass.

National Newspaper Publishers Association, at its convention June 17-20 in Detroit, elected the following new officers:

• *President*—Patricia O'Flynn-Thomas, Milwaukee Community Journal

• *First Vice President*—Levi Henry, Westside Gazette, Fort Lauderdale

• *Second Vice President*—Thomas H. Watkins, New York Daily Challenge

• *Treasurer*—Waverly L. Easley, Philadelphia Tribune

Investigative Reporters and Editors, at its annual convention June 18-21 in Phoenix, elected the following new officers:

• *President*—Mary Hargrove, The Tulsa Tribune

• *Vice President*—Mike Grim, The Palm Beach Post, West Palm Beach, Fla.

• *Treasurer*—Frederic Tulsky, The Philadelphia Inquirer

The **International Newspaper Marketing Association**, at its annual convention May 17-20 in Toronto, elected the following new officers:

• *President*—David Teague, P. Bailey Foreman Ltd., Great Britain

• *President-elect*—E. Russell Donnelly, Worcester (Mass.) Telegram and Gazette

• *Vice-President*—Milo W. Sutton, Los Angeles Times

• *Treasurer*—Crawford Carroll, Times-Picayune, New Orleans. □

Promotion spending on the rise

Newspapers' promotion budgets apparently benefited last year from increased newspaper revenues.

As revenues rose, expenditures for promotion more than doubled, according to the 1987 Newspaper Promotions Operations Survey conducted by the International Newspaper Marketing Association. Responses were received from 249 of 679 INMA-member newspapers asked to participate in the third annual survey.

The survey found that an average of 1.42 percent of gross revenue was allocated for promotion. The most dramatic increases in spending were: by papers under 50,000 circulation, for promotional advertising; by papers of 100,000-200,000 circulation, for research; by those over 200,000, for community service efforts.

The report is available for $75 to survey participants and for $150 to other newspapers. Contact INMA, The Newspaper Center, 11600 Sunrise Valley Drive, Reston, Va. 22091. □

Correcting the corrections report

In your excellent June 1987 article on newspaper corrections, there is, unfortunately, an error. I will take the blame for it and hope, for your other readers' sakes, that you will correct it.

In your recounting of our Gannett Center for Media Studies survey on corrections, you note (p. 67) that the "one-eyebrow-raiser [was] that more errors were committed by copy editors than by the reporters who wrote the stories." And that is indeed what our Gannett Center Working Paper says (p. 10). Of corrections that could be classified by error source (about 60 percent could not), we said, "about 33 percent attributed the errors to reporters, and 50 percent attributed them to copy editors." But this is wrong, as Table 3-B on the same page of our report shows. The error was a copy editing error on our part at the Gannett Center. What the copy originally said was, "Papers attribute about three of four errors to themselves, with about a third of all errors attributed to reporting errors and about half that number to copy editing." In other words, reporters are responsible for twice as many errors as copy editors.

I regret the error and, of course, will blame it on my copy editor.

D. Charles Whitney
Research associate professor
Institute of Communications Research
University of Illinois at Champaign-Urbana
(Research coordinator, Gannett Center for Media Studies, Columbia University, 1985-1986)

Paying for performance

I read with some interest "Pay-for-performance system embodied in Guild contract," which appeared on page 95 of your May issue.

That article says, "A new labor agreement negotiated between Local 82 of The Newspaper Guild and The Seattle Times contains a pay-for-performance system for the first time in a Guild contract."

You might be interested to know that The Sacramento Bee has had a pay-for-performance system in its contract ratified by The Newspaper Guild in December of 1984. Performance reviews have been the basis for Guild increases at the Bee for more than two years now.

Fuller A. Cowell
Operations director
The Sacramento Bee

Editor's note: The Sacramento Bee contract that Cowell refers to also contains a general wage increase. There are several such contracts in the newspaper business. The *presstime* story should have specified that the Seattle Guild contract was the first such pact that established for one group of employees a pay-for-performance system alone, with no other general wage increase. *Presstime* regrets the error.

Defending UNESCO

No wonder the U.S. press establishment is blasting away already at a new study to be made of a possible "disinformation" campaign directed against UNESCO by the American media (February, p. 43). This one will be carried out by the Media Analysis Institute of New York, and even before it is very much under way Dana Bullen of the World Press Freedom Committee is quoted in the *presstime* piece as wondering if "a cheap shot against the press is in the making that will add no luster to UNESCO's image."

If I were the U.S. press establishment, I would be nervous, too, because every other study made of American media treatment of UNESCO has had UNESCO come off as the innocent maiden and the U.S. press as the leering, evil villain. To say that these studies added "no luster" to the American press' image is a classic understatement. . . .

The time of this writing is rather late in the game for such old-fashioned, outdated UNESCO-thrashing. . . .

over-set

Newspaper numbers

582—average number of dollars paid weekly as a top minimum to experienced reporters in the United States as of May 1, 1987, according to 123 labor agreements on file at ANPA.

37—number of schools of journalism or mass communications in Africa.

587—number of newspapers currently carrying the Sunday magazines Parade (310) or USA Weekend (277).

Smear tactic

In a brief editorial June 23, The Globe and Mail in Toronto poked fun at an ad offering a number of unusual items for sale, including "newspaper reading gloves."

Some readers did not find the idea so outrageous, however. Their letters to the editor included this published response:

"I little thought when the kids had flown

"The nest, and we two were left alone

"I'd still be faced with the daily chores

"Of wiping fingerprints from the doors;

"But nothing's changed and I'm still a nag—

"The Globe and Mail is a filthy rag."

Fraser Hale, St. Petersburg Times

Sounds corny, but cabbage works better than squash

Squash, grapefruit and oranges didn't work, but cabbages do. So now when the St. Petersburg Times is in a rush to get film back to the plant and highways are congested, the paper makes an "air drop" from a helicopter with the film cushioned in a bag of cabbage.

Every month or so the Times charters a chopper for a drop. Because the paper has no heliport or ground landing area, and with county zoning laws prohibiting landing on top of a building, the film is placed in a shipping bag with the cabbage, and the whole thing is dropped from the helicopter hovering about 30 or 40 feet above the Times' roof.

"The problem was finding something that would bring the package to the roof," says Jack Belich, news photo editor (at right in photo with lab technician Ken Helle).

"We . . . needed something to weigh it down and cushion it. We tried butternut squash. We tried grapefruit and oranges. But they would split and get juice all over. . . . Cabbage gives just the right consistency," Belich said.

Summertime heat for third-class mail

Advertising mail, sometimes known as "junk mail," has taken a bit of a trashing from two sources this summer: an exasperated judge and a playful humor columnist.

Judge Donald King of the California Court of Appeal gave his stamp of disapproval in a court opinion echoing some ANPA concerns on bulk, third-class postage rates. "Insult is added to injury," he said, "when one realizes that individual citizens must pay first class postage rates to send their mail, while junk mail, for reasons apparent only to Congress and the United States Postal Service, is sent at less than one-half of that rate."

His views notwithstanding, King and two other judges on an appeals panel upheld dismissal of what the court called a frivolous $15-million lawsuit against an allegedly misleading subscription solicitation from Time Inc.

Meanwhile, the direct-mail industry was tweaked by humorist Calvin Trillin who proffered his disdain for "those subscription cards that are always falling out of magazines." In typical Trillin fashion, he suggested in a syndicated newspaper column that readers send the postage-paid cards back to the magazines—not with a purchase order but with the message, "Keep up the good work, circulation fulfillment people."

There are no data on how many people have acted on Trillin's whimsy. But Denison Hatch, editor/publisher of *Who's Mailing What?*, a newsletter on third-class mail, claimed Trillin has cost some direct-mail users a significant amount of money.

Aftermath of a storm

The forecast for Saturday, July 11, in the Nation's Capital was afternoon thunderstorms followed by irony.

Readers the next day found a big hole in their newspaper's weather report. A small box explained: "Because a storm knocked out computer systems at The Washington Post last night, we were unable to provide a complete weather report."

A Proven Sales Training Program with a Money Back Guarantee. Impossible, right?

It's true. You can invest in a training program for your salespeople that is guaranteed to bring you plus business or your money back.

We are American Consulting Services in Vancouver, Washington and we have developed a marketing program for the newspaper industry which involves selling against the Yellow Pages. As of today, more than 200 dailies in the United States and Canada have invested in our services and the results they are having are unbelievable. Millions of dollars have already been recaptured by newspapers around the country by utilizing our simple consulting techniques. You have an opportunity this year to slow the growth of the Yellow Pages in your market with absolutely no down-side risk.

How can we offer a guarantee on sales training? Because we teach a 5½ hour How-To session rather than some philosophical overview. We train your people on what to say, when to say it and how they can consult their way into a sale. Then we spend about an hour with your managers and supervisors sharing implementation techniques that 200 other newspapers have utilized. We sell results. It's as simple as that.

Guarantee

If your salespeople don't recover the investment of our seminar within 30 days of your kickoff, we will return to your community, go out with one of your people and write the business for you. If we fail to do so within 10 days, we will issue a refund.

Another Flint Ink FIRST

This spring, Flint Ink delivered a tanker of Arrowflex black water-based flexographic newsink to the Providence Journal.

That makes us first again!

We made history with the first bulk delivery of letterpress black newsink. As newspapers began turning to offset, we had another first with bulk delivery of offset newsinks — both black and color. We introduced alkaline fountain solutions, the standard of today's offset newspaper industry. Now, once again we're first — this time with bulk delivery of flexo newsink.

As the nation's leader in quality newsink — letterpress, offset and now flexo — Flint Ink delivers.

Bulk delivery of Arrowflex Newsink is now here.

INDEX VOLUME 9, NUMBER 9 SEPTEMBER 1987

Special Report *Correspondents regularly tramp through the corridors of the Pentagon, but most newspapers have not mobilized the same kind of resources to cover the defense installations in their own backyards. Some larger newspapers in communities where the military has a major presence have assigned full-time coverage. But the beat is not an easy one. Fewer reporters today have served in the military. The bureaucracy is a source of frustration. And historic tensions linger despite efforts to bring about greater mutual understanding.* **24**

Stocks of information *As befits communications companies, publicly held newspapers produce some of the best annual reports in the corporate community.* **6**

World readership rankings *In the global list of per-capita newspaper circulation, the United States is in 19th place. Japan is number one.* **10**

Insight into readership *Gallup's new readership research tool is, literally, eye-catching. It's a new way to measure what readers read.* **14**

Controlling energy costs *Energy conservation translates into big savings for newspapers. Some have turned to sophisticated energy-management systems.* **16**

Constitutional coverage *Though the Constitution was drafted in secret, newspapers in the new nation were highly interested bystanders.* **20**

TMC name game *When choosing a title for a non-subscriber publication, some papers merely tack on "Extra" or "Plus." Others go for more individuality.* **23**

Productivity yardsticks *Newspapers are trying to get a handle on the complex chore of measuring employee productivity.* **32**

Profile: J. Patrick O'Callaghan *The publisher of the Calgary (Alberta) Herald enjoys being on the front lines in Canadian free-press battles.* **34**

Essay: Sales tax pro & con *Two Florida newspaper executives explain their papers' editorial positions for and against the state's tax on advertising.* **36**

Celebrate citizenship! *Newspapers are assisting in preparations for the nationwide, day-long teach-in about the Constitution, Sept. 16.* **46**

Paper prices climb *Some observers think the cost of newsprint could hit $700 a ton next year. The hikes are bringing conservation efforts back into vogue.* **68**

CHAIRMAN'S CORNER

Minority opportunity shapes our vision of the future

I would like to have your counsel about an important program priority our Board of Directors will be considering this month and throughout the rest of our 1988 budget-planning process. It is a key proposal we have before us to raise to even higher priority our work to assist newspapers in enhancing opportunities for minorities.

ANPA and ANPA Foundation, working closely with ASNE and with all the 36 organizations active on the Task Force on Minorities in the Newspaper Business, have initiated many useful projects in this arena in recent years. Our commitment to do what is right is a firm one already.

George W. Wilson

But more can be done. And ANPA leadership can be even stronger and more effective.

Meaningful action occurs in pursuit of a vision of how things ought to be. Our Directors and Foundation Trustees are considering adoption of such a vision. It might be something like this:

As a result of ANPA leadership, the newspaper workforce—because of enhanced sensitivity in both business and editorial segments—reflects the national diversity of American society; and, as one result, newspapers' role as a mass medium is strengthened for both readers and advertisers.

I ask you to consider, if you will, your vision of this future and to share it with me. Also, let me know what specific steps might best be taken by us to turn the vision into reality.

The vision above, if adopted by our Association, would anticipate that newspaper executives across North America would embrace and participate in the effort and help realize it as a key, valuable ANPA initiative on a par with our traditional technical services and government-relations activities. We would be committed to a high priority application of time, effort and resources.

Work toward such a goal, always coordinated with the intra-industry task force, probably would entail a national survey of newspaper minority employment, attention to secondary school recruiting, expanded job banks, widely available advisory services to individual newspapers, management training for minorities, communication of tools and techniques via conventions, conferences and newsletters, and a host of other things.

Some of you already have heard me talk about my view that people are the resource we can and should concentrate on even more. That's the place further, real progress can be made. It is a good policy. It is good business.

I believe it is time to make minority opportunity a top ANPA priority. But this is your Association. Please let me know—right away—what you think.

George W. Wilson

ANNUAL REPORTS

THE ART OF PRESENTING AN IMAGE ALONG WITH THE FACTS

BY MARY A. ANDERSON
presstime staff writer

Glitzy or staid, voluminous or bare bones, this year's crop of annual reports from publicly held newspaper companies trickled from April through June into the offices of shareholders, bankers, analysts, advertisers and government officials.

After a brief summer respite, some companies are already hard at work on next year's productions.

They are not cutting back on their efforts, even in light of the Securities and Exchange Commission's startling ruling late last year that it does not require an annual report, so long as public companies submit full financial information in some other form.

Depending on their size and other factors, newspaper companies spent up to $250,000 last year to produce reports that are considered by many annual report-watchers to be among the most revealing, well-written, and attractive in the corporate world.

A byproduct of capitalism, the annual report is a company's way of putting its best foot forward in the presence of people who may affect its financial fortune.

To accomplish that, its appeal must be multifaceted. The financial experts might start at the back, checking the information whose disclosure is required by federal law. This includes statistical tables where one can find the proverbial "bottom line"—profits, losses and earnings per share. The financial wizards also are on guard for any cautionary note from the independent auditor's statement.

On the other hand, some individual investors or company employees will start at the front, attracted by the colorful photographs, modern graphics and feature stories that many companies use to convey their glamour and humanity.

In short, the annual report is both an image-maker and a corporate calling card.

Frank N. Hawkins Jr., vice president for corporate relations and planning for Knight-Ridder Inc., says the reports are "like a corporate Rorschach test."

"At Knight-Ridder, we believe the annual report is a reflection of how the company feels about itself," says Hawkins, posing this question: "Who wants to invest in a company that doesn't feel good about itself?"

Another reason annual reports are important is that "companies must be identified anew each year," says Richard A. Lewis, chairman of a consulting firm, Corporate Annual Reports Inc., and publisher of a quarterly newsletter, The Corporate Communications Report. "They are constantly changing—making acquisitions, launching products, entering new markets."

Media analyst J. Kendrick Noble, first vice president of PaineWebber Inc., says the annual report "is the single most important document as far as I'm concerned."

"When I want to find out about a company," he says, "I ask for the last 10 years of annual reports, 10 years of (Securities and Exchange Commission annual Form) 10-Ks, three years of quarterly statements (of operations and revenues) and any proxy statements or press releases" the company may have issued.

Analyst Bruce Thorp of the Washington D.C., brokerage firm of Lynch, Jones & Ryan, says, "We do our financial profile based on annual reports each year. Without information that we find only in annual reports, we would not be able to complete that as quickly as we do."

Some of the information best obtained from an annual report includes debt and shareholders' equity, and the breakdown of financial data into segments such as newspaper operations and broadcasting, he says.

Newsletter publisher Lewis says, "Because the annual report is signed by the chief executive and filed with the Securities and Exchange Commission, it's considered to be the most credible document a company produces. . . . Among large American companies in this society, if a company doesn't have credibility, then no one is going to follow their stock."

Photographers shoot the cover of Knight Ridder's award-winning 1986 report.

READABLE, INFORMATIVE. Over the past five years, says Lewis, newspaper company annual reports, as a group, surpass their counterparts in other industries in many respects. "They are fatter and better and more informative than the run-of-the-

mill, perhaps reflecting the affluence in the industry," he says. "I think it has to do more with bragging"—a kind of one-upmanship among newspaper conglomerates—than with a possible journalistic inclination toward better writing or design.

If journalism were the main reason for the reports' excellence, one might expect those of advertising, broadcast or book publishing companies to be just as impressive. But analyst Noble, who judges annual reports of media companies for two different groups, says the ones put out by newspaper companies "are typically the best . . . in the entire media field."

The analysts and Lewis agree the reports from newspaper companies provide more extensive financial information than is normal, but their views differ as to why.

"I suspect newspaper companies provide more than they really need to because they are information companies, and they tend to believe in the need for public disclosure," says Thorp of Lynch, Jones & Ryan.

Lewis says that "because they don't compete head-to-head, they are willing to give more information about their market areas."

In recent years, that openness has carried over to the quarterly reports and interim releases. "That's a general trend with newspapers in all kinds of ways—telling analysts what's happening on a monthly basis more than they ever did," Thorp says.

Almost all annual reports contain the same basic elements, in roughly the same order: operating financial highlights; chairman's letter; the management's discussion and analysis of operating results in various divisions; assorted financial tables, including consolidated income statement and balance sheet; footnotes; independent auditor's report; and list of directors.

Those newspaper companies that go beyond the basics have been fulfilling the wishes of analysts for "more numbers," Thorp notes. Some of those extras are:

- Three- to five-year segment information, breaking down revenues and expenses for newspapers, broadcast and other properties
- Eleven-year financial summaries, to allow full comparisons of growth over a 10-year period
- Percentage of change from the previous year in operating results
- Biographical information on executive officers.

Another feature favored by the experts is a question-and-answer section, such as those carried in the reports of Knight-Ridder and Tribune Co. of Chicago, in which management discusses future prospects.

"Relatively few companies will say anything about the year ahead," Lewis says.

STANDING OUT. A report that has received widespread praise in financial and publishing circles is Knight-Ridder's latest one. Its front and back covers picture some of the company's 39 Pulitzer Prize winners amid stacks of newspapers and a newsrack that proclaims, "Tradition of Excellence."

Another winning touch was the first effort by Pulitzer Publishing Co., which hurriedly put together its annual report after going public last December. In Financial World magazine's prestigious yearly contest, Pulitzer won second-place recognition behind Knight-Ridder in the printing and publishing category.

Its debut report stresses the company's history, with a John Singer Sargent portrait of Joseph Pulitzer on the cover.

The New York Times Co. opted for no photograph on the cover of its report for 1986. Instead, it used a sophisticated graphic design incorporating names of the operating divisions, with plenty of color inside.

Lee Enterprises Inc.'s cover was a picture of Americana: a red-capped youth about to toss the La Crosse (Wis.) Tribune to the home beyond a white picket fence on a crisp autumn day.

Dow Jones & Co., just like its leading publication, The Wall Street Journal, presented the facts in "gray lady" fashion. Photographs were black-and white.

Capital Cities/ABC Inc. offered the most no-nonsense design, excluding photographs entirely. As has been its tradition, the company put its statement of management philosophy inside the front cover—and it is a standard to which the austere annual report attests: "We expect a great deal from our managers. We expect them to be forever cost-conscious."

Also on the modest end of the spectrum—but mostly because of their smaller size and fewer shareholders—were Park Communications Inc. and Stauffer Communications Inc. At 26 and 11 downsized pages, respectively, they were the briefest of the 1986 crop, with few photographs or other artistic flourishes. Gannett Co.'s was the largest, at 77 pages.

For the 16 principal publicly traded newspaper companies, the average length was 45.8 pages, substantially higher than the average of 40.5 pages of all annual reports tracked by Sid Cato Communications, Inc., which publishes Sid Cato's Newsletter on Annual Reports.

Surveys by Cato and Lewis show that out-of-pocket costs of preparing annual reports nationally have ranged from 34 cents to $8 per copy, with the average hovering around $3.

Lewis said most companies spend between $100,000 and $400,000 a year on their annual reports, with relatively few going higher than $250,000.

Some Private Firms Also Report

Although private companies are not reliant on Wall Street and are under no legal requirement to issue an annual report or a Form 10-K, several newspaper firms do one or the other.

The annual report of privately held Cox Enterprises Inc. includes no financial data but provides as slick, colorful and optimistic a synopsis of the company's operations as many of the public companies.

Scripps Howard issues a similar publication, which it calls a "progress report." According to an explanatory statement, the report is "less concerned (than those of public companies) with bottom-line figures and more concerned with the quality of work being performed at its operating units and the employees responsible for the company's steady growth."

The Hearst Corp. offers a slim brochure, illustrated with color photographs, titled "A Letter to Employees from Frank A. Bennack, Jr., President and Chief Executive Officer."

More unusual in its openness is Cowles Media Co. of Minneapolis, a privately held company whose major shareholders include Gannett Co. and The Washington Post Co.—both publicly traded companies. For several years, Cowles has published a full annual report with financial tables as complete as those put out by many public companies.

Cowles does so as a service to the company's 400 shareholders, and because a small portion of Cowles' stock is traded over the counter, says Chairman David Kruidenier.

And Ingersoll Newspapers Inc. this year publicly distributed a completed Form 10-K, full of annual operating results and financial statements.

"It's a one-shot thing," says Benjamin J. Kowalczyk, Ingersoll's principal accounting officer. "I can assure you, if we didn't have to do it, we wouldn't do it." The SEC required the 10-K because of outstanding public debt the company has carried since the end of 1985.

Outlays by newspaper companies ranged close to the $3-per-copy average. That was about what Knight-Ridder Inc. spent to publish 60,000 copies, Hawkins says, for a total cost of about $200,000.

Gannett Co. spent about $250,000 to publish almost 100,000 copies of its lengthy, glossy annual report. It kept costs down to about $2.50 per copy by doing everything, except the printing and mailing, in-house, says Joe Junot, managing editor of Gannett publications.

Pulitzer Publishing may be able to claim the record for the most expensive annual report this year. With only 7,500 copies printed, production cost about $10 per copy, says James V. Maloney, company secretary. Given the short deadline for its first report, much of the work had to be farmed out to a St. Louis public relations firm, adding to the cost.

At the modest end of the scale, Park Communications spent about $5,500 to produce 5,000 copies of its two-color annual report, at a unit cost of $1.08.

Most companies could not provide detailed breakdowns of report distribution, but if Knight-Ridder's practice was any standard, about half went to individual shareholders, media analysts and brokerage firms; a third went to individuals who requested them for diverse reasons; and the remainder went to company employees, journalism schools or others on company mailing lists.

Annual reports for most businesses are coordinated by the companies' public relations or corporate communications departments. Relatively few—between 16 and 27 percent, by varying surveys—are supervised by "investor relations" people, who specialize in dealing with the financial community.

Newspaper companies and other industries alike nearly always make data collection and writing an in-house job, but usually contract with outside firms for design work and printing.

LOSING ITS LUSTER? Several companies and the government have begun talking about possibly downplaying the role of the report in meeting federal accountability requirements.

The controversy was sparked late last year by General Motors' advocacy of a "summary annual report"—one without full financial data, so long as complete data are filed with the SEC in the annual 10-K and proxy statements. Not only did the SEC approve GM's proposal, but it stunned the financial world by agreeing that the annual report could be dropped entirely.

"The SEC position is not just a matter of hair-splitting over obscure rules. If anyone realized beforehand the traditional annual report was optional, nobody at the SEC or in the corporate world ever said so," wrote Edward Kulkosky, publisher of Corporate Shareholder newsletter, in a Wall Street Journal column that widely publicized the decision.

But the annual report is not likely to change drastically because of the SEC pronouncement, Kulkosky wrote. "It's too much big business now."

So far, no newspaper companies have scaled down their reports, which is welcome news to analysts. Responding to a recent survey by the Hill & Knowlton public relations firm, analysts said that anything less than the traditional annual report makes their jobs more difficult and shows contempt for shareholders.

On the non-traditional front, a handful of companies are experimenting with using videotapes and floppy disks as supplements—or substitutes—for the publications. Knight-Ridder's Hawkins believes they are too faddish to catch on.

Progress is being made on the electronic front in one area. Information from the reports are being stored in databases and retrieved by people using personal computers, Lewis says.

Even so, he and other observers of the annual report scene believe the familiar, printed annual report serves so many useful purposes that it is here to stay. □

USA TODAY
chooses
DataTimes

USA TODAY, the nation's most widely read newspaper, has chosen DataTimes, the world leader in electronic publishing and information networks, to provide its electronic library services.

USA TODAY and the **Gannett News Service** will join the DataTimes electronic information network of over 170 newspaper, newswire, and business databases serving thousands of commercial businesses worldwide. **USA TODAY** joins the world's leading newspapers on DataTimes, and will be available for public access September 1, 1987.

The DataTimes system will allow reporters, editors and newsroom libraries instant computer access to previously printed information directly from their own newsroom terminals.

DataTimes is proud to welcome **USA TODAY** and the **Gannett News Service**, from the Gannett Co. Inc., the nation's largest newspaper group, to its world of information.

THIS AMAZING REMEDY, FOLKS, ACTUALLY PREVENTS COLDS, GROWS HAIR, HEALS BROKEN BONES AND LOWERS RAIL RATES.
C.U.R.E.
CAUTION: will cause serious long-term discomfort for most shippers.
TRAVIS

If you thought snake oil salesmen were a thing of the past, listen again to a group called Consumers United for Rail Equity (C.U.R.E.).

C.U.R.E. claims it has just the remedy for those who ship by rail. What they don't tell you is that the stuff they're hawking does more harm than good.

C.U.R.E.—a curious name for an organization funded primarily by the coal and utility industries—proposes extensive new regulation of railroads through legislative "reform" of the Staggers Rail Act of 1980. That's the same Act that rescued freight railroads from a century of over-regulation in the first place. And while C.U.R.E.'s proposals would lower rail coal rates for its principal supporters, they'd clearly leave everyone else paying the freight—in terms of declining service; higher rates; and, ultimately, through the loss of rail service altogether.

It's no surprise that C.U.R.E.'s pitch also ignores the fact that the majority of shippers—87 percent of those recently surveyed—feel pretty good about the effects of partial deregulation and don't want to see the Staggers Act changed.

When you think about it, C.U.R.E.'s pitchmen have turned it all around. Reregulation isn't the remedy; it's the disease. In fact, not only did the Staggers Act help remove the railroad industry from the critical list, it also helped the industry become strong enough to offer rate reductions in recent years, including two years of consecutive rate cuts for C.U.R.E.'s principal supporters.

Still, C.U.R.E. is pressing for further rate cuts and new regulations that could be the prescription for the demise of rail service in this country once and for all.

If you're a journalist covering this story, you'll find that the facts support the argument that a good dose of free markets is far healthier for the railroads and their customers than C.U.R.E.'s snake oil.

To get facts, write Rail Remedy, Association of American Railroads, 50 F St., NW, Washington, DC 20001, Dept. 712.

Or if you're up against a deadline, call (202) 639-2555.

Global Readership

The United States and Canada lag behind many other countries in daily newspaper circulation per capita

BY MARION LEWENSTEIN

Despite wealth, high literacy and modern production technology, the United States ranks only 19th in daily per-capita newspaper circulation in the world.

Japan is number one. Both East and West Germany rank substantially higher than the United States. So do the United Kingdom, the Scandinavian countries, Singapore, Monaco, Iceland, the Soviet Union, Czechoslovakia, Australia, New Zealand and several others.

But Canada, France, Italy, Spain and Belgium, and most countries in Africa, Asia, and the Middle East, rank behind the United States.

Why? How are these rankings procured, and what factors go into making one nation's citizens newspaper readers and another one's rather indifferent to a daily press?

The United Nations Educational, Scientific and Cultural Organization keeps count of each country's publications by various categories, including daily general-interest newspapers. ("Daily" is defined as a paper published at least four times per week.) Also provided in UNESCO's annual *Statistical Yearbook* are the number of daily papers in each country, total circulation and circulation per 1,000 inhabitants. UNESCO's statistics are the generally accepted norm for comparing circulation, even though newspaper associations in some countries provide slightly different figures.

The 1986 *Yearbook* shows that U.S. daily newspaper circulation per 1,000 inhabitants stood at 268 in 1984, the latest year for which figures were available. (See table.) The book reported that there were 1,687 U.S. dailies in 1984—one fewer than counted by *Editor & Publisher YearBook* for that year.

Japan, with 125 dailies, had the highest ratio—562 copies per 1,000 people.

UNESCO data are intended to represent average daily number of copies sold by single copy and subscription, plus the number of free copies regularly distributed.

Heavily used public transportation seems to increase circulation in Japan and other countries.

REASONS FOR READERSHIP. Among the most common factors appearing to boost newspaper circulation are high literacy, comfortable per-capita income relatively evenly distributed among households, population homogeneity, keen interest in world affairs, a good educational system, a heavily used public transportation system, and effective newspaper distribution techniques.

Some of these factors play more of a role in certain countries than in others.

Scandinavian nations, New Zealand and Japan, for instance, have homogeneous populations and high per-capita circulation. So did the United Kingdom, but recent immigration of new ethnic groups are an important reason for recent declines in circulation there.

And yet, Switzerland and Singapore, with multi-language populations, have high newspaper circulations per capita. Switzerland's newspapers reflect three cultural and language groups: German, 65 percent of the population; French, 18 percent; and Italian, 12 percent. Singapore has four official languages and many ethnic dialects with newspapers in each, though English- and Chinese-language papers dominate.

Population density also seems to have an impact on circulation figures in some countries. For example, in Japan and England, both with high circulation per capita, the population density also is high—317 inhabitants per square kilometer in Japan and 230 in England. Similarly, in the relatively low-circulation countries of the United States and Canada the population density is 25 and three, respectively.

But population density, like homogeneity, is not an absolute test. There is high circulation in Norway with 13 inhabitants per square kilometer, Sweden with 19, and Australia and Iceland with only two. On the

other hand, despite densities of 90 and 190 per square kilometer, France and Italy have daily circulation per 1,000 people of only 212 and 82, respectively.

Good distribution systems appear to help in countries with circulation ratios that are above those of the United States or Canada. In Sweden, the government subsidizes collaborative distributors who deliver several papers even in sparsely settled rural areas. Most newspapers are delivered by adults using cars or trucks.

Airplanes are used in Norway to reach remote areas.

And with their unequalled circulation per capita, Japanese publishers credit some 50,000 independent news agencies that aggressively solicit and deliver daily papers. Adults solicit new subscriptions in Japan, while papers are delivered mostly by youths.

In some instances, providing readers with diverse newspaper options seems to stimulate daily circulation. The mix may contain national and local papers, partisan papers, "popular" (generally meaning sensationalistic tabloids), and elite newspapers.

Gunnar Sand, a Norwegian journalist who has studied U.S. and Scandinavian newspapers, attributes recent 2-percent annual growth in Norway's circulation (despite stable population) to the increasing choice readers have available to them. "Whatever the reader wants, he can find," Sand says. "That means he often buys two papers—a local and national, or a party paper and another one, or a serious paper and a popular one."

Newspapers in most Scandinavian countries are partially subsidized by governments with policies designed to keep "many voices" alive.

In France, where newspapers receive limited, indirect subsidies, diversity of another sort is helping to increase slightly circulation in national newspapers, according to Diane Seligsohn of the Paris-based International Federation of Newspaper Publishers. She says the latest annual study of the French press shows some gains at national papers that stem from new weekend supplements and weekday special interest sections.

CIRCULATION INHIBITORS. While national papers have grown and regional ones have held their own, France has seen a decline in "popular" dailies that have been unable to compete successfully with specialized magazines and television, Seligsohn says. Newspapers in Italy, she adds, traditionally have been aimed at the "elites," and specialized magazines long ago grabbed the "popular" market.

Similarly, specialized magazine growth has hurt newspapers in the United Kingdom, according to Janet Mayhew, research director of the Institute of the Practitioners in Advertising—the U.K. equivalent of the Newspaper Advertising Bureau in the United States. More than television, she says, magazines have segmented the market and intruded upon newspaper circulation.

Growth of free weekly shoppers has also cut into local daily circulation, Mayhew reports. These free publications often contain "proper newspaper editorial content," she says, and they have lured substantial advertising revenues from paid newspapers.

Publishers in the United States and France often blame TV watching for cutting into readership. The United States has 793 sets per 1,000 inhabitants. France has 375 per 1,000, about average for most countries in this survey. In many other countries, however, there seems to be little correlation between television-set penetration and newspaper circulation. Japan, with the second-highest TV penetration, 563 sets per 1,000 people, doesn't seem to find viewing a deterrent to reading, despite full entertainment programming and frequent newscasts.

JAPANESE SUCCESS. Hyde Sakata, the American representative of the Japan Newspaper Publishers and Editors Association, says a recent survey showed that most Japanese consider newspapers their most reliable source of news. He mainly credits this for Japan's high circulation rates.

But Sakata also says Japanese newspapers efficiently promote their product. One national paper regularly gives new subscribers tickets to baseball games.

In addition, Sakata notes that newspapers get a boost by the heavy emphasis secondary schools place on reading them.

Literacy rates for the first 19 countries listed in the table are uniformly high, averaging well over 95 percent, but as one American anthropologist remarks, "In Japan, they're *really* literate." Scandinavian countries also have an advanced educational system, plus a more even distribution of income than is true in the United States.

Regardless of a country's income stratum, however, newspapers have experienced a common pattern. As their costs have climbed, and as circulation prices have been increased accordingly, circulation has faltered. □

Key Facts About Newspaper Circulation by Country[1]

Country	Number of dailies	Total circulation (in thousands)	Circulation per 1,000 people
Japan	125	57,380	562
East Germany	39	9,199	550
Liechtenstein	2	15	536
Finland	67	2,599	535
Sweden	99	4,340	521
Norway	82	2,071	501
Soviet Union	724	116,096	422
Iceland	4	113	469
United Kingdom	108	23,206	414
Monaco	2	11	408
West Germany[2]	359	25,103	408
Switzerland	90	2,494	392
Denmark	47	1,837	359
Australia[3]	63	4,851	335
New Zealand[2]	31	1,025	325
Netherlands	84	4,474	310
Czechoslovakia	27	4,609	298
Singapore	10	700	277
United States	1,687	63,263	268
Kuwait[2]	7	391	250
Hungary[2]	27	2,665	249
Belgium[2]	26	2,204	224
Canada	112	5,544	220
France	101	11,598	212
Fiji[2]	3	67	102
Italy[2]	79	4,632	82

Factors affecting circulation include literacy, income, population homogeneity and education.

Why do they have to show things like this in the newspaper?

© 1986 Knight-Ridder, Inc.

Yes, this is a grisly picture.

But in a glance, readers understood the enormity of what happened to the White City. No amount of words could equal this image and those that came with it.

It began on November 14, 1985.

Colombia's long-dormant Nevada del Ruiz volcano erupted. Photographers Carol Guzy and Michel duCille of Knight-Ridder's Miami Herald were dispatched to the Colombian town of Armero.

It was known as the White City because of its extensive cotton and rice crops. Now a brown tidal wave of mud, ash, melted snow and rocks had cascaded down the slopes.

Armero was no more.

To get to the scene, Guzy and duCille, along with two Miami Herald reporters, rode for five hours over twisting, fog-covered roads. Then, when the roads ended, they faced a five-mile walk. As they approached Armero, the mud was hip-deep.

Carnage and corpses surrounded them. Throughout the area, the roar of the eruption had been replaced by the quiet of dying.

Only 20 percent of the town's 28,000 inhabitants had survived.

Guzy and duCille sent back gut-wrenching pictures. They knew they'd be painful to print. But from a human perspective, they'd captured the truest pictures of the trauma and the tragedy of Armero. DuCille recalls, "I was shooting close-up shots of a dead baby, and all the time thinking, 'My God, this could be my son.' They were about the same age."

The Herald's pictures and stories about the devastation in Armero created an immediate, compassionate reaction in South Florida. Thousands of Herald readers brought food, clothing and medical supplies to local fire stations. Eventually, twelve truckloads of relief supplies were sent to Colombia.

Carol Guzy and Michel duCille won the 1986 Pulitzer Prize for Spot News Photography.

The Miami Herald had sent two reporters and two photographers 1,500 miles to get the story. A chartered jet had to be used to get the pictures back to Miami before deadline. In all, it was a herculean feat.

By comparison, no other news organization's coverage came close to the Herald's.

But The Miami Herald is a Knight-Ridder newspaper.

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 28 daily newspapers.

The Eyes Have It

Another readership research tool is introduced

BY GENE GOLTZ
presstime staff writer

The Gallup Organization is beginning to use a newspaper-readership research tool that could add a new dimension to the term. It's an "eye-tracking" technique that uses videotape cameras to record the time readers spend with each item in the newspaper. And although some editors and researchers find it "fascinating," others are reserving judgment.

Eye-tracking equipment has been used for years in advertising and marketing research, but the new equipment makes it possible for subjects to be tested in a more natural setting than ever before. That is, the individual is able to hold a newspaper in his or her hands and move the head and arms naturally—motions that have not been possible with previous eye-tracking equipment.

The technique is seen as a supplement to traditional research that involves personal interviews and written questionnaires. But, because it involves hooking up one person at a time to the videotape mechanism, the research is far more expensive per research subject than other methods.

Gallup calls it Eye-Trac Research. The project is a joint effort of Gallup and Applied Science Group Inc. of Waltham, Mass.

The method, which was tested at the Gallup laboratory in Princeton, N.J., involves placing two miniature, lightweight videotape cameras on a subject's head. One camera focuses on the eyes, the other on the printed page of whatever material the subject is holding. The equipment creates a videotape showing the precise jerks and pauses of the eyes and the exact spot on the page where the eyes are focused at a given time.

Gallup executives will not discuss specific contracts with newspapers. However, Sharon H. Polansky, a senior research director who is heading the project, says a study using the eye-tracking gear is scheduled to start this month at a major metropolitan newspaper. Several other contracts are being written with other newspapers for similar research projects, Polansky says.

When the technique was tried out a year ago at The Trenton Times, the results were "absolutely fascinating," says Linda Grist Cunningham, executive editor.

"This research confirms a lot of things we already knew and turns other things absolutely topsy-turvy," says Cunningham. "It's been so fascinating I hardly know where to start."

The Trenton experiment was conducted with 43 volunteer readers who were regular subscribers. Some of the things Times executives found out from the Gallup survey:

• The most popular feature was the Times' "People Poll," a daily feature in which six people are asked a question on various topics in the news. The research showed that 66 percent of those tested read the poll.

• There was a "very, very high percentage of headline scanning." The readership of the stories dropped off to 30 to 50 percent if the headline didn't seem to promise an interesting story.

• Practically every one of the readers tested made the "jumps" from front-page stories that were continued elsewhere in the paper. Some read all of the front-page portions first and then turned to the jumps, others read a complete story—front-page portion and the jump—then returned to Page 1 and repeated that pattern.

• Hardly anyone read the paper's index. Cunningham points out that the experiment involved regular, faithful Times readers, so probably they did not need an index as much as casual readers might.

• Only 3 percent looked at the serial comics "Judge Parker," "Apartment 3-G" and "The Phantom." Cunningham notes, however, that previous surveys have shown that readers of such comics are devoted to them. Therefore, she will not drop the comics based on the finding.

The research also showed that the readers liked photographs—the more faces in the photo, says Cunningham, the more time readers spent looking at it—and they liked process color.

"The Gallup Organization, in telling us about it (the test results), said it was very, very clear that our readers felt comfortable with the design of the paper," she says.

HOW IT BEGAN. Although eye-tracking dates back several decades, researchers say the technique now becoming available makes the old ones obsolete.

Descriptions of the old procedures sound a bit like "how to" directions for medieval torture devices.

Researchers used to put readers' heads in a vise and then attempt to determine where the eye moved on a page.

But subjects with their heads in a vise or otherwise immobilized could not easily hold newspapers in their hands. Researchers tried

Equipment weighs less than a pound.

to solve this problem by flashing a facsimile of a newspaper ad or page on a screen and then observing on which part of the screen the eyes focused.

According to B. Stuart Tolley, research director of the Newspaper Advertising Bureau, another device previously used was a "bite bar," which the subject would bite so as to stabilize his or her head while reading.

Tolley says that in the 1960s, researchers tried yet another device, one that measured pupil size. The subject placed his or her head in a black box and read the test material through an opening in one end while a camera measured the size of the pupil. A topic of great interest to the reader would cause the pupil to enlarge, and a duller topic resulted in a smaller pupil.

The new device used in the Gallup technique was invented by Applied Science Laboratories under the direction of Joshua D. Borah, vice president/engineering. It is a dual camera attached to a headband that has a transparent visor attached. The company's promotional literature says the device weighs "less than a pound."

One camera takes moving pictures of the cornea of the eye. The other camera records simultaneously the part of the newspaper the subject is reading. The device allows a subject to shift around at leisure and to move the newspaper, fold it or turn pages at will. Under its contract with Applied Science, Gallup has exclusive rights to the equipment.

One camera focuses on the eyes, the other on the printed page of whatever the subject is holding.

"It's an interesting idea," Tolley says. "It results in data arrived at differently from survey data. I'm all for data under any circumstances, and if you can check it against other data for verification, I don't know what the limits are."

If the technique is pursued through more and more applications, he says, new things may be learned. But he cautions against speculating at this time on what the practical applications are for publishers and editors.

Gallup's Polansky agrees that it will take more time to see how the eye-tracking cameras can be put to best use. "I think we are at the point where this particular tool can be tremendously valuable," she says. "The way we have been packaging newspapers has really alienated some readers. What we can do is find out new questions that can ultimately be used in survey research. This is basically a new tool to be used in the context of many other research techniques."

She has been invited to give a demonstration of research techniques Oct. 20 at the annual fall meeting of the Newspaper Research Council in Keystone, Colo. She says she will demonstrate the Gallup eyetracking technique and is experimenting on combining it with "verbal protocol analysis." In protocol analysis, the subject is asked to comment as he or she reads.

Polansky says editors have long been imagining what readers wanted. With the new equipment, she says, they will be able to find out. "This is a whole lot different from asking what people read. Now we can watch them do it." □

ANPA

Pressroom Operations Symposium

October 19-21, 1987
Hyatt Regency O'Hare
Chicago

This year's symposium will present a forum for discussion of the latest issues in pressroom options and equipment. Leading newspaper operations executives will discuss developments and decisions in these areas:

- Flexography
- Offset
- Letterpress
- Printing Materials
- Newsprint
- Quality Control
- Future Technology

The $375 registration fee covers admission to all symposium sessions, continental breakfast both meeting days, a reception Monday evening and a luncheon Tuesday.

Call the ANPA Technical Research Department at (703) 648-1202 to make reservations or to obtain further information.

ENERGY MANAGEMENT IN VOGUE

Newspapers, motivated by profit margins rather than a global crisis, are finding ways to reduce energy consumption

BY ROSALIND C. TRUITT
pressTime technical writer

No one links the words "energy" and "crisis" much these days, although analysts say rising consumption is likely to cause shortages in the not-too-distant future. And there is considerable nervousness about growing tensions in the energy-rich Persian Gulf region.

Regardless of whether an energy crisis again commands front-page headlines as it did in the 1970s, newspapers are working to save energy, because to do so means savings today and preparation for the future.

"Newspapers are large users of electricity, and when energy is conserved, that move goes right to your bottom line," says Mike Luciano, manager/Newspaper Division of Lockwood Greene Engineers Inc., a Spartanburg, S.C., firm that designs newspaper plants. "We emphasize that when we sit down and discuss a new project."

Examples of energy savings include:

• The Gainesville (Fla.) Sun has saved a minimum of $2,000 a month in utility bills since installing a $30,000 Johnson Controls energy-management system about a year and a half ago. The system regulates air-conditioning and reduces peak-load demand. Bills that formerly averaged $29,000 to $30,000 are now in the $23,000-$25,000 range, says Production Director Vernon G. Bean.

• The Fort Lauderdale News and Sun-Sentinel, which spent more than $1 million annually for utility bills, saved more than $100,000 in energy costs in 1984. That was the first year the newspapers' $72,000 energy-management system manufactured by Seaboard Energy Systems was in use, says Building Manager Fred W. Hubbard. "That's why energy-management equipment has been so popular."

A **pressTime** survey that covered those two newspaper operations and 10 others indicates that such energy-management systems are the most popular choice for papers seeking to gain more control over energy expenditures.

In their application, these practical systems far surpass some of the more exotic forms of energy conservation, including equipment to harness the power of the sun and the wind, installed by a few papers in the late 1970s and early '80s [**pressTime**, Oct. 1982, p. 40].

Continuing that innovative spirit, a handful of newspapers including The New York Times currently are heating and cooling their own facilities with energy recovered from incineration systems that burn ink and other waste.

The Asbury Park (N.J.) Press and a small number of other papers use "cogeneration" systems that can heat and cool facilities with energy thrown off and captured from operating machinery. And in some cases, energy conservation involves no more than having one or two people remind colleagues to turn off the lights.

No matter how newspapers conserve, cost savings can be significant because newspapers are major energy consumers.

Gasoline, diesel fuel or propane gas is needed to operate fleets of trucks and cars [**pressTime**, Aug. 1986, p. 16], and natural gas—or, less commonly, fuel oil—is needed for heating.

But electricity is newspapers' primary concern. Executives of several papers say they spend considerably more on electricity to cool their buildings than they do on gas or oil for heating. Add that to the growing amount of newspaper production equipment requiring heavy doses of electricity for operation and it becomes clear why energy costs are a significant line item for newspapers.

For example, the controller of the Lincoln (Neb.) Journal and The Lincoln Star,

David Cannon, The Orlando Sentinel

The Orlando Sentinel's Hall (left) changes fluorescent tubes, assisted by other energy committee members Ralph Kruger, Karen Barr, Loren Morse and Ralph Allen.

Gary Powell, projects gas and electric bills of just over 1 percent of total expenses for the newspaper's 1987-88 fiscal year, which begins Oct. 1.

"That may not seem like a lot, but we try to monitor and control costs wherever we can, particularly with newsprint prices going up. Any money you can save represents dollars diverted to the bottom line," says Powell.

Energy management can contribute to profitability because the equipment can pay for itself in as little as a year or two.

The Times in San Mateo, Calif., has used a sensor-based, load-management system for about five years. Arthur A. Bouthillier, property manager, says the Comm-Air Inc. system paid for itself within a year.

According to Tom Cox, production director of The New York Times, the incinerator and energy-management system at its Carlstadt, N.J., plant cost nearly $2 million and paid for themselves in about three and a half years.

The cost of the highly popular energy-management systems varies a great deal, based in part on the number of sensors used to keep track of air temperatures and then relay information that dictates an increase or decrease in warm or cool air. The least elaborate systems run about $15,000, while a very sophisticated one can top $500,000.

George I. Fischer, vice president of Seaboard Energy Systems, a Virginia Beach firm that specializes in energy systems for newspapers, says that in some cases newspapers are now looking at second-generation energy-management systems to replace earlier versions installed a decade or so ago.

"There are very few things you can do to cut costs that don't impact on productivity," he says. "Energy management is one of those things."

SCALING THE PEAK. The term "energy-management systems" covers a variety of computerized equipment and procedures that can do a number of tasks, such as restricting peak demand for electricity, monitoring temperatures, and reducing kilowatt hour consumption by chillers, boilers and other heavy equipment.

In many states, electric bills are computed based on when the greatest amount of electricity was used. Any surge in power use—for example, at the time the press is started—can mean paying substantially more for all the electricity used.

For that reason, "load shedding" equipment was devised. At the time the press is started up, the equipment reduces the amount of energy consumed in other areas of the plant, thereby keeping overall consumption levels from rising significantly.

Shedding schedules based on load requirements for various hours of the day, days of the week or even holidays can be programmed.

The activities at newspapers suggest that while the term "energy crisis" is not part of the contemporary vocabulary, "energy conscious" and "energy conservation" are.

Fischer notes that an option to shedding would be to slow down the press, but "no one wants to do that" because of deadlines. He believes it makes more sense to keep the press running at regular speed and allow the building to "get a bit warmer" by cutting back on power in other parts of the plant.

The Lincoln newspapers are using load shedding to great advantage, Production Manager David Brolhorst says. Monitoring peak demands has helped keep the newspapers' electrical bills to an average of $12,000-$14,000 a month, down 10 to 15 percent from their former bills.

Monitoring room temperatures is another way to control energy consumption. With energy-management systems that do this, electronic sensors turn fans off and on, or regulate the amount of chilled water the system is using to produce cool air [presstime, Feb. 1986, p. 11].

Seaboard Energy Systems, for example, has a microprocessor-controlled system connected to sensors that monitor air volume and temperature and adjust the temperature of water for the chiller or boiler. Heating and cooling coils are shut down as demand decreases, and energy is directed where it is needed elsewhere.

Although the benefits of a good energy-management system are obvious, every newspaper operation is different and the right equipment takes prudent study, newspaper executives say.

Bill Hall, facility manager for The Orlando Sentinel, says his paper is looking for an energy-management system but doesn't plan to rush into a decision.

The Sentinel takes a team approach to its conservation progam. A five-member committee, consisting of Hall and other technical and engineering personnel, meets monthly to look over the newspaper's utility bills, which last year totaled $1.3 million. That was primarily for electricity to operate the air conditioning, presses and other heavy equipment. The committee analyzes electric consumption and conducts studies to determine the cost of energy per square foot of space in the plant.

The local electric company also conducted an energy audit of the plant, at no charge to the newspaper, and made conservation suggestions. The newspaper has followed some of the suggestions, including hanging air curtains across loading docks doors to keep air conditioning from escaping the eight-year-old production building.

In addition, hot water has been eliminated in some restrooms in the 103,000-square-foot facility, which Hall says has led to a few employee complaints but nothing major.

Some of the roofing tiles regarded as heat absorbent have been replaced with heat-reflectant ones in the paper's 20-year-old

CIVILOX™

corporate office building.

Now that the Sentinel is studying which comprehensive energy-management system best suits its needs, representatives of the newspaper plan to visit sites where different systems are working.

The Fort Lauderdale papers also took other energy-savings steps before turning to an energy-management system. Windows were caulked and insulation added. A campaign to convince workers to turn off lights was conducted, and walls were erected to prevent "leaking" air.

Then the newspapers purchased their Seaboard system. Hubbard says it smooths out the power requirements of the air-conditioning, which in climates such as Fort Lauderdale's must be used throughout the year.

Temperature extremes at both ends of the thermometer are an annual occurrence in Fargo, N.D., so the energy-consumption situation there is quite different. Harold Schmunk, production director of The Forum, says the range can be from humid, 100-degree days in the summer to 30 below zero Fahrenheit in the winter.

Heat pumps help regulate the temperatures, Schmunk says, but cooling and heating a building in times of such extremes, coupled with energy generated by press starts, adds up to peak loads that are a problem.

For that reason the newspaper is considering the purchase of an energy management system.

Also considering such a purchase are The News & Observer and The Raleigh (N.C.) Times. The newspapers used an energy-management system that worked well in the late 1970s and early '80s, says Allen O. Sanders, machine shop foreman. When the plant was remodeled, the system was removed and not replaced. Sanders explains that the newspapers simply did not get around to selecting a new system; only now is the selection process under way.

In the meantime, the newspapers have adopted such practices as switching from 50-horsepower AC motors to DC motors, because AC motors generate more heat and require more air conditioning in the summer months.

LIGHTS OUT. Now that cooling and heating are being brought under the control of energy-management systems, many newspapers are moving to reduce lighting costs.

The San Mateo daily is one paper that is beginning to gather information about alternatives to its current lighting system, in which switches control banks of lights rather than individual fixtures. Property Manager Bouthillier notes that this arrangement is a waste of energy and money; lights cannot be isolated so that fewer are in use when only a few people are working.

In Orlando, Hall says the Sentinel also is experimenting with various ways of reducing lighting costs. For instance, by placing reflectors in fluorescent fixtures, the newspaper has cut the number of tubes used in each from four to two while reducing lighting levels only about 15 percent.

In most areas of the Sentinel's plant, the changes have been made with no noticeable effect, he says, but in some conference rooms, staff members have reported increased glare from the reflectors.

Hall says he is looking at a system that uses a different kind of reflector that reduces glare.

All in all, the activities at newspapers suggest that while the term "energy crisis" is not part of the contemporary vocabulary, "energy conscious" and "energy conservation" are. □

Can You Measure The Quality Of Your Newsprint?

Quality printing demands quality newsprint . . . especially for quality color reproduction.

Today's increasing demands for color, by advertisers and consumers, require greater control of newsprint brightness, opacity and color. And now you have it.

The Technibrite™ MICRO TB-1C allows everyone to clearly communicate these values with real numbers that everyone understands. The simple-to-operate Technibrite MICRO TB-1C provides accurate, reliable, standard measurements . . . a common language. Every time.

Newspapers can order quality newsprint with confidence, and check those orders when they arrive. Mills know what to produce. Exactly. Everyone will be talking the same language. At last!

Contact us today for more information or a demonstration.

COMPOSED AND SEPARATED ON DS EQUIPMENT BY COLOR TECH CORP. REDWOOD CITY, CA

You make the decisions, the C-270-D does the work.

It's designed to make the operator's job a lot easier. The computer-controlled auto-focus system performs focusing and sizing at the touch of a few buttons. A complete line of options including a 6-channel filter wheel and an automatic exposure control unit can make color work a snap.

All DS horizontal cameras (manual and automatic, low-bed and overhead, sheet film and roll film) fit neatly into the DS spectrum of pre-press equipment. Ask for a demonstration and see just how easy the C-270-D can be. All you have to do is push a few buttons. The ones on your phone.

Constitution's Secret Drafting Did Not Faze the Press

BY DAVID PEASE

It is widely known that the Constitutional Convention met in secret and that delegates kept a tight lid on information until adjournment 200 years ago this month.

What is not so well-known is the fact that while the convention was in session, many newspapers published letters from citizens who had visions of how the new nation and its government could develop. In addition, after the convention ended, newspapers printed the text of the Constitution plus a stream of letters for or against ratification by the states.

Nearly 50 newspapers were being published in 1787. Most were weeklies; some were tri- and semi-weeklies; only a handful were dailies.

It may seem strange that their "printers"—the 18th century equivalent of publishers—did not push for on-the-scene reporting of the convention's deliberations. The rights of the press were not well-defined in that era, and it was not unusual for the press to be excluded from major functions.

A study of newspapers published from May through September 1787 found that "the right to detailed reports on the Convention was something of which (printers) hardly dreamed, much less demanded. . . ." The study was conducted by journalism historian Victor Rosewater and published in Journalism Quarterly in 1937—the 150th anniversary of the convention.

The notion to meet in secret was not universally shared. Notably, Thomas Jefferson, who was then ambassador to France, argued from afar against excluding the press.

In the end, however, the decision was made to close the Pennsylvania State House in Philadelphia to all except delegates. A major reason was that principal delegates such as James Madison planned a radical departure from the country's charter of government, the Articles of Confederation, instead of only a revision as had been planned. In a closed forum, they believed, delegates would be more inclined to speak their mind.

The emphasis on secrecy can be illustrated by an incident during the convention. According to one delegate who took notes for posterity, presiding officer George Washington at one point offered this admonition: "Gentlemen, I am sorry to find that one member of this body has been so neglectful of the secrets of the convention as to drop in the State House a copy of their proceedings. . . . I must entreat the gentlemen to be more careful. . . ."

The secrecy factor was a topic for discussion in the newspapers, too. On June 2, 1787, the Pennsylvania Herald and General Advertiser of Philadelphia wrote: "Such circumspection and secrecy mark the proceedings of the federal convention that the members find it difficult to acquire the habit of communication even among themselves . . . and the anxiety of the people must be necessarily increased by every appearance of mystery in conducting this important business."

While waiting for the convention to end, newspapers also published letters from citizens about the momentous meeting and about the status of the country six years after Britain's Lord Cornwallis surrendered at Yorktown. Written by people using names such as "A Connecticut Farmer" or "Observer V," the letters reflected problems of the day and, in some cases, the hope that solutions were being found at the convention.

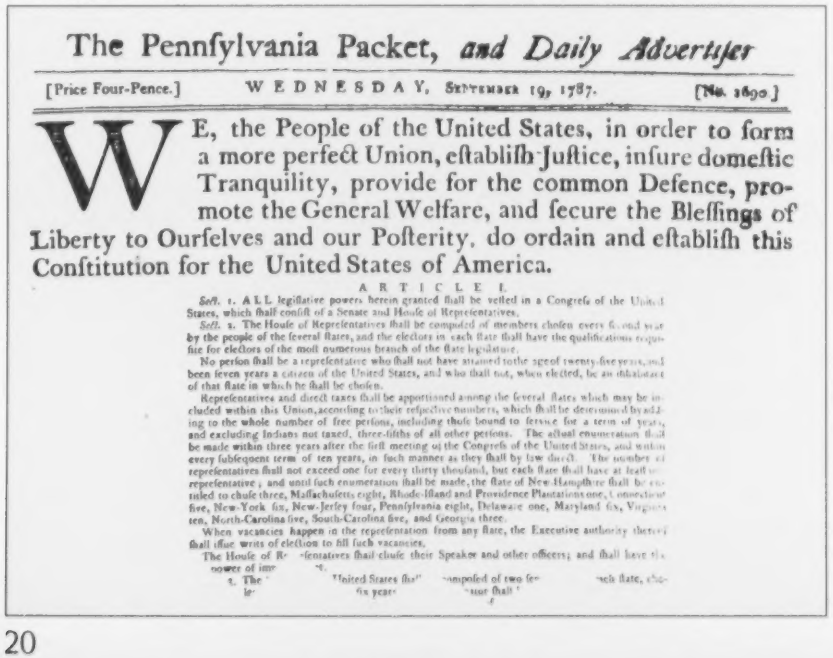
After the convention adjourned on Sept. 18, 1787, the text of the Constitution was reprinted in nearly all papers. The first to do so—on Sept. 19—was the Pennsylvania Packet and Daily Advertiser of Philadelphia [presstime, July 1987, p. 88].

This reprinting marked the first time that political news dominated space in American newspapers. Until then, the printed news concerned mostly mercantile and civic matters.

In the months that followed the convention,the newspapers were very active. Anonymous letters poured in commenting on the trade imbalance and lingering British occupancy of certain U.S. territory as well as expressing the optimistic view that America's new government would fix past shortcomings.

For example, "A True American" wrote

Pease, a Duke University senior, was a summer intern at presstime.



The Pennſylvania Packet, *and Daily Advertiſer*

[Price Four-Pence.] WEDNESDAY, SEPTEMBER 19, 1787. [No. 2690.]

WE, the People of the United States, in order to form a more perfect Union, eſtabliſh Juſtice, inſure domeſtic Tranquility, provide for the common Defence, promote the General Welfare, and ſecure the Bleſſings of Liberty to Ourſelves and our Poſterity, do ordain and eſtabliſh this Conſtitution for the United States of America.

ARTICLE I.

Sect. 1. ALL legiſlative powers herein granted ſhall be veſted in a Congreſs of the United States, which ſhall conſiſt of a Senate and Houſe of Repreſentatives.

Sect. 2. The Houſe of Repreſentatives ſhall be compoſed of members choſen every ſecond year by the people of the ſeveral ſtates, and the electors in each ſtate ſhall have the qualifications requiſite for electors of the moſt numerous branch of the ſtate legiſlature.

No perſon ſhall be a repreſentative who ſhall not have attained to the age of twenty-five years, and been ſeven years a citizen of the United States, and who ſhall not, when elected, be an inhabitant of that ſtate in which he ſhall be choſen.

Repreſentatives and direct taxes ſhall be apportioned among the ſeveral ſtates which may be included within this Union, according to their reſpective numbers, which ſhall be determined by adding to the whole number of free perſons, including thoſe bound to ſervice for a term of years, and excluding Indians not taxed, three-fifths of all other perſons. The actual enumeration ſhall be made within three years after the firſt meeting of the Congreſs of the United States, and within every ſubſequent term of ten years, in ſuch manner as they ſhall by law direct. The number of repreſentatives ſhall not exceed one for every thirty thouſand, but each ſtate ſhall have at leaſt one repreſentative; and until ſuch enumeration ſhall be made, the ſtate of New-Hampſhire ſhall be entitled to chuſe three, Maſſachuſetts eight, Rhode-Iſland and Providence Plantations one, Connecticut five, New-York ſix, New-Jerſey four, Pennſylvania eight, Delaware one, Maryland ſix, Virginia ten, North-Carolina five, South-Carolina five, and Georgia three.

When vacancies happen in the repreſentation from any ſtate, the Executive authority thereof ſhall iſſue writs of election to fill ſuch vacancies.

The Houſe of Repreſentatives ſhall chuſe their Speaker and other officers; and ſhall have the ſole power of impeachment.

3. The United States ſhall be compoſed of two ſenators from each ſtate, choſen by the legiſlature thereof, for ſix years; each ſenator ſhall

in The Massachusetts Centinel of Boston on Sept. 29, 1787: "Should the several states agree (and there appears but little doubt remaining that they will) to adopt the federal system, we shall at once be acknowledged our proper rank among the nations of the earth—our laws respecting trade will be such as will soon convince the British nation that unless she will consent to deal with us upon terms of reciprocal advantage, her vessels will not be admitted to our ports...."

Another letter published on Sept. 29 dealt with freedom of the press, which at that time was established only on the state level. Carried by the Independent Gazetteer of Philadelphia, it stated: "At the glorious period of our Independence, the newspapers were filled with publications against as well as for that salutary measure: and I am clearly of opinion, that the Liberty Of The Press—the great bulwark of all liberties of the people—ought never to be restrained (notwithstanding the honorable Convention did not think fit to make the least declaration in its favor)...."

The most famous letters about the new Constitution were written by John Jay, John Hamilton and James Madison under the pen name "Publius." This series of 85 letters is known as *The Federalist*. They were written to help elect pro-Constitution delegates to the ratifying convention for New York state. The series of letters explained, in great detail, the entire Constitution.

Initially, the ratification effort failed in New York. However, the writings of "Publius" had a major impact on other states because newspapers widely reprinted them.

Newspapers also used cartoons to convey their messages because printed letters such as *The Federalist* were often thought to be above the language of the common man. The first cartoon to appear in a U.S. newspaper, the Pennsylvania Gazette of Philadelphia, gave readers a visual image that complemented letters supporting ratification: It showed a severed serpent, with each segment representing one of the 13 original states.

The ratification period also produced America's first cartoon series, the "Federal Edifice." As the states one by one ratified the document, the cartoon showed another column being erected in the building of the new country.

To assure ratification by Massachusetts, New Hampshire, New York, South Carolina and Virginia, the federalists drafted a Bill of Rights containing 10 amendments to the Constitution. The document was approved by Congress in 1789 and ratified by the states two years later. Among its many provisions were the First Amendment guarantees of freedom of religion, speech, press, assembly and petition. □

How Creative Data Systems and IBM have teamed up to bring winning business solutions to your team

1. We recognize that one solution won't solve every problem you may have.

Even though our systems are standardized and developed for the newspaper industry, there are 150 control files that give circulation, advertising and financial executives more than a million and a half options for their specific needs.

2. We utilize IBM equipment for its compatibility and dependability.

For seven years Creative Data Systems has worked closely with IBM. Our experience has affirmed the IBM reputation for excellence. As a result of our joint effort, we're in a position to offer you the most comprehensive systems that address your business processing needs.

3. We believe you should continue receiving quality support after installation.

The members of your team receive both on-site and off-site support from our team in the form of comprehensive training sessions. Two or more Creative Data Systems' staff members are assigned to your system; they're familiar with every portion of your system—including all specifications particular to your operation.

For more information... and to learn why more than 400 U.S. newspapers have already selected Creative Data Systems, call or write today.

What To Call TMC?

Newspapers giving birth to non-subscriber publications assign their offspring names that reflect purpose and coverage area

BY PAUL ADAMS

If a newspaper had an offspring, what would its name be?

That has been the question for many U.S. newspapers spawning ancillary papers to achieve total- or target-market coverage. While parent newspapers usually are bound by tradition to old and sometimes quaint names [**presstime**, July 1985, p. 18], TMC publications give editors a chance to coin a fresh nameplate for modern tastes.

TMC papers, though intended for non-subscribers, are highly identified with the parent newspapers, a recent survey conducted at Louisiana State University found. Some newspapers, like people, designate their TMC products "Junior" by adding "Plus" or "Extra" after their regular names.

Thus, in Newton, Iowa, the TMC product is the Daily News Plus. In Baltimore, it's the Sun Plus. The Times Republican of Marshalltown, Iowa, shortens the TMC name to TR Plus. "Extra" is added to the name of the Kentucky Post in Covington and The Herald in Sapulpa, Okla.

Just plain "Plus" gets the call for The Tribune-Democrat of Johnstown, Pa. But perhaps parlaying off newspaper lore is the solo name "Extra" in Fort Dodge, Iowa, Galesburg, Ill., Augusta, Ga., and Norfolk, Va.

Geography often offers the peg for a name. Some names encompass the area outside the city of publication, such as Mountain Guide for the TMC product of Salida, Colo., the Desert Advertiser of Indio, Calif., or the Tri-State Free News of Middlesboro, Ky. The area narrows for the Mid-Valley News and Greensheet of Chico, Calif., and the Twin County Weekly News of Alamogordo, N.M. For larger papers such as the Charleston (W.Va.) Gazette, the TMC publication becomes Metro North or Metro West or Metro East. In contrast, for the Park Papers of St. Lawrence in Ogdensburg, N.Y., the new TMC name is Rural News.

Newspapers combine geography and goodwill to produce Neighbors in Kingsport, Tenn., and Good Neighbors in Richmond, Va. There is simply Hometown in Worcester, Mass.

Some newspapers take care of naming their offspring by looking at the calendar. Thus, there is the Weekly American in Poplar Bluff, Mo., the Star Weekend in Terre Haute, Ind., and Wednesday Plus in Quincy, Ill.

Also in the news-related genre are County Courier in Barre, Vt., Community Life in Del Rio, Texas, Currents in Vicksburg, Miss., The Review in Elwood, Ind., and the Weekly Sampler in Louisville.

For a closer look at entertainment and lifestyle issues, consider the Celebrity of Westchester Rockland Newspapers, White Plains, N.Y., and The Spotlight of Lansdale, Pa.

The news value of TMC publications is recognized in the Parker County News of Weatherford, Texas. And what could be better focused than The Localizer of Ellensburg, Wash.?

Most newspapers start TMC publications because of advertising needs, however. Thus, a Buyers Guide is distributed in Superior, Wis., Yankton, S.D., and Pleasanton, Calif., while Greenville, Mich., has The Buy Line. The Commercial News of Three Rivers, Mich., publishes a Penny Saver, The Union of Grass Valley, Calif., has a Dollar Saver, and the Belleville (Ill.) News-Democrat an UltraSaver. Non-subscribers to the Daily News in Ludington, Mich., get a Shopping Guide.

Other advertising-related names include TMC (The Merchants Choice) in Pauls Valley, Okla., The Merchants Advocate in Fort Pierce, Fla., and The ADvantage in New Castle, Pa.

Finally, some colorful names defy generic classification. They simply fit their markets. The Sunflower stands tall as an example for Pratt, Kan., Brightside reaches residents of West Palm Beach, Fla. And Interlude of Michigan City, Ind., perhaps signals a wait until the next newspaper offspring arrives. □

Adams is associate professor at the Louisiana State University School of Journalism, Baton Rouge.

Despite the defense buildup, coverage of local installations lacks uniform emphasis

BY JACK DORSEY

Twenty years ago when Archie McKay looked around the newsroom of the Valdosta (Ga.) Daily Times, most of the male reporters and editors there were veterans of military service. They were the products of national conscription, which ensured that almost every physically qualified male teenager knew what boot camp and basic training were all about.

But most of the people who have joined his news staff since 1973, when the draft was ended, lacked military service, says the paper's managing editor. "I can look around now, and the publisher and I are the only ones with military experience," he says.

Of those in the newsroom, McKay and the publisher probably are the only ones who know there is a difference between a Bradley fighting vehicle and an M-1 Abrams tank. They know, too, the difference between the rank of an Army corporal and a Navy second class petty officer.

Some people in the newsroom don't know the difference between a sergeant major and a major general.

And that, according to a number of editors and military reporters, may be one of the reasons newspapers are being criticized for not being in step with the military in their coverage of the defense establishment—and the multibillion-dollar defense buildup of the 1980s. Of course, one does not have to be a physician to cover the medical beat, nor a lawyer to cover the courts. Still, everyone agrees that it doesn't hurt for a reporter to have some expertise in a specialized field he or she covers.

Not only is military experience becoming an increasing rarity in the nation's newsrooms, but very few of the 1,650 U.S. daily newspapers have seen fit to create a full-time beat for covering local military installations. Interviews with Pentagon public affairs officials and a **presstime** survey of 35 newspapers published near military facilities turned up the names of just 27 such reporters.

Much more typical is the Valdosta paper (evening, circulation 18,146), in its coverage of Moody Air Force Base, 10 miles northeast of the city.

Moody, with 3,350 active-duty members and 5,500 dependents, is home to the 347th Tactical Fighter Wing, the 1878th Communications Squadron and a detachment of the 3rd Weather Squadron. Considered a small base compared with those around San Antonio, where 75,000 Air Force members are assigned, Moody requires only sporadic coverage from McKay's staff.

Dorsey has worked for the Norfolk newspapers for 25 years, the past nine as military affairs writer. He was named UPI's journalist of the year in Virginia in 1980. Dorsey was in the Army National Guard for six years; his father is a retired Air Force colonel, and his late father-in-law was a Marine colonel.

"We cover it, of course," he says. "We have guys go to the exercises, changes of command and do the general housekeeping kinds of stories." The airmen and their families are considered valuable subscribers, he adds.

The paper's government or general-assignment reporters dog the hard stuff, sometimes with help from the Washington bureau of the Daily Times' parent Thomson Newspapers' Group. Frequently, it's the closest available reporter who will be assigned spot news coverage of, for instance, a plane crash.

Like all good newspaper people, those assigned to complex military stories do the best they can with what knowledge they can obtain. But it's sometimes left to the senior editors—those who still remember how to salute—to catch the tiny errors before they creep into print and totally embarrass the newspaper.

An example of one that slipped by:

A somewhat seasoned reporter, trying to capture the scene in a Virginia Beach restaurant last year for a feature story, wrote that "a Navy colonel" had done such and such. For a military town like Virginia Beach, populated with thousands of members from all service branches, it was almost enough to cause the silver eagle on the officer's collar to take flight in disgust when the error was published. Navy and Coast Guard officers with such rank are captains. Army, Marine and Air Force officers are colonels.

It is that kind of mistake, albeit small, about which the Pentagon experts rightly complain.

Call a battleship an aircraft carrier or an Air Force F-15 Eagle a bomber, and the credibility gap widens even more. (The F-15 is a fighter). Make errors in stories about the Strategic Defense Initiative or Army training and doctrine, and the distrust becomes universal.

Or, as happened with the Associated Press in mid-June, publish

Make errors in stories about the Strategic Defense Initiative or Army training and doctrine, and the distrust becomes universal.

a photograph and caption of an Army soldier fainting on the parade field, but label him a Marine, and all hell breaks loose.

On the other hand, the defenders of the Fourth Estate argue, the military could do more to explain to the media enough about its high-technology, scientific world to help make journalists less ignorant.

"Part of the fault is ours," says Navy Cdmr. Tony Hilton, director of the Broadcast Department at the Pentagon's Defense Information School at Fort Benjamin Harrison, Indianapolis. Each year, about 250 officers and 1,800 enlisted personnel from all service branches roll through the school, a training ground for those who plan to specialize in military public relations.

"We don't aggressively grab you to show you what we've got," Hilton says. "Then again, you sometimes tell us you have to mow the yard today and will look at our ship tomorrow. Then, when a crisis turns up, the reporter writes errors in his story and the military condemns the reporter."

That, he says, is as much the result of the public information officer's not working harder and insisting that the reporter be dragged to an orientation session, as it is the reporter's fault for not making a stronger effort to learn.

When those efforts aren't made, mistakes will occur, Hilton says. "I jumped on our (Indianapolis) paper's case just last week when they wrote about 'Lt. David Robinson,'" the star basketball player who graduated from the U.S. Naval Academy last spring. "I said, 'You just promoted him three pay grades (to the equivalent of an Army captain). The reporter was familiar with the Army, and he assumed Robinson was going to be a lieutenant."

Robinson's rank is ensign, the equivalent of an Army, Air Force or Marine Corps second lieutenant.

"It's little things like that that frankly cost the newspaper credibility," Hilton says.

Some senior newspaper executives, such as Harold W. Andersen, chairman and chief executive officer of the Omaha World-Herald Co. and a former chairman of ANPA, believe local coverage of the military merits increased emphasis. Andersen views the coverage of military installations in a newspaper's circulation area as important for the community and for the country at large.

"A military installation has an importance, obviously, to the country and needs to be regarded as a subject to be covered fairly from that standpoint," he says. "Secondly, of course, a military installation can indeed have an effect on a community's payroll. That is an additional reason to give it fair and comprehensive coverage."

The one warning Andersen has for those covering community military facilities is not to allow the economic clout of such a facility to compromise the coverage. "I suppose there is always the suspicion someone could voice (that) because a community becomes dependent on some of the economic vitality of such a base, that it will color your coverage or attitude toward the

Some Tips on What To Do and

Following are some hints on what to do, and not do, when approaching the military about covering a story.

DO:

- Prepare and prepare well. The media officers you will be dealing with have been trained never to go into a news conference, talk show or any arena without having done their homework. Nor should you. They have thought of every nasty question you will ask. They know their subject better than you do.
- Be willing to give the public affairs officers a flavor of what you are planning to write. No one likes to be blindsided. They may be able to determine quickly fact from rumor and allow you a better perspective on a story.
- Agree to allow the public affairs officers a certain amount of time in which to answer your questions. They frequently have to go to the commanding officer involved to get some questions answered, and, unfortunately, a whole gaggle of people end up massaging the answers. But it is the way both the Pentagon and those in the field work. At the same time, emphasize your deadline.
- Remember that the answers you receive from a military public affairs officer will be as self-serving as they would be from any other industry's spokesman.
- Know the difference between "background," "not for attribution" and "off the record." They mean different things to different people. If you get them mixed up, you've just burned whatever source you tried to cultivate.
- Learn who the chiefs of information are for each of the service branches. They normally are general or flag-rank officers located in the Pentagon who have a direct line to the service chiefs, or other high-ranking military officers. They also can nip in the bud any potential problem you may be having with military spokesmen in the field. Use it as a last resort, though.
- Work hard on gaining trust from the military spokesmen you will be dealing with. It will take some time, but, as with any beat, it pays off. The problem is that these spokesmen are reassigned every 18 months to three years, and you'll find yourself doing this frequently.
- Make frequent visits to the base, post or military facility you will be covering. Ask for a command briefing initially, followed by a background interview with the commanding officer. That individual will feel more relaxed if not being quoted directly. Ask for an on-the-record interview later, once the commanding officer knows a little about you. It's a good way to break the ice.
- Agree to submit a list of questions before an interview, if that is what the command asks. This practice has become a way of life among military officials. Although it differs from other beats, it probably is a good idea when you are posing far-reaching questions that the military commander may want to be briefed on ahead of time.
- Encourage your editors and publisher to arrange an editorial conference, maybe even a luncheon,

defense budget. I think that is something those in our business should be aware of and be careful not to give the skeptics reason to criticize us on."

Omaha is headquarters for the Air Force's Strategic Air Command, and Andersen says that through intense coverage, "You can see its mission and get to know the people. That can be an asset in understanding the military's mission in your area—and indeed, (understanding) the larger national security arena."

INSTALLATIONS SCATTERED ABOUT. The military has planted 874 such bases, posts, stations and other facilities around the nation where its 2.1-million uniformed members work, live and play. (See map.) They range from tiny Campion Air Force Station in Galena, Alaska, with only three personnel, to the Norfolk Naval Base complex where 110,000 sailors and Marines operate 127 ships, 59 aircraft squadrons, 83 other fleet commands and units, and 78 shore activities. It is considered the largest military complex in the world.

There is little doubt that the military is thoroughly covered at the Pentagon. Correspondents fan out through its corridors daily to check the pulse of the generals and admirals, reporting on everything from the current conflicts in the Persian Gulf to what new helmet the nation's soldiers will wear.

But just how are newspapers around the country covering the military installations in their circulation areas—the trenches where the soldiers work?

Well in some places but not so well in many others, according to a sampling of newspaper executives and military officials who have seen little, if any, increase in the local coverage of the defense industry. Except in a few areas, they say, President Reagan's defense buildup during the past six years has not been paralleled by a significant increase in local news coverage of the military.

Big newspapers that happen to have large military installations near them generally do have a military correspondent keeping tabs on their activities. But the small paper, located in the desert of Nevada or the mountains of Montana, has precious few resources, or reasons, for making the military a full-time beat.

The Seattle Post-Intelligencer (morning, 203,726) is one newspaper that last year added a full-time military beat to its staff. It chose Edward P. Offley, a former editorial writer, as military

Number of Bases with at Least 300 Active-Duty Personnel

Source: The Times Journal Co., Springfield, Va.

Not to Do In Military Reporting

with the area military commanders—and do it on at least an annual basis. It's a tremendous opportunity to explain the mission of the press and vice versa.

DON'T:

• Bluff, threaten or assume. The military officials you deal with are professionals, too. More and more are journalism graduates who have had practical experience. Chances are they already know more than you do about the subject matter involved. They'll help you if you treat them as you would a public relations expert from General Motors, the medical community or another professional organization.

• Allow military officials to hide behind a veil of unnamed officials. Use their names whenever possible, resorting to "base official," "Pentagon spokesman," etc., only if it is truly necessary. Your readers will appreciate the effort.

• Burn a military spokesman if you ever plan to use him or her again. That person's memory is long.

• Sneak on a base, using your uncle's car with the base sticker. If you're caught, your credibility for being truthful with the military is shot. You don't need that hassle. Be forthright, ask for permission to go on the base. If permission is denied, then raise hell all the way to the Pentagon if need be. If a soldier, sailor or airman wants to see you and doesn't have a car, arrange to meet him or her outside the gate; then go to a civilian location and talk.

• Ever think you know enough about your subject. It is a necessity for a reporter covering military affairs to study intensively.

• Forget the political implications of a military story. There usually are reasons for the armed services to suddenly switch plans in mid-stream. (Why, for example, did the Navy relocate its new E-6A TACAMO submarine communications plane at Tinker Air Force Base in Oklahoma City, rather than near the coast where it will fly? It turned out that one of the main reasons was that Rep. Mickey Edwards [R-Okla.] led the fight in the House to restore contra military aid last June 25. A week later, Edwards announced the Navy had selected Tinker as the base for the E-6.)

• Wait until right on deadline to contact a military press officer with questions about the story you are writing. Like any organization, the military has to coordinate, and your demand for an immediate answer probably won't be satisfactory.

• Call the military press office after hours or on weekends unless you must. During those times, you will be dealing with some duty officer whose level of expertise is most likely uneven. He or she is just like the person on your news desk pulling weekend duty. Try to have a home telephone number of an expert you can deal with.

• Become complacent with a single "expert" for your stories, especially those from the "think tanks." Remember, they most likely are retired senior military officers, or university professors whose expertise may be limited and biased. Develop a cadre of experts. —*J.D.*

"It is like covering any other technical beat. You have got to understand the vocabulary, the culture. You are working almost like a translator."

reporter. The decision to expand the beat from what had been a part-time effort came from Executive Editor J.P. Alexander.

Alexander says that prior to his arrival at the P-I 18 months ago, the beat had not been covered very thoroughly, despite the vast presence of the armed forces in the area. "I told my management staff that it seemed to me the military coverage we did had focused on the protests and not on the military. I wanted to change that."

With Offley, whom Alexander credits with having a keen interest in the national impact of what the military does in the Seattle area, the paper has been able to expand its military coverage tremendously.

"We are going to cover all sides of it, from the people lying down in front of the (nuclear-weapons-carrying) train, to the environmental hassles and whatever problems the new Army hospital will cause," Alexander says. "But we also will cover what all this means strategically and in terms of national policy. That is the kind of coverage I want. We are not really interested in the traditional coverage—the retreats and changes of commands.

"I may be a little more sensitive to military coverage than a lot of editors around an area where the military has an impact," he adds. "There are few places in this country where there isn't a military base within 100 miles. But here, and in San Diego and Washington, D.C.—places where I've worked—it is very obvious the military is a big part of those areas."

Offley's beat has become the entire state of Washington. It includes: the Navy's Trident submarine facility at Bangor, plus four support bases on the Puget Sound; the Whidbey Island Naval Air Station, home of the Navy's A-6 Intruder Medium Attack Wing and a reserve patrol squadron; the Puget Sound Naval Shipyard; and the Seattle Naval Station. In addition, at Fort Lewis is the headquarters for the Army's I Corps, which has as its main responsibility the entire Pacific and Korean areas. The headquarters for the Infantry Division also is at Fort Lewis, as is a major special operations Ranger battalion. In Spokane is Fairchild Air Force Base with its KC-135 tanker and B-52 bomber wings. At McChord Air Force Base near Tacoma is the 62nd Military Airlift Wing.

BIG BUSINESS. Lastly, Offley's newspaper is interested in the economic impact the aircraft carrier Nimitz and 12 other warships will bring to Everett, Wash., beginning in 1993. Under a major initiative launched by former Navy Secretary John F. Lehman Jr., the Navy plans to add 10 new ports to the 18 already in existence. The new ports will reduce the crowded conditions and other deficiencies at current bases, providing modern facilities for some 64 surface ships.

Two sites—Staten Island, N.Y., and Everett—were funded in the last two federal budgets. Funds for eight more ports are requested between now and 1992. The Navy will spend $846 million on the home-porting projects, including $235 million for Staten Island, $272 million for Everett and $339 million for the others.

The reassignment of the carrier Nimitz and its escort ships means big business for the Everett community. And the Post-Intelligencer has taken great pains in the past few years to let its readers know what such a major influx of defense dollars will mean—or won't mean if Congress scuttles the program.

The Navy says the population in Everett will grow by 21,000 and payrolls by $300 million after 7,500 sailors and 13 ships are based there when the port is completed by 1993. The Navy predicts 7,600 new housing units will be needed off base for port personnel.

"There is a heavy military presence in this place, and to some degree it is seriously undercovered by everyone," says Offley. "I'm running 13 to 14 hours a day just to get familiar with the incredible diversity of activity here. The only thing we don't have is a major Marine Corps base. We even have the Soviets right off the coast."

Learning the ropes and developing the new beat has been a significant job, Offley says. He has cultivated the military public affairs officers, read every periodical he can find on his subjects and visited the Pentagon where "I got more paper out of Washington than did J.J. Pollard (the former Navy intelligence analyst convicted of spying for Israel)."

Those visits are beneficial, he says. "The biggest challenge is to just understand this global infrastructure which doesn't follow straight lines. You need to understand why the Tridents (ballistic missile submarines) are getting their war orders from the President and not the Pacific Fleet, and that just because a B-52 is 20 years old that doesn't mean it is on a suicide mission every time (it flies), because its avionics are brand new.

"I suppose it is like covering any other technical beat. You have got to understand the vocabulary, the culture. You are working almost like a translator," says Offley, who rose to the lofty rank of seaman (pay grade E-3) during his brief tour in the Navy.

"The military is a command organization where information is guarded, and the journalists are a ragtag bunch of curious people who want to find out what goes on. Therein lies the conflict," he says.

But it can be solved, or at least lessened, if the reporter makes a bold attempt.

Offley likens the job of covering a military beat to that of a friend who was visiting in Greece but had taken the time to study the language before she arrived. "Because she made the step across the barrier between them, she won their confidence and help. Likewise with the

Asbury Park Press' Walsh talks with Maj. Gen. Francis R. Gerard of the New Jersey Air National Guard, Trenton.

military. If they perceive you trying to understand them, then this gap shrinks dramatically."

While trying to cover a story concerning a Ranger battalion—possibly one of the hardest groups of combat soldiers in the Army to become friendly with—Offley let it be known that his grandfather was a retired colonel who loved to play the song, "The Yellow Rose of Texas." "These guys warmed up to me completely because they realized I knew their theme song and that I cared at least a little bit about them. That made it a hell of a lot easier, and we worked together."

WHO DOES WHAT. Even more than in Seattle, the military shapes the economy and lifestyle in places like Norfolk, San Antonio and San Diego, and all of the daily newspapers published there have full-time military beats.

The Virginian-Pilot (morning, 143,093) and The Ledger-Star (evening, 79,043) of Norfolk have had a military writer since before World War II. At times the papers have assigned two reporters to the beat, plus a columnist who concentrates on the lighter side of military life in Norfolk and an editorial assistant who prepares the routine "military briefs" column. Elsewhere on the staff, one reporter has responsibility for covering the Coast Guard, another the naval shipyard industry, and one or two part-time correspondents concentrate on military life for the newspapers' six local tabloid sections.

Sandra M. Rowe, executive editor and vice president of the Norfolk papers, notes that "almost one-fourth of the population of our area are active-duty military, dependents or retired. It is the single largest segment of our readers."

The newspapers have expanded their military coverage in the last year to include a regular human-interest column, and they plan to continue to improve and expand coverage of local and national issues of importance to the military community, she says. "Our focus cannot be narrow and only Pentagon-related. The Navy community here is involved in every facet of community life in Hampton Roads. They sit on the boards of civic organizations, they coach Little League. Many non-military businesses depend on the military support for their survival. We intend to provide the breadth of coverage—whether the story has a Washington dateline or a Virginia Beach one—that our military readers deserve."

The Norfolk area, in addition to its heavy Navy populace, also takes in three major shipyards, the headquarters for the Air Force's Tactical Air Command, the headquarters for the Army's Training and Doctrine Command, NASA's Langley Research Center and the headquarters for the Supreme Allied Commander Atlantic—the only NATO base on U.S. soil. Economists reckon that the area's 1.3-million population includes a "military family" of active duty, retired, dependents and civilian defense workers that numbers about 500,000.

A heavy military concentration also is present for the San Antonio Express-News (all-day, ₮78,812) and San Antonio Light (all-day, 142,407), with 75,000 to 80,000 soldiers and airmen stationed at nearby Fort Sam Houston, Brooks AFB, Kelly AFB, Lackland AFB and Randolph AFB.

Express-News Executive Editor Bert Wise notes his paper has had a military writer "for years and years." The military is covered probably more than the area schools, he says, and generally has been the beat to which the rising stars have been assigned.

Other examples of newspapers in places where high military presence has warranted specialty coverage include The San Diego Union (morning, 252,686) and The Tribune (evening, 123,087), where the other half of the Navy resides; the Colorado Springs Gazette Telegraph (all-day, 112,404), serving the home of the Air Force Academy; and The Florida Times-Union (morning, 160,405) and Jacksonville Journal (evening, 41,340), published in a city that is base for 35 Navy vessels, including two aircraft carriers, and 47 aircraft squadrons.

Don Kohlbauer, The San Diego Union and The Tribune

Discussing F-14 Tomcat fighters at Miramar Naval Air Station are Burgess of the San Diego papers and Lt. Cmdr. Ellis D. Woumnm.

San Diego, while the nation's second-largest Navy town, also is its seventh-largest city. As a result, the newspapers are very heavy on specialty reporters, such as two assigned to education and one each to environmental issues, medicine, AIDS and other subjects. Says Alfred JaCoby, assistant managing editor: "I've been here 35 years, and as long as I can remember we've always had a full-time military reporter. Generally, he has been a former military person or had considerable military experience."

The current military affairs writer there, Tom Burgess, is a former naval officer and public affairs specialist. Burgess, notes JaCoby, has the experience to cover the military on a large scale.

"We are not as consistent in our coverage of routine things, such as changes of commands," JaCoby says. "We look more for big interest stories on a national basis as well as a local basis." And covering the human side of military life is something JaCoby

"It's difficult to cover. But there is a lot of taxpayer money at stake, and I think it is just as important to watch from the bases as it is from the Pentagon."

would like to do more of. "I wish we could do a better job day by day, letting San Diego know what it is like to be in the military," he says.

The Union and Tribune have not increased their coverage of the military since Reagan's defense buildup began, primarily because the coverage has always been heavy, he says. Besides, there is other news.

"The military no longer dominates the community. The last, major city/military hassle was over the construction of the Navy hospital," JaCoby says. Community leaders were not that interested in the 600-bed facility that would draw an additional 2,500 active-duty personnel and 4,000 dependents to an already-crowded city. But the Navy finally won, and the hospital is now in its final construction stages.

LINGERING RESENTMENT. Occasional disagreements and friction between the military base and the local press are not unusual, but some in the press speak of a deeper problem. In San Antonio, editor Wise says relations between the Express-News and the military are generally good. "But there is something I can't understand. The military in recent years is terribly suspicious of everything we do. I have been in two wars, the publisher was in one. We know most of these (military) guys, but I still can't convince them we publish positive stories most of the time."

The military field officers seem to have preconceived views about journalists who cover the Texas bases, he says. The officers' "minds are made up."

Such attitudes are by no means confined to the Lone Star state. Thomas W. Jobson, managing editor and vice president of the Asbury Park (N.J.) Press (evening, 139,954), says he and his military affairs reporter, Edward L. Walsh, also encounter them from time to time. The Press takes in the Army's satellite and communications command at Fort Monmouth, the Navy's major East Coast weapons station at Earle and the Navy's air engineering center at Lakehurst.

While those commands are relatively small, the issues they frequently generate aren't, says Walsh, a former Marine officer and a 37-year veteran of the newspaper business. Walsh, who covers the military only part-time, sharing it with other beats such as transportation, believes he presents the military in as fair a light as possible.

Some of his paper's younger reporters are constantly complaining about the nuclear weapons that are stored at the Earle facility, he says. There is a lot of uneasiness about what a lightning strike might do to the place.

But Walsh, who has seen the effects of the atomic bomb—he was with the 2nd Marine Division which went into Japan after the bombings of Hiroshima and Nagasaki to end World War II—has compassion for the duties of today's serviceman.

He also wants to help educate a relatively naive nation about the uniformed services. "I try to help the younger people as much as possible. Most wouldn't know a corporal from a major general," he says.

Tensions between the military and the press are a fact of history. For example, the cover story in the July-August 1987 issue of American Heritage magazine, "Sherman Bashes The Press," quotes newly available letters written during the American Civil War by Union Gen. William Tecumseh Sherman. In them, Sherman denounced press coverage in words such as these written to a U.S. senator in 1863: "Now I know and every officer knows that no army or detachment moves or can move that is not attended by correspondents of hundreds of newspapers. . . . They publish without stint positive information of movements past & prospective, organizations, names of commanders, and accurate information which reaches the enemy with as much regularity as it does our People. . . . So that no matter how rapidly we move, our enemy has notice in advance. To them more than to any other cause do I trace the many failures that attend our army. While they cry about blood & slaughter they are the direct cause of more bloodshed than fifty times their number of armed Rebels. Never had an enemy a better corps of spies than our army carries along, paid, transported, and fed by the United States."

In the modern era, the Vietnam War was the catalyst for a souring of the atmosphere and relationships between the military and the press. A contributing factor was the satellite-communications system that made it possible for the day's battle to enter the evening news programs back home, which caused resentment from troops in the field and brass in the Pentagon.

Today, there is some lingering reluctance on the part of base commanders who are veterans of Vietnam.

"I've got no use for them on my post, around my troops or in my home," said an Army lieutenant colonel addressing a military/media seminar last year at the Naval War College in Newport, R.I. "They can only cause me trouble. If there's something I need to tell them, I'll do it through a PIO (public information officer)," he said.

Following the exclusion of the press from the U.S. invasion of Grenada in October 1983, ANPA and the American Society of Newpaper Editors made a renewed effort to improve relationships with the military. To ensure newspapers would not be excluded from Washington-based press pools, ANPA gave the Pentagon a list of Washington bureau contacts to be used for pool callups. And in early 1985, then-ASNE President Robert P. Clark wrote the assistant secretary of defense for public affairs, Robert B. Sims, saying the editors were concerned about what appeared to be distrust and misunderstanding, perhaps even hostility, between the two.

What evolved was a series of press-military seminars that would allow both sides to become more familiar with one another's problems. At the local newspaper level, press tours of military bases were encouraged, and the military was invited to take a first-hand look at the newspapers. The service branches have begun planning more "media days" to introduce reporters to their commands. A few newspapers responded by having the military in for an editorial conference or an informal luncheon.

Those efforts took place about the time a detailed poll was released by the Army War College—the incubator for future generals and other military leaders—that found a high level of distrust and dislike for the news media.

The poll was conducted as a term paper and class project by one of the students, Lt. Col. Gerald W. Sharpe. It became a widely quoted essay about the conflict between the journalism and military professions. Sharp traced the friction back to the European wars of the 18th century, quoting Napoleon that

"three hostile newspapers are more to be feared than 1,000 bayonets."

Fifty-one percent of the 105 senior-grade officers who responded to the poll at the prestigious school at Carlisle Barracks, Pa., had a "negative" or "very negative" attitude in general toward U.S. newspapers, television and news magazines.

The officers also found the news media ignorant about the military, with 66.1 percent saying reporters have little or no knowledge about the Army.

Those outside Washington who cover the military full-time may agree that their knowledge of specialty weapons systems and military doctrine may not be perfect, but it is not for want of trying.

Sgt. 1st Class Keith Riley, Defense Information School

Officers examine photographs as part of the journalism and public affairs training at the Defense Information School.

"I am overwhelmed, sometimes," says Sue McMillin, military reporter for the Colorado Springs Gazette Telegraph. "There are times when I feel inadequate writing about things in the space industry. But I have found that if you ask for someone to explain how it works, you have pretty good luck."

McMillin covers the military space program, the Air Force Academy, NORAD (North American Aerospace Defense Command) Headquarters, the Fort Carson Army infantry post and several smaller facilities scattered around the state. "It's difficult to cover," she says, "but there is a lot of taxpayer money at stake, and I think it is just as important to watch from the bases as it is from the Pentagon." A number of small townships in the Gazette Telegraph's circulation area are worried about sonic booms, base expansions and the stress placed on their two-lane roads, she reports.

Not every reporter is anxious to cover such a beat, says Michael J. Nyenhuis, military writer for the Florida Times-Union and Jacksonville Journal. "It's a high-profile beat, and there are a lot of good perks," he says, such as getting out of the country on occasion to follow local troops overseas, flying with the Blue Angels flight demonstration team and riding in a ship at sea.

"But a lot of people wouldn't consider applying for this beat because of the red tape involved in dealing with the Navy public relations machine. It's frustrating. It's much easier to cover city hall, walk into the mayor's office and start talking," Nyenhuis says.

His assignment takes him to three major naval bases—Mayport Naval Station, home port for nearly three dozen ships; Jacksonville Naval Air Station, where a patrol wing, helicopter anti-submarine warfare wing and naval hospital are located; and Cecil Field Naval Air Station, the East Coast base for three carrier air wings.

He receives support from the papers' Washington bureau and, as in the recent USS Stark tragedy, is lent the entire assets of the papers' staff when such a major event calls for it. (The Stark, which lost 37 crewmen in the May 17 missile attack in the Persian Gulf, is based at Mayport.)

In general, Nyenhuis says, "I find the local public affairs people to be real helpful, even in instances where we're looking for information that may be construed as negative. I have no complaints on the PIOs here. But lots (of complaints) in Washington . . . where it may not be all their fault.

"One instance not long ago: I was doing a story on aircraft accident rates for 1986, and the Navy would not set up a telephone interview with a person at the Navy Safety Center (in Norfolk) who studies those figures. I found him on the phone, and he said he'd be happy to talk to me but asked if I had gone through the (chief of naval information) news desk in Washington. He said he would feel more comfortable doing it that way.

"I called the (Navy's) news desk, and they would not set up a phone interview. They said if I wanted the information to present a list of questions, they would get the answers. It's real frustrating that way."

IMPROVEMENT NEEDED. Frustration probably is the greatest single feeling a reporter has in trying to nail down a good story involving the military. The reporter can encounter many roadblocks along the way.

What's more, today's journalists often aren't really prepared to cover the complex military establishment. If they lack even basic military training, that's probably strike one.

If they aren't prepared to look beyond the public affairs officer or base commander to the rest of the base personnel and to the defense industry scientists and manufacturers, that's strike two.

Unfortunately, there isn't much help available to the newspaper reporter covering the military. No training seminars exist for the beat. Unlike everyone from music critics and education writers to real estate editors and entertainment journalists, people specializing in military reporting have no information-sharing organization. Most of what is learned comes from on-the-job experience.

The military reporter, says Robert E. Rhodes, executive editor of the Corpus Christi Caller-Times, "is made, not born."

"It is nearly impossible to try to recruit someone who will just cover the military. You don't have that type of pool," says Rhodes, who is president of the Associated Press Managing Editors Association. "Unless you are really in a hotbed of military installations, you don't find the military writer. I don't think they have anything like Journalism 301 that teaches someone how to cover the military.

"I've been here nine years and never had anyone say, 'I am interested in the job.' I would snap up a guy like that. . . . I think any editor in a military town would welcome with open arms a young reporter who has experience in that field."

So, while it is not impossible to publish a fair and objective news story about the defense industry, it may well take more work than most other kinds of articles. And the simple fact is, a reporter shouldn't be covering this beat if he or she can't understand the various levels of technology of weapons systems and the military way of doing things.

There is a distance to go before newspapers' coverage of the defense establishment from the trenches becomes as thorough and complete as it should be. □

PRODUCTIVITY

TECHNOLOGY HELPS, BUT PEOPLE ARE THE KEY

BY PATRICIA P. RENFROE

Productivity is improving at many daily newspapers, most human resources experts believe, but measuring such gains throughout the newspaper industry remains difficult.

Nevertheless, the drive to raise the quality of both the product and the workforce is causing many newspapers to explore ways of getting a handle on productivity.

One example of the gains that can be made is at Philadelphia Newspapers Inc., which reduced the number of production hours per page by 11.5 percent this year.

Although productivity statistics for the newspaper industry are not available, the U.S. Labor Department's Bureau of Labor Statistics reported in June that, nationally, manufacturing productivity increased 2.1 percent in the first quarter of 1987.

"Accuracy in productivity measurements is difficult to achieve," says Norman R. McMullin, president of the Alton (Ill.) Telegraph. "Bases for comparison must be established, along with the factors to be considered in the measurement."

Even identifying all the factors associated with employee productivity is complex.

Newspaper production managers and others emphasize that productivity can be enhanced by capital investments in a more efficient equipment and technology.

It is generally acknowledged, however, that capital investments are short-term factors for productivity changes. The machines are more efficient, true. But there is no guarantee that the people who operate the new presses, laser cameras, pagination systems and other equipment have themselves become more productive.

Moreover, "The industry may be reaching a technological plateau, which means we won't be able to achieve such dramatic productivity improvements" in years to come, says Gordon Calverly, vice president and treasurer of Worcester (Mass.) Telegram & Gazette Inc.

How can a newspaper determine if an employee's output is different after new equipment is installed?

In the composing room, the standard productivity measurement is hours required per page made up, which is based heavily on human behavior. In the mailroom, part of any productivity measurement is based on pieces inserted per hour, which could well be weighted more in favor of the equipment used.

Some managers believe they can detect gains in productivity as a result of better cost controls, such as: reducing waste throughout the plant, which is very measurable; decreasing the percentage rate of annual pay raises in union contracts; and operating with fewer employees in many departments.

The question to consider, however, is whether this is productivity improvement or just an adjustment of the bottom line.

OTHER DEPARTMENTS. Experts also point out that incentive programs and improved management skills enable newspapers to obtain greater efforts, as well as innovation, from employees. Thus, newspapers are putting heavy emphasis on training to improve performance in such areas as management development and sales skills. The effects of such training can be measured in advertising and circulation sales.

Philadelphia Newspapers reduced production hours per page by 11.5 percent.

Like many other businesses, some newspapers are employing telephone-monitoring systems to ascertain how productive individual employees are, although the practice is generating some concern in Congress [presstime, Aug. 1987, p. 51].

It is far more difficult to measure a newspaper's business operations, says Melvin B. Williams, director of personnel for Gannett West Newspapers in Reno. He cites the difficulty in deciding what to measure in such areas as accounting. "Do we look at the number of collection calls made, or do we look at the amount of money collected? Do we count the number of checks written, or do we look at the way the cash flow is handled?" he asks.

A theory that has bubbled to the surface in American industry is that greater productivity can be attributed to a higher quality workforce. This quality results from more education, more experience as the workforce ages and elimination of many low-skilled jobs through automation.

This theory is supported by June Barry, vice president/executive assistant to the publisher, at Philadelphia Newspapers, who describes many of today's employees as being extremely creative.

"In one instance, the employees came up with a plan to merge two advertising areas," showing that "now people do more than just sell," Barry says. Overall, she says, many people take the team or project approach and go "the extra nine yards," reflecting a more skilled, better qualified workforce.

Newsrooms have traditionally been difficult to grade on productivity, but lately there has been a greater effort to do so. Some newsrooms measure story numbers and lengths, and others conduct extensive evaluations of how reporters perform on the job. Still, some editors say a meaningful measurement is impossible.

And Barry says that an emphasis in any

Renfroe is ANPA manager/personnel relations.

department on "producing faster" may beg the question regarding real productivity, which to her is a combination of working efficiently and innovatively to achieve high quality.

MANAGEMENT'S ROLE. Whatever the definition and whatever the cause of higher productivity, many people believe it will continue even beyond the technology explosion, provided management accepts responsibility for making it happen.

As Richard A. Williams, vice president/employee relations of Journal Communications Inc. in Milwaukee, observes, "We need to emphasize with employees that high-level performances are expected." He believes that most people rise to the occasion when required to do so and that, in truth, they want to do a good job.

Gannett's Williams casts great importance on creating an environment where employees are motivated to produce at maximum levels. Managers' performance and employees' training are two key elements of the work environment. Williams says newspapers should not reduce training budgets if higher productivity is the goal.

Then, according to Philadelphia's Barry, newspapers should look at the organizational design and ask such questions as whether departments are structured properly, and whether managers are being used effectively both in terms of their skills and control.

Barry says that another part of the effort to enhance productivity should be an analysis of what is the proper mix of compensation, special rewards and incentives, as well as recognition programs, for employees. (See story, p. 60.) The result of all these efforts can be employees who are as efficient as the equipment they use. □

Newspapers Have 'Come To Expect More,' Especially in the Newsroom

BY MARY SEPUCHA

Performance standards, particularly in newsrooms, have become an issue of increasing importance in disciplinary arbitrations over the last 17 years.

Since 1970, 41 such cases have been tracked by ANPA—all but 15 of them in the current decade. Thirty-three involved white-collar employees.

Larry A. Frankel, vice president/labor relations of The Washington Post, says the number of cases has grown because companies realize they have a right to change their performance standards for employees to improve the newspaper. This means that although newspaper companies once tended to retain reporters despite less-than-sterling performances, they are no longer inclined to do so.

One reason is that newspapers are faced with increasing costs—payroll, newsprint and capital expenditures—and so-called "deadwood" adds to the burden. A newspaper cannot keep passing extra costs on to the advertiser and reader, says John B. Hammett, senior vice president of the San Jose Mercury News.

A strong news staff is key to a good newspaper, Hammett says, and unless the number of productive staff members is maintained at a proper level, it is impossible to produce a quality product. If some staff members are not performing adequately, a company today cannot afford to hire additional people. New hires should be replacements, not additions, he says.

Another reason newspapers no longer may tolerate substandard performance is the industry's emphasis on quality.

In part, this may be a result of the acquisition of family-owned newspapers by groups with specified editorial standards.

More generally, The Washington Post's Frankel says "we've come to expect more," with growing professionalism among better-educated reporters.

Hammett of the Mercury News is all-too familiar with the issue of improving professional competency. His paper has arbitrated five performance-based grievances since 1977 when a new management team initiated a campaign to upgrade editorial standards. Most of these cases upheld the right to demand quality performance and to discipline employees who, after counseling, were unable to meet the higher standards.

The Mercury News is not the only company that has established that right. In 1985, Arbitrator Jesse Simons upheld The Wall Street Journal's discharge of a long-term reporter because she was unable to perform at a satisfactory level of competence—despite repeated efforts to help her [presstime, Aug. 1985, p. 48].

In fact, 28 of the 41 poor-performance arbitrations since 1970 were decided in the company's favor. The remaining 13 were lost mainly on technicalities, such as failure to give sufficient warning.

Warning and counseling are two factors that an arbitrator will consider carefully in determining whether performance discipline is for "just cause."

"Especially with long-term employees," Frankel says, "a company has a real obligation to make improved standards known to its employees and to work with them to help them to achieve these standards."

More than half of the 41 cases involved long-term employees, and in 70 percent of them, the company's action was upheld because progressive discipline and counseling were an integral part of management's program.

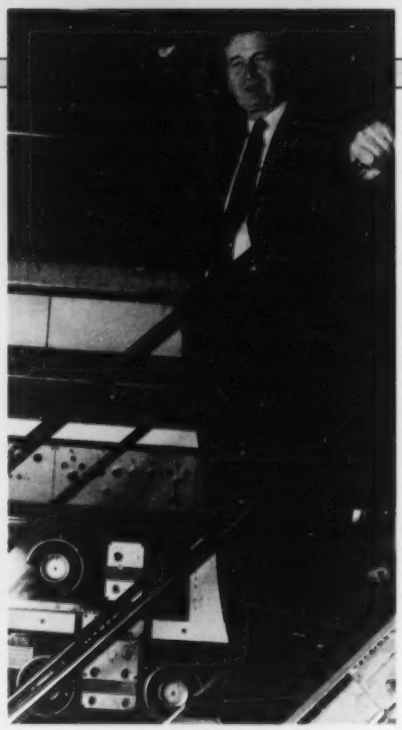
Still, the just-cause standard can be a stringent one. In a 1984 performance-discharge case at The Tacoma (Wash.) News Tribune, Arbitrator Timothy D.W. Williams said, "The just-cause standard for inadequate performance should place an additional burden on the employer to provide remedial help prior to the decision to terminate."

Williams outlined six just-cause guidelines employers could apply to questions of inadequate performance:

1. Is the employer's expectation of performance reasonable and/or similar to that expected from other employees?
2. Did the employer inform the employee about the expected level of performance and that his or her performance was unacceptable?
3. Did the employer attempt to provide constructive assistance or remedial help to improve performance?
4. If remedial action failed to improve performance, did the employer inform the employee that disciplinary action might be instituted?
5. Did the employer grant sufficient time for the employee to raise performance to an acceptable level?
6. After that time period, can the employer objectively establish that performance had not improved to an acceptable level?

Williams said a "no" answer to any of the questions would mean the employer had not proved its case.

Sepucha is ANPA assistant manager/labor relations.



J. Patrick O'Callaghan

Irish-born publisher not shy about letting his opinions be known

BY C. DAVID RAMBO
presstime staff writer

As a stalwart defender of a free press, Canadian publisher J. Patrick O'Callaghan has had his hands full the past half-dozen years.

When he was publisher of the Edmonton (Alberta) Journal in 1982, his office was ransacked by federal investigators trying to build an antitrust conspiracy case against his parent company, Southam Inc. "God knows what they were looking for. To this day, I still don't know," he says. Southam later was acquitted of charges, and the Canadian Supreme Court struck down such broad searches.

As president of the Canadian Daily Newspaper Publishers Association, O'Callaghan led successful efforts in 1983 against a proposed Daily Newspaper Act, which would have restricted growth of large newspaper groups and established a national press council.

He was a sharp opponent of Canada's Charter of Rights and Freedoms and editorialized strongly against it. Adopted in 1982, the charter is considered the Canadian constitution and includes language on freedom of the press. But in his typically outspoken fashion, O'Callaghan says those provisions are "a mockery and an absolute farce."

One of the most recent issues to raise his Irish temper is a federal proposal to ban tobacco advertising in all media. O'Callaghan does not smoke and is convinced that using tobacco is a health hazard. In fact, he only bought cigarettes once: when he was 17 and dating a girl who smoked. "I lost her before I finished the pack of cigarettes and haven't smoked since."

However, he says of the proposed ad ban, "You can't have freedom of speech if the government is going to tell you what not to publish. That is censorship."

His penchant for battle in free-press fights has brought wide acclaim. John Foy, president of CDNPA, says, "I'm not going to extreme to say that in support of a free press, he would be willing to be shot."

O'Callaghan is opinionated on a wide range of issues and is not shy about speaking his mind, whether it is through his signed column in the Southam-owned Calgary Herald, where he has been publisher since 1982, or around a meeting table. "On a pet subject, he's liable to write half a page," says H.O. (Tommy) Thomasson, who recently retired from Southam as vice president of human resources. "He's a digger and a prolific writer."

The 62-year-old publisher-writer responds, "You don't get anywhere in this world by being apologetic or reserved."

His approach sometimes results in explosive reaction, which O'Callaghan takes in stride. For example, he is being sued for defamation by the competition, The Calgary Sun, which took offense at one of his columns.

In that piece, he lashed out at the Sun's ongoing campaign to get Parliament to restore capital punishment in Canada. O'Callaghan and the Herald oppose the death sentence, while he says the Sun has engaged in "sensationalism" to "bring back the rope. . . . The Sun was dripping with blood, as usual."

Sun Publisher Jim Tighe says he has "a great deal of professional respect" for O'Callaghan and even has a "reasonably good personal relationship" with him. But "he has in this case, we believe, gone over the line."

Born in Mallow, County Cork, Ireland, O'Callaghan came up on the news side of the business and has been cultivating his journalistic style some 46 years. He got his first job at age 16 as a reporter at a weekly newspaper in Malven, England, where he made 30 shillings (about $1.50) a week plus another 10 shillings for transportation—a bicycle.

Prodded by his mother and his priest, O'Callaghan entered Cotton College, a Roman Catholic school in England, to become a priest, but he decided that vocation was not right for him. "The church was lucky enough that I went into journalism instead," he says.

In 1943, he joined the Royal Air Force and served as a wireless operator. He saw no combat action during the Second World War.

After military service, he took a job at the Yorkshire Evening Press in England as "splash sub"—the sub-editor who wrote splashy headlines. His career later included stints at the Yorkshire Evening Post, where he gained experience as, among other things, a "pigeon-racing columnist," and at the Liverpool Daily Post and Echo.

The owner of the Liverpool papers bought a Canadian weekly, the Red Deer (Alberta) Advocate, and asked O'Callaghan to move there and oversee converting it to daily publication. The newcomer took well to the Canadian way of life and became a naturalized citizen in 1964.

O'Callaghan stayed nearly eight years in Red Deer before joining the Toronto-based Southam group. He held positions including executive editor of Southam News and vice president and publisher of the Windsor (Ontario) Star before going to Edmonton and Calgary.

O'Callaghan is not active in local civic affairs, partly because Southam frowns on such involvement by its executives and partly because that position reflects his personal views. "You can't belong to some local community organization because sooner or later one of your reporters will have to cover that organization," he says. The reporter may be unduly influenced, no matter how subtly, "if the boss sits on the board."

But he is deeply involved in newspaper-business organizations. Besides his service to CDNPA, he is president of the Canadian Press, Canadian chairman of the International Press Institute and vice chairman of the American Press Institute.

O'Callaghan's busy schedule includes arrival at the office at 6:30 a.m. weekdays and 7 a.m. Saturday. With the plethora of professional activities, he says there is little time for hobbies or sports, although he plays golf occasionally and is an ice hockey enthusiast. He is looking forward to watching some of the hockey games and other events at the 1988 Winter Olympic Games in Calgary, for which his paper has "very ambitious plans."

He and his wife, Lorna, who was a nurse in England, have five children ranging in age from 16 to 38. □

Publishers: No Risk Sales Training Investment

It's true. You can invest in a training program for your salespeople that is guaranteed to bring you plus business or your money back.

We are **American Consulting Services** in Vancouver, Washington and we have developed a marketing program for the newspaper industry which involves selling against the Yellow Pages. As of today, more than 200 dailies in the United States and Canada have invested in our services and the results they are having are unbelievable. Millions of dollars have already been recaptured by newspapers around the country by utilizing our simple consulting techniques. You have an opportunity this year to slow the growth of the Yellow Pages in your market with absolutely no down-side risk.

How can we offer a guarantee on sales training? Because we teach a 5½ hour **How-To** session rather than some philosophical overview. We train your people on what to say, when to say it and how they can consult their way into a sale. Then we spend about an hour with your managers and supervisors sharing implementation techniques that 200 other newspapers have utilized. We sell results. It's as simple as that.

Guarantee

If your salespeople don't recover the investment of our seminar within 30 days of your kickoff, we will return to your community, go out with one of your people and write the business for you. If we fail to do so within 10 days, we will issue a refund.

The Florida Sales Tax

Why We Oppose It

BY PHIL deMONTMOLLIN
President and General Manager, The Miami Herald

Everyone knows newspapers perform an essential role in our society by providing the information we need to function every day as citizens and consumers. But some people may have forgotten that a newspaper is a private business that must make a profit to survive in our free market economy.

Or maybe they haven't forgotten.

Newspapers today are particularly vulnerable to adverse economic developments. Newsprint and other production costs continue to rise; the news coverage and services demanded by our readers increase in scope, complexity and expense each year. The number of economically viable publications has declined over the past several decades. While our constitutional protections for newsgathering and reporting have grown, so has the pressure on our pocketbook.

Because democracy just can't work without healthy newspapers, it would be natural to expect government to adopt policies that would preserve them. Generally, that has been the case. Congress has enacted the Newspaper Preservation Act, the courts have afforded journalists important constitutional protections, and the states have not burdened the right to acquire information with taxes. Until now, in Florida.

The Florida Legislature has imposed a tax on the sale of both newspapers and advertising. Newspapers don't pay the tax, they charge it and collect it from their readers and advertisers. The legislature claims that obtaining news and other information from the press is a taxable privilege, not a right. The courts will shortly decide whether this is true. But an equally important question is whether a sales tax on basic newspaper functions makes sense.

It doesn't. The economics are simple. By taxing the sale of newspapers and advertising, the government makes those services more expensive. A sales tax is a very regressive tax. Readers and advertisers with lower incomes are disproportionately affected by the tax, which is not graduated with respect to either their earnings or the newspaper's profits. The consequence of any price increase is a reduction in the quantity demanded. There is no different result here. Fewer newspapers will be bought; fewer ads will be placed and read. And the greatest losses will be on those least able to afford it.

Why should government act to lessen speech in this way? Why should it do so when progressive alternatives exist? Why should such fundamental services be curtailed to pay for less important activities? Why should newspapers be taxed when banks and hair stylists are not?

The Florida information taxes also hurt the press very badly. When fewer newspapers are purchased and fewer ads placed, newspaper revenues plummet. The loss of advertising revenues is particularly serious because they are used to subsidize circulation prices. As advertising revenues fall, the price the public pays for a newspaper must rise. Again, the tax is imposed irrespective of the profitability of the newspaper. The marginally profitable newspaper, whether large or small, will find it difficult to survive. Far from fostering and preserving newspapers, Florida has chosen to deal them a terrible economic blow.

The response of advertisers has been predictable. With the 5-percent increase in the price of advertising, they have purchased less ad linage. No less an authority than Wharton predicts the economic consequences of reduced advertising will be fewer goods sold. So in the end, the Florida sales tax on newspapers is self-defeating. It would tax the sale of more services but reduce the number of sales made.

The Florida sales tax is bad public policy and bad economics. □

Why We Support It

BY JANE HEALY
Associate Editor, The Orlando Sentinel

Why did The Orlando Sentinel editorially support a tax on advertising in Florida? Because the people of Florida are entitled to a decent quality of life—roads and schools that aren't jammed, rivers and lakes that aren't polluted, teachers who are competent, and police who are adequately trained and paid.

All that is expected to cost $35 billion more than the current tax levels would provide in the next decade. Thus, the only question to us on the Sentinel editorial board—and to most of Florida's lawmakers—was not whether to raise taxes, but how.

Simply increasing the current sales tax from 5 cents to 6 cents is futile since goods are not the growth part of Florida's economy, which depends mostly on the service industry. It would have to be increased again in a few years because revenues would not keep up with the state's growth.

What Florida has needed for years is a way to broaden the tax base and provide a stable source of money. A sales tax on services does that. It will grow 20-percent faster than a sales tax on goods.

The only other choices for an equally stable tax base in Florida were a state income tax or a gross receipts tax on businesses. A state income tax may not be such a bad idea, but you can forget it. It must be approved by voters, and that is not going to happen—at least in the foreseeable future.

The 1.5-percent gross receipts tax on businesses was also considered, but it is not even a good idea. It is unfair to small businesses that operate on slim profit margins because they have to give 1.5 percent of all revenue to taxes.

So why didn't the Sentinel just support the tax on every service except advertising, which will produce more than $100 million a year for the state's needs? Because if virtually every other service was going to be taxed, we couldn't credibly argue that advertising should be exempt.

The job of the Sentinel's editorial page is to look out for the community's best interest. In that regard, the media have just as big an obligation as other businesses in Florida to help pay for the pressing needs of growth.

What credibility would we have with our readers if we argued against this tax increase—while supporting most others—simply because it affected our own pocketbook?

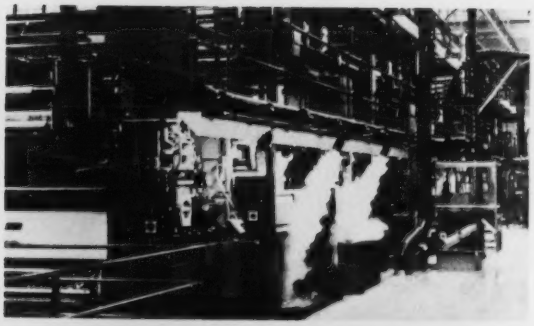
Editorially, the Sentinel has consistently taken the position that Florida has not taxed itself enough to keep up with its needs. Overall, the state is 47th in the nation in taxes per capita. Would we now oppose this increase just because it affects us? Of course not—not if we wanted readers or legislators ever to take seriously again our editorials calling for higher taxes—for roads and schools.

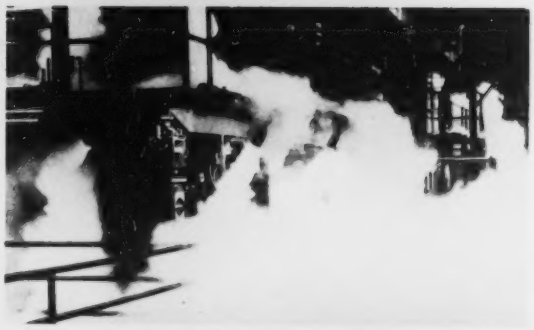
The Sentinel was one of three major newspapers in the state that stood on principle on this one, and it should be proud of it. □

(The Sentinel editorially opposed the tax on circulation as a First Amendment issue.)

Protect your pressroom from fire

Let Chemetron show you how to reduce the risk





This sequence of photos shows a Chemetron carbon dioxide fire suppression system at work protecting a press line in a newspaper printing plant. Within minutes of the end of discharge, production can resume because there is no mess, no clean-up, and no damage to equipment by carbon dioxide. Imagine the problems created if a sprinkler system were to activate on your press line.

Multiple hazards, the potential for serious loss

There are a number of areas in printing plants which are potential sources of fire, such as ink and paper storage areas, composing rooms and the bindery. But perhaps nowhere else in the printing plant is the potential for fire greater, and the result more crippling, than in the pressroom, the heart of the newspaper operation.

Immediate, effective, non-disruptive protection

Lengthy shutdowns can spell financial disaster for the newspaper industry. That's why pressroom equipment requires fire protection that is immediate, effective and causes a minimum of disruption.

Chemetron automatic fire protection systems suppress fires without the need for enclosing walls. Unlike sprinkler systems, there is no contamination of ink, printed material, press rolls, bearings, electrical drives or controls. This means downtime is held to a minimum. Self-contained, the Chemetron low pressure carbon dioxide system operates even during a power failure.

Put Chemetron experience to work for you

Protecting printing plants is our specialty. Over the past 40 years, Chemetron has put in service between eight and ten thousand low pressure carbon dioxide fire protection systems, and has pioneered many other developments in fire protection.

Ask about Chemetron's new microprocessor based control panel and how you can use it to reform out of date technology on your existing carbon dioxide system.

Free video demonstration

Publishers, Production Managers, Pressroom Supervisors: Send us your business card and we will give you a copy of our videotape on fire protection for printing plants. Learn about efficient, cost-effective solutions to fire problems in modern printing plants.

COURTS

Right to identify source argued by two dailies

In a trial next summer, a Minneapolis court will determine whether newspaper reporters' promise of confidentiality constitutes a valid contract.

In a pretrial hearing, the Star Tribune of Minneapolis and the St. Paul Pioneer Press and Dispatch argued for the right to *disclose* the identity of a source. But a Minnesota District Court judge refused to dismiss a breach-of-contract and misrepresentation suit filed against the two newspapers by Dan Cohen, former public relations director of a Twin Cities advertising agency.

Cohen, a Republican activist and one-time president of the Minneapolis City Council, claims he lost his public relations job shortly before the 1982 election when the papers published stories identifying him as the source of information that the Democratic candidate for lieutenant governor had once been convicted of shoplifting.

He had contacted four news organizations, offering to provide the information under the condition that his identity not be disclosed.

All of the reporters accepted the information, but editors at the Minneapolis and St. Paul dailies overrode the promises of confidentiality and published the story, naming Cohen as the source. When he learned, just prior to publication, that the two newspapers intended to use his name in their stories, he called the reporters and asked that the stories be killed.

The Associated Press and WCCO-TV did not identify Cohen in their stories.

Judge Franklin J. Knoll has scheduled the trial on Cohen's claims for next July. In his June ruling, he rejected the papers' "intriguing" arguments that no legally enforceable contract with Cohen existed, that voters had a right to know who was disseminating such information just before the election, and that the First Amendment protects the papers from liability for the consequences of the disclosure.

The judge wrote that there was no constitutional issue in the case. "This court will not adopt the premise that the First Amendment should operate to excuse news organizations from the consequences of a decision to publish when that decision involves the breach of a valid contract or of the general tort laws." □

Largest-ever libel award is possible after appeals court reinstates damages

A federal appeals court has reinstated $3 million in libel damages in a tobacco manufacturer's case against CBS Inc. and Chicago television journalist Walter Jacobson.

In its Aug. 12 ruling, a three-judge panel of the 7th U.S. Circuit Court of Appeals reaffirmed a jury's libel verdict against the network and upheld more than $2 million in punitive damages. It also reinstated $1 million of the U.S. District Court jury's award of $3 million in compensatory damages, which the trial judge had reduced to a token $1.

If not overturned upon rehearing or appeal to the U.S. Supreme Court, the award would be the largest, finally affirmed media libel award in history and the first of more than $1 million, said Henry R. Kaufman, general counsel of the Libel Defense Resource Center. The punitive damages also would be four times larger than in any previously upheld case, he said.

The opinion concerns 1981 commentary in which Jacobson accused the Brown and Williamson Tobacco Corp. of trying to lure children into smoking by presenting "the cigarette as an illicit pleasure" akin to "pot, wine, beer and sex."

"It is unfortunate that we are forced to conclude that this case does not involve freedom of the press," said the appellate court opinion by Chief Judge William J. Bauer. The libel verdict was affirmed "because false statements of fact made with actual malice are not protected by the First Amendment," he wrote.

P. Cameron DeVore, a Seattle attorney involved in the appeal, said the network will seek a rehearing.

The strongly worded opinion said the most compelling evidence of actual malice submitted to the jury was "the intentional destruction of critical documents" that, the court said, probably would have shown that Jacobson and a researcher were aware, at the time of the broadcast, that some material presented as fact was false. □

Newspapers prevail in case involving code enforcement

A federal judge has ruled that a Florida county's ordinance violated the First Amendment by requiring publishers of classified advertising to help enforce a consumer protection code.

The Fort Lauderdale News and Sun-Sentinel challenged the Broward County ordinance that prohibited a newspaper or other publisher of classified ads, such as Yellow Pages, from publishing an ad placed by a service contractor unless it carried the contractor's state or county certificate of competency number. To run an ad without the number, a publisher had to verify that the contractor was legally exempt from certification.

The law also set misdemeanor penalties for violation of the ordinance, which was intended to help protect the public from incompetent or dishonest contractors.

The News and Sun-Sentinel claimed the time-consuming and complex procedure would affect half of their service advertisements. A similar ordinance in Dade County has not been challenged by The Miami Herald.

The Fort Lauderdale newspapers argued that the ordinance improperly required the media to enforce public policy and that it unconstitutionally intruded into the operations and content of a newspaper.

Ricki Tannen, one of the attorneys representing the Fort Lauderdale papers, said the principle went beyond freedom of the press and could have threatened to make any service industry an arm of the government.

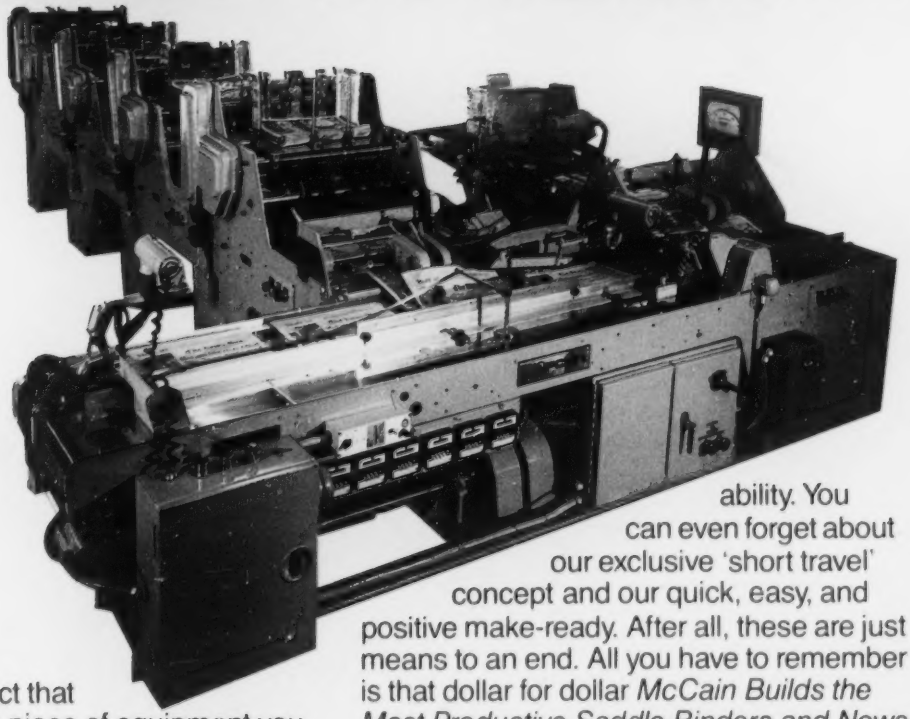
By extension, she said, "Does that mean the county commission could pass a law saying that if your headlights don't work, a gas station can't sell you gas? . . . The idea of making sure all contractors have licenses is worthy of support, but we didn't think the newspaper should be responsible for that."

U.S. District Judge Norman C. Roettger Jr. wrote, "whether such an intrusion on editorial judgment would be constitutionally permissible absent the imposition of a 'penalty' on the publisher is not clear, but what is clear is that . . . the imposition of such a penalty is not permitted by the First Amendment."

"Full enforcement of the underlying (consumer protection) ordinance may be costly and difficult for the County, but the First Amendment . . . prohibits the County from singling out the press to bear the burden of that enforcement," he wrote. □

THE THREE MOST IMPORTANT CONSIDERATIONS WHEN BUYING A NEWSPAPER STUFFER ARE

PRODUCTION! PRODUCTION!! PRODUCTION!!!



SEE US AT
THE NNA SHOW
BOOTH 201

Here at McCain we appreciate the fact that when you invest in a piece of equipment you have every right to expect the best possible return on that investment. And we've spent over 75 years improving and innovating our equipment to assure you of just that! So you can forget all about McCain's international reputation for versatility, quality, and dependability. You can even forget about our exclusive 'short travel' concept and our quick, easy, and positive make-ready. After all, these are just a means to an end. All you have to remember is that dollar for dollar *McCain Builds the Most Productive Saddle Binders and Newspaper Stuffers in the World.* So, if you're in the market for a stuffer and want the fastest possible payback with year after year of the highest return on your investment write or, better yet, call McCain. We'll show you how practical and profitable a new McCain can be.

Editorial page libel problems to be discussed

"Libel on the Editorial Pages" is the name for a fall conference that will examine problems newspapers have encountered in the courts as a result of material published on their opinion pages.

The conference is scheduled for Nov. 6-7 at the College of William and Mary in Williamsburg, Va.

It will be conducted by the college's Institute of Bill of Rights Law and cosponsored by ANPA, National Conference of Editorial Writers and other media organizations. □

COURT BRIEFS

• The Massachusetts Supreme Court ruled that former Gov. Edward J. King is entitled to a jury trial in a **libel action** he filed five years ago against The Boston Globe.

The court rejected most of King's allegations concerning three cartoons and four columns. But it ruled a trial should be held regarding statements in one column [**presstime**, June 1986, p. 57].

• Robert M. McKinney will resume **management of Santa Fe's daily newspaper** on Sept. 1, according to a schedule set in August by a federal judge. Under a contract signed when Gannett Co. bought The New Mexican in 1976, McKinney has nearly eight years remaining to control the paper's operations [**presstime**, July 1987, p. 56].

Gannett has decided not to appeal any further McKinney's claims to management, and the company has agreed to pay back pension benefits of almost $90,000—but not the $60 million McKinney still wants in punitive damages.

• The Federal Court of Canada ruled that news organizations have a **right to cover detention hearings** concerning Sikh migrants whose boat landed in Nova Scotia July 11.

Media attorneys said the ruling represented the first time a Canadian federal judge has declared administrative hearings to be open.

• Bob Hohler, a former Concord (N.H.) Monitor reporter who refused to testify in a murder trial about his interview with the defendant, was to go on trial Aug. 27 on **contempt of court** charges. Maine prosecutors won the conviction without Hohler's testimony, but the judge charged him with contempt, ruling that his prospective testimony met legal standards for compelling a reporter to testify [**presstime**, March 1987, p. 48].

LEGISLATION

Newspapers irate over poll bill

Canadian newspapers are protesting a bill before Parliament that would require the news media to include certain government-mandated information in stories reporting on political public opinion polls.

In addition to the opposition already expressed in editorials, the Canadian Daily Newspaper Publishers Association will oppose the measure when it reaches the hearing stage, according to CDNPA General Manager John E. Foy.

Under the bill, the published or broadcast results of any opinion poll on a candidate or registered party must be accompanied by this information: the identity of the organization that conducted the poll, the size of the sample, the dates of the first and last completed interviews, the margin of error, and the exact wording of each question that led to the printed results. Violators would be fined up to $5,000 in the case of an individual or $25,000 in the case of a corporation.

CDNPA's Foy said he thinks the bill, part of a measure to amend the Canada Elections Act, will be defeated. □

Publisher blasts proposed ban on tobacco ads

For the second time this year, a representative of ANPA has testified before a congressional subcommittee against a proposed ban on tobacco advertising.

And in Canada, where a government-sponsored bill to ban tobacco ads is before Parliament, tobacco manufacturers conducted an $800,000 advertising campaign to drum up opposition to it.

In his July 27 congressional testimony, David Starr, chairman of the ANPA Government Affairs Committee's First Amendment/Freedom of Information Working Group, said the Association opposes two bills, HR 1272 and HR 1532, that would prohibit all media advertising of tobacco products.

"Government suppression of truthful advertising of lawful products is censorship," said Starr, publisher of the Union-News and Sunday Republican in Springfield, Mass. "Its purpose is to shut off thinking and talking about a subject in the hope that the problem will go away That, I submit, is the last thing a democracy should do."

Newspapers do not oppose a ban on tobacco advertising in order to protect advertising revenues, he said. "Tobacco advertising amounts to only one-half of 1 percent of the advertising revenue of America's newspapers."

Starr said a ban on tobacco ads would lead to a demand for bans on the advertising of other products and added that Congress has alternatives to deal with the public health issues related to smoking.

Starr testified before the House Energy and Commerce Committee's Subcommittee on Health and the Environment. Last April, ANPA testified on the same subject before the committee's Subcommittee on Transportation, Tourism and Hazardous Materials [**presstime**, May 1987, p. 60].

In Canada, the Canadian Tobacco Manufacturers' Council placed three full-page ads protesting the ad-ban proposal. The ads ran in that country's major daily newspapers, including four that will not accept tobacco advertising.

Council President Norman J. McDonald said additional advertising may be placed when Parliament reconvenes its regular session, which is expected to be in October. Introduced in April, the ad-ban legislation, Bill C-51, has not yet received second reading in the House of Commons. After second reading, it will be assigned to a committee. □

Lottery ad bill advances

As a state press association was preparing to argue in federal court in Minnesota that existing laws restricting lottery advertising are unconstitutional, a congressional subcommittee approved a bill lifting the restrictions.

The House Subcommittee on Administrative Law and Governmental Relations July 30 approved HR 3146. It would allow the mailing, broadcasting, importation or transportation across state lines of advertisements for any lottery or similar game of chance if the lottery is "not prohibited by the state in which it is conducted." The subcommittee deleted from an earlier version of the legislation a requirement that the lotteries be authorized and regulated by a state.

The new bill is expected to be considered by the full Judiciary Committee in late September or early October [**presstime**, May 1987, p. 60].

As the subcommittee acted, the Minnesota Newspaper Association was preparing briefs to be filed Aug. 28 in U.S. District Court in St. Paul in its suit challenging the constitutionality of the federal laws and postal regulations that restrict the mailing of lottery advertising. Both the MNA and the federal government have filed motions for summary judgment in the case. Oral argument has been scheduled for Sept. 18. □

Risk notification wins committee approval

Committees in both houses of Congress have now approved legislation that would require the federal government to identify and notify workers whose health is at risk from exposure to hazardous substances in the workplace.

The Senate Labor and Human Resources Committee July 23 approved S 79, which would establish a Risk Assessment Board under the Department of Health and Human Services to determine which classes or categories of workers should be notified that they are at risk.

A similar bill was approved by the House Education and Labor Committee May 19 [**presstime**, June 1987, p. 78]. The bills are expected to be considered by the House and Senate in September or October. □

LEGISLATIVE NOTES

• In an executive order, President Reagan instructed federal agencies to notify businesses when "confidential commercial information" they submitted to the government is about to be released under the **Freedom of Information Act**. This is something that the business community had sought through legislation [**presstime**, July 1986, p. 64].

• The U.S. House of Representatives has passed legislation that would require banks to **describe savings plans more fully in their advertising**. The "Truth in Savings Act," HR 176, requires uniform disclosure of certain terms and conditions.

Banks, not advertising media, are liable for noncompliance with the proposed law. No media or advertising groups expressed opposition to the bill, according to a spokesman for its author, Rep. Richard Lehman (D-Calif.).

The Senate Consumer Affairs Subcommittee held a hearing Aug. 5 on a companion measure, S 1507.

• In a similar vein, the House Committe on Banking, Finance and Urban Affairs Aug. 6 approved a bill, HR 515, requiring **credit card issuers** to disclose in advertisements and applications such things as the annual percentage rate charged on the unpaid monthly balance and the annual fee charged to card holders.

• ANPA and the American Society of Newspaper Editors jointly submitted testimony to the House Subcommittee on Libraries and Memorials in suppport of a resolution authorizing the establishment of a **memorial to honor members of the U.S. news media** who lost their lives covering armed conflicts.

The memorial would be located on public land but would be funded by private donations.

• Legislation to reauthorize the Federal Trade Commission for three more years is moving through Congress.

The bill approved in April by the Senate would permanently bar the agency from issuing **rules to ban or regulate advertising** on the basis of unfairness. A similar bill in the House, approved July 14 by the Energy and Commerce Committee, contains no such provision.

REGULATIONS

ANPA hails end to 'fairness doctrine'

ANPA has applauded the Federal Communications Commission's Aug. 4 decision to abolish its 38-year-old "fairness doctrine" on grounds that it is unconstitutional.

"ANPA believes that the editorial freedom guaranteed by the First Amendment applies to broadcast and print media alike," said ANPA Chairman and President George W. Wilson, president of the Concord (N.H.) Monitor.

The doctrine required broadcasters to air all sides of controversial issues of public importance.

But the victory long sought by broadcasters and their media allies is expected to be challenged in Congress.

Sen. Ernest F. Hollings (D-S.C.) and Rep. John D. Dingell (D-Mich.), chairmen of the commerce committees in the Senate and House, have said they intend to attach the doctrine to legislation thought to be veto-proof, perhaps an appropriations measure, when Congress reconvenes this month after its summer recess. An earlier congressional attempt to codify the doctrine failed when President Reagan vetoed the bill in June [**presstime**, July 1987, p. 56].

And legal challenges to the FCC's action already have begun. The Media Access Project, a public interest law firm, has filed an appeal in the 2nd U.S. Circuit Court of Appeals in New York City.

The FCC's action came after it received instructions from the U.S. Court of Appeals for the District of Columbia Circuit that it consider the constitutionality of the doctrine. The instructions came in a case involving a Syracuse, N.Y., radio station that the FCC found in violation of the doctrine. □

EEOC nominee named

President Reagan, as expected, has nominated Joy Cherian, a native of India, to fill a vacant fifth seat on the Equal Employment Opportunity Commission.

If confirmed by the Senate, Cherian will serve the remaining term of Fred W. Alvarez, who left in June to join the U.S. Department of Labor [**presstime**, Aug. 1987, p. 51]. The term expires July 1, 1988.

Cherian, a naturalized American citizen, is an executive with the American Council of Life Insurance in Washington, D.C. □

Newspapers may qualify for petroleum refund

Newspapers that purchased large quantities of refined petroleum products between Aug. 19, 1973, and Jan. 27, 1981, may be eligible for a cash refund from the federal Department of Energy.

The program is designed to compensate end users of petroleum products for overcharges by crude oil producers during the period in which crude oil prices were federally regulated.

Funds for the program have been collected from companies alleged to have violated the crude oil regulations, resulting in overcharges.

According to a DOE-prepared fact sheet on the program, users do *not* have to show injury in order to make a claim, nor do they have to identify their supplier or trace their purchase back to a firm that gave back funds to DOE.

The refund level currently is $20 per 100,000 gallons of the product purchased, but DOE anticipates it will rise to $80 per 100,000 gallons. Because DOE will not issue a check for less than $15, a claimant must have purchased 75,000 gallons of product in order to get a $15 refund at the current refund level.

According to DOE, eligible products include motor gasoline, diesel fuel, heating oil, propane, motor oil, greases and other refined products.

The question has been raised whether printing ink, which is petroleum-based, qualifies.

Roger Klurfeld, assistant director of the Office of Hearings and Appeals, said he did not know whether ink would qualify. "The way to get an answer would be to file an application and see what happens," he said. However, a DOE attorney told an ink company official that such a claim would be denied, according to ANPA Vice President/Technical William D. Rinehart.

Moreover, Rinehart said, even if the claim were allowed, the amount of the refund would be negligible in most cases. Eight pounds of ink, which is measured by the pound, is equivalent to one gallon. An offset newspaper would have to consume 800,000 pounds of ink to be eligible for a $20 refund. A typical offset newspaper uses three gallons of ink per short ton of newsprint consumed. A typical letterpress newspaper uses four gallons per ton of newsprint.

Deadline for applying for refunds is Dec. 31, 1987. Further information may be obtained by contacting the Office of Hearings and Appeals, DOE, 1000 Independence Ave., S.W., Washington, D.C. 20585. □

Telephone ownership of cable television may be liberalized

The Federal Communications Commission is re-examining its restrictions against telephone company ownership of cable-TV systems in light of changes in both industries.

The FCC initially adopted the rules in 1970. Designed to prevent telephone company abuse of its monopoly position in its service area and to preserve a competitive environment for the development of cable, they prohibit a telephone company from providing cable TV in its service area in most cases.

The commission said it was appropriate to re-examine the rules in light of the "substantial growth" experienced by the cable industry and the "dramatic changes" that have taken place in the telephone industry.

The commission has invited public comment on the extent to which the development of new telecommunications technologies—such as cellular telephone, satellite service and fiber-optic distribution—has "created constraints on the ability of telephone companies to exercise monopoly control" over local telephone or cable services. It also is asking whether the cross-ownership rules should be applied to AT&T, which was separated from the local telephone companies in the 1984 divestiture.

If the commission decides a change in the rules is warranted, it will have to propose legislation, because the rules were codified in 1984 as part of the Cable Communications Act [**presstime**, Nov. 1984, p. 32]. □

Detroit Free Press

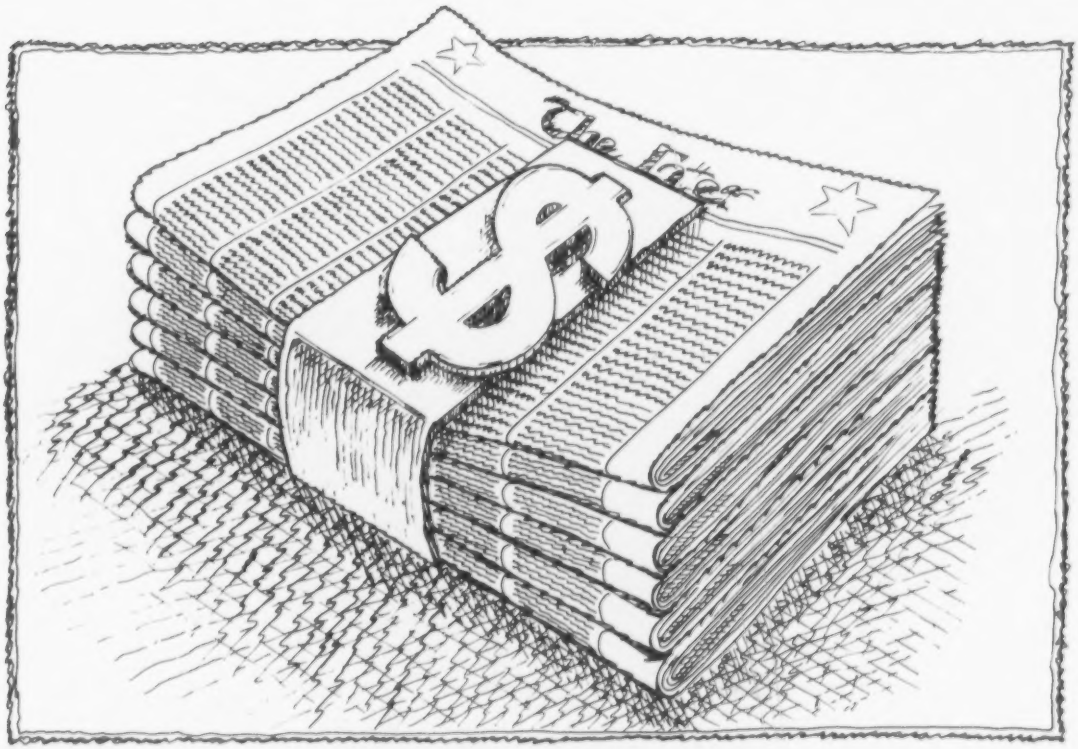
Gannett Chairman Allen H. Neuharth leaves JOA hearings flanked by attorneys Lawrence J. Aldrich (left) and John Stuart Smith.

Detroit JOA public hearings draw to close

At press time, public hearings into the proposed joint operating arrangement between Detroit's two daily newspapers were nearing an end.

The hearings began Aug. 3 in Detroit [**presstime**, May 1987, p. 58]. Following their conclusion, administrative law judge Morton Needelman will make a recommendation to Attorney General Edwin Meese III whether to approve the JOA application of The Detroit News, a Gannett Co. newspaper, and the Detroit Free Press, which is owned by Knight-Ridder Inc.

Testimony at the hearings revolved around whether the Free Press meets the definition of "failing newspaper" under terms of the Newspaper Preservation Act. That 1970 law allows newspapers to combine their production, circulation and advertising functions while retaining separate news-editorial operations if one of them is in probable danger of financial failure. □



Mutual libel seminars save your paper money.

The best way to avoid the expense of libel and privacy suits is to avoid having such suits filed in the first place, but keeping pace with the rapid changes in libel and privacy law makes this difficult. That's why the personnel of so many newspapers attend the seminars on the prevention of libel and privacy suits offered by the Mutual Insurance Company of Hamilton, Bermuda.

"How To Prevent Libel and Privacy Suits" informs newspaper professionals about the current status of libel and privacy law in order to prevent costly suits. The one-day seminar offers legal expertise and explanations of recent court decisions involving libel, public and private people, actual malice, negligence, embarassing truths, lies, distortions, and mean methods, in multimedia presentations and question and answer sessions.

Offered to publications insured by Mutual, this seminar enables journalists to do their job with a minimum of risk. For more information, contact Barbara Dill, (305) 856-2965.

Minitels have Capitol showing

Minitels, the small terminals used in the French Teletel videotex service, have been sprouting up in the United States.

They were demonstrated July 30 for members of Congress and their staffs in a Capitol Hill hearing room. In addition to the French service [**presstime**, Aug. 1987, p. 44], a U.S. videotex service, CompuServe, was shown. The House Telecommunications and Finance Subcommittee sponsored the hands-on presentation.

Minitels also are being used in a videotex project in the Houston area. U.S. Videotel, owned by Encode International Inc. of Houston, offers three types of services: information, transactions and communications. One part of the project, emphasizing business-to-business communication, has been launched. Another part, aimed at residential users, will begin later this year.

In addition to the Minitel terminals, which are leased to subscribers, the services of the Houston project are accessible via personal computers. U.S. Videotel is currently negotiating contracts with two newspapers to provide information for the project, according to George L. Walls, area manager of residential sales. □

Voice information sparks interest

More than 30 newspaper executives have indicated an interest in helping ANPA determine how voice information services can be used by the newspaper business.

Voice information services is a term that covers a variety of different types of services, from sophisticated message-taking systems to interactive information services [**presstime**, June 1987, p. 24].

In a July 14 letter to ANPA member newspaper executives, ANPA Telecommunications Committee Chairman Robert M. Johnson, publisher of Newsday on Long Island, N.Y., said his committee is collecting information on the services and invited them to take part in a meeting on the topic.

"We were pleased with the response," said Jane Wilson, ANPA assistant director of telecommunications affairs. The meeting, which will be in early 1988, will not be a seminar on voice information services, she stressed. "We will expect the people participating in this meeting to help us come up with an assessment of how these technologies can be used by the newspaper business," she said. □

Information on telephone use gets scrutiny

ANPA has urged the Federal Communications Commission to prohibit telephone companies from assembling or sharing certain telephone subscriber data.

In comments submitted Aug. 5 to the commission, the Association said the information could be used by the telephone companies in an anticompetitive manner.

A telephone company "as a provider of basic service has considerable information on customers, such as preferred features, volume of toll calls, service change, payment patterns," the Association said. It argued that this information could be used to market enhanced services, either by the telephone company itself or by another company with which the phone company decides to share the information.

ANPA asked the commission to reconsider its recent Computer III decision and include such a prohibition [**presstime**, May 1987, p. 62]. □

Bells' voice mail should be only trial, ANPA says

If the Federal Communications Commission approves the plan of two Bell operating companies to provide voice mail services, it should only do so on a trial basis, ANPA has urged the agency.

Pacific Bell and Nevada Bell have requested FCC authorization to offer the services. They also would have to obtain a waiver from the consent decree governing the breakup of AT&T.

ANPA noted that the companies must comply with FCC rules for so-called "comparably efficient interconnection," designed to enable competitors to obtain basic services on an equal basis with the carrier's own enhanced service. The Association said approval on a trial basis would allow the FCC to determine whether the CEI implemented by the BOCs meets competitors' needs.

ANPA also sought clarification of several aspects of the plan submitted by the two companies. □

Rules on supplements 'merit attention,' ANPA counsel says

The U.S. Postal Service is seeking comment by Sept. 7 on still more proposed rules governing supplements to second-class mail pieces including newspapers.

The new proposal abandons some previous USPS ideas to which ANPA had objected but contains several requirements that Tonda F. Rush, ANPA assistant general counsel, said "still merit attention."

Dropped from an earlier version were a limit on the number of pages of supplements a newspaper may carry and a requirement that all supplements carry the line "supplement to" followed by the name of the newspaper.

ANPA had said such rules would force some smaller newspapers to turn away advertising and create other hardships [**presstime**, March 1987, p. 49].

The Postal Service most recently proposed, among other things, that:

- The "supplement to" line be mandatory for non-advertising supplements and "be a recommended but voluntary identifying marking" for advertising supplements
- No supplement be longer or wider than the newspaper in which it is contained
- Product samples—including "envelopes containing enclosures," such as cents-off coupons—not be eligible as supplements
- The mailing address and title of the publication appear on the same side of the mail piece
- Publishers, when inserting supplements in the paid newspaper that also will be mailed via third-class, be required to insert those supplements so that the mail indicia be concealed.

USPS earlier had proposed that supplements carried in the newspaper not be permitted to carry any indicia at all, and publishers said that would result in unnecessary extra expense. ANPA is studying the proposed changes. □

Rate case advances

Proceedings in the new U.S. Postal Service rate case picked up speed in August as USPS experts testified in 13 days of hearings about the need for more revenues.

USPS filled 15 loose-leaf notebooks in responding to written questions submitted by ANPA and other parties.

ANPA, which concluded on a preliminary basis that the rate package is favorable to the newspaper business, in late August was drafting its formal position in the case [**presstime**, July 1987, p. 58]. □

State and Local

Press groups sue to overturn Florida ad tax

A lawsuit seeking to throw out the Florida ad tax was filed in early August by the Florida Press Association, joined by Media General Inc., which publishes The Tampa Tribune, and by two television stations and a Florida retailers' group.

Other suits are pending from other newspaper companies, said Faye B. Davis, FPA assistant executive director. No hearing dates have been set on any of the media suits. (See essay, p. 36.)

As those suits and others by advertising related interests await action, one weekly newspaper group in Florida is seeking support in its crusade to end the tax. Rather than have many redundant efforts by newspapers, Publisher Derek Dunn-Rankin and Executive Editor Don Moore of the weekly Venice Gondolier and five sister weeklies in the Sun Coast Media Group have asked other Florida newspapers to cooperate with their effort.

The Gondolier launched a campaign called "The People's Tax Revolt" as a means for newspapers to collect signatures for a referendum on the tax. Cooperating newspapers print ads and coupon petitions that people may send to a larger political action committee called S.T.O.P (Sales Tax Oppressing People).

So far, 50,000 people have signed petitions requesting that Florida voters be able to decide the issue in the next general election in November 1988. Nearly 343,000 signatures are needed to put the issue on the ballot.

Florida Gov. Bob Martinez, who supports the advertising tax, also supports a non-binding referendum on the question and will ask the state Legislature to include it on the ballot for Florida's March 8 presidential primary. □

Colorado court exempts sales to distributors

Culminating five years of litigation, the Colorado Supreme Court has revoked retail sales tax assessments on papers sold to carriers and independent distributors.

The court ruled July 27 that the sales are exempt because they are wholesale transactions.

The city of Denver tried to assess the tax on The Denver Post and Rocky Mountain News for newspapers sold to their independent carriers. □

World Press

Panama shuts three dailies

The government-mandated closure of three daily newspapers in Panama during a political crisis there sparked an international media outcry.

ANPA sent a telegram to Panamanian President Eric Artuo Delvalle and Armed Forces Commander Manuel Antonio Noriega, strongly protesting the July 26 closing of La Prensa, Extra and El Siglo as well as broadcast stations in the country. The American Society of Newspaper Editors also sent a protest telegram.

The Inter American Press Association dispatched a delegation to Panama in an unsuccessful attempt to meet with Delvalle and Noriega. IAPA President Alejandro Miro Quesada of El Comercio in Lima, Peru, noted that the country is now one of four in the hemisphere where newspapers have been closed by their governments. The others are Cuba, Nicaragua and Paraguay.

With regard to Nicaragua, six press groups in August called upon Nicaraguan President Daniel Ortega to honor the Central American peace agreement he recently signed and allow closed daily La Prensa to publish again. The letter to Ortega was signed by Freedom House of New York City, ANPA, ASNE, IAPA, World Press Freedom Committee, International Federation of Newspaper Publishers (FIEJ) and International Press Institute. □

M'Bow may stay on at UNESCO

Will Amadou Mahtar M'Bow extend his term as director general of UNESCO?

According to the newsletter of the World Press Freedom Committee, M'Bow wants to stay on at the helm of the Paris-based United Nations Educational, Scientific and Cultural Organization for two more years. M'Bow has served two terms, a total of 13 years.

UNESCO has been the site of debates over the establishment of a "new world information order," something that free-press nations have vigorously opposed [**presstime**, June 1986, p. 54]. A new director general is scheduled to be elected at UNESCO's General Conference Oct. 20-Nov. 21 in Paris.

UNESCO spokesman Doudou Dienne said M'Bow has refused to comment on press reports that some delegations at UNESCO headquarters have discussed the possibility of M'Bow extending his term in office if the election is deadlocked. □

Transportation

Rail strike halts national service in Canada

Canadian railway workers struck Aug. 24 after talks between nine unions and Canadian National Railways and Canadian Pacific Rail deadlocked over job security, wages and other issues. The strike shut down national rail service, but at press time, the parties had been brought together through a mediator.

Officials said the federal government would intervene if those talks failed.

Union officials wanted job protection for workers with at least four years of service. Railroad executives said they want to cut costs and would not make such a guarantee.

The 48,000 union members had worked without a contract since December 1986.

Canada's last national rail strike occurred in 1973. It lasted two weeks until Parliament issued a back-to-work order. The contract dispute later was settled through arbitration.

Railroad cars are used to transport the majority of Canadian newsprint used by newspapers in North America.

Also on the transportation labor front in Canada, a tentative settlement has been reached between BC Rail and seven unions in British Columbia.

Provincially owned BC Rail is the third largest railroad in Canada [**presstime**, Aug. 1987, p. 54]. □

Analysis provided of trucking costs

The Private Truck Council of America reported that it costs an average of $1.63 per mile for trucking fleets to operate, with tractor-trailer fleets averaging $1.38 and trucks and van lines averaging $2.13.

Most expenses for tractor-trailer fleets are for equipment maintenance, whereas for trucks and van lines driver salaries are the biggest cost item, the PTCA reported.

Overall, drivers' salaries account for slightly more operating costs than the equipment—71 cents per mile for salaries and 68 cents for equipment. □

Railroad on track

Wisconsin Central Ltd. announced a tentative financing agreement for its acquisition of 2,000 miles of Soo Line Railroad lines in Minnesota, Wisconsin and Michigan. Wisconsin Central is expected to begin operations this month. □

Constitution is 200 years young

Organizers have laid the finishing touches on plans for "A Celebration of Citizenship," which expects to reach more than 66 million students Sept. 16 in a day-long "teach-in" about the Consitution.

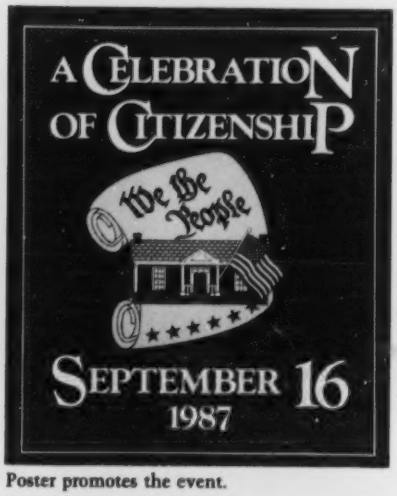
Through local Newspaper In Education coordinators, "a lot of newspapers are putting on workshops for teachers, telling them what to teach that day," said Claudia Haskel, ANPA Foundation's project director for the event. Lesson plans have been designed to prepare students for the following day's observance of the bicentennial of the document's signing.

ANPA Foundation and the Commission on the Bicentennial of the United States Constitution are cosponsoring "A Celebration of Citizenship" with 12 national education organizations.

Over the summer, when extra corporate funding became available, the program expanded to involve, potentially, the entire U.S. population through a nationally broadcast ceremony [presstime, July 1987, p. 62]. At 1 p.m. EDT on the 16th, ABC will begin televising a special half-hour program, covering school activities related to the bicentennial.

The official ceremony, to be aired by the television networks, will start at 1:30 p.m. EDT. It will feature President Reagan leading the nation in the Pledge of Allegiance from the West Front steps of the Capitol in Washington, D.C. Other scheduled participants are retired Chief Justice Warren E. Burger, chairman of the bicentennial commission; congressional leaders; cabinet members; and American youth participating in marching bands and other ways.

New painting by Mort Kunstler depicts James Madison and Benjamin Franklin examining printed copy of Constitution. The Printing Industry of the Carolinas is offering reproductions for $150 unframed or $250 framed, benefiting PICA Foundation educational activities.



Poster promotes the event.

In a press briefing Aug. 20, Burger said the national civics lesson would be patriotic, educational and entertaining. It kicks off four years of bicentennial celebration, continuing through 1991—200 years after ratification of the Constitution's first 10 amendments, the Bill of Rights.

Newspapers across the country have been participating in "A Celebration of Citizenship" primarily through their NIE programs. In late August, ANPA Foundation mailed full-page, camera-ready ads to newspapers in preparation for the day.

Among special newspaper projects surrounding the Sept. 16 event, the Houston Chronicle is conducting a day-long symposium, "America's Framework 1787-1987," at which Houston leaders will speak about the Constitution. Participants will see the entire live broadcast from Washington via big-screen television. Outstanding social studies students, nominated by school districts in the Houston area, will be honored at the symposium.

In Florida, a three-day speaking tour by state Education Commissioner Betty Castor was organized by the statewide NIE program specialist, Barbara Shapley. The tour will culminate Sept. 16 in Fort Myers, when Castor addresses high school journalism students in an event coordinated with the Fort Myers News-Press.

Newspapers have been most involved in commemorating the bicentennial in ways not directly related to "A Celebration of Citizenship."

"What newspapers are doing about the Constitution is phenomenal," the Foundation's Haskel said of this year's proliferation of special sections, Sunday magazines, commentary, and stories about the Constitution in America's past and present .

One unusual project involves historians at Johns Hopkins University in Baltimore, The Farmington (N.M.) Daily Times, newspapers in 11 states and Gannett Foundation. Using the Daily Times' production facilities, the historians have been producing their version of a 1787 newspaper, primarily under a grant from Gannett Foundation.

The first edition of The Liberty Gazette, as the special newspaper is named, was published the week of May 20. The paper has been carried as an insert by newspapers in 11 states, including the Daily Times and six others in New Mexico. The last edition is scheduled to appear Sept. 23. □

Reading campaign enters new phase on Literacy Day

ANPA Foundation will kick off a new phase in its Press To Read campaign by meeting on International Literacy Day, Sept. 8, with leaders of 20 educational organizations.

The meeting is an attempt to broaden the Foundation's three-year assault on illiteracy by taking the campaign beyond the newspaper industry, said Carolyn Ebel Chandler, manager/literacy programs for ANPA Foundation.

The Foundation will develop cooperative projects with the educational organizations, including the International Reading Association, whose 72,557 members are professional reading educators. IRA sponsors International Literacy Day.

"The primary focus in the program's first phase was to create awareness within our industry about the nature of the national illiteracy problem," said Charles T. Brumback, chairman and president of ANPA Foundation, and president and chief executive officer of the Chicago Tribune Co.

"This we have accomplished," he said, citing illiteracy projects by hundreds of newspapers. Now "we will apply our energies to support the experts who will do the actual teaching of reading." □

NIE workshops lauded by participants

Workshops to help teachers use the newspaper in the classroom have been effective, according to a survey by two researchers from Miami University.

Seventy-eight elementary and secondary school teachers who participated in 35 workshops in 13 states during Newspaper in Education Week last March responded to the survey.

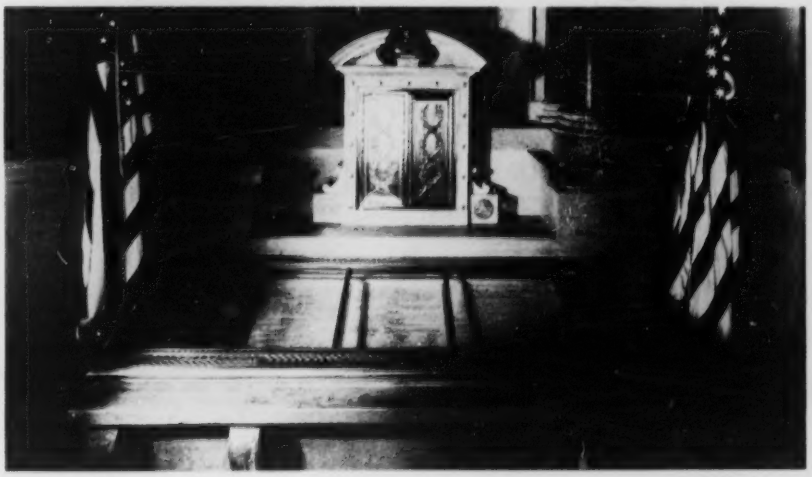
More than a fourth said the sessions helped them to teach art, math, science, social studies and English; another 23 percent appreciated the focus on vocabulary and spelling; others cited the value of using newspapers for teaching critical thinking.

The survey, conducted by professor Allen Berger and research assistant Irene Lang Kleiman, was sponsored by the Gannett Foundation "to determine what makes a successful newspaper workshop and how it influences education in the classroom."

According to statistics compiled by ANPA Foundation, at least 43,748 teachers participated in 1986 NIE Week activities. □

THE PRESIDENT DOESN'T TAKE AN OATH TO DEFEND THE AMERICAN FLAG OR THE STATUE OF LIBERTY.

The President takes an oath to defend something even more important than a majestic symbol of our country.



The President takes an oath to defend the Constitution of the United States. A document that has been described as the greatest leap forward for freedom in human history. A document that is the foundation of our country. And the means by which we achieve the rule of law and protect our freedom.

As we commemorate the Bicentennial of the U.S. Constitution, there is no better way for you as an American to reaffirm the principles for which our country stands than to learn more about the Constitution.

The words we live by.

THE CONSTITUTION
The words we live by

To learn more about the Constitution write: Constitution, Washington, D.C. 20599, The Commission on the Bicentennial of The U.S. Constitution. Ad Council

Another look at credibility; weather pages also studied

BY GUIDO H. STEMPEL III

The glut of credibility studies in the last several years has found that some people trust newspapers and some people don't. The next question has to be, "Who are those people who don't trust the media?" An article by Cecilie Gaziano and Kristin McGrath in the summer 1987 Newspaper Research Journal offers some answers.

Gaziano, research analyst for MORI Research of Minneapolis, and McGrath, president of MORI, draw on the ASNE credibility study, which they directed [presstime, May 1985, p. 56], for a psychographic analysis. They found the group most critical of the press consisted of well-educated, conservative, high-income people whom they termed "sophisticated skeptics."

This group expressed substantially less confidence in newspapers and television than other respondents did. They also gave lower ratings on honesty and ethical standards to newspaper reporters, television reporters, television anchors and newspaper editors.

The "sophisticated skeptics" believed that Democrats, labor union members and people on welfare get coverage that is too favorable, while Republicans and military leaders do not receive enough favorable coverage.

There are two reasons that newspapers need to be concerned about the "sophisticated skeptics." One is that they tend to be opinion leaders in their communities. The other is that while they are more interested in news than other respondents, they are less loyal to their local newspapers.

• • •

USA Today's impact on newspaper graphics is widely talked about by newspaper people. Certainly one of its most apparent efforts in graphics is the weather map. How much impact has this had? Not a great deal, according to a study in the Summer 1987 Newspaper Research Journal.

Mark Monmonier, professor of geography at Syracuse University, and Val Pipps, design chief of the Gary (Ind.) Post-Tribune, studied 26 newspapers in the 14 cities where USA Today was first introduced. They looked at weather sections in those newspapers six months before USA Today's debut and again about 30 months later.

Monmonier and Pipps found some change in the presentation of weather information—but no stampede to imitate USA Today [presstime, March 1987, p. 16]. They concluded that the weather sections in 11 of the 26 papers were virtually unchanged; just two had added color to weather maps (two had that feature before USA Today's launch), and only four made their maps larger.

They also found that seven papers had added regional weather maps after USA Today appeared. In so doing, they were exploiting an advantage they have over the nationally circulated USA Today. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to presstime.

Scarborough's findings parallel Simmons'

Sunday newspaper readership shows a healthy gain and daily readership is virtually holding its own, according to figures released by Scarborough Research Corp. in a survey of the top 50 markets plus Des Moines.

The survey, in which 61,026 adults were interviewed, found that 73.7 percent read a Sunday newspaper, and 68 percent read a daily newspaper. Overall, the study represents 117 million adults, Scarborough estimated.

The survey results are broken down into 51 areas of dominant influence, 74 metropolitan statistical areas and 12 local newspaper-defined markets—the largest number of areas ever for a Scarborough study.

The Scarborough results were close to those of Simmons Market Research Bureau Inc., which released its top-50 survey earlier in July [presstime, Aug. 1987, p. 37]. Simmons had reported that Sunday and daily readership were 72.3 and 67.1 percent, respectively. The Simmons study was based on 106,000 telephone interviews in 56 markets, including the top 50.

The two firms conducted a joint survey in 1985 but then elected to go separate ways. The 1985 results showed that 69.7 percent said they read a Sunday newspaper, and that 68.4 percent read a daily paper on an average weekday. Researchers caution that exact comparisons between the 1987 and 1985 studies cannot be made because the samples and methodology varied somewhat. □

'Benchmark survey' set this year on readership

Response Analysis Corp. of Princeton, N.J., has been selected by the Newspaper Advertising Bureau to conduct a national study of adult newspaper reading habits.

The study is sponsored by the Readership Task Force of the Future of Advertising Project. It was described as "another benchmark survey" by Reg Murphy, president and publisher of The Baltimore Sun and task force chairman.

The overall cost of the project will be in excess of $250,000, said Albert E. Gollin, NAB vice president and associate director of research.

Results of the study will be compared with readership trends shown in similar surveys conducted for the erstwhile Newspaper Readership Project in 1977 and 1982.

Response Analysis conducted a national classified ad study for NAB in 1986 and did the field work for the 1983 NAB study, "How America Shops and Buys."

The survey field work is scheduled to begin in October. James H. Fouss, president of Response Analysis, said a national probability sample will be taken in which 2,000 persons across the country will be interviewed face to face.

Results will be projectible to all the households in the United States, according to Fouss.

Respondents will be asked if they read yesterday's newspaper. Those who say they did will be shown a copy of the paper. For that purpose, interviewers will have available copies of the previous day's editions of every newspaper that has at least 5-percent local market penetration. Pages will be shown at random. Each respondent will be asked whether he or she actually read those specific pages.

People also will be asked where they get their information—from newspapers, television, radio, magazines or other sources.

In addition to benchmark questions posed in 1977 and 1982, there will be queries on topics that have become more important in recent years, Gollin said. Those include the rise in Sunday readership, single-copy sales, classified-ad readership and "no time to read."

"The initial reports on the results of this important survey will be made to the American Society of Newspaper Editors and ANPA in 1988," said Gollin, who is directing the study for the task force. "We will be supplementing these with a series of detailed written reports and other industry presentations throughout the year." □

Racial diversity is emphasized in Orlando Sentinel program

The Orlando Sentinel has met a goal only dimly visible, if at all, at most other U.S. newspapers—the racial diversity of its staff exceeds that of the community at large. And in the newsroom, the Sentinel staff is approaching that level.

Minorities make up slightly less than 14 percent of the Orlando population. They are 11 percent of the Sentinel's editorial staff and 15 percent of all Sentinel personnel, the company says.

But the paper has found that an even more formidable task remains: to make its news and feature pages also representative of its community.

To reach that goal, the Sentinel developed a program to put more of its money, time and energy where its mouth is. And to practice until it gets it right.

A systematic approach began with formation of an in-house committee last January, which for three months pored over editions published between Jan. 4 and Jan. 17. Each section was analyzed to determine whether minorities were included in stories and art, whether they were used as sources, and whether they were portrayed in a positive or negative light.

The consensus was that the Sentinel was doing a satisfactory job but not nearly enough to reach its goal of fully reflecting racial diversity.

Sentinel Editor John Haile directed that most of the committee's recommendations for change be implemented within 90 days.

Key deficiencies cited by the committee were virtually non-existent coverage of the Hispanic community, inadequate use of minority sources in routine stories, and lack of contacts between reporters and minority communities.

Some of the remedies being pursued:

- A Spanish course, currently attended by 10 newsroom staff members, may help break down the language barrier.
- Editors direct reporters to seek sources and viewpoints from varying racial backgrounds, whenever possible.
- Job responsibilities of editors, reporters and columnists include visits to minority communities to establish better familiarity and cultivate new sources.
- Reporters and editors take care not to identify people by race in news stories, unless race is truly relevant.
- Photographers, artists and editors seek to reflect Orlando's ethnic mixture in photos and graphics.

While even the best laid plans don't guarantee improvement, Assistant Metropolitan Editor David Porter said he's already seen progress, especially in the feature sections.

"Hardly a week goes by that I don't see stories that touch on or include minorities," he said. "They have taken routine stories and made an effort to include minorities."

In a year, the paper plans to start the process all over again with another content analysis and further recommendations. □

Darrell Hall

Albert Fitzpatrick, assistant vice president of Knight Ridder Inc. and president of the National Association of Black Journalists, responds to questions at NABJ's 12th annual convention in Miami. More than 1,100 journalists registered for the Aug. 18-23 convention.

Eleven awarded ANPA Foundation minority fellowships

Ten newspaper employees and a college journalism teacher have been awarded ANPA Foundation minority fellowships for the second half of 1987.

The semiannual fellowships cover travel, registration and lodging expenses for attendance at training seminars sponsored by ANPA and other newspaper organizations [**presstime**, March 1987, p. 75].

Since the program began in 1981 to expand management opportunities for minorities, the Foundation has awarded 129 fellowships.

Winners of the current fellowships, and the training sessions they were selected for, are:

- John A. Taylor, labor relations and legal affairs manager, The Detroit News; and Frank E. Lopez, assistant managing editor, Mesa (Ariz.) Tribune—ANPA Management Development Workshop, Austin, Texas, Sept. 21-24.
- Ray Marcano, medical reporter, Dayton (Ohio) Daily News and Journal Herald; and Eugene Kane, reporter and features/entertainment columnist, The Milwaukee Journal—The Poynter Institute seminar on Writing: Writers & Editors, St. Petersburg, Oct. 4-9.
- Roosevelt Wilson, assistant professor of journalism, Florida A&M University, Tallahassee—American Press Institute seminar for journalism educators, Reston, Va., Oct. 4-9.
- Lorraine E. Branham, Burlington Neighbors editor, The Philadelphia Inquirer; and Josie Cantu-Weber, news features editor, El Paso Times—Leadership in the Newsroom Workshop, sponsored by ANPA, the American Society of Newspaper Editors and Associated Press Managing Editors, Chicago, Oct. 5-7, or St. Petersburg, Nov. 30-Dec. 2.
- David R. Carranza, classified phone sales supervisor, Tucson Newspapers Inc.—API seminar for classified advertising managers, Reston, Nov. 1-7.
- James N. Crutchfield, metropolitan editor, Detroit Free Press—ANPA Advanced Management Workshop, Amelia Island, Fla., Dec. 7-9.
- David Drapeaux, circulation sales manager, Aberdeen (S.D.) American News—API seminar on Circulation Sales and Marketing Strategies, Reston, Dec. 6-11.
- Rhonda Chriss Lokeman, editorial writer, Kansas City Star Co.—API seminar for editorial page editors and writers, Reston, Dec. 13-18. □

Honoring historic journalism sites

BY DAVID PEASE

Donald Ring Mellet, publisher of the Canton (Ohio) Daily News, was walking in his yard on the morning of July 16, 1926. Suddenly, a man appeared and fired a shot that ripped through Mellet's head. The publisher fell dead.

The scene could have been one in a crime movie. But in reality, it is one of many episodes that constitute the history of journalism in the United States. Mellet was the victim of a gunman getting revenge for the newspaper's intense coverage of city government corruption.

As a result, the Society of Professional Journalists, Sigma Delta Chi, in 1976 designated Mellet's home as a historic site in journalism. It is one of about 80 locations in the United States that the national SPJ,SDX has recognized since 1942 as the scene of a significant event or accomplishment in the annals of journalism.

"The program has an internal as well as a public side," said University of Georgia journalism professor Wallace B. Eberhard. "Internally, it gives journalists a sense of their past. The program also attempts to keep our history alive for the public." Eberhard plans to compile a book of essays and photographs about the sites recognized by the SPJ,SDX program, the only one of its kind.

The idea of designating historic sites was the brainchild of Irving Dillard, a St. Louis Post-Dispatch editor and journalism professor, who was chairman of Sigma Delta Chi in 1940. He saw the program as a way of observing National Newspaper Week. (See story, p. 72.)

A Historical Sites Committee originally chose one site per year. Since 1965, the number selected has varied from one to six and averaged about three, according to Russell C. Tornabene, recently retired SPJ,SDX executive officer.

The organization installs informational plaques at or near each site to explain the historical significance. Traditionally, each new plaque is formally dedicated at a ceremony and reception.

Nominations for historical sites usually are made by local chapters of SPJ,SDX.

A granite marker in Old Bennington, Vt., denotes the first designated site—the location of the first print shop of Anthony Haswell. Haswell, editor and publisher of the Vermont Gazette, was jailed for fighting the Sedition Act of 1798.

Pease, a Duke University senior, was a summer intern at presstime.

The Advertiser in Montgomery has one plaque (top) honoring crusading editor Hall and another, from the local SPJ,SDX chapter, citing Pulitzer Prize-winning Editor Harold E. Martin.

Other sites include:

- The newsroom of The Advertiser in Montgomery, Ala., honoring Editor Grover Cleveland Hall's early 20th century campaign against the Ku Klux Klan
- Reid Hall on the campus of Washington and Lee University in Lexington, Va., commemorating the first formal instruction in journalism. It was proposed by Gen. Robert E. Lee, president of what was then Washington College, in 1869
- The lobby of the Associated Press offices at Rockefeller Center in New York City, commemorating the first leased wire used to transmit news
- The lobby of the Arkansas Gazette in Little Rock, honoring Editor John N. Heiskell and the Gazette as the oldest newspaper west of the Mississippi
- The Main Restaurant in Baraboo, Wis., marking the spot where Baraboo Republic Editor Ansel N. Kellogg developed the first newspaper syndicate in 1861
- The lobby of the Atlanta Daily World, honoring founder W.A. Scott II and the oldest black-owned and controlled daily in the United States
- Townsend's War Correspondents Arch in Gathland State Park, Jefferson, Md., recognizing the memorial to Civil War correspondents of both the North and the South
- 206 Hill St. in Hannibal, Mo., marking the site of the Hannibal Journal, where Samuel Clemens (Mark Twain) began his career in writing.

Sites designated this year were The Baltimore Sun, founded 150 years ago and one of the first successful penny newspapers; and the birthplace in Greenville, Ohio, of legendary broadcaster Lowell Thomas, a founder of the company that evolved into Capital Cities/ABC Inc. □

Project Watchdog funding grows

Project Watchdog has received more than $715,000 in contributions to date from media organizations and individual companies.

The public-service advertising project, dedicated to freedom of the press, is expected to generate more than $25 million in donated time and services by the time it ends in 1991, the bicentennial of the Bill of Rights to the Constitution.

Project sponsors are the Society of Professional Journalists, Sigma Delta Chi, and the Advertising Council [presstime, April 1987, p. 51].

The advertising is prepared, published and aired on a voluntary basis by ad agencies, newspapers, magazines and broadcast stations. □

Husband and wife who edit rival papers are careful about conversations at home

The executive editor of the Pasadena (Calif.) Star-News and the editor of the Daily News of Los Angeles get along quite well, even though their newspapers are rivals.

In fact, the editors are married to each other.

Robert W. Burdick, 39, was named editor of the Daily News July 31. He had been managing editor/news. His wife, Patricia Burnett, 40, was promoted on Sept. 1 from managing editor to executive editor of the Star-News.

Although the Daily News (morning, circulation 153,084) and Star-News (morning, 40,950) are not in head-to-head competition, the Daily News has some circulation on the western fringes of Pasadena. Both newspapers carry stories dealing generally with the greater Los Angeles area.

The husband and wife say they long ago resolved any notion of conflict of interest

Robert W. Burdick

Patricia Burnett

because of their jobs. At home, they talk about the newspaper business but never about specific assignments and projects.

"It's old hat," said Burnett. She worked for the San Francisco Examiner for four years while her husband worked for the San Jose Mercury News. Later, she was on the staff of the Daily Camera in Boulder, Colo., while he was at The Denver Post.

Burdick and Burnett met in 1975 while both were working at the same paper—The Wichita Eagle-Beacon.

Despite their efforts to keep their separate jobs from causing any problems, once in a while things can be a little awkward.

Last January, for instance, just after the Rose Bowl game in Pasadena and just before the Super Bowl was to be played in the same stadium, Burdick sent a Daily News reporter to Pasadena for about a week, digging into records concerning safety factors there.

On the morning the first part of a series on Rose Bowl safety appeared, Burdick told his wife at breakfast, "You might want to read the Daily News today."

Said she: "They broke that story in my own back yard."

Said he: "She was not entirely pleased with that. But she would do the same thing to me. I'm sure of that." □

Writers don't always write right

It should go without saying that journalists should be masters of grammar. However, a University of Oregon School of Journalism survey reveals that many writers apparently have much to learn.

The survey asked editors, other journalists and journalism educators what language abuses bother them the most. One hundred questionnaires were distributed; 50 people responded. High on their lists of annoyances:

- Misuse of *it's* and *its*; *you're* and *your*
- Improper use of *like* as a preposition, as in "It looks *like* it will rain."
- Sentences that end with a preposition
- Pronoun-antecedent disagreement. It is incorrect to say, "McDonald's is promoting *their* new product." McDonald's is singular and should be referred to as *it* (or *its*).

The largest group of irritations consisted of incorrect and imprecise word usage such as:

- *Most unique*. *Unique* means one of a kind.
- *Hopefully* to mean *I hope*. *Hopefully* is an adverb that means *in a hopeful manner*.
- *Presently* to mean new rather than soon. *Currently* is the correct choice.
- Substituting *feel* for *believe*
- Confused use of *further* and *farther*. *Farther* expresses physical distance; *further* refers to degree, time or quantity.
- Using *since* to mean *because*. *Since* denotes a period of time; *because* gives a reason or cause.
- Saying something is *centered around*. *Centered on* is the correct usage.
- Misuse of *compose* and *comprise*. Individual parts *comprise* or make up a whole. A whole is *composed of* smaller parts.
- Overuse of *very*, *many*, *that*, *get* and *got*, *on*, *virtual* and *indeed*.

Journalists despise language that is vague, such as sentences that begin with *being* and forms of *there is*, and use of phrases such as *impact on* as a substitute for *affect*, or *prior to* for *before*.

Most also said they are bothered by words that have been recently contrived or given new meanings. Examples are computer-related words such as *retrofit*, *interface*, *upload*, *download* and *input*. □

Design society meets

The annual workshop and business meeting of the Society of Newspaper Design will be Oct. 15-17 in Austin, Texas.

It will feature four design exercises in news, features, business and sports. For more information, contact SND's Ray Chattman at The Newspaper Center in Reston, Va., at (703) 620-1083; or Peggy Itzen of the Austin American-Statesman at (512) 445-3660. □

Former newspaperwoman takes over as SPJ, SDX staff chief

Vivian E. Vahlberg, 39, a former Washington correspondent and former president of the National Press Club, is the new executive officer of the 20,000-plus-member Society of Professional Journalists, Sigma Delta Chi.

Vivian E. Vahlberg

Vahlberg was Washington correspondent for newspapers published by Oklahoma Publishing Co. of Oklahoma City from 1971 to 1976 and assistant bureau chief in Washington for the company from 1976 to 1983.

She was president of the National Press Club in 1982 and from 1983 to 1984 was vice president of the Press Building Corp., helping to oversee an $85-million renovation of the club's Washington, D.C., building.

She began her duties Aug. 15 at SPJ,SDX headquarters in Chicago, replacing Russell C. Tornabene, who resigned to head a firm that trains business and government officials in how to deal with the press. □

Creators Syndicate continues growth; large syndicates say they won't change policies

Tom Batiuk has become the latest artist or columnist to sign on with Creators Syndicate, whose liberal, across-the-board policy on ownership of material has caused a stir in syndicate circles.

For his new comic strip, "Crankshaft," Batiuk said he went with Creators Syndicate because its president and founder, Richard S. Newcombe, allowed him to retain the rights to the strip. "Crankshaft" features an acerbic school bus driver.

Batiuk is best known for "Funky Winkerbean," a comic strip featuring high school students that appears in more than 350 newspapers. It will continue to be syndicated by North America Syndicate.

Batiuk explained that his contract with NAS calls for "Funky Winkerbean" to come up for renewal every five years. If the syndicate wants to renew, the strip is renewed; if it wants to drop the strip, it can. Another provision allows the syndicate to drop the strip any time within the five-year intervals should revenue from it fall below a certain minimum, he said.

Conversely, Batiuk said, there are no provisions allowing him to move "Funky" to another syndicate. It is tied to North America for all time, he noted.

Explaining why he had signed a contract tying up the rights to his comic strip forever, Batiuk said, "I'd have done just about anything to get syndicated. I was just out of college, and I had a strip based on friends of mine." He said he signed with Publishers Hall in 1972, a syndicate long since absorbed into several companies that have become North America Syndicate.

Another such company was News America Syndicate, which Newcombe was heading as president when it was acquired earlier this year by The Hearst Corp. Newcombe left to start Creators Syndicate.

Its offerings now include advice columnist Ann Landers, editorial cartoons by Herbert Block (Herblock) and the comic strip "B.C." by Johnny Hart [**presstime**, July 1987, p. 64]. At the time of signing with Creators Syndicate, they, too, said they were attracted by its policy of allowing writers and artists to retain the rights to their material.

It is difficult to assess what effect Newcombe's approach to syndication may have had on other syndicates. Executives of large syndicates contacted by **presstime** said they have no plans to change their relationships with artists and writers, but they will not discuss specific situations.

Dennis R. Allen, vice president/creative director of King Features Syndicate, the parent company of NAS, commented: "No two contracts are the same. We regard the handling of contracts and negotiations as private events. We would be violating confidences of our clients if we discussed these matters in public."

Sarah A. Gillespie, director of comic art for United Feature Syndicate, said, "I think we could say our policy is to deal with each artist on an individual basis. Beyond that, it [the contract] is proprietary." She added: "Our feeling is that there's no real change in our basic attitude."

A smaller syndicate that was started in 1970 with a commitment to bringing a new approach to the business, Universal Press Syndicate, routinely provides that the artist or writer retain rights to the material, said Lee Salem, vice president and editorial director.

At the same time, Salem said some artists have an unfounded fear that if a syndicate retains the rights to a cartoon, it could someday fire the artist and hire someone else to draw it. It is not plausible to believe that anyone other than Gary Larsen could draw "The Far Side" or that someone could substitute for Garry Trudeau with "Doonesbury," he said, citing two of his syndicate's most popular offerings.

Salem also said that a periodic review of a strip's performance, such as the five-year renewal clause mentioned by Batiuk for "Funky Winkerbean," is reasonable because strips not being read or not being bought have to be dropped.

Batiuk said he believes other young artists sign up with syndicates for the same reason he did. "Basically you're presented with a choice of doing it their way or not being syndicated."

Asked whether he would advise other artists with new strips to insist on keeping the rights to their material, he replied: "I think they'd be darn fools not to do that."

He said he thought the freedom offered by Creators Syndicate will be good for the business. "There's never been an option in this business before. It's going to be healthy for the syndicates, because I think it will force them to be more creative."

—Gene Goltz

Media reporter's column will be syndicated by Post unit

The Washington Post Writers Group Sept. 2 will begin syndicating Post reporter Eleanor Randolph's column on the media.

Although many reporters and columnists report regularly on the media in newspapers throughout the country, Randolph's media column may be the first one offered for syndication, said William B. Dickinson, Writers Group editorial director.

Eleanor Randolph

Randolph, 44, has been the Post's media reporter since 1984. She previously worked at the Pensacola (Fla.) News-Journal, St. Petersburg Times, Chicago Sun-Times, Chicago Tribune and Los Angeles Times.

"When I started out in journalism about 20 years ago, the one rule was you never wrote about yourself and never wrote about the business," Randolph said. "It's funny how that has changed."

She said Timothy Crouse's book, *The Boys on the Bus*, an account of press coverage of the 1972 presidential election, may have influenced the trend toward the media covering the media.

As part of her beat at the Post, Randolph has written an occasional column on developments in the media, as well as her regular reporting of media stories including libel suits, joint operating arrangements and ethical issues.

For the syndicate, she will write one media column a week. Writing the column gives her "a few hours of pleasure," she said, and she will continue to devote most of her time to reporting assignments involving the media.

Randolph said when she was hired at the Post some debated whether there would be enough work for a reporter devoted exclusively to the media.

"Now some people ask how I am going to find a media subject [for a column] every week," Randolph said. "I've found some lean times, but I found an awful lot to do." □

'Garfield' reaches 2,000 plateau

The comic strip "Garfield" has become the second one to appear in 2,000 newspapers worldwide, according to United Feature Syndicate. "Peanuts," by Charles M. Schulz, also distributed by UFS, remains in first place, the syndicate said.

Created by cartoonist Jim Davis, "Garfield" was introduced in 41 newspapers in 1978. It now appears in publications in more than 37 countries and is published in 12 languages.

However, the 2000th subscriber was a U.S. newspaper—The Commercial-News in Danville, Ill.

The Garfield phenomenon has spread to books and television. Seven Garfield book titles once appeared on The New York Times Best Sellers List simultaneously, according to United Feature, and 23 Garfield books have been published. Three out of six Garfield television specials have won Emmy Awards for Outstanding Animated Program.

Cartoonist Davis explains the popularity of the lazy, overweight and cunning cat this way: "He has the courage to say and do a lot of things a lot of us would like to, but don't." □

Southam still seeks U.S. syndicate pact

A proposed joint news distribution operation between Southam Syndicate of Canada and Scripps Howard News Service has fallen through.

Southam officials would not comment on why the agreement did not go through as planned. But they said they are talking with other news organizations in pursuit of their plan to exchange news and features with a U.S. syndicate [presstime, Aug. 1987, p. 40]. □

Column catches on

About 50 newspapers have signed up to carry the new advice column of the Chicago Sun-Times, said United Feature Syndicate's director of comic art, Sarah A. Gillespie.

The feature made its debut Aug. 10 with twin columns by Diane Crowley and Jeffrey Zaslow. The two were winners of a nationwide contest to replace Ann Landers, who moved to the Chicago Tribune in March [presstime, July 1987, p. 64]. □

Moral dilemmas get case studies

A seasoned journalist and an expert on philosophical ethics examine the moral dilemmas of modern journalism in *The Virtuous Journalist*.

Journalist Stephen Klaidman and Tom L. Beauchamp look at ethical questions through case studies on events such as the Rev. Jesse Jackson's derogatory comment about Jews, Gen. William Westmoreland's libel suit against CBS and coverage of AIDS victims.

The discussion in part delves into professional virtues and character traits needed for fair and accurate journalism.

The 246-page, hard-cover book is available for $19.95 from Oxford University Press Inc., 200 Madison Ave., New York, N.Y. 10016.

A catalog listing U.S. photojournalists

For those frequently calling on freelance editorial photographers, *The Editor's Guide to Freelance Photographers and Photojournalists* shows work samples of more than 500 of the nation's best freelancers.

Produced by Publishers Network Inc., the 520-page catalog is arranged by state, and each page is devoted to a separate photographer, showing address and phone number, background information and several sample photos.

Copies of the soft-cover book are available for $95 plus $6 for shipping and handling from Publishers Network, 828 Charcot Ave., San Jose, Calif. 95131.

'How-to' book explores use of databases

Tedious research can be streamlined almost beyond belief by using electronic databases, computer information expert Alfred Glossbrenner explains in *How To Look It Up Online*.

Glossbrenner examines the advantages of databases, how to use them, where to find them and how to evaluate them according to particular needs.

Copies of the 486-page, soft-cover book are $14.95 each, plus $1.50 for shipping and handling for the first copy and 50 cents for each additional copy. Quantity discounts are available. Contact St. Martin's Press Inc., Cash Sales Department, 175 Fifth Ave., New York, N.Y. 10010; (800) 221-7945. □

Audits resume in Dallas

The two Dallas daily newspapers and the Audit Bureau of Circulations have reached an agreement that will allow resumption of circulation audits there.

In 1986, the ABC suspended audits of the Dallas Times Herald and The Dallas Morning News after the Times Herald filed a lawsuit against its rival and the audit bureau. The Times Herald charged that the Morning News had inflated circulation figures. It sought unspecified monetary damages against ABC and the Morning News [presstime, Dec. 1986, p. 56].

After three-way discussions among the parties, the Times Herald dropped its monetary claim against ABC in early August, clearing the way for ABC audits of both papers. The bureau will conduct audits for the year ended March 31, 1987, and then for the six months ending Sept. 30, 1987, said ABC President and Managing Director M. David Keil.

The Times Herald lawsuit against both parties will proceed, however, as will a countersuit filed by the Morning News against the Times Herald.

The Morning News contends internal audits show its circulation numbers are valid. The Times Herald claims the last valid ABC audit was for the period ended March 31, 1985, showing the Morning News at 368,683 and the Times Herald at 241,055. □

Saskatoon likes its morning paper

The Star-Phoenix in Saskatoon, Saskatchewan, is going to continue as a morning newspaper until at least next May.

The paper made an experimental switch from evening to morning publication on May 19, intending to change back to the p.m. cycle at the end of the summer [presstime, March 1987, p. 51]. But General Manager Ed Sebestyen said a 5-percent increase in circulation helped executives decide to retain the a.m. schedule.

Sebestyen said the average daily paid circulation for June was 62,073, which he said was an increase of 3,194 over June 1986.

Several surveys also contributed to the newspaper's decision. Seventy percent of its carriers said they preferred morning delivery, and 66 percent of readers who voiced an opinion liked it.

Sebestyen said he wants to complete a year of a.m. deliveries before making a final decision on the schedule. □

Rate-incentive program finally begins; over 280 newspapers offer discounts

Although it was supposed to have started last January, the 18-month newspaper trial of a rate-incentive program for package-goods advertising has only just begun.

The test is designed to determine whether a certain group of national advertisers will respond positively to a concerted move by newspapers to curb the differential between national and retail rates. New York City ad agency Young & Rubicam announced the test last December, saying that 23 dailies had agreed to a trial program for package-goods advertisers [pressstime, Jan. 1987, p. 53].

Promotional brochure.

Subsequently, the Newspaper Advertising Sales Association took over the task of compiling a master list of special rates offered by newspapers participating in a broader program to lure package-goods advertising.

NASA did not finish accumulating rates from the more than 280 participating newspapers until mid-July, said NASA President Roy G. Blackfield, chairman and chief executive officer of Sawyer-Ferguson-Walker Co., an advertising representative firm.

Now, armed with the rates and a promotional brochure, NASA members are ready to hit the streets. "We are going out and making calls on every package-goods advertiser and agency in the country, whether it be a regional buy or a national buy," he said.

According to Blackfield, the rates, for a minimum of 13 quarter-page ads or their equivalent, provide an average 27-percent discount off the newspapers' regular national rates.

He said the newspapers participating in the program have combined circulation of just over 32 million—about half of total U.S. daily circulation.

The package-goods advertisers targeted currently spend 3 percent or less of their advertising budget in daily newspapers, Blackfield said. "Already we've had a response from a few, and we think we are going to have more. If it makes sense and we've increased our share of business, maybe newspaper publishers will look at the entire rate structure."

Blackfield said the first advertising buy made under the program was a regional order recently placed in the Dallas area by Campbell Soup Co.

Despite the start-up delay, Blackfield said he hopes a complete 18-month test still will be conducted. If so, it will run through the end of next year.

The American Association of Advertising Agencies intends to promote the program in its September newsletter, he said.

One advertising agency executive has been critical of the program. Joel S. Kushins, senior vice president, media director of Bozell, Jacobs, Kenyon & Eckhardt of New York City, called the program a "Band-Aid" approach to the rate-differential problem.

"There are a lot of good national advertisers in a lot of other categories" that would like similar inducements, themselves, he said.

Kushins said there are ways to structure rates to satisfy national advertisers who already use newspapers, including offering them "merchandising value" for their ads by distributing reprints to local retail outlets.

At the Newspaper Advertising Bureau, Executive Vice President Leo Bogart reported that newspapers have made "enormous progress" in addressing the rate differential problem. "What we are seeing is a greater complexity of rate structure than existed in the past," he said.

NAB's Future of Advertising Project has recommended that newspapers review the differential and consider offering special introductory rates to lure certain promising categories of national advertising, such as beer and proprietary drugs, as well as incentives for all national advertisers to repeat their ads.

"We don't expect immediate revisions of rate structures," Bogart said. "What we do expect is as newspapers start formulating their rate structure for 1988, they will be thinking very hard about the recommendation we put before them. And we have every indication that that is going on."

In related developments:

- Fifty-three percent of respondents to a recent survey by the International Newspaper Advertising and Marketing Executives said they believe retail/national differentials, beyond commissions, are "not at all justified." Of the 198 respondents, 87 percent said their newspapers charge more for national advertising than local. Nearly half said they plan to eliminate the differential. Of these, 71 percent said they want to do so within five years.
- Ottaway Newspapers Inc. adopted a policy of reducing the gap in rates. By the end of 1988, all 22 Ottaway dailies must either charge national advertisers buying at least 1,000 column inches annually no more than 25 percent above the retail rate, or establish a cost-per-thousand rate for a quarter-page national ad of $10 or less.
- The Philadelphia Inquirer initiated a local rate structure for national advertisers in its Sunday magazine and color comics.
- The Record in Hackensack, N.J., announced that it had achieved its goal of one rate for national and retail advertising at most volume levels.
- The Houston Chronicle introduced a program in which national advertisers that buy a schedule, or "flight," of ads receive a discount that brings the cost down to local rates.

—Margaret G. Carter

Kentucky survey finds newspapers top ad medium

When Kentucky residents were asked which medium they rely on most for advertising information, newspapers outdistanced the competition in every category.

For example, 65 percent said they rely on newspapers for grocery advertising, compared with 13 percent for the next-highest medium, direct mail.

Of the 80 percent of respondents who said they read newspapers on a regular basis, 72 percent said they very often or fairly often make purchases because of newspaper advertising, compared with 41 percent because of direct mail, 29 percent because of television and 23 percent because of radio.

The statewide survey of retail shopping habits involved 999 households. It was conducted by The Preston Group Inc. of Lexington, Ky., and Hamilton, Frederick and Schneiders of Washington, D.C., for the Kentucky Press Association and Kentucky Press Service. □

How to improve your advertising sales

BY CRAIG C. STANDEN

The Newspaper Advertising Bureau has compiled a list of 50 selling opportunities for newspaper advertising staffs—50 ideas which could be turned into ad sales before the end of the year. I'd like to share a few of them with you.

Retail

One good idea would be to *review your zoned coverage* of subscribers and non-subscribers to see if your distribution areas can be made smaller. Jim Hollis, the bureau's expert on total-market-coverage programs and the ins and outs of competing with direct mail, shoppers and pennysavers, believes that shrinking our zones to help retailers pinpoint their advertising better is the most effective single strategy available to us.

Craig C. Standen

Now is also a good time to take a hard look at your *non-subscriber product*. How does it compare in appearance and content with the weekly and shopper competition in your market? If you found it on your doorstep, would you pick it up and read it—or throw it away? Just having a non-subscriber product and a TMC program isn't enough any more. They have to be better than the competition. We are seeing cases where some advertisers will choose an excellent weekly newspaper over an excellent daily combined with a poor or mediocre non-subscriber product.

Be sure your zoned editions carry complete *information on how to place an ad*, including a telephone number and perhaps a map of all the zones. Remember, many of your readers are potential advertisers!

Do your *Christmas selling* early. Meet in September with your top retailers to review what you and the newspaper can do to meet their Christmas sales objective. For most retailers, October and November are just too late.

Remind those retailers—and every retailer in your market—that doing a *co-op inventory* before the end of October can help them generate extra money for Christmas advertising by spending all their earned accruals before they expire at year-end. It means more business for them, and you.

Standen, president of the Newspaper Advertising Bureau in New York City, is a regular contributor to presstime.

General

Is *health care* one of your fastest-growing ad categories? Be sure someone on your ad staff has responsibility for it. And no matter how you organize your sales effort, add punch with our new "Health Care" videotape presentation, designed for local sales calls on your area's hospitals, HMOs, doctors, dentists and insurance companies.

This month the bureau will have a new *travel presentation* designed for use with regional carriers, travel agents and tour packages. Use it as the centerpiece for sales calls aimed at getting a commitment for next year's advertising.

Encourage repeat ads. Doesn't it make sense to consider offering special incentives for repeat insertions of same-size ads run in a continuing schedule—incentives beyond your already established volume discounts?

1988 is a presidential election year. But most of the action, and most of the spending, will be local, with campaigns not only for governors, senators and representatives but also for state legislators, sheriffs, judges and others.

More importantly, the candidates will decide how to spend the money this year. Start *campaigning for those election dollars* now. Put together a list of likely candidates, party officials, local consultants and ad agencies. Get together with them and show them why and how they can get more bang for the buck in newspapers. So when the bureau's political advertising kit arrives on your desk in October, you'll be ready to spring into action.

Classified

As a promotion, *offer local realtors an extra day*, at an attractive special rate, to run their house ads with the word "SOLD" across the copy. This not only makes the realtor look good, it makes your classified section look even better.

Establish *seasonal pages* for categories like Temporary Help, Christmas Buying Guide and New Year's Resolutions. They'll make the paper more interesting, more useful and more profitable.

Develop a weekly bannered page of *business service classified* from painting and building contractors, floor covering stores, decorators, etc. Your local Yellow Pages are a prime source of leads for this kind of product.

Sponsor an automotive clearance event for local car dealers—perhaps in a downtown parking lot or as a mall event—and invite every dealer in town to tie in.

Use the bureau's *three recently completed studies of classified readership* in automotive, real estate and employment. They document the massive audience newspaper classified delivers—day in, day out, week in, week out—and you can tie your own local statistics in to double the selling power. If you haven't really studied these reports, you're missing some of the strongest selling ammunition the newspaper business has ever had. Make them the basis of your classified efforts. If you don't have these reports, order copies from our classified department.

You'll find these ideas, and 36 more like them, in a folder called "50 Selling Opportunities," which we put together from our presentation at the recent meeting of the International Newspaper Advertising and Marketing Executives. If you'd like us to send you a copy, call me or Pat Edwardes, my secretary, at (212) 704-4500. □

Telemarketing managers to organize

A national organization for newspaper retail telemarketing managers is being formed.

The idea of establishing such an organization, as yet unnamed, resulted from a two-day conference on newspaper telemarketing hosted by the Winston-Salem (N.C.) Journal in early June.

The organizational effort is "very much in the early stages," said Jeffrey P. Green, retail sales manager of the Journal. Kimberly R. Marion, Journal telemarketing manager, is coordinating the effort.

According to Green, the group plans to hold annual conventions and explore such subjects as the diversity of telephone systems and the management of a telemarketing department. □

'Facts' available

The Newspaper Advertising Bureau has published "Key Facts 1987: Newspapers, Consumers, Advertising."

Single copies are free and may be obtained from NAB, 1180 Avenue of the Americas, New York, N.Y. 10036. □

ANPA schedules 42 seminars for 1988

ANPA—through its Training Services Department, Technical Services and Technical Research Departments, Human Resources Department, Newsprint and Transportation Department and Foundation—has announced 42 training sessions to be held during 1988.

Additional seminars and conferences are under consideration. They and any changes in the schedule listed below will be announced in presstime. More information and registration forms will be included in brochures to be mailed to the membership.

General seminars and workshops

Except where otherwise noted, additional information about the following seminars is available from Stephen E. Palmedo, ANPA manager/training services, at The Newspaper Center, Reston, Va.; (703) 648-1126.

Leadership in the Newsroom — **Jan. 11-13, San Francisco; March 28-30, Austin, Texas; June 6-8, Washington, D.C.; Nov. 14-16, Miami**

Helps skilled journalists with the management part of the editor's job. A practical three-day workshop on the management skills needed by the mid-level newspaper editors. Instructors from the University of Chicago work with participants in role play exercises, small group assignments and other activities to perfect leadership, delegation, decision-making, communication and other necessary skills. Cosponsored with the American Society of Newspaper Editors and the Associated Press Managing Editors Association. Registration fee: $550 for members of ANPA, ASNE and APME, $675 for non-members.

Managing People in the Circulation Department — **Jan. 25-27, San Francisco; April 11-13, Chicago; Oct. 31-Nov. 2, Austin, Texas**

Problem solving, motivation, performance appraisal—these and other key management skills are studied and practiced at this workshop. The workshop program was developed by the University of Chicago in consultation with representatives of the International Circulation Managers Association. Cosponsored with ICMA and the Newspaper Personnel Relations Association. Registration fee: $550 for members of ANPA, ICMA and NPRA, $675 for non-members.

Newspaper Executives Marketing Seminar — **Feb. 7-13, Houston**

Helps newspaper executives learn more about their newspaper and its market by being immersed in actual situations faced by newspapers and their management. An intense one-week seminar featuring 14 case studies—11 about newspapers—that challenge the participants to define, decide and act on problems of the modern newspaper environment. Cosponsored with the International Newspaper Marketing Association. Registration fee: $1,900 for members of ANPA and INMA, $2,300 for non-members.

Management Development Workshop — **Feb. 8-11, Miami; May 16-19, Chicago; Dec. 12-15, San Francisco**

Leadership, decision-making, communciations techniques, motivation and coaching, team building, meeting management, problem identification, and resolution—these and other important topics are addressed. Workshop participants take part in role plays, small work groups, and class discussions of real newspaper problems suggested by their colleagues. Registration fee: $675 for ANPA members, $800 for non-members.

Newspaper Personnel Workshop — **Feb. 14-17, Chicago**

Sponsored in cooperation with NPRA, this annual workshop is designed as an introduction to personnel management in the newspaper industry. Designed and run by newspaper personnel executives, the program provides a mix of internal expertise and external advice for the recently promoted or hired newspaper personnel professional. This workshop also provides participants with a network of colleagues in similar job positions who can be a valuable resource in further professional development. Registration fee: $350 for members of ANPA and NPRA, $375 for non-members. For more information, contact Patricia P. Renfroe, ANPA manager/personnel relations (703) 648-1069.

Budgeting/Planning Workshop — **Feb. 15-16, Tampa**

The goal of this workshop is to demystify the budgeting and planning process, so that managers—especially those with no prior financial training—will not see it as an annual ordeal, but a year-round opportunity to contribute to the operational and financial success of the newspaper. Topics include details of the planning process, building the operating budget, capital budget and cash flow, and a case study. Newspaper financial executives and planners serve as the faculty. Registration fee: $395 for members of ANPA and $495 for non-members.

Newspaper Sales Leadership — **Feb. 22-24, New Orleans; May 9-11, Washington, D.C.; Sept. 26-28, San Francisco**

The specific issues to be covered in this new management skills workshop especially for newspaper advertising sales managers will be determined by representatives of the International Newspaper Advertising and Marketing Executives, ANPA and the University of Chicago School of Continuing Education. The content and format of the workshop will closely follow that of successful ongoing workshops such as Leadership in the Newsroom and Managing People in the Circulation Department. This three-day workshop, cosponsored with INAME, will stress practical application of management skills and techniques. Role plays, small group and individual exercises, and discussion of management problems identified by the participants will be featured. Registration fee: $550 for members of ANPA and INAME and $675 for non-members.

Negotiating Strategy Seminar: Salaried Units — **March 7-8, San Diego**

This workshop is intended for newspapers whose labor agreements with white-collar units will expire within the next two years. Discussion will be directed principally at the issues emphasized in model contract proposals and at union bargaining goals that appear regularly in the course of negotiations. Participants may select other topics to discuss. The development of counterproposals, alternative strategies and drafting of desired language are features of the seminar. Registration fee: $300. For more information, contact Mary I. Sepucha, ANPA assistant manager/labor relations (703) 648-1073.

Advanced Management Workshop **March 7-9, Los Angeles**
Sept. 19-21, Chicago

Designed for senior-level managers and directors from all departments and those who have completed one of these workshops: ANPA Management Development, ANPA/ASNE/APME Leadership in the Newsroom, ANPA/ICMA/NPRA Managing People in the Circulation Department or ANPA/INMA Management Skills for Newspaper Promotion. It reviews the management skills addressed in these workshops and involves study and practice with several other management challenges including managing change and conflict, and coalition or team building. Registration fee: $550 for ANPA members, $675 for non-members.

Total Newspaper Conference **March 13-16, St. Petersburg**

Since 1966, this conference has helped prepare more than 800 newspaper men and women for greater responsibility and more authority. Participants explore the goals, challenges and capabilities of each newspaper department, while emphasizing the interdependence of all. Respected newspaper professionals lead sessions focusing on the editorial, advertising, circulation and production departments and on general management. Registration fee: $850 for ANPA members, $1,000 for non-members.

Newspaper in Education Conference **May 18-20, Atlanta**

Provides an opportunity for NIE coordinators, directors and other newspaper personnel with responsibility for NIE programs to learn and work with those NIE coordinators with successful Newspaper in Education programs. Presentations by newspaper managers and educators cover starting and enhancing a NIE program. Small group sessions focus on specific educational newspaper and professional concerns and give participants suggestions and direction that can be used at their newspapers. Registration fee: $400, $525 for NIE vendors. For more information, contact Betty Sullivan, ANPA Foundation manager/Newspaper in Education (703) 648-1051.

Labor Relations and Technology Seminar **June 10-11, Atlanta**

Held just prior to the ANPA/TEC, this seminar examines how rapidly changing technology has altered traditional concepts of labor relations. It covers the effects of technology and mergers on traditional bargaining concepts and their impact on employees. Drawing upon the expertise of panelists and one another, participants will develop strategy and language in both workshops and general sessions to combat resistance to technological change. Tours of selected ANPA/TEC displays will be conducted. Registration fee: $350. For more information, contact ANPA Assistant Manager/Labor Relations Sepucha (703) 648-1073.

Telecommunications Management Workshop: Connections III **June 10-11, Atlanta**

This annual seminar for individuals with telecommunications responsibility, highlights the newest ways to enhance newspaper operations and reduce costs through technology. Connections will immediately precede the ANPA/TEC '88. Registration fee: To be announced. For more information, contact Deborah Walker, ANPA telecommunications sytems specialist (703) 648-1142.

Literacy Creators Workshop **August, Leesburg, Va.**

A practical three-day workshop to assist newspaper representatives in developing action plans for home newspaper literacy projects. Participants bring to the workshop outlines of initial newspaper-office-brainstorming sessions and work within groups to further define potential projects tailored to individual communities. The workshop also features presentations by national literacy organizations and background data on national literacy needs. Strictly limited to 25 participants. Registration fee: $500. Includes seminar materials, meals and accommodations for three nights. Fore more information, contact Carolyn Ebel Chandler, ANPA Foundation manager/literacy programs (703) 648-1251.

NIE Instructor Training Seminar **Fall, Leesburg, Va.**

Participants will learn to become self-reliant in giving presentations on the use of the newspaper as a teaching tool. They will study a variety of workshop models to develop flexibility, creativity, effectiveness and confidence. The seminar is designed to create highly motivated leaders with a firm knowledge of modern teaching and training techniques and a strong grasp of NIE curricula covering all grades and content areas. Registration fee: $500. For more information, contact ANPA Foundation Manager/Newspaper in Education Sullivan (703) 648-1051.

Health and Safety Symposium **Fall, Site: To be determined**

Topics will include VDT issues, "right-to-know" laws including federal hazard communications regulations, industrial hygiene surveillance, assessment of alleged hazards, ink research, waste management and regulations, health and safety litigation, ANPA's accident reporting system, and health surveillance programs. Registration fee: To be announced. For more information, contact Richard W. Neergaard, ANPA manager/environmental services (703) 648-1221.

Newspaper Training Conference **Sept. 14-17, Chicago**

An annual event designed for and by newspaper trainers, this conference enables training and development managers to meet and exchange ideas. The design and format allow for an interchange of information. General sessions feature speakers from inside and outside the newspaper industry, while smaller group activities focus on specific newspaper training issues. Cosponsored with NPRA. Registration fee: To be announced. For more information, contact ANPA Manager/Personnel Relations Renfroe (703) 648-1069.

Steven H. Star of M.I.T. leads discussion in marketing seminar.

Newspaper Packaging and Distribution Symposium III **October, Chicago**

This will be the third symposium sponsored by ANPA focusing on developments in newspaper inserting, packaging, conveying and distribution, including robots, computer systems and total-market-coverage programs. Registration fee: To be announced. For more information, contact George R. Cashau, ANPA director/technical research (703) 648-1183.

Labor Relations Seminar **October, Pittsburgh**

For over 14 years, this two-and-a-half-day seminar has assisted general managers, managing editors and employee relations executives to prepare for and to conduct union contract negotiations. It

examines the impact of technology on contract language, the recapturing of management rights, Title VII regulations and court decisions, equal pay and comparable worth, and the challenges of union mergers in the publishing industry. Registration fee: $450. For more information, contact Charles Cole, ANPA manager/labor relations (703) 648-1070.

Management Skills for Newspaper Promotion — **Oct. 10-12, Washington, D.C.**

Successful newspaper promotion requires participation and creative contributions of many people from different departments; this requires a special set of management and communications skills that are both studied and practiced at this workshop. Participants examine the promotion manager's creative, professional and managerial role. They also observe and practice several skills, including leadership, motivation and attitude setting. Cosponsored with INMA. Registration fee: $550 for members of ANPA and INMA, $675 for nonmembers.

Newsprint Seminar — **Oct. 13-14, Chicago**

The fourth newsprint seminar to be sponsored by ANPA and the Technical Section of the Canadian Pulp and Paper Association will examine what lies ahead in the 21st century for newsprint and newsprint technology. The program will be of interest to newspapers, newsprint manufacturers, ink manufacturers, machinery manufacturers, advertisers, etc. Registration fee: $275. For more information, contact Joseph Prendergast Jr., ANPA manager/newsprint and transportation (703) 648-1103.

Hands-on technical seminars

Hands-on technical seminars, conducted by the Association's Technical Services Department, are held at The Newspaper Center in Reston, Va. Registration fee for each is $575.

The schedule for the second half of 1988 will be announced later.

Web Offset Newspaper Press Operation — **Jan. 4-8, Feb. 22-26, March 21-25, April 25-29, May 23-27, June 27-July 1**

Pressmen will learn techniques such as web offset trouble shooting and quality control programs for consistent results on the press. Non-pressroom personnel will gain hands-on experience operating a newspaper press. This seminar will utilize ANPA's double-width M.A.N.-Roland 4/2 press and the single-width Goss Urbanite Press. Specific areas to be covered include: offset press unit components, precise adjustment of all systems, registration systems, plate processing and control, printing problems and offset press care and maintenance.

Newspaper Quality Control — **Jan. 25-29, May 9-13**

This seminar reviews procedures needed to establish quality standards throughout the newspaper production cycle. Through lectures, demonstrations and "hands-on" operational experience, a complete system for documenting, measuring and maintaining high quality printing will prepare participants to initiate their own systems. The quality control system will proceed through the following steps: copy standards and photographic reproduction density ranges (color and black-and-white); establishing and maintaining typesetting procedures and equipment; process camera control of line copy and halftones; color separation standards for scanners and direct screen operations; and maintenance and set-up procedures for newspaper presses.

Newspaper Color Scanner Operation — **Feb. 8-12, April 11-15**

Newspaper production and management personnel will learn the skills needed for utilization of electronic scanning systems. The program encompasses newspaper processes relative to producing consistent, high-quality color. Through a combination of classroom instruction and hands-on training, attendees learn the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses. Participants are given a thorough background in color reproduction, including the purpose of masking additive and subtractive color theory, the relationship of ink and paper in color printing, and proper evaluation of colors.

Newspaper Process Camera Techniques — **Feb. 22-26, May 23-27**

Production and management personnel will obtain working knowledge of the customary instruments used for process camera operation at a newspaper. Also, the seminar will introduce attendees to the proper use of contact screens, processor control, chemistry, films and diffusion transfer material. Lectures and demonstration on the Hell and Royal Zenith Scanners will be conducted. Instruction and operation of the ECRM Autokon camera will be provided.

Management Introduction to Newspaper Technology — **March 7-11**

Management personnel are introduced to the latest developments in electronic editorial and production systems. The seminar is intended to create increased awareness of the capabilities and limitations of modern newspaper production equipment. Instruction includes personalized sessions that assist attendees in achieving an understanding of the new technologies. They experience hands-on operation of modern phototypesetting equipment plus electronic editorial and advertising copy processing systems. Participants also produce their own four-page newspaper, working through all the procedures from copy preparation to the actual press run.

For more information on these hands-on technical seminars, contact Arthur M. Boudreau, ANPA manager/technical training, at The Newspaper Center, Reston, Va.; (703) 648-1217.

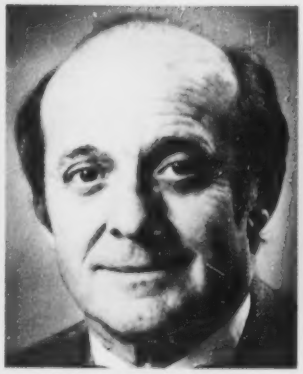
Direct-screen seminars available

In addition to the regularly scheduled seminars, ANPA in 1988 will offer special hands-on technical seminars to individual newspapers and newspaper groups on direct-screen color separating.

The seminar, which will be scheduled on request, covers the skills needed for utilization of direct-screen color systems. Participants are given a thorough background in color reproduction and the essential techniques for printing high-quality ROP process color for both editorial and advertising departments on offset and/or letterpress presses.

Registration fee is $575. For more information, contact ANPA Manager/Technical Training Boudreau.

Speeches



David Starr

Janet Chusmir

Jerry W. Friedheim

Robert MacNeil

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

Meeting the Demands of Responsible Newspaper Ownership
James K. Batten, president, Knight-Ridder Inc., Miami. Mississippi Press Association annual convention, Biloxi, June 19

The Proposed Ban on Tobacco Advertising: A Threat to Free Speech
David Starr, publisher, Union-News, Springfield, Mass., and senior editor, Newhouse Newspapers. Testimony before the House Subcommittee on Health and the Environment, Washington, D.C., July 27

Forging Attitude Changes About Women in the Workplace
Janet Chusmir, executive editor, The Miami Herald. Hispanic Women's Network, Miami, June 27

Classified Advertising Managers Up Close
Joyce Richardson, classified advertising manager, The Washington Post. Association of Newspaper Classified Advertising Managers annual conference, San Diego, June 24

Helping Newspaper People Newspaper Better
Jerry W. Friedheim, ANPA executive vice president and general manager. North Carolina Press Association annual convention and trade show, Williamsburg, Va., July 24

To Kill a Messenger: The Ethics of Journalism
Earl R. Hutchinson Sr., professor of English and journalism and director/journalism program, English Department, Tennessee Technological University, Cookeville. Tennessee Tech College of Arts and Sciences lecture series on professional ethics, April 16. (Or see July 1, 1987, Vital Speeches of the Day, 389 Highway 17 By-Pass, Box 1247, Mount Pleasant, S.C. 29464.)

From the Association for Education in Journalism and Mass Communication annual convention, San Antonio, Aug. 1-4:

The Constitution and the Media
Robert MacNeil, executive editor, MacNeil-Lehrer NewsHour, Public Broadcasting Service

Online Databases and Newspapers: An Assessment of Utilization and Attitudes
Stanley I. Soffin, chairman, School of Journalism; and Carrie Heeter, director, and Pamela Deiter, graduate student and research assistant, Communication Technology Laboratory, Michigan State University, Lansing

Subscriber Behavior and Attitudes One Year After P.M.-A.M. Conversion
Professors Galen R. Rarick and James B. Lemert, School of Journalism, University of Oregon, Eugene

The Public Is Often Mistaken About the Media and Journalists
Professor Fred Fedler and graduate student Robert G. Davis, Department of Communication, University of Central Florida, Orlando

Circulation Practices and Pricing at Mid-sized Dailies
Robert G. Picard, associate professor, Manship School of Journalism, Louisiana State University, Baton Rouge

The Publisher as Official: Conflict of Interest or Libertarian Vestige?
Don Sneed, associate professor, School of Journalism, San Diego State University, and Daniel Riffe, associate professor, Journalism Department, School of Communication, University of Alabama, Tuscaloosa

Outstanding work rewarded

In the past two years, several newspapers have instituted programs to reward employees at all levels with hefty amounts of cash for outstanding job performance.

Although some papers such as the Chicago Tribune and the Los Angeles Times have had similar programs for years, it has just been recently that the practice has begun to spread through the business.

"The cost in relationship to the benefits is very small," said Sheldon (Shelly) L. Greenberger, vice president and director of advertising at the Fort Lauderdale News and Sun-Sentinel where an employee-recognition program is in effect in the editorial and advertising departments. Other newspaper executives echo Greenberger and cite benefits ranging from improved customer service to higher staff morale.

"The reason for instituting the program was to find a way of calling to everybody's attention the importance of customer service and doing so in a way that got everybody's attention and excited everybody," said Sam S. McKeel, publisher and chairman of Philadelphia Newspapers Inc.

The Philadelphia Inquirer and Daily News started their program July 1, 1986, and so far nine employees have received cash awards of $1,000, after taxes, for meritorious service. The first recipient was a garage helper. An advertising sales representative, a deputy metro editor and a circulation service clerk were among the other winners.

A nomination can be made for consistently high performance or for a one-time innovative achievement. Any employee can nominate any other employee. A 10-member committee of employees from various departments selects the nominees to be submitted to McKeel, who makes the final decision.

The Record in Hackensack, N.J., recently selected its second annual recipient of the $1,000 Chairman's Award, which recognizes outstanding employees. Retirees also are eligible to receive the award for outstanding community work. In addition to the cash award, recipients receive an engraved sterling silver tray, and their names are listed on a plaque displayed in the newspaper's main office. The first person to receive the award was an advertising layout supervisor.

The Hartford Courant began its Publisher's Excellence awards program at the end of 1985. Up to three awards are made quarterly. The nominations, which can be made by any employee, are reviewed by the human resources department, with the company's executive committee making the final decision on the employees to be honored.

Louise Leonard Galvin, the Courant's human resources director, said the awards are made not only to recognize outstanding performers but also "to honor people who understand the company's missions." Recent winners were a political columnist, a metro reporter and an employee benefits coordinator. The winners may choose from three prizes: $1,000; four days and three nights in Bermuda for two; or an extra week's vacation. Their names are inscribed on a plaque displayed in the newspaper's lobby.

In 1985, the Fort Lauderdale papers extended to the advertising department an employee recognition program started the previous year for editorial employees only. In advertising, four departmental salespeople of the month are named and rewarded with a $100 prize in cash or merchandise. The monthly winners are automatically nominated for four annual President's Awards of $1,000 each, after taxes, plus a trophy.

The annual awards are presented during a Saturday morning ceremony in a local hotel that concludes with a champagne lunch. Another $100 award is given for the sales presentation of the year, which is reenacted by the winner. The Sunday edition runs a house ad featuring the winners.

"We have a lot of young people, and the program gives them the opportunity to assimilate the culture of the company," Greenberger said. "People who do the best jobs are held up and recognized by their peers."

In the editorial department of the Fort Lauderdale dailies, five monthly awards of $100 are given. At the end of the year, three $1,000 awards are given for continuing outstanding contributions to the newspapers. Perhaps more important than the money, said Vice President and Editor Gene Cryer, is the presentation of a bronze sculpture to the winners. Cryer had editorial cartoonist and artist Pat Oliphant design and cast 31 bronze figures with upraised arms. They are signed by the artist and numbered. There also are three $400 runners-up awards presented during a reception at the city's art museum.

Scripps Howard eight years ago launched an editorial awards program for its 14 dailies. Monthly winners in nine categories receive $250, and nine annual winners receive $2,500, with $1,250 going to second-place winners in each category.

Awards "retain meaning only if you remember why the award was created—to recognize outstanding work," said Susan H. Miller, director of editorial development at Scripps Howard. "Contests are a legitimate way to honor and make more meaningful the work of the people who put the paper out every day."

Some papers recognized that long ago. The Chicago Tribune, for example, has been giving cash awards for years. The awards were introduced between 1943 and 1985 for employees in the editorial, circulation, advertising and production departments. And the Los Angeles Times just marked its 25th year of presenting editorial awards, currently in the form of shares of Times Mirror Co. stock, to winners in 10 categories.

Next year, Gannett Co. will join the parade and begin recognizing annually five "unsung heroes" with a $1,000 cash prize each. Nominations for the first awards are due by Dec. 31, with the winners to be announced in February. —*Clark Newsom*

McKeel (right) presents $1,000 check to Ken Hull, technical support manager of data processing at Philadelphia Newspapers Inc.

CWA printing sector holds first conference since merger

The first two-day conference of the Printing, Publishing and Media Workers Sector of the Communications Workers of America was a quiet affair compared with the one-week conventions of the International Typographical Union before it merged with the CWA.

For one thing, the five-member Executive Council of the printing sector was unanimous in its decisions, where previously there had been a longstanding 3-to-2 split on many important matters, especially those pertaining to a merger partner.

The printing sector met July 24-25 in Miami Beach, prior to the CWA's 49th annual convention there.

William J. Boarman, a vice president of the printing sector, said that the most important action taken at the conference was to "solidify" the sector's separate strike-lockout fund. The CWA pays strike benefits based on need. In addition to CWA benefits, the sector has its own plan designed to pay a $200 weekly benefit, funded by a monthly assessment of 0.50 percent of members' straight-time earnings. In recent weeks, however, the fund has been unable to pay the full $200 because of inadequate income.

Boarman said "to make sure it continues," the "defense" fund is now "strictly a strike and lockout fund." It will no longer be used to pay legal bills or to finance so-called "corporate campaigns" in lieu of strikes.

The printing sector's conference was attended by 120 delegates from 84 local unions—about 18-percent representation from the 460 locals in the sector. The last ITU convention in 1986 drew 199 delegates from 145 locals. Since then, more than 3,000 mailers have left the union to join the Teamsters [**presstime**, April 1987, p. 60].

Earlier this year, the Newspaper Drivers Division of the Teamsters, based in Cleveland, created a Printing-Mailing Trade District within the division. But Boarman said there still was a large representation of mailers at the printing sector's conference from Chicago, Denver, Los Angeles, New York City, San Francisco and Washington, D.C.

Following the conference, the CWA's July 27-30 convention drew 3,600 delegates, alternates and guests, including six Democratic Party presidential candidates.

CWA President Morton Bahr called for legislative action that would require employers to use audible warning tones when monitoring workers' telephone conversations and to provide advance notice of plant closings [**presstime**, Aug. 1987, p. 51]. The convention approved resolutions opposing the nomination of Judge Robert H. Bork to the U.S. Supreme Court, opposing random or across-the-board drug testing and calling for a national child care policy.

Larry Cohen, the CWA's organizing director, said the union is ready to organize more workers in the printing and publishing industry.

Robert S. McMichen, head of the printing sector, was formally installed as a CWA vice president during the convention. □

NLRB elections

Norfolk Virginian-Pilot and Ledger Star, Guild: Newsroom employees voted 100-95 against further representation by Local 219 of The Newspaper Guild.

(NLRB Case No. 5-RD-948)

San Mateo (Calif.) Times, San Bruno Herald, CWA, Teamsters: In separate elections, mailers at the daily Times and the semiweekly Herald voted to change their bargaining representative from the Communications Workers of America to the Teamsters. The vote at the Times was 10-2; at the Herald, 5-0.

(NLRB Case Nos. 20-RC-16108, 16140)

Tallahassee (Fla.) Democrat, CWA: Composing room employees voted 12-8 in favor of continued representation by Typographical Union No. 660, CWA.

(NLRB Case No. 12-RD-604)

Recent contract settlements

Memphis Commercial Appeal, Teamsters: Two-year agreement covering mailroom employees; retroactive to Jan. 1, 1987.

Milwaukee Journal and Sentinel, GCIU: Fifty-four-month agreement covering pressroom employees; effective March 1, 1987.

(Details in September 1987 ANPA Labor & Personnel Relations Letter.)

Editorial page editor found to be supervisor; excluded from unit

The editorial page editor of The Times Herald in Norristown, Pa., has been excluded from the bargaining unit represented by Local 10 of The Newspaper Guild.

Acting on a "unit clarification" petition filed by the company with the National Labor Relations Board, Regional Director Peter W. Hirsch in Philadelphia, found that Richard Brust, the editor in question, was a supervisor within the meaning of the Taft-Hartley Act.

The Guild was certified in 1981 as the bargaining agent for a unit of editorial and commercial employees. The position of editorial page editor was created in 1986.

Hirsch found that Brust spends "a regular and substantial" portion of his time substituting for the city editor, a supervisory position. In addition, the regional director found that Brust has the authority to discipline a desk assistant and grant her overtime, had "effectively recommended" the hiring of two employees and attends management meetings.

The Guild is appealing Hirsch's decision to the board.

Meanwhile, William Barry, the Guild's administrative officer, said the union is seeking an arbitrator's ruling in a related dispute over work jurisdiction. No date for the arbitration hearing has been set.

(Norristown Herald Inc. and The Newspaper Guild of Greater Philadelphia. Case 4-UC-222) □

Drug-related arrests made at newspapers

Employees at three California newspapers were arrested in July on drug-related charges following undercover investigations.

At The San Diego Union and The Tribune, seven mailroom workers and three circulation department employees were arrested on charges of sale, possession or possession for sale of crystal methamphetamine, cocaine and marijuana. All have been arraigned and are free on bail. "The company is committed to giving employees a drug-free work environment," said Robert J. Robinson, assistant general manager.

At the Ventura County Star-Free Press in Ventura, four mailroom employees, three pressroom workers and a circulation department employee were arrested. Business Manager Ron Spurr said the newspaper will implement a drug-screening program for future employees. □

Arbiter upholds union in dispute over 'outside activities'

An arbitrator has ruled that the Seattle Post-Intelligencer violated an "outside activities" clause in its labor agreement with Local 82 of The Newspaper Guild.

The dispute arose when management issued a memorandum to editorial employees that stated in part: "To avoid conflicts, all staff members must consult their department head before writing or agreeing to write or provide articles or photographs for any outside media."

The Guild contended that the memo violated the clause because it diminished employees' freedom to engage in outside activity granted by the agreement.

The company, on the other hand, said the consultation requirement was a valid exercise of management rights, which had not been restricted by any specific provision of the agreement.

The clause in question stated that "Any employee is free to engage in outside activities . . . provided such endeavor is not in direct competition with the publisher."

Arbitrator Michael H. Beck found that the consultation requirement was "inconsistent" with the clause. He pointed out that the memo required consultation regarding articles or photographs to "any" outside media. He noted that an employee would be subject to discipline if the employee failed to consult before writing for an outside medium even if that medium was determined not to be in direct competition with the Post-Intelligencer.

Beck observed that the union did not take the position that prior consultation was necessarily inappropriate, but that employees may not be required to consult. He said the clause set forth certain exceptions to the freedom to engage in outside activities, "thus indicating that there are no other exceptions. Through issuance of its memorandum, the employer has effectively attempted to impose an additional exception to the freedom of employees to engage in outside activity."

The arbitrator ordered the company to "cease and desist" from enforcing the consultation requirement. □

Additional arbitration awards

Palo Alto (Calif.) Peninsula Times Tribune, Mailers: William Eaton ruled that the company was not required to appoint an assistant foreman from within the bargaining unit.

San Jose Mercury News, GCIU: Barbara Chvany found that the company violated the labor agreement by assigning ink recycling work to a non-journeyman.

Toronto Globe and Mail, Guild: R.D. Joyce ruled that time on maternity leave should be counted toward progression on the time-based minimum pay schedule.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Florida newspaper and former owner settle EEOC case

The Clearwater (Fla.) Sun and the former owner of the newspaper have settled for an undisclosed amount an Equal Employment Opportunity Commission case brought by a former photographer at the paper. Sun Publisher Bruce E. Coury said the settlement was in exess of $25,000.

Coury said the underlying events in the case occurred before The Hearst Corp. bought the newspaper from Jefferson Pilot Publications in December 1984.

The photographer, an independent contractor who had worked for the paper as a stringer, was hired as a temporary replacement for an ill employee. She filed discrimination charges with the EEOC after the temporary replacement position ended, and the paper also stopped using her as a stringer.

The proportion of the settlement shared by the two companies was not disclosed. □

Tax reminder

Workers who have not submitted a new Internal Revenue Service W-4 or W-4A tax withholding form to their employers before Oct. 1, 1987, may be subject to tax penalties next year. If a new form is not submitted, the employer must withhold tax from wages as if the employee is single claiming one withholding allowance or married claiming two allowances, depending on whether the employee checked the "Single" or "Married" box on the most recent form on file.

Guild questions safety of VDT emissions

The Newspaper Guild has issued "an urgent call" for shielding video display terminals to protect users from magnetic-field emissions.

The action came following a report published in the newsletter VDT News that a new experiment in Sweden confirmed an earlier Swedish finding that exposure to pulsed 20KHz (20,000 cycles per second) magnetic-field emissions can damage fetuses of mice. Others dispute that the latest findings confirmed the earlier study.

David J. Eisen, the Guild's director of research and information, said local unions should insist that VDTs in the workplace be tested for magnetic-field emissions. He said VDT manufacturers should install shielding in all new terminals and produce retrofit shielding for older machines. Government agencies in the United States and Canada should initiate experiments to reconfirm the European results, he said.

The latest study was by the Swedish University of Agricultural Sciences in Uppsala. It was an attempt to replicate and verify the results of a previous study by the Karolinska Institute in Stockholm and presented at a May 1986 conference in that city [**presstime**, June 1986, p. 56].

ANPA Manager/Environmental Services Richard W. Neergaard said he had not seen the latest Swedish study and therefore could not comment on it.

The Center for Office Technology in Washington, D.C., said the Uppsala study of the effect of pulsed magnetic fields on the development of fetuses in mice reported that while the Karolinska experiment found that such fields affect the rate of placental resorption, fetal mortality and body weight, "our results were to the contrary." The Uppsala researchers also said, according to an unofficial English translation of the study, that they were unable to demonstrate any increased rate of internal deformities in mice as the result of pulsed magnetic fields.

Based on discussions with some U.S. scientists, COT said one could conclude that the Uppsala study did not replicate, or verify, the results achieved in the Karolinska study. "Scientists seem to agree that there is an effect from exposure to pulsed magnetic fields," COT said, "but there continues to be wide disagreement on the nature of the effect and the meaning of specific study results. Neither study draws any conclusions about relevance of this research to actual VDT use or human reproductive systems."

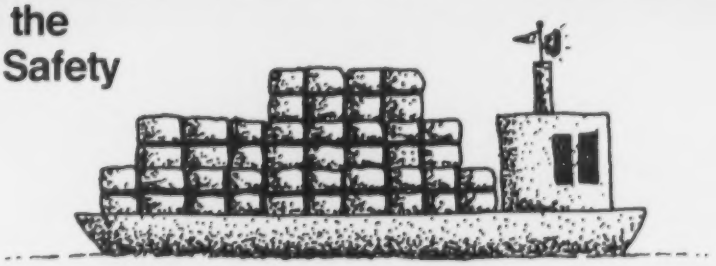
COT serves as an information clearinghouse on health-related VDT issues. Among those contributing to its activities are ANPA, Eastman Kodak Co., BellSouth Corp. and the American Electronics Association [**presstime**, July 1985, p. 55].

In an unrelated VDT development, the Suffolk County, Long Island, N.Y., legislature came within one vote of overriding the county executive's veto of a bill that would have regulated the use of VDTs for the first time in the private sector [**presstime**, Aug. 1987, p. 39]. □

Do you know where your waste is going?

You're invited to attend the 1987 ANPA Health and Safety Symposium.

October 29-30, 1987
Orlando Marriott
Orlando, Florida



Newspapers face increasingly complex responsibilities for hazardous waste and its disposal. This seventh annual ANPA Health and Safety Symposium will address issues of importance to all newspaper managers. This year's topics will cover such issues as:

- Waste Management
- Waste Recycling
- Waste Storage
- Waste Disposal
- Drug Testing
- AIDS Issues
- Newspaper Safety
- Superfund Cases
- Asbestos Regulations
- VDT Legislation Issues
- Latest OSHA and EPA Issues
- Hazard Communication Update
- Carpal Tunnel Syndrome
- Right-to-Know Issues
- Environmental Audits

The 1987 symposium brings you timely reports from experts in the newspaper industry and in the industrial and environmental health fields. The $375 registration fee covers admission to all symposium sessions, continental breakfast on both meeting days, a reception Wednesday evening and a luncheon on Thursday.

Call ANPA at (703) 648-1220 for more symposium information and a registration form.

Clip art joins computer age

Until a couple of months ago, Lynda K. Cannon, graphics manager for three Independent Newspapers Inc. weeklies in Maryland and Delaware, selected "atmosphere" illustrations for display advertisements the way most newspapers do.

She flipped through cumbersome clip art books to find a suitable back-to-school-sale banner or Fourth of July firecracker.

These days, though, Cannon's job has been simplified. In July, the newspaper group obtained the new Kwikee In House Graphic Services' system that uses compact disks known as CD ROM (Compact Disk-Read Only Memory).

Valerie Hubbard, Salisbury News & Advertiser

Cannon of Independent Newspapers scrutinizes "atmosphere" clip art on a computer screen.

The service is the first of its kind for newspapers, and since it went on the market in June, 35 newspaper clients have signed up. Some, like the three Independent Newspapers weeklies, are already using the service. Others are waiting for installation of the hot-selling item, which is an adjunct to "desktop publishing."

The In House system involves both special equipment and the graphics service.

It works this way: Referring to a category index, subscribers review the clip artwork on a compact-disk storage/retrieval system. The system is connected to an Apple Macintosh SE personal computer, and images are called up and displayed on the PC screen and manipulated as desired. By combining those images with text, headline type (more than 100 typefaces are available), borders and other graphic elements, the operator can compose an entire advertisement on the screen. It is then sent to either a laser printer or typesetter.

Kwikee In House is a division of Multi-Ad Services Inc. of Peoria, Ill. Multi-Ad Services sells the clip-art service and advertising and page-layout software. As an Apple Computer Inc. value-added reseller, it also sells the Macintosh and the CD ROM storage/retrieval system that connects to it.

Steven J. Ganz, national sales representative for Multi-Ad Services, said the firm sells complete packages of equipment that range in price from about $10,000 for a rudimentary one to $20,000 for the most sophisticated. For an additional $2,250 a year, a subscriber gets the layout software and a subscription to the In House clip-art service, including quarterly updates.

Customers that already have a Macintosh can purchase only the layout software, the subscription and the compact disk equipment, Ganz said. He also reported that the service soon will be compatible with IBM personal computers.

William D. Rinehart, ANPA vice president/technical, called the technology "a really significant development. This is something that will benefit newspapers of all sizes. Everybody has to deal with ads."

Multi-Ad Services has been providing books of clip art to newspapers for more than 40 years. In addition to the atmosphere art, the firm also provides illustrations of 98 percent of national product brands, Ganz said. The product illustrations are used in assembling grocery and other types of display ads.

The cost of Multi-Ad's conventional clip art ranges from $85 to $400 a month, depending upon a newspaper's circulation size, Robert B. Mounts, product manager for Kwikee In House, said.

Ad Builder books have theme and generic art for display advertisements, and the company's Scan books offer similar art for classified advertising. The company's Kwikee product-illustration books are distributed free to newspapers because the advertisers want newspapers to have access to the illustrations, Mounts said.

"This is something that will benefit newspapers of all sizes. Everybody has to deal with ads."

The company is gradually making these illustrations available on compact disk.

Hardware and automotive clip art also may be added to CD ROM, Ganz said.

According to Ganz, most of the 35 newspaper clients that have signed purchase agreements for Kwikee In House did so since it was shown at ANPA/TEC '87 in Las Vegas in early June. He said the response there was highly enthusiastic, and he expects a similar reception this month when the equipment is demonstrated at the Seybold Desktop Publishing Conference in San Francisco.

Ganz and people at several newspapers offer a number of reasons why it has taken off so quickly:

- Compact disks have immense storage capabilities (**pressstime**, Jan. 1987, p. 61). Because the information is stored digitally, one compact disk can hold 13,000 or more illustrations. It would take more than 700 floppy magnetic disks to provide the same storage.
- The art is "vectored"—stored as a digital formula—not "bit-mapped" as in usual desktop publishing. When enlarged, the vectored graphics print sharply.
- Use of personal computers to create display advertisements is on the rise. But until the development of clip art on CD ROM disks, a hole had to be left where each illustration later would be pasted down manually.

Subscribers to the CD ROM service currently have disks with about 350 different pieces of art, both brand-name product illustrations and atmosphere art. An updated disk to be distributed this month will contain about 1,000 pieces; in December, a disk with about 3,000 illustrations is scheduled to be delivered; and by the spring of 1988, the company is aiming for a disk containing its complete book of 13,000 product illustrations, Ganz said.

To accomplish that, he said the company has about 80 computer artists and is steadily adding more.

At Independent Newspapers, Cannon said she "just fell in love" with the computerized clip-art service, which is being used to compose display ads for the Salisbury (Md.) News & Advertiser, the Crisfield (Md.) Times and the Sussex Post in Millsboro, Del. "I wouldn't go back to the other way."

Cannon adds: "It's the most fantastic way of doing things. The art is very fine and prints very sharply. It's saving us a lot of time."

Another Independent Newspapers publication, the Delaware State News of Dover, is also subscribing to the Kwikee In House service.

According to Alan Turner, publisher of the Dover daily and regional vice president for Independent Newspapers, all of the group's display advertising was prepared at the Dover plant until earlier this year.

When it decided to decentralize and allow each of the group's newspapers, or a cluster of them, to handle display advertising locally, the company began looking at various types of desktop-publishing equipment, Turner said.

After studying a variety of options, the Delaware State News and the three papers for which Cannon works independently chose Kwikee In House.

"We believe it was a good move," Turner said. "We're able to do the same amount of work with fewer people. In addition, we're saving money on phototypesetting paper and chemicals."

Turner says he has "a slight complaint in that the company has done so well, it's almost victimizd by its own success. So many people have discovered this, it takes them a while to get back to you. Overall, though, we haven't had any major problems worth mentioning."

Charlene P.E. Carnan, news and graphics specialist for the Delaware State News, says she "can do so many things" with the system, such as "wrap text around graphics, size up or down quickly."

Newapapers of all sizes are likely to find the In House system useful, but Ganz said the company believes medium-size newspapers represent the biggest market for the service and equipment.

The company has no plans to phase out the traditional clip art books, Mounts and Ganz said. But for the vast number of newspapers that still subscribe to those books, the Kwikee In House system may have considerable appeal. —*Rosalind C. Truitt*

Here's a way to give old color ink second life as black ink

What can be done with over 2,000 gallons of color ink per year that is still basically good ink—useable but not color-consistent?

At The Daily Journal in Kankakee, Ill., "We use it. . . . It is put into the black-ink supply tanks where, through dilution, it becomes black ink," said Thomas R. Crossett, mechanical supervisor.

Crossett called this a practical solution to the problem of disposing of waste ink in accordance with U.S. Environmental Protection Agency regulations.

The newspaper plant in Kankakee consumes a lot of ink by virtue of its heavy production schedule. In addition to printing The Daily Journal seven days a week, it prints USA Today and 16 semiweekly newspapers for Star Publications of Chicago.

"We have quite a variety of advertising and editorial color, both spot and process," Crossett said. "Our Goss Metro (offset press) is equipped with ink rails, and to change the color in an ink rail to accommodate page positioning is a simple task.

"All ink feed lines are quick-disconnect coupling. You remove the ink feed you have been using, connect the ink feed you want to use, and purge the rail and the page pack of the remaining ink. Then you set the rail to an estimated density for the page to be printed. In doing this, we are left with approximately 40 gallons of multicolored ink a week."

To facilitate the recycling of this ink, employees of the newspaper recently devised a new method that makes it less onerous a chore.

Pressroom workers had been dumping the colored ink into the black ink tank by hand. Climbing a ladder with a 30-pound bucket and scraping the waste ink into the black-ink tank was messy and potentially dangerous.

Bill Byrns, The Daily Journal

Pressman Dana Hiene pours waste color ink into black-ink tank.

"What we have done is create a small tank on the floor next to the large tank," Crossett said. "Pails are emptied into the small tank, and when the small tank is full, the ink is pumped up into the larger tank. To do this, we use a 55-gallon drum piped to an ink pump that goes through a filter and then into the black ink tank.

"The initial cost was minimal, as the pump, hose, filter and regulator assembly were all spare parts from our color ink supply system."

Crossett said mounting brackets and the pump intake were fabricated at a cost of about $100, and the on/off valves, copper pipe, fittings and 2-foot piece of a 2-inch hose were purchased for about $40.

With the new system, he said, the newspaper had eliminated "an unsafe and dirty job and improved working conditions. Balanced against the cost of possible personal injury, the cost was minimal indeed." □

Editor's note: This story was submitted in response to ANPA Technical Committee requests that newspapers share innovative technical ideas that others might find useful. Send submissions to Rosalind C. Truitt, technical writer, **presstime**, The Newspaper Center, Reston, Va.

Ink reclamation system gets first user

The Contra Costa Times in Walnut Creek, Calif., is the first newspaper to use a new ink reclamation system developed by Separation Technologies Inc., a Placentia, Calif., firm. The system has been in use about two months.

Large solids are filtered from waste ink, and the ink then is heated to 165 degrees and purged with a vacuum that removes solvents and water. At that stage, micron solids are removed, and the ink is pumped to a tank for cooling. It is later transferred to another tank for storage.

The newspaper is printing with ink that is one part new ink to two parts recycled ink, and it reports no discernible change in printing quality.

"We believe this is a good answer to a serious industry problem," said Ronald Servern, assistant pressroom supervisor. □

Bundle verifier proves worth in Virginia test

After testing a newspaper bundle count verifier over the past several months, the production manager of The Free Lance-Star in Fredericksburg, Va., pronounced preliminary judgment: "I have seen enough to know it will do the job.

"With a few more refinements," added Minor D. Armstrong, "a lot of people in the industry will be real tickled by it."

The ANPA-developed machine, engineered to give an accurate count to bundles of newspapers en route to the loading dock, has been tested under daily production conditions both on-line from the press and off-line, he said.

It was installed at the newspaper in February [**pressstime**, Jan. 1987, p. 63] and has been used periodically since then. ANPA engineers have made several modifications based on how the equipment performed.

The verifier, which works in tandem with mailroom tying machines, uses compressed air to squeeze bundles of newspapers to a uniform height. It then uses position sensors to determine whether a bundle is short or contains extras by measuring its height.

A bundle with a known count is used as the standard to which other bundles are compared. A red light is triggered if a bundle deviates from the established height.

The ANPA machine also has a counter to keep track of the number of good and bad bundles.

Armstrong said that in the early stages of the testing, incorrectly counted bundles were slipping through because the pressure was too low to compress them properly. Modifications to date included increasing the air pressure.

Most of the modifications have been made by Nhac (Pete) Nguyen, an ANPA research engineer who was one of the machine's principal designers.

Armstrong said he wants to see further testing and study data before issuing a final assessment of the equipment's performance. He also believes further testing at a larger newspaper would be useful.

ANPA plans to apply for a patent for the verifier.

Developing an accurate bundle verifier is a priority of the ANPA Technical Committee's Post Press Packaging and Distribution Task Force. The project will be discussed when the committee meets this month at The Newspaper Center in Reston, Va.. □

TECHNOLOGY NOTES

• Scripps Howard is purchasing a 12-unit **flexographic press** from Motter Printing Press Co. to print The Evansville (Ind.) Courier and The Evansville Press. The sale is Motter's first of a complete flexographic press.

The Courier, a Scripps Howard newspaper, and The Press, owned by Hartmann Publications Inc., are published under a joint operating arrangement that calls for Scripps Howard to print and distribute both papers.

• The first MAN Roland Colorman 75 **offset press** in the United States is operating at the Asheville (N.C.) Citizen and Times.

The eight-unit press with four color decks can print 75,000 copies per hour. It is located in the newspapers' new production facility.

• Muller-Martini Corp. has installed the first on-line PrintRoll **inserting system** in the United States at the St. Joseph (Mo.) Gazette and News-Press.

The system includes the 308 Biliner inserter, a PrintRoll buffer, a conveyor and a programmable counter stacker.

• Camex Inc. is expanding its product line by offering less expensive **composition and display-advertising software** that operates on personal computers. Its new Sun Breeze software will run on Sun Microsystems off-the-shelf PCs. Previously, all Camex systems used proprietary hardware.

The new software and hardware cost less than $20,000 per unit, and the system is compatible with Camex's existing SuperSetter line.

• Scitex Corp. Ltd. of Israel and Hell Graphic Systems Inc. of West Germany have **settled a patent infringement suit** brought by Hell and met with a countersuit by Scitex. Both manufacture electronic prepress equipment for newspapers.

The two companies agreed to dismiss their U.S. District court suits and grant each other non-exclusive five-year licenses. Scitex will pay Hell $200,000 each of the five years to use Hell patents.

• Scitex has also agreed to **sell its one-half interest** in Contex Graphic Systems Inc. to Continental Can Co. Scitex and Continental organized the company in 1985 to develop graphic design systems.

Continental will pay Scitex $1 million now and $500,000 at a later date.

TECHNOLOGY CALENDAR

• The annual meeting of the **International Newspaper Group**, formerly the International Newspaper Conversion Group, will be Sept. 9-11 at the Marriott Desert Springs Resort, Palm Desert, Calif.

• The **Seybold Seminars' Desktop Publishing Conference** will be Sept. 9-12 at the Santa Clara (Calif.) Convention Center.

• **Impact 1987: Technology on the Move**, the annual conference of the New England Newspaper Operation Association, will be Sept. 17-20 at Killington Village in Killington, Vt.

• The **Western Newspaper Production Conference** will be Sept. 24-26 at the Westin Bayshore in Vancouver, British Columbia.

• **Lasers in Graphics '87**, electronic prepress seminars, will be Sept. 27-Oct. 1 at the Buena Vista Palace in Orlando.

• ANPA's **Pressroom Options IV** technical symposium will be Oct. 19-21 at the Hyatt Regency O'Hare in Chicago.

• A Graphic Arts Technical Foundation seminar, **Color Reproduction: How Color is Perceived from Transparency to Press Production**, will be Oct. 24 at the Stouffer Concourse Hotel in Arlington, Va.

• Another GATF seminar, **Web Offset Press Operating and Troubleshooting**, will be conducted twice: Nov. 5 at the Quality Inn in Towson, Md., and Nov. 7 at the Franklin Plaza Hotel in Philadelphia.

• **Composition Technologies**, a typography seminar, will be Nov. 9-10 at the Key Bridge Marriott in Arlington, Va.

• **Graph Expo '87** will be Nov. 15-18 at McCormick Place in Chicago.

• **Print Outlook '88**, will be Dec. 9-10 at the Crystal Gateway Marriott Hotel, Arlington, Va.

• **The 1987 Microcomputer Graphics Show and Conference** will be Dec. 16-18 at the Javits Convention Center in New York.

Newsplate

presensitized offset plates are prepunched for you!

This gives you speed and convenience in getting to press faster, with absolutely no chance of punching inaccuracies!

Likewise, Newsplate's factory-applied coating frees you of the need to mix chemicals on the spot. This eliminates any possible coating inconsistencies, and, not incidentally, does away with messy roller coaters and punch/coaters.

Thus Newsplate cuts out two time-consuming steps in makeready from package to exposure, and eliminates two problems as well. It offers you the security of hassle-free plate processing, backed up with a two year shelf life—for dependable operation today, tomorrow, next year and the year after!

That's not all. Newsplate's presensitized coating is applied to Hoechst's tough electrochemical grain: a powerful combination that offers sharp dot reproduction for clean, clear images and pressruns you can count on of 250M+ impressions.

Now you've got a lot of powerful reasons to put Newsplate in your pressroom. Call us for more information.

Newspapers brace as newsprint prices continue to spiral rapidly upward

With consumption increasing and newsprint stocks tightening, North American newspaper executives weren't surprised by recent price increases. What has been somewhat unnerving is the swiftness with which the price increases have come. Mills that were selling newsprint for $535 per metric ton at this time last year are now—after two rounds of increases—charging $610 to customers in the Eastern United States, with minimal discounting.

And some observers believe the list price may reach $700 a ton by the late spring of 1988.

More expensive newsprint will have a widespread impact on newspapers' operations, their executives say. Newsprint conservation is again in vogue, and tighter stories and smaller newsholes soon may be.

Newspapers are also working to reduce waste by handling newsprint rolls more carefully and double-checking bundle counts to cut down on wasted papers.

In addition, although many publishers say they are loath to do it, newspapers likely will attempt to pass along the higher newsprint prices to their advertisers and subscribers.

Smaller newsholes might not be noticeable to the average newspaper reader, and some might even prefer shorter stories, but advertising price increases and higher subscription rates would come at a time when the newspaper business is working to hang on to its share of advertising dollars and to bolster stagnant circulation numbers.

Also, "In these low inflationary times, it will be more difficult to pass those kinds of increases on to the reader or the advertiser," said Douglas H. McCorkindale, vice chairman/chief financial and administrative officer for Gannett Co. and a member of the ANPA Newsprint Committee.

Committee member Grover J. Friend, president of Calkins Newspapers in Levittown, Pa., said that "expenses and costs will have to be watched more closely." "We've enjoyed a period of lower newsprint prices, and now there will be pressure to cut costs in other areas," he said. "I don't foresee newspapers taking on drastic steps. . . . We've had some warning this was coming for the past year to 18 months, so I believe people have been preparing for it."

Another problem is that in 1988 publishers will confront a once-every-four-years situation in which coverage of a U.S. presidential election campaign and the Olympic games has been known to dictate additional newsprint consumption. In 1984, for example, U.S. dailies used 8.5 million metric tons of newsprint, compared with 7.9 million tons a year earlier. That 8-percent increase compared with 3.8 percent in 1983 and 2.3 percent in 1985.

> *"Basically, there is no new supply, and demand has been increasing steadily at a rate of about 2 percent a year."*

Also in 1984, suppliers raised newsprint prices from $500 to $535 a ton, and that price held until late last year [**pressTime**, Nov. 1986, p. 70].

After such a long period of stability, prices were due to climb, according to many observers, but they say the ascent has been unexpectedly steep and rapid.

"What's different this time is that prices are going up a lot faster in a shorter period of time than they had in the past," said William Metzfield, president of Garnett Supply Corp.

At least one prognosticator, Robert L. Johnson of Abitibi-Price Sales Corp., had forecast a rapid succession of price increases. Johnson, senior vice president/marketing, cited the seven failures in 1985-86 to get price increases to stick, which meant reduced profits for shareholders. Once an increase held, he predicted last fall, a number of others would follow.

Today, according to Johnson, supply and demand are "comfortably in balance," and the higher prices are resulting in "healthy operating rates" for Abitibi-Price, the world's largest newsprint producer.

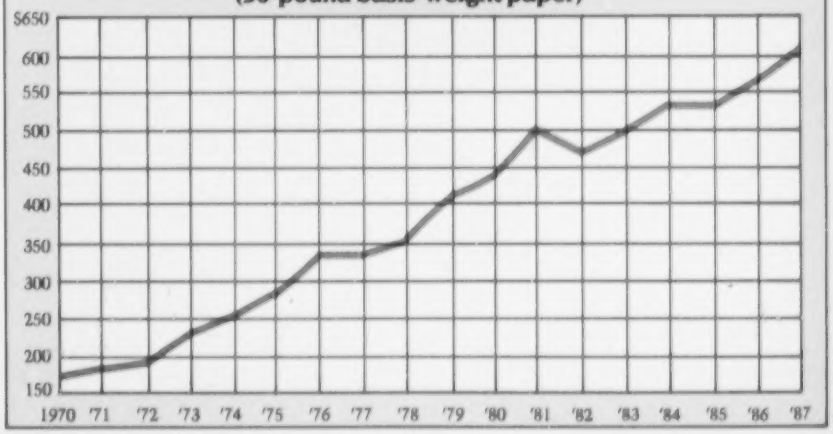
Among others expecting a continuation of the upward spiral of prices during 1988 are Canadian securities analysts John M. Duncanson and Brian Topp. They both foresee prices of $650 per ton as of next Jan. 1.

Duncanson, an analyst with McCarthy Securities Ltd. in Toronto, noted that because mills traditionally give customers about 90 days' notice of price hikes, announcements could come as early as late this month.

Topp, vice president of Capital Group Securities Ltd. in Toronto and a newsprint analyst, said he believes the list price may reach $700 by June 1, 1988.

"The main problem is supply and demand," Topp said. "Basically, there is no new supply, and demand has been increasing steadily at a rate of about 2 percent a year. Operations are being pushed to full capacity now, and any major new growth would cause major problems. There has not been any major [mill] construction since 1983-85. . . . Major new expansions have been announced, but it will be 1989 or 1990 before those have an impact."

Eastern U.S. Newsprint Prices Per Metric Ton (1970-87)
(30-pound basis-weight paper)



Alberto Pacheco

Those projects were postponed by mill executives who said the failure to secure price increases in 1984 and 1985 meant less money to invest in capital improvements.

According to ANPA's Newsprint and Transportation Department, newsprint mill projects scheduled for completion between now and 1991 will add a net 1.3-million metric tons of capacity for North America [**presstime**, Aug. 1987, p. 54].

Factors other than supply and demand have come into play as well, according to the analysts and others who track newsprint prices. The weakening U.S. dollar has made the North American market less attractive to so-called "off-shore" newsprint makers.

Scandinavian and other countries until recently offered a "spot" market of newsprint that gave newspaper executives leverage with North American producers and kept the market more competitive.

But because the U.S. dollar now buys less overseas, "you just don't have the spot tonnage being offered by the Finns and the Swedes and others that you had a few months ago," analyst Duncanson said. "We now have a very tight market, and the deep discounting that you saw the past few years is disappearing."

No one interviewed by **presstime** said shortages are looming. However, because demand and supply are so even, several said that a serious disruption in newsprint production could lead to shortages. "Every ton being made is being bought," observed Johnson of Abitibi-Price.

A spot check of a half-dozen newspapers and newspaper groups indicates that a few papers, anticipating the price increases and possible shortages, have stockpiled newsprint. However, most did not—usually for lack of storage space. In fact, ANPA's statistical sample of newsprint inventories showed a 45-day supply in July. Stocks were at the same level in July 1986.

Gannett's Metzfield said he believes the stockpiling, what little there has been, was more of a hedge against possible strikes than fears of escalating prices. With the exception of a few scattered strikes, though, labor disputes have been settled without serious work stoppages.

Metzfield, who buys 840,000 metric tons annually for Gannett newspapers, said his company is viewing the increases as a "normal course of events."

Other newspaper executives said they, too, are taking the increases in stride but believe the higher prices will cause problems for some newspapers.

"A newsprint price increase is always a burden, but it's especially a problem for newspapers in the Southwest where we are having economic problems due to the oil industry," said James M. Moroney, chief executive officer of A.H. Belo Corp., which publishes The Dallas Morning News.

Moroney, chairman of the ANPA Newsprint Committee, said newspapers in that area will have less to spend on newsprint because economic conditions have forced advertisers to cut back on expenditures. Historically, he said, newsprint and labor have accounted for 75 to 80 percent of the overall expense of operating a newspaper.

"I don't think this will ever change," Moroney said of the cycle of oversupply and low prices giving way to tight supplies and higher prices. "It's like a roller coaster."

He said smaller newspapers have a particularly "rough time" in such shortages because they purchase newsprint in smaller quantities and thus are more susceptible to steadily rising prices.

Stanley H. Stauffer, chairman of Stauffer Communications Inc. in Topeka, Kan., and a member of the Newsprint Committee, said he takes the view that newsprint price hikes are uniformly difficult for newspapers to accept, regardless of circulation size. "Newsprint costs are relative," he said. "I don't feel it [another increase] will impact smaller newspapers any more than larger ones. It's still money out of your budget."

—Rosalind C. Truitt

Labor contracts signed at six mills

Canadian Paperworkers Union members have ratified three-year agreements at six Eastern Canadian newsprint mills, five of which had been the scene of job actions earlier this summer.

The mills are:

- The Gatineau Quebec, Trois-Rivieres, Quebec, and Dalhousie, New Brunswick, mills of CIP Inc. They had been shut down for five days in late July because of a strike.
- The Amos, Quebec, mill of Donohue Normick Ltd. A strike had closed the mill for about a month, ending in early August.
- The Thorold, Ontario, mill of Ontario Paper Co. Ltd. Another union, the International Association of Machinists, had forced the mill to shut down for two shifts in late July.
- Boise Cascade Canada Ltd.'s Kenora, Ontario, mill.

All of the agreements with the CPU were along the lines of an earlier one at Abitibi-Price Inc., which called for wage increases of 25 cents an hour in the first year, 45 cents an hour in the second and 4.5 percent in the third. That will mean a total wage increase of 9 percent over three years [**presstime**, Aug. 1987, p. 52]. □

Newsprint booklet

"Newsprint Statistics 1986" has been published and is available from ANPA's Newsprint and Transportation Department at The Newspaper Center, Reston, Va. The booklet contains data on U.S. daily newspapers' newsprint consumption, supply and sources, as well as the capacity of newsprint mills.

Financial report of paper companies, first six months of year

Net income (in thousands of dollars)

	1987	1986	% Change
Abitibi-Price Inc.	$ 58,100	$ 50,200(a)	+ 15.7

Consumption jumps 5.7 percent in July

Newsprint consumption continued its steady rise in July. Consumption by all U.S. users increased 5.7 percent, while U.S. daily newspapers used 8.2-percent more newsprint than in July 1986.

For the first seven months of the year, consumption was up 2.5 percent for all users and 3.9 percent for U.S. dailies.

Newsprint inventories for newspapers in ANPA's statistical sample totaled 45 days in July, the same as a year earlier. However, stocks of North American mills were 30-percent lower.

Canadian production in July, affected by some work stoppages, was 3.2-percent below year-earlier levels. On the other hand, U.S. production was up 5.1 percent during the month.

The Canadian operating rate was 92 percent in July, compared with the U.S. rate of 93.2 percent.

Shipments from Canadian mills increased 2.7 percent in July and 6.1 percent for seven months. Canadian shipments to the United States grew 3.2 percent and 5.7 percent, respectively.

Domestic shipments from U.S. mills exceeded last year's by 7.6 percent in July and 4.6 percent for seven months.

Dailies publish despite tornado

The tornado came roaring through Edmonton, Alberta, at 3:07 p.m. on Friday, July 31. It ripped up a subdivision and tore up part of an industrial park where the printing plant of the Edmonton Journal is located.

The printing plant was undamaged, but electric lines were down, and the presses were useless. Electricity also was out in the downtown editorial offices. It was apparent it would take herculean efforts to produce the next morning's paper.

The disaster was a massive one: 26 people killed, 300 injured and 1,000 left homeless, with damage estimated at $150 million.

The Edmonton Sun also was confronted with the multiple problems of coping with the biggest natural disaster in the city's history, although the fact that the Sun does not publish a Saturday edition meant it did not have to scramble quite to the extent its rival did.

Journal Publisher William Newbigging abandoned plans to publish the normal 76-page Saturday paper and decided to go instead with a 12-page, all-editorial-matter special edition. Thirty-five reporters and photographers were dispatched to cover the story.

At first, the editorial offices functioned with the aid of flashlights and candles. Around 7 p.m., electricity came back to the downtown offices, and the staff was able to use computers and composing equipment.

The printing plant remained out of commission, however. After determining that the press capacity of two nearby newspapers was inadequate, the Journal called on the Calgary Herald, which like the Journal is owned by Southam Inc.

Journal Editor George R. Oake chartered a Lear jet and flew the page negatives along with six Journal pressmen 200 miles south to Calgary. About 150,000 copies were printed there, compared with a normal Saturday press run of just over 170,000, and they were shipped to Edmonton in three rental trucks.

The special edition contained numerous stories and 37 photographs, 15 in color, of the tornado and the destruction it caused. Single copies sold out within minutes, and to satisfy demand, the Journal reprinted the disaster edition on Aug. 7 and included it as part of the regular paper.

In covering the disaster, the Sun faced a different kind of problem. Because the tabloid paper does not publish on Saturdays, the whole staff was off duty when the tornado struck that Friday afternoon, said Publisher Patrick A. Harden. But, true to newspaper tradition, people from all departments reported for work, with photographers and reporters going directly into the field.

Harden decided against publishing a special Saturday edition. It would get in the way of the Sunday edition, he reasoned, and would have to be printed at the Sun's sister paper, also in Calgary.

By mid-afternoon Saturday, power was restored to the Sun's plant, and the Sunday edition was printed on schedule. It sold 35,000 more copies than normal, for a total of 156,000 copies sold—a record, said Sun General Manager Kenneth M. King.

That weekend, the Sun announced formation of a tornado relief fund and began planning for a high-gloss magazine carrying pictures and stories of the tornado and its aftermath.

About 25,000 copies of the magazine, "Black Friday," were placed on sale Aug. 10, with "every penny" of the proceeds going to the tornado relief fund, Publisher Harden said.

Sale of the 36-page magazine, at $3.50 a copy, had raised $90,000 by the third week in August, and another 40,000 copies were printed Aug. 24 to satisfy "phenomenal" demand, Harden reported. *—Gene Goltz*

Edmonton Journal photographer Steve Simon captured this dramatic image.

Troubled triweekly closes in Cookeville; some litigation ends

The Dispatch, a triweekly newspaper in Cookeville, Tenn., ceased publication July 19.

The newspaper's owner, Osia Williams, had filed for Chapter 11 bankruptcy protection in 1984. John C. McLemore, a court-appointed reorganization trustee, said The Dispatch was losing about $2,000 a week. "Common sense said to stop it," he said.

According to McLemore, Park Communications Inc. had an option to purchase The Dispatch but did not exercise it because Park was rebuffed when it attempted also to acquire Cookeville's other paper, the daily Herald-Citizen.

A second newspaper owned by Williams, the weekly Cumberland (Tenn.) County Times, is operating profitably and is for sale, McLemore said.

The Dispatch had been embroiled in legal controversy with the Herald-Citizen [**presstime**, July 1985, p. 54]. With the demise of The Dispatch, lawsuits involving the newspaper are terminated although suits involving individuals will continue, said McLemore, who is a Nashville attorney. He said the Dispatch received a $45,000 settlement in a suit it filed against the Audit Bureau of Circulations over audits of the Herald-Citizen. □

UPI still cleaning up debris from upheavals, bankruptcy

United Press International in late August was preparing a settlement offer to end a $4-million defamation suit filed by former UPI Editor in Chief Malcolm Hughes.

Hughes alleged that in a November 1986 conference telephone call among company executives, then-UPI President Milton R. Benjamin maligned him by saying Hughes was trying to "hold up" UPI with demands over salary and severance pay. Hughes resigned from UPI the day after the conference call.

Christopher J. Smith, UPI director of corporate communications, said the wire service made Hughes an offer upon his leaving the company, but Hughes refused it. "The company was rather slow to respond again," and Hughes subsequently filed suit, Smith said.

UPI has denied the defamation charges.

Meanwhile, UPI has been declared not liable in some older libel suits against it. The cases are tied up in lingering bankruptcy proceedings.

At issue are six suits filed before UPI sought Chapter 11 bankruptcy protection April 28, 1985. UPI General Counsel Michael E. Veve said the U.S. Bankruptcy Court has relieved New UPI Inc.—holding company of UPI since its purchase in June 1986 by Mario Vázquez-Raña—of any responsibility relating to those libel claims.

UPI's libel insurance company, Mutual Insurance Co. Ltd. of Hamilton, Bermuda, has argued that Mutual, too, should be relieved of responsibility. The court has not ruled on the matter.

Lack of a decision has held up payment of money to large, unsecured UPI creditors left holding the bag when the wire service under previous ownership went to bankruptcy court. Funds that Vázquez-Raña set aside for payment to them, as part of a settlement allowing him to buy UPI [**presstime**, July 1986, p. 19], will not be distributed until the libel issues are resolved, Veve said.

With interest, the amount set aside has grown from about $9.5 million to $10.3 million, according to the company.

Outcome of the libel suits could have an impact on how much of that amount creditors ultimately will receive, Veve said. □

Editor-educator named to head API

William L. Winter becomes the sixth director in the 41-year-history of the American Press Institute on Sept. 1, moving to the Reston, Va., training facility from the executive editor's post at the Pasadena (Calif.) Star-News.

Winter, 43, was chosen after a nationwide search to fill the vacancy created by the resignation of Frank Quine, which took effect July 1 [**presstime**, June 1987, p. 96]. A native of Jonesboro, Ark., Winter has a doctorate in higher education from Kent State University.

He has held newspaper editing jobs in Akron and Louisville, and worked as bureau chief for the Associated Press in Louisville. He also has taught journalism courses at Kent State, Central Michigan University and San Antonio College. □

Carr leaving NNA's ad-rep firm; credited with overseeing turnaround

Eugene G. Carr is resigning as president of American Newspaper Representatives Inc. to pursue other interests. ANR, an advertising "rep" firm representing more than 7,000 weeklies and small dailies, is a wholly owned subsidiary of the National Newspaper Association.

Carr, former executive vice president of the North Dakota Newspaper Association, joined ANR in November 1985. At that time, Carr said, he made a two-year commitment to the firm. He will remain with ANR during the transition to a new president.

According to NNA, the ANR Board of Directors accepted Carr's resignation "with regret," noting that he had led the company during "a difficult two-year economic period to where it was operating profitably." The search for a successor will be made by the ANR board, which is headed by NNA Executive Vice President David C. Simonson.

During Carr's tenure, ANR computerized its advertising data and order processing and moved its headquarters from Brooklyn, N.Y., to Minneapolis [**presstime**, Dec. 1985, p. 51]. The firm also has sales offices in New York City, Detroit and Chicago. □

Kit is available to help in observing Newspaper Week

National Newspaper Week will be observed Oct. 4-10 with the theme "Your Newspaper: People Serving People."

Newspaper Association Managers, the organization for managers of state, regional and national press organizations, annually sponsors the observance and has available a press kit with suggestions on how newspapers can observe the week.

The kit also contains material for the Oct. 10 observance of International Newspaper Carrier Day, sponsored by the International Circulation Managers Association.

The kit costs $6, plus $1.50 for postage and shipping. Contact the NAM office at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041; (703) 648-1123. □

Merger studied

A joint committee is considering a possible merger of two regional newspaper organizations, Allied Daily Newspapers and the Pacific Northwest Newspaper Association.

Allied is a multi-service organization based in Tacoma, Wash. PNNA, whose focus is newspaper labor and personnel relations, is headquartered in Portland, Ore. Overlapping services and memberships prompted the merger discussions. □

Changes in command

Newspaper Association Managers, at its annual convention Aug. 9-13 in Durango, Colo., elected the following new officers:

- *President*—Jerry W. Friedheim, American Newspaper Publishers Association
- *Vice President*—Kathy T. Chaffin, Georgia Press Association
- *Secretary*—Ken Drum, Ohio Newspaper Association
- *Treasurer*—Stephen E. Palmedo, Newspaper Association Managers. □

We Are The Software Firm That Incorporates Accounting Principles & Human Resources Into Newspaper Management Systems

We're Collier-Jackson, and we've spent 12 years developing advertising, circulation, financial, accounting and personnel systems to help newspapers organize, process, analyze and present information more efficiently, more effectively.

We believe it is the creative ideas of our people that make our products so successful. People who know as much about ROP color linage as they do about reducing CPU, I/O and elapse times.

You see, it's the combination of newspaper expertise, accounting principles, human resources and software know-how that sets us apart as a company and differentiates our software from all others.

AWARD-WINNING SOFTWARE

Our unique way of working means our installation base is growing at a rapid pace.

Work which earns us numerous ICP Awards for products that have clearly evidenced their acceptability in the marketplace and their leadership as proprietary software systems.

Growth that keeps us ranked as an Inc. 500 and ICP 200 company.

It's the payoff for dedication. And it makes for satisfied customers in newspapers throughout the United States.

FULL RANGE OF PRODUCTS

Each of our newspaper management systems is designed to do business the way you do business. And they work alone or together to better work for you.

CJ/CIRCULATION™
CJ/ADVERTISING™
CJ/ADVANCED GENERAL LEDGER™
CJ/ACCOUNTS PAYABLE™

60,000-circulation daily brings estimated $155 million

Several newspaper analysts estimate that the winning bid for the Morristown (N.J.) Daily Record was $155 million.

The price, disclosed by Ingersoll Publications Co. as being "in excess of $100 million," is estimated to be 5.3 times the 60,243-circulation daily's estimated annual revenues of $29 million. The sale price and the revenue multiple rank the transaction as one of the largest ever for a newspaper that size.

"It's very high. I guess I would say it's roughly twice as much as we've seen typically for newspapers of this size and this type of market," said Bruce Thorp, an analyst with the Washington, D.C., brokerage firm of Lynch, Jones & Ryan.

Rival contenders were Malcolm A. Borg, chairman of the Bergen Record Corp. of Hackensack, N.J., and William Dean Singleton, president of Garden State Newspapers Inc., a subsidiary of his MediaNews Group. Their bids were believed to have been close to $125 million or more.

The Daily Record has been owned by the Tomlinson family for 87 years.

Mark Goodson, of television game show fame, actually will be putting up the money for the morning paper, although the purchase was negotiated by Ingersoll Publications, management arm of Ingersoll Newspapers Inc.

BUSINESS ROUND-UP

Ralph Ingersoll II, chairman and chief executive officer of Ingersoll Newspapers, will have operational control of the Daily Record. This arrangement is being used in other situations, such as the New Haven (Conn.) Register, which Goodson owns but Ingersoll manages under terms of a contract.

The late Ralph Ingersoll Sr. and Goodson had owned certain newspapers jointly, but under an agreement signed in July 1986 Goodson and Ingersoll Newspapers restructured the holdings by selling the minority interests in their properties to each other.

The agreement also established options for one to buy the other's newspaper holdings at the time when either Goodson or Ralph Ingersoll II died.

In other recent business news concerning newspapers:

• Singleton's **Garden State Newspapers Inc.** bought The Johnstown (Pa.) Tribune Publishing Co. and its holdings from the Mayer family and the Anderson H. Walters Trust.

Included in the deal are The Tribune-Democrat of Johnstown (morning, daily circulation 50,592); The Columbia (Pa.) News (evening, 4,313); two free-circulation weeklies in Pennsylvania, an AM and a FM radio station, and two real estate companies.

The selling price was not disclosed, but analysts estimated the price for the two dailies to be about $73 million, based on industry averages.

• Toronto-based **Hollinger Inc.**, through its American Publishing Co. subsidiary, bought two more small U.S. daily newspapers. They are: The Stillwater (Minn.) Evening Gazette (5,250), acquired from the Easton family that had owned it since 1870; and the Waynesboro (Pa.) Record Herald, acquired from the Chalfant family. Prices were not disclosed.

• One of the few places in the United States where a Sunday-only newspaper is published now has competing Sunday papers.

The Wilkes-Barre (Pa.) Times Leader, previously a six-day morning paper with circulation of 46,961, began publishing a Sunday edition Aug. 9 with a 128-page inaugural edition. The Times Leader is owned by Capital Cities/ABC Inc.

Wilkes-Barre's Sunday-only paper, which dates from the early part of the 20th century, is the Sunday Independent, which has circulation of about 65,000 [**presstime**, Nov. 1986, p. 44].

• Billboard Publications, acquired by **Affiliated Publications Inc.** in April, agreed to buy Plants, Sites & Parks magazine for an undisclosed price. Affiliated owns The Boston Globe. □

Promotion/Marketing Services Director

for a strong medium-sized daily and Sunday, with TMC and satellite products, in a vibrant Eastern market.

Here's what needs to be done:

1. Create and execute plans to promote the newspaper to local and national advertisers, as well as to readers.

2. Take the original research already done, plus secondary data, and make usable, effective tools for the ad staff to use on the street.

3. Assist the Marketing Director and Retail Ad Manager in showing the ad staff how to sell with this information.

4. Identify account and media targets, and create presentations to convert their dollars to newspaper revenue.

5. Plan and execute all details of the next cycle of market research, with the vendor you'll help choose.

This position reports to the Marketing Director, has an assistant to help, and will be backed up with a budget to do the job. It will also include working with the ad agency and the rep firm.

So you can see we are not looking to train someone. We need a proven pro who will hit the ground running, and will produce.

The right person will be compensated accordingly, and will have an attractive package of benefits.

All inquiries will be treated in confidence. Send Performance History to:

P.O. Box 504, Southport, CT 06490.

Correction

An article in the June issue about suburban competition incorrectly reported that The Baltimore Sun planned to begin zoned editions this year in competition with The Capital in Annapolis, Md.

The Sun has been publishing a zoned edition for Anne Arundel County, serving the Annapolis area, for 10 years. It plans to expand it from semiweekly publication to triweekly this month.

Presstime regrets the error. □

over-set

Newspaper numbers

7—annual percentage rate of replenishment in the ranks of U.S. newspaper reporters by new college graduates, according to The Newspaper Fund.

13—percent of adult Americans reading two or more newspapers on an average weekday, down from 24 percent in 1967.

2.8—U.S. newspapers' lost-workday injury rate per 100 full-time employees in 1985. Equivalent injury rate for all the private sector was 3.4 per 100.

88—percent of member newspapers reporting in a recent ANPA survey that they offer pension coverage to employees.

A worrisome signal from student leaders

Only about half of high school student leaders spend as much as 10 minutes reading a daily newspaper, according to a survey of teenagers attending the 51st conference of the National Association of Student Councils.

Forty-one percent said they spend 10 to 20 minutes reading the newspaper, and slightly less than 10 percent read one for a half hour or more each day.

Thirty-nine percent read a paper for fewer than 10 minutes daily, and a tad above 10 percent don't read one at all.

About 1,400 student government officers, school editors and band leaders were polled during the NASC's summer conference in Amherst, N.Y. They were asked their opinions on a range of issues that also included credibility of institutions.

The hometown daily newspaper ranked low on the credibility scale, with only 15.7 percent of respondents calling it their most believable source of news. In contrast, 58.2 percent of the students rated national network television news as the most credible. Local television news rated about the same as daily newspapers, 16.6 percent.

C. David Rambo

Eat, drink and read funnies at this Sunday brunch

Lots of restaurants provide Sunday brunch patrons with a complimentary paper to read while they consume their coffee and eggs Benedict. But a hotel restaurant in the Washington, D.C., area boasts that it offers its brunch customers "America's largest selection of Sunday newspapers from around the United States under one roof."

Many area residents are "transplants" from other parts of the country, explains Dennis R. Layer, director of marketing for the Radisson Mark Plaza Hotel in Alexandria, Va. Hotel management thought it would be "kind of refreshing" for them to have hometown papers to read while dining, he said. Working through a local distributor, the hotel gets papers from about two dozen major cities.

For the "Sunday Funnies Brunch," the hotel sets up an authentic-looking newsstand at the entrance to the restaurant. The theme dominates inside, too, as waiters wear aprons adorned with comics characters and placemats are laminated comics pages. The menu features such things as "Hot Off the Press" waffles, "Dagwood's Deli" sandwiches, "Popeye's Spinach Patch" salads, and Brenda Starr's "Starr Struck Egg Dishes." In the photo above, waitress Anna M. Espejo chats with (from left) Dorothy P. Heater of Sebring, Fla., and Maria C. Caiozzo and Michelle R. Gries of Alexandria, who are reading The Philadelphia Inquirer.

What would Mark Twain have said?

"Newspaper reporters have the shortest life expectancy of any occupational group, next to coal miners, waiters, and bartenders."

Sez who?

The intriguing statement was published in the July 15 edition of Media Industry Newsletter, a media and marketing trade publication circulated among media executives.

MIN attributed the information to the July issue of Longevity, a monthly newsletter published by Omni Publications International Ltd. in New York City. Longevity got the information from an article in the November-December 1986 issue of Complementary Medicine Magazine, published in Gig Harbor, Wash. The free-lance writer who contributed the story to the magazine says she got the data from the book *Lifespans*, by Frank Kendig. The book contains no such statement.

It must be such frustrating, fruitless attempts at fact-checking that lead reporters to an early grave, maybe.

Despite blindness, he carries on

The snow is the worst obstacle, says blind newspaper carrier John A. Miller. When it snows a foot or more in Omaha, many of the contours and landmarks he customarily depends on to find his way along the delivery route are obliterated.

"Then I have to rely even more on my memory," says Miller, who has an afternoon route for the Omaha World-Herald. "I have to remember it's so many feet to the next house."

Miller was three and a half years old when he was stricken with retinitis pigmentosa, a rare hereditary eye disease that results in blindness. He can now see well enough only to distinguish light from dark.

He carries a white cane while walking the 50-customer route in his own residential neighborhood. He uses billing cards marked in Braille.

The 17-year-old high school senior was awarded one of two Gilbert M. and Martha H. Hitchcock Foundation $1,000 scholarships to be used to attend college. The scholarships, named after the founder of the World-Herald and his wife, are given annually to outstanding carriers.

Phil Johnson, Omaha World-Herald

SOME NEWSPAPERS ARE ONLY PRINTING HALF THE STORY.

The papers that don't use Western Lithotech in the plateroom. They save a few pennies here and there and pay the price of quality. From plates going blind to total press stops.

But quality newspapers know the whole story. Because they depend on the *total systems* supplier that has been the leader for over 60 years. Depend on the famous plate names... Front Page... Metro Express... Final Edition... and more. On the industry's best chemistry and hardest working processors.

Plus Newstek,™ the new extra long run plate system designed for sharp 4-color inserts and supplements.

All backed by the most responsive technical team in the business.

Get the whole story.

Mutual libel seminars save your paper money.

The best way to avoid the expense of libel and privacy suits is to avoid having such suits filed in the first place, but keeping pace with the rapid changes in libel and privacy law makes this difficult. That's why the personnel of so many newspapers attend the seminars on the prevention of libel and privacy suits offered by the Mutual Insurance Company of Hamilton, Bermuda.

"How To Prevent Libel and Privacy Suits" informs newspaper professionals about the current status of libel and privacy law in order to prevent costly suits. The one-day seminar offers legal expertise and explanations of recent court decisions involving libel, public and private people, actual malice, negligence, embarassing truths, lies, distortions, and mean methods, in multimedia presentations and question and answer sessions.

Offered to publications insured by Mutual, this seminar enables journalists to do their job with a minimum of risk. For more information, contact Barbara Dill, (305) 856-2965.

NO MORE EITHER/OR.

You don't have to choose between paging and color. Not anymore. The 75,000 cph Goss Colorliner provides both with its stacked unit arrangements. Plus optimum print quality from short couple-to-couple web leads, three-form roller inking and direct-to-plate dampening.

And you can expand color economically by adding couples or stacked units when requirements change—without sacrificing paging.

The menu-driven, touch-entry Advanced Press Control System (APCS) accelerates makeready and improves on-the-run productivity. And microprocessor-based information systems monitor and log operations for management evaluation.

Paging and color flexibility. It's not either/or anymore with the Goss Colorliner press.

For more information, contact Goss Newspaper Products, Graphic Systems Division, Rockwell International, 3100 South Central Avenue, Chicago, IL 60650. 312 656-8600.

Technological Advances for All Newspapers

Technology to the rescue! Today any newspaper, regardless of printing process, can look and feel cleaner and fresher than ever before possible. U.S. Printing Ink technology makes it happen.

Letterpress tradition no longer needs to be associated with readers' sooty fingers. Our *Aqua-Kleen** letterpress news inks have the waterbased emulsion technology which reduces rub by as much as 50% to run clean, *stay clean,* from news stand through a "clean hands" read. Our Civilox* version stays equally clean. And all *Aqua-Kleen* inks cut mist by up to 50%.

If offset quality is your strength, cleanliness comes to you, too, with our *KleenSet** line of technologically advanced low-rub inks. Refreshingly clean formulations deliver superior rub resistance, control dot gain, and avoid roller and blanket build-up.

Switched to flexography? Our *Aqua-News** line offers you just the right waterbased flexo inks that not only look and feel as fresh as a babbling brook, but print crisper halftones and more uniform solids than you'd expect.

US U.S. Printing Ink

INDEX | VOLUME 9, NUMBER 10 | OCTOBER 1987

Special Report *Employee training in the newspaper business has increased significantly during the 1980s. Today, the greatest emphasis is on training new managers and giving advertising and circulation staffs better selling skills. Many newspapers offer in-house training, and there are numerous organizations that attempt to meet the need for off-site instruction. One problem is finding time for employees to attend classes; another is measuring the results. Nonetheless, the outlook is for newspaper training to continue to expand as a means of pumping up productivity.* **20**

Long distance choices *Where once there was one, today there are 561 long distance telephone companies vying for newspapers' business.* **6**

Some type of a trend *Many newspapers are using larger type to improve legibility, but thus far the aging population has not been a prime reason.* **12**

Technological risk takers *The newspaper business has not lacked for pioneers willing to act as guinea pigs to test everything from phototypesetters to presses.* **16**

Competing for talent *Journalism educators sound alarms about future competition for top students and their tendency to shun newspaper careers.* **28**

Newsrack attacks *The U.S. Supreme Court's decision to hear a newsrack ordinance case focuses attention on the ways governments try to regulate the racks.* **32**

Essay: Remove reader obstacles *Some headlines, cutlines and leads are the sources of frustration to fickle readers, says Publisher John Ginn.* **34**

Profile: Thom Greer *As managing editor of The Plain Dealer in Cleveland, this former sports writer and editor now calls the plays for a staff of 325.* **36**

Florida ad tax flip-flop *Gov. Bob Martinez has a change of heart and calls for repeal of a new law imposing tax on advertising and other services.* **40**

Decision rings newspapers' bell *Press praises Judge Harold H. Greene's decision on information services, but possible appeals and hearings loom.* **42**

Rearranging the ABCs *The Audit Bureau of Circulations is planning to make significant changes in its venerable newspaper reports format.* **56**

Wage study proceeds *Newspaper organizations finalize plans for a nationwide newspaper salary survey funded by ANPA.* **58**

CHAIRMAN'S CORNER

Tell us what you think about ANPA services, directions

Your Directors want to know what you think of ANPA and what you would change.

This fall we will ask you directly to tell us.

In November and December, more than 7,000 newspaper executives will receive a brief, targeted questionaire seeking your views on current ANPA services and on future directions you believe ANPA should follow.

This survey of members and some non-members is being directed by Lloyd Schermer, Lee Enterprises chairman and ANPA treasurer, and his fellow ANPA Directors John Montgomery, Bill Cowles and Bob Erburu. The Board engaged the Gallup research firm to manage the survey.

George W. Wilson

It has been 10 years since ANPA surveyed its membership. The Association has changed dramatically since then, partly in response to survey findings and partly in response to a changing world. Directors are more deeply involved in Association affairs. The Board adopted a strategic planning system that encourages members of ANPA standing committees to help shape policies and program priorities. Presstime was launched. Professional staff has been added to help us deal more effectively with laws and regulations that affect newspapers. ANPA's research activities were moved to The Newspaper Center in Reston, Va.

This survey will give ANPA Directors and staff valuable information we will use to allocate ANPA resources better and to provide the level and kinds of services you want for your newspapers. That is why we need and want your opinions.

Our formal planning approach, outreach programs, member comments and the increased involvement of newspaper executives in committee work provide continuing feedback on Association priorities and policies. But we believe there is no substitute for periodically going directly to you and formally asking, "How is ANPA doing? How can we do better?"

Gallup will survey all publishers and group CEOs and will selectively survey additional newspaper executives. It will analyze results and report its findings to the Board in the spring.

I cannot overemphasize the importance of this survey and the vital need for you to contribute your opinions and your counsel. ANPA is, after all, *your* Association.

We are a diverse and independent lot, with many different priorities and concerns. But we all have in common the desire to produce high quality, economically healthy newspapers that serve readers and advertisers well. ANPA, our mechanism for doing collectively things we would not do so well alone, can be a powerful means to help us achieve those ends.

When you receive a questionnaire from Gallup, give us your views. Please respond fully and promptly.

We will heed your guidance.

George W. Wilson

A New Printer Emerges

America's fastest growing printer grows in response to customer needs.

Economic factors fluctuate, market requirements intensify, new business patterns evolve and new players emerge.

America's printing buyers are no strangers to this sequence of events. Magazines, catalogs, free standing inserts and Sunday magazines also have changing characteristics and demands. Market conditions require more definitive press runs both short and long, more targeted distribution both demographic and geographic, and in general a more responsive and flexible way of doing business.

In response to the current and future needs of America's printing buyers, a new printer has emerged, Maxwell Graphics Group. As America's fastest growing printer, Maxwell presently ranks number three in the nation with twelve manufacturing locations.

Maxwell's growth and philosophy is oriented entirely to customer benefit. Our highly experienced and flexible management style can respond quickly to your changing needs. We are totally committed to the highest levels of talent and technology throughout our manufacturing network. We pledge to be the industry's low cost, top quality producer and we are totally supported by one of the world's largest communications firms.

Come to us with your questions, concerns and demands. Let us show you how America's fastest growing printer can respond. Call 800-367-6299 for more information and the number of your nearest sales office.

Long Distance Phone Options

Newspapers balance costs and quality in the marketplace maze

BY MARGARET G. CARTER
presstime staff writer

Until the early 1970s, there was one long distance telephone company in the United States, AT&T. Today, the way the Federal Communications Commission figures it, there are 561.

All are pitching their services to potential customers. And newspapers, like other major long distance users, are being bombarded with telemarketing sales calls.

"We've got everyone racing around and putting pressure on newspapers to try alternatives," says Paul Daubitz, president of ATI Telemanagement, a consulting firm in Newburyport, Mass., that specializes in newspaper applications of telecommunications. It is "easy to succumb" to such pressure, says Daubitz, "because they tell you how good it could be."

Even when AT&T was the only long distance game in town, newspapers sought to contain their long distance costs through such things as dedicated lines to bureau offices and AT&T WATS (Wide Area Telephone Service) lines. There are no up-to-date statistics on newspapers' current long distance choices, but telecommunications consultants say many newspapers are aggressively investigating alternatives.

"I think newspapers are more concerned about their costs than most other businesses I get involved with," says Edwin E. Kirby, a principal in Comtrol Corp., a Lisle, Ill., telecommunications consulting firm that has worked for about 65 Gannett Co. communications properties, including newspapers ranging from the Pacific Daily News in Guam to USA Today.

Kirby estimates that a newspaper that has not previously paid attention to its long distance costs can save between 15 and 20 percent by shopping around.

For newspapers that are big long distance users, that is not small change. For example, Arthur S. Meggitt, manager of technical support and telecommunications for the Star Tribune of Minneapolis, figures that his newspaper would save about $47,000 on its annual $175,000 long distance phone bill if it switches from AT&T WATS service to US Sprint's Ultra WATS service. But that decision to switch carriers is being complicated by the introduction of new AT&T discounted service offerings for major long distance users, Meggitt says.

Cost is the major reason for investigating new service options. But consultants say a newspaper's long distance choices also can affect productivity. If a long distance vendor lacks sufficent circuit capacity and employees frequently get a circuits-busy signal, or the newspaper has too few WATS lines and employees have to queue up to make their long distance calls, that can adversely affect productivity, they say.

Despite all the choices available today, three national companies dominate the U.S. business long distance market. And AT&T still has more than half of the total long distance business pie.

As of last April, The Yankee Group, a high-tech market research consulting firm based in Boston, estimated that AT&T had 60.6 percent of the business long distance market; MCI had 16.1 percent, US Sprint Communications Co. had 10.7 percent and "everybody else" had 12.6 percent, according to Michael E. Dortch, senior telecommunications analyst.

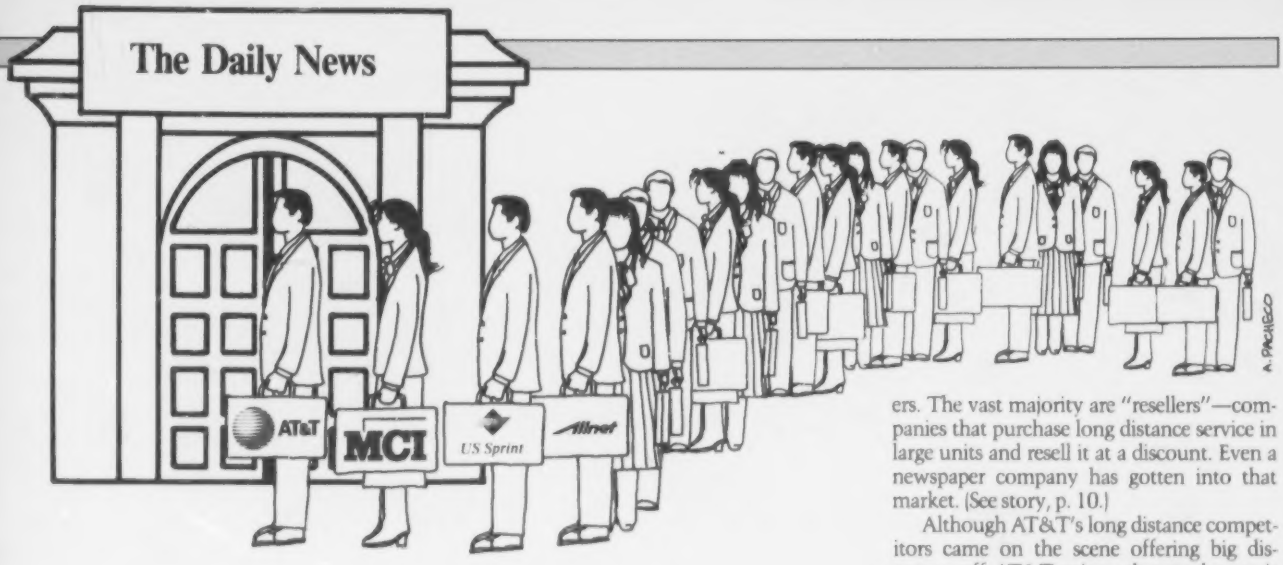
The last time a study of newspaper long distance service was made, AT&T had the majority of that market, too.

According to a 1986 survey by the ANPA Telecommunications Department of ANPA-member newspapers, 14 percent of the responding papers had chosen MCI, 6.5 percent Sprint and 2.5 percent Allnet, another national long distance company. The vast majority of the remainder were still with AT&T.

Why has AT&T retained such a large share of newspapers if they are so cost conscious? "Newspapers are very interested in quality and require quality telecommunications," says consultant Daubitz. Therefore, he says, newspapers have tended to be "more conservative" in their long distance choices.

Take the Chronicle-Tribune in Marion,

Workers of US Sprint lay fiber-optic cable in South Carolina.



Ind., a Gannett newspaper that decided to stay with its AT&T WATS service after testing MCI and Sprint a year ago.

"I just wasn't happy with the quality at that time," says Gary A. Stoffer, operations manager. "To me, dependability and service rate higher than cost *per se* as long as the cost is not completely out of line."

"In the field we are in, we can't afford to have problems. If our service is poor or we are having trouble contacting people or they are having trouble contacting us that is just not going to hack it."

Even the Star Tribune in Minneapolis is not leaping at the chance to save $47,000. Executives there are conducting quality tests before making a final decision.

Telecommunications experts say the quality gap between AT&T and alternative vendors is narrowing, thanks to the construction of new fiber-optic networks, the availability of more circuits in general and better connections to local networks.

At the same time, the price gap is narrowing. In large part, this is due to federal regulatory policy. In addition, AT&T has responded to its discount competitors by introducing a variety of new discount programs of its own, designed for business users.

Indications are that long distance prices will continue to be in flux. The FCC recently proposed to end its rate-of-return regulation of AT&T. Although AT&T's competitors hope this will halt the steep decline in long distance prices, some analysts say it will foster even more price chopping.

Because of the rapidly changing marketplace, telecommunications experts recommend newspapers review their long distance service frequently, even on a yearly basis, to make sure they are still getting the most for their long distance dollar.

"They may be doing everything right. But if they don't check periodically, they won't know that," says Deborah S. Walker, ANPA telecommunications systems specialist. "Long distance tariffs and long distance services have been changing so quickly that even if you did a traffic study two years ago, that might not be valid today."

GROWING MARKETPLACE. Although the changes have accelerated in recent years, they really began in 1963 when Microwave Communications Inc. petitioned the FCC for permission to build a microwave transmission system between Chicago and St. Louis. Six years later, the FCC granted the request, and, in 1972, MCI became the first alternative long distance carrier, providing service between those two points.

A series of subsequent regulatory and legal decisions encouraged others to compete, and before long where there was once a single long distance carrier there were now hundreds. The FCC's current estimate of 561 is based on reports it receives from the seven regional Bell operating companies that were separated from AT&T's long distance operation by the 1984 breakup of Ma Bell.

Of the 47 states in which the BOCs are located, Vermont and Maine have the smallest number of long distance carriers operating, 15; Texas has the largest, 178. The FCC observes, however, that a carrier may concentrate its efforts in serving only a few exchanges or a small portion of a state.

Only a handful of the very largest long distance companies have their own networks and are categorized as common carriers. The vast majority are "resellers"—companies that purchase long distance service in large units and resell it at a discount. Even a newspaper company has gotten into that market. (See story, p. 10.)

Although AT&T's long distance competitors came on the scene offering big discounts off AT&T prices, that no longer is the case. For instance, MCI's initial average discount was "somewhere around 40 percent," says John R. Houser, public relations manager in MCI's Corporate News Bureau. Now, MCI's prices "are on the average of 10 percent lower than AT&T's." He points to an increase in access charges that MCI must pay to local telephone companies as one reason for the dwindling difference.

In 1984, the FCC required local telephone companies to provide network access to all long distance companies on a basis equal to AT&T. Before then, AT&T's competitors had less efficient network connections that required customers to use long access codes when placing a call, but the competitors also had been paying only about half what AT&T paid for access to the local network.

At the same time access costs have been going up for its competitors, AT&T's long distance prices have been coming down. Its prices have dropped more than 30 percent since 1984 largely because the FCC shifted to local customers some of the fixed or so-called "non-traffic sensitive" costs of operating the local telephone system. Long distance carriers traditionally bore those costs.

Because FCC policy restricts AT&T to only a 12.2-percent return on its investment, the agency has ordered the company to reduce its long distance prices as it realized these savings. AT&T is the only long distance carrier subject to profit regulation, a vestige of its days as a monopoly carrier.

At its Aug. 5 meeting, the FCC unani-

According to an ANPA survey, 14 percent of responding papers had chosen MCI, 6.5 percent Sprint and 2.5 percent Allnet. The vast majority of the remainder were still with AT&T.

mously approved a plan to scrap rate-of-return regulation in favor of another regulatory scheme that would cap prices for AT&T services.

AT&T competitors' assessment that the deregulation plan will stop AT&T's price cutting is "foolish," says research analyst Jack B. Grubman of PaineWebber Inc. in New York City. Prices will continue to go down under price-cap regulation, Grubman believes.

"Any deal that is cut will include AT&T continuing to have to flow through any decreases" in local network costs, Grubman says. In addition, AT&T will have an incentive to increase productivity, which also will be reflected in lower prices.

ART OF CHOOSING. When evaluating competing long distance companies, telecommunications consultants say newspapers should look at their own calling patterns, including: number of calls per month, cost, duration, what time of day they are being made and where they are going. Armed with this information, newspaper executives can shop for the company whose rate structure is most beneficial for a given situation.

Consultants say the most cost-effective choice may not be a single service but several different services.

When it began looking into whether it should switch long distance carriers, the Star Tribune in Minneapolis used its personal-computer-based, call-accounting system to help analyze costs supplied by different vendors. The system records all of the newspaper's outgoing long distance calls as they are channeled through its PBX system.

Vendors generally take a customer's monthly bill and make cost comparisons, says Meggitt. But they may make certain "assumptions" that may be false, simply because the bill does not contain sufficient detail, he says. The newspaper's call-accounting system was able to provide a more accurate comparison.

Smaller newspapers that make most of their long distance calls in-state should be sure to point out that fact when talking to vendors, says Helen Y. Craley, owner of a West Chester, Pa., consulting firm Craley Associates. The rate structure for intra-state calls may be entirely different from that for inter-state, largely because of state regulatory requirements.

Craley also urges newspapers to inquire about additional service fees. "Most of the vendors have gotten away from installation and termination charges, but if you don't ask you don't know," she says.

For some newspapers, especially larger

Even a Newspaper is a Long-Distance Carrier

What happens when a newspaper company goes into the long distance telephone business?

For one thing, says Sidney H. Bliss, general manager of The Janesville (Wis.) Gazette, "We are our own best customer."

Gazette Printing Co., which owns the 29,592-circulation evening daily, became a reseller of long distance service about three years ago, following the breakup of AT&T. Several communications consultants "felt that this might well be an opportunity to get in on the ground floor of the telecommunications industry without a tremendous capital investment," says Bliss, who is on the board of directors of the telephone subsidiary.

The company leased the necessary switching equipment, installed it in the basement of its newspaper offices, and Wisconsin Telecommunications Technology Inc. was born. Its full-time staff is made up of a manager, a bookkeeper who doubles as a computer systems manager, and a telemarketing representative. The subsidiary's operations are overseen by the printing company's engineer.

Gazette Printing, if not the only newspaper company to have diversified into the telephone business, is certainly one of a very small number, according to the ANPA Telecommunications Department.

"It's a fun business, but it is a very, very frustrating business in that it seems to change almost on a daily basis," says newspaperman Bliss. "For a very small reseller, which is what we would be classed as, it is very difficult to keep abreast of the bureaucracy."

AT&T's rate-cutting has had an impact on the Janesville operation, as it has on other resellers who have had to reduce their rates to keep competitive. "The profit margins in the business are not what they were three years ago," says Bliss, "but they remain sufficient to generate profit when an acceptable level of traffic volume is achieved."

Currently, the company has about 1,000 customers, about 75 percent of them business users.

The discounts his company offers compensate for the "relatively small" difference in quality compared with what they have been used to with AT&T. "I think the quality issue is becoming less and less a factor," he says, since the company began transmitting some traffic over a fiber-optic network built by a consortium of power companies.

"In all honesty, this has not to date been a money-making venture," Bliss says. But, he adds, he is optimistic it will start making a profit by year-end.

Newspaperman Bliss also serves as phone company board member.

ones, telecommunications consultants say the most cost-effective choice in long distance may not be a single service but several different services from one or more vendors. Larger phone systems, generally with more than 50 extensions, can be equipped with software packages that will choose the least costly path for a given call from several different service options.

Consultants also advise newspapers not to stop their long distance shopping when they have determined which carrier is the cheapest. "If you take the schedules that all the different carriers present you and base your judgment on cost presented alone, you probably are not going to make the right decision," says consultant Kirby of Comtrol Corp.

Newspapers should have some insight into the "less obvious" factors associated with the services being offered, he says, "such as the billing technologies, the access delays that you might encounter and the quality of transmission."

Although consultants say that on the whole quality has improved, one of them, Craley, cautions that quality may vary depending on the geographic area in which the newspaper is located and where its calls are going. She suggests that newspapers try out each vendor's service, perhaps by making 10 calls to frequently dialed areas. She also advises asking about the composition of the long distance vendor's network. Is it microwave, satellite, or fiber optics? "Many vendors at this point are using a hodge-podge of those three types of services. . . . Satellite is probably the least best in terms of quality," she says.

Fiber optics is touted as the best, especially by US Sprint which is building the first national fiber-optic network.

ADDITIONAL HINTS. Some of the other things consultants say newspapers should look out for are:

- How long it takes to connect the call. With alternative carriers the call frequently is not immediately connected, as it is with AT&T, notes Kirby.
- How the vendor knows whether a call has been answered. "There is a greater possiblity with the alternative carriers that calls not completed will show" on a monthly bill, Kirby says. However, this problem is being resolved because as alternative companies have acquired access to the local network on the same basis as AT&T, they also have obtained the same "answer supervision" technology that AT&T uses.
- How calls are billed. While some long distance companies bill in six-second increments, others may round the call up to the next whole minute, says Craley. She also advises newspapers to determine whether there are higher or lower charges for the initial minutes of the call.
- Billing information. Some vendors also load their monthly bills with extensive details that may be attractive to some newspapers. According to consultant Daubitz, one of his newspaper clients, The Knoxville News-Sentinel, chose a local long distance reseller, Call U.S., because it allowed the newspaper to provide its employees with account codes that are reflected on its bill, telling who placed what calls. It essentially performs the same function as a call-accounting system attached to the newspaper's PBX, Daubitz says. "Instead of investing, say $40,000, they are getting this feature at no charge from this specialized reseller."

Finally, telecommunications experts advise newspapers to look at the long-term financial viability of the company. "Some of your smaller carriers . . . are going to be competitive up to a certain degree, and then they just might fold," says Craley.

Indeed, some experts think that consolidation has already begun in the long distance business. "In five or 10 years, you will see no more than three or four long distance companies," says Robert T. Dwyer, senior editor of *Telecom Factbook*, produced by Television Digest Inc. "There isn't the profit there used to be." □

USA TODAY chooses DataTimes

USA TODAY, the nation's most widely read newspaper, has chosen DataTimes, the world leader in electronic publishing and information networks, to provide its electronic library services.

USA TODAY and the **Gannett News Service** will join the DataTimes electronic information network of over 170 newspaper, newswire, and business databases serving thousands of commercial businesses worldwide. **USA TODAY** joins the world's leading newspapers on DataTimes, and will be available for public access September 1, 1987.

The DataTimes system will allow reporters, editors and newsroom libraries instant computer access to previously printed information directly from their own newsroom terminals.

DataTimes is proud to welcome **USA TODAY** and the **Gannett News Service**, from the Gannett Co. Inc., the nation's largest newspaper group, to its world of information.

TYPE SIZES

Newspapers make their columns easier to read by careful selection of type, computer enhancements

BY GENE GOLTZ
pressstime staff writer

Many newspapers in the United States and Canada are using larger type. Others are choosing new typefaces that *appear* to be larger.

But so far, this trend has not been in response to the widely publicized "graying of America." Newspaper designers and editors say there has been no clamor among the aging population for enhanced legibility in newspapers.

In fact, the most vocal advocates of larger type have been readers of agate sports statistics and stock listings, says Roger F. Fidler, corporate director of graphics and newsroom technology at Knight-Ridder Inc.

David B. Gray, graphics editor for the Providence Journal and Bulletin, says another reason some newspapers have gone to a larger type size is a deterioration in the quality of their newsprint.

Mario Garcia, associate director of The Poynter Institute for Media Studies, estimates that 80 percent of newspapers in the United States currently use 9-point type on 10-point leading.

About two-thirds of 180 papers represented at an October 1986 meeting of the Society of Newspaper Design reported they had increased their type size in the previous five years.

Yet a **pressstime** sample of more than 30 editors and designers found only one who cited an aging readership as prompting an increase in point size.

That paper, the St. Petersburg Times, is published in a retirement haven. "Last year we decided, given the age of our readership, to increase the type size to 10-point" on 10.3-point line space or "leading," says Neville Green, deputy managing editor. The Times had been using 8.5-point since the 1970s, when tight newsprint supplies prompted a drop from 9-point.

In the week after the most recent change, Green says, the Times received 250 letters hailing the more readable type.

Although St. Petersburg's demographics make it an unusual case, many experts suggest that newspapers across the country may have to make similar modifications in coming years to meet the special needs of an older readership.

The American Association of Retired Persons projects that the number of Americans 55 years of age or older will grow from 51 million in 1985 to 60 million by the year 2000. Many older Americans have "some difficulty seeing," AARP observes.

The executive director of the National Association for the Visually Handicapped, Lorraine H. Marchi, says, "We don't know exactly what the demand is, but older Americans would certainly like to see large-type publications."

Only one daily newspaper, The New York Times, currently publishes a large-type edition for visually impaired readers. The Times' large-type weekly is a 36-page tabloid set in 16-point body type. The stories are a representative section of the week's news, plus features, a sampling of editorial cartoons from around the country and a crossword puzzle.

The large-type edition, introduced in 1967, costs $48 a year in the United States and $61 a year elsewhere—prices that Marchi calls "scandalously expensive." Circulation has been holding steady at about 8,000.

At other newspapers, the move to larger type for regular editions is being accomplished without a major sacrifice in the number of words that get into the paper. That's because computerized photocomposition makes it possible to "kern"—reduce the space between letters—and to condense the larger type, thus avoiding a significant decrease in the number of letters per line.

For example, by kerning its larger type, the St. Petersburg Times minimized the loss of words in the newshole when it switched to 10-point type, Green says. The reduction of 8 to 10 percent was considered an acceptable tradeoff for greater readability, he adds.

According to Art Director Johnny Maupin, The Courier-Journal of Louisville had no appreciable loss of words per page when it switched this year from 8.5-point type on 9-point leading to 9.5-point on 9.7-point because the paper kerned the type and cut down on white space.

The Hamilton (Ontario) Spectator is kerning and condensing its new 9-point type to maintain the same approximate number of letters per line yielded by the old 8.5-point type, says Stan Kwapisinski, creative supervisor for advertising. The Spectator's efforts to improve legibility date back five years, he says, when the staff began looking into "which type faces were more suitable, less tiring to the eye."

In the old days of hot type, of course, type could not be squeezed. Characters were formed by inflexible, metallic matrices. Photocomposition offers "tremendous versatility," Kwapisinski says. "You could go to 8.501 points if you wanted to."

Because of computer flexibility in changing type sizes and shapes, some design experts tend to disregard point values entirely when describing the size of type today. As Gray of the Providence papers puts it, "Point size as a frame of reference is almost totally irrelevant today."

Designers warn, however, that type that is too condensed can be hard to read.

The designers also say that careful selection of typefaces is an integral part of any effort to improve legibility.

The key here is how a typeface treats "descenders"—small letters such as "p" that plunge into the white space below the line; "ascenders" for letters like "d" that have the opposite effect; and the "x-height"—the height of a small letter without ascenders or descenders.

The x-height of a typeface with small ascenders and descenders will appear to be a larger point size than it actually is, typographical experts say.

Using the right typeface in a decent size and without overly condensing it can make a newspaper much more legible, designers say—and readers of all ages will be appreciative. □

NEW ALBANY, Ind. — A trip to China may not be for everyone. Crowds often gather when foreign visitors appear in public, say those who have been to the People's Republic. People stare at or follow Westerners, or want to touch them

Courier-Journal changed type from 8.5 on 9 (left) to 9.5 on 9.7.

The Third Bite.

Now Camex gives you affordable display ads for electronic newspaper publishing.

First we offered editorial and classified systems in bite-size installments. They match more expensive systems feature for feature, and then some.

Now, the bite-size display ad system, from the world leader in electronic display ad makeup. For the first time you can take advantage of Camex's unmatched type and graphics capability at an entry price of $20,000 per terminal.

And all of the above can be built up into a networked system based on standard hardware workstations – a full-featured newspaper publishing system supported by *one* established manufacturer.

Only Camex gives you all of these starting points and all of these capabilities at affordable prices. Call us to talk about your requirements and arrange a system demonstration.

FIVE YEARS YOUNG AND NO. 1

PIONEERS IN

BY ROSALIND C. TRUITT
pressTime technical writer

Newspapers of all sizes have played an important role in the development of new and better production equipment

From the newsroom to the pressroom to the mailroom, the benefits of technological breakthroughs are key to the current robustness of the newspaper business.

Development of all the whiz-bang equipment and processes that mark today's newspapers owe much to researchers and engineers at ANPA and at various equipment vendors. Yet, some publishers had to be willing to open up their newspaper plants to test these untried devices on a daily basis and to risk disruption and even failure.

In short, pioneers were needed.

Fortunately, the newspaper business has had them. They are a major reason why cold type, offset presses, video display terminals and other innovations of the past 40 years are in common use today.

Pioneering activity generally has taken two forms. One is field-testing a prototype or a system that has yet to be sold on the open market. The other is buying first-of-its-kind equipment that very likely could have bugs to be worked out.

"Without that kind of production testing, there is no doubt the implementation of such technology would have been retarded several years," says William D. Rinehart, ANPA vice president/technical. "We [ANPA staff] can run lab tests all we want, but the real test of equipment comes with thorough use in a newspaper operation. That's the only way to find out whether something works or not."

Take the neonatal days of VDTs, for example. One of the first newspapers to try out new, rudimentary computer terminals in the early 1970s was Cocoa Today, now called Florida Today. Systems Editor Ed Wentworth says testing the equipment manufactured by Harris Corp. was like working in a fish bowl. He recalls editing stories with crowds of people looking over his shoulder and at the same time having to deal with the frustration of a system that crashed almost daily and met heavy early resistance by employees.

But it was worth it. Wentworth says he firmly believes that early work made possible the kinds of editing and writing functions now taken for granted in most newsrooms.

In any such ventures, however, there are risks, and payback is not guaranteed. Why would a newspaper shoulder such a burden for the rest of the industry? From interviews with newspaper executives, these reasons emerge:

- Some newspapers test out of a sense of duty. "It's a matter of caring not only for your own newspaper but for everyone in the industry," says John J. McGann, editor and publisher of the South Bend (Ind.) Tribune. "All newspapers benefit from what one newspaper learns," he says.
- Some enjoy being perceived as an aggressive, take-charge operation. Testing often draws industry attention ranging from stories written about the program to visits by other newspapers' personnel.

"There's something satisfying about being a technological pioneer," says F. Robert Woodward Jr., executive vice president of the Telegraph-Herald in Dubuque, Iowa, the first daily to buy a double-width offset press. "There is a sense of pride in being the first. When you take a risk, there's always the danger it will become an albatross. But when you succeed, it's a great lark. It's fun being the center of attention. And we believed what we were doing was important."

- Testing new equipment keeps employees from getting stale. "It keeps us interested, fresh," says Jerry S. DeHimer, director/operations for the Providence Journal Co.

The company, which publishes The Providence Journal and The Evening Bulletin, has experimented with new equipment ranging from flexographic presses to computer systems. "It's exciting coming to work," DeHimer says. "Our people can't wait to get their hands on something new."

- It makes good business sense. Newspaper executives are always interested in implementing new, cost-effective technology.

"This may be a generalization, but when a newspaper is well-run, there seems to be more time to think about ways to run it better," says Edward R. Padilla, a former production chief at several newspapers and now chief executive officer for MAN Roland USA Inc. Managers at such companies "have time to think about where the company is, where it should go and what needs to be done to accomplish that. Those kinds of well-thought-out ideas result in newspapers that are willing to try something new in order to improve their operations."

Cocoa Today was one of the first to use new VDTs in the early 1970s.

HISTORY OF PROGRESS. These days something new might mean a digital color scanner or a personal computer-based display advertising system. Or a publisher might have to choose from a dizzying array of printing press options, from flexo to the next generation of offset press.

The way was paved for such innovations in large part by technological experimentation by newspapers, and it continues to this day.

"There is more testing today than ever before," says George Cashau, ANPA director/technical research. "Newspapers are getting more adventurous because they realize the tremendous benefits they receive if they achieve a breakthrough."

One of the first North American newspapers to qualify for the technology-pioneer label was The Daily World of Opelousas, La., and the technology it experimented with was offset printing. In 1939, it began

TECHNOLOGY

printing a daily tabloid on an offset press.

The move to offset occurred originally at mostly smaller newspapers. An early leader of the movement was Staley T. McBrayer, then publisher of the News-Texan and a group of other small daily and weekly newspapers in the Arlington, Texas, area. McBrayer was such a believer in the new printing technology that he had an offset press, appropriately named the Vanguard, designed for his operation.

In the 1960s, larger newspapers began testing and using offset. They included the Dubuque daily, the St. Louis Post Dispatch, and the St. Petersburg Times.

The next major technological advance fostered by newspapers' venturing spirit was photocomposition, or cold type, which took off in the 1950s. Newspapers discovered that cold type was less time-consuming, provided sharper resolution, and allowed them to use more graphics and color. Newspapers like The Patriot Ledger in Quincy, Mass., the South Bend daily, the St. Petersburg Times, the St. Paul Pioneer Press and Dispatch, and The Miami Herald were early users.

The Quincy newspaper conducted extensive field tests in cold type under the leadership of its then-publisher, G. Prescott Low.

Low helped establish the Graphic Arts Research Foundation that developed the Photon machine in the 1950s. The machine, which was used to set type photographically, was first tested at The Patriot Ledger beginning in 1954 and later was widely used by other newspapers.

By the time video display terminals emerged in the late 1960s and early '70s, the newspaper business already had a track record for pioneering. One of the first in line behind Cocoa Today to test and install the new VDTs was The Daily Oklahoman of Oklahoma City.

Since that time, digital computers have played an increasingly greater role in all aspects of newspaper operations. From pagination devices to color scanners, from press controls to automatic guided vehicles for newsprint handling, newspapers have taken the equipment into their plants for testing and refining.

And the testing is not confined to equipment. The Peoria (Ill.) Journal Star, The Bakersfield Californian and other papers have successfully tested newsprint made from kenaf, a fast-growing fibrous plant.

F. Robert Woodward Jr. (left), then-production manager of the Telegraph-Herald in Dubuque, his father, F. Robert Woodward Sr., and grandfather, the late Fred W. Woodward, examine print quality from early doublewidth offset press. Photo was taken in October 1965.

NO SIZE LIMITS. Although many new technologies made their debut at small newspapers and then spread throughout the business, that has not always been the case. Testing of new equipment and processes has been conducted by newspapers of all sizes.

Smaller papers may be most flexible in accommodating production tests, but larger ones may give equipment a more strenuous workout and be able to keep more detailed test records.

The Washington Post, for example, has tested flexography and has provided some interesting statistics comparing offset and flexo that only a big paper could compile.

Another large newspaper that took technological chances and won is the St. Louis Post-Dispatch. Alex T. Primm, now retired as Post-Dispatch business manager, says the decision for that newspaper to go offset was a hard one to make in 1968. The newspaper was the first big metropolitan daily to take that route, and Primm says it was five or six years before all the bugs were worked out.

"We knew we would need offset to take full advantage of the cold-type process and of computers," Primm says. "At the time, the smaller newspapers were finding offset useful, but we were a large newspaper and there was some doubt about using it with an operation of our size."

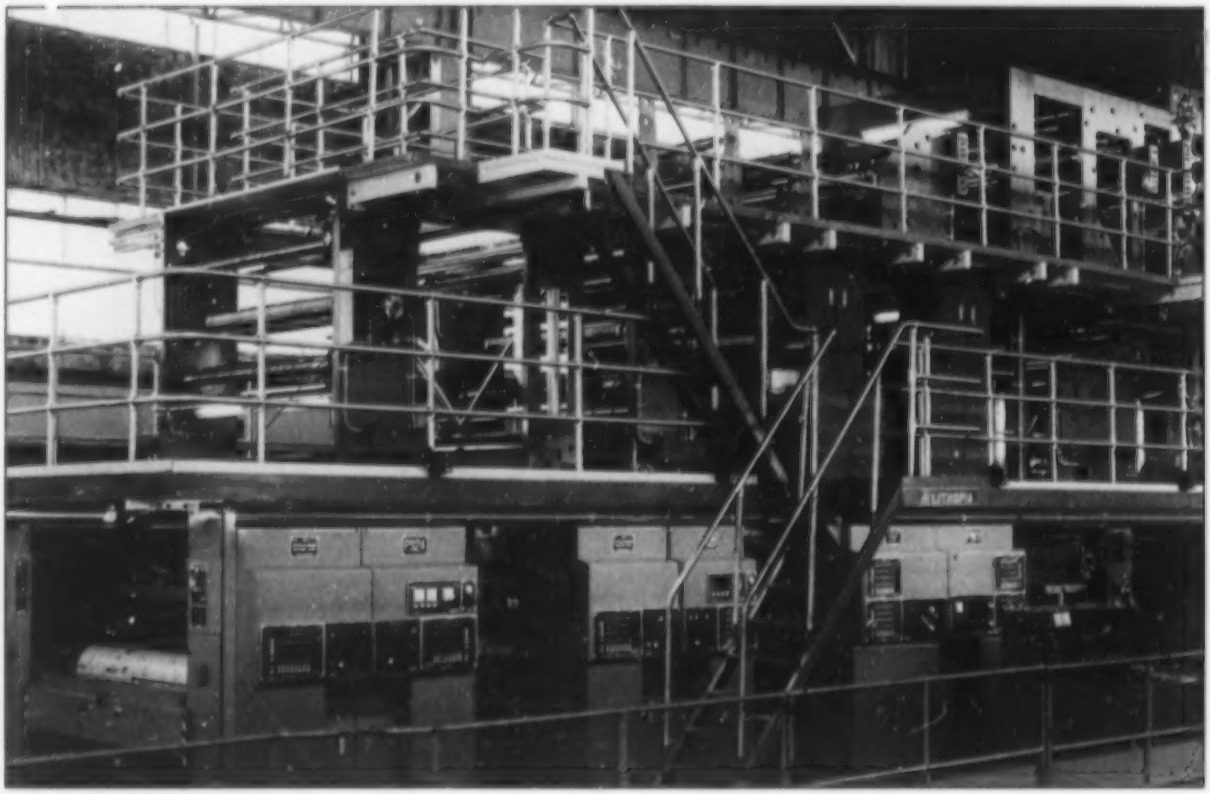
There were some late press runs and times when the presses went down altogether. Yet, Primm says, the newspaper never seriously considered going back to letterpress.

Nestled between very big and very small publications are many medium-sized newspapers that conveniently take up the slack. They often can conduct more sophisticated testing than small plants and can devote more time to the tasks than their metro counterparts.

The Express in Easton, Pa., is one such

Mitsubishi

The Proven Standard of Quality in Newspaper Presses



Mitsubishi Offset Presses
— over 20 years of installed experience
— versatility in unit design
— flexibility in color and paging

A new quality standard for color newspaper printing is now available due to Mitsubishi's highly advanced engineering.

The result: superior quality color printing, increased productivity and reduced printing waste.

As testimony to their careful engineering, Mitsubishi presses each week print more than 20 million copies of newspapers —making them genuinely suited to the needs of a modern newspaper — *yours.*

mid-size daily. It was spurred on by its late president, J. Laurence Stackhouse, a firm believer in the benefits of technology. In 1948, Stackhouse was involved in the establishment of the ANPA Research Institute in Easton.

The Express tested a variety of equipment developed by ANPA, including an anilox inking system that was the forerunner for newspaper flexography.

The Telegraph Herald of Dubuque in the mid-1960s helped speed use of offset in daily newspapers with its purchase of a Goss double-width offset press. The company demonstrated that the process was viable for bigger publications.

"There was no break-in period at all. One day we were letterpress and the next we were offset," recalls Executive Vice President Woodward. "We were definitely guinea pigs, but we were faced with either going with an untried prototype or purchasing a letterpress press that would be out of date in less than five years," he explains.

The South Bend Tribune, under leadership of its longtime editor and publisher, Franklin D. Schurz Sr., who died earlier this year, was among the first to adopt photocomposition. It also did much of the early testing of the ANPA-Dow rapid etching process and was the first to test the W.R. Grace Letterflex plate, a more flexible and lightweight plate for letterpress presses.

COOPERATIVE WORKERS. Regardless of the size of the pioneering paper, executives involved say success hinges largely on cooperation of the workforce. In many cases a special agreement must be worked out with labor unions.

For example, the Providence dailies have tested Atex systems, Camex Breeze composition terminals and other equipment after agreeing with its various unions that no one would lose a job because of automation or computerization, says DeHimer.

Other newspaper executives say they have made similar labor arrangements.

However, many newspapers that have engaged in testing programs have no unions and have been relatively free to carry out production changes as they see fit. That is a major reason many technological innovations have flowed from smaller to larger newspapers, publishers say.

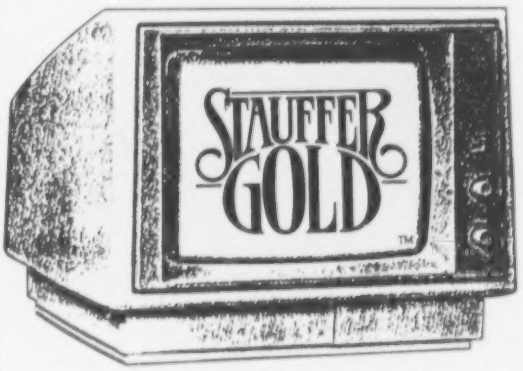
Regardless of whether unions are involved, executives agree that it would be very hard to introduce new technology without employees' enthusiastic cooperation.

Wentworth of Florida Today says the resistance he encountered during early VDT testing came partly from staff members who were miffed at having to learn new equipment. "Computers can be a little intimidating, but once people began using them, seeing what they could do, there was less resistance," he says.

Not everyone, however, wants to be a pioneer. Some newspaper executives say they have policies that their papers would not be the first to try any untested equipment or process.

Wentworth speaks for the other school. "You can't do that," he says. "While you're waiting for something to be perfected, the next stage will come along and you won't know anything about the first stage."

Adds DeHimer of Providence: "I'm not saying we've never run a little late (on the press run as a result of testing), but the benefits have been substantial. It keeps us looking for ways to improve." □



You Can Cost-Justify This!

Here's the Quality Computer Library system at an economy price you've been waiting for.

Dan Potter, executive editor of the Independence, (Mo.) Examiner, and former instructor at the University of Missouri School of Journalism had this to say about Stauffer Gold:

"Importantly," Potter says, "Stauffer Gold addresses a top concern of editors in the 1980s. We've got to be bottom-line oriented and at the same time improve the quality of the newspaper. Not too many things come along, like Stauffer Gold, that enable a newspaper to do a better job but at less cost, both in time and money. We cannot afford a full time researcher or librarian. But what we've done with Stauffer Gold is give the newsroom the capabilities of two or three librarians without adding to the payroll. The cost of the full-text system is about what we would pay a librarian in salary in two months."

TRAINING TAKES ON A MORE VITAL ROLE

Newspapers of all sizes are sending more employees to seminars and workshops to acquire new skills

BY CLARK NEWSOM
presstime labor writer

In January 1980, a presstime report assessing the decade then beginning predicted that employee training in the newspaper business was likely to increase significantly during the 1980s for two reasons. First, the business would continue to change, and second, more efficient use of human resources would be required to meet increased competition in the media marketplace.

Those predictions have come true.

"We're turning up the fire," says Rob Reed, director of training for Knight-Ridder Inc. "The demand continues to grow." In fact, training has grown to such an extent that some of the larger newspaper companies are now marketing training programs to other papers. (See story, p. 25.)

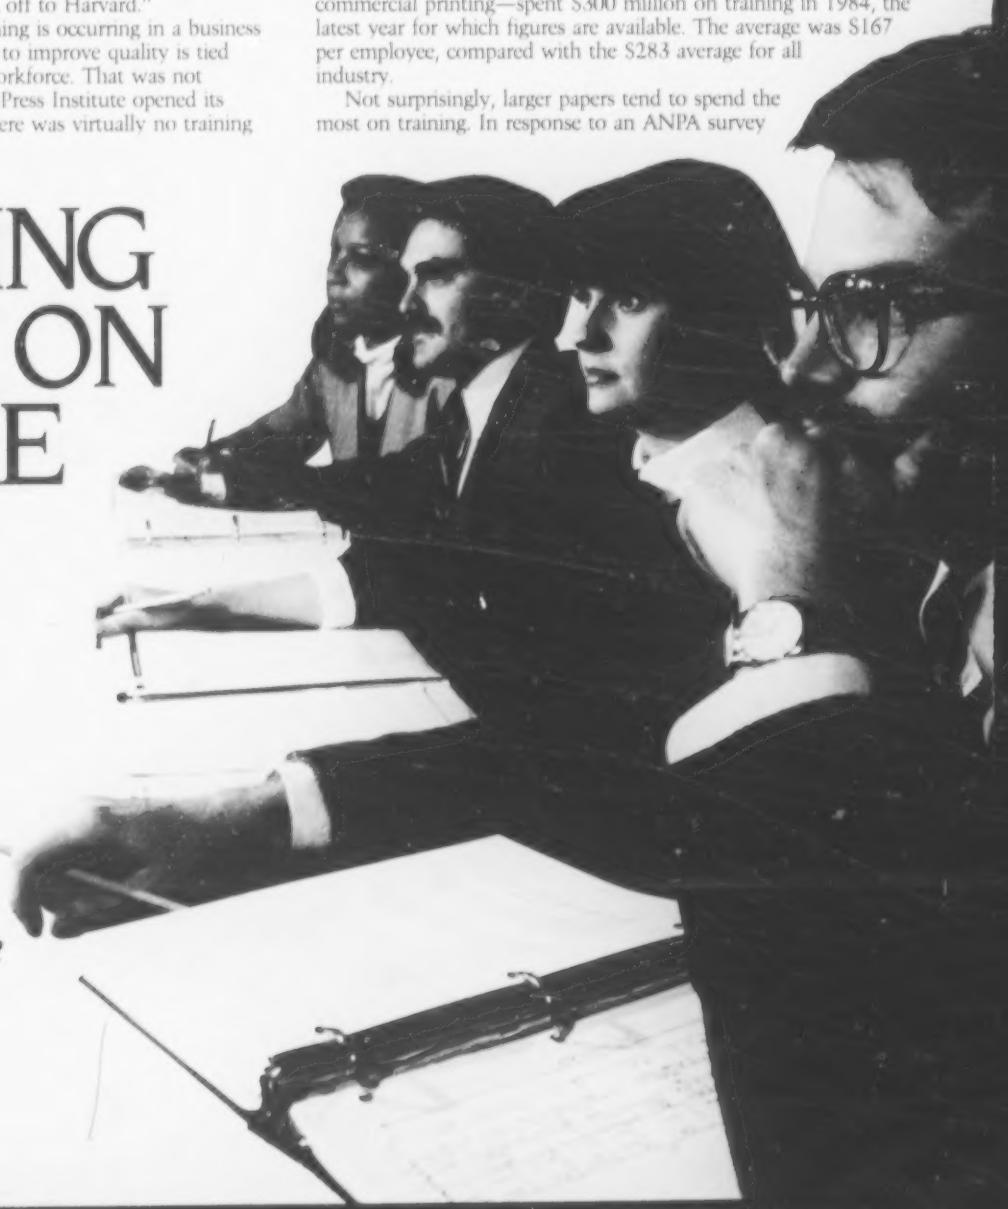
"Training spans an incredibly broad area," observes Edward N. Baron, director of training and development for Gannett Co. in Arlington, Va. "It's anything that improves job performance. Sometimes it's as simple as coaching between manager and employee. Sometimes it means going off to Harvard."

Whichever direction it takes, training is occurring in a business that increasingly recognizes its effort to improve quality is tied directly to attaining a well-trained workforce. That was not always the case. Until the American Press Institute opened its doors in New York City in 1946, there was virtually no training of newspaper personnel conducted outside the plant.

"Newspapers were not among the leaders in training and developing people," says Sam S. McKeel, publisher and chairman of Philadelphia Newspapers Inc. "We didn't develop people the way we should for their own benefit and the benefit of our own individual newspapers. We simply hired people and put them to work." But now, he says, "We've developed into a major industry with more opportunities for professionals to develop. It's a new day in working with people."

That "new day" has made training itself a big business. U.S. companies spend about $30 billion annually on formal employee training, according to the American Society for Training and Development, which represents some 50,000 professionals in the field. Although figures for newspapers are not available, Anthony P. Carnevale, ASTD's chief economist and vice president for national affairs, says the U.S. printing and publishing industry—including newspaper, magazine and book publishing and commercial printing—spent $300 million on training in 1984, the latest year for which figures are available. The average was $167 per employee, compared with the $283 average for all industry.

Not surprisingly, larger papers tend to spend the most on training. In response to an ANPA survey



of member newspapers earlier this year, 67 percent of the 70 respondents with circulations above 100,000 said they budgeted in excess of $25,000 a year for training activities, with 19 of those setting aside more than $100,000 and five more than $250,000. Of the 100 respondents with less than 25,000 circulation, 42 percent budgeted less than $5,000.

Yet a sizable number of small papers, too, are putting more of their resources into training. "We're a small company, but we spend about $60,000 a year on training activities," says Charles A. Lyons, president of Chesapeake Publishing Corp. in Easton, Md., publisher of the 12,044-circulation daily Star-Democrat of Easton and 20 weekly and semiweekly community newspapers. "In tough economic times, historically, the first cuts were in training," Lyons says. "Now there is more commitment to preserve that role than there has been before."

One reflection of the splurge in training is the registration figures for the various out-of-plant programs. At API, for example, registration now averages about 1,200 a year compared with 850 in the early 1980s. And at ANPA, where the number of seminars and workshop sessions has increased from 40 in 1980 to 58 planned for 1988, the number of registrants has grown from less than 800 to just over 1,000 this year.

Phillip Musser, Morris Communications Corp.

Morris Communications Corp.'s Beauchamp (standing, right) and Bruce Metts, Morris' tax manager, lead discussion in seminar for accounting personnel.

Reasons for the increases are many, but chief among them is the recognition that training is tied to enhanced productivity.

"We need to help people become proficient as soon as possible, because the expectations of people coming into the industry today are high," says Knight-Ridder's Reed. "We keep selecting people who are more and more attracted to achievement. After tremendous capital outlays during the past couple of years, the human element has to be supported."

The greatest emphasis is on supervisory training, and it's by no means limited to the larger papers. "I'm getting more calls from smaller newspapers that see they need to develop managers," says Sara Brown, president of Sara Brown & Associates of Washington, D.C., a consulting service on management development and human resources. Newspapers "are interested in going beyond skills training. They see they need to do a better job in coaching their staffs," says Brown, a former newspaper executive and one-time president of the Newspaper Personnel Relations Association.

The range of today's training programs covers nearly every job to be found in a newspaper plant, from strategic planning for top executives to technical skills for craftsmen. It embodies newer concerns such as how to handle the AIDS threat in the workplace to more prosaic ones such as how to improve skills of garage mechanics. But, according to results of the ANPA survey, most newspapers currently are stressing advertising and circulation sales training. Other areas receiving high priority are writing skills, career development, time management and customer service.

Training experts believe the emphasis on sales training will continue in the near future. "We'll still be looking at selling skills," says Clifford C. Hebard, training manager for the Syracuse Herald-Journal and The Post-Standard. Another training specialist, Stirling S. Rasmussen of The Washington Post, says, "We'll continue to focus on the advertising sales representative as a 'marketing advisor' for the customer."

The explosion in training programs at newspapers has sparked rapid growth in the ranks of people responsible for them. The number of full-time, in-house training and development managers in the newspaper business has jumped from 30 to 50 in the past three years [presstime, Nov. 1984, p. 26], and that's only part of the story. There are also hundreds of newspaper employees—including writing coaches and sales trainers—who devote part of their time to training in specific areas. (See story, p. 62.)

The trend is for trainers to become internal consultants, says Rasmussen, manager of organization development and training at the Post. "It used to be: 'Tell me what you need, and I'll put it together.'" Nowadays, he says, trainers do not just put on classes; they get involved in the working relationships between departments.

The burgeoning newspaper-training field is not without problems, however. A continuing one is finding the time in such a labor-intensive business to send key employees to outside training sessions whose special programs aren't available in-plant. This is a particular challenge for smaller papers with limited work forces. One answer is to schedule such sessions on weekends. The Mid-America Press Institute in Carbondale, Ill., which offers editorial training to its more than 100 member newspapers, has used such a schedule with success.

Another problem is an ongoing one of structuring training programs that address concerns and offer solutions that are relevant to an ever-changing work environment.

Although some trainees occasionally raise the question of relevancy, ANPA Manager/Training Services Stephen E. Palmedo says such criticism is rare because of the unusual willingness newspaper people have to discuss in a workshop setting the problems they have faced. "Not all industries are willing to share information the way the newspaper industry does," he says.

TRAINING NEW MANAGERS. The need for training is particularly acute, experts say, for individuals who suddenly gain supervisory status. Most such training is done in-house, but many papers take advantage of outside resources to complement their staff efforts.

"We give training to everybody who supervises anybody," says Don P. Campbell, publisher of The Columbian in Vancouver, Wash.

Another mid-size paper, the Binghamton (N.Y.) Press & Sun-Bulletin, started an in-plant supervisory training program in 1984

"After tremendous capital outlays during the past couple of years, the human element has to be supported."

Rob Reed
Knight-Ridder Inc.

called "Managing for Excellence." It is attended by all new supervisors and potential supervisors, usually a group of 15 to 16 people. The 12 sessions, completed during a three-month period, run from two to eight hours each. A session on affirmative action, for example, is two hours, while one on interviewing and selecting new hires lasts all day. "It helps people new to management know what management is about," says Director of Employee Relations Dorothy M. Petrulis. "They learn the newspaper's policies and procedures." Petrulis says she budgets $4,000 for the program, which is conducted by herself and department heads.

The 90 dailies in the Gannett group, of which the Binghamton paper is one, have a large resource of training material available from corporate headquarters. The company's training and development library has more than 800 films, videotapes, books and slide programs. Training director Baron also subscribes to an electronic database service that provides up-to-date information on training programs.

Ottaway Newspapers Inc., the Dow Jones & Co. subsidiary that publishes 22 small and mid-size dailies, trains an average of 225 managerial employees a year at the company's conference center in Campbell Hall, N.Y. About 12 seminars a year are held, with three or four for newsroom managers and the rest for circulation, advertising, production and business office managers.

Vice President/News Avrom N. Romm, who oversees the seminars, says, "We expect each newspaper to have a training supervisor," such as a city editor charged with overseeing the training of reporters.

Two other newspaper companies that are getting into supervisory training in a big way are Lee Enterprises Inc. and Morris Communications Corp.

Lee, which has 18 dailies, this year reorganized its corporate Human Resources Department to place greater emphasis on training and appointed its first corporate director of training and development. "Much of our effort focuses on enhancing people's skills to cope with the changing marketplace and technology," says Floyd Whellan, vice president of human resources for the Davenport, Iowa-based group.

At the request of its publishers, Lee has developed a new supervisory training program called STAR (Supervisor Training and Review). It is conducted a half day a week over 10 weeks. This is in addition to Lee's other in-house acronymic programs called LEAP (Lee Executive Advertising Program) and MORE (Meeting Our Readers' Expectations).

At Morris Communications of Augusta, Ga., owner of 14 dailies, supervisory training became a higher priority after the hiring in 1985 of William I. Beauchamp as its first corporate training director. "We will be adding a major, company-wide supervisory program now that we have completed our basic mid-level and upper management programs," says Beauchamp. As at Lee, the in-house programs were developed on recommendations from each newspaper.

For Many Newsrooms, Training Comes on the Job

BY JACQUELINE L. ADAMS

Editors know something young journalism graduates don't know: A reporter really begins to learn the craft the first day on the first job. Before that, it's all just practice.

And not enough practice, some professionals complain.

"We just accept the idea that they won't be able to write very well," Arlin Albrecht says of new journalism grads. Albrecht is co-owner of two small dailies and 11 weeklies.

Roy W. Anderson, ANPA vice president/human resources, says newspaper people "expect reporters to come in from journalism schools with all the training in the world—but the real world is different."

Adams is city editor of The Daily Inter Lake in Kalispell, Mont. This article is based on a report she prepared while a graduate student at the University of Minnesota, where she received a master's degree in journalism and mass communications last July.

If that is so, it would seem to make sense for small papers to invest some time in training young reporters. But with limited staffs responsible for getting the paper out each day, training is sometimes regarded as a "frill" and is often ignored.

"Overall, smaller newspapers don't have any formal training programs," says Anderson.

In their new book, *Managing Media Organizations*, professors John Lavine and Daniel Wackman of the University of Minnesota say the most important training is that conducted by managers on a day-to-day basis, usually in the form of one-on-one coaching.

At such a suggestion, the harried managing editor of a small newspaper is likely to groan, "Fine, but when am I supposed to do this?"

Although not all managers are in accord about the advantages and economics of training, they agree that it cannot be done without a financial commitment. Calling it "a management problem that's basic to a newspaper's priorities," Lee Stinnett, executive director of the American Society of Newspaper Editors, says there is "plenty of profit in the newspaper business" to support training—even on smaller papers.

Albrecht says it's not quite that easy.

At his Red Wing (Minn.) Independent Eagle—long considered a top-notch training ground for young reporters—"We have committed the resource to have an adequate news staff (in terms of size) so that editors can take the time to train," he says.

But, he adds, "it's a distinct economic sacrifice for us" to maintain that size—11 newsroom staffers for an 8,593-circulation paper. "If we were part of a large group, we wouldn't have that luxury. Profit would come first."

The key to training at the Red Wing paper is providing time for supervisors to work with reporters during the writing and editing process each day, according to Albrecht. He says top managers at some papers may be unwilling to budget for this

TRAINING THROUGH THE RANKS. Experts say, however, that the need for training should not stop at the supervisor level.

"Newspapers are not hierarchical, with a few order givers and many order executors, with a book on how to do everything," says ANPA Chairman George W. Wilson, president of the Concord (N.H.) Monitor. "Decisions, key decisions, must be made deep within and throughout the organization if we are to be quick on our feet and coordinate so many different tasks under great time pressure.

"Not only do people have to know their jobs well and be willing to take responsibility, they have to know what others are doing and how the parts fit together. Training is the only way to make that happen quickly and correctly."

Rasmussen of The Washington Post notes, "We need basic, on-the-job training for people coming into the business."

Although the training of non-supervisors also occurs mainly in the plant, it differs from supervisory training in that it usually is conducted on the job rather than in a classroom setting. In production departments, for example, newspapers rely heavily on the suppliers to train people on new equipment.

"We've always done a pretty good job of providing training experiences off-site," says Lyons of Chesapeake Publishing. "We began placing emphasis on in-house training five years ago." Smaller newspapers, he notes, hire "a lot of people just starting out. It may take a year or two before they make a contribution, and that's when you lose them" to larger papers. The continual turnover dictates continual training, which he calls "an ongoing investment."

According to newspaper human-resources experts, one of the adverse effects of employee turnover is that it exacerbates the ongoing problem of properly communicating with customers over the telephone.

The Austin (Texas) American-Statesman is one of the many newspapers that have developed customer relations training programs for advertising and circulation employees who work the phones. "We try to show them what obstacles may get in their way" to doing a good job, says Deborah Heintschel, training and development manager.

"We're trying to come up with creative responses to the industry's most difficult problems."

Robert J. Haiman
The Poynter Institute

One of those obstacles could be poor time management. "If people can't control their time, they can't manage it," says Heintschel, who notes that the Austin daily has a time management program. The subject also is being addressed at Chesapeake Publishing where Lyons recently engaged consultant Brown for training editorial employees in time management.

Time management of a different sort is a nagging problem in all training. How, in the helter-skelter world of newspaper publishing, can precious hours or days be set aside to spring people loose to attend a training program?

"We have to find windows in production schedules to allow time for training," says David E. Brace, director of newsroom training at Ottaway Newspapers, who conducts on-site workshops tailored to the situation at the individual newspaper.

Though Often at a Considerable Inconvenience

sort of training because many of them rose through the advertising-business ranks and do not understand the needs of the news side.

Lavine, who in addition to his academic post owns four dailies and four weeklies in Wisconsin, follows his own advice about hands-on training in the newsroom.

At least once a year, he puts on a one-day seminar at each of his papers, talks to the newsroom staff as a whole and meets with each person individually.

In the individual meetings, he asks each reporter to pick some of his or her published stories, and he asks the editor also to pick a few. Lavine may choose some, too.

While the reporter looks on, Lavine edits the stories, commenting on everything from style to conceptual faults. Eventually he asks, "What would you do?" about a specific problem, thereby drawing the reporter into the editing process also.

Lavine holds separate discussions with his editors, giving them ideas for improving the work of their reporters.

Here are some of them:

- When editors assign stories, they should not simply tell the reporter what the assignment is. They should also question the reporter about the assignment to ascertain whether the reporter is ready to handle it.
- When a reporter returns from an assignment, the editor should ask him or her to summarize the story orally before writing it. Then the editor should ask for the lead only. This forces the reporter to think through the story, and it provides an opportunity to fix a faulty story before it is written.
- Reporters should be asked to edit stories they wrote for the paper a week earlier, with an eye toward finding their own writing errors. They should also read their work from a year ago to check progress and to spot bad habits.
- Reporters covering ongoing stories should furnish suggestions for follow-up articles. The reporter thus learns to think in terms of following through.

Lavine's papers also have weekly critique sessions at which emphasis is placed on what the staff did well. The editors of his four dailies critique each others' papers. And helpful articles from trade publications are circulated among the staffs.

Persistent on-the-job training programs such as Lavine's can be augmented by a variety of short courses and workshops sponsored by state and national press organizations, ASNE's Stinnett notes.

Stinnett offers another idea that combines in-house and outside-expert training: Get a college or university journalism teacher to work in the newsroom for the summer.

Most journalism schools have some faculty members with significant newsroom experience who might welcome a chance to keep their practical skills current. They could handle news assignments until deadline and spend the rest of the day coaching reporters, he suggests.

B.J. Hately, training and development manager for the Los Angeles Times, emphasizes that a few hours invested in training can have a worthwhile payoff for employee and employer alike. "Employees who are learning and growing will be more skilled, more productive and more satisfied," she says.

The time factor is what makes weekend workshops, such as those conducted by the Mid-America Press Institute and some state press associations, especially appealing to smaller newspapers.

One paper has developed an unusual weekend training program to improve teamwork: It takes place on a sailboat. The "Interpersonal Skills Lab" is a "more intensive experience than a seminar or workshop," says Fran Chapman, training manager at Gannett's Fort Myers (Fla.) News-Press, who with her husband owns the 27-foot Catalina sailboat used in the program. Chapman signs up six employees from various departments for the trips into the Gulf of Mexico. The participants crew, thus learning teamwork, and the weekend ends with a debriefing session that stresses effective communication.

Chapman is also the author of a manual called "Hit the Road to Training," which describes how a newspaper of any size can start a training program for non-supervisors and supervisors alike. Free copies can be obtained from the News-Press.

WHO ARE THE TRAINERS? In addition to in-house training, literally thousands of newspaper employees from all departments are sent each year to off-site locations for specialized training. For organizations outside the business of publishing a newspaper every day or every week, there is a constant effort to keep their training useful and relevant to those on the front lines of newspapering.

"We are constantly reviewing the programs," says ANPA's Palmedo. "The content and format evolve as new participants bring new needs to the workshops. Because the workshops are so participatory, we can adjust the program at the suggestion of the participants."

ANPA's involvement in training dates from 1964, when a committee was set up to analyze supervisory training needs in the industry. The first supervisors' workshop was held in January 1965 at the University of Chicago's Center for Continuing Education, beginning a relationship with the university that continues today.

The Association's programs are often held in conjunction with other newspaper associations. For example, Palmedo says he is working with the University of Chicago and the International Newspaper Advertising and Marketing Executives on a new management skills workshop for advertising sales managers.

Registration fees for ANPA seminars and workshops range from $300 for certain two-day sessions to $1,900 (including meals and lodging) for some weeklong programs. The "hands-on" production seminars, taught by staff members and conducted at The Newspaper Center in Reston, Va., last one week and cost $575 [presstime, Sept. 1987, p. 56]. Arthur W. Boudreau, manager/technical training, says 3,336 people have attended the seminars since 1967.

Perhaps the best-known of all newspaper training programs are conducted by the American Press Institute, which moved from New York City to Reston—next door to The Newspaper Center—in 1974. More than 20,000 people have attended about 700 API seminars in the past 41 years, and next year's schedule calls for 42 seminars and workshops, all but nine of them in Reston. (See story, p. 62.) The seminars are led by a combination of API's seven-member professional staff and guest discussion leaders from newspapers and other fields.

API began as a training center for news-editorial employees but subsequently expanded its programs into advertising, circulation and business. Registration, or tuition, fees vary from $175 for a two-and-a-half-day regional workshop to $715 for a nine-day program. A new five-day program for senior executives—built around a computerized newspaper management simulation—will be introduced next year at a higher fee of $1,500.

Looking at the institute's future, API Chairman William O. Taylor, chairman and publisher of The Boston Globe, says he sees it "retaining what has been a highly successful combination of two key components: first, seminars and other special programs for the training of journalists in all areas of newspaper operations, and second, creative thinking that identifies and helps the industry prepare to deal with key issues and needs for the future."

API's staff leadership changed over the summer, with the resignation of Director Frank Quine and the retirement of Director of Development Malcolm F. Mallette. The newly appointed director, William L. Winter, joined the staff Sept. 1. "You can look back over the past decade at the number of newspapers that have folded and look at the general belt-tightening in the industry and see very clearly that this is a most competitive period for papers of all sizes," Winter says. "With that competitive environment comes an accelerating need for sophisticated training of persons at all levels in skill areas and in management techniques."

Besides API and ANPA, outside training is offered by numerous other organizations.

• The Poynter Institute For Media Studies in St. Petersburg has

API's first seminar in 1946 at Columbia University (left) for editors is in stark contrast to those held today at spacious facilities in Reston, Va.

a 1988 schedule that calls for 18 professional seminars, three more than in 1987. Attendance at the 1987 sessions is expected to reach 250 people. Founded in 1975, the institute owns a controlling interest in Times Publishing Co. of St. Petersburg, but its seminars are open to all newspapers. Tuition fees range from $525 for one-week programs to $735 for two-week programs.

Three new programs will be introduced next year. One will be on "whole journalism"—a combination of writing, editing, graphics and design. "It's obvious to us that the skills will have to overlap in the future," says Robert J. Haiman, president and managing director. Another seminar will be limited to three-person teams from six newspapers committed to a complete redesign. The other will be a four-day seminar on how the press should cover AIDS, the results of which will be published as a handbook for newspapers. "We're trying to come up with creative responses to the industry's most difficult problems," says Haiman.

• The Knight-Ridder Institute of Training in Miami, now in its 19th year, scheduled 32 seminars in 1987, up from 22 last year. Most of the seminars are open to participants from outside Knight-Ridder's 32 dailies. Registration fee for the five-day programs is $650. Training Director Reed says newsroom programs are being expanded from five to eight next year.

• The New England Newspaper Association in Salem, Mass., has directed much of its activities in this decade toward training, says Executive Director Morley L. Piper. "A lot of the programs are aimed at the working staff level rather than at the managers," he says. Last year, about 4,000 people from NENA's 92 dailies attended 60 different workshops and seminars covering all newspaper departments. "We've continued at the same pace in 1987," Piper says. The sessions are held in the states where NENA has members, and most discussion leaders come from member newspapers. Registration fees range from $50 for a one-day seminar to $150 for a three-day session.

• The Southern Newspaper Publishers Association Foundation in Atlanta scheduled 12 seminars this year and will have 15 in 1988. Like NENA, SNPA conducts seminars in its region. They cover newspaper operations and public issues. Registration fee is $100. "The trend for us is more emphasis on 'how to' type of seminars," says Executive Director Reginald E. Ivory.

• The Inland Daily Press Foundation in Park Ridge, Ill., scheduled 12 seminars in 1987, three more than in 1986. The seminars, from one to three days, cover all facets of newspapering. Registration fees range from $75 to $150. About half of the seminars are held at Inland's headquarters; others are staged in various Midwest cities.

• The Canadian Daily Newspaper Publishers Association in Toronto schedules between eight and 12 seminars a year on advertising, circulation and editorial topics and human resources management, some of them in French. Registration fees for the two- or three-day seminars range from $150 to $350.

• The Pacific Northwest Newspaper Association in Portland, Ore., conducts up to 20 workshops a year at member newspapers. The one-day sessions led by PNNA Manager Paul J. Lizundia concentrate on supervisory development but also cover time and stress management. There is no cost to the 43 dailies in the association, except travel expenses. PNNA also has cooperated with another regional organization, Allied Daily Newspapers in

Training Can Be a Revenue Source, Too

At least three newspaper companies—Gannett, Harte-Hanks Communications and Times Mirror—have training programs that are available to other newspapers via videotape.

The Gannett programs are "Opportunity Selling" for advertising personnel and "Circulation Success Strategies." They are marketed by Thompson-Mitchell & Associates, a training distributor in Atlanta. "We're recovering a small percentage of our production costs," Gannett Training Director Edward N. Baron says. When the investment was made, the company was "not thinking of selling it."

Harte-Hanks, owner of 15 dailies, is using Professional Development Resources in Dallas to market "Circulation Sales Training" and "Selling Newspaper Advertising," produced in-house with the help of training consultant Phillip D. Russell.

Times Mirror purchased Xerox Learning Systems of Stamford, Conn., in 1985 and changed the name to Learning International. According to the ANPA training survey, many newspapers are using its "Interpersonal Managing Skills" program, which is designed to provide managers with skills to motivate people. "We've put hundreds of supervisors and managers through the three-day course," says Ross A. Dixon, manager of personnel development at Southam Inc. in Toronto.

Training will continue to address "the connection between the individual's objectives and the organization's objectives."

Paul N. Pohlman
University of Chicago

Tacoma, Wash., on a two-day supervisory training program. The two organizations currently are considering merging [presstime, Sept. 1987, p. 72].

• The Mid-America Press Institute, which will mark its 20th anniversary next year, has scheduled seven seminars between October 1987 and October 1988 for editorial people. MPI has about 100 dues-paying newspaper members, about half of them with circulations of less than 15,000. "We stick to nuts and bolts," says Executive Secretary W. Manion Rice, associate professor at the School of Journalism of Southern Illinois University in Carbondale. MPI has conducted more than 75 seminars since its founding, most of them in St. Louis. The cost of the Friday-to-Sunday sessions is $50, plus annual membership of $50 to $100, depending on circulation.

Dee W. Bryant, editor of The Leaf-Chronicle of Clarksville, Tenn., says she will send five employees to MPI's next round of seminars and also will "look carefully" at SNPA's. "A newspaper has to put as much of its resources into training as possible," she says. "You have to have in-house training, but outside training is crucial. You have to get people out of their everyday work setting . . . to talk with their peers on other publications."

• Southern Production Program Inc.'s Newspaper Production and Research Center in Oklahoma City, founded in 1967, is sometimes used on a contingency basis to teach management employees how to produce a newspaper in the event of a strike or other labor dispute. But Executive Director and General Manager James D. Stuckey says the center also is used for cross-training—for example, to give pressroom experience to a composing room foreman who has been promoted to production manager, or for an advertising manager to become better acquainted with the production process. "It's nuts and bolts and repetition," says Stuckey. "It's not as technical as ANPA." Registration fees vary from $200 for a two-day course on paste-up to $675 for a two-week course on a double-width offset press.

• The Newspaper Advertising Bureau in New York City sends specialists to about 250 newspapers a year to conduct training programs. Four months ago, NAB suspended the fees traditionally charged for its on-site workshops conducted by bureau trainers, which account for nearly 90 percent of all bureau training activities.

• The International Circulation Managers Association conducts about a dozen seminars a year in various parts of the country, with registration fees of from $125 to $300. ICMA General Manager Joseph B. Forsee says he expects circulation training programs will continue to grow.

In addition, most of the 50 state press associations are involved in workshops and seminars. Three examples are: the Oklahoma Press Association, which schedules about 15 workshops a year in the advertising, circulation and editorial areas; the Minnesota Newspaper Foundation, which sponsors or cosponsors 18 to 20 seminars ranging from skills training for non-managerial employees to general management techniques for publishers; and the Iowa Newspaper Foundation, which draws more than 200 people a year to an annual weekend seminar with concurrent sessions on advertising, circulation and news writing.

Also, a large number of college and university professors are privately engaged in various training activities at newspapers.

The costs of taking advantage of this smorgasbord of training opportunities can add up to six-figure bills for newspapers.

At the News & Record of Greensboro, N.C., for example, training programs, combined with a tuition refund plan, resulted in expenditures last year of $145,870, an increase of 10.5 percent over 1985. The 1986 expenditures amounted to $278 per full-time employee, says Personnel Director Van King.

Also last year, more than 500 employees of the Milwaukee Journal and Sentinel participated in one or more training and development programs at a cost exceeding $100,000, reports Richard A. Williams, vice president/employee relations director. He says about the same amount was budgeted for training this year.

Some people foresee rising competition among trainers for newspapers' dollars—and a Darwinian effect on some of the institutions involved in the training field. But this is a minority view. Most observers both inside and outside the newspaper business say they fully expect training programs to continue to proliferate.

MEASURING RESULTS. As newspapers channel so many dollars into in-plant and outside training, how can they be assured of getting their money's worth? It's not easy. Although some types of training can be readily measured and cost-justified, it is harder to assess the effectiveness of some other kinds.

Sales training is perhaps the easiest to measure "because you can look at performance and track (the participants) after the program," says Knight-Ridder's Reed.

Although the results of other forms of training may be harder to gauge, there are objective ways to go about it.

One device is the follow-up evaluation form. Heintschel says the one used by the Austin American-Statesman poses such questions as "What specifically in your job has the workshop helped you do better or differently?" and "What, if any, obstacles have you encountered that limited your ability to apply what you learned?" For some programs in Austin there are also two-hour follow-up meetings once a month for four months.

Another approach is to give participants before-and-after knowledge tests. However, Sandra E. Shepherd, training director for the St. Louis Post-Dispatch, cautions that "it isn't what we know but what we practice. The real test of supervisory and management training is how well the manager gets things done through and with other people on the job."

At a newspaper with unions, Shepherd says, supervisors who go through a training program can be monitored in terms of the number of grievances, arbitrations and absenteeism involving their staffs.

Or, as Lyons of Chesapeake Publishing puts it for newspapers with or without unions: "Over time you can see people resolving conflicts differently."

ANPA's Palmedo points to one difficulty in evaluating off-site training programs. "Newspapers often send their brightest people who succeed because they're bright. Do they succeed because of their brilliance or their training?"

Another difficulty is that a person returns to the newspaper

Newspaper Trainers Have Diverse Backgrounds

The 50 or so full-time trainers employed by newspapers have varied backgrounds and have taken different routes to arrive at their current positions.

If there are common threads, it is that many have teaching experience and some have psychology or sociology degrees. Otherwise, trainers seem to emerge from just about anywhere.

Eight examples:

• Edward N. Baron, director of training and development for Gannett Co., taught elementary school for three years before going into newspapering. A psychology major in college, he joined the company in 1975 as a reporter at the Niagara Gazette in Niagara Falls, N.Y., and later worked as an assistant city editor, assistant Sunday editor and on the corporate staff as a specialist in newsroom technology.

• Gerri Cordle Davis, who was a trainer at The Orlando Sentinel before becoming vice president/human resources, taught business subjects at the college level in Michigan before moving to Florida. She answered the Sentinel's blind ad for a training manager in 1978.

• Dolly King, director of organizational development at The Charlotte (N.C.) Observer, also answered a blind ad for a training position. Before being hired by the Observer in 1979, the one-time high school English teacher and adult-education specialist had received specialty training from the Washington, D.C.-based Mid-Atlantic Association for Training and Consulting.

• Deborah Heintschel, training and development manager at the Austin (Texas) American-Statesman, has no background in teaching, but like Gannett's Baron she has a degree in psychology. She started working at the newspaper 10 years ago in the classified advertising department and was telephone sales manager before moving into training in 1983.

• Rob Reed, director of training for Knight-Ridder Inc., had his own newspaper consulting and training firm before joining the company in 1983. Before that, he was program coordinator with the Division of Management Education at the University of Michigan. He was on the English faculty at Eastern Michigan University for six years.

• B.J. Hateley was director of staff training and professional development at the University of Southern California before joining the Los Angeles Times in 1986 as training and development manager. With a degree in sociology and working toward a doctorate in social ethics, she is a part-time faculty member at USC's gerontology center.

• Fran Chapman, training manager at the Fort Myers (Fla.) News-Press, joined the paper in 1981 as training coordinator. Before that, she taught adult education at a vocational school in Lee County, Fla., and worked with a consulting firm specializing in training and organizational development.

• Stirling S. Rasmussen, manager of organization development and training at The Washington Post, has an academic background in international relations. He started at the Post in 1980, moving there from the federal government where he worked as a training specialist.

with some new techniques but has trouble implementing them because colleagues don't share the enthusiasm. "Make haste slowly" is common advice trainers have for those returning to their newspapers. "It can be like going to a religious retreat and then returning to the real world," says Mary Anne Pikrone, state editor of The Richmond (Va.) News Leader.

Palmedo says one way to overcome this problem is for the people who get trained to send their deputies to the training program.

Regarding seminar format and content, there are occasional grumbles that participation in discussions is inhibited. "The format in many programs is one-way communication," says Michael H. Maharry, metro editor of The Ann Arbor (Mich.) News. Some seminars "tend to be more of an exercise in ego gratification for the speaker."

But responses to follow-up questionnaires indicate general satisfaction with the programs and the benefits received. And as pointed out by Gerri Cordle Davis, vice president/human resources at The Orlando Sentinel, if training was not effective, newspapers would not be insisting on an even wider assortment of seminars and workshops.

OUTLOOK. Davis and others predict that the steady growth of newspaper training will continue indefinitely. Training will have "an increasing impact on all areas of the newspaper," Davis says. "Every year there is something new. Last year it was training on exposure to toxic substances. This year it's training on how to deal with AIDS in the workplace."

Reed says Knight-Ridder is gearing up for the future by creating an "executive development center" for the company's division heads and general managers. Scheduled to open next year in Miami, the center will operate "a 10-to-12 day program—a graduate division, if you will—not to take the place of API and other organizations but to supplement those efforts," he says.

In the 1990s, Reed predicts, "there will be a strong need for training in problem-solving and decision-making." As an example, he cites "project management" such as anticipating major capital investments.

Training is also a way to move minorities into management positions, and Palmedo says there will be greater activity in this area. Last summer, the Los Angeles Times graduated its first class of 27 minority and female employees from The Times Summer Management Institute, a new project "to develop the company's future leaders," says the Times' Hateley. The two-week program, with a yearlong follow-up, covered leadership, goal-setting, team-building, career planning and other topics relevant to professional development.

"We're in the process of forming a full corporate college this fall for employees at all levels," Hateley adds. "Our theme is 'Create Your Own Future.'"

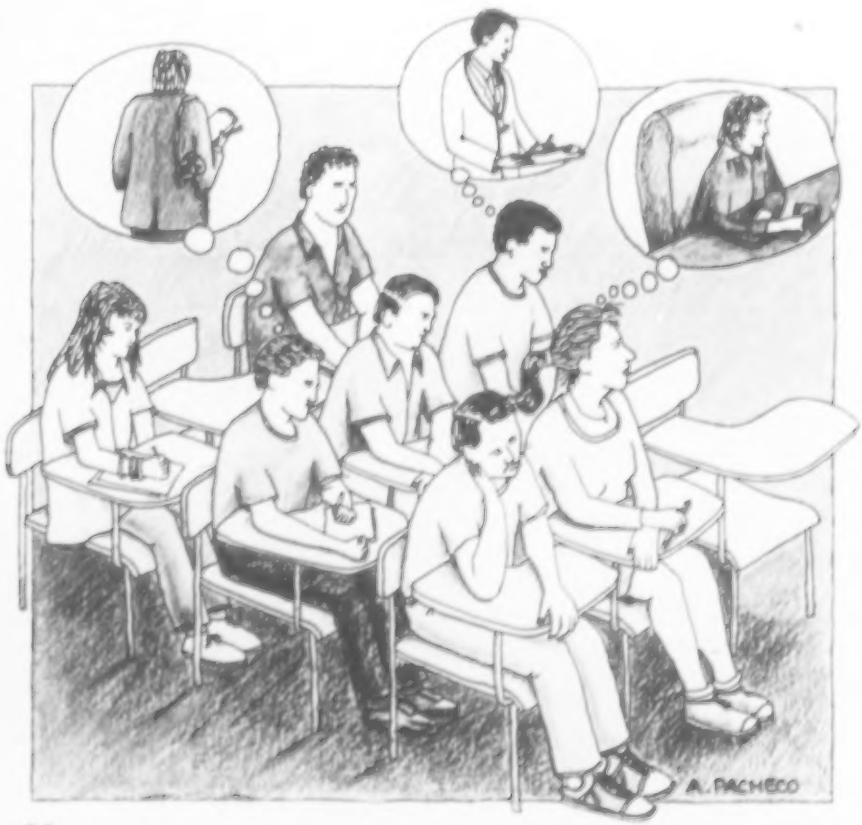
Training procedures will change, too, as technology evolves. Curtis E. Plott, executive vice president of the American Society for Training and Development, says "there will be more computer-based learning" and more use of "interactive audio-video," which are cost-effective because they do not require an instructor.

Yet even as training reaches out in new directions, it will continue to deal with an "old theme," says Paul N. Pohlman, director of management development programs at the University of Chicago, who has conducted management workshops for ANPA and other newspaper organizations for 15 years. "That theme is the connection between the individual's objectives and the organization's objectives. The manager has to manage that balance." □

Tough Times May Be Ahead For Attracting Top J-Students

Some educators believe competition for the best and brightest will increase, and possibly result in loss of enrollment to other academic disciplines

BY MARY A. ANDERSON
presstime staff writer



The last of the baby boomers have graduated from college. The "baby bust" is at hand. And journalism schools are having to compete as never before for quality students.

Many journalism educators are expressing a concern about the potential long-range effects of this demographic shift—for journalism schools and for newspaper newsrooms. But so far, the educators say they have not detected any drop in quality among their students. In fact, some say quality is higher than ever.

"It's my opinion we are getting even better students than we have gotten in previous years," says Neale Copple, dean of the College of Journalism at the University of Nebraska-Lincoln. "We are getting more than our share of the bright and good ones, and it continues to happen."

Nationally, according to The Dow Jones Newspaper Fund, newspapers draw 85 percent of their entry-level newsroom hires from the news-editorial sequences of journalism schools. But recently the percentage of those news-ed majors has been decreasing in relation to other sequences at U.S. journalism schools.

Although that's not the case at Nebraska, Copple is among many journalism educators who expect trouble ahead given the projections of a diminishing pool of college-age young people and poor starting salaries at newspapers.

"I think [newspapers] ought to be alarmed" that they may have trouble recruiting top prospects, he says.

At the University of North Carolina-Chapel Hill, the number of newspaper newsroom-oriented students has been holding steady, but journalism Dean Richard R. Cole warns, "I think the numbers are going to shrink unless [newspapers] change their image." To that end, newspaper editors have been visiting his school "in droves" in an effort to improve their image among top students.

Billy I. Ross, chairman of mass communications at Texas Tech University, says newspapers need "a more positive image." The current image is diverting some of his "sharper students" into public relations. "They look at PR as a middle-of-the-road career that's not all writing, not all advertising, that has a little more glamour to it, that has a little more money to it."

Taking a long view of the situation, Gerald C. Stone, a journalism professor at Memphis State University, says, "The crest the newspaper industry has been riding for the past five years—sometimes getting 50 to 100 resumes for every job opening—is going to end."

Professor Paul V. Peterson of Ohio State University, whose annual survey tracks en-

A QUARTERLY REPORT TO NEWSPAPERS

AD STATUS

4TH QUARTER 1987

The AD/SAT network now has 109 newspapers on line.

On October 15, a test facsimile transmission to The Sarasota Herald-Tribune, The Spartanburg Herald-Journal and The New York Daily News is scheduled to complete the installation of the entire AD/SAT network for 1987.

On that date, 109 newspapers, representing 43% of the nation's daily and 60% of the Sunday circulation, will be able to receive ads transmitted from AD/SAT's New York uplink.

With the network in place, the next—and vital—step is the transmission of advertising material to network newspapers. Traffic volume will begin slowly and should show a steady increase as agencies and advertisers become familiar with the advantages of satellite transmission.

Newspapers wishing to join the network, or seeking more information, should contact AD/SAT at the address below. Network affiliations signed during the balance of 1987 will have installations by next summer. Because of the long lead times involved in equipment manufacture, newspapers are urged to join as quickly as possible.

Now receiving ads: 109 papers.

AD/SAT "reigns" in Chicago

Remember the blizzard of January 22, 1987, which closed airports throughout the eastern seaboard and brought ground transportation to a halt?

AD/SAT came to the rescue for The Boston Globe, Washington Post and Chicago Tribune on that eventful day. More than $200,000 in advertising was saved for the three newspapers.

On Thursday, August 13, there were no blizzards to worry about. What Chicago got, however, was a "hundred year" rain, as over nine inches fell in 24 hours. O'Hare Airport became an island for several days. It was seemingly impossible to get advertising material into the city.

Undaunted by the forces of nature, AD/SAT routinely transmitted ads for Lord & Taylor and Bonwit Teller to The Chicago Tribune as the rains prevented ordinary delivery methods.

So far in AD/SAT's young life, neither snow nor rain . . .

Selling advertisers and their agencies.

One of the most frequently asked questions about the AD/SAT network is how the company is marketing itself to agencies and advertisers.

AD/SAT has two executives directly responsible for sales and marketing: Dave Farren, Director of Marketing; and Dick Evans, National Sales Manager.

Additionally, AD/SAT presently works through seven exclusive sales agents: Advertising Technologies in Atlanta, The Collier/Wright Company in Boston, Ad Systems in Chicago, Collier Colortype in Detroit, Gore Graphics in Los Angeles, Potomac Graphic Industries in New York and Star Graphics in Palo Alto (San Francisco). These sales agents are leading pre-press and graphics companies in their respective cities. Together, they employ 63 sales people, all fully familiar with the AD/SAT network.

To promote these efforts, AD/SAT publishes a monthly newspaper, "ORBIT," which goes to approximately 1,000 people at agencies, advertisers and newspapers, and creates further awareness of the AD/SAT network.

ADWEEK · Marketing Media Decisions · Chain Store Age Executive · Advertising Age · Inside Print

AD/SAT also employs a New York public relations firm, Saga Communications, to exploit exposure opportunities among advertising decision-makers.

AD/SAT's advertising effort to agencies and their clients is created by Horlick Levin Advertising, Los Angeles. The media schedule presently includes: Advertising Age, Adweek, Marketing & Media Decisions, Inside Print and Chain Store Age Executive.

We deliver newspaper ads at the speed of light

rollments in schools of journalism and mass communications, notes that degrees in news-editorial have dropped from 25 percent of all journalism degrees in 1984 to 20.8 percent last year. Peterson predicts a further decline in that percentage over the next few years, as the number of news-editorial majors remains stable while advertising and public relations enrollments continue to rise.

Another annual survey suggests that once they graduate, news-editorial majors in increasing numbers may be bypassing newspapers. The Dow Jones Newspaper Fund found that in 1986 there were 1.5 graduates seeking every available newspaper or wire service job, compared with 2.5 graduates for every such job two years earlier. The most recent survey also showed there were two 1986 graduates for each job offered in broadcasting, and 2.5 per job in public relations and advertising. [**presstime**, May 1987, p. 74]

A QUESTION OF QUALITY. Those numbers say nothing, however, about the quality of those students. While journalism deans and other faculty profess satisfaction with their news-editorial students, no national study has isolated them for comparison with the rest of the student body.

The only national study that attempts to do this by using Scholastic Aptitude Test scores still falls short because it measures students who only "intend" to major in communications rather than those who actually are in that major, and it does not differentiate among the various sequences under communications, such as news-editorial, film, broadcasting and others.

The most recent such study by The College Board's Admissions Testing Program found that the mean SAT score of 1985 high school seniors intending to major in "communications" in college was 906—exactly equal to the mean for all college-bound seniors and below the averages for students interested in many other professional majors or the liberal arts and sciences.

This, of course, is not the case at all schools. At the University of Illinois, for example, journalism students come third only to engineering and business majors, says James W. Carey, dean of the College of Communications.

To maintain high quality, Carey advocates tightened admissions standards even if news-editorial enrollments decline. "People won't think you're good until you think you're good," he told a gathering of journalists and educators last February. Even assuming a journalism school is attracting top students, however, there is no guarantee that they will find their way to newspaper newsrooms.

> *"I think newspapers ought to be alarmed" that they may have trouble recruiting top prospects.*

Journalism educators are seeing "growing student rejection of news-editorial studies and career choices based on what may be students' inaccurate or unrealistic perceptions," according to a study led by Raleigh C. Mann, associate professor of journalism at the University of North Carolina.

Mann and his research team last spring surveyed 790 new communications and journalism students at five universities in five states. They asked the students which sequences they were most and least likely to choose, and why.

Nearly 45 percent said news-editorial was the least desirable sequence, far exceeding the negative ratings for broadcast (21.7 percent), advertising (15.4) and public relations (16).

Among those who thought news-editorial was the least desirable, the most commonly stated reason was "dislike of that work" (55.7 percent), followed by "low salaries" (40.1 percent), "lack of opportunities to use creativity" (19.4 percent), "poor working conditions" (17.7 percent), and "poor advancement opportunities" (9.3 percent).

Less than 5 percent of news-editorial students believed they were choosing a field with good pay, while more than 20 percent in the other sequences said good pay had influenced their choices. The results also showed that students believe public relations offers the best working conditions and chance for advancement, and news-editorial the worst.

The researchers plan future questionnaires to determine more precise reasons for students' vocational choices.

In a study by the Associated Press Managing Editors, 78.4 percent of journalism educators said their students "have little or no interest in newspaper careers."

Of course, warnings have been sounded for years that low wages, long hours and other image problems have hindered newspapers' recruitment on campuses.

A 1958 study by Alvin E. Austin, now professor emeritus of the University of North Dakota, gave birth to The Dow Jones Newspaper Fund after Austin cited six obstacles to recruitment: low wages, lack of long-range opportunity, lack of prestige, low status of high school journalism, bad-mouthing of the profession by those in it, and "the traditional stereotype of the hard-drinking, crime-battling star reporter."

Perhaps only the latter might be safely taken off the list today.

At Texas Tech, Ross says some newspaper representatives visiting the journalism school have practically dared students to work at newspapers. "They say, 'There are long hours, low pay and difficult working conditions.' Students say, 'That's not what I want to get into.'"

Ross and other educators interviewed by **pressstime** answered uniformly in the affirmative when asked, "If newspapers paid more, could they get better applicants?"

Median starting salaries at newspapers have increased slowly, reaching $13,900 in 1986, according to the Newspaper Fund. However, this figure is below other fields such as business, engineering and teaching. Moreover, measured in constant dollars (adjusted for inflation), starting salaries for newspaper reporters have actually declined since the mid-1960s, even as salaries for experienced reporters have risen. [**pressstime**, March 1986, p. 34]

Besides increasing their entry-level pay, newspapers can take other steps to attract talented people to the business, observers say.

One suggestion is that they use their new programs for minority recruitment as a model for recruitment across the board.

Inviting students to visit the newspaper is seen as another way to entice them into the business. MaryAnn Yodelis Smith, director of the University of Minnesota's School of Journalism and Mass Communication, says that after a trip last year to the weekly Monticello Times and the St. Cloud Daily Times, "A number of students said to me, 'This has really changed my mind about a newspaper career, because I can see that some of those small newspapers really do have high standards.'"

Bright students should be courted by the newspaper business even before they enter college, notes Rosalind G. Stark, assistant director and publications manager of ANPA Foundation. Assisted by a grant from Gannett Foundation, ANPA Foundation will publish a booklet in December designed to do just that.

Reviewing an early draft, a focus group of high school students said they wanted four-color art on every page and lots of graphics. "It has to be kind of glitzy and fast-paced, so students will see the newspaper business as an exciting business," says Stark.

Only time will tell whether such efforts will produce what editors and educators alike want: a steady stream of high-quality college graduates who choose to launch their careers in newspaper newsrooms. □

Defense Initiative

All six crewmen of the Ranger-12 chose to stay with the panicked young pilot, making his sixth attempt to land the awkward old spy plane on the USS Nimitz, brightly lit but terrifyingly small in the night waters below. But unlike the crew of the Challenger, in the news exactly one year earlier, the names of the seven dead crew members of the Ranger-12 will not be remembered by the schoolchildren of America. The public was informed of the loss in a one-paragraph statement issued by public affairs officers at the Pentagon. Not everyone considered it news.

Jim Stewart did.

Stewart, national defense reporter for Cox Newspapers' Washington Bureau, revealed the tragically human mistakes of a routine mission that had gone terribly, fatally wrong.*

In 1985, Stewart's investigative defense reporting uncovered the incompetence of the Naval Hospital's chief heart surgeon. That story led to the conviction of the surgeon and the awarding to Stewart in 1986 of the Sigma Delta Chi Distinguished Service Award for General Reporting.

We're proud to have reporters with the initiative of Jim Stewart as part of the Cox Newspapers' family of fine journalists.

Regulating Newsracks

Four approaches have surfaced in ordinances across the country in the past decade

BY JOHN R. BENDER

In its new term that begins this month, the U.S. Supreme Court will consider whether the First Amendment limits the ways local governments may regulate newsracks.

The case involves the newsrack ordinance of Lakewood, Ohio. The Plain Dealer of Cleveland challenged the ordinance in court, and in July 1986 the 6th U.S. Circuit Court of Appeals struck down those parts of the ordinance that regulated newsracks in commercial areas [**pressetime**, June 1987, p. 78].

Lakewood demanded a $10-a-year fee, required owners of the racks to take out insurance (with the city of Lakewood named as the insured), and regulated their placement. An unusual twist was a requirement that the city's architectural review board approve the racks' designs.

The appeals court upheld Lakewood's newsrack ban in residential areas.

About a month before the Court of Appeals ruled on the Lakewood ordinance, a New Jersey court voided a similar law in Totowa.

A review of the Totowa and Lakewood cases, as well as several others reported in Media Law Reporter in the last decade, reveals four approaches to regulation that have surfaced in ordinances across the country:

- Licenses and fees
- Hold-harmless agreements and insurance requirements
- Restrictions on locations
- Limitations on clustering.

Because the First Amendment protects newspaper distribution as well as publication, cities may not ban newsracks altogether, however, they may impose reasonable restrictions on them. The four types of regulations fall far short of banning newsracks, but courts disagree as to how reasonable these restrictions are.

Different courts have ruled differently on similar regulations. The resulting confusion was one of the reasons the Supreme Court was asked to rule on the Lakewood newsrack law.

Here is a rundown on how some courts have handled each type of regulation in recent cases:

Fees and licenses. The Totowa and Lakewood ordinances both imposed annual fees of $10 per newsrack. A New Jersey court struck down Totowa's fee, but the 6th Circuit said Lakewood's fee probably was constitutional.

Part of the reason for the difference in these two decisions is the way the New Jersey court interpreted state law. A city may impose reasonable fees, but state law requires that the fees be justified by the costs of licensing, enforcement or other special circumstances, the court said. Because Totowa offered no evidence to justify the fee, the court declared it unreasonable.

Using similar reasoning, the Minnesota District Court for Hennepin County voided a Minneapolis ordinance that required the licensing of each rack and the payment of a $10 initial licensing fee and a $5-a-year renewal fee. The court said that the license and fee imposed a prior restraint.

The Minnesota court found the license as objectionable as the fee. Even without a fee, the court said, the license requirement may be unconstitutional unless the state proves it is the least restrictive way of serving "a weighty and important governmental interest."

Newspapers cannot always expect fees—even substantial fees—to be struck down by courts. In 1983, Gannett wanted to install USA Today newsracks in commuter stations operated by New York's Metropolitan Transportation Authority. The MTA said Gannett would have to pay $75 per rack or $150 per station.

Cities may not ban newsracks, but they may impose reasonable restrictions on them.

The 2nd U.S. Circuit Court of Appeals approved the hefty fees, ruling that the MTA stations are not traditional public places, like streets and sidewalks, where First Amendment activities are subject to only minimal regulation. Because of the importance of public transportation, government may use newsrack fees to subsidize passenger fares, the court said.

Insurance and hold-harmless agreements. Several communities have required owners of newsracks to carry insurance against personal injury or property damage. Some ordinances directed that the city be named as the insured or that the newsrack owner sign a hold-harmless agreement relieving the city of all liability arising from the placement of newsracks.

Totowa, Lakewood, Minneapolis and Greenwich, Conn., adopted ordinances requiring insurance for newsracks. Each was struck down by courts.

The amount of insurance required by the cities ranged from $1 million to $10,000. Some of the ordinances said the city must be named as the insured or as a coinsured party. Totowa and Lakewood told owners both to sign hold-harmless agreements with the city and to purchase insurance.

In most cases, courts struck down the insurance requirements because the cities had failed to prove they were needed. For example, the Minnesota court that ruled on the Minneapolis ordinance said the city had offered no more than a few stories of small cuts and torn clothing to justify its insurance requirement.

The federal appeals court that struck down the Lakewood ordinance noted that the city had not compelled the bus company and telephone company to carry insurance for the equipment they place on the streets. It said governments may not require those exercising First Amendment rights to carry burdens others need not bear.

Bender is a graduate teaching assistant at the Freedom of Information Center, University of Missouri.

Location. Some regulations on the placement of newsracks are generally accepted. Ordinances that prohibit placing racks next to fire hydrants or too close to crosswalks fall within the range of reasonable restrictions. Usually, newspapers work with local governments to settle any differences about where to put racks.

Sometimes, however, newsrack laws impose more onerous limitations. Whether the courts allow them to stand usually depends on the strength of the city's arguments.

One location restriction that has survived court review is Lakewood's complete ban on newsracks in residential areas. The federal appeals court upheld the ban on grounds that city officials could exercise no discretion as to what newspapers would be sold where, and that the "narrowly tailored" regulation served the government's interest in safety, sanitation, clear sidewalks and aesthetics in residential areas.

Courts have been less inclined to approve ordinances that ban newsracks within specified distances of schools, churches, parks, museums or commercial establishments without permission of the governing authority or the property owner. Ordinances adopted by Totowa, Yonkers, N.Y., and Ann Arbor, Mich., contained such provisions.

Totowa said its ordinance was necessary to regulate traffic in areas around schools, churches and parks, but the New Jersey court refused to consider this a substantial justification because the city allowed private entities, like businesses and churches, to decide whether the regulation would apply.

A Michigan court said the Ann Arbor ordinance would let property owners deny permission for the installation of newsracks on the basis of the publication's content.

A New York court that struck down the Yonkers law did not rule formally on this issue, but it did say in a footnote that the ban on newsracks near schools, parks, libraries and museums probably was invalid.

Clustering. Another type of regulation limits the number of newsracks that can be placed within a certain area. Some ordinances prohibit the placement of two or more racks selling the same issue within a specified distance of one another. Other ordinances limit the number of racks that may be placed at one location or on a single block.

The court that struck down the Totowa ordinance noted that the city traffic engineer could offer no justification for the rule, and in Greenwich the court said there was no safety rationale for it. The court decisions on the Lakewood and Yonkers ordinances did not mention this issue specifically.

One ordinance on the clustering of newsracks that has survived a court challenge is in Glendale, Calif. It limits newsracks to eight at any one location and 16 on each side of a block. The ordinance employs a system for assigning priorities to newspapers wishing to place racks on the streets. The highest priority goes to those newspapers that are published most frequently and circulated most widely in Los Angeles County.

Some cities see newsracks as a nuisance but also as a revenue source.

Summing up, the Supreme Court's decision in the Lakewood case may bring some uniformity to the area of newsrack regulation by clarifying which kinds of regulations are permissible and under what circumstances. But the decision probably won't be the last word on newsrack ordinances.

Some city officials, moved by the complaints of visual clutter or a loss of business by local merchants, regard newsracks as nuisances to be regulated. They also look on them as a new source of revenue.

For newspapers, single-copy sales, of which newsrack sales are an important part, account for about 20 percent of total circulation. Some people in the newspaper business say single-copy sales eventually could account for a third of total circulation as readers become more mobile and less inclined to read a newspaper every day.

Given these opposing forces—the political and financial needs of local officials and the changing nature of newspaper circulation—the decision on the Lakewood ordinance may set the tone for future newsrack litigation, but it won't settle the conflict. □

Poor Headlines, Cutlines and Leads Can Spook Fickle Readers

BY JOHN GINN

Winning the loyalty of many fickle readers can be a matter of removing some obstacles from our news columns.

Such fickle readers seem to be an important cause of subscriber churn, an expensive and frustrating headache at most newspapers. Many of us must sell enough subscriptions each year to equal half or more of our total circulation just to maintain existing subscriber levels. A series of focus-group sessions with subscribers who quit suggests news column obstacles are an important cause of subscriber churn.

Many of these fickle readers seem to approach the newspaper-reading experience with a mind-set unlike yours and mine. We and many of our most loyal readers are news junkies. We are eager to read the paper. We begrudge interruptions. We have important, unmet needs when we cannot spend 30 minutes to an hour or more getting our newspaper fix.

Not so the fickle, fragile reader. These men and women seem to pick up the newspaper poised to quit. Given slight encouragement—usually in the form of an obstacle—they do quit. And when they frequently quit early in the reading process, they begin to conclude that they don't have time to read the paper. Or that it costs too much. So they cancel their subscriptions.

The focus groups we conducted with subscribers who quit the Anderson Independent-Mail pointed to three elements of the newspaper that are most likely to harbor churn-producing obstacles. Not surprisingly, those elements were headlines, cutlines and story leads.

Headlines were villains when the fickle reader concluded they were in any way misleading. "I don't want to be tricked or toyed with," one focus group participant said. "Just give me the information in the headline and don't play games with me," he said.

This fairly common complaint from our sessions has blunted my longstanding enthusiasm for teaser headlines on certain feature stories. And it has made me more sensitive to those instances where a page design calls for a one-column, 36-point headline that precludes a clear statement of the story's essence. When such layouts prompt the risk of adding to reader churn, I get eager to explore less risky layout schemes.

Several of these focus-group participants pointed to incompleteness as a common headline obstacle. I found myself very inclined to resist this idea. For 30 years, it has been my view that a headline needs to capture the main idea of a story, and that other important ideas could appear unannounced as the story unfolded. Several of these fickle readers disagreed with that notion. "I look at headlines to learn what kind of stuff is written about in the story," one man explained. "And when I'm surprised by important parts of a story that aren't covered by the headline, I figure you're trying to fool me. I don't like that. Besides, I wonder what you may have caused me to miss with other incomplete headlines on stories I didn't read."

These fragile-reader sentiments seem to me to argue for more multiline heads and more uses of decks than most of our newspapers typically use. And sometimes they may even argue for having two stories and thus two headlines when we might otherwise be tempted to forge two related topics into one piece.

This exploration of headlines led to another discovery that surprised me. I have long presumed that all readers use headlines just as you and I do—to determine whether we want to read the story under the head. However, there are some less news-hungry readers who on a given day are satisfied simply with the information they receive from reading headlines. Some such people tell us there are days when they read all or most of the heads in a paper without reading any stories.

That information jolted me. At first, I was offended. What right does a reader have to ignore all of our stories and just read the headlines? But a less emotional look at that question led me to the obvious answer: He has a right to do as he pleases once he plunks down his subscription money or single-copy price. That led me to wonder whether it might not be useful occasionally to read through all the heads in your newspaper without reading any stories, asking yourself, "Would a reader get a fair and accurate view of the day's news report just from reading these heads?" If you're tempted to answer "No," you may want to put additional emphasis on more complete heads in your paper.

John Ginn

The fragile readers in our focus groups pointed to photo cutlines as the greatest source of obstacles in our newspaper.

The fragile readers in our focus groups pointed to photo cutlines as the greatest source of obstacles in our newspaper.

One type involves the assumption that when the reader reads a cutline, he or she already has read the story. "I almost always look at the pictures and read the words under them before I read a story that goes with it," one focus-group member said. "A lot of those words don't make sense unless you've read the story first," she said.

She had brought some examples to prove her point. You likely can find such in your own paper. They included very widespread practices such as using a person's last name

Ginn is publisher of the Anderson (S.C.) Independent-Mail. This article originally appeared in Editorial Focus, a publication for the news staffs of Harte-Hanks Newspapers.

only under a photo or mug shot, making reference to "the fire" or "the crash" without adequate explanation, and putting some quote under a mug-shot name line that makes little sense until you read the story. Keep in mind that some of your fragile readers may be encouraged to stop subscribing because of these practices.

Another type of obstacle in cutlines involved what one reader called "irrational time elements." While she was an English teacher and could speak more articulately than others on this point, a significant number of focus-group participants called our attention to this obstacle. As the English teacher put it, "You typically begin one of these cutlines with a present-tense sentence. That's fine. You are describing the action captured in the photograph, and it seems reasonable to state that, 'Fireman John Jones battles the fire that struck the hospital.' However, it doesn't seem reasonable to say, 'Jones battles fire Friday.' That's incongruous to have the present tense verb and the past tense information presented as an adverb."

She went on to suggest that the time element be moved to a subsequent sentence in such captions, where it is common practice to use past tense.

Other focus-group participants were more inclined to point to this time-element factor with comments like, "This sounds funny." But it seemed clear that to many fragile readers, captions with "irrational time elements" are an obstacle.

There was one type of obstacle identified that seemed to crop up both in cutlines and story leads. At first I thought these focus-group participants were talking about this obstacle being wordiness, because they pointed out examples where sentences contained 30 or more words. But there were equally wordy sentences in other cutlines and story leads with which they said they had no problem.

The difference seemed to be the number of ideas contained in a sentence. When a cutline or story sentence contained only a few closely related ideas, there seemed to be no obstacle, even if 35 or 40 words were used. But this kind of cutline sentence clearly was considered an obstacle:

"Heptathlon winner Jackie Joyner-Kersee, left, gets words of comfort from her coach-husband Bob Kersee after a poor performance in the javelin which prevented her from a world record in the heptathlon during the USA-Mobil Outdoor Track and Field Championships in San Jose, Calif., Wednesday afternoon, when she still produced the third-highest point total in heptathlon history with 6,979 points."

The six or seven ideas presented here seem even more of a burden than the 60 or so words cluttering the sentence.

One other kind of obstacle was called to our attention often. This one is no surprise, and it can occur in headlines, cutlines or stories. It involves what I have come to call blatant inaccuracy. "When I see something I know is wrong, that's a big turnoff for me," said one focus-group participant. "I usually put down the paper and go do something else then. I'm not sure why, but that's what I do." Spelling errors, incorrect street names and headlines that disagree with stories were the most common, blatant inaccuracies cited.

There is no surprise in the fact that inaccuracy is very undesirable. We fight it all the time. But it had not occurred to me that inaccuracies—even relatively minor ones—can be so expensive that they distinctly contribute to decisions to cancel subscriptions.

I came away from this series of focus groups convinced that the clues picked up there represent some opportunities for us to lessen the burden of subscriber churn. Most of these obstacles can be eliminated with fairly simple effort and ideas. You likely can come up with a number of ways to avoid most such obstacles. Some that occur to me include:

- Strive to design and write headlines that clearly state all of the important ideas in the story. Use multiline heads and decks if needed.
- Be inclined to break longer, complex stories into several shorter, easier-to-grasp pieces.
- Write cutlines so they make sense to someone who has not read the story (and has not read the cutline for any other photo in the layout).
- In most instances, omit the time element from the opening, present-tense sentence of a cutline. Put it in a subsequent, past-tense sentence.
- Write cutline and story sentences so that they involve only a few closely related ideas. Simple declarative sentences are nice, too.
- Be extremely diligent in eliminating errors—even minor ones. An especially useful approach can be to take this point of view: "I know there are some errors here. I wonder how many of them I can find and eliminate."

Maybe the most useful idea from the focus-group sessions with fickle, fragile readers is to keep in mind that an important group of readers—and a group that contributes greatly to subscriber churn—uses the newspaper differently from us and our most loyal readers. Our goals need to include publishing editions that help them have satisfactory newspaper experiences, even as we continue our efforts to tend to the needs of us news junkies. □

WHOSE MARKET STUDIES PAY FOR THEMSELVES IN JUST ONE YEAR?

Thom Greer

Veteran sportswriter tackles job of m.e. in Cleveland

BY GENE GOLTZ
presstime staff writer

Someone once told Thomas H. Greer that a good black sports writer could write his own ticket in the newspaper business. Greer became a good black sports writer, but he says along the way he learned a profound lesson: "Nobody writes his own ticket if he can't get the job done."

During most of his first 22 years in newspapering, Greer stuck to making his mark as a sports writer, sports editor and sports columnist. But in August 1986, he was promoted from sports editor to managing editor of The Plain Dealer in Cleveland, where he is responsible for the day-to-day news operation and guides a staff of about 325 reporters, editors, clerks and secretaries.

It was quite a jump from his first love, sports, where he had supervised about 40 people. But after three years as a sports editor, he says his horizons enlarged; he "matured a little" and developed an appreciation for the entire news product. Nevertheless, on his managing editor's desk today, he displays a baseball and a miniature football mounted on pedestals.

Those who know him say they never doubted Greer's ability to get the job done in any position.

"Thom had proven himself not only as a reporter but as an editor in sports to be a well-rounded and thorough newsman," says David L. Hopcraft, former executive editor of The Plain Dealer and the person who promoted Greer to m.e.

Born in Nashville, Greer spent much of his youth in New Jersey, then returned to the South to attend college. In 1963, he graduated from Dillard University in New Orleans, having majored in history.

He worked at various jobs before taking a job in 1965 as a suburban reporter for the Trenton Times. He made it known that he wanted to cover sports, and about a year later his wish came true.

An unexpected vacancy occurred, and Greer was assigned to follow the Philadelphia Eagles, thus becoming one of the first black reporters to cover professional sports. When he covered his first Super Bowl in 1971, he was the only black reporter present.

Greer left Trenton for The Plain Dealer in 1973, convinced that to reach the top as a sports writer he would have to work at a major metropolitan newspaper. Because there was no opening in sports at the time, he accepted a position as a suburban reporter with the understanding that he would be reassigned to cover the Cleveland Browns within a year. However, the expected opening as a pro football writer did not materialize.

In the suburbs, Greer and another reporter unearthed a massive scandal involving the sheriff's office and various others in local government. Their work during a three-year period led to grand-jury indictments of several people on charges involving theft in office, shakedowns of nightclub operators and thefts of liquor confiscated by law-enforcement officers in raids.

"It was one of those incredibly long, drawn-out stories," Greer says. "It was the most rewarding thing I'd ever done in the business, getting those greedy politicians."

But still desiring a major sports beat, he left Cleveland for the sports department of the Chicago Sun-Times in 1976. From there, he moved to the sports staffs of three other big-city dailies—the Philadelphia Daily News, New York Daily News and The Philadelphia Inquirer—before The Plain Dealer came through in 1983 with its long-promised offer for him in sports.

This time, though, the job being talked about was much more than covering the Cleveland Browns. Then-Executive Editor Hopcraft was looking for someone to straighten out a disorganized sports desk. He asked Greer if he was interested in becoming the first black sports editor of a major metropolitan newspaper.

Greer had some doubts. "I had no management experience. I was not an inside person, not a desk person; I was a writer. While I thought I would love to give it a try, I really did not think I was qualified. Hopcraft told me, 'You let me make that decision.'"

The decision was the right one, says Thomas Vail, Plain Dealer president and publisher. "When Greer came to our sports department," says Vail, "it was not well-organized. It needed a lot of work." He said Greer got the department running smoothly and "made a fine track record."

When the managing editor's job became vacant, several people were interviewed for the job, Greer among them. Hopcraft says he selected Greer because he was the best among those interviewed.

Publisher Vail says Greer had made a good name for himself and "came through clearly" as the best man for the job.

Greer says hard work is an integral part of his success story. "Occasionally, when I'm out speaking to minority groups, one of the things I'm trying to get across is that you really have to work like hell in this business. If you want to have any success at all, you just have to put your nose to the grindstone and work, work, work, work. If I've had any success, it's because of devotion to the work ethic."

He believes the greatest lack of minority staffing at newspapers today is at mid-size and small operations. Major metros hire the "limited pool of minority journalists who have prepared themselves for the profession," but smaller papers are not willing to hire and train minorities, he says.

"I think executives in the smaller weeklies and suburban dailies need a change in their mind-set," he adds. They should actively recruit, hire and help minorities prepare for the business. "I don't want to paint everybody with the same brush stroke," he says, "but it seems (the smaller papers) see no need to hire minorities, since there are no blacks living in their areas."

This is a mistake, he says, because all newspapers should realize that diversity among the staff, including blacks, Hispanics, Asians and other minorities, is "absolutely essential for their survival."

The 46-year-old Greer and his wife, Shirley, live in Cleveland Heights. They have two daughters, one a student at Ohio University and the other in elementary school. □

COURTS

Supreme Court to hear variety of media-related cases

BY LISA M. CODY

The U.S. Supreme Court has agreed to hear several cases of interest to the press in the term that gets under way Oct. 5. The cases deal with "intentional infliction of emotional distress" by a publication, a newsrack ordinance and other First Amendment concerns.

In addition, the high court is being asked to accept for review a number of other cases involving issues of interest to the media.

The court will hear the following:

• *Hustler Magazine v. Falwell*, in which Hustler has asked the court to set aside a $200,000 jury award to evangelist Jerry Falwell. The jury awarded damages after determining that Hustler committed "intentional infliction of emotional distress" by publishing a liquor-ad parody presented as an interview with Falwell. The evangelist also claimed he was libeled, but the jury did not agree and that part of the case was dropped.

In a friend-of-the-court brief, ANPA joined other media organizations in arguing that the damage award violates the First Amendment.

But Falwell's lawyers have claimed that nothing in the First Amendment "requires protection for the calculated, premeditated and deliberate infliction of harm targeted at a specific individual."

• *City of Lakewood v. Plain Dealer Publishing Co.*, in which the constitutional question is the extent to which local governments can regulate newspaper vending machines.

The city of Lakewood, Ohio, is appealing a 6th U.S. Circuit Court of Appeals order that struck down portions of an ordinance governing rack design, permit approval and insurance requirements.

Media groups including ANPA have asked the court to look at another part of the appeals court's order: the upholding of Lakewood's ban on newsracks placed on public streets in residential areas. The groups said newsracks are entitled to full First Amendment protection, and that placement may be restricted "only under narrowly tailored circumstances that are not present here." (See story, p. 32.)

• *Hazelwood School District v. Kuhlmeier*, in which school authorities have asked the court to reverse an 8th Circuit ruling that a principal violated First Amendment rights of student journalists by deleting from a high school newspaper two stories on pregnancy and divorce.

The school district argues the school paper is not a public forum but part of the curriculum under its control [**presstime**, April 1987, p. 40].

The American Society of Newspaper Editors and other press groups filed an *amicus* brief in support of the students. They said government control over curriculum "must be valued," but it also must be "reasoned" when "constitutionally protected values of free expression" are involved.

• *Carpenter v. U.S.*, in which the court has been asked to overturn the conviction of R. Foster Winans, former reporter of The Wall Street Journal.

Winans was found guilty of insider trading by letting a stockbroker know in advance the publication schedule of Journal "Heard on the Street" columns. Winans argued that by revealing the schedule he committed a breach of duty to his employer but not a violation of securities law as a court found [**presstime**, April 1987, p. 40].

Ten media organizations filed a friend-of-the-court brief on behalf of Winans. They argued that the court's application of securities laws was too broad and "threatens infringement of First Amendment rights." The brief also said the decision creates an "unprecedented basis for liability under the securities law by incorporating internal company ethics rules into the federal criminal code."

• *Bankers Life and Casualty Co. v. Crenshaw*, in which the court will decide whether punitive damages are contrary to an Eighth Amendment prohibition against excessive fines.

Bankers Life appealed a $1.6-million punitive-damage award for failure to pay a $20,000 insurance claim.

Several press organizations in a friend-of-the-court brief urged the court to take the case because many media firms have been hit with multimillion-dollar punitive judgments.

Among cases the court is being asked to accept for review:

• *Tavoulareas v. Washington Post Co.*, on whether the U.S. Circuit Court of Appeals for the District of Columbia erred in throwing out a $2-million libel judgment against the Post. The court said there was insufficient evidence of actual malice [**presstime**, April 1987, p. 41].

• *U.S. v. Providence Journal Co.*, on whether the 1st Circuit properly cleared the newspaper company and its executive editor of a criminal contempt-of-court conviction [**presstime**, Feb. 1987, p. 38].

• *Blatty v. New York Times Co.*, on whether the standards of defamation suits should apply to a claim of "interference with prospective economic advantage." Author William Peter Blatty sued The New York Times for not including one of his books on the Times best-seller list, claiming that the exclusion resulted in lower book sales than if it had been listed.

• *Random House and Hamilton v. Salinger*, on whether author J. D. Salinger's unpublished letters are covered by the fair-use defense under the Copyright Act. □

Cody is ANPA legal/regulatory specialist in the Legal/Government Affairs Department.

COURT BRIEFS

• A New York appeals court ruling expanded the public's right of **access to pretrial documents**, including wiretap information and motion papers.

Two New York newspapers and the Associated Press had appealed a U.S. District Court judge's decision to withhold key documents from the press in a government-corruption case.

The appeals court did not call for automatic disclosure but said such information could be withheld only if a party shows that a "narrowly tailored" sealing is essential.

• A federal appeals court awarded **double court costs** to The Daily Times of Maryville, Tenn., while upholding a lower court's dismissal of a $26-million lawsuit against the paper.

Hubert D. Patty, a lawyer, had sued because the publisher refused to print a political advertisement.

The 6th U.S. Circuit Court of Appeals ruled that Patty will have to pay the newspaper between $500 and $600, said The Daily Times' attorney, L. Michael Zinser [**presstime**, Aug. 1986, p. 37].

Appeals court upholds closed jury hearings

Press organizations may seek U.S. Supreme Court review of a federal appeals court decision that upheld closure of mid-trial jury proceedings in the 1986 fraud and racketeering trial of Louisiana Gov. Edwin W. Edwards.

In its opinion, a three-judge panel of the 5th U.S. Circuit Court of Appeals said, "For First Amendment purposes, no presumption of openness attaches to proceedings involving the mid-trial questioning of jurors."

The panel also found that the six-week delay in releasing the transcripts was "reasonable," and that the judge was within his authority to delete material from the transcripts.

"It's a horrible, horrible opinion in every respect," said attorney Jack M. Weiss, who represents The Times-Picayune Publishing Corp. of New Orleans, Gannett News Service, and the Morning Advocate and State-Times of Baton Rouge.

The proceedings in question concerned whether out-of-court remarks by jurors indicated that improprieties had occurred. □

Interviews with defendants lead to litigation

Two cases involving reporters' interviews with murder defendants are proceeding on opposite coasts of the United States.

In California, The Contra Costa Times of Walnut Creek is appealing to the state Supreme Court a judge's order that a reporter submit her notes as evidence and testify about her interview with a man charged with three murders.

The judge presiding over the murder trial ruled that the defendant's right to a fair trial, in a case possibly exposing him to the death penalty, overrides Erin Hallissy's First Amendment rights. He said it also supersedes the California shield law that is designed to protect reporters.

In Maine, former Concord Monitor reporter Bob Hohler plans to appeal his Aug. 29 conviction of criminal contempt for refusing to testify in a murder case there.

Hohler's conviction followed a jury trial—unusual in a contempt case—in which a Maine Superior Court judge barred evidence concerning the reporter's reasons for refusing to testify about his interview with a murder defendant.

Sentencing for Hohler, who now works for The Boston Globe, is set for Oct. 7 [**presstime**, Sept. 1987, p. 40]. □

REGULATIONS

Detroit JOA draws flak

The Antitrust Division of the Justice Department recommended denial of the application of Detroit's two daily newspapers for a joint operating arrangement.

In a Sept. 23 brief, the division said The Detroit News and the Detroit Free Press had failed to show that the Free Press is a failing newspaper within the meaning of the 1970 Newspaper Preservation Act and thus had not demonstrated that a JOA is necessary to preserve two independent editorial voices in the city.

The brief was submitted to Administrative Law Judge Morton Needelman, who in August presided over public hearings on the JOA application.

Gannett Co., owner of the News, and Knight-Ridder Inc., owner of the Free Press, said they were not surprised by the recommendation.

A Knight-Ridder spokeswoman noted that in the case of the last JOA application, in Seattle, the Antitrust Division also recommended denial but the application ultimately was approved by the attorney general. A Gannett spokeswoman said that in their joint post-hearings brief to Needelman, the two newspapers maintained they had "met their burden of establishing that the Free Press has sustained real, substantial and continuing losses." The newspapers said they had shown that the Free Press "has engaged in reasonable management practices in a continuing but unsuccessful effort to stem its operating losses and earn a reasonable return on investments," she said.

The Antitrust Division said that while the Free Press has sustained substantial losses since 1980, the News also has lost heavily; that their battle for dominance of the Detroit market had resulted in the lowest circulation prices in any major metropolitan market; and that their relative competitive positions had remained stable, with the Free Press improving slightly by some measures.

Nor is the Free Press in the "downward spiral" characteristic of other failing newspapers, the division said. The fact that the proposed JOA calls for an almost equal division of profits indicates the two papers view their competitive positions as comparable, it added.

In July 1986, the division had told Attorney General Edwin Meese III it did not appear that a Detroit JOA was necessary. However, it recommended public hearings to gather more evidence. Meese agreed, and the hearings, held in Detroit, ended Aug. 24 after three weeks of testimony before Needelman.

After the hearings, a brief also was submitted to Needelman by opponents of the JOA.

All parties now have until Oct. 14 to file reply briefs, after which Needelman will recommend to Meese whether to approve the pact [**presstime**, Sept. 1987, p. 42].

Needelman has no deadline by which to act, but one source close to the situation said a recommendation is not expected before late November or December. □

LEGISLATION

Newsprint duty exemption sought on two fronts

A free-trade agreement between the United States and Canada could provide the vehicle the U.S. newspaper business has been seeking in its drive to retain the duty-free status of newsprint.

That's what ANPA suggested in a letter to the Senate Finance Committee.

The committee sought comments on U.S.-Canadian trade negotiations being conducted in Ottawa and Washington, D.C. Negotiators are under an Oct. 5 deadline to present a draft agreement to Congress. At press time, the talks were in abeyance after a walkout by Canadian officials Sept. 23.

In the letter, ANPA reiterated its opposition to a proposed import duty that is part of trade legislation currently before a congressional conference committee [**presstime**, Aug. 1987, p. 35].

The Association said that if the United States reaches an agreement with Canada to eliminate all tariffs and other barriers to free trade, the agreement should "supersede" the proposed import duty in the trade bill, at least with respect to newsprint.

In late September, newspaper-industry representatives were seeking a meeting with the U.S. trade negotiators, according to Claudia M. James, ANPA assistant general counsel.

At the same time, she said, ANPA was continuing to urge members of the House-Senate conference committee to include a newsprint exemption in the trade bill. □

Florida's Legislature debates repeal or revision of services tax

The 5-percent tax on services in Florida was barely 10 weeks old on Sept. 18 when Florida Gov. Bob Martinez declared it a "mistake" and called for its repeal.

At press time, repeal was by no means assured, as both houses of the Legislature concluded a two-day special session by keeping bills for repeal locked in committee.

Gov. Bob Martinez

"Nothing is settled. They're back to square one," said Faye B. Davis, assistant executive director of the Florida Press Association.

Many in the Florida Democratic majority leadership favor revision instead of outright abandonment of the tax. And the Legislature's decision to adjourn Sept. 22 for five days was viewed as favorable to efforts to revise the law.

"It's a little early to rejoice," said Davis. "No one knows what's going to happen." But she predicted that at least the state's taxation of advertising services will soon be history.

"We've been told by the leadership that (exemption of) advertising would be part of the revision," she said.

Some legislators have said they prefer to exempt only advertising services, thus salvaging most of the revenues that would be collected under the tax. The tax was expected to raise more than $750 million in the current fiscal year, $100 million of that from advertisers [presstime, May 1987, p. 62]. But others argue that to exempt only the advertisers and media—the most vociferous opponents—would fuel charges of discrimination by other taxed groups, such as lawyers.

Even if the tax on services, which became law July 1, is softened or repealed, the Florida Department of Revenue has said the tax must continue to be paid until any superseding legislation takes effect. Martinez has proposed that the repeal be made effective Jan. 1.

Martinez, the main champion of the tax as it moved through the Legislature earlier this year, began to change his strategy in late August, prodded by polls showing that his popularity rating had plummeted and that up to 80 percent of the state's voters oppose the entire tax on services.

A majority of those polled said they agree the state needs more revenue, but they preferred other means to raise it, such as adding a penny to the sales tax on goods.

As opposition intensified, the first-year Republican governor initially called for a constitutionally binding public referendum on the tax, to be held during Florida's presidential primary next March. But the opposition continued to gain momentum, so he next decided to prevent further losses of support, and possible fiscal chaos, by asking the Legislature to repeal the tax.

Martinez criticized himself for pushing through the massive services tax without first tackling budget reform. "That mistake has cost me the confidence of the people of Florida," he said. "More importantly, it has severely damaged the people's confidence in government generally."

Martinez has asked that no replacement tax be passed, but that the budget be cut or other reforms adopted to give him better control of state spending.

"We must wipe the slate clean and begin again," he said. "And this time, we have to do it right—by showing efficiency first and talking about more taxes last."

Many legislators are reluctant to repeal the measure without enacting some kind of revenue-raising alternative, said Davis of the FPA. During the special session, they were discussing increased corporate taxes or the suggested penny increase in the sales tax, a proposal previously dismissed as a "Band-Aid" to Florida's fiscal problems.

Yet another option under discussion is to eliminate tax "pyramids" that may tax services many times, such as through subcontractors, contractors and the end user. The state's constitution prohibits any state tax on personal income, real estate or personal property.

The turmoil in Florida has, for the moment, deflated efforts in most other states to enact similar sales taxes on services. But observers in ANPA's Government Affairs Department remain concerned that several financially strapped states continue to consider them.

In Texas, for example, a commission is studying ways to raise revenue, including a services tax similar to Florida's. Legislative action is not expected until December at the earliest.

Other states currently studying a services tax, and closely watching Florida, are Utah and Pennsylvania, says Kevin Grant, ANPA State Relations Coordinator. □

Nicaragua government allows La Prensa to resume publication

The government of Nicaragua and the publisher of La Prensa announced Sept. 20 that the opposition daily newspaper had been given permission to resume publication without restriction.

Violeta Chamorro said her paper, which was shut down by the government June 26, 1986, will be on the streets by the first of this month.

A Central American peace plan signed in August by Nicaraguan President Daniel Ortega called for freedom of expression to be restored by Nov. 7 [presstime, Sept. 1987, p. 45].

The Inter American Press Association has told Ortega it hopes the agreement to permit the newspaper to circulate without prior censorship "will be faithfully maintained."

In a Sept. 23 statement, IAPA pointed out that other newspapers remain closed by government order in Latin America, citing those in Paraguay and Panama. □

Press groups denounce raids, imprisonment

Government actions against a newspaper in India and a magazine editor in Chile have drawn international press protests.

The World Press Freedom Committee was among those protesting government raids on the offices of the Indian Express newspaper. In a letter to India's Prime Minister Rajiv Gandhi, the WPFC expressed skepticism about the official reason for the raids—suspicion of offenses involving the import of machinery.

"Despite allegations of law violations, the nature of these raids forces us to conclude that this is a thinly veiled and heavy-handed attempt to intimidate the Express and other newspapers that have been covering alleged government corruption," the organization said.

Among others protesting the government's action were the International Federation of Newspaper Publishers, or FIEJ, and the Inter American Press Association.

FIEJ and IAPA also protested the imprisonment of Chilean magazine editor Marcelo Contreras for publishing a satirical supplement that portrayed Chilean President Augusto Pinochet as King Louis XIV of France.

Contreras was imprisoned by military authorities and 30,000 copies of his Apsi magazine supplement were seized, according to FIEJ. □

'Diversity Principle' reaffirmed

Newspaper-industry executives have praised the decision of a federal judge to continue barring the regional Bell operating companies from generating content for electronic information services, including electronic Yellow Pages.

U.S. District Judge Harold H. Greene's decision reaffirms the ANPA-proclaimed "Diversity Principle" and provides new incentive for the development of electronic information services in the United States, the executives said.

Judge Greene

The other key aspect of the decision regarding information services—to permit the BOCs to perform some limited "gateway" functions related to the transmission of videotex services—coincides with ANPA views, they said.

Citing a lack of technical information, Greene did not immediately issue an order implementing his Sept. 10 decision on the information services question. He asked for proposed orders to be submitted to him by Oct. 15.

The judge's order will be "the operative document as to what is permitted and what is not," said W. Terry Maguire, ANPA senior vice president. At press time, the Association was preparing its proposal for Greene.

Also creating a climate of uncertainty was the possibility of an appeal by the BOCs to a higher court, the likelihood of congressional hearings and the chance of legislation if the BOCs decide to push for it on Capitol Hill.

Despite the remaining questions, newspaper executives were clearly pleased with the results of Greene's first triennial review of the consent decree governing the breakup of AT&T. "The Diversity Principle is alive and extraordinarily well," said Maguire, referring to the Association's position that a monopoly telephone company should not own or control the information flowing over its lines.

Uzal H. Martz Jr., chairman of ANPA's Diversity Principle Task Force, said Greene's plan to allow the BOCs to have some limited involvement in information services was in line with recent ANPA statements.

In its filings with the court and in congressional testimony, ANPA had differentiated between "transmission and content-neutral services" and "those relating to content," Martz said, "and in that sense had moved away from a rigid sense of the status quo." Martz, president and publisher of the Pottsvillle (Pa.) Republican, is also a member of the Association's Board of Directors.

ANPA Chairman George W. Wilson, president of the Concord (N.H.) Monitor, said Greene's decision "appears to provide a fresh incentive for the development of robust electronic information services in this country."

The newspaper executives' enthusiastic response was in stark contrast to that of officials of the Bell regionals, who criticized Greene's decision to give them only a limited role in information services—a role some of them said they believed they were already allowed to play.

Several newspaper executives said they welcomed the fact that the decision removes much of the uncertainty that has plagued the videotex marketplace. "To the degree that the court has clarified the roles (of the telephone companies and information providers), it will help them each in terms of their business plans and in their ability to get together and work in a cooperative fashion," said Thomas Pace, communications counsel for Dow Jones & Co., which is involved in electronic as well as newspaper publishing.

As it prepared its filing with the court, ANPA sought to act as a catalyst for that cooperation. Maguire said the Association planned to contact the Bell regionals "in an effort to convince them that it is in their best interests and in the best interest of information providers to have the final order from Judge Greene be the most workable that it can be."

ANPA executives have been meeting with Bell representatives since divestiture "to see if we could develop a framework very similar to what Judge Greene has now given the green light to," Maguire said.

The bulk of Greene's 223-page opinion was devoted to background on the AT&T antitrust trial over which he presided, the 1982 consent decree that closed the case splitting the BOCs from Ma Bell, and an explanation of why he was denying the BOCs' request to lift the decree's restrictions on their involvement in long distance and telecommunications manufacturing.

In the 30 pages he devoted to the decree's information services restriction, Greene outlined five "gateway" functions that the BOCs should be authorized to perform. He said they were similar to those handled by the French telephone company for its Teletel videotex system.

As described by Greene, the functions are:

- "Data transmission," which would allow consumers to use less sophisticated computer hardware and software
- "Address translation," which would allow consumers to dial a simple code to obtain a specific information provider rather than a separate phone number
- "Protocol conversion," which would allow messages to be sent more efficiently over the telephone network
- "Billing management," which would eliminate both the need for each information provider to bill for its services and the need for consumers to subscribe to individual videotex services
- "Introductory information content," which would be limited to a listing of information providers, the category of their offerings and a "welcoming page." This would advise the consumer of the billing arrangement and ask for the code or name of the information provider desired.

Greene said the telephone companies will

TELECOMMUNICATIONS NOTES

• The Seattle Times has become the latest newspaper to enter the **voice-information-services** business.

The paper's INFO-Line offers news, financial information, sports and weather forecasts. The recorded information is stored in a computer in digitized form and is accessible via telephone using a Touch-Tone service line.

Beginning this month, the newspaper will sell 15-second advertising spots for the service.

• Bell Canada said it will conduct a trial of a **videotex service** called "ALEX" beginning September 1988 in Montreal and later in Toronto. Targeted at the residential market, it will emphasize transactional services.

Consumers will gain access to the service using a specially developed terminal, similar to the Minitel device used in the French Teletel system. It will be rented to users.

The service will use the NAPLPS videotex format developed by the Canadian government and capable of more elaborate graphics than the Antiope format used in Teletel.

American Newspaper Publishers Association
ANPA
TO ADVANCE THE CAUSE OF A FREE PRESS

not be allowed to provide electronic Yellow Pages because they "would plainly have the incentive and ability to discriminate both against competing providers of directory services and against the publishers of classified and other advertisements." He added, however, that there is no reason the companies should not be allowed to offer "white pages" directories in electronic form.

The filings of the BOCS will be scrutinized for clues as to whether they will proceed to offer such services.

"The question really is whether the gateway role that the judge lays out for the BOCs will be viewed by them as significant enough to want to develop the gateway role," said James Holly, director of electronic information services for The Times Mirror Co.

As the telephone companies consider whether to proceed, they may be in touch with "publishers and possibly other information providers to find out if they are going to be there with products," he said.

"Something like this gateway role (for the BOCs) may well get people talking again about taking another look at mass market videotex," said Holly, who headed Times Mirror's consumer videotex service—it had the name "Gateway"—that folded last year.

Maguire, who was part of an ANPA delegation that traveled to France earlier this year to inspect Teletel, said Greene's opinion gives U.S. publishers "110 percent" of the things most appealing about that system. It allows the U.S. telephone companies to do "all that the French telephone company does that we think they should do," and, unlike the French model, it provides a clear prohibition against their involvement in Yellow Pages and other content.

ANPA to support FCC on 'fairness doctrine'

ANPA has been granted its request to "intervene" in the lawsuit challenging the Federal Communication Commission's decision to abolish the "fairness doctrine."

The Association sought intervenor status from the 2nd U.S. Circuit Court of Appeals so that it can file a brief supporting the FCC.

The case has been transferred from the 2nd Circuit in New York City to the U.S. Court of Appeals for the District of Columbia Circuit, at the request of the FCC and Meredith Corp. This is the court whose ruling, on an appeal by Meredith of an FCC action, led to the FCC's August decision to repeal the doctrine [**presstime**, Sept. 1987, p. 41].

The shift in courts does not change ANPA's intervenor status. □

ANPA, Advo, others file in pending rate case

The U.S. Postal Service has proposed certain third-class-mail discounts that are larger than they ought to be, ANPA said in testimony submitted to the Postal Rate Commission.

ANPA comments, submitted Sept. 14 as part of the pending USPS rate-increase request filed May 5, call for smaller discounts that would result in third-class rates even higher than currently proposed.

Details were outlined on behalf of the Association in written testimony prepared by Cambridge, Mass., economist Sharon L. Chown. Her testimony and that of about three dozen other rate-case participants will be followed in coming months by rebuttal comments, hearings and oral argument, tentatively scheduled for Jan. 12. New rates will not become effective until early next summer or later.

Chown did not directly address USPS proposals calling for up to 32-percent rate hikes for third-class, although ANPA previously said they are "in the right direction" [**presstime**, Sept. 1987, p. 44].

But those proposals were the topic of strong views expressed by some of the other parties, including direct mailer Advo-System Inc., which said the proposed rates are too high. Advo testified that a 22-percent increase requested by USPS for carrier-route-presorted, bulk mail would cost it an additional $50 million annually—an amount "more than three times Advo's estimated pre-tax profit for this year." Advo said it will clear a profit in 1987 for the first time in "many years."

In addition to recommendations on discounts, ANPA's Chown presented evidence to show that when postal carriers must stop at a house to deliver only one piece of mail—such as advertising mail—the cost of that delivery should be attributed only to that class of mail.

She also argued that neither first-class nor second-class mail should have to pay the entire cost of night-shift, Sunday or holiday premium pay for postal workers as they do now. Third-class should share that burden because it also is handled during those times, Chown said.

Advo, meanwhile, proposed new discounts that take into consideration the distance USPS must transport mail. Such discounts would result in lower costs for firms that minimize distances USPS must carry their mail.

Vincent Giuliano, Advo's vice president of government relations, testified the company is just now recovering from the shock of the last rate hike that took effect in February 1985.

"Because of competitive pressures of newspapers, we were unable to pass all of the rate increase through to our customers without an acceptable loss of volume to newspapers, and we consequently incurred substantial losses during 1985," he said. "Our volume went flat over the entire 1985-86 period during which we restructured our operations and many of our markets, dropping those made hopelessly unprofitable by the rate increase and attempting to hold on where we could.

"Eventually, due to nearly three years of rate stability, we have been able to turn the corner. By mid-1986 we began earning a small operating profit and have gradually improved each quarter since then, although even today our operating margin is small. . . . This year, Advo has embarked on a gradual market expansion effort that we plan to continue for the foreseeable future. Our ability to do so (and even our ability to remain in the market), however, will be entirely a function of postal rates."

Giuliano presented Advo mail volume figures showing that shared-mail, in which two or more ad circulars are united as one third-class piece, leveled off in 1986. Advo shared-mail grew from 39 million pieces in 1980 to 2.158 billion in 1984 and 2.389 billion in 1985. It dropped slightly to 2.373 billion in 1986.

Volume of Advo's "solo mail," containing just one preprint per mail piece, peaked in 1984 at 2.2 billion pieces, Giuliano said. Because "high postal rates for solo mail have made it non-competitive with newspaper distribution," volume dipped to 1.5 billion in 1985. It was 1.6 billion last year.

Giuliano acknowledged that newspapers and direct mailers each have distinct advantages in the delivery of advertising. Newspapers offer Sunday distribution, a guaranteed delivery date and a shorter lead time for receipt of preprints from advertisers. Direct mail offers greater market coverage and selectivity, no duplication, and the "simplicity of dealing with a single distribution purchase—although newspapers have made some improvements in these areas due to the competitive stimulus of shared mail."

He said these factors "weigh differently with each advertiser." In the final analysis, price often plays a decisive role in an advertiser's choice. And for Advo, price is dictated by postal rates, he noted. □

Newspapers help to celebrate bicentennial of Constitution

"A Celebration of Citizenship" kicked off the official commemoration of the bicentennial of the Constitution Sept. 16 with an array of pageants, 200th birthday parties, musical extravaganzas and an assembly of national leaders in Washington, D.C.

The national ceremony, which took place on the West Front steps of the Capitol, drew thousands of students, federal workers and other observers. It also reached millions of television viewers nationwide through a live ABC News Special, as President Reagan led the nation's schoolchildren in the Pledge of Allegiance.

Pauline Hammons, fifth-grade teacher in Poplar Bluff, Mo., focuses students' attention on Daily American Republic's Constitution edition.

But most of all, "A Celebration of Citizenship" was a nationwide teach-in for about 66 million students through high school level in 110,000 schools.

Newspapers, assisted by event cosponsor ANPA Foundation, helped schools develop curricula for the day and use the Newspaper in Education program to build students' understanding of the Constitution. Many newspapers also sponsored contests and symposiums to involve students and the general public.

An example of a well-received local event was "A Constitutional Convention," organized by The Rapid City (S.D.) Journal. Participating were 1,700 student "delegates" representing 10 percent of the student body from each of Rapid City's 36 public schools. To handle expenses, the Journal got financial and organizational support from the local bar association, according to Gayle Forsberg, the newspaper's creative services manager.

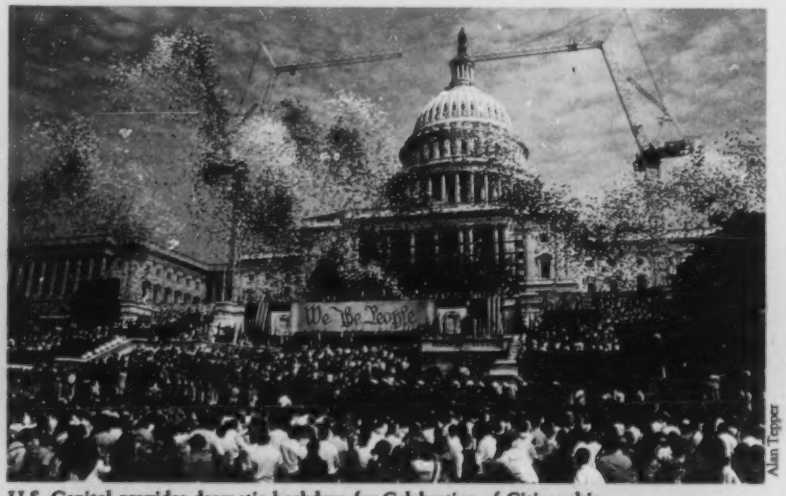
The program began with talks about the Constitution by civic leaders, including Journal President and Publisher David C. Sharp. Next, the student delegates re-enacted a convention roll call. The program concluded with a pageant of the signing of the Constitution, using costumed characters.

The following day, exactly 200 years after the actual signing, the "delegates" returned to their classrooms for celebrations with birthday cakes provided by the school district and additional presentations by members of the bar association and others. Those presentations were geared toward NIE curriculum materials.

Another program that encouraged teacher involvement was a lesson plan contest sponsored by the Kansas City Star and Times, with support from McDonald's restaurants. Twelve teachers in the Kansas City area received grants of $100 apiece from McDonald's for their winning plans.

The newspaper published a booklet containing the plans of the winners and those of 12 receiving honorable mention. The book, "Appreciating Our Freedom . . . 24 Award-Winning Lesson Plans for the Study of the U.S. Constitution," was offered free to educators and proved so popular that the newspapers had to print about 1,000 additional copies.

On the other side of Missouri, many teachers in Poplar Bluff used their local paper, the Daily American Republic, to teach about the Constitution. For instance, Rosemary Doyle of Holcomb High School asked her students to discuss, using examples from the newspaper, "ways we are more free now than 200 years ago," "threats to our freedom," and stories displaying "our Constitution in action." □



Alan Tepper

U.S. Capitol provides dramatic backdrop for Celebration of Citizenship.

NIE Week scheduled

Planning has begun for Newspaper in Education Week 1988. Cosponsored by ANPA Foundation and the International Reading Association, it will be observed March 7-11.

A 153-member steering committee representing both the newspaper business and IRA affiliates has been formed to coordinate plans.

The 1988 NIE Week Manual will be mailed to newspapers this month, according to the Foundation. □

Women in media study set for '88 publication

Following revisions, a massive study on women in the media is scheduled for publication by Gannett Foundation "sometime next year," according to the author.

The work, "Taking Stock: Women in the Media Before the 21st Century" is being prepared by Jean Gaddy Wilson, a member of the faculty at the University of Missouri School of Journalism. Gannett Foundation has been the primary sponsor of the report, which is now undergoing revision.

A report of her findings as they pertained to newspapers was published in a presstime Special Report one year ago.

Wilson's study is based on hundreds of interviews and responses to a national survey, "The Media in the '80s," that was sent in 1985 to all U.S. daily newspapers, television stations and a random sample of radio stations.

The survey asked for information about media employment, including salaries, length of service, and expectations for employment trends over the next five years. □

'Blessings of Liberty' on videotape

The multimedia presentation, "Freedom and Information: The Blessings of Liberty," is available on videocassette because of positive responses to the 15-minute program that was shown earlier this year to ANPA's 100th Anniversary Convention and ANPA/TEC '87 [presstime, June 1987, p. 62].

Its portrayal of changes in the United States over the past 100 years, and the part newspapers have played in that change, may be used in newspapers' community relations and NIE programs, particularly as part of activities surrounding the bicentennial of the Constitution.

The videocassettes are available for $100 apiece (half-inch VHS, half-inch Beta or three-fourths-inch sizes) from the ANPA Public Affairs Department at The Newspaper Center, Reston, Va. □

Camera-ready literacy ads mailed to newspapers

Camera-ready ads urging support for literacy programs during September—national literacy month—and thereafter were sent to newspaper executives from ANPA Foundation.

The ads are appropriate for running any time and provide space at the bottom to insert telephone numbers of local literacy agencies or the national literacy hotline, according to Carolyn Ebel Chandler, manager/literacy programs for the Foundation.

Newspapers may choose from two themes: the "Read. Avoid Extinction" theme with dinosaurs, made popular by the Foundation's "Press To Read" campaign; and one depicting the hand of Thomas Jefferson drafting the Declaration of Independence. □

INAME fosters 'Adopt-A-University' program

Newspaper advertising executives should "Adopt-A-University" to form partnerships between daily newspapers and university advertising programs, according to a new program developed by the the International Newspaper Advertising and Marketing Executives Foundation.

The organization hopes the program will enhance the education of students, contribute to the professional development of faculty members and increase the schools' resource base.

Suggested activities include participation in career days, visits by students to newspapers, research grants, equipment donations and endowed chairs.

For further information, contact Susan Schoebel, INAME Foundation, 11600 Sunrise Valley Drive, Reston, Va. 22091; (703) 648-1178. □

Most U.S. dailies' religion writers are Protestants, women and churchgoers

Nearly two-thirds of religion writers on U.S. daily newspapers are women, and the majority are Protestants who attend church regularly, according to a new survey.

The study was conducted by Judith M. Buddenbaum, assistant professor in the Department of Technical Journalism at Colorado State University.

Among her other findings:

- The typical religion writer at a daily paper has a college degree in journalism and 10 years' professional experience as a journalist—four of them covering religious news.
- Most religion writers have about a two-page religion newshole to fill each week while devoting only half their time to that beat. This results in less time for personal contacts with sources and heavy reliance on wire services and church news releases.
- About two-thirds of newspapers with circulation over 30,000 set aside Saturday for publishing most religion news, and three-fourths of smaller newspapers use Friday as the religion-page day.
- Fifty-nine percent of the religion writers said they were Protestant; then, in order, Roman Catholic, 21 percent; other Christian faiths, 6 percent; Jewish, 2 percent; and other religions, 2 percent. Ten percent said they were affiliated with no religious group.

Buddenbaum selected a statistically random sample of 250 daily newspapers ranging in size from under-10,000 circulation to over 100,000. Completed questionnaires were submitted by 141 papers.

The new study suggests there has been a near-reversal in the gender of religion writers since 1978, when a study found that two-thirds of those on the religion beat of large metropolitan newspapers were males. However, the earlier study was limited to papers of more than 100,000 circulation, so results are not directly comparable, Buddenbaum said.

She reported that although some studies indicate a high readership interest in religion news, most editors rank religion very low in importance [**presstime**, Dec. 1985, p. 6].

"Religion has traditionally been considered a second-class beat to be shunned by talented reporters," Buddenbaum said. "As a result, journalism educators and communications researchers have generally ignored religion news."

But she added that recent evidence, "largely anecdotal," suggests the religion beat is gaining in prestige as editors and reporters become aware of "the religious dimension of political news and of reader interest" in religion. □

APME reports cover broad newsroom issues

Digital alteration of photographs, AIDs issues in the newsroom and "tips on staying ahead of the metros" are among dozens of topics addressed in the 1987 Continuing Studies reports by committees of the Associated Press Managing Editors Association.

The 16 reports were issued during APME's annual convention Sept. 15-18 in Seattle.

A limited number of single copies of the reports are available from the ANPA Public Affairs Department at The Newspaper Center, Reston, Va. The committees, names of reports (when given) and committee chairmen are:

- Business and Economics Committee: Sue Reisinger, The Miami News
- Commentary Committee: "The Editorial Page," Robert J. Cochnar, Anderson (S.C.) Independent-Mail
- Ethics Committee: "Ethics Codes—Sunrise or Sunset?" Norman Lockman, The News-Journal Co., Wilmington, Del.
- Features Committee: "Features Grows Up," Lawrence K. Beaupre, Westchester Rockland Newspapers, White Plains, N.Y.
- Foreign News Committee: "Korea—A Cool Spot That Became a Hot Spot," David Lipman, St. Louis Post-Dispatch
- Freedom of Information Committee: Earl Maucker, Fort Lauderdale News and Sun-Sentinel
- Journalism Education Committee: "Crisis on Campus—Why Aren't the Best and Brightest on These Seats?" Myrtle Barnes, Daily Press and The Times-Herald, Newport News, Va.
- Marketing and Research Committee: "Strengthening Readership," Tom English Jr., The Fayetteville (N.C.) Times
- Minorities Committee: Reid MacCluggage, The Day, New London, Conn.
- Newsroom Management Committee: Mary Lou Bessette, The Arizona Republic and The Phoenix Gazette
- Photo and Graphics Committee: Michael Waller, The Hartford Courant
- Small Newspapers Committee: Tom Marquardt, The Capital, Annapolis, Md.
- Sports Committee: Beverly Kees, Post-Tribune, Gary, Ind.
- Technology Committee: "Meet the Future—a Report on Pagination and Other Mystical Things," Gregory E. Favre, The Sacramento Bee
- Writing and Editing Committee: Rich Archbold, Press-Telegram, Long Beach, Calif.

Unavailable from ANPA is the report from the General News Committee, chairman of which was Robert W. Ritter, The Sun, San Bernardino, Calif.

At the Seattle meeting, Robert H. Giles of The Detroit News was elected APME president. Other officers elected were Paul Janensch of Westchester Rockland Newspapers, vice president; Gene Foreman of The Philadelphia Inquirer, secretary; C. Donald Hatfield of the Tucson Citizen, treasurer; Ralph Langer of The Dallas Morning News, chairman of the Continuing Studies program; and Reisinger of The Miami News, vice chairman of Continuing Studies. □

Regional pool gets Persian Gulf test

A regional media pool was operating in the Persian Gulf area Sept. 21 when American helicopters attacked an Iranian vessel that American forces said was laying mines.

The incident was the first combat test for the regional pool concept, which was formed in August to allow ongoing coverage of U.S.-escorted tankers in the gulf.

Previously, the pools had consisted of news people assigned to cover the Pentagon in Washington, D.C. On July 24, when the United States began escorting reflagged Kuwaiti tankers, it took 18 hours to fly the pool reporters to the Persian Gulf [**presstime**, Aug. 1987, p. 60].

The regional pool is a continuing operation formed from news personnel already working in the Persian Gulf area. Membership rotates every three weeks.

Those on duty during the attack on the Iranian ship were a United Press International reporter, an Associated Press photographer, a CBS radio announcer and an NBC television crew, said Lt. Col. Craig Mac Nab, Department of Defense public affairs officer.

Mac Nab said the regional concept enables the media to respond faster to a Persian Gulf action. □

Editors deplore erosion of good word usage

Language changes, but editors hold fast in their dislike of some time-honored abuses, an Indiana University journalism professor reported in his annual word-usage survey.

For example, 82.6 percent of those surveyed would change a sentence that refers to "knots per hour." The dictionary definition of knot is a rate of speed, one nautical mile per hour—therefore, "knots per hour" technically means one nautical mile per hour per hour, a redundancy at best. However, 17.4 percent of newspaper and magazine editors surveyed said they would let the sentence stand.

The survey of 200 editors, 120 of whom responded, was performed by Professor Richard L. Tobin for the ninth year [**presstime**, Dec. 1986, p. 60].

Tobin found that 92.9 percent of the editors would change a sentence using an adjective as a verb, as in "to gentle your face." But 7.1 percent said they would allow the writer to gentle a face if that's what he or she felt like writing.

The editors said, by 70.9 percent to 29.1 percent, that "like" cannot be used as a conjunction, as in "The Mets played like they were half asleep."

An overwhelming 95.3 percent said "predominately" is incorrect in usage such as, "The squad was predominately made up of older men." The correct word is predominantly.

Tobin, once editor of Saturday Review magazine, found that an earlier trend toward using titles such as "Mr.," "Mrs." and "Ms." in second references has been reversed. A total of 92.9 percent of editors said they prefer eliminating titles after the first reference.

Nearly 90 percent said the word "gay" has changed to the extent that it should now be used only in a homosexual context.

Tobin concluded that "gay" in its original meaning is a dead word.

The *Merriam Webster Ninth Collegiate Dictionary* gives 1953 as the year "gay" was first defined as a noun meaning homosexual, but many editors indicate the word has only recently taken on that connotation. Many of the editors used phrases such as "a real shame" and "too bad" to describe how they felt about having to give up the original usage of the word. "Gay" once described a cheerful or carefree person or situation, even in book title (*Our Hearts Were Young and Gay*) and Christmas carol ("don we now our gay apparel"). □

Ownership of syndicated work provokes lively discussion

Some of the participants chuckled ruefully after the two-hour panel discussion on artists' ownership rights had finished Sept. 16 at the annual general membership meeting of the Newspaper Features Council in Denver. Others winced.

"The comments were not as bad as they could have been," said Willard Colston, panel moderator and chairman of the Los Angeles Times Syndicate.

"Maybe some things were said that shouldn't have been," said Lee Salem, vice president and editorial director of Universal Press Syndicate.

Panelist Richard S. Newcombe, president of Creators Syndicate Inc., said he has been accused of raiding other syndicates. Newcombe, who has signed up advice columnist Ann Landers, editorial cartoonist Herbert Block, the comic strip "B.C" and others, founded Creators last year on the premise that artists should retain the rights to their material and should be allowed to sign short-term contracts if that's their desire [**presstime**, Sept. 1987, p. 52].

Newcombe has claimed many comic artists are locked into long-term contracts and have signed away the rights to their material.

Panelist Mort Walker, creator of the "Beetle Bailey" strip that is handled by King Features Syndicate, said when he wanted to start another strip, "Gamin and Patches," his contract with King prohibited him from using his own name on the new strip, which is being syndicated by United Feature Syndicate.

Walker, however, said he settled the problem amicably during a round of golf with the president of King Features. He said he is allowed to use his real first name, Addison, in connection with "Gamin and Patches."

Another cartoonist said his relations with syndicates were not so amiable. Bil Keane ("Family Circus") said his contract with King Features expires in 1988, and the syndicate so far has refused to relinquish the copyright. In a later interview, Keane said because the strip he has drawn for 27 years is autobiographical, based on his own family, he will kill the strip if he does not get the rights to it.

Panelist David Hendin, senior vice president and editorial director of United Media, said Newcombe had greatly exaggerated contract situations between artists and syndicates.

Panelist Mike Peters ("Mother Goose and Grimm," Tribune Media Services) came out strongly for artists' independent ownership of their strips.

Attorney Frederick J. Coyer, who has represented numerous cartoonists in syndicate negotiations, took a middle road. In a post-panel interview, he noted that syndication rights are an old topic. For instance, Milton Caniff did not own the rights to "Terry and the Pirates," so he stopped doing it years ago and created "Steve Canyon," Coyer said. On the other hand, Hal Foster, creator of "Prince Valiant," owned the rights to his strip and sold them back to the syndicate before he died several years ago for $400,000, which gave his surviving family a nest egg, he said.

Coyer said the artist should always remember that such rights are subject to negotiation.

In a related action, Pollster Louis Harris announced that he is switching to Creators Syndicate in January. Harris writes a weekly column, "The Harris Poll," that has been syndicated by Tribune Media Services in about 400 newspapers. □

UPI, Southam sign pact

United Press International and Southam Syndicate announced a joint North American marketing agreement in which each company will exchange and distribute the other's information services.

The UPI-Southam deal comes after a proposed agreement between Southam and Scripps Howard News Service fell through [**presstime**, Sept. 1987, p. 53].

Under terms of the agreement, effective Oct. 1, UPI will distribute material of Southam News and of the Financial Times of Canada to its U.S. subscribers. Southam will act as the U.S. wire service's exclusive sales and marketing agent in Canada. □

Classified comic

The first comic strip designed for the classified ad section of newspapers is being offered by Tribune Media Services.

The central characters are Pete and Aggie Haggler, a suburban couple in their 40s who give a lighthearted viewpoint on why readers should turn to the classified section. The strip is the creation of Mike Dikas, an advertising copywriter and account executive, and Paul Reynolds, an illustrator, both of whom work in California. □

ANPA strengthens commitment to minority hiring issues

In a set of unprecedented actions, the ANPA Board of Directors placed minority opportunity in the newspaper business alongside technical and government-relations services as the Association's top priorities.

The actions signify a deepened commitment by ANPA to a newspaper work force that more closely reflects the multiracial makeup of the general population.

At its Sept. 9-10 meeting, the Board:

- Amended one of the Association's five "objectives" statements to say that ANPA will help newspapers achieve "workplace diversity"
- Adopted a "vision statement" that will be used as a guide for accomplishment on minority affairs over the next decade
- Decided to fund an industry-wide employment survey to measure the level of minority employment throughout the newspaper business.

These and other steps were in accordance with the resolution the Board passed last May to "expand plans and strategies that encourage and aid newspapers to recruit, develop, promote and retain minority personnel" [**presstime**, June 1987, p. 84].

In amending the "objectives" statement, the Board pledged that ANPA will "assist newspapers in enhancing their operating effectiveness, particularly by anticipating and understanding future developments in technology and public policy, *and by furthering work force diversity*" (newly adopted language in italics).

The "vision statement" reads: "As a result of ANPA leadership and enhanced sensitivity in all newspaper departments: The nationwide, newspaper work force more nearly reflects the national diversity of American society. ANPA member newspapers and their executives perceive and participate in minority-opportunity programs as a key ANPA service on a par with traditional technical and government-relations programs. And, therefore, newspapers' role and position as a mass medium are strengthened."

The Board directed the new ANPA Minority Opportunity Committee to develop plans for the nationwide newspaper employment survey and also to study the feasibility of a computerized, national job bank for the newspaper industry.

The committee previously functioned as the Minority Programs Advisory Group under the umbrella of ANPA Foundation. It was given the status of an ANPA standing committee so that it may more directly advise the ANPA Board and staff. The committee of 11 newspaper executives is headed by Jay Smith, publisher of the Atlanta Journal and Constitution. Vice chairman is Karen Howze of USA Today.

The Board also approved additional staffing for ANPA Foundation's continuing minority opportunity work, such as expansion of its multicultural advisory service to newspapers. Foundation personnel will include the first full-time staff director for the Task Force on Minorities in the Newspaper Business. Terri Dickerson-Jones, manager/minority affairs for ANPA Foundation, has been filling that role on a part-time basis. The Foundation will help fund and support the ANPA Minority Opportunity Committee.

In another action at its meeting in Washington, D.C., and Reston, Va., the Board agreed on a statement defining its relationship with the Task Force on Minorities in the Newspaper Business, a coalition of 37 national newspaper associations including ANPA.

"We envision the task force as the priorities-coordination body and the primary projects developer, which would include special efforts in the secondary schools and other projects" such as job fairs, the statement reads.

Many of the task force's projects will be proposed for ANPA funding, with others funded by ANPA Foundation or other organizations as is currently the case.

The various ANPA initiatives were discussed Sept. 23 at a meeting in Los Angeles of the steering committee of the task force. David Lawrence Jr., publisher and chairman of the Detroit Free Press, has been selected by the task force's nominating committee to succeed Loren F. Ghiglione, publisher and editor of The News of Southbridge, Mass., as the group's chairman.

In another development concerning minority development, the ANPA Convention Arrangements Committee is planning a general session on minorities at next April's convention in Honolulu. □

How small papers can attract minorities

Loren F. Ghiglione knows that a small-town newspaper can attract minority journalists, even when the town's population is virtually all-white.

In Southbridge, Mass., where he is publisher and editor of The News, there are 17 blacks in a population of 16,625. About a quarter of the blacks are reporters for his newspaper.

Recruitment and reputation are Ghiglione's primary means for drawing talented minority candidates to his paper. He has found that the two are intertwined. Widely recognized as a leader in increasing opportunities for minorities at newspapers, he has found that larger papers are "very generous" in referring good prospects to him when they don't have openings.

"I offer real jobs, so I can compete" with the big papers at job fairs, he said. But most other small papers do not recruit, he said, "so they don't win."

Ghiglione with Wells award.

Many minority journalists also need to change their views about small towns, Ghiglione said in an interview with **presstime**. And that was one of his messages to the annual convention of the National Association of Black Journalists, where on Aug. 21 he accepted the annual Ida B. Wells Award for his "exemplary leadership in providing minorities employment opportunities in journalism."

Aside from the leadership in his own newsroom, he has been chairman of the Task Force on Minorities in the Newspaper Business and of the American Society of

You'll have to go a long way to find Training, Service & Support to equal Mycro-Tek's.

When you choose a Mycro-Comp™ or NORTEXT® system from Mycro-Tek, we both make a long-term commitment.

You can count on us to be there when you need us — as long as you own the system. That includes installation and training and 24 hour, 365 day-a-year technical and service support. The result is a system and a partner you can depend on now — and far into the future.

No other systems supplier in the world knows your business like we do. Mycro-Tek virtually pioneered the front-end systems concept for small- and medium-sized papers. And now, with the addition of the NORTEXT system, Mycro-Tek becomes *the* single source for the world of publishing, with hardware and software designed specifically for the way *you* do business.

But what truly sets Mycro-Tek a world apart from other suppliers isn't simply *what* we do, it's the *way* we do it. Maybe more than anyone else in the industry, we design our advancements and upgrades to be integrated into our existing systems. As a result, you continue to benefit from your original investment, avoiding the expense and hassle of starting over.

There's a world of difference between Mycro-Tek and the competition. Discover the difference for yourself. Call Toll Free 1-800-835-2055. In Kansas, (316) 681-0550.

Newspaper Editors Minorities Committee.

"It's just as important to persuade minority journalists of the value to them of working in small towns as it is to persuade the editors and publishers of small-town papers to hire minority journalists," he said.

The publisher added, "I believe small-town papers can help provide not only entry-level reporting jobs but (also) the exposure to all aspects of newspapering that could assist reporters to move ultimately into overall management and ownership."

In accepting the Wells award, he announced an award of his own—an internship at his company for a minority journalist to work as assistant to the president. It, too, will be named for Ida B. Wells, a pioneering black editor in Memphis around the turn of the century.

The internship will allow a minority journalist to "experience first-hand the management of the company as it considers acquisitions, personnel policies, equipment purchases and other important decisions," he told the gathering.

Ghiglione later told **presstime**, "Depending on how much experience they bring to it, I'd like them to be a candidate for becoming a publisher. My ultimate hope is to get people who are thinking of owning their own papers. My hope is that we'll find those people who have that dream and encourage them to live it."

The Massachusetts publisher said he is not drawing on any direct model for the program, and many details still must be worked out, such as the level and kind of prior newspaper experience to be required of candidates. However, he expects to start seeking applications by Jan. 1, with the first internship to begin in the fall of 1988.

—Mary A. Anderson

Multicultural program will get new director

The Multicultural Management Program at the University of Missouri School of Journalism will continue despite the departure of Executive Director Ben Johnson, who last year helped found the program that seeks to prepare minorities for media management [**presstime**, Aug. 1987, p. 46].

The school hopes to name a permanent successor to Johnson by the end of the year. His wife, Mary Bullard-Johnson, formerly associate director, will act as the program's director in the interim.

Johnson will become managing editor of the school-produced newspaper, the Columbia Missourian, on Oct. 12. He will be the Missourian's first black managing editor since it began publication in 1908. □

Some of the proliferating graphics found hard to read, confusing

BY GUIDO H. STEMPEL III

One of the most striking changes in newspapers in the last decade is the increased use of graphs and charts. The proliferation of computer programs that produce informational graphics undoubtedly means that they will be used even more.

Guido H. Stempel III

There are pitfalls, however, and James Tankard, professor of journalism at the University of Texas, identifies 10 of them in an article in the summer-autumn issue of Journalism Quarterly.

Perhaps the most avoidable of the pitfalls Tankard illustrates is the graph that is too complex. He shows an example of a graph that has six sets of data, including line charts, pie charts and bar charts all mixed together. Of course, nothing stands out, and the visual impact is minimal.

There are also multiple pie charts that are impossible to compare with each other, bar graphs with obscure bar ends and stacked graphs presenting four or five pieces of data with no common base.

Tankard suggests that quantitative graphics may be a neglected area and that we need to pay more attention to what makes charts and graphs effective.

Everyone talks about journalistic ethics these days. Is anybody doing anything about it? A study by Douglas Anderson, professor of journalism at Arizona State University, indicates the answer is "yes."

Anderson sent a mail questionnaire to 165 randomly selected managing editors of daily newspapers and received responses from 96 (58 percent). He asked editors about distribution of codes and initiatives that their newspapers were taking.

One-fourth of the editors said codes of ethics were posted in their buildings, and 46 percent said copies of codes were distributed to staff members. Forty-five percent said their newspapers had developed their own codes to supplement national codes.

More than three-fourths of the editors said they had issued memos on ethics to their staffs, and two-thirds said they had held meetings or seminars to discuss ethical issues. All the respondents said they had discussed ethical concerns with staff members.

The study is reported in the summer-autumn issue of Journalism Quarterly.

Cigarette advertising has been controversial for some time, and alcoholic beverage advertising is becoming controversial because of the growing evidence of the connection between drinking and automobile accidents. Two marketing researchers suggest that there is quite a parallel between the histories of these two types of advertising.

"Alcoholic beverage advertisers are at the same point now where cigarette advertisers were 20 years ago. The alcoholic beverage industry should be aware that a ban on broadcast advertising is possible unless something is done to counter the current anti-alcoholic sentiment," wrote Camille P. Schuster and Christine Pacelli Powell, marketing faculty members of Virginia Polytechnic Institute at Blacksburg. They went on to suggest that the alcoholic beverage industry's best course might be to give up broadcast advertising voluntarily.

The two researchers pointed out that 35 states already restrict alcoholic beverage advertising to some extent, and that the Supreme Court has upheld such bans in four cases.

They also observed that the ban on broadcast advertising did not cause cigarette sales to decline in the early 1970s.

If the alcoholic beverage industry were to pull out of the broadcast media, Schuster and Powell said, it would free up money for other advertising. The issue thus has obvious implications for newspapers, which might realize greater revenue as a result. At the same time, it is possible that the content of newspaper alcoholic beverage advertising might become more subdued, or that a broadcast ban might be expanded to print advertising.

The article is in Issue No. 2, 1987, of the Journal of Advertising. □

Stempel is distinguished professor of journalism at the E. W. Scripps School of Journalism at Ohio University, Athens, and editor of Journalism Quarterly. He is a regular contributor to **presstime**.

FOA sales teams organize

One Future of Advertising Project initiative is gearing up, and four others recently came to fruition.

This month, teams organized by the Sales Structure Task Force are expected to begin making calls on major accounts in five categories: credit cards, beer, over-the-counter drugs, overnight delivery services and fast food.

Each team will be composed of an executive from the Newspaper Advertising Bureau, under whose auspices the FOA Project is being conducted; a senior sales executive from a major market newspaper; and support staff. Newspapers represented will be The Boston Globe, Chicago Tribune, Los Angeles Times, The New York Times and The Washington Post.

The task force spent about six months gathering information about the industries and evaluating target accounts, according to Chairman Lance Primis, executive vice president and general manager of The New York Times.

Before they make the calls, he said, the teams will contact newspapers in markets identified as important to the accounts. The newspapers will be asked to approve the sales plan and to participate.

The goal of the program is to demonstrate to newspapers a new method of selling national advertising, Primis said.

The four FOA efforts that have been completed involved preparation and release of new publications:

• "Standard Market Data Folder"—Developed by the Marketing Data Task Force, it contains recommended standards for the booklets newspapers use to present market information to potential advertisers. Subjects covered range from the size folder that should be used (8 1/2 inches by 11 inches, vertical, with three holes punched on the left) to the content of the 10 recommended sections.

Task Force Chairman Robert H. Hartmann, president and publisher of The Evansville (Ind.) Press, said in the introduction: "We encourage the kind of creativity that sets one newspaper's promotional efforts apart from others. But putting such information into a standard sequence and format will automatically make it much more practical and convenient to use."

• "Electronic Competition to Newspaper Classified Advertising"—Prepared by a Denver telecommunications consulting firm for the Technology Subcommittee of the Classified Task Force, this report looks into the impact of emerging electronic competitors on the future of newspaper classified ads.

The firm of Browne, Bortz & Coddington analyzed four categories of electronic services: broadcast, such as television real-estate "showcase" programs; cable-TV services, those with text only and those with both text and pictures; voice information services; and videotex.

It concluded that none of the electronic services analyzed individually represent a "fundamental threat" to print's classified revenue stream in the next five years. "Most will remain comparatively small, marginal businesses, serving specific niche markets," it said. "In the aggregate, however, they could potentially develop into important secondary advertising media, limiting print classified revenue growth."

• "Jargon"—This 72-page glossary of terms used in newspaper advertising, from "AAAA (American Association of Advertising Agencies)" to "zoned edition," was produced by the Standardization Task Force.

That panel has been working not only to make it easier to buy newspaper advertising but also to "facilitate communications between newspapers and their clients and between personnel in different disciplines within the plant," according to an accompanying letter from Task Force Chairman Joe D. Smith Jr., president of the Alexandria (La.) Daily Town Talk, and Sam S. McKeel, publisher of Philadelphia Newspapers Inc. and chairman of the subcommittee that developed the booklet.

• "Report from the Remote Entry Transmission Committee of ANCAM"—Also issued by the Standardization Task Force, it describes the remote-entry process through which advertising is transmitted from a remote personal computer over telephone lines directly into a newspaper's computer.

The report also discusses the ANCAM committee's recommendation that standard software codes be adopted for remote entry. It asks publishers and other newspaper executives to "urge software houses to develop programs that fit the standard specifications" recommended by the committee.

A copy of each report has been sent to all ANPA and NAB member newspapers. Additional copies are available for purchase through the NAB Promotion Department, 1180 Avenue of the Americas, New York, N.Y. 10036. □

Retailer drops daily ads after almost a century

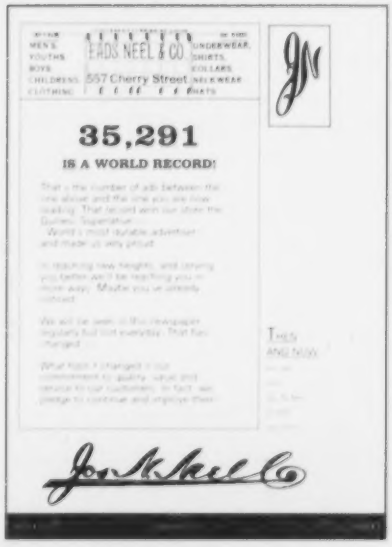
After nearly 100 years, the Jos. N. Neel Co. is no longer a daily advertiser in the Macon (Ga.) Telegraph and News.

"We didn't feel like we needed to be in the newspaper every day," said Roland H. Neel, chairman of the board of the downtown retail clothier that is listed in the *Guinness Book of World Records* as the "Most Durable Advertiser."

Neel said the decision "opens up a lot of money" to be put into advertising in other media, although most of the budget probably will still be spent for newspaper ads.

The last ad ran Aug. 16.

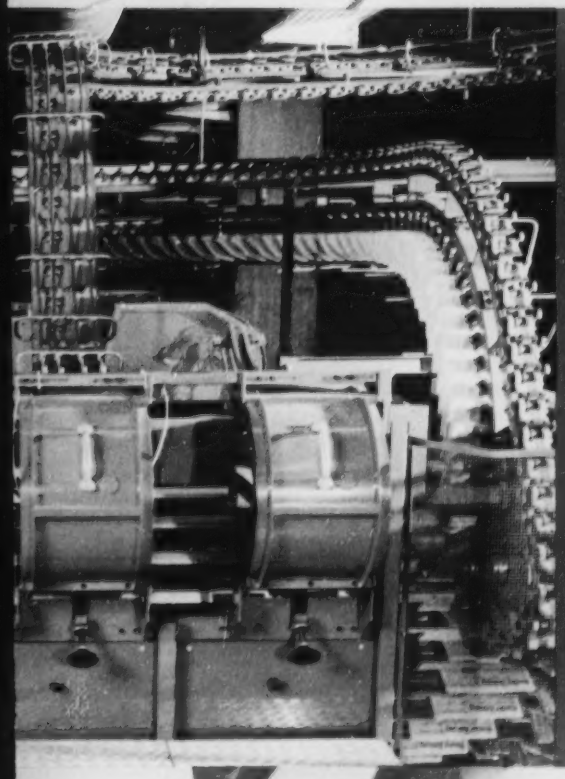
Exactly when the string of ads began is open to debate. One story in the newspaper's files says the store began running ads continuously, daily and Sunday, on Oct. 3, 1887. Then on Feb. 22, 1889, it placed its first ad in the upper left hand corner of Page 2, where all subsequent ads ran. The Guinness record book cites the latter date. Still another account from the newspaper's records puts the starting date sometime in 1890, which would coincide with the store's own count that it had placed a total of 35,291 daily ads. □



35,291
IS A WORLD RECORD!

The last daily ad run by the Jos. N. Neel Co. includes copy from its first ad and its claim to a world record.

Day after day, we insert our know-how into thousands of newspap throughout the world.



Our Rotosert automatic inserting system enables printing plants to achieve optimal production and economical performance in a wide variety of demanding situations. Inserting provides flexible new ways to structure the product, thus offering readers maximum service. The convincing argument is targeted information – for readers and advertisers alike.

Immigration notice requested

Officials of the U.S. Immigration and Naturalization Service want newspapers to run a statement in their classified advertising sections alerting employers and potential employees of the requirements of a new immigration law.

The Immigration Reform and Control Act requires that anyone hired after Nov. 6, 1986, show proof of identity and proof of eligibility to work in the United States [**presstime**, July 1987, p. 68].

"We in INS are anxious to raise public consciousness regarding the responsibilities of both employers and employees under the new law," William B. Stubbs, executive director of the Office of Employer and Labor Relations, said. "We believe that if a statement such as this could appear along with classified advertising, it would be greatly helpful to persons looking for jobs and those who would be eventually hiring them."

Stubbs suggested the following language for such a statement: "A new immigration law affects everyone who changes jobs. Immediately after hiring, you must show your new employer proof of identity and of your eligibility to work in the United States. Remember: This applies to *everyone*—U.S. citizens and others authorized to work in this country. Employers should not fail to hire anyone because they sound or look foreign. See details in INS Handbook for Employers in your public library, or call toll free 1-800-777-7700."

Stubbs observed that some newspapers' classified sections already carry statements regarding the requirements of laws such as those governing equal housing opportunity. The INS "would be very grateful" if newspapers would "accord us the same service," he said.

However, while the equal housing opportunity statement or logo is required by federal regulations, the INS is asking newspapers to carry its message "as a public service." □

Many shoppers redeem coupons 'grudgingly'

A market research firm that studied consumers' behavior and attitudes toward cents-off coupons has found that although more people are redeeming more coupons, many are dissatisfied with the practice.

The study concluded that "a considerable proportion" of the people who redeem coupons do so "grudgingly," said the firm, Clayton/Curtis/Cottrell of Boulder, Colo. "They resent coupons, feel they are caught in a rising spiral of prices triggered by the coupons themselves, and that the only way to maintain a balanced food budget is to get involved in coupon redemption."

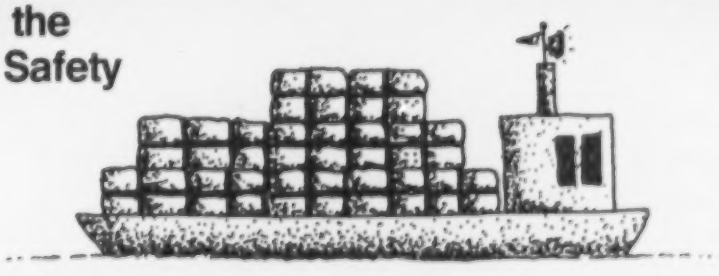
Researchers found that consumers blame the manufacturers who issue the coupons, not retailers, and that more than 75 percent of coupon users believe prices would go down if couponing ended.

The multifaceted study was conducted to project the future of the coupon industry in the next decade. □

Do you know where your waste is going?

You're invited to attend the 1987 ANPA Health and Safety Symposium.

October 29-30, 1987
Orlando Marriott
Orlando, Florida



Newspapers face increasingly complex responsibilities for hazardous waste and its disposal. This seventh annual ANPA Health and Safety Symposium will address issues of importance to all newspaper managers. This year's topics will cover such issues as:

- Waste Management
- Waste Recycling
- Waste Storage
- Waste Disposal
- Drug Testing
- AIDS Issues
- Newspaper Safety
- Superfund Cases
- Asbestos Regulations
- VDT Legislation Issues
- Latest OSHA and EPA Issues
- Hazard Communication Update
- Carpal Tunnel Syndrome
- Right-to-Know Issues
- Environmental Audits

The 1987 symposium brings you timely reports from experts in the newspaper industry and in the industrial and environmental health fields. The $375 registration fee covers admission to all symposium sessions, continental breakfast on both meeting days, a reception Wednesday evening and a luncheon on Thursday.

Call ANPA at (703) 648-1220 for more symposium information and a registration form.

Now you see him.

© 1986 Knight-Ridder, Inc.

Most people don't.

To many people, Walter is invisible. They've trained themselves not to see him.

They look the other way when Walter and other street people come into view.

The Philadelphia Inquirer wanted to bring these invisible Philadelphians into sharp focus for its readers.

Walter is a part of that invisible Philadelphia story.

His past is a stranger.

When it rains, he escapes in a box.

At night, he sleeps on steam vents on several streets in downtown Philadelphia. No one can ever remember seeing him washed and clean.

Many of these street people are a part of the bizarre phenomenon of the 1980s resulting from the deinstitutionalization of mental patients. In city after city, schizophrenics treat their torment daily by dulling their senses with all the alcohol they can get.

Stubble-chinned or bearded, bound in winter in ancient overcoats, they look like they've stepped out of the past. Ragged. Depression-era ghosts on modern streets.

Inquirer photographer Tom Gralish took to those streets to do a photo essay on downtown derelicts.

For the first week, he took no pictures. He worked on breaking down their highly developed sense of distrust for outsiders. Then, for five weeks, he shot 60 rolls of film, 2,160 pictures.

Selected photographs ran for more than 10 pages in the Inquirer. This is a fragment of that work.

Tom Gralish won the 1986 Pulitzer Prize for Feature Photography.

His pictures had graphically exposed a social policy which dumps the mentally ill on our cities' doorsteps and streets.

Considering the grim subject, many newspapers would never devote such an extraordinary amount of space to this kind of story.

But The Philadelphia Inquirer is a Knight-Ridder newspaper.

KR

KNIGHT-RIDDER

We never underestimate the American people.

Knight-Ridder, winner of an unprecedented seven Pulitzer Prizes in 1986, is a nationwide communications company with eight television stations, cable systems, business information services and 34 daily newspapers.

Format of ABC reports may be overhauled for first time in half a century

The Audit Bureau of Circulations is proposing to change significantly the format of its newspaper Audit Reports and its Publisher's Statements for the first time in 56 years.

"It's the first major revision to the ABC newspaper report format since Herbert Hoover was President," said Robert L. Burke, ANPA vice president/industry and public affairs. "It's an effort by ABC to continue providing reliable audits while at the same time making the reports easier to understand and use."

Many of the changes are in terminology, designed to make the reports more self-explanatory for buyers of newspaper advertising who may not be familiar with ABC jargon.

The ANPA Board of Directors was briefed on the proposal in September by one of its members, Edward W. Estlow, chairman of the ANPA/NAB-ABC Liaison Committee. The Board endorsed most of the proposed changes but has advised the ABC of its reservations about two of the proposals, Burke said.

The proposed changes are in four areas:

• **Total Average Paid Circulation.** The title of this section, Paragraph 1 A of both the Audit Reports and the Publisher's Statements, would be expanded to add a parenthetical explanation that all the circulation listed there goes to "individuals" and "designated recipients."

The ABC Board also is proposing that a newspaper may use only the data contained in Paragraph 1 A in comparing its circulation with that of other newspapers.

• **Group.** Within Paragraph 1 A, the category "Group: Mailed Subscription Special"—which covers copies that are purchased by a business for its employees—would be changed to "Group: Subscriptions by Businesses for Designated Employees."

Currently, only business and national newspapers are eligible to report circulation in this category, but under the proposal the category would be available to all papers. A newspaper would have to provide both names and titles for recipients. The ANPA Board told ABC that it believes either the name or the title would be sufficient, Burke said.

• **Average Bulk Sales.** This section would be renamed "Third Party (Bulk) Sales" and be moved from Paragraph 5 to Paragraph 1C, which puts it on the front page of the Publisher's Statement and in most cases the Audit Report as well. This would make it easier for advertising buyers to see all of the elements of a newspaper's paid circulation at a glance.

Newspapers would be required to indicate the four largest categories of their bulk sales from a list of standard descriptions, such as "Airlines—available for passengers" and "Hotels—available for guests." A fifth entry would cover all other bulk sales.

• **County Circulation.** Currently, national newspapers are exempt from the requirement to report circulation by county. That exemption would be eliminated. However, ABC members could request an individual exemption. The ANPA Board has expressed its opposition to this change because of the cost that would be involved in coast-to-coast, county-by-county reporting, according to Burke.

At its Aug. 12-14 meeting, the ABC Board approved the changes in principle. At its next meeting, Nov. 12-14 in San Francisco, it will consider taking the first step toward making changes in the ABC rules to implement them. A final vote to change the rules would be required thereafter.

The ABC Newspaper Division will discuss the proposals at its meeting Nov. 12.

At that meeting, the division also will elect three representatives to the ABC Board. The boards of ANPA and of the Newspaper Advertising Bureau have endorsed the three incumbent newspaper directors for re-election. They are: John O. Emmerich, editor and publisher of the Greenwood (Miss.) Commonwealth (representing newspapers with less than 15,000 circulation); Grover Friend, president of Calkins Newspapers, Levittown, Pa. (representing papers with circulations from 15,000 to 100,000); and William C. Green, publisher of the Huntsville (Ala.) Times and vice president of Birmingham News Co. (representing papers with more than 100,000 circulation).

In another development, the ABC Board extended for a year its suspension of the rule prohibiting same-day promotion of coupon values. Burke said it appears likely that the rule will be eliminated altogether a year from now. □

Carrier Day Oct. 10

Newspapers depend heavily on their carriers, hence, the theme of the 1987 International Newspaper Carrier Day: "They are the last link to firsthand information." The promotion is sponsored annually by the International Circulation Managers Association, which has distributed camera-ready logos to its members.

ZIP code reporting becomes more prevalent

A total of 210 North American newspapers now report their circulation to the Audit Bureau of Circulations by ZIP code or, in the case of Canadian newspapers, by Postal Code.

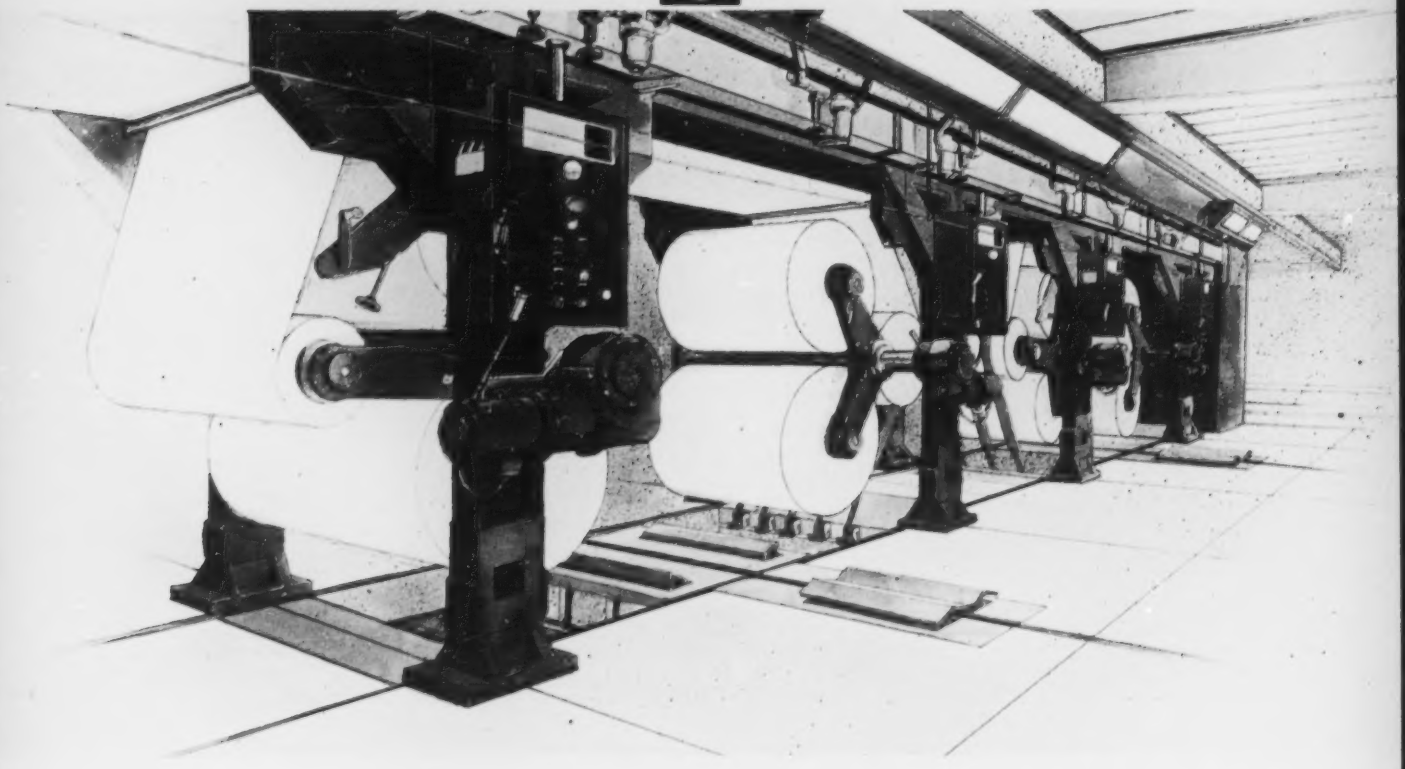
This is a net increase of 43 papers since Sept. 1 of last year, according to the ABC.

"Much of the growth in 1987 is due to increased awareness of the benefits of ABC's program," the bureau said in the introduction to its new "ZIP/Postal Code Case Book."

The publication contains interviews on why retailers want newspapers to report by postal code, why three newspapers decided to participate in the program and how one of them, The Milwaukee Journal, prepared for its first ZIP code audit.

Reporting by postal code is optional, and the procedure dates from the early part of this decade. Of the papers currently participating, two are Canadian dailies, two are U.S. weeklies, and the balance are U.S. dailies.

Copies of the publication are available from ABC's Communications Department, 900 N. Meacham Road, Schaumburg, Ill. 60173-4968. □



How to improve your paper's circulation

Improving your paper's circulation in your *reelroom* has been our business for over thirty-five years.

The Jervis B. Webb Company was one of the first companies to apply material handling technology to newsprint roll handling. Our systems currently operate in newspaper publishing facilities across the U.S. and Canada, transporting newsprint rolls from receiving docks to presses in the most timely, efficient manner possible.

Our success in newsprint roll handling stems from an in-depth working knowledge of newspaper production and an ability to offer the widest range of alternatives to satisfy production requirements. We can design single-source systems incorporating a wide range of Webb products, including Towveyor® floor conveyors, Prontow® Automatic Guided Vehicles, appropriate control systems and Webb-Triax® Automated Storage and Retrieval Systems. Webb engineers design each system with the material handling products necessary to handle the demands of the facility it serves.

Implementing the right newsprint roll handling system may be the first step towards achieving the efficiency and quality you need to increase your readership. Contact a Webb representative for a free brochure on the latest newsprint roll handling techniques and see what we can do to improve your paper's circulation.

Jervis B. Webb Company
World Headquarters, Webb Drive
Farmington Hills, MI 48018

Plans set for first nationwide newspaper salary survey

Preliminary results of the first nationwide newspaper salary survey, which will be funded by ANPA, are expected to emerge in the spring of 1988, with the final report published in the summer. The survey is planned as an annual project.

The ANPA Board of Directors in September approved plans for the survey, which will be coordinated with many other newspaper associations [**presstime**, July 1987, p. 69]. Hervey A. Juris, professor of human resources management at Northwestern University's J.L. Kellogg Graduate School of Management, will supervise the survey. He will report to ANPA Executive Vice President Thomas C. Fichter.

Hervey A. Juris

Participating newspapers will receive detailed data that will enable them to compare their salary structures geographically, by circulation size and with the industry as a whole. A summary report may be publicly released.

Fichter said the collection, entering and processing of the data, and the production of reports, will be subcontracted to the Inland Daily Press Association. Juris and a compensation specialist will be working with Donald T. Beelow, Inland's director of research. Inland's headquarters is in Park Ridge, Ill., not far from Northwestern.

In the past, Fichter said, as many as 50 companies and associations, including Inland, have conducted annual salary surveys. About 350 newspapers participate in the Inland survey [**presstime**, Aug. 1984, p. 6].

"There is a growing belief that as many as 800 respondents could be encouraged to participate in a more comprehensive survey," Fichter said. "Aside from the greatly enhanced utility value, a nationwide survey could very likely eliminate much of the duplication inherent in the multiple-survey approach used now.

"We recognize that compensation directors to some extent like to have multiple sources of data for comparison purposes. We do, however, expect that enough of the 50 other groups conducting surveys now will participate in a joint survey to effect economies for the business and for the associations involved."

Inland charged a fee for participation in its salary survey, but the new survey will be free to participants. Inland Executive Director Ray Carlsen said he is optimistic that the goal of 800 participants can be reached. "As the database is expanded, the results become more valuable to the participants," he noted.

Carlsen said some Canadian dailies have participated in the Inland survey, and they are expected to take part in the new one.

Fichter, who described the survey as "ecumenical," said it will be open to non-ANPA member newspapers. About 65 different job descriptions will be identified, and the salary data will include bonuses.

An advisory group of newspaper compensation experts has been formed. "Because this is the first time a project of this magnitude has been undertaken, and because the scope of the project will depend in large part on the advice of the advisory group, it is difficult to determine precisely what the total costs will be," Fichter said. "However, we estimate that the annual cost will be in the $75,000 to $100,000 range."

Juris will retain access to the survey data and will work with ANPA in developing a continuing research agenda, and in developing potential continuing education programs for the industry as guided by ANPA's Human Resources Committee. □

Average '88 pay hike budgeted at 5.3 percent

White-collar pay increases in the printing/publishing sector and in U.S. industry as a whole are expected to average about 5.3 percent in 1988, according to a survey by a management consulting firm.

The survey of 2,500 firms, including several large newspaper companies, was conducted by William M. Mercer-Meidinger-Hansen Inc. John D. McMillan, managing director at the firm's Deerfield, Ill., office, said the projections reflect relatively low levels of inflation and the need to maintain business competitiveness.

In the executive category among all industries, actual increases in 1987 averaged 5.4 percent and are budgeted to be 5.3 percent next year. Increases for middle managers are also expected to decline slightly, from 5.2 to 5.1 percent.

In the non-exempt category, white-collar hourly employees are budgeted for a 4.9-percent increase next year, compared with an average of 5 percent paid this year. □

New York Daily News and two more unions agree on contracts

The New York Daily News has reached agreements with two more unions on new three-year contracts that could be the basis for wage settlements with eight other unions at the newspaper. The agreements are subject to ratification by the unions' memberships.

The contracts with the Newspaper and Mail Deliverers' Union, the largest union at the paper, and with Typographical Union No. 6 both provide for no pay increase the first year, a $26 a week increase in the second year and $36 the third.

In late August, members of Photoengravers' Union 1-P ratified a contract that left the wage package subject to agreements with the other unions.

In the process of renewing contracts that expired March 30, the Daily News has been seeking $30 million in concessions from the unions [**presstime**, May 1987, p. 96].

In the agreement with the Deliverers, the newspaper, owned by Tribune Co. of Chicago, agreed to increase its contribution to the union's health and welfare fund in exchange for additional cost savings to offset that adjustment. The company also agreed to pay $65,000 to drivers who resign.

Gregory L. Thornton, vice president/director of industrial relations, said the agreement with the drivers would save the newspaper $6 million a year. □

NLRB elections

Houston Chronicle, GCIU: Paper handlers voted 51-15 against further representation by Local 6 of the Graphic Communications International Union.
(NLRB Case No. 23-RD-599)

San Diego Union and Tribune, CWA: Mailroom "supplementers" voted 8-1 in favor of representation by Mailers' Union No. 75. The occasional employees, who supplement the workforce, are now included in the same unit as mailers and trainees.
(NLRB Case No. 21-RC-17930)

Scranton (Pa.) Tribune, Guild: Copy people and correspondents voted 9-1 in favor of representation by The Newspaper Guild. The union already represented other editorial department employees.
(NLRB Case No. 4-RC-16410)

Negotiations at an impasse in at least 10 cities

The Bakersfield Californian is the latest newspaper to declare an impasse in bargaining over a new labor agreement and to impose the company's last best offer on employees in the unit.

The action taken Sept. 10 in negotiations with The Newspaper Guild, commonly called "posting working conditions," follows a similar move taken by The Washington Post Aug. 18 in negotiations with the Guild.

The union represents editorial and commercial employees at both newspapers.

The contract in Bakersfield expired May 16, 1987. The Post earlier had canceled the terms of its Guild agreement, which expired July 9, 1986. Earlier this year, The Fresno (Calif.) Bee and The Sacramento Bee posted conditions after reaching an impasse with the Guild [**presstime**, Aug. 1987, p. 48].

The Guild has filed unfair labor practice charges with the National Labor Relations Board against the Post and The Sacramento Bee, but no complaints have been issued.

Members of other unions also are working under posted conditions at newspapers. Examples are: pressroom employees represented by the Graphic Communications International Union at The Virginian-Pilot and The Ledger-Star in Norfolk, the Fort Lauderdale News and Sun-Sentinel, and The Modesto (Calif.) Bee; composing room employees represented by the Communications Workers of America at The Anchorage Times, The Houston Post and the Fort Lauderdale dailies; and mailroom employees represented by the CWA at The State-Journal-Register in Springfield, Ill.

Labor specialists say the main reason for the recent increase in deadlocks is that a strike is no longer an effective weapon. "The notion of 'no contract, no work,' is of a bygone era," said ANPA Manager/Labor Relations Charles D. Cole. "The perception that employees are less inclined to strike if an impasse is reached has strengthened the resolve of management to hold firm to its bargaining demands." □

Two Canadian strikes end

Strikes by the Graphic Communications International Union that began last spring have ended at two dailies in Ontario, Canada.

The unrelated disputes were over renewal of labor agreements. Both newspapers continued publication during the walkouts [**presstime**, May 1987, p. 96].

The Cornwall Standard-Freeholder was struck April 2 by members of the Montreal local, which represents employees in the pressroom and another unit of commercial employees. The strike ended Aug. 28 with a negotiated settlement.

The Brampton Times was struck March 30 by two members of the Toronto local, which represents pressroom employees. There has been no picketing for months, and the company said it considers the union to have abandoned the unit. □

Arbitration awards

Detroit Free Press, Teamsters: Richard Mittenthal found a circulation district manager was protected under the labor agreement for the loss of $322 in company funds resulting from theft.

Detroit News, Guild: George T. Roumell Jr. found that reporters assigned to the newspaper's Lansing bureau were entitled to a guaranteed minimum mileage allowance.

Detroit News, Teamsters: Gabriel N. Alexander sustained the 10-day disciplinary suspension of a circulation district manager for insubordination to a supervisor.

Detroit News, Teamsters: Edwin R. Teple sustained the discharge of a circulation district manager for falsification of company records.

Long Beach (Calif.) Press-Telegram, Guild: William Levin ruled that a new group of circulation sales and marketing employees should not be added to the union's bargaining unit.

Middletown (N.Y.) Times Herald-Record, CWA: Herbert L. Haber sustained the discharge of a reporter for incompetency.

(Full texts are available from the ANPA Human Resources Department at The Newspaper Center, Reston, Va.)

Complaint reinstated in bargaining over 'merit pay'

An NLRB complaint against The Cincinnati Enquirer in a case involving bargaining over "merit pay" has been reissued.

Local 9 of The Newspaper Guild charged that the newspaper—by insisting that wages be based solely on merit—violated the Taft-Hartley Act during negotiations for an initial labor agreement covering newsroom employees. The union sought to negotiate a minimum wage scale.

NLRB Regional Director Emil C. Farkas issued a complaint against the paper in 1986, but it was subsequently withdrawn. The Guild appealed the action to NLRB General Counsel Rosemary M. Collyer [**presstime**, March 1987, p. 63].

Granting the appeal, Collyer directed Farkas to reissue the complaint and schedule a hearing before an administrative law judge. The hearing is scheduled to begin Oct. 27.

(The Cincinnati Enquirer Inc., Case No. 9-CA-23190) □

Newspaper union prevails in free-speech case

The California Court of Appeal upheld the right of a newspaper union to distribute literature in a shopping mall.

The court ruled that the right to hand out leaflets about a labor dispute with The Daily Republic of Fairfield was protected as free speech under the state's constitution.

The union involved is the Northern California Newspaper Organizing Committee, which was certified by the NLRB in 1984 to represent a unit of all non-supervisory employees at the newspaper. The court case grew out of the union's efforts to inform the public through distribution of leaflets about the Republic's refusal to bargain with it [**presstime**, March 1986, p. 58].

An NLRB order that the newspaper bargain with the union was upheld by the 9th U.S. Circuit Court of Appeals, but to date, no agreement has been reached.

(Northern California Newspaper Organizing Committee v. Solano Associates, CCA No. AO 32887) □

Canadian election

Editorial employees of The Winnipeg (Manitoba) Sun have voted to be represented by the Media Union of Manitoba, which is affiliated with the Communications Workers of America. □

GCIU sued for damages in wake of Montreal lockout

The owner of The Gazette of Montreal, its publisher and 18 foremen are suing the Graphic Communications International Union for activities related to the lockout of pressmen and maintenance workers there.

Southam Inc., Publisher Clark W. Davey and the foremen contend in their suit that the union's picket signs, without justification, have accused them of employing "scabs" in violation of the Quebec Labor Code, which forbids the hiring of replacement workers.

The plaintiffs are seeking $400,000 (Canadian) in damages. Named as defendants are the union and 13 of its officers.

Their suit, filed in Quebec Superior Court, said the union had painted the word "scabs" on the newspaper's building and issued press releases accusing them of violating the law. It also said the union and its officers had distributed leaflets in the neighborhoods where the foremen live, describing them as scabs.

GCIU President James J. Norton said the international union will support its members in Montreal "as long as necessary to obtain a satisfactory settlement. That's an absolute. The resources in our defense fund are very, very adequate."

The pressmen and maintenance workers were locked out July 10 after Local 41M of the GCIU refused to accept proposals for new scheduling clauses. The lockout was a pre-emptive move against a threatened strike by the union [presstime, Aug. 1987, p. 50].

In another development, GCIU-represented mailroom employees, who had been observing the pressmen's picket line, struck the newspaper Aug. 14 when their labor agreement expired.

But daily publication is continuing, with the work of the 250 locked-out employees and strikers being performed by supervisory and managerial personnel.

Employees represented by The Newspaper Guild and the Communications Workers of America are continuing to work. □

Newspaper's check of union official ruled proper

The NLRB general counsel in Washington, D.C., has upheld a regional director's refusal to issue a complaint against the Providence Journal Co. for investigating the background of a union official.

General Counsel Rosemary M. Collyer said that the appeal, brought by Local 41 of The Newspaper Guild, was denied "substantially for the reasons set forth" in the acting regional director's letter and that further proceedings were "unwarranted."

The acting director, Michael F. Walsh, had found no evidence that the investigation into the background of the Guild's new interim administrator violated the Taft-Hartley Act. Walsh said the investigation extended only to the educational background and employment history of the administrator, a person the company could reasonably expect to be dealing with in the course of bargaining [presstime, July 1987, p. 69]. □

Guild denied appeal over drug testing

An appeal by The Newspaper Guild of the Twin Cities over the drug-testing policy of the Star Tribune of Minneapolis was rejected by the NLRB general counsel.

The union, arguing that the Star Tribune unlawfully refused to bargain over the policy, had appealed an NLRB regional director's refusal to issue a complaint against the newspaper.

But General Counsel Rosemary M. Collyer agreed with Regional Director Ronald M. Sharp that the dispute should be resolved under the grievance and arbitration procedures in the Guild's labor agreement with the newspaper [presstime, June 1987, p. 99].

The drug-testing policy took effect in January as part of medical examinations required of all job applicants.

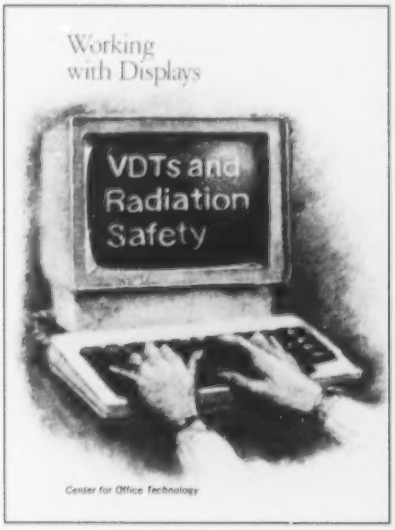
COT publishes new booklet on VDT safety

The Center for Office Technology in Washington, D.C., has issued a new booklet that provides users of video display terminals with information on radiation.

VDTs, like other electrical devices, give off a small amount of electromagnetic radiation. The booklet, "Working with Displays: Radiation Safety," explains why most scientists have concluded that the level of radiation emitted from VDTs is not harmful.

The publication discusses the various types of radiation and the "extremely low frequency" and "very low frequency" electromagnetic fields. It notes that considerable



research on the effect of ELF and VLF fields has been done, and will continue, but that no scientific data to date has demonstrated a link between the fields produced by VDTs and any harmful biological effect on humans [presstime, Sept. 1987, p. 62].

Up to 10 copies of the 14-page booklet can be obtained free; additional copies are 25 cents each. Contact COT, 1801 K St., NW, Suite 905, Washington, D.C. 20006; (202) 452-9060. □

Recent contract settlements

Boston Globe, GCIU, Teamsters: Three-year agreements covering pressroom employees, photoengravers, mailroom employees and delivery department personnel; retroactive to Jan. 1, 1987.

Indianapolis Star and News, GCIU: Five-year agreement covering paper handlers and pressroom employees; retroactive to June 1, 1987.

(Details in October 1987 ANPA Labor & Personnel Relations Letter.)

PUBLISHERS... Are You Budgeting for Big Capital Expenditures in 1988?

Here's a way to help pay for them:

Budget for a proven sales training program that has already generated hundreds of thousands of dollars for over 200 newspapers since 1985.

It's true. You can invest in a training program for your salespeople that is guaranteed to bring you plus business or your money back.

We are American Consulting Services in Vancouver, Washington and we have developed a marketing program for the newspaper industry which involves selling against the Yellow Pages. As of today, more than 200 dailies in the United States and Canada have invested in our services and the results they are having are unbelievable. Millions of dollars have already been recaptured by newspapers around the country by utilizing our simple consulting techniques. You have an opportunity this year to slow the growth of the Yellow Pages in your market with absolutely no down-side risk.

How can we offer a guarantee on sales training? Because we teach a 5½ hour How-To session rather than some philosophical overview. We train your people on what to say, when to say it and how they can consult their way into a sale. Then we spend about an hour with your managers and supervisors sharing implementation techniques that 200 other newspapers have utilized. We sell results. It's as simple as that.

Guarantee

If your salespeople don't recover the investment of our seminar within 30 days of your kickoff, we will return to your community, go out with one of your people and write the business for you. If we fail to do so within 10 days, we will issue a refund.

Call us TODAY... for the amount you need to budget for our training.

Newspaper trainers share experiences

When trainers and other human-resources specialists get together to talk about their experiences and frustrations, their problems and solutions, the exchange of information rises to unusually high levels.

That was apparent Sept. 16-19 when more than 60 specialists in newspaper human resources, including two dozen full-time training and development managers, met for the eighth Training Conference sponsored by ANPA and the Newspaper Personnel Relations Association.

Program topics at the meeting in Baltimore ranged from training youths in the art of selling subscriptions, to outdoor team-building experiences for executives.

On the latter point, Nedra Weinstein, assistant manager of organization development and training at The Washington Post, said that groups of employees who have to rely on each other in an office environment can profit immensely from roughing it together outdoors.

The trainers heard publishers and other newspaper executives outline what is expected of them. One of the most important jobs for a trainer, said Reg Murphy, president and publisher of The Baltimore Sun, is to instill front-line supervisors with leadership and management skills.

Another speaker, Diana M. Zinda, advertising director of the Sunpapers, said trainers "can contribute to the bottom line" by improving staff performance. She stressed the importance of giving new managers training on how to supervise people.

Along that same line, Geoffrey M. Bellman, author of *The Quest for Staff Leadership*, explained how managers in staff positions can develop leadership qualities. Managers tend to follow maps, he said, while leaders tend to "navigate by the stars."

The newspaper attendees themselves had plenty of suggestions for their peers. "We need to know more about our customers' businesses," said Beth E. Farber, advertising sales trainer for the Star Tribune of Minneapolis.

Judy Shay, training manager for The San Diego Union and The Tribune, described a 22-hour program, divided into half-day sessions, for developing the platform skills of line managers so they can become better trainers.

Peter Block, an organization development consultant, empathized with the trainers in their efforts to gain acceptance within their organizations and to build credibility. He said people make a career of training because they are visionary and value-driven. "You are advocates much like newspapers themselves."

But obstacles can get in their way. For one thing, the newspaper business has a tradition of autocratic leadership, said Block, author of *The Empowered Manager*. In some cases, he said, the business "advocates for the community what it has a hard time doing within itself." —*Clark Newsom*

New Executive Development Program joins API's seminar schedule

Four sessions of a new Executive Development Program are among the 36 seminars scheduled next year by the American Press Institute in Reston, Va.

The new program will include a computerized management simulation that will enable executives in teams of five to publish a simulated daily newspaper over a simulated six-year period.

In addition to the 36 seminars, six regional workshops for reporters and copy editors will be held. Dates and sites will be announced in January.

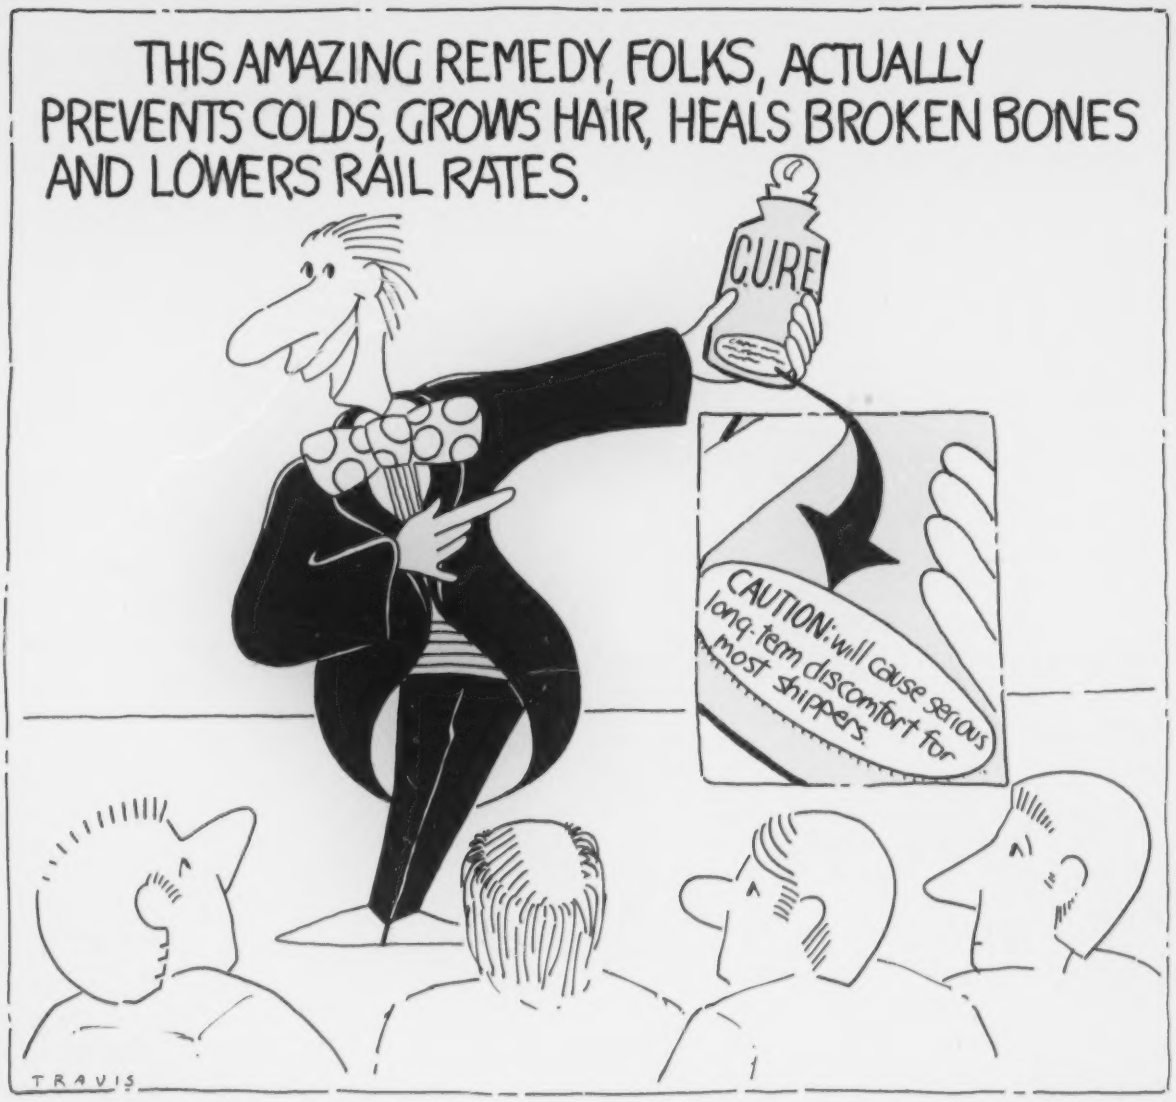
Thirty-three of the seminars will be for daily newspapers and three for weeklies.

One seminar (denoted by an asterisk in the list below) will be held in Toronto, and two (denoted by double asterisks) will be in California:

- **City and Metro Editors** (for newspapers over 75,000 circulation), Jan. 10-20
- **Editing the Weekly Newspaper,** Jan. 10-15
- **Newspaper Design and Graphics,** Jan. 17-22
- **Circulation Managers,** Jan. 24-Feb. 3
- **Classified Advertising Managers,** Jan. 24-30
- **Developing Management Skills,** Feb. 7-12
- **Executive Editors and Managing Editors** (for newspapers under 75,000 circulation), Feb. 14-24
- **Executive Development Program** (for newspapers over 75,000 circulation), Feb. 28-March 4
- **Marketing the Daily Newspaper,** March 6-11
- **News Editors and Copy Desk Chiefs,** March 13-23
- **Weekly Advertising Executives,** March 13-18
- **Management and Costs** (for newspapers over 75,000), March 20-30
- **Newspaper Production and New Technology,** April 10-15
- **Circulation Sales and Marketing Strategies,** April 10-15
- **Sports Editors,** April 17-27
- **Executive Editors and Managing Editors** (for newspapers over 75,000 circulation), April 24-May 4
- **Feature and Lifestyle Editors,** May 1-7
- **Advertising Executives** (for newspapers over 75,000 circulation), May 8-13
- **Executive Development Program** (for newspapers under 75,000 circulation), May 22-27
- **Management of the Weekly Newspaper,** June 5-10
- **Management and Costs** (for newspapers under 75,000 circulation), June 12-22
- **Developing Management Skills** (at Toronto), June 19-24*
- **News-Editorial Management for Non-News Executives,** June 19-24**
- **City and Metro Editors** (for newspapers under 75,000 circulation), Sept. 18-28
- **Executive Development Program** (for newspapers over 75,000 circulation), Sept. 25-30
- **Advertising Executives** (for newspapers under 75,000 circulation), Oct. 2-12
- **Journalism Educators,** Oct. 2-7
- **Executive Development Program** (for newspapers under 75,000 circulation), Oct. 9-14
- **News Editors and Copy Desk Chiefs,** Oct. 16 26
- **Human Resources Management,** Oct. 30-Nov. 4
- **Promoting the Daily Newspaper,** Nov. 13-18
- **Circulation Managers,** Nov. 27-Dec. 7
- **Business and Economic News Coverage,** Dec. 4-9
- **Suburban and Community News Coverage,** Dec. 4-9**
- **Effective Writing and Editing,** Dec. 11-16
- **Editorial Page Editors and Writers,** Dec. 11-16

Tuition for the Executive Development Program has been set at $1,500. All other tuitions remain unchanged from 1987: $715 for a nine-day seminar, $625 for six days and $575 for five days.

To participate, an applicant must be nominated by a newspaper's principal executive. For more information, contact William L. Winter, 11690 Sunrise Valley Drive, Reston, Va. 22091. □



THIS AMAZING REMEDY, FOLKS, ACTUALLY PREVENTS COLDS, GROWS HAIR, HEALS BROKEN BONES AND LOWERS RAIL RATES.
C.U.R.E.
CAUTION: will cause serious long-term discomfort for most shippers.
TRAVIS

If you thought snake oil salesmen were a thing of the past, listen again to a group called Consumers United for Rail Equity (C.U.R.E.).

C.U.R.E. claims it has just the remedy for those who ship by rail. What they don't tell you is that the stuff they're hawking does more harm than good.

C.U.R.E.—a curious name for an organization funded primarily by the coal and utility industries— proposes extensive new regulation of railroads through legislative "reform" of the Staggers Rail Act of 1980. That's the same Act that rescued freight railroads from a century of over-regulation in the first place. And while C.U.R.E.'s proposals would lower rail coal rates for its principal supporters, they'd clearly leave everyone else paying the freight—in terms of declining service; higher rates; and, ultimately, through the loss of rail service altogether.

It's no surprise that C.U.R.E.'s pitch also ignores the fact that the majority of shippers—87 percent of those recently surveyed—feel pretty good about the effects of partial deregulation and don't want to see the Staggers Act changed.

When you think about it, C.U.R.E.'s pitchmen have turned it all around. Reregulation isn't the remedy; it's the disease. In fact, not only did the Staggers Act help remove the railroad industry from the critical list, it also helped the industry become strong enough to offer rate reductions in recent years, including two years of consecutive rate cuts for C.U.R.E.'s principal supporters.

Still, C.U.R.E. is pressing for further rate cuts and new regulations that could be the prescription for the demise of rail service in this country once and for all.

If you're a journalist covering this story, you'll find that the facts support the argument that a good dose of free markets is far healthier for the railroads and their customers than C.U.R.E.'s snake oil.

To get facts, write Rail Remedy, Association of American Railroads, 50 F St., NW, Washington, DC 20001, Dept. 712. Or if you're up against a deadline, call (202) 639-2555.

Consumption climbs again in August

Newsprint consumption by all U.S. users was 2.6-percent higher in August than in August 1986. For the first eight months of 1987, the increase from last year was 2.3 percent.

Consumption by U.S. daily newspapers increased 2.5 percent in August and 3.3 percent for the eight-month period.

Newsprint inventories of newspapers in ANPA's statistical sample averaged 43 days' supply at the end of August, one day less than a year earlier. North American mill stocks were 19.3-percent below the year-earlier level.

The Canadian mills' operating rate in August was 98 percent and for U.S. mills, it was 92.3 percent.

Shipments from Canadian mills to the United States decreased by 0.8 percent in August, while U.S. domestic shipments increased by 3.4 percent. Canadian shipments within Canada increased by 9.3 percent.

Overseas shipments decreased by 6.6 percent at Canadian mills and 29.3 percent at U.S. mills.

Estimated newsprint consumption, 1986-1987 (thousands of metric tons)

Survey details rising demand, worldwide capacity growth

Newsprint demand in the United States increased slightly last year—from 11.7-million metric tons in 1985 to 11.8 million tons, according to an annual survey by the Canadian Pulp and Paper Association. Japan accounted for the world's second-greatest demand, 2.9-million tons.

Survey results, published in CPPA's "Newsprint Data '86" booklet, also showed that Sweden led the world last year in growth in newsprint capacity, with a net increase of 220,000 metric tons.

The Soviet Union was second, up 160,000 tons, followed by Britain, up 135,000. By comparison, capacity grew by 65,000 tons in the United States and by 35,000 tons in Canada.

Canada was first in production with 9.3 million tons. The United States was second at 5.1 million and Japan was third at 2.6 million.

The United States was the leading importer of newsprint, bringing in 7 million tons. Britain was second at 1.1 million and West Germany third at 821,000.

Canada was the top exporter—8.2 million tons, compared with 1.4-million tons for second-place Sweden and 1.1 million for third-place Finland.

Among other facts contained in the 27-page report:

- World newsprint demand reached 29 million tons, an increase of 3.1 percent over 1985. World demand was 90.3 percent of capacity, compared with 89.5 percent in 1985.
- World capacity reached 32.1 million tons, a 2.2-percent increase from the previous year.
- U.S. newsprint producers increased their share of the U.S. market to 40.4 percent, compared with 39.9 percent in 1985. The increase was at the expense of manufacturers in Canada and other non-Scandinavian countries.

A limited number of copies of the report are available from ANPA's Newsprint and Transportation Department at The Newspaper Center in Reston, Va. □

William D. Rinehart, ANPA vice president/technical, shows a difference in kenaf and wood-pulp newsprint. The wood-pulp sample, top, from the final edition of The Washington Star Aug. 7, 1981, has yellowed from acidity caused by lignin, a wood-fiber binder. The kenaf sample, from a Dec. 5, 1979, press run at The Yuma [Ariz.] Daily Sun, has better maintained its appearance. Both samples were kept in a dark closet at ANPA.

NEWSPRINT NOTES

- MacMillan Bloedel Ltd. will spend $6 million at its mill in Powell River, British Columbia, to **upgrade a newsprint machine** that has been idle since 1985. The 65,000-metric-tons-a-year machine is scheduled to be started up next January.

- Abitibi-Price Inc. is competing with a group of unidentified publishers to **build a newsprint mill** in Venezuela. Abitibi officials said that if the company is not chosen for the project, it will consider adding a second newsprint machine at its mill in Iroquois Falls, Ontario.

- The names of Ontario Paper Co. Ltd. and Q.N.S. Paper Co. have been changed to **Quebec and Ontario Paper Co. Ltd.** The company has newsprint mills located at Thorold, Ontario, and Baie Comeau, Quebec.

- Imperial Trust Company of Montreal has **sold its 100-percent interest** in the St. Raymond, Quebec, mill to Donald J. McDougall, president of St. Raymond Paper Inc. since 1984.

Parliament acts to end rail shutdown

Canadian railroads were back in service in late August after Parliament passed legislation ending a five-day national strike.

The legislation directed railroads and their unions to abide by the terms of expired contracts until new conditions can be set by an arbitrator.

Major issues in the strike included job security, removal of cabooses from freight trains and use of outside contractors in place of railroad personnel [presstime, Sept. 1987, p. 45]. □

Greyhound wants to restore some rural service

Greyhound Lines Inc. has completed the acquisition of Trailways Lines Inc. and has reduced combined bus routes by 5.1 percent [presstime, Aug. 1987, p. 54].

But Greyhound has begun a nationwide effort to resurrect some rural service dropped by both lines in recent years.

Under the program, vans from federally funded rural transportation agencies will help deliver people and packages to Greyhound bus terminals in a hub-and-spokes arrangement patterned after that of commercial airlines. □

Group tries to buy Southern Pacific

The Railway Labor Executives Association is looking for financing to buy the Southern Pacific Transportation Co. from the Santa Fe Southern Pacific Corp.

SFSP, a holding company that controls both the Southern Pacific and the Atchison, Topeka & Santa Fe railroads, has been ordered by the Interstate Commerce Commission to sell at least one of the two [presstime, Aug. 1987, p. 54]. □

Seaway strike possible

Lock operators and maintenance workers employed by the St. Lawrence Seaway in Canada voted to strike. But by late September, no strike date had been set, as negotiations continued between the St. Lawrence Seaway Authority and the Canadian Brotherhood of Railway Transport and General Workers.

The last strike by Canadian Seaway workers took place in 1968 and lasted 24 days. □

Flexo activity picks up speed

Newspaper interest in flexography, high all year, has intensified in the nearly four months since ANPA/TEC '87 in Las Vegas.

Evidence of that comes in many forms:

• The San Francisco Newspaper Agency, which prints the San Francisco Chronicle and San Francisco Examiner, purchased 22 flexo units from Publishers Equipment Corp., some new and some converted. Delivery is scheduled for early 1989.

• The Macon (Ga.) Telegraph and News purchased a nine-unit flexo press with a 3:2 folder and four halfdecks from Motter Printing Press Co. The two flexo units Motter used in live demonstrations at ANPA/TEC will be delivered to Macon by the end of the year, with the rest to follow in 1988.

• PEC sold flexo presses—one of five units and another of six units—to two newspapers in the same group. George Derby, PEC vice president/marketing, said the newspapers asked that their identities be withheld for now.

• The Rocky Mountain News in Denver will buy flexo presses to replace letterpress presses, although the vendor has not yet been selected, according to Ralph E. Eary, director/production of the newspaper's parent company, Scripps Howard. He said it is hoped the press units can be purchased in time to be on line sometime in 1989.

That brings to 17 the number of U.S. newspapers that have purchased flexo or are still testing the process.

The Providence Journal and The Evening Bulletin are now printing with the first six of 18 flexo units ordered from Windmoeller and Hoelscher. When the installation is complete, scheduled for next spring, the Providence papers will become the first completely flexo newspaper operation in the United States or Canada.

Fort Wayne (Ind.) Newspapers Inc. is scheduled to receive a MAN Roland flexo shipment in December. In January, MAN Roland is scheduled to deliver flexo units to The Wichita Eagle-Beacon, Lancaster (Pa.) Newspapers Inc. and The Charlotte (N.C.) Observer [**presstime**, Feb. 1987, p. 56].

In December 1988, The Blade of Toledo will receive a Goss flexo press from the Graphic Systems Division of Rockwell International. A second press is scheduled for delivery there a year later.

Motter's sale to Macon was its second of a complete flexo press. The first came during the summer to the Evansville, Ind., newspapers.

The Evansville purchase represented Scripps Howard's first full commitment to flexo. Eary, a member of the ANPA Technical Committee's new Flexographic Printing Task Force, said flexo testing since last December has gone well at the Knoxville (Tenn.) News-Sentinel, and two more flexo units and a halfdeck are being ordered for the plant there. The flexo units are being used to print both Scripps Howard's The News-Sentinel and the independently owned Knoxville Journal.

With the orders for flexo presses building up, delivery time is now about two years and could increase, manufacturers told **presstime**.

"I think that's why you're seeing what I would term a buying frenzy. People are coming out of the woodwork," said Robert J. Mrak, vice president/flexo newspaper group for North America Cerutti Corp. "People have begun to realize that if they need a press by a certain time, they must make a decision and buy now. They're worried a significant increase in orders will lengthen the lead time."

However, Mrak said he is "somewhat chagrined" that Cerutti, an Italian firm, has not yet sold a flexo press to a U.S. or Canadian newspaper. "All we can do is keep knocking on doors and letting people know about our product."

At Motter, James C. Leatham, director/marketing and sales, said the Evansville and Macon sales have gone a long way to solidify the company's credibility in the newspaper industry. "This legitimizes us as a press supplier to newspapers," he said. "We've been a respected supplier to the commercial printing industry for a long time, but we needed those sales to newspapers."

All of the manufacturers interviewed said they sense newspapers no longer are as concerned with whether the flexographic process works. Problems such as plate plugging have not been completely eliminated, but the general feeling is progress is being made and the problems will be resolved.

And so, rather than focusing so much on whether the process works, newspapers are evaluating equipment from different companies to determine what best suits their needs, the vendors said.

"The situation is not dissimilar to the introduction of offset at newspapers," said Derby of PEC. "Some people jumped right in while others were a bit apprehensive and waited to see what would happen. After the first few installations, it became more and more acceptable. That's what's happening to flexo these days." □

ANPA research chemist John T. Moynihan (right) demonstrates process of turning soybean oil into ink for a Cable News Network crew. CNN Science Editor Charles B. Crawford (partially seen at left) reported on ANPA's soybean oil ink project for the network's "Science and Technology Week" program that ran Sept. 10, 12 and 13.

Why gamble with your color... when we offer you a sure bet

At Huber, we understand every aspect of newspaper production that can contribute to color quality. That's why we:

- Look into your plate preparation, color separation, print density and lay
- Analyze your present ink formula, ink/water balance, and the paper that you use
- Study your presses, their type, makeup, configuration, and their running speed
- Look at the overall appearance of your printed sheet — page set-off, smearing, rub-off and dot gain
- Investigate your delivery and handling procedures • Collect data on acceptance by your advertisers

We really get to know your operation. We compile our findings in a permanent record — and place your "Fingerprint" on file for future reference. Then, and only then, do we customize a color ink formula just for you — and we supply it with the consistency, dependability and service that have made Huber an industry leader for over a century. If you want quality color, don't leave anything to chance. Call on Huber today...it's a sure bet.

For more details about a comprehensive analysis of your operation, call Andy McDonnell, Market Manager, Newsinks (201) 906-1760.

Think ink...think Huber.

Congratulations to the Chicago Tribune ...first prize winner
in Eastman Kodak's 10th annual "Run for the Money"
newspaper reproduction contest, using Huber Colorset Newsink

ANPA to hold flexography symposium; manual planned on materials evaluation

An ANPA symposium on flexography is being planned for next March in Atlanta. It will be the first Association-sponsored seminar devoted entirely to this latest form of newspaper printing.

ANPA has sponsored pressroom symposiums, such as the one this month in Chicago, but they also cover offset and letterpress printing.

The flexography symposium is the brainchild of the new Flexographic Printing Task Force of the ANPA Technical Committee. The committee and its nine task forces met Sept. 2-3 at The Newspaper Center in Reston, Va., as did the ANPA/TEC '88 Arrangements Committee.

Task force Chairman Jerry S. DeHimer, director/operations of The Providence Journal Co., said the group proposed the symposium because of the "tremendous interest" among newspapers in flexographic printing. The Providence papers have been pioneers in the field. (See story, p. 16.)

The tentative program includes segments for newspaper users of flexography and for vendors of flexographic equipment and supplies.

The flexo task force was spun off from the Direct and Offset Printing Developments Task Force. That panel was reconstituted as the Letterpress & Offset Printing Developments Task Force.

During their semiannual meetings in Reston, other task forces also worked on long- and short-range projects.

The Quality Evaluation Task Force said its next project will be preparation of a new manual to help newspapers evaluate materials such as printing plates, blankets, ink, newsprint and fountain solutions.

The new manual will be called ANPA/TEST and is scheduled for distribution next spring. Production employees will be able to use the manual to measure such properties as ink viscosity and newsprint opacity or brightness against suggested standards, said Charles R. Blevins, chairman of the task force.

The manual will be in a loose-leaf notebook format and categorized by material. Blevins, vice president/production for Gannett Co., said the task force hopes to update the information annually.

ANPA/TEST will be a companion to other ANPA reference works published recently as part of the newspaper industry's drive to improve printing quality.

The others are the *Guide to Quality Reproduction*, for which the task force recommended a third printing; ANPA/CHECK, a booklet newspapers can use to evaluate their printing quality against suggested standards; and *ANPA-COLOR™ AD-LITHO®/AdPro®, Vol. 7*, the new offset and letterpress ink book.

ANPA has not yet established standards for flexographic inks. The flexo task force

Roth discusses ANPA-prepared report.

and the Newspaper Ink Study and Research Task Force—estimating that more than 100 flexo printing units will be in use at newspapers within the next three years—proposed that such standards be formulated by an informal group of ANPA research chemists, flexo users and ink company representatives.

In other developments:

• The Post-Press Packaging and Distribution Task Force decided to send a report on post-press automation to vendors. The report, prepared by Nhac (Pete) Nguyen, ANPA research engineer, focuses on how preprints can be stored and handled with maximum efficiency and speed. It should be viewed as "a thought stimulator, an introduction to the problems and the opportunities in newspaper packaging and distribution," said Ralph S. Roth, chairman of the task force and vice president/technology for Knight-Ridder Inc.

The task force is planning a third symposium in its subject for October 1988.

• The Environmental and Ink Study & Research task forces reported that ANPA is investigating potential options for disposal of waste soybean oil-based ANPA-INK®. They include solidifying the ink for landfill disposal, emulsifying it for discharge to public sewers and septic fields, incinerating it or recycling it.

Fourteen ink companies are now licensed to manufacture ANPA-INK, and more than 50 newspapers have tested it—including The Cedar Rapids Gazette, which is using the color ink exclusively [*pressstime*, July 1987, p. 80].

Michael Stern, chairman of the Environmental Task Force and production manager for Syracuse Newspapers Inc., also said work continues on the *ANPA Guide to Newspaper Waste Mangement*. Release to members is scheduled for early next year. □

TECHNOLOGY NOTES

• Integrated Newspaper Systems has **acquired Creative Data Systems**, a supplier of business and production software for newspapers. INS is a joint enterprise of E.M. Warburg, Pincus & Co., a venture capital group, and Ingersoll Publications Co. of Princeton, N.J.

Dann Kroeger, founder of CDS, said the Overland Park, Kan., firm "needed larger capital resources in order to develop the next generation of products."

• The San Jose Mercury News and The Scranton (Pa.) Times are the **first U.S. newspapers to purchase Hell Graphic Systems' Newsplan**. Newsplan is a page-design system that combines text and four-color graphics. It also can be used to colorize black-and-white line art and to create and position color borders.

In San Jose, the system is being used on the editorial side, and in Scranton in both the editorial and advertising departments.

• Gannett Co. will add **printing sites for USA Today** next year in Atlanta, Salt Lake City and near St. Louis.

That will bring the number of sites to 33, 11 of which are contract printers. The remainder are operated by Gannett Offset and by Gannett newspapers around the country.

• The **National Printing Equipment and Supply Association** has moved its headquarters from McLean, Va., to Reston. The new address is 1899 Preston White Drive, Reston, Va. 22091.

The 57-year-old organization represents about 250 graphic arts manufacturers and suppliers and sponsors trade shows.

Ink companies seek certification under new ANPA color book

As of Sept. 15, 63 of 212 ink samples submitted to ANPA had been certified as meeting the specifications prescribed in *ANPA-COLOR™ AD-LITHO®/AdPro®, Vol. 7*, the new color ink book for newspapers that took effect in August. (See chart at right.)

Ink companies have been sending samples to ANPA for run-of-paper color certification since June, and about two of every three fail tests for hue and pigment strength the first time tested, according to H. Wilson Cunningham, analytical chemist for the Association. On the second round of tests, about three of four pass, he said.

The color ink book has specifications for 12 certified colors for offset printing and for letterpress printing—eight basic colors and four new spot colors. The eight basic colors are used in producing 38 blends. Exact formulations for those blends are found in the new color book.

Newspapers are encouraged to buy certified versions of the four new spot colors. "The spot color blends listed in the book are approximations which will be much more transparent than the manufactured spots," said George Cashau, ANPA director/technical research.

At the pace testing is proceeding, Cunningham believes that certification will be completed early in 1988.

Companies that have not yet submitted samples are invited to do so. Upon written request, ANPA will send them samples of ink for the purpose of matching, a list of approved pigments and the specifications for the new inks.

Inks that do not meet ANPA's suggested standards may not provide the same level of print quality as inks that do [presstime, Aug., 1987, p. 56], according to ANPA's Cashau. Newspapers are encouraged to use the approved inks in order to ensure consistent and high quality color reproduction, he said.

Equally important, Cashau said, is for newspapers to continue to submit samples of certified inks to ANPA for ongoing testing.

Orders are still being accepted for the ink book. The cost is $50 per copy for one to nine copies or $45 for 10 or more copies. Orders may be sent to the ANPA Technical Services Department at The Newspaper Center in Reston, Va. □

Nashua Telegraph buys Crosfield 2500 system

The Telegraph Publishing Co., which owns the Nashua (N.H.) Telegraph, has purchased the first full Crosfield 2500 pagination system from Crosfield Data Systems.

Six VAX-based Wizard terminals will be used for news and classified pagination as well as for display advertising makeup.

Also part of the system are 50 personal computers that can stand alone or be linked with other PCs in a network. □

TECHNOLOGY CALENDAR

• **IFRA '87**, an annual European newspaper conference and exposition, will be Oct. 12-15 at the RAI Exhibition Centre in Amsterdam.

• **Composition Technologies,** typography seminars sponsored by the National Composition Association, will be conducted twice—Oct. 13-14 at Infomart in Dallas and Nov. 9-10 at the Key Bridge Marriott in Arlington, Va.

• ANPA's **Pressroom Options IV** technical symposium will be Oct. 19-21 at the Hyatt Regency O'Hare in Chicago.

• A Graphic Arts Technical Foundation seminar, **"Color Reproduction: How Color is Perceived from Transparency to Press Production,"** will be Oct. 24 at the Stouffer Concourse Hotel in Arlington, Va.

• **The Folio Show,** an annual publishing conference and exposition, will be Nov. 2-6 at the New York Hilton at Rockefeller Center.

• **Web Offset Press Operating and Troubleshooting,** a GATF seminar, will be conducted on two occasions—Nov. 5 at the Quality Inn in Towson, Md., and Nov. 7 at the Franklin Plaza Hotel in Philadelphia.

• **Graph Expo '87,** a graphic-arts equipment exposition, will be Nov. 15-18 at McCormick Place in Chicago.

• **Color Separation and Electronic Scanning,** a GATF seminar, will be Nov. 21 at the Charlotte (N.C.) Marriott City Center.

• **Print Outlook '88** will be Dec. 9-10 at the Crystal Gateway Marriott Hotel in Arlington, Va.

• **The Digital Image,** a series of digitized image processing seminars sponsored by the National Composition Association, will be Dec. 10-11 at the Hyatt on Union Square in San Francisco.

• **The 1988 Microcomputer Graphics Show and Conference** will be Dec. 16-18 at the Javits Convention Center in New York City.

Press monitor system offers many advantages

A new pressroom computer system developed by the Pittsburgh Press Co. is providing multiple benefits. It has reduced waste and spoils, cut down on overruns and underruns, and given the company the means to analyze press failures and simplify repairs, company executives say.

The Pressroom Control System was developed over a two-year period and put into daily use last year. Daniel F. Persiani, the company's director of data systems, described it as "an efficient, state-of-the-art system that supplies a constant monitoring and update on all (press) run activity."

COLOR QUALITY

X-Rite Densitometers make it easier than ever.

X-Rite 408 & 418
Color Reflection
Densitometers

Introducing two new densitometers designed to improve the color in your newspaper: the X-Rite 408 and 418. They're the most versatile color reflection densitometers available for newspaper quality control procedures.

Accurate & Easy to Use

With only a few simple steps, the 408 and 418 give you the important information needed to control print variables like density, dot gain, hue error/grayness, and print contrast.

Special Ink-Trap Formula

Responding to the unique characteristics of printing on newsprint, we've included a special newspaper ink-trap formula in the circuitry of the 418 to deliver realistic trap percentages.

To discover why the X-Rite 408 and 418 are rapidly becoming the choice of professionals throughout the industry, contact us today for more details.

"The menu-driven software allows for fast and reliable press condition assignments," he said. "Once the proper information is put into the system, it is generally self-sufficient. The system does allow for human intervention to ensure maximum personnel safety and efficient production of the newspaper product."

Persiani said the system works this way:

Prior to a press run, an operator uses keyboard commands to enter into the system all information regarding the press run. The software provides menus on the operator's computer screen, making the assigning of the presses to a group easier and faster. After all the selections have been made, the electrical department is told which press units need to be powered for the run.

Production personnel monitor the press run's progress on video display terminals and display monitors. Information, which is updated constantly, includes the average paper-per-hour speed for each press or group of presses, estimated time to complete the run, and which presses are running and which ones aren't.

The system can make necessary adjustments automatically when problems arise. In addition, the system operator at any time can selectively stop a press or alter the number of copies ordered for the run. At the end of the run, it shuts down the presses.

Persiani said the system "not only monitors its own downtime but also counts and stores the number of red-light occurrences"—instances when the presses stop because of such things as web breaks—"and the total minutes of red-light time caused by the mailroom."

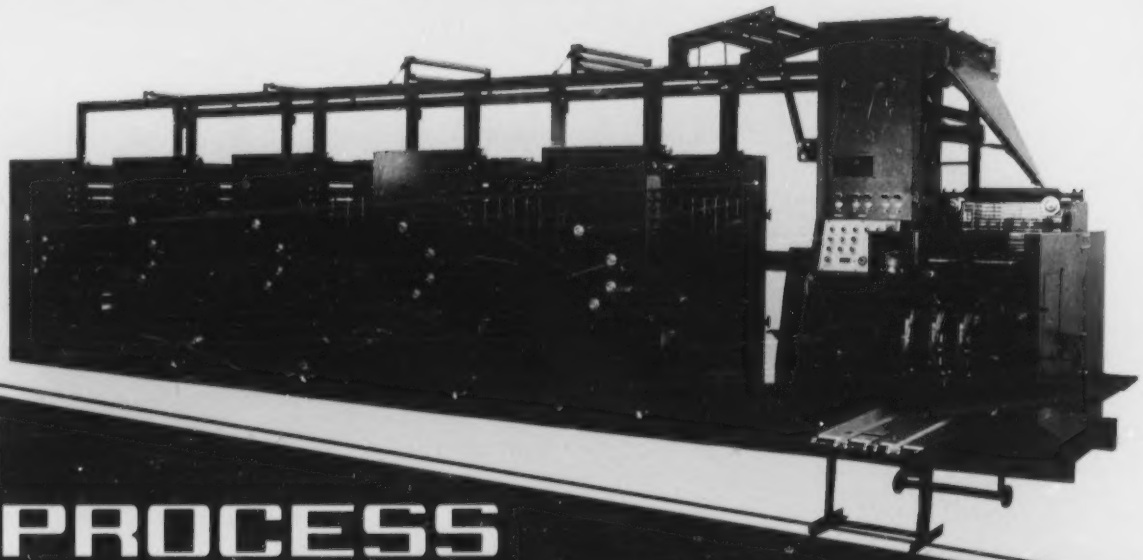
The pressroom office has the controlling VDT. Another VDT in the computer office is used to update the software as necessary. Monitors are located in the production office, mailroom and pressroom.

The system also collects data during the run for use in production reports, including start-up and shut-down time, production downtime, and the amount of paper waste and the reason for its occurrence. Printouts are provided daily.

The Pittsburgh Press Co. publishes The Pittsburgh Press, a Scripps Howard paper, and prints the Pittsburgh Post-Gazette under a joint operating arrangement. □

Editor's note. This story was submitted in response to ANPA Technical Committee requests that newspapers share innovative technical ideas others might find useful. Send submissions to Rosalind C. Truitt, technical writer, pressetime. *The Newspaper Center, Reston, Va.*

PRESS AHEAD.



PROCESS KING

*A totally new generation printing system, will put you steps ahead of the competition. Signatures, supplements, circulars, inserts and direct mail pieces. . . **All** take on a profitable new dimension when produced on the Process King.*

Specifically designed to offer you:

- *Quality back-to-back four-color process reproduction, either heatset or non-heatset*
- *Realistic production speeds to meet the demands of today's market*
- *A clearly established and distinct performance*
- *One of the most positive price/value relationships ever*

Built to precision tolerances, Process King is the result of two technologies: state-of-the-art computer-aided design and an evolutionary, rigorous testing program.

Standard Process King features:

- *Solid stainless steel plate and blanket cylinders with wide-body bearers and preloaded Timken double-row tapered bearings*
- *15 roller ink train with 3 form rollers and 2 vibrator rolls per couple*
- *Ductor ink feed and brush dampening with speed following*
- *A true horizontal web path with staggered blanket cylinders, full running circumferential and lateral register control on both sides of the web*
- *Automatic sequenced pneumatic control of all printing unit functions from master control panel*

Plus:

- *One-piece solid steel side frames*
- *High-line press drive with balanced torque tube drive shaft*
- *Class 11 gearing with cascade oil bath lubrication*

*Built in the United States and backed by more than two decades of experience in design and manufacture, Process King is "the" **Press Ahead.***

Singleton goes on buying binge

BUSINESS ROUND-UP

Newspaper entrepreneur William Dean Singleton dominated the acquisition game in September by running two successful Post patterns. Within a five-day period, he announced agreements to purchase The Houston Post and The Denver Post for prices totaling $245 million, much of it leveraged through various financing arrangements.

Singleton's MediaNews Group Inc., which he formed in 1983 with New Jersey newspaper and newsprint executive Richard Scudder, agreed to pay $150 million cash plus future "revenue incentive" payments for The Houston Post, and $95 million in cash and notes for The Denver Post.

The latest moves further demonstrate Singleton's penchant for buying—at relatively low cost—the trailing dailies in cities with competitive newspapers and depressed economies, in the belief that he can turn other newspaper companies' headaches into sweet dreams.

Current circulation at The Houston Post is 309,400 weekday mornings and 356,424 on Sunday, down from five years ago when it circulated 376,455 daily and 436,659 on Sunday. During the same period, the Houston Chronicle lost circulation on weekdays, when it publishes both mornings and afternoons, but gained on Sunday. The weekday loss was from 419,869 to 406,084; the Sunday gain was from 502,654 to 531,528.

The all-day Chronicle was bought earlier this year by The Hearst Corp. Singleton was one of the unsuccessful bidders for the property [presstime, June 1987, p. 130].

In the Denver market, the Post has lost daily circulation but snatched a sizable share of the Sunday market from its competitor, the Rocky Mountain News. The Post has 229,731 circulation on weekday mornings and 415,250 on Sunday; in 1982, it had 256,257 and 358,265, respectively. Circulation for Scripps Howard's Rocky Mountain News has risen from 321,693 to 345,778 on weekday mornings, and from 346,886 to 379,984 on Sunday.

The 36-year-old Singleton's plunge into big-city newspaper ownership began last year with his purchase of the Dallas Times Herald, which has been running behind The Dallas Morning News in a fierce battle for readers and advertisers.

With the latest purchases, MediaNews Group will own 28 dailies selling about 1.3-million copies on weekdays, making it the 11th largest newspaper group in the country, according to Morton Research at the Washington, D.C., securities firm of Lynch, Jones & Ryan. Only last January, with combined circulation of 658,100, it was the 21st largest group.

The announced prices to be paid would translate into about $484 per subscriber for The Houston Post and about $413 per subscriber for The Denver Post.

But analyst John Morton estimated that the financing terms agreed to by The Times Mirror Co. in the sale of The Denver Post were so favorable that the deal is really worth about $70 million, or $300 per subscriber. Such prices are low compared with the average yardstick of $900-$1,600 per subscriber.

Media General Inc. of Richmond, Va., put up $25 million of the cash for the Denver purchase and has an option to buy 40 percent of that paper. The remaining $70 million was extended as notes by Times Mirror. That Los Angeles-based media firm will retain ownership of the downtown land and buildings, which it will lease to MediaNews Group.

In the Houston sale, The Toronto Sun Publishing Corp. also struck a deal with Singleton for a future payment. It will be made on March 31, 1993, and be based on the gross revenues of The Houston Post over a five-year period ending Dec. 31, 1992. Under the arrangement, Sun Publishing will receive $1.25 for each dollar of additional revenue over an annual base equal to 1987 revenues.

Texan Singleton and partner Scudder could benefit from more than an upswing in the Texas economy. The purchase means

Guy Gannett Publishing Company of Portland, Maine, has acquired

Minnesota Suburban Newspapers, Inc.

(19 non-daily newspapers in the Minneapolis/St. Paul area with total circulation of 297,000)

From FNCO Corporation

We are proud to have served as the broker for Guy Gannett Publishing Company in this transaction.

Lee Dirks & Associates
313-646-4230

that the Post could share some publishing expenses, such as newsprint and ink stocks, with the Dallas Times Herald, and advertisers could be offered the opportunity to buy space in both papers at one rate, said William J. McCluskey, vice president of Henry Ansbacher Inc., an investment banking firm that represented Singleton in the transaction.

Also in September, Singleton merged two of his New Jersey dailies. The North Jersey Herald News of Passaic (evening, circulation 45,283) and The News of Paterson (morning, 37,000) became The North Jersey Herald & News, centered in Passaic. The papers had been publishing jointly on Saturday and Sunday since July.

In other newspaper-business news:

• MediaNews Executive Vice President **John Buzzetta** is resigning that position to launch his own acquisition efforts, which began Sept. 23 with an agreement to purchase The Scranton (Pa.) Tribune (morning, circulation 37,222) for an undisclosed price from the Goodman family. The paper trails The Scranton Times (evening, 58,062).

Buzzetta, who will continue to serve as a consultant to MediaNews, formed a new holding company, MediaOne Inc., for this and future acquisitions. MediaNews will have an option to buy 40 percent of MediaOne, according to a spokeswoman for Henry Ansbacher Inc., which represented Buzzetta.

• Owners of **The Scranton Times** acquired The City Paper, a free alternative weekly in Baltimore, for an undisclosed price. The free paper's circulation more than quintupled in the past five years, from about 16,000 to 87,000.

• The **federal tax rate** for publicly traded newspaper companies dropped an average of about 3.6 percent in the year since the government changed the corporate tax structure, according to figures published in Morton Research's Newspaper Newsletter. "This lower tax rate has contributed about one-third of the industry's approximately 30 percent increase in net income in the first six months of this year," said the newsletter, published by analyst John Morton's research team.

Strong pretax growth accounted for the remaining income boost, the newsletter said. The average effective tax rate for the companies decreased from about 50.7 percent in the first half of 1986 to 47.1 percent in the first half of 1987, according to the analysis.

• **Times Mirror** directors voted to increase the number of shares of common stock in the company and to create two new classes of stock with different voting rights. Shareholders are scheduled to vote Nov. 30 on the proposal.

The move was partially intended to strengthen the power of shareholders, particularly the Chandler family that controls 32.7 percent, against any unwanted takeover. Times Mirror Chairman Robert F. Erburu said no such attempt is evident.

Under the plan, the number of authorized shares would increase from 80 million to 550 million.

Holders of existing common stock, which would increase to 300 million shares, would have one vote per share. The plan would create 100 million shares of Class B common stock, with one-tenth vote per share, to finance future acquisitions without diluting the voting power of existing shareholders.

Also newly authorized are 150 million shares of Class C common stock. It would have 10 votes per share, would not be publicly traded and would be distributed to current shareholders, with transfer restricted to family members or other "closely affiliated parties."

• Sept. 15 marked the fifth anniversary of **USA Today's** first publication date. Amid the Gannett Co.'s hoopla, certain benchmark figures emerged. Average daily paid circulation has increased from 362,879 two months after the paper was launched to 1.3 million at the end of March.

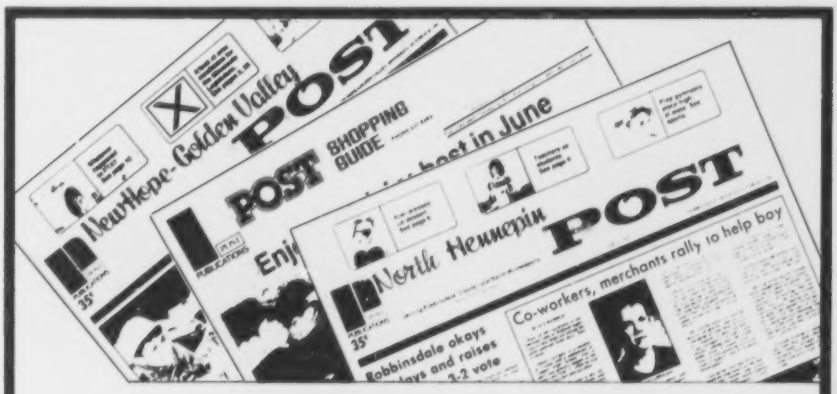
The company projected gains to 1.6 million, including bulk sales, by the end of September, when it planned to raise ad rates by 12 percent.

Average daily advertising pages increased from less than seven in 1983 to more than 15 this year.

• The **Press-Telegram** of Long Beach, Calif., signed on to print "Dodger Blue," an official publication of the Los Angeles Dodgers, through the end of the 1988 baseball season. The contract then may be renegotiated.

The 32-page tabloid appears in the newspaper on the first and third Mondays of each month. The previous 14,000 subscribers to "Dodger Blue" continue to receive their copies by mail, accompanied by that day's Press-Telegram.

Newspaper executives said they see the contract as a way to offer readers additional sports information. —*Mary A. Anderson*



Guy Gannett Publishing Company
of Portland, Maine, has acquired

Bomb threat prompts action

Several newspapers took precautions after receiving a message over the Los Angeles Times-Washington Post News Service about a letter-bomb threat addressed to newspaper managing editors.

According to George J. Cotliar, managing editor of the Los Angeles Times, the newspaper's Washington bureau was telephoned in late August by a woman who said she was sending a letter bomb to the managing editor of the Times and to other, unnamed, managing editors around the country.

Although he did not know whether there was any validity to the recent threat, Cotliar sent an advisory out over the Times-Post wire and also alerted the Associated Press and United Press International.

Times security personnel began screening Cotliar's mail. And several other newspapers also acted. William L. Bland, loss prevention manager for the Miami Herald Publishing Co., alerted local postal officials and circulated the wire message "to the appropriate people." The Boston Globe also notified postal authorities, advised its staff to be on the lookout for suspicious-looking envelopes and moved "bomb blankets" up to its mailroom, according to G. Frank Mahoney, safety and security manager. □

Glimmer of hope seen for El Mundo

There appeared to be a slim possibility in late September that El Mundo of San Juan, Puerto Rico, would reopen under new ownership.

The unprofitable Spanish-language daily closed Aug. 30 in its 68th year after a prospective buyer failed to reach an agreement on a new labor contract with the Puerto Rico Newspaper Guild. The Guild, the only union in the plant, represented about 400 employees from all departments at the newspaper, which had a circulation of about 100,000.

Pedro González Ramos, president of El Mundo Inc., could not be reached for comment, but The San Juan Star reported Sept. 22 on negotiations described as "difficult" and "very doubtful" involving the Guild and Héctor González, a prospective buyer.

There are four dailies left in San Juan, three in Spanish and the English-language Star. □

Changes in command

The **National Association of Black Journalists**, at its annual convention Aug. 18-23 in Miami, elected the following new officers:

- *President*—DeWayne Wickham, Gannett News Service
- *Vice President/Print*—Gayle Pollard, Los Angeles Times
- *Vice President/Broadcast*—Pam Moore, WBZ TV, Boston
- *Secretary*—Sheila Detrick, The Dallas Morning News
- *Treasurer*—Thomas Morgan III, The New York Times
- *Parliamentarian*—William W. Sutton Jr., Nieman Foundation, Cambridge, Mass.

Ad expenditures up for first six months

For the first half of 1987, expenditures for newspaper advertising were up 10.2 percent from the year before, according to estimates from the Newspaper Advertising Bureau.

All three categories tallied increases, with classified leading the way with a 16-percent increase to $5.3 billion; retail was up 8.1 percent to $7.1 billion, and national up 3 percent to $1.8 billion.

"Classified is performing better than we had thought," said NAB President Craig C. Standen. Retail and national expenditures have been about what NAB had expected, he said. "The business overall is very healthy this year."

However, he added, the figures represent a "national average," and newspaper performance "does vary by region." □

Other acquisitions

Hollinger Inc. of Toronto, through its American Publishing Co. subsidiary, acquired The Neosho (Mo.) Daily News, circulation 6,036; The Decatur (Ind.) Daily Democrat, circulation 5,866; The Daily Register, Harrisburg, Ill., circulation 7,092; the Constitution-Tribune of Chillicothe, Mo., daily circulation 5,660; and The Morning News of Blackfoot, Idaho, daily circulation 5,899.

Park Communications Inc. of Ithaca, N.Y., acquired the South Idaho Press of Burley, daily circulation 6,393, from Cowles Media Co. of Minneapolis.

Marshall Settle of Chickasha, Okla., acquired The Tiller and Toiler of Larned, Kan., daily circulation 2,549. □

WHEN IT COMES TO POLLUTION CONTROL, MANY NEWSPAPERS ARE IN OVER THEIR HEADS.

Dan Sells, Vice President of Newspaper Sales at Western Lithotech, explains a new concept in cost-effective pollution control.

Dan, what is this concept?
Well, it involves two systems: Envirotech clean chemistry and a special processor called Eliminator.* And together, they are the best available technology for additive plate processing.

How do they work?
First, they're designed to work exclusively with Western Lithoplater® plate processors. Envirotech is a new, odorless developer and finisher chemistry — so clean it meets tough government regulations.

Then our new Eliminator system is connected to the Lithoplater processor, removing solids from effluent waste. So what goes down the drain is safe and virtually clear.

So what happens to the solid waste?
It's easily disposed of by your waste haulers.

Give me three good reasons why a newspaper needs the Envirotech and Eliminator Systems.
Here are four: EPA, OSHA and state regulations *and community responsibility.*

The big question: Just how much can these new systems save me?
Plenty! Consider the alternatives: government fines of up to $10,000 a day; possible shutdowns; personal injury suits; or designing an approved system of your own.

What about switching to a subtractive plate system?
It's less expensive to use Western. No start-up costs, personnel retraining or lost production time, and not all subtractive plate chemistries comply with EPA and OSHA guidelines.

What about other environmental additive chemistry on the market?
They just don't do the job, because additive plate processing produces polluting sludge. Our Eliminator makes all the difference. Remember, it's not just the chemistry which must pass government regulations *...it's what goes down the drain.*

The Choice is Clear.
For complete technical information, call 1-800-325-3310 (in Missouri, 314-225-5031). Or write Western Lithotech, 3433 Tree Court Industrial Boulevard, St. Louis, MO 63122.

Speeches

Richard J.V. Johnson

Bruce W. Sanford

Stephen Lacy

Carolyn Martindale

Single copies of the following speeches are available from the ANPA Public Affairs Department at The Newspaper Center, Box 17407 Dulles Airport, Washington, D.C. 20041:

The Changing Role of Women in the Newsroom
Richard J.V. Johnson, president and publisher, Houston Chronicle. Houston Chapter of the Society of Professional Journalists, Sigma Delta Chi, Aug. 4

From Newsracks to Ad Taxes: Commercial Speech and the New Silence
Bruce W. Sanford, attorney, Baker & Hostetler, Washington, D.C., Scripps Howard Business Conference, Denver, Aug. 23

Education in Journalism-Mass Communication: Where We Are and Where We Should Be Going
Richard R. Cole, dean, School of Journalism, University of North Carolina, Chapel Hill. Southern Newspaper Publishers Association symposium on journalism education, Atlanta, June 22

The Power of Information: The Incremental Economic Strength of a Country
Robert W. Galvin, chairman, Motorola Inc., Schaumburg, Ill. National Computer Conference keynote address, Chicago, June 15. (Or see Aug. 15, 1987, Vital Speeches of the Day, 389 Highway 17 By-Pass, Box 1247, Mount Pleasant, S.C. 29464.)

From the National Association of Black Journalists annual convention, Miami, Aug. 18-23:

The Small-town Newspaper: A Place to Grow Minority Owners As Well As Minority Reporters
Loren Ghiglione, editor and publisher, The News, Southbridge, Mass.; remarks made in receiving the Ida B. Wells Award

The Bicentennial of the Constitution: From a Racial Perspective
Judge A. Leon Higginbotham Jr., 3rd U.S. Circuit Court of Appeals

The Road to Parity for Minority Electronic Journalists
Ernie J. Schultz Jr., president, Radio-Television News Directors Association, Washington, D.C.

From the Association for Education in Journalism and Mass Communication annual convention, San Antonio, Aug. 1-4:

Trading Places: Reader Reactions to the Knoxville Newspapers' Cycle Switch
Associate Professor M. Mark Miller and graduate students Shu-Ling Chen and Stephen E. Everett, College of Communications, University of Tennessee, Knoxville

Evidence of a "Failing Newspaper" Under the Newspaper Preservation Act
Robert G. Picard, associate professor, Manship School of Journalism, Louisiana State University, Baton Rouge

The Impact of Intercity Competition on Daily Newspaper Content
Stephen Lacy, assistant professor, School of Journalism, Michigan State University, East Lansing

Changes in Newspaper Images of Black Americans
Carolyn Martindale, director/journalism program, English Department, Youngstown (Ohio) State University

Friedheim named ANPA president; Fichter, Maguire also promoted

Three senior ANPA staff members were promoted in early September by the ANPA Board of Directors.

Jerry W. Friedheim, who had served as executive vice president since joining the ANPA staff in 1975, became ANPA president.

Thomas C. Fichter, formerly senior vice president, became executive vice president.

W. Terry Maguire, who had been vice president/general counsel, became senior vice president.

All three will continue their present responsibilities—Friedheim as chief operating officer of the Association, Fichter as deputy chief operating officer and chief financial officer, and Maguire as general counsel and chief government relations officer.

"We are extremely pleased to recognize with these new titles the distinguished service of these three executives to the newspaper business of North America, and to recognize their demonstrated professionalism as ANPA plans for future years of effective service," said George W. Wilson, president of the Concord (N.H.) Monitor and the Association's top elected official. Previously ANPA chairman and president, he continues as chairman.

© David Rambo

ANPA leaders are (from left) Fichter, Vice Chairman Arthur Ochs Sulzberger, Chairman George W. Wilson, Friedheim and Maguire.

Friedheim said: "The structure of the ANPA staff is, of course, designed—and whenever necessary adapted—to provide the maximum possible responsiveness and flexibility to the elected Officers, Directors and member newspapers in execution of the Association's programs and policies. We believe this new structure furthers that goal, and all of us on the staff value greatly our opportunity to join in the work of advancing a free press in our free society."

Fichter is a 26-year ANPA employee who started his career with the Association as an accountant. Maguire joined the Association in 1979 as associate general counsel. □

Membership survey is on tap

ANPA is embarking on a comprehensive membership survey—its first in a decade.

"This is an excellent opportunity for us to get feedback from the membership about all aspects of ANPA's services," said Association Treasurer Lloyd G. Schermer, chairman of ANPA's Membership Study Task Force and chairman and chief executive officer of Lee Enterprises Inc., Davenport, Iowa. "This information will help us not only improve what we are doing to meet present needs, but also be a guide for the allocation of resources to meet future problems of the industry."

At its Sept. 9-10 meeting, the ANPA Board of Directors approved the task force's recommendation that the study be done and that The Gallup Organization Inc. of Princeton, N.J., be retained to conduct it for approximately $85,000. (See **Chairman's Corner**, p. 4.)

Gallup will develop questionnaires through a process of focus groups and telephone interviews involving newspaper executives.

The questionnaires will be sent individually to the publisher and other key executives at each ANPA-member newspaper.

This differs from the last ANPA survey by Yankelovich, Skelly and White Inc. of New York City in which the publisher received all questionnaires for the newspaper and was asked to distribute them to staffers in designated positions.

In another change, questionnaires will be tailored to the specific type of respondent. For instance, production executives will not be asked to evaluate ANPA's services in the legal area.

The latter change is designed to decrease the number of instances in which respondents indicate they "don't know" or have "no opinion," according to Robert L. Burke, ANPA vice president/industry and public affairs. It will also enable Gallup to cross-tabulate results by type of respondent, he said.

The polling firm may also report responses by newspaper size, with the break point probably a circulation of 100,000, Burke said.

In addition to ANPA-member newspaper executives, questionnaires will go to CEOs and certain other executives at the corporate headquarters of newspaper groups and to executives at a sample of non-member newspapers.

In all, questionnaires will be mailed to about 7,460 newspaper people.

Although the Gallup organization has said a 50-percent response rate to such a survey is "normal," the ANPA Board wants an even higher response rate, Burke said.

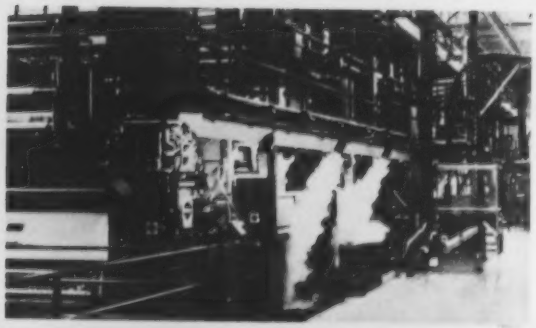
The 1977 survey had responses from 1,243 executives representing 677 newspapers.

As a result of that study, several key changes were made in Association operations. Among them were enhanced communications with members, particularly the launching of **presstime**; expanded government relations activity; and strengthened technical operations, culminating in the construction of modern laboratories at ANPA headquarters at The Newspaper Center in Reston, Va.

Questionnaires are expected to be mailed by the end of this year, with results reported to the ANPA Board of Directors at its April meeting. □

Protect your pressroom from fire

Let Chemetron show you how to reduce the risk



This sequence of photos shows a Chemetron carbon dioxide fire suppression system at work protecting a press line in a newspaper printing plant. Within minutes of the end of discharge, production can resume because there is no mess, no clean-up, and no damage to equipment by carbon dioxide. Imagine the problems created if a sprinkler system were to activate on your press line.

Multiple hazards, the potential for serious loss

There are a number of areas in printing plants which are potential sources of fire, such as ink and paper storage areas, composing rooms and the bindery. But perhaps nowhere else in the printing plant is the potential for fire greater, and the result more crippling, than in the pressroom, the heart of the newspaper operation.

Immediate, effective, non-disruptive protection

Lengthy shutdowns can spell financial disaster for the newspaper industry. That's why pressroom equipment requires fire protection that is immediate, effective and causes a minimum of disruption.

Chemetron automatic fire protection systems suppress fires without the need for enclosing walls. Unlike sprinkler systems, there is no contamination of ink, printed material, press rolls, bearings, electrical drives or controls. This means downtime is held to a minimum. Self-contained, the Chemetron low pressure carbon dioxide system operates even during a power failure.

Put Chemetron experience to work for you

Protecting printing plants is our specialty. Over the past 40 years, Chemetron has put in service between eight and ten thousand low pressure carbon dioxide fire protection systems, and has pioneered many other developments in fire protection.

Ask about Chemetron's new microprocessor based control panel and how you can use it to reform out of date technology on your existing carbon dioxide system.

Free video demonstration

Publishers, Production Managers, Pressroom Supervisors: Send us your business card and we will give you a copy of our videotape on fire protection for printing plants. Learn about efficient, cost-effective solutions to fire problems in modern printing plants.

Aloha! The time to begin planning for next April's Convention is now; air fare discounts to Honolulu are available

It is not too early to begin making plans to attend the 102nd Annual ANPA Convention April 25-27, 1988, in Honolulu, the ANPA Meetings Management Department has advised.

Because airlines limit the number of seats sold at the most discounted fares, reservations should be made as soon as possible, said Michael J. Genick, ANPA manager/meetings and services.

For Convention-related travel, employees of member newspapers are eligible for lower rates involving both discounted and regular fares from United Airlines and Delta Air Lines. Genick's department has details at (703) 648-1277. United Airlines also will be offering special inter-island fares on Hawaiian Air.

Genick said attendance at the Honolulu Convention should be no more expensive than that at some meetings in the continental United States, with lower hotel and meal prices offsetting higher travel costs. Room rates at the Convention headquarters hotel, the Sheraton Waikiki, range from $94 to $149 a day, double occupancy—45-percent less than those charged for the 1987 Convention in New York City, he said.

The ANPA Convention registration packet is planned for mailing in December or January.

ANPA also is beginning to explore possibilities for post-Convention travel. A questionnaire was sent in late September to participants in previous ANPA Conventions to gauge the level of interest in suggested excursions to Australia, China and Hawaiian islands besides Oahu. The questionnaires should be returned as soon as possible to Priscilla C. Shingleton, ANPA meeting planner, at The Newspaper Center in Reston, Va. □

Technical Research adds ink chemist, computer specialist

Two new employees have joined ANPA's technical research staff at The Newspaper Center in Reston, Va.

Ruth M. Felland, an ink chemist, previously was a research associate in the Chemistry Department of Clemson (S.C.) University.

She received a master of science degree in analytical chemistry from Clemson in 1986 and a bachelor of science degree in chemistry from Miami University in Oxford, Ohio, in 1983.

Margaret Bair Garrison, a computer programmer/analyst, was a software engineer for Locus Inc. in Alexandria, Va. She also has worked as a programmer/analyst for the Corporation for Public Broadcasting in Washington, D.C., and as a computer applications specialist for the University Medical Center/Arizona Health Sciences Center in Tucson.

She studied computer science at the universities of Minnesota and Arizona and received a bachelor of arts degree in biology from Earlham College in Richmond, Ind., in 1976. □

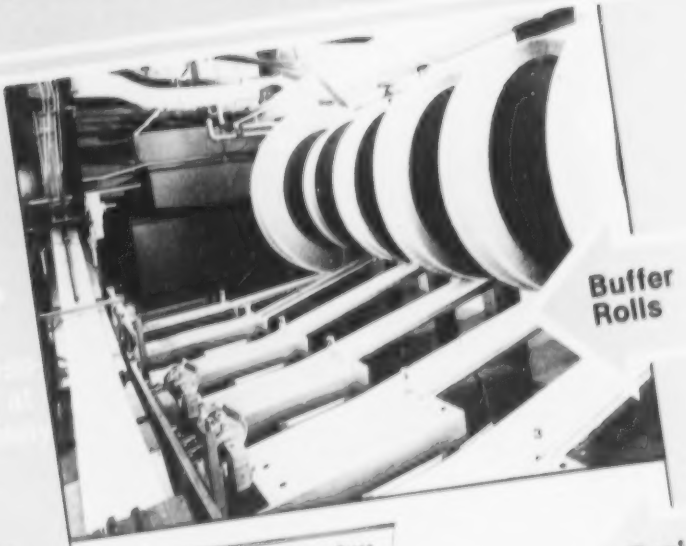
PrintRoll ends pressroom/mailroom tug-of-war



Buffer Rolls

- PrintRoll winds newspapers and preprints into large diameter, stationary rolls. Space-efficient to take advantage of full ceiling height.
- Automatic rolling and retrieval of main sections and preprints from buffer or storage eliminates manual pallet or roll handling and special equipment.
- Zoned editions may be stored in preselected rolls.
- Rolled products are compressed to allow more efficient processing through inserting machines.
- Shingle stream integrity is maintained throughout to assure smooth movement of the product by conveyor without need for single-copy synchronization.
- PrintRoll eliminates the need to start or stop the press for temporary mailroom problems or interrupt mailroom production if the press is down.
- Average rather than maximum press output determines inserting capacity.

Non-dailies are bastion of independent U.S. journalism

I read with great interest the excellent article in presstime by Mary A. Anderson on the "fading" status of independent newspapers. Her article touched only on dailies, yet it is entirely possible the prime bastion of truly independent journalism may be found in the ranks of non-daily newspapers.

A classic example is the San Francisco Progress, which has made the "reverse" transition from private to corporate (Harte-Hanks) and back to private ownership. The Progress . . . reports audited circulation (VAC) three days a week of 160,219 (distributed on voluntary-pay basis). There are only nine papers larger than the San Francisco Progress on your list of the 20 largest independent dailies. . . .

While the trend you report is ominous in terms of dwindling private ownership, I believe the independent community newspaper—whether daily or otherwise—is the last best hope for U.S. journalism and a critical bulwark in protecting and expanding our freedoms.

The corporatization of the media generally and the press in particular is reshaping and reorienting those institutions most critical to the preservation of liberty. The objectives of giant corporations, media and otherwise, differ sharply from those of the citizenry at large, and they are less inclined to "rock the boat" and take on in substantive ways other huge corporations and certain government leaders. . . .

We in community journalism may be positioned ideally to reverse the somewhat gloomy trend that presstime cites.

William H. Rentschler
Editor and publisher
San Francisco Progress

'Dying in chains'

In the course of my 20 years of travel on behalf of ANPA membership, I visited with several thousand newspaper publishers.

Many of them were wrestling with the problem of whether to sell or not to sell that was so well described in your August issue.

One put the issue in limerick form, which I can still remember as follows:

The publisher-owner complains
Of the perils of capital gains.
Of headhunters' axes
And death-duty taxes,
Of the horrors of dying in chains.

Harry W. Edwards
Great Falls, Va.

Editor's note: Edwards retired as ANPA's director of membership development in July 1983.

Papers can't afford not to cover military

Re: Jack Dorsey's report in the September presstime (Special Report on covering the military):

How can a newspaper, regardless of size, not aggressively and adequately cover a military installation in its circulation territory, especially if the newspaper covers the traditional beats such as education and government?

The Leaf-Chronicle is a small daily (morning 18,500), but our coverage of Fort Campbell, Ky., adjacent to Clarksville, Tenn., touches more lives in our readership area than does our education coverage. Look at the statistics of Fort Campbell, home of the 101st Airborne Division (Air Assault). At the end of fiscal year 1986, the post population was 20,418. The school system on post served 4,410 children. There were 16,901 military family members living off post, 9,818 on post. There were 18,743 retired military living in the area with 71,525 retirees' dependents, and 42,506 Army reserve component members in the area. The payroll disbursement alone was $636 million.

Unlike the newspapers Dorsey talked with, we do cover exercises and changes of command and other "routine" stories. We think it's important to let people know who's who on post, as well as what's going on. But, we also cover defense and weapons trends—the so-called "big" stories.

How can we afford not to?

Dee W. Bryant
Editor
The Leaf-Chronicle
Clarksville, Tenn

More on 'compose' and 'comprise'

Responding to an article that appeared in your September issue, p. 51, "Writers don't always write right," this piece certainly testifies to its headline.

I call your attention to the bulleted example concerning misuse of the words compose and comprise. It's incorrect to say "individual parts comprise or make up a whole." That sentence defines "compose." Comprise means to be made up of, not to make up. (Synonyms would be include, encompass, contain.) What should have been said is "a whole comprises its individual parts."

Incidentally, the bulleted example concerning the word "presently" also appears to contain a typo that gives the example an unintended meaning. I suspect it should've said "Presently to mean now rather than soon," instead of "Presently to mean new. . . ."

In fairness to the millions for whom your publication is Gospel, perhaps you should rerun a corrected version.

John B. Peters
President
H&D Public Relations
Chicago

Solution for jumps

Your August story on "jumps" did not tell the whole truth. There is a "perfect solution" for jumps for readability. . . .

You can put all your jumps on a full page or a full two-page sheet, or even full four-page double-truck sheet in the center of the newspaper. The back page is not big enough for all the jumps, especially if you want to put a weather map there *a la* USA Today.

The jump section should be used exclusively for jumps with no headlines but (with) serial numbers for easy spotting. Front-page tails would only have to say, "See No. 1, No. 5, No. 15, etc." No confusion. No inconvenience. No trouble.

This way you could also "jump" your long inside-page stories—if you had any—to this jump section.

The reader would simply pull the jump section and set it aside, ready to go to it whenever a story jumps from anywhere.

Only one catch. Your display advertisers would abhor the idea, because the reader would not have to search through the pages, thus missing the chance of exposure to the display ads. Since the U.S. journalism is subservient to the all-mighty [*sic*] advertiser dollars, you would never have guts enough to try this trouble-free jumping method.

And, that will disprove once again ANPA's claim that advertising is part of information service, and it can stand on its own. . . .

Soon Jin Kim
Professor of journalism
Towson State University
Baltimore

DECISIONS SALUTES THE AGENCY MEDIA DEPARTMENT

This December, MARKETING & MEDIA DECISIONS will again recognize the imaginative thinking of media specialists from across the country.

The DECISIONS Media All Stars report represents *a salute* to the nation's agency media departments and the craft of media selection. It is no popularity contest. These nine individuals were nominated by their clients on the basis of performance.

We believe strongly in the media professional. That's why we came up with the idea of highlighting certain disciplines within the media department and finding those individuals who perform so well that they can be held up as shining examples.

Last year's winners were: Michael D. Moore, Media Director, DMB&B; John Belfiore, Associate Media Director, BBDO; Alice Greenberg, Network Negotiator, O&M; Loretta Volpe, Print Media Specialist, SSC&B; Joanne Taub, Radio Media Specialist, Grey; Suzanne Shawn, Cable Media Specialist, Campbell-Ewald; John Miller, Out-Of-Home Media Specialist, Y&R; Kevin Killion, Media Research Specialist, DDB Needham.

Here is an opportunity to place your sales messages in an exceptional editorial setting. Your advertisement in DECISIONS' December issue will tie your special creative to our All Stars' special achievements.

It's your chance to tell these media people you care about their efforts—what they do. It's an issue not to be missed.

Ad close November 2.

Contact your MARKETING & MEDIA DECISIONS representative or Dave Bentley, Publisher (212) 391-2155.

Newspaper numbers

13—number of professional newspaper associations with headquarters at The Newspaper Center, Reston, Va.

4 billion—estimated dollar value of newsprint imported into the United States in 1987.

2,600—number of college graduates that U.S. daily newspapers hired as reporters and editors in 1986, according to The Dow Jones Newspaper Fund. Non-dailies hired about 1,000.

57—percent of U.S. newspapers that pay the full cost of medical insurance plans for employees, according to a survey by the International Newspaper Financial Executives.

Just a little pressroom prank

Everyone's heard the old joke about the diner whose fortune cookie contained a plea for help from a person being held prisoner in a Chinese bakery.

Here's the newspaper version, the difference being it's true: A subscriber to The Gazette, Montreal's 198,960-circulation English-language daily, called police in early August after coming across this message scrawled across a page in his paper: "Help. I'm being held against my will in the basement at 250 St. Antoine St." That's the address of The Gazette's plant.

Officers located the "victim"—one of the newspaper's managers who has been helping to run the presses since a labor dispute began July 10 between the paper and the Graphic Communications International Union.

"He's a prankster, that's just the type of individual he is," Director of Production Robert B. Williams says of the manager, who ordinarily works as an editor. "He was enjoying himself and put that on the (newsprint) roll. It was just a joke, I guess." No reprimand was issued.

ANPA's Charles D. Cole, manager/labor relations, and Mary I. Sepucha, assistant manager, are in the process of discarding about 22,000 labor contracts stored at The Newspaper Center. The expired contracts cover the hot-metal era from the early 1930s through 1980. Purpose of the disposal project is to alleviate file overcrowding, or what Cole calls "storage lock."

Publisher wants to find a new home for old but able Goss press

There are some things you just can't throw away. Take a rare, old newspaper printing press, for example.

Frederick J. Harrigan, publisher of The News and Sentinel of Colebrook, N.H., seeks a good home for his Goss Duplex Model A-1, circa 1926 and still in working condition. So far, despite "any number of inquiries, including two museums," there have been no takers.

Harrigan bought the Duplex—a roll-fed, flatbed model—in 1969 from The Newport (Vt.) Daily Express. It served the 4,000-circulation weekly faithfully until 1976, when the paper started to be printed at an offset shop in Lancaster, N.H. The time has come to get rid of the old press because it occupies valuable space, Harrigan says.

One reason there have been no takers is the considerable cost to transport the 16-foot-long, 10-foot-wide, 8-foot-tall unit, which weighs about 16 tons. "They're stumbling over the cost of moving it," he says.

Accommodating the pope

Newsracks were among the receptacles removed at the request of the Secret Service from the routes traveled by Pope John Paul II during his September visit to the United States. "It was a normal request," says Robert R. Snow, assistant to the director. "I assume it was done all the way down the line."

John R. Schueler, vice president/circulation, reports that racks for The Miami Herald and The Miami News were moved about 300 feet from the pope's parade route down Biscayne Boulevard. Boats were used Sept. 10 to deliver papers to street hawkers in the parade area, and no sales were lost, he reports.

One for the books

What began as a newspaper's effort to help save a historic building in Boston has blossomed into a booming retail book business.

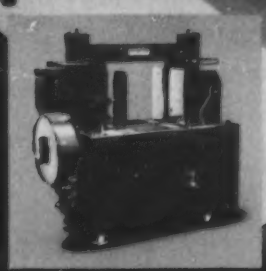
In 1964, The Boston Globe and a group of local citizens banded together to save a then 246-year-old downtown building. It had once served as a corner bookstore and had housed Tichnor & Fields, a 19th-century publishing house that printed the works of such distinguished authors as Longfellow, Emerson and Hawthorne.

The Globe took out a long-term lease on the building, now on the National Register of Historic Places, and for several years used it as a bureau office. In 1983, after buying a small New England book publishing company, it opened a bookstore there, specializing in books about New England.

"It was virtually an instant success," says Charles B. Everitt, president of The Globe Pequot Press Inc., which operates both the book publishing business and The Globe Corner Bookstore.

Building Our Reputation

POWER STRAP



Design innovation. Operator safety. Maximum dependability. Superior service.

The qualities we build into every Power Strap tying machine are building our reputation as an industry leader. Whether you choose state-of-the-art high production — as in our 45 bundle-per-minute PSN-5, pictured above — or simple, economical strapping, the Power Strap commitment to advanced design, safe operation, reliable performance, and customer satisfaction is part of the package.

Test our reputation. Contact Power Strap, 29299 Clemens Road — 111, Westlake, Ohio 44145. Call (216) 871-1053, or toll-free (800) 346-4600.

POWER STRAP

Quality and commitment: The best in pictures.

"In news photography, the moment is a fragile thing. It's fleeting, sometimes even unseen by the naked eye. Our job as AP photographers is to make sure we do not miss that moment."

Bob Daugherty of The Associated Press is one of the top photographers in the Washington news corps and has spent 24 years at AP, capturing fragile moments on film, making them endure.

"It's an awesome responsibility. Sometimes you're the only AP photographer on a particular breaking story. And more than a thousand newspapers are depending on you for *the* definitive picture. There's no room for being second best."

Bob Daugherty's dedication is shared by AP photographers everywhere — whether covering a dangerous war, a routine press conference, or illustrating a feature. Sixteen Pulitzer Prizes attest to their skill and determination.

Thanks to modern communications, the images they shoot are shared almost instantaneously around the world, increasingly in color, for the benefit of the thousands of member newspapers and broadcasters who own AP.

Like Daugherty, the 2,850 people who staff AP's 219 offices around the world are dedicated to giving these members the highest quality service in the news industry — a goal that is a continuing commitment of everyone in AP.

"A good picture is like a well-written story. AP photographers have a tremendous amount of pride in their product. They are, regardless of the assignment, shooting their best."

AP Associated Press
Quality. Commitment.
